Lunt Building  
Northwestern University  
Evanston, Illinois  
U. S. A.

Dear Professor Boas,

In my opinion the paper by Srivastava now is interesting, and therefore acceptable.

Only in page 3, line 14, to the sentence

"since  $f_1(s)$  and  $f_2(s)$  are integral functions"

I should add

"Bounded in  $\sigma < x$  for any  $x < \infty$ "

since it is known that there exists Dirichlet series convergent only in a half-plane which represent integral functions.

Sincerely yours,

UAB<sup>5</sup>
