TESTIMONIALS

ELISE GORNISH

Cooperative Extension Specialist, Univ. of Arizona, USA

"I am thrilled to work with the fabulous researchers at CREAF as a **Visiting Researcher**! The thoughtful, cutting edge research occurring at CREAF addresses the **serious challenge of soil degradation** and provides a critical need as the value of restoration continues to grow worldwide. My collaboration with CREAF researchers will hopefully produce interdisciplinary approaches to managing landscapes for multiple ecosystem services both in Spain and abroad".

NEW PROJECTS

MOUNT RESILIENCE aims at supporting **European mountain regions and communities** in increasing their **climate change adaptation** capacity, and their transition to a **climate-resilient society**. It will be done by developing, testing and scaling up multi-level and multidimensional innovative solutions in local settings.

Bernat Claramunt, CREAM

"Mount Resilience is a fantastic opportunity for the Catalan Pyrenees, which are part of the four replicator regions of the project, to develop successful development strategies adapted to local contexts, taking into account social, economic and environmental dimensions"

Stefano Sala, Unimont (Italy)

"We will assess the problems of European mountain areas due to rapid climate change. We will apply nature-based solutions created in six regions, as a portfolio. It will be a unique occasion for the European Commission to recognize and value the role of mountain areas in agendas and policies"

AGENDA

Conference: 'The Restoration of Mediterranean Wetlands: the Wetland-Based Solutions'

15th December 2023 - 10 am to 12 pm CET
Online

CREAF researcher **Annelies Broekman** will talk about the opportunities for wetlands under the Natural Heritage Mission, focused on protecting, restoring and valorising the Euro-Mediterranean area.
