Thank you very much for your beautiful Christmas card. I am ashamed to be so dilatory in my correspondance. I was at a very interesting colloquium at Lexington last weekend. I spoke to several people about the possibility of inviting you to visit the U.S. The most likely place would seem to be Lawrence, Kansas. Would it be convenient for you write to Professor S.M.Shah, Department of Mathematics, University of Kansas, Lawrence, Kansas. I expect your list of publications has grown since the one you sent me and it may be you ~~are~~ are not at present interested. I would also like reprints of several of your recent papers.

Yours Sincerely

*A. J. MacIntyre*

(Present anticipation is that Susan will stay at Stratford Avenue)

Department of Mathematics  
University of California  
Davis, California 95616

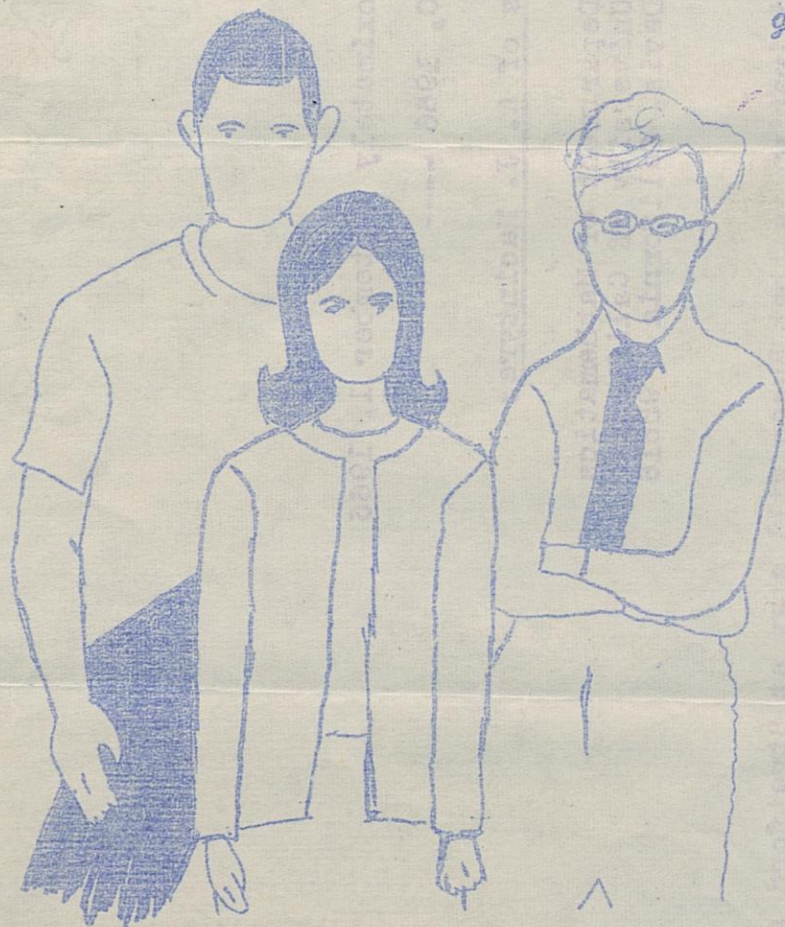

Address of A. J. MacIntyre:

to June 30, 1966

From approximately September 1, 1965

April 1965

December 1964. A word at last from the long silent Macintyres.  
Best wishes for 1965 from our new quarters 2729 Stratford Avenue,  
Cincinnati 20 Ohio 45220. Here we have six rooms, garage and  
basement. It is only a few steps from U.C. and Susan gets a ride to  
Walnut Hills. We did a good job moving in on the last day of September  
but are not yet in ideal shape and have done little entertaining.  
Had a visit from Eric and Louise Turner in November and they include  
greetings where relevant.

Susan now in tenth grade should graduate from High School  
in 1967. She contemplates trying to follow her mother in  
studying maths at Cambridge. Alister hopes to graduate in  
physics from U.C. at about the same time. Both have to  
work very hard.

After four Ph.D. students graduated last year making up  
a round dozen supervised since 1958 Mac has been a little  
less pressed! this year and hopes to get some work written  
up and perhaps set up a workshop in the basement when it  
gets cleared. Has visited Lexington to lecture on Bloch's  
theorem subject of thesis of Chiang and Miami of Oxford  
to lecture on a differential equation. There is some talk  
of spending next year in Kansas.

Mr. Scott passed on October 1963.

We were unable to organise any vacation this summer and  
experienced our first genuine 100 degree temperature.  
Tomatoes were still growing in the yard here in October.  
The new quarter system provides a few days' respite just now  
while waiting for examinations.

No signs of an invitation back to Britain. The U.C.  
is again chartering a plane to fly directly from  
Cincinnati to London and back from Paris next summer.  
Perhaps one of us may be on it.
