### Individual Fellowships

Individual Fellowships are a great option for experienced researchers to boost their careers by working abroad.

Gaofei Yin

**Postdoctoral researcher at CREAM funded by Marie Skłodowska-Curie Fellowship**

"The fellowship provides me the **opportunity to join the world-class research group** on Earth Observation and Global Change Ecology. I have full access to high-performance resources and Profs. Peñuelas and Verger help me open new research lines (photosynthetic phenology, high spatio-temporal resolution biophysical parameter retrieval from EO data)."

## TESTIMONIALS

Gregory Giuliani

**Head of the Digital Earth Unit, GRID-Geneva, University of Geneva**

"We are thankful for the very fruitful collaboration that we have now for more than 10 years with CREAM. We are actively working together to support the **Group on Earth Observations** (GEO) in the frame of various EU-funded research projects such as **H2020 e-shape** and **ERA-PLANET/GEOEssential**. We are both aiming to facilitate access and use of environmental knowledge to provide the best evidences possible to decision-makers. **CREAF scientists are key actors in that field** and we hope that we will continue our joint efforts and collaboration on the (near) future."

## NEW PROJECTS

CREAF's researchers Lluís Brotons and Sergi Herrando take active part in the brand new **H2020 EuropaBON project**.

Lluís Brotons

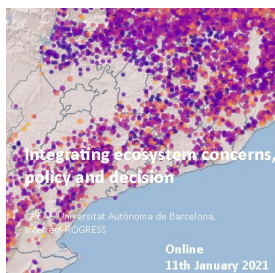

"The objective of EuropaBON is to work with the European Commission to organize information on biodiversity and take advantage of synergies with ongoing initiatives at national and international levels. We urgently need to mobilise this information on biodiversity and make it readily accessible to decision makers in a context of environmental crisis."

Sergi Herrando

"EuropaBON attempts to improve the organisation of the information flow from field data to informed decision making. It requires harmonising diverse approaches monitoring biodiversity across the EU. To achieve this, engaging relevant stakeholders for this common goal will be critical, and we'll do our best with our experience in international data sharing in the context of the European Bird Census Council, among others."

## AGENDA

### WEBINAR: Supporting the horizontal integration of the ecosystem concerns into the sectoral policies and plans

**Monday, 11th January 2021**

**Time: 10 - 13 h (CET)**

The PROGRESS-InterregEurope project organizes a webinar to share good practices on ecosystem services from 6 EU territories: Hungary, Spain, Italy, Ireland, Latvia and Romania.
