Prof. P.Kr. Kamthan
Deptt. of Mathematics
Birla College
Pilani (Rajasthan)
India

Dear Professor Kamthan,

As I promised in my former letter I have studied your paper, and I think the theorem very interesting. Therefore I shall send the paper to "Collectanea Math." for publication. But before I think it would be useful: instead of

\lim

to write

\lim

according to current notation; on page 1, line 11, instead of

$$M(\sigma) = \max_{-\infty < t < +\infty} |f(\sigma + it)|$$

to write

$$M(\sigma) = \sup_{-\infty < t < +\infty} |f(\sigma + it)|$$

since it can be that there does not exist a value of t such that

$$|f(\sigma + it)| = \sup_{-\infty < t < +\infty} |f(\sigma + it)|;$$

on page 1, line 20, instead of

$$t = e^{\sigma \rho(\sigma)}$$

to write

$$t = e^{\rho(\log \varphi) \log \varphi};$$

on page 3, line 7, instead of

$$(A \rho e)^{1/\rho}$$

to write

$$(A, \rho e)^{1/\rho}$$

On the other hand, I think the title:

PROXIMATE ORDER (R) OF ENTIRE FUNCTIONS REPRESENTED BY DIRICHLET

SERIES

would perhaps be better.

Please let me know if you approve these small modifications in which case I will make them in your manuscript before sending it for publication.

Perhaps you may know the address of ~~XXXXXXXXXXXXXXXXXXXX~~ Prof. K.N. Srivastava and if so I should be obliged if you would let me have it, as this professor has published the paper ON THE LOWER ORDER OF AN ENTIRE DIRICHLET SERIES in the Japanese Journal "Mathematica Japonicae" and I have not been able to find a ~~XXXXXX~~ photoprint either here or in France.

Thanking you in anticipation

I am
yours sincerely
