

Multidisciplinary Repositories for Open Access Data

	 UAB	 CSUC	 CERN OpenAIRE	 Digital Science	 NCSU	 Elsevier
1. Thematic and geographical area	Multidisciplinary UAB institutional repository	Multidisciplinary Catalonia	Multidisciplinary International	Multidisciplinary International	With emphasis on science and medicine International	Multidisciplinary International
2. Type of data (software, images, raw data...)	All kind of formats (preferably open) and published documents: final research data, gray literature, publications, images, plain text ...	All kind of formats Certain formats with specific functions (Stata, SPSS, R, Excel, CSV....)	All kind of formats and published documents: publications, grey literature, images and audio, plain text ...	All kind of formats : figures, datasets, images and audio, grey literature, filesets ...	All kind of formats and with preference for open source formats File requirements Content Criteria	All kind of formats : plain text, images and audio, PDF, HTML...
3. Open, embargoed, restricted or closed data?	Open Temporarily embargoed	Open Restricted Embargoed	Open Closed Restricted Embargoed (Policies)	Open Closed (by default, until they are published) Embargoed Confidential Metadata-only + information	Open Temporarily embargoed	Open Closed (by default, until they are published) Restricted Embargoed
4. Approximate size of the files to submit	Up to 25GB per dataset. For larger sizes, please contact with ddd.bib@uab.cat	Up to 10GB per file. For larger sizes, please contact with rdr-contact@csuc.cat	Up to 50 GB per dataset. For larger sizes, please contact them	For free up to 20GB per file and up to 20GB of private space Account limits In Figshare+ up to 5 TB per file	Up to 300GB per dataset. For larger sizes, please contact with help@datadryad.org They recommend that the files do not exceed 10 GB	Up to 10GB per dataset. Up to 100GB if the researcher's institution subscribes Digital Commons Data

5. Licenses used to spread the data	CC0 . Can be changed by another CC	By default CC0 , but it may be changed	Variety of licenses although they recommend open licenses. The description of the data is under CC0	- CC0 for data (<i>metadata & datasets</i>) - CC-BY for non data (<i>audio, papers....</i>) +información	CC0	Allows a variety of licenses : CC0, CC-BY, CC-BY-NC for data For software: MIT, Apache 2.0...
6. Persistent identifier	URI, DOI	DOI	DOI	DOI	DOI	DOI
7. Conditions for depositing or removing content	To deposit content: UAB community with ORCID and create a Readme file (template). To remove content, contact with ddd.bib@uab.cat	To deposit content: Catalan universities, CERCA research centers and other research entities. Data can be deleted, although the metadata will always be accessible	It is allowed to withdraw the data explaining the reason. DOI and URL will be retained	Private data can be deleted . To delete a public item you should contact them	ORCID and a Readme file are required. Data can be deleted only in specific cases by contacting curator@datadryad.org	- Data requirements -It is allowed to remove the data before publishing. Once published, contact with Mendeley
8. Cost	Free of charge for the UAB community	Free for users of participating institutions	Free. But by paying, it is possible to have more space (FAQS)	Free up to a certain size: 20 GB (private space), unlimited public space. For more space, you should contact them. Account limits	120 \$ for a dataset (up to 50GB). There are exceptions How much it cost?	Free
9. Data linked to publications	It allows to add links to related documents	It allows to add links to related documents	It allows to add links to related documents	It allows to add links to the full text or related documents	Often the data are associated with a research paper, published or in publication process	It use Scholix to link datasets to published articles
10. Preservation	Digital preservation policy (in Catalan and Spanish)	Data will be preserved for at least 10 years	Data stored at CERN Data Center	Preservation	Data stored at Merritt Repository Preservation	Data stored at Amazon S3 and DANS How is data stored?
11. Document versions	It allows to have different versions of the final files	It allows to have different versions of a file	It allows to have different versions of a file (DOI versioning)	Allows different versions of a file already published	It allows to have different versions of a file	It allows to compare different versions of a file
12. Meets the requirements of European grants?	Data Repository recognition by OpenAIRE	Exports compatible with OpenAIRE	Recommended for European projects. Link H2020 research	No information	No information	Published dataset metadata is aggregated to l'OpenAIRE portal

			with OpenAIRE automatically			
13. More information (URL)	UAB Digital Repository of Documents	About (CSUC) User guide (Dataverse general)	FAQS Policies Features Terms of use Blog About	Help website Features Blog Tools About	FAQS Terms of service Blog	FAQS Terms of use
10. Others	<ul style="list-style-type: none"> - Download stats - Public data is seen in Google Scholar and other research collectors (CORE, BASE....) - Export citations to bibliographic managers and social networks - Perpetual availability of published data 	<ul style="list-style-type: none"> - It use the open source software DataVerse - Integration with ORCID, Dropbox, OSF, OJS, DataCite, Rspace and Shibboleth - Download stats - Allows you to obtain the citation in XML, RIS or EndNote XML - Indexed in re3data and FAIRsharing - The datasets are accessible in Mendeley Data - Allows you to share a set of data in social networks (Facebook, Twitter and LinkedIn) 	<ul style="list-style-type: none"> - Usage stats - Show citations received - Integration with ORCID and GitHub - Public data is seen in Google Dataset Search - Collaborative platforms (<i>Community collections</i>) - Allows you to export citations to bibliographic managers and social networks - Partnership with Dryad 	<ul style="list-style-type: none"> - Integration with ORCID, GitHub and Dimensions (funding) - Collaborative spaces - Statistics of downloads - The public data is available at Google Scholar and Google Dataset Search - Allows adding to your personal profile social networks links and links to your publications - Allows you to export citations to bibliographic managers and social networks - It allows to create collections with a common theme 	<ul style="list-style-type: none"> - Integration with ORCID - Download stats - Allows you to obtain the citation in RIS or BibTeX. And to share it in social networks - Searchable in WoS Data Citation Index, Scopus and Google Dataset Search - The main language of the data must be English - Partnership with Zenodo - It has implemented the Make Data Count recommendations 	<ul style="list-style-type: none"> - The incorporation of files is very simple (just drag them) - Integration with dataCite and Plotly - It allows to organize the files in folders and subfolders - Ownership and control of data - Usage stats - They have various tools for affiliated institutions: Data monitor i Digital Commons Data

More information in the list of thematic repositories: <http://www.re3data.org>

Note: Developed from a working document by the support group to research at CSUC

July 2022 edition
