Key to the dataset

The dataset (R file) is organised as follows: B1, A1, etc., are the identification labels of the participants, and each row in the data frame corresponds to one of them; each participant provided a total of 18 answers, the first six correspond to object relatives, the next six to the RM items and the following six to the long distance wh questions. For instance, looking at the first column, what you see is the answer that the 22 children gave to the first object relative sentence.
