## CREATIVE COMMONS LICENSES RECOMMENDED IN THE UAB

*Approved by the Open Access Commission of the UAB, at the meeting of January 9, 2020  
Bellaterra, January 2020*

### 1. Creative Commons

Open Access promotes free access to academic content in order to improve the scientific communication system. With the Creative Commons (CC) licenses authors declare that they allow certain uses, universally (worldwide) and free of charge, without having to contact them, in advance.

Creative Commons is an American non-profit organization established in 2001. The licensing project was born on December 16, 2002. It began with the push of a few Harvard and Stanford academics led by Lawrence Lessig.

Creative Commons offers a variety of licenses. There are 6 standard licenses, adapted to different jurisdictions that can be chosen following a selection process.

Licenses are free and there is no need to register the work in any CC repository or registration. Creative Commons does not give legal support in case of license violation.

Creative Commons does not offer any software license and recommends those of the Free Software Foundation (FSF <http://www.fsf.org/>) or the Open Source Initiative (OSI <http://opensource.org/>).

There are four license elements:

ATTRIBUTION

SHARE ALIKE

NON-COMMERCIAL

NO DERIVATIVES

And there are six licenses as a result of the combination of these elements:

Attribution

Attribution – Non-Commercial

Attribution – Non-Commercial – Share Alike

Attribution – Non-Commercial - No Derivatives

Attribution – Share Alike

Attribution – No Derivatives

Common aspects, the six licenses allow: copy or reproduction, distribution and public communication; at the same time, licenses require attribution, they are non-exclusive, they are worldwide, they are not revocable and they do not affect moral rights.

<https://creativecommons.org/licenses/>

Additionally, Creative Commons contemplates another license, Public Domain, for those authors who want to renounce to all the copyrights of their work so that it enters the public domain, always respecting the current legislation.

Public Domain

<https://creativecommons.org/share-your-work/public-domain/cc0/>

## 2. Creative Commons in the UAB

In the Universitat Autònoma de Barcelona **authors can always choose the license** (if they have not assigned their rights to third parties) they prefer to publish their own work in the DDD or in the consortium repositories, but it is very helpful to have an institutional recommendation as a point of departure.

Taking into account that point 2 of the Budapest Declaration<sup>1</sup> and principle 1 of Plan S<sup>2</sup> recommend the CC-BY license (Attribution), this should be the basis for thinking about the licenses that could be adopted by the UAB. Necessarily the reuse of information for teaching, learning and investigation should be allowed.

CC licenses are especially interesting for teaching uses, since the law is very rigid in this area. Examples: Teaching resources of the Massachusetts Institute of Technology - <http://ocw.mit.edu> or Materials Docents en Xarxa <http://www.mdx.cat/>

According to the DDD collections on the scientific production of the University, this proposal is agreed:

- **CC-By License** (Attribution)

Course materials (teaching guides and exams), institutional documents, UAB scientific publications.

- **CC-By-Sa License** (Attribution – Share Alike)

Teaching resources, final degree projects, master's thesis and research documents (thesis, working papers, articles, contributions to conferences...)

- **CC0 License** (Public Domain)
