Publishing Connect
Trends in publishing

- Rapid conversion from “print” to “electronic”
  - 1997: print only
  - 2009: 55% e-only (mostly e-collections)
    - 25% print only
    - 20% print-plus-electronic
  - 2014: 95+% e-only (in life sciences field over 99%)
  - 2016: ???

- Changing role of “journals” due to e-access

- Increased usage of articles (more downloads)
  - at lower cost per article

- Electronic submission
  - Increased manuscript inflow

- Experimentation with new publishing models
  - E.g. “author pays” models, “delayed open access”, etc.
Your personal reason for publishing

However, editors, reviewers, and the research community don’t consider these reasons when assessing your work – the content counts!
Why publish?

Publishing is one of the necessary steps embedded in the scientific research process. It is also necessary for graduation and career progression.

What to publish:
- New and original results or methods
- Reviews or summaries of particular subject
- Manuscripts that advance the knowledge and understanding in a certain scientific field

What NOT to publish:
- Reports of no scientific interest
- Out of date work
- Duplications of previously published work
- Incorrect/unacceptable conclusions

You need a STRONG manuscript to present your contributions to the scientific community
What is a strong manuscript?

- Has a novel, clear, useful, and exciting message

- Presented and constructed in a logical manner

- Reviewers and editors can grasp the scientific significance easily

Editors and reviewers are all busy scientists – make things easy to save their time
How To Get Your Article Published

Before you start writing
Refine your searching – be strategic!

Too many researchers have abandoned all the value of libraries when they stopped going there physically!

There is more than Google

Learn what online resources are available at your institute, and learn to search in a clever way. *Ask your library experts for help.*

Haglund and Olson, 2008:

*... researchers have difficulties in identifying correct search terms. Searches are often unsuccessful.*"
Use the advanced search options

- Within Google and Google Scholar use the advanced searches and check out the Search Tips.

- In ScienceDirect, Scopus, WoS/WoK and other databases use proximity operators:
  - w/n  ➔ Within - (non order specific)
  - pre/n ➔ Precedes - (order specific)

E.g. wind w/3 energy
Find out what’s Hot (downloads)
Find out **what** is being cited and from where
Find out who is being cited
There are many tools available such as SCOPUS, WoS, Google Scholar, PubMed.

Use what you have available. Become skilled in using these effectively.....

Referees of papers in Elsevier journals get 1 month personal free access to Scopus.
Think about **WHY you want to publish your work**.

- Is it **new and interesting**?
- Is it a current **hot topic**?
- Have you **provided solutions** to some difficult problems?
- Are you **ready** to publish at this point?

If **all answers are “yes”**, then start preparations for your manuscript.
What type of manuscript?

- Full articles/Original articles;
- Letters/Rapid Communications/Short communications/Case reports;
- Review papers/perspectives;

Self-evaluate your work: Is it sufficient for a full article? Or are your results so thrilling that they need to be shown as soon as possible?

Ask your supervisor and colleagues for advice on manuscript type. Sometimes outsiders see things more clearly than you.
Select the best journal for submission

- Look at your references – these should help you narrow your choices.
- Review recent publications in each “candidate journal”. Find out the hot topics, the accepted types of articles, etc.
- Ask yourself the following questions:
  - Is the journal peer-reviewed to the right level?
  - Who is this journal’s audience?
  - How fast does it make a decision or publish your paper?
  - What is the journal’s Impact Factor?
  - Does it really exist or is dubious? (check for example Beall’s List of Predatory Open Access Publishers) [http://scholarlyoa.com/publishers/](http://scholarlyoa.com/publishers/)
- DO NOT gamble by submitting your manuscript to more than one journal at a time.
  - International ethics standards prohibit multiple/simultaneous submissions, and editors DO find out! (Trust us, they DO!)
Identify the right audience for your paper

- Identify the sector of readership/community for which a paper is meant

- Identify the interest of your audience

- Get advice from your university library team on where to publish
Choose the right journal

- Investigate all candidate journals to find out
  - Aims and scope
  - Accepted types of articles
  - Readership
  - Current hot topics
    - go through the abstracts of recent publications

BIOCHEMICAL PHARMACOLOGY

BCP Special Issues: Published and Future issues

January 2008: Addictions Special Issue
Edited by David Weinshenker

Description

Biochemical Pharmacology is an international journal devoted to publishing original work on the interaction of drugs and nontherapeutic xenobiotics with biological systems. While particular emphasis is placed on reporting findings that relate to the actions and metabolism of drugs and toxic substances at the biochemical and molecular levels, submissions in the areas of behavioral and physiological pharmacology and toxicology are also encouraged if they describe studies directed at defining mechanisms of action. All areas of the field are represented in the journal including, but not limited to, cancer chemotherapy, neuropharmacology, inflammation/immunopharmacology, antimicrobials, behavioral, respiratory, gastrointestinal, cardiovascular, and endocrine pharmacology and toxicology. Submissions relating to either pharmacodynamics or pharmacokinetics are considered. Reports based on experiments conducted with mixtures, plant or animal extracts will not be considered for publication unless the chemical structures and concentrations of all substances are known. Submissions to the journal must be in English.

The journal publishes the following types of reports:
(1) Full-length Research Papers: These contain the results of original research on an issue of relevance to the field of pharmacology.
(2) Commentaries: These are commissioned articles that provide the author’s view on a selected topic.

Volume 54, Issue 2, Pages 193-318 (August 2007)

Bibliometric indicators

Impact Factor  
Eigenfactor  
SJR  
SNIP  
H-Index
What is the Impact Factor (IF)?

**Impact Factor**

*the average annual number of citations per article published*

- For example, the 2013 impact factor for a journal is calculated as follows:
  - $A =$ the number of times articles published in 2011 and 2012 were cited in indexed journals during 2013
  - $B =$ the number of "citable items" (usually articles, reviews, proceedings or notes; not editorials and letters-to-the-Editor) published in 2011 and 2012
  - 2013 impact factor = $A/B$
  - e.g. **600 citations** = 2.000
    - **150 + 150 articles**
Impact Factor and other bibliometric parameters
Influences on Impact Factors: Subject Area

- Fundamental Life Sciences
- Neuroscience
- Clinical Medicine
- Pharmacology & Toxicology
- Physics
- Chemistry & Chemical Engineering
- Earth Sciences
- Environmental Sciences
- Biological Sciences
- Materials Science & Engineering
- Social Sciences
- Mathematics & Computer Sciences

Mean Impact Factor

0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5
Your Journals list for this manuscript

So you now have a sequence list of candidate journals for your manuscript?

All authors of the submission agree to this list

Write your draft as if you are going to submit to the first on your list. Use its Guide to Authors
Read the ‘Guide to Authors’- Again and again!

- Stick to the Guide for Authors in your manuscript, even in the first draft (text layout, nomenclature, figures & tables, references etc.). In the end it will save you time, and also the editor’s.

- Editors (and reviewers) do not like wasting time on poorly prepared manuscripts. It is a sign of disrespect.
Read the ‘Guide to Authors’- Again and again!
Common problems with submissions:

An international editor says...

“The following problems appear much too frequently”

- Submission of papers which are clearly out of scope
- Failure to format the paper according to the Guide for Authors
- Inappropriate (or no) suggested reviewers
- Inadequate response to reviewers
- Inadequate standard of English
- Resubmission of rejected manuscripts without revision

— Paul Haddad, Editor, Journal of Chromatography A
Save your editor and reviewers the trouble of guessing what you mean

Complaint from an editor:
“[This] paper fell well below my threshold. I refuse to spend time trying to understand what the author is trying to say. Besides, I really want to send a message that they can't submit garbage to us and expect us to fix it.

My rule of thumb is that if there are more than 6 grammatical errors in the abstract, then I don't waste my time carefully reading the rest.”
Scientific Language – Overview

Write with clarity, objectivity, accuracy, and brevity.

- Key to successful scientific writing is to be alert for common errors:
  - Sentence construction
  - Incorrect tenses
  - Inaccurate grammar
  - Not using English

Check the Guide for Authors of the target journal for language specifications
Scientific Language – Sentences

- Write direct and **short** sentences – more professional looking.

- **One idea** or piece of information **per sentence** is sufficient.

- **Avoid** multiple statements in one sentence – they are confusing to the reader.
Policies regarding authorship can vary

Most common example: the International Committee of Medical Journal Editors (“Vancouver Group”) declared that an author must:

1. **substantially contribute** to conception and design, or acquisition of data, or analysis and interpretation of data;
2. **draft** the article or **revise** it critically for important intellectual content; and
3. **give their approval** of the final full version to be published.
4. **ALL three** conditions must be fulfilled to be an author!

All others would qualify as “Acknowledged Individuals”
Authorship - Sequence & Abuses

- **General principles for who is listed first:**
  - **First Author**
    - Conducts and/or supervises the data generation and analysis and the proper presentation and interpretation of the results
    - Puts paper together and submits the paper to journal
  - **Corresponding author**
    - The first author or a senior author from the institution
      - Particularly when the first author is a PhD student or postdoc, and may move to another institution soon.

- **Abuses to be avoided:**
  - **Ghost Authorship:** leaving out authors who should be included
  - **Gift Authorship:** including authors who did not contribute significantly
Typical Structure of a Research Article

- Title
- Abstract
- Keywords

Main text (IMRAD)
- Introduction
- Methods
- Results
- And
- Discussions

- Conclusion
- Acknowledgement
- References
- Supplementary Data

Make them easy for indexing and searching! (informative, attractive, effective)

Journal space is not unlimited.

Your reader’s time is scarce.

Make your article as concise as possible - more difficult than you imagine!
The process of writing – building the article

Title & Abstract

Conclusion  Introduction

Methods  Results  Discussion

Figures/tables (your data)
A good title should contain the fewest possible words that adequately describe the contents of a paper.

Effective titles
- Identify the main issue of the paper
- Begin with the subject of the paper
- Are accurate, unambiguous, specific, and complete
- Are as short as possible
- Articles with short, catchy titles are often better cited
- Do not contain rarely-used abbreviations
- Attract readers - Remember: readers are the potential authors who will cite your article
<table>
<thead>
<tr>
<th>Original Title</th>
<th>Revised</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preliminary observations on the effect of Zn element on anticorrosion of zinc plating layer</td>
<td>Effect of Zn on anticorrosion of zinc plating layer</td>
<td>Long title distracts readers. Remove all redundancies such as “observations on”, “the nature of”, etc.</td>
</tr>
<tr>
<td>Action of antibiotics on bacteria</td>
<td>Inhibition of growth of mycobacterium tuberculosis by streptomycin</td>
<td>Titles should be specific. Think to yourself: “How will I search for this piece of information?” when you design the title.</td>
</tr>
<tr>
<td>Fabrication of carbon/CdS coaxial nanofibers displaying optical and electrical properties via electrospinning carbon</td>
<td>Electrospinning of carbon/CdS coaxial nanofibers with optical and electrical properties</td>
<td>“English needs help. The title is nonsense. All materials have properties of all varieties. You could examine my hair for its electrical and optical properties! You MUST be specific. I haven’t read the paper but I suspect there is something special about these properties, otherwise why would you be reporting them?” – the Editor-in-chief</td>
</tr>
</tbody>
</table>
Keywords

In an “electronic world, keywords determine whether your article is found or not!

Avoid making them
- too general (“drug delivery”, “mouse”, “disease”, etc.)
- too narrow (so that nobody will ever search for it)

Effective approach:
Look at the keywords of articles relevant to your manuscript
Play with these keywords, and see whether they return relevant papers, neither too many nor too few – a good guideline.
Graphite intercalation compounds (GICs) of composition $C_xN(SO_2CF_3)_2 \cdot \delta F$ are prepared under ambient conditions in 48% hydrofluoric acid, using K2MnF6 as an oxidizing reagent. The stage 2 GIC product structures are determined using powder XRD and modeled by fitting one dimensional electron density profiles.

A new digestion method followed by selective fluoride electrode elemental analyses allows the determination of free fluoride within products, and the compositional $x$ and $\delta$ parameters are determined for reaction times from 0.25 to 500 h.
Introduction

The place to convince readers that you know why your work is relevant, also for them

Answer a series of questions:

- What is the problem?
- Are there any existing solutions?
- Which one is the best?
- What is its main limitation?
- What do you hope to achieve?
Pay attention to the following

- Before you present your new data, put them into perspective first

- Be brief, it is not a history lesson

- Do not mix introduction, results, discussion and conclusions. Keep them separate

- Do not overuse expressions such as “novel”, “first time”, “first ever”, “paradigm shift”, etc.

- Cite only relevant references
  - Otherwise the editor and the reviewer may think you don’t have a clue where you are writing about!
Methods / Experimental

• Include all important details so that the reader can repeat the work.
  • Details that were previously published can be omitted but a general summary of those experiments should be included

• Give vendor names (and addresses) of equipment etc. used

• All chemicals must be identified
  • Do not use proprietary, unidentifiable compounds without description. State purity and/or supplier if it is important.

• Present proper control experiments

• Avoid adding comments and discussion

• Write in the past tense
  • Most journals prefer the passive voice, some the active.

• Consider use of Supplementary Materials
  • Documents, spreadsheets, audio, video, ....

Reviewers will criticize incomplete or incorrect method descriptions, and may even recommend rejection.
Results – what have you found?

The following should be included:

- the **main findings**
  - Thus not *all* findings. Decide what to share.
  - Findings from experiments described in the Methods section

- Highlight findings that differ from findings in previous publications, and unexpected findings

- Results of the **statistical analysis**
Results – Figures and tables

- Illustrations are critical, because:
  - Figures and tables are the most efficient way to present results
  - Results are the driving force of the publication
  - Captions and legends must be detailed enough to make figures and tables self-explanatory
  - Figures and tables should not need further explanation or description in text. Less writing and less reading. Let your figures do the work instead of words.

"One Picture is Worth a Thousand Words"
Sue Hanauer (1968)
Results – Appearance counts!

- Un-crowded plots
  - 3 or 4 data sets per figure; well-selected scales; appropriate axis label size; symbols clear to read; data sets easily distinguishable.
- Each photograph must have a scale marker of professional quality in a corner.
- Text in photos / figures in English
  - Not in French, German, Chinese, Korean, ...
- Use color ONLY when necessary.
  - If different line styles can clarify the meaning, then never use colors or other thrilling effects.
- If used, color must be visible/distinguishable when printed in black & white.
- Do not include long boring tables!
Discussion – what do your results mean?

- It is the most important section of your article. Here you get the chance to SELL your data!
  - Many manuscripts are rejected because the Discussion is weak

- Check for the following:
  - Do your results relate to the original question or objectives outlined in the Introduction section?
  - Do you provide interpretation for each of your results presented?
  - Are your results consistent with what other investigators have reported? Or are there any differences? Why?
  - Are there any limitations?
  - Does the discussion logically lead to your conclusion?

- Do not:
  - Make statements that go beyond what the results can support
  - Suddenly introduce new terms or ideas
Conclusions

- Present global and specific conclusions
- Indicate uses and extensions if appropriate
- Suggest future experiments and indicate whether they are underway
- Do not summarize the paper
  - The abstract is for that purpose
- Avoid judgments about impact
  - Others can comment, you should not.
References: get them right!

- Please **adhere to the Guide for Authors of the journal**
- It is your responsibility, not of the Editor’s, to format references correctly!
- Check
  - Referencing style of the journal
  - The spelling of author names, the year of publication
  - Punctuation use
- Avoid citing the following if possible:
  - Personal communications, unpublished observations, manuscripts not yet accepted for publication
  - Articles published only in the local language, which are difficult for international readers to find
Some Publishers are helpful!

"Imagine if contributors could submit their papers to a journal without worrying about formatting the manuscript, including those pesky references, to exacting specifications?“  

*Kelvin J.A. Davies, 2012*

Called Your Paper Your Way, introduced to the journal Free Radical Biology & Medicine and now offered in more than 640 Elsevier journals. More than half of authors find it easier and more helpful. Reviewers are equally happy as figures and tables can be put in the right place by authors to allow easier review.

*Your Paper Your Way*

We now differentiate between the requirements for new and revised submissions. You may choose to submit your manuscript as a single Word or PDF file to be used in the refereeing process. Only when your paper is at the revision stage, will you be requested to put your paper into a “correct format” for acceptance and provide the items required for the publication of your article.

To find out more, please visit the Preparation section below.
Reference Management Software helps

- Many journals are helpful in formatting the journal reference style for you (e.g. Elsevier’s Your Paper Your Way service).

- If the publisher is not offering this service it is your responsibility to format references correctly!

en.wikipedia.org/wiki/Comparison_of_reference_management_software
Supplementary Material

- Data of secondary importance for the main scientific thrust of the article
  - e.g. individual curves, when a representative curve or a mean curve is given in the article itself
- Or data that do not fit into the main body of the article
  - e.g. audio, video, ....
- Original figure before color correction or trimming for clarity
- Not part of the printed article
  - Will be available online with the published paper
- Must relate to, and support, the article
Dear Professor Schmidt,

Enclosed with this letter you will find an electronic submission of a manuscript entitled “Mechano-sorptive creep under compressive loading – a micromechanical model” by John Smith and myself. This is an original paper which has neither previously nor simultaneously in whole or in part been submitted anywhere else. Both authors have read and approved the final version submitted.

Mechano-sorptive is sometimes denoted as accelerated creep. It has been experimentally observed that the creep of paper accelerates if it is subjected to a cyclic moisture content. This is of large practical importance for the paper industry. The present manuscript describes a micromechanical model on the fibre network level that is able to capture the experimentally observed behaviour. In particular, the difference between mechano-sorptive creep in tension and compression is analysed.

John Smith is a PhD-student who within a year will present his doctoral thesis. The present paper will be a part of that thesis.

Three potential independent reviewers who have excellent expertise in the field of this paper are:

Dr. Fernandez, Tennessee Tech, email1@university.com
Dr. Chen, University of Maine, email2@university.com
Dr. Singh, Colorado School of Mines, email3@university.com

I would very much appreciate if you would consider the manuscript for publication in the International Journal of Science.

Sincerely yours,

A. Professor

January 1, 2008

Final approval from all authors

Explanation of importance of research

Suggested reviewers
Suggest potential reviewers

- Your suggestions will help the Editor to move your manuscript to the review stage more efficiently.

- You can easily find potential reviewers and their contact details from articles in your specific subject area (e.g., your references).

- The reviewers should represent at least two regions of the world. And they **should not** be your supervisor or close friends.

- Be prepared to suggest 3-6 potential reviewers, based on the Guide to Authors.
Do everything to make your submission a success

- **No one gets it right the first time!**
  - Write, and re-write ....

- **Suggestions**
  - After writing a first version, take several days of rest. Come back with a critical, fresh view.
  - Ask colleagues and supervisor to review your manuscript. Ask them to be highly critical, and *be open to their suggestions*.
  - Make changes to incorporate comments and suggestions. Get all *co-authors to approve* version to submit.

Then it is the point in time to submit your article!
The Peer Review Process – not a black hole!

http://www.pri.univie.ac.at/~derntl/papers/meth-se.pdf
Why?

- The peer-review system is *grossly overloaded* and editors wish to use reviewers only for those papers with a good probability of acceptance.
- It is a *disservice* to ask reviewers to spend time on work that has clear and evident deficiencies.
First Decision: “Accepted” or “Rejected”

**Accepted**
- Very rare, but it happens

- **Congratulations!**
  - Cake for the department
  - Now wait for page proofs and then for your article to be online and in print

**Rejected**
- Probability 40-90% ...
- Do not despair
  - It happens to everybody
- Try to understand WHY
  - Consider reviewers’ advice
  - Be self-critical
- If you submit to another journal, begin as if it were a new manuscript
  - Take advantage of the reviewers’ comments and revise accordingly
  - They may review your manuscript for the next journal too!
  - Read the Guide for Authors of the new journal, again and again.
The Peer Review Process – revisions

http://www.pri.univie.ac.at/~derntl/papers/meth-se.pdf
First Decision: “Major” or “Minor” Revision

- **Major revision**
  - The manuscript may finally be published in the journal
  - Significant deficiencies must be corrected before acceptance
  - Usually involves (significant) textual modifications and/or additional experiments

- **Minor revision**
  - Basically, the manuscript is worth being published
  - Some elements in the manuscript must be clarified, restructured, shortened (often) or expanded (rarely)
  - Textual adaptations
  - “Minor revision” does NOT guarantee acceptance after revision, but often it is accepted if all points are addressed!
Manuscript Revision

- **Prepare a detailed Response Letter**
  - Copy-paste *each* reviewer comment, and type your response below it
  - State specifically which changes you have made to the manuscript
    - Include page/line numbers
    - No general statements like “Comment accepted, and Discussion changed accordingly.”
  - Provide a *scientific* response to comments to accept, ..... 
  - ..... or a convincing, solid and *polite* rebuttal when you feel the reviewer was wrong.
  - Write in such a manner, that your response can be forwarded to the reviewer without prior editing

- **Do not do yourself a disfavour, but cherish your work**
  - You spent *weeks* and *months* in the lab or the library to do the research
  - It took you *weeks* to write the manuscript.........

  ..... *Why then run the risk of avoidable rejection by not taking manuscript revision seriously?*
Increasing the likelihood of acceptance

All these various steps are not difficult.

You have to be consistent.

You have to check and recheck before submitting.

Make sure you tell a logical, clear, story about your findings.

Especially, take note of referees’ comments. They improve your paper.

This should increase the likelihood of your paper being accepted, and being in the 30% (accepted) not the 70% (rejected) group!
What leads to acceptance?

- **A**ttention to details
- **C**heck and double check your work
- **C**onsider the reviewers’ comments
- **E**nglish must be as good as possible
- **P**resentation is important
- **T**ake your time with revision
- **A**cknowledge those who have helped you
- **N**ew, original and previously unpublished
- **C**ritically evaluate your own manuscript
- **E**thical rules must be obeyed

– Nigel John Cook

Editor-in-Chief, Ore Geology Reviews
Your Paper is Published – What now?

- Your paper becomes visible online in the journal website, such as ScienceDirect, Springer Link etc. and in databases as SCOPUS, PubMed, etc.

- There are many things you can do to draw attention to your great research just online…

- Think Social Media!
Open access publishing
What is open access?

Free and permanent access to scholarly research *combined with clear guidelines (user licenses) for users to re-use the content.*

**Gold open access**
- After submission and peer review, an article publishing charge (APC) is payable
- Upon publication everyone can immediately and permanently access the article online

**Green open access**
- After submission and peer review in a subscription journal, the article is published online
- Subscribers have immediate access and the article is made open access either through author self-archiving, publisher deposit or linking.
# What is the difference?

<table>

</table>
Why publish in an open access journal?

- Want community to access my research without restriction: 67%
- Want to increase readership of article: 66%
- Less time between submission and publication than for subscription journals: 37%
- Have published in open access journals before and had a good experience: 36%
- Other researchers in my specialty publish in open access journals: 25%
- Funding body mandate: 10%
- Institutional mandate: 5%
- Other reason (please specify): 5%
- No reason/ prefer not to say: 3%

14% have been asked by their departmental head or funding organization to publish open access.
Publishing gold open access

**SUBMISSION**
- Select an Elsevier peer-reviewed journal with an OA option

**ACCEPTANCE**
- Indicate intention to publish OA in the acceptance and rights form
- Author is presented with journal's choice of user license
- Authors sign an ‘Exclusive Agreement’ with Elsevier where the author retains copyright
- Authors identify themselves as a funded author
- Pay an OA fee. This is covered by either:
  - A prepaid funding body agreement
  - A prepaid institutional agreement
  - The author – normally reimbursed by their institution or funding body

**PUBLICATION**
- Crossmark is added to the article that will link all versions to the final published article
- Article is published OA online. Copyright is with the author and permitted use defined by the user license
- The article is permanently preserved and accessible via Elsevier’s platforms
- OA articles can be immediately posted to an institutional or subject repository
Understanding the fine print

- AUTHOR
  - Retains copyright

- PUBLISHER
  - Grants publishing rights

- USER LICENSE
  - Publishes article under the user license

- READER/USER
  - Granted rights to reuse the article
Copyright

- Describes the rights related to the publication and distribution of research
- Publisher's need publishing rights
- This is determined by a publishing agreement between the author and publisher
  - In subscription journals, it is normal to transfer copyright to the publisher
  - In open access, authors retain copyright and grant publishers a license to publish their article.

Authors retain:
- Copyright of the article
- Patent trademark and other intellectual property rights in the article

Publisher gets:
- An exclusive right to publish and distribute an article.
- Are able to adapt the article for latest technology even after publication.
What is the uptake of open access?

There were in 2013, estimated worldwide 2,041,106 published subscription and 297,596 published open access articles

**Subscription content:**
- Continues to grow year on year at approx. 3-4%
- Amounts to a total article share of approx. 87.3% in 2013
- In 2013, Elsevier published over 330,000 articles which included an increase of 20,000 extra subscription articles

**Open access content:**
- Currently growing at approx. 20% in 2013
- Amounts to a total article share (hybrid + “pure” Gold) of approx. 8.2% in 2013
- The total article share of all immediately accessible OA articles is 12.7% including subsidized open access
- In 2013, Elsevier published over 6,000 gold open access articles
Elsevier and open access

Gold open access

Expanding our gold options:
- Launching new open access journals
- Rolled out gold options in our established journals (over 1600 hybrid titles)
- Waiving policy in place for authors

Improving our systems
- Making the author publishing experience easier
- Improving open access labelling
- Working with our society partners

Green open access

- Linking can be done immediately on all platforms via our Share Link service and/or with the article’s permanent address (DOI)
- 97 journals feature open archives
- CHORUS
- All journals enable the option to self-archive
- Elsevier embargos typically range from 12 – 24 months, with some longer or shorter.
- Piloting ways to facilitate green open access:
  - Agreements with funders and institutions
  - New repository tools such as embed PDF and metadata pilots

Global approach to open access policy

North America
- US Federal Agencies formulating policy on public access
  - Publishers have developed CHORUS to assist
- NIH Policy: 12 month deposit mandate to PubMed Central
- CIHR Canada: Gold open access or 12 month deposit mandate to Canada PubMed Central

Latin America
- Focus on green open access
  - Argentina: MINCYT introduced 6 month deposit mandate
  - Brazil: Government formulating green open access policy
  - Mexico: CONACyT pass open access guidelines for optional self-archiving

Europe
- Focused on a mix of gold & green open access
  - UK funder mandates focused on gold (Research Councils UK & Wellcome Trust)
  - Green open access mandates in Italy, Spain & Sweden
  - All EU members formulating open access policies at either national, funder or institutional level.

Africa
- Developing repositories
  - Publishers enabling philanthropic access
  - New open access journals to support local research needs
  - Some institutions have open access mandates, but no policies from any funders or Governments

Asia Pacific
- Mixed approach: Chinese & Japanese funders considering gold & green approaches
  - ARC & NHMRC in Australia have 12 month self-archive mandate, as does A*Star in Singapore
  - Other funders considering policy

Publishing Connect

Elsevier Publishing Campus
Funding body open access mandates and policies

**OSTP**
Federal agencies with $100m+ budget must:
- Develop a mechanism to make research results available within 12 months of publication
- Make unclassified data available to the public

**HEFCE**
From 1st April 2016:
- Deposit AAM in repository on acceptance (12/24 month embargo)
- Gold – no specific license, no new funding

**RCUK**
Policy active since 2014. Compliant if:
- Gold – CC-BY, immediate access
- Green – CC –BY NC, 6/12 months if gold unavailable, 12/24 months if gold available but no funding

**Howard Hughes Medical Institute (HHMI)**
- Deposit in PMC within 12 months of publication

**National institutes of Health (NIH)**
- Deposit in PMC within 12 months of publication

**FWF (Austria)**
- Gold – CC B, funding available
- Deposit AAM in sustainable subject/institutional repository under CC BY –NC.
- 6 (or12) month embargo
- Deposit in Europe PMC required for life sciences

**European Commission**
- Research funded by Horizon 2020 made accessible from 2014:
  - Gold (APCs can be reimbursed)
  - Green – 6/12 months after publication

**European Research Council**
- Deposit of articles in an appropriate research repository within 6 months

**Telethon**
- Deposit in Europe PMC within 6 months of publication.
- Will cover APC’s where appropriate

**Wellcome Trust**
- Deposit in PMC and Europe PMC within 6 months of publication
- Provides funds for APCs
- Requires CC-BY for gold

**Chinese Academy of Sciences (CAS)**
- Deposit in institutional repository within 12 months of publication.

**Australian Research Council (ARC)**
- Free availability after 12 months in institutional repository
- No central compliance checks
- Author versions and final versions accepted.
Facilitating open access policies

Green agreements
- Facilitates sustainable green open access
- Immediate internal posting on repositories
- Public access to the author accepted manuscript after embargo

Gold agreements
- Help establish automation of workflows to streamline author experience
- Can include reporting to funding organisation on uptake
- Compliance is higher when combined with clear funding for APCs.

Mixed agreement combination of both green and gold
Tips for publishing gold open access

Find the right journal: Look for reputable journals

Collect key info: Check your funding body and institution’s policies

Make your article OA: Select a license and pay an OA fee

Publish OA: Share the final version of your article!
Author Responsibilities

As authors we have lots of rights and privileges, but also we have the responsibility to be ethical.
Ethics Issues in Publishing

Scientific misconduct
- Falsification of results or images

Publication misconduct
- Plagiarism
  - Different forms / severities
  - The paper must be original to the authors
- Duplicate publication
- Duplicate submission
- Appropriate acknowledgement of prior research and researchers
- Appropriate identification of all co-authors
- Conflict of interest
- A short-cut to long-term consequences!

- Plagiarism is considered a **serious offense** by your institute, by journal editors, and by the scientific community as a whole.

- Plagiarism may result in *academic charges*, but will certainly cause rejection of your paper.

- Plagiarism will *hurt your reputation* in the scientific community.
Duplicate Publication

- Duplicate Publication is also called Redundant Publication, or Self Plagiarism
- Definition: Two or more papers, without full cross reference, share the same hypotheses, data, discussion points, or conclusions

- An author should not submit for consideration to another journal a previously published paper.
  - Published studies do not need to be repeated unless further confirmation is required.
  - Previous publication of an abstract during the proceedings of conferences does not preclude subsequent submission for publication, but full disclosure should be made at the time of submission.
  - Re-publication of a paper in another language is acceptable, provided that there is full and prominent disclosure of its original source at the time of submission.
  - At the time of submission, authors should disclose details of related papers, even if in a different language, and similar papers in press.
  - This includes translations
Plagiarism Detection Tools

Elsevier is participating in 2 plagiarism detection schemes:

- TurnItIn (aimed at universities)
- iThenticate (aimed at publishers and corporations)

Manuscripts are automatically checked against a database of 30+ million peer reviewed articles which have been donated by 200+ publishers, including Elsevier.

More traditional approach also happens:

- Editors and reviewers
- Your colleagues
- Readers
- "Other" whistleblowers
  - "The walls have ears", it seems ...
Publication ethics – Self-plagiarism

2003

Same colour left and right
= Same text

2004
An article in which the authors committed plagiarism: it will not be removed from ScienceDirect ever. Everybody who downloads it will see the reason for the retraction...
Figure Manipulation – some things are allowed

As long as they don’t obscure or eliminate info present in the original image

Brightness
Contrast
Colour Balance
Nonlinear adjustments

Must be disclosed in the figure legend

Enhanced
Obscured
Moved
Removed
Introduced
Figure Manipulation
Example - Different authors and reported experiments

Am J Pathol, 2001

Images worked on, added to, rotated 180°, to become:

Life Sci, 2004

Rotated 180°

Zoomed out ?!
