- 180 Area T2. Molecular, Genomic, Cellular and Kinetic-Dynamic Bases for Diseases and their Treatment
- 190 Associated Groups

Presentation

Since its constitution in 2009, the IIB Sant Pau has been consolidated as a research project of reference without ever losing sight of its main objective, the health and welfare of the people. Its consolidation as a research institute was confirmed in early 2011, when it was accredited as a Healthcare Research Institute by the Carlos III Institute, which emphasizes the commitment of the IIB Sant Pau with excellence. Despite the current economic climate of budget adjustments, the entities forming the IIB Sant Pau have continued to lead large research projects that have a broad impact in the field of production and scientific publications, generating in some cases, patent and technology transfer agreements.

Are the research groups of IIB Sant Pau, and especially each of the persons that are part of them and their very day work, who make it possible for the institute to be a reference of research in Catalonia.

Jaume Kulisevsky
IIB Sant Pau Manager

Who We Are

The Sant Pau Biomedical Research Institute (IIB Sant Pau) conducts research into basic, clinical and epidemiological medicine and healthcare services. Ten entities cooperate to perform high-level research into new techniques and processes aimed at improving the quality of life of patients. Stakeholders include the following:

- Hospital de la Santa Creu i Sant Pau Healthcare Management Foundation
- Hospital de la Santa Creu i Sant Pau Private Foundation
- Hospital de la Santa Creu i Sant Pau Research Institute
- Autonomous University of Barcelona - Ageing Institute
- Catalan Institute of Cardiovascular Sciences
- Puigvert Foundation
- Blood and Tissue Bank
- Iberoamerican Cochrane Centre
- Barcelona-Sardenya Primary Health Care Centre
- Public Health Agency of Barcelona

IIB Sant Pau was founded on 27 May 2009 as an association of healthcare entities carrying out their own research. Throughout 2010, IIB Sant Pau has become consolidated as a research centre, while continuing to implement an accreditation process as a Healthcare Research Institute with the Spanish Ministry of Science and Innovation. This accreditation was finally obtained in early 2011. The institutions participating in IIB Sant Pau, which together form a natural alliance for historical and geographical proximity reasons, jointly implement research activities and cooperate in other scientific areas. The cooperation between these institutes represents a qualitative leap in terms of fostering translational research projects that bridge the gap between basic and clinical research.

The knowledge developed in this kind of research is channelled to society by the application of discoveries to clinical practice and to healing patients. The most tangible benefits are the application of technology to health and the scientific communication of new knowledge. This research infrastructure also generates employment and spotlights Catalonia's contributions to biomedical research. Our success as a research centre ultimately translates to patient health.

Strategic Objectives

IIB Sant Pau's mission is to manage, promote, develop and communicate research into the health sciences.

To fulfill its mission, IIB Sant Pau has set itself a number of strategic objectives that guide its activities:

- To promote and consolidate relationships and knowledge exchanges between IIB Sant Pau researchers and with other public and private organizations, prioritizing the implementation of joint projects and the creation of multidisciplinary teams so as to strengthen alliances and implement translational research with a bearing on clinical activities.
- To organize courses, conferences, open days, seminars and workshops aimed at communicating scientific advances to society and at facilitating innovation and technology transfers to the productive sector.
- To organize and participate in continuous professional development, whether by developing teaching activities or arranging grant-aided stays abroad for researchers.
- To participate in developing policies aimed at coordinating biomedical research in Catalonia, while ensuring a strong presence in national and international research projects and networks of excellence.
- To acquire, maintain and optimize use of scientific and technological infrastructures and equipment.

IIB Sant Pau Entities

Hospital de la Santa Creu i Sant Pau Healthcare Management Foundation

The Hospital de la Santa Creu i Sant Pau Healthcare Management Foundation (HSCSP Healthcare Management Foundation) is a high-technology and specialist care hospital performing patient care, teaching and research activities in the clinical, epidemiological and healthcare services fields. It offers accredited specialist and undergraduate health science training courses.

Institut de Recerca

Hospital de la Santa Creu i Sant Pau Research Institute

The Hospital de la Santa Creu i Sant Pau Research Institute (HSCSP RI) promotes, manages and communicates biomedical research conducted in the Hospital de la Santa Creu i Sant Pau. It raises and manages funds and other resources for health science research in the basic, clinical, epidemiological and healthcare service fields.

Hospital de la Santa Creu i Sant Pau Private Foundation

The Hospital de la Santa Creu i Sant Pau Private Foundation (HSCSP Private Foundation), which owns the Hospital de la Santa Creu i Sant Pau, is responsible for building, improving and maintaining buildings and premises used for medical care and associated and complementary activities.

Autonomous University of Barcelona (UAB) - Ageing Institute

The UAB, a leading university renowned for quality and innovation in research, coordinates an influential scientific and technological centre, called Esfera UAB, responsible for promoting new business projects. The UAB also projects its productive activity in such a way as to disseminate new knowledge in society.

The Ageing Institute, attached to the Autonomous University of Barcelona , is a non-profit foundation governed by a board of trustees formed by the UAB, the UAB Foundation and the Trade and Industry Mutual Society (Agrupació Mútua del Comerç i de la Indústria). Its mission is to improve knowledge of different aspects related to ageing with the aim of enhancing the quality of life of older people and promoting actions that contribute to adapting the society and people to the challenges of the demographic change.

Catalan Institute of Cardiovascular Sciences

The Catalan Institute of Cardiovascular Sciences performs basic and clinical research into cardiovascular and heart diseases. The fact that it competes successfully at the international level enables it to avail of the infrastructure necessary to transfer basic research to the development of therapies and diagnostic methods, ultimately improving medical care for patients.

Fundació Puigvert

Puigvert Foundation

The Puigvert Foundation has the aim of deepening medical knowledge and perfecting medical techniques in the field of research and treatment of urinary and male reproductive system disorders and diseases. More specifically, it performs urology, nephrology and andrology research, focusing particularly on medical care, teaching, training and studies.

Centre Cochrane Iberoamérica
Iberoamerican Cochrane Centre

Iberoamerican Cochrane Centre

This independent, not-for-profit organization has as its main aim the promotion of medical practice based on the best available scientific evidence. To this end, it ensures that valid, useful, up-to-date and thoroughly reviewed information is made available for clinical and healthcare decision making.

Barcelona-Sardenya Primary Care Centre

Part of the public healthcare system, this teaching and care centre provides primary care services in its catchment area of Barcelona and has a research unit which performs clinical trials and epidemiology studies.

Agència
de Salut Pública

Public Health Agency of Barcelona

This autonomous body, created by the Barcelona Health Consortium, has as its main mission to analyse and monitor the health of the population of Barcelona with a view to improving health and preventing risk. It is also responsible for epidemiological surveillance and the provision of medical care to substance abusers. It has an excellent track record in the public health and applied research fields.

Blood and Tissue Bank

The Blood and Tissue Bank is a public healthcare body which carries out patient care, teaching and research activities in the blood transfusion and tissue bank fields.

IIB Sant Pau Scientific Structure

IIB Sant Pau has seven research areas that can be divided into three research lines: vertical, transversal and associated groups.

The vertical line has five main areas of research:

- Cardiovascular Diseases
- Genetic, Metabolic and Inflammatory Diseases
- Haematological and Oncological Diseases
- Neurological and Mental Disorders
- Uronephrology and Experimental Surgery

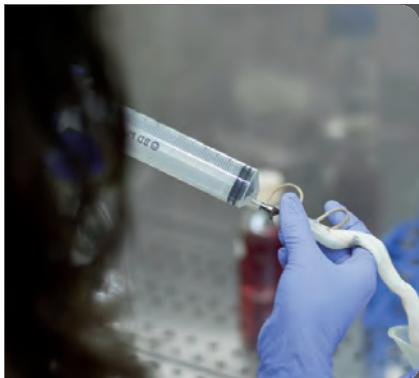

The transversal line consists of two areas:

- Epidemiology, Public Health and Healthcare Services
- Molecular, Genomic, Cellular and Kinetic-Dynamic Bases for Diseases and their Treatment

Activities in transversal line complement and support research in the vertical line.

Vertical Areas of Research

Cardiovascular Diseases

The incorporation of new technologies that facilitate molecular profiling and gene regulation has led to innovative research into heart disease. The great diversity of the groups in this area gives research varied perspectives, whether in developing or testing the effectiveness of new biomarkers (as in the investigation of the metabolic and genetic bases of diseases) or improving the range of results and possible applications in short-term therapies.

Genetic, Metabolic and Inflammatory Diseases

Identifying the genes and mutations responsible for genetic diseases is an essential component of knowledge and understanding of the physiological bases of metabolic pathways and also in the development of new forms of treatment for common diseases affecting large proportions of the population.

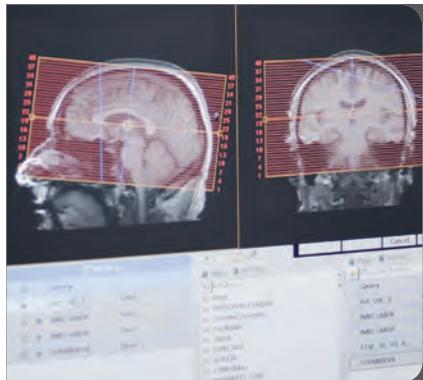

Diseases of this type include nutrition-related disorders, such as diabetes and obesity, and a large number of hereditary diseases, infectious diseases such as AIDS and tuberculosis and rare diseases that, while not well known, may have a devastating impact on those affected.

Haematological and Oncological Diseases

A broad range of research is conducted in this area, particularly head-and-neck, breast, ovary, colorectal and haematological cancers, among others. Research covers a wide range of fields, with disciplines that include nanomedicine, new anticancer agents and predictive molecular markers, to name but a few.

Initiatives of specific relevance include the GAIT (Genetic Analysis of Idiopathic Thrombophilia) project, a world pioneer in the identification of genes influencing the risk of thromboembolic disease, and research into antitumour immunotherapy in animals and humans.

Neurological and Mental Disorders

This structure covers research in a broad range of disciplines. Besides the study of ageing and the most common neurodegenerative disorders such as Alzheimer and Parkinson, neurological research is also focused on stroke, neuroimmunology and neuromuscular diseases. Research into cognitive, affective, psychotic and personality disorders ranges from identification and evaluation of new therapeutic targets to neurogenesis and the effects of deep-brain stimulation. Research in this field has the support of the Drug Research Centre, which assesses the effectiveness of new drugs and therapies in humans.

Uronephrology and Experimental Surgery

IIB Sant Pau promotes experimental surgery in the knowledge that this area has a promising future both as an independent research line and as a complement to general surgery. This interdisciplinary approach ensures valuable new insights, techniques and procedures of great clinical relevance. Current areas of interest include the development of minimally invasive techniques and the application of deep-brain stimulation in different pathologies. The Puigvert Foundation is a leading centre in Spain for research of this type in the fields of andrology, urology and nephrology.

Transversal Areas of Research

Epidemiology, Public Health and Healthcare Services

Research into epidemiology and public health aims both to determine the magnitude and distribution and identify the determinants of public health problems in order to evaluate the effectiveness and efficiency of public interventions and prevention practices.

This area also aims to reduce patient risk and make healthcare safer by promoting evidence-based medical practice and ensuring the use of conscious, explicit and rational decision, making concerning patient care.

Molecular, Genomic, Cellular and Kinetic-Dynamic Bases for Diseases and their Treatment

This area focuses on the structure of proteins associated with neurodegenerative diseases and inflammatory processes and on factors linked to the innate immune system. Research is also conducted in the area of osteoporosis, ageing-related macular degeneration and coagulation-cascade factors closely linked to cardiovascular disease and haemophilia.

Such studies are vital to the understanding of diseases of the heart, blood and nervous systems and to advances in the fields of cancer and epidemiology. The development of new simulation models enables maximum data use during the conduct of clinical trials.

Associated Groups

This area includes HSCSP Research Institute groups that do not form part of the IIB Sant Pau because they have not, as yet, been accredited by the External Scientific Committee.

Emerging Processes in Prevalent Diseases
Radiophysics and Radioprotection
Ophthalmology
Paediatrics
Chronic Respiratory Diseases

Financial Data

Public/Private Income Summary 2004-2011

Balance sheet year ending 31 December 2011

Income from activities	11,624,446.80
Services	3,679,247.97
Collaborations with partners and sponsors	1,117,517.90
Government grants	5,871,605.19
Other grants, donations and legacies	1,001,910.44
Repayment of grants, donations, etc.	-45,834.70
Stocks and supplies	-1,542,081.96
Material and equipment for activities	-1,542,081.96
Other income	1,597.76
Accessory income and management	1,597.76
Personnel expenditure	-7,692,749.34
Salaries	-6,143,442.58
Social security	-1,549,306.76
Other operating expenses	-2,727,744.40
External services	-2,594,174.73
Repairs and maintenance	-148,752.26
Freelance services	-504,698.85
Insurance	-75,640.17
Banking	-19,283.44
Sundry	-233.64
Other services	-1,845,566.37
Taxes	-25,539.44
Loss, deterioration and variation in provisions for operations	-46,616.86
Other operating expenses	-61,413.37
Depreciation of fixed assets	-1,146,330.05
Grants, donations and bequests transferred to results	866,818.14
Impairment and results of alienation of fixed assets	-4,573.88
Results for alienations and others	-4,573.88
Other results	300,812.86
Incidental expenses	-90,445.50
Incidental income	391,258.36
EXPLOITATION RESULT	-319,804.07
Financial income	451,886.67
From investments in equity instruments	0.00
Negotiable costs	451,886.67
Financial expenditure	-128,074.97
For debts with third parties	-128,074.97
Exchange differences	-4,007.63
FINANCIAL RESULT	319,804.07
RESULTS FOR THE YEAR	0.00

Scientific Outcomes

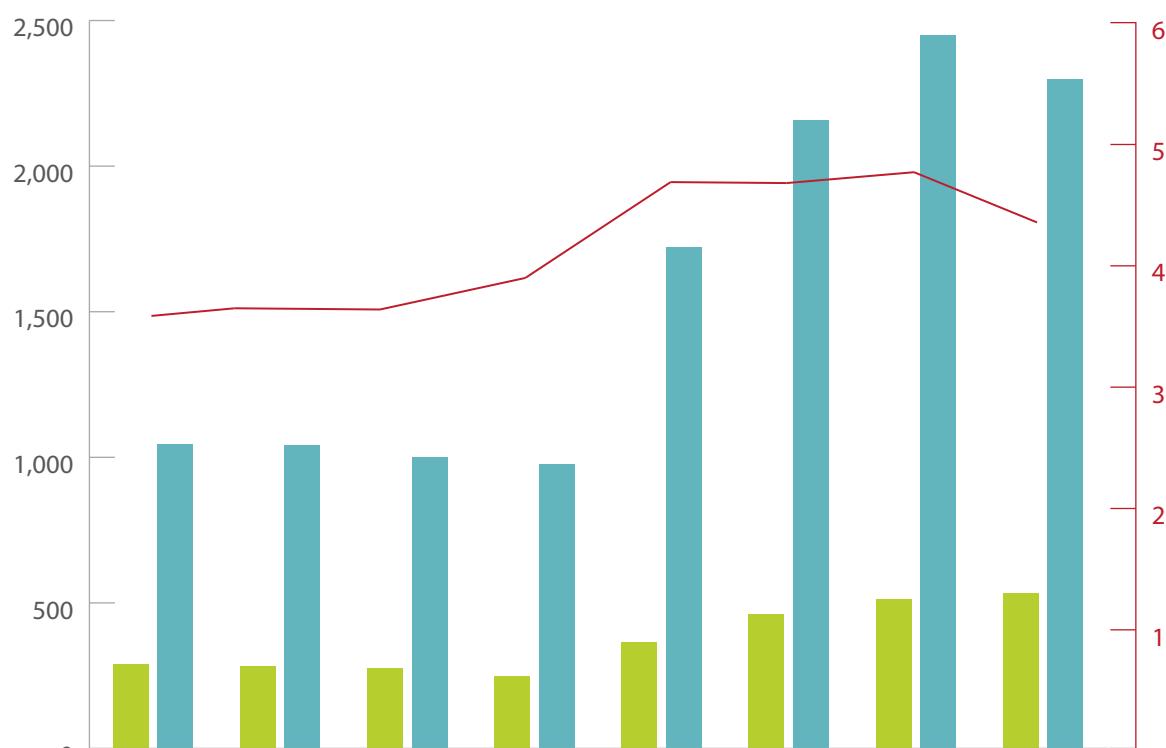

Outcomes for IIB Sant Pau's scientific activities are summarized in the following pages in terms of five illustrations as follows:

- **Publications with an Impact Factor:** This figure shows IIB Sant Pau publications over the years with an impact factor, one of the most important indicators used to identify the relevance of a science journal in its field and to give an approximate idea of the quality of the publications of researchers.
- **Publications by Thematic Area:** This figure reflects the relative importance of each of the thematic areas covered by IIB Sant Pau.
- **Publications by Quartile:** This figure depicts IIB Sant Pau publications by quartiles that reflect the importance of the scientific journal. The journals in a specific category are listed in descending order according to their impact factor and the list is divided into four equal quartiles. Thus, journals in the top quartile (Q1) are the most important journal in their category.
- **Research Resources and Training:** These tables show the list of institutions providing support to IIB Sant Pau and sharing its vision of research.
- **Doctoral Theses:** This table reflects the potential of up-and-coming IIB Sant Pau staff members and their ability to generate new ideas and drive new projects.
- **Patents:** This table shows the patents requested by IIB Sant Pau researchers between 2009 (constitution date of the Institute) and 2011.
- **Technology Transfer Agreements:** This table reflects the agreements on this matter signed between 2009 (constitution date of the Institute) and 2011.

Research Support Services

Sharing and pooling resources is an effective way to optimize funds and boost research. This is the main objective of the research support services, which are divided into two blocks.

Research Support Services

These provide facilities and equipment that are exclusively available to any specific research group but are shared among groups at all institutions within the IIB Sant Pau.

The IIB Sant Pau has 12 services that support of research:

- Clinical Trial Documentation Management
- Research Institute Management
- Tumour Bank
- Quality and Information Systems Unit
- Radioactivity Unit
- Centre for Drug Research (CIM Sant Pau)
- Communications Coordination Team
- Central Clinical Research and Clinical Trials Unit (UCICEC Sant Pau)
- Animal Housing
- Transfer and Innovation Unit
- Clinical Research Ethics Committee
- Clinical Research Ethics Committee Secretariat
- Author Editing

Scientific and Technical Service Platforms

The main aim of these support services is to manage, allocate and optimize the top-level research resources available to IIB Sant Pau. They provide researchers with support and scientific/technical assessment and advise on the most appropriate methods to prepare samples and to plan optimal workflows for each objective. They also promote experimental development with equipment, infrastructure and specialist staff.

IIB Sant Pau has six platforms:

- Genomics and Transcriptomics Platform
- Proteomics Platform
- Functional and Cellular Analysis Platform
- Microscopy and Immunohistochemistry Platform
- Innovation Platform
- Biobank

The platforms may also use equipment available for general use to complement their functioning.

Research Support Services

Coordinator:

M. Teresa Mas
mmas@santpau.cat

Staff:

Pilar Matamoros
M. Àngels Piera

Clinical Trial Documentation Management

Functions:

- > Manage and supervise all documentation associated with active clinical trials in the experimental phase and destruction of documentation for terminated clinical trials located in the external archive.
- > Supervise data processing and management.
- > Coordinate researchers and monitors and

agendas for meetings and study monitoring.

- > Provide logistical support to the cold area and the clinical materials store associated with clinical trials in the experimental phase.
- > Shipment of biological samples to Central Laboratory Services.

Facilities:

Several areas have been designated for conduct these functions:

- > Head office and administration.
- > Data processing and management.

Research Institute Management

Functions:

- > Management of HSCSP Research Institute and IIB Sant Pau finances: manage accounts and fiscal matters; design, administer and control budget-related issues; manage and monitor financial and material resources.
- > Management of public body funding requirements fulfil entered into with government bodies and official regional and state entities; ensure compliance with current fiscal, financial, labour and legal regulations and with HSCSP Research Institute–IIB Sant Pau management policies.
- > Administration and management of activities, providing management support for research groups in different areas; project management, human resources, procurement, invoicing, control and monitoring of projects, general administration, management of services (courses, travel and continuing professional development).

- > Design, elaboration, development and maintenance of information systems for management area units, both for HSCSP Research Institute–IIB Sant Pau and research groups.

Tumour Bank

Functions:

- > Create and maintain a collection of healthy and diseased tissue samples in optimal conditions for use in research projects that may include morphology, phenotype and molecular analyses and which may also be used in diagnosis.
- > Guarantee the quality of stored material by means of morphology analyses of samples, assuring anatomical and pathological corre-

tion with definitive diagnoses for tissues.

- > Supply material to research groups on a non-profit basis (investigators may apply for samples as long as their project meets current regulations and is scientifically, technically and ethically viable).

Equipment:

- | | |
|--|---|
| <ul style="list-style-type: none"> > 4 fast-freeze (isopentane bath, stored at -50°C). > Storage and cryopreservation systems: 2 freezers -80°C and 1 deposit for liquid nitrogen. | <ul style="list-style-type: none"> > 1 cryostat. > 1 manual tissue arrayer. |

Quality and Information Systems Unit

Functions:

- > General:
 - Coordinate the contingency plan for the HSCSP Research Institute premises.
 - Coordinate to draw up the functional plan for the Hospital de la Santa Creu i Sant Pau Research Institute's new building.
 - Coordinate the IIB Sant Pau deployment.

Assurance Programme.

- Establish evaluation mechanisms for quality and good scientific practice at IIB Sant Pau.
- Provide support to IIB Sant Pau management in applications for public and private funding.

Quality:

- Draw up the IIB Sant Pau quality plan.
- Coordinate accreditation processes involving IIB Sant Pau.
- Implement ISO 9001/2008 and Good Clinical Practice and Good Laboratory Practice quality standards, related to the laboratories and infrastructures involving the Institution.
- Provide support in drawing up, updating and distributing standard operating procedures (SOPs) associated with the Quality

Information systems:

- Monitor IIB Sant Pau indicators.
- Coordinate the implementation of Spanish personal data protection legislation with respect to records containing personal data held by IIB Sant Pau and participate in the Security Regulations Committee.
- Manage the general insurances for the HSCSP Research Institute: researchers, equipment, civil liability and operations.
- Coordinate the preparation of statistical reports for different bodies.

Supervisor in charge:

Josep Julve
jjulve@santpau.cat

Radioactivity Unit

Functions:

- > The Radioactivity Unit provides groups with specific research laboratories in which to work with radioactive isotopes in liquid form. These areas are fully-equipped and adapted for the handling of radioactive material and apply optimum measures for the safety and radioprotection of staff and the environment.
- > This area has been authorized by the nuclear safety authority. The staff in charge supervise the compliance of laws, guidelines and regulations established by the regulatory body.

> It provides the necessary services for studies in the following:

- In vitro labelling of proteins, lipoproteins and liposomes.
- Cellular proliferation and toxicity.
- Nucleic acid labelling.
- Immunoassay techniques.
- Determination of enzymatic activities using radiolabeled substrates. Analysis and separation of labelled molecules.
- Cellular cholesterol efflux.
- Metabolism in vivo.

Facilities:

The Radioactivity Unit has the following facilities:

- > 1 room for radioactive material storage.
- > 7 equipped laboratories, one of them refrigerated.
- > 1 room for gamma- and beta- counters.
- > 1 room for radioactive waste storage.
- > 1 room for controlled disposal of radioactive waste.
- > Radioactive liquid waste containers for controlled radioactive waste disposal.
- > Shielding accessories for radiation safety (table top shields, shielded containers, protective equipment, etc.)
- > Portable radiation and environmental con-

tamination detectors.

- > 1 ventilated rack for in vivo studies.
- > 2 chemical safety cabinet for gas extraction.
- > 1 vertical laminar air flow cabinet for cell cultures.
- > 1 CO₂ incubator for cell cultures.

Coordinator:
Rosa M. Antonijoina

Centre for Drug Research (CIM Sant Pau)

Functions:

Perform clinical drug trials and/or clinical research in compliance with methodological, ethical and legal requirements in the context of international Good Clinical Practice guidelines concerning:

- > Clinical trials that are not of therapeutic interest for participants (phase I, special populations, psychopathological research, biomarkers, proof of concept).
- > Clinical trials in neuropsychopharmacology.
- > Clinical trials in initial developmental phases.

Facilities:

Three separate work areas have been designated for the trials:

Healthcare:

- > Admission zone.
- > 24 beds distributed in 4 units: trials in healthy volunteers and patients.
- > 2 individual rooms for CNS studies.
- > Ambulatory zone.
- > 4 consulting rooms for complementary testing mainly related to CNS.
- > 3 cubicles to evaluate psychomotor performance.

Logistical support:

- > Rest area for clinical trial participants with bathrooms and kitchen.
- > Areas for the preparation, centrifugation and separation of biological samples.
- > Cold room.
- > Filing.

Management, administration and data processing:

- > Offices.
- > Area for monitors.
- > IT equipment for clinical trial activities of a non-experimental nature.

Coordinators:
Pablo Ayesta
payesta@santpau.cat

Sara Garcia
sgarciago@santpau.cat

Abraham del Moral, Santi Porta

Communications Coordination Team

Functions:

- > Coordinate IIB Sant Pau communications.
- > Prepare IIB Sant Pau annual reports and other communication materials.
- > Provide an effective news distributes service and generate positive media coverage.
- > Respond to media enquiries.
- > Update website content.

- > Establish standards concerning graphics and linguistic style to ensure visual uniformity in all IIB Sant Pau communications.

Research Support Services

Coordinator:

Rosa M. Antonijoan
rantonijoana@santpau.cat

Staff:

3 advanced research technicians
4 research technicians
1 administrative officer

Central Clinical Research and Clinical Trials Unit (UCICEC Sant Pau)

Functions:

Comprehensive methodological, regulatory, administrative, financial and practical support to researchers developing independent research projects (not supported by the pharmaceutical industry).

Knowledge Management:

- > Single input window for independent studies.
- > Liaison between researchers and technical units.
- > Support and supervision.
- > Adverse events notification.
- > Knowledge Management:
 - Project feasibility studies.
 - Project needs identification.
 - Dimensionality studies for new projects.
 - Documentation: protocols, final reports.
- > Activities arising from research:
 - Spin-off project identification.
 - Strategic partnerships with other entities.
 - Publication plans.
- > Training needs identification.

Methodological and Statistical Support:

- > Advice on study design.
- > Data entry.
- > Data processing.
- > Statistical report preparation.
- > Electronic CRF validation and management.
- > Documentation and reports.

Documentation, Archives, Monitoring and Follow-up:

- > Document preparation support: EUDRA / applications / monitoring.
- > Monitoring.
- > Support with applications: Spanish Medicines and Health Products Agency, clinical research ethics committees, healthcare authorities.
- > Master file custody for sponsors.
- > Insurance policy management.
- > Communications with clinical research ethics committees, the Generalitat de Catalunya and the Spanish Medicines and Health Products Agency.

Pharmacy:

- > Drug reception, distribution and return.
- > Drug preparation, masking and labelling.
- > Liaison for external preparation of clinical trial drugs.

Management and financial management:

- > Financial management.
- > Budgeting and financial monitoring.
- > Contract management.
- > Personnel management.

Coordinator:

M. Antònia Rubio
arubioc@santpau.cat

Luis Garcia

Animal Housing

Functions:

- > Produce different small rodent strains in-house for research and teaching purposes.
- > Manage the purchase and transportation of animals from domestic and international breeding and supply centres.
- > Receive and house incoming animals and subsequently deliver them to users once the quarantine period is over and health requirements are met.
- > House and maintain experimental animals while ensuring their welfare.
- > Feed animals according to experimental protocols.
- > Provide support in animal surgery, anaesthesia and euthanasia.
- > Supply laboratory material and collect samples.
- > Monitor mating, mating plugs, pregnant females and weaning.
- > Provide healthcare.
- > Advise the animal welfare expert.
- > Perform periodic health checks with sentinel screening in all rooms.
- > Maintain monitoring protocols.
- > Ensure the hygiene and safety of facilities and equipment.
- > Manage waste disposal.
- > Attend training in relation to all protocols developed in the animal house.
- > Advise on the drafting of research projects involving the use of animals.

Facilities:

- > Mice rooms (2), total capacity 2400.
- > Rat room, capacity 200.
- > Quarantine room.
- > Wash room.
- > Clean-storage room.
- > Standard storeroom.
- > Surgery.
- > CO₂ euthanasia equipment.
- > Treatment room.
- > Office.
- > Shower.
- > WC.

Transfer and Innovation Unit

Functions:

- > Promote innovation culture and education.
- > Develop a framework for innovation management.
- > Evaluate technological opportunities originating with IIB Sant Pau staff, detect inventions and assess their protection, transfer and commercialization.
- > Manage the intellectual property of the Institution.
- > Establish links with the business sector.
- > Assist researchers in developing projects with companies.
- > Manage competitive official announcements of innovation projects, within national and European frameworks of funding.
- > Develop technological platforms.

Clinical Research Ethics Committee

The Ethics Committee for Clinical Research (CEIC) of the Hospital de la Santa Creu i Sant Pau Healthcare Management Foundation is an independent body that, according to the laws that accredit it, has the mission to ensure the protection of rights, safety and welfare of the subjects involved in a trial and provide public

assurance of that protection, reviewing and approving the protocol, the suitability of the researcher, facilities, equipment and methods to be used in obtaining and documenting the informed consent of the subjects.

Its specific functions are:

- > Evaluate the methodological, ethical and legal aspects of:
 - Clinical trials with drugs and health products.
 - Observational studies.
 - Pharmacogenetic and pharmacogenomic studies.
 - Studies evaluating surgical or psychological treatments.
 - Studies involving invasive procedures or the use of health data (HC, biological samples).
- > Evaluate the relevant amendments in projects approved by the CEIC.
- > Monitoring of clinical drug trials and clinical research with medical devices.

Coordinator:
Milagros Alonso
malonsoma@santpau.cat

Administrative Staff:
Vanesa Mansilla
Marisol Mogollón
Albert Querol

Clinical Research Ethics Committee Secretariat

The HSCSP Research Ethics Committee is an independent agency whose mission is to protect the rights, safety and wellbeing of persons participating in the HSCSP research projects which may entail physical or psychological harm. The Secretariat of the Clinical Research Ethics Committee evaluates the methodological, ethical and

legal aspects as well as any other relevant information regarding all research projects listed in the minutes of the Committee's meetings. It also advises researchers in the HSCSP and the HSCSP Research Institute regarding the preparation and presentation of clinical research projects.

Functions:

- > Receive, log and validate documentation for clinical research projects submitted to the Committee for evaluation.
- > Arrange and call Committee meetings, inform members of the agenda and provide them with copies of protocol summaries and patient informed consent and information sheets.
- > Prepare and submit reports to the Committee containing a methodological, ethical and legal description and analysis (and any other relevant information) of the research projects listed in agendas.
- > Act as a reference point in communications with and between researchers, sponsors, medical administrators and managers and healthcare authorities regarding all aspects of the activities of the Committee and of the research projects evaluated by the Committee.
- > Prepare and sign the reports of the Committee and communicate its decisions to the corresponding sponsors and researchers.
- > Prepare the minutes of meetings and distribute them to Committee members within the established period.
- > Manage all documentation associated with the operations and activities of the Committee and with the research projects evaluated by the Committee.
- > Administer contracts for all clinical trials to be performed at the HSCSP.
- > Certify the actions of the Committee.
- > Prepare the annual report of the Committee.
- > Ensure compliance with the Standard Operating Procedures of the Committee.

Coordinator:
Carolyn Newey
cnewey@santpau.cat

Author Editing

Functions:

- > Review and edit research papers, abstracts, posters, presentations and other scientific documents written in English.
- > Assist in the preparation and delivery of presentations, lectures, speeches, etc in English for meetings, conferences and similar events.

Genomics and Transcriptomics Platform

> GENOMICS LABORATORY

Functions:

- > Sequencing:
 - Mutation analysis.
 - Identification of microorganisms.
- > Fragment analysis:
 - Instability of microsatellites.
 - Loss of heterozygosity in pathological processes.
- > Detection and genotyping of mutations.
- > Gene copy number quantification.
- > Methylation.
- > Polymorphism and disease associations.
- > Next generation sequencing.

Equipment:

- > Ion Torrent Personal Genome Machine.
- > Ion OneTouch(TM) System.
- > ABI 3130xl Genetic Analyzer capillary electrophoresis sequencer.

> TRANSCRIPTOMICS LABORATORY

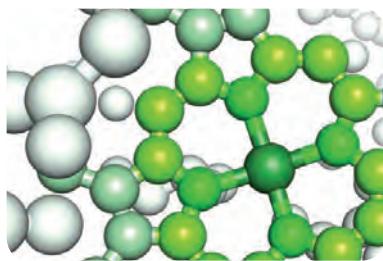

Functions:

- > Hybridization and analysis of Affymetrix microarrays:
 - RNA and micro-RNA expression profiles in normal conditions and in diseases and treatment.
 - Loss of heterozygosity, copy number analysis and genome-wide mutation detection.
 - Genome-wide linkage and association studies.

- Real time quantitative PCR (gene expression, allelic discrimination).
- Nucleic acid quality assessment.
- Quantification of nucleic acids (Bioanalyzer, Nanodrop).

Equipment:

- > Affymetrix array platform (upgrade 7G).
- > Real-time quantitative PCR ABI 7000.
- > Real time quantitative PCR ABI 7900HT.
- > Bioanalyzer 2100.
- > Nanodrop 2000.

Functional and Cellular Analysis Platform

> FLOW CYTOMETRY LABORATORY

Functions:

- > Conventional cytometry:
- > In homogenous (cell line) or heterogeneous (biological fluid) samples:
 - Detection of the presence of proteins and determination of cell populations (cell markers).
 - Studies of signalling cascades (cell cycle, cell proliferation, apoptosis, intracellular calcium determination).
 - Quantification of transfection efficiency.
 - Phenotype changes. Relative and absolute presence.

Production of mediators.

- Detection of minority populations.

> Cell separator:

In sub-populations of separated cells:

- Microarrays.
- Western blot.
- Cell cultures.
- RT PCR.

Equipment:

- > FACSCalibur conventional flow cytometry.
- > Cytomics FC500 conventional flow cytometer (Beckman Coulter).
- > Flow cytometry FACSaria cell sorter.

Microscopy and Immunohistochemistry Platform

> IMMUNOHISTOCHEMISTRY LABORATORY

Functions:

- > Tissue processing.
- > Microtome paraffin-block cutting.
- > Automatic immunostaining.
- > Staining (Giemsa, haematoxylin-eosin).
- > Image acquisition and analysis using high-resolution colour microscopy and specialist software.

Equipment:

- > Tissue processor (Sakura).
- > Paraffin bath (Sakura).
- > Microtome (Microm).
- > Immune autostainer AS48 (Dako).
- > Autostainer (Sakura).

> MICROSCOPY LABORATORY

Functions:

- > Confocal microscopy in live and fixed cells:
 - Immunofluorescence of 2 to 5 fluorochromes.
 - Reconstruction of 3D and 4D images.
 - Colocalization studies.
- > Inter- and intra-interactions (FRET and FLIM).
- > Molecular diffusion times (FCS).
- > Conventional fluorescence microscopy (immunofluorescence with 1 or 2 fluorochromes, FISH).

Equipment:

- > Zeiss digital time-lapse microscope.
- > Confocal multispectral Leica SP5 AOBs with high-resolution scanning system and high-speed tandem scanning, FLIM/FCS modules and time-lapse incubation system.

------------	----------

Main Lines of Research

- Cardiac electrophysiology and arrhythmias.
- Heart failure.
- Ischaemic heart disease.
- New diagnostic techniques.

Challenges

- Describe cardiac repolarization (T wave genesis) in the isolated perfused human heart (Langendorff).
- Develop new drugs to treat atrial fibrillation based on involvement of atrial receptors for adenosine.
- Set up basic research lines related to car-

diac physiology in experimental models.

- Develop new diagnostic techniques for myocardial involvement based on myocardial electrical impedance measurements.

Active Grants

- Cinca J. Electrophysiological and molecular characterization of cardiac repolarization in the isolated human heart. La Marató de TV3 Foundation. March 2009-December 2012. 080630. €48,320.00.
- Cinca J. Remodelling of adenosine receptors in human atrial fibrillation: A novel mechanism for atrial arrhythmogenesis. CNIC-Carlos III Health Institute. January 2008-December 2011. CNI-12. €71,646.50.
- Cinca J. Redinscor. Spanish Heart Failure Research Network. Coordinated project. Carlos III Health Institute. January 2007-December 2012. RD06/0003. €151,639.78.
- Guerra J.M. Comparative study of electro-mechanical effects of epicardial and endocardial biventricular stimulation of the left ventricle in an animal model of heart failure. FIS Project. Carlos III Health Institute. January 2011-December 2013. PI10/01149. €82,340.50.
- Hove L. Effects of atrial fibrillation on the distribution and frequency of spontaneous calcium release events in human atrial myocytes. SAF Project. Ministry of Economy and Competitiveness. January 2012-December 2014. SAF 2011-30312.

External Collaborations

Redinscor (RD06/0003). Spanish Heart Failure Research Network. Carlos III Health Institute. PI: Juan Cinca.

Main Lines of Research

- Investigation of the genetic basis of venous and arterial thrombosis. GAIT-1 and GAIT-2 projects.
- Investigation of new antithrombotic drugs: thrombin inhibitors, molecules against activated factor X, low molecular weight heparin with oral activity, among others.
- Biomarkers of prothrombotic states in patients under 55 years with venous thromboembolic disease, acute ischaemic stroke, or acute myocardial infarction.
- Applied clinical development of the self-management model of oral anticoagulant treatment.

Challenges

- Study of the QTL detected in GAIT-1 families in relation to phenotypes of haemostasia with thrombosis risk (resistance to activated protein C, factor VIII, homocysteine, factor XII and others).
- Replication of the QTL related to thrombosis in GAIT-1 families by means of the linkage analysis using the new GAIT-2 families.
- Genomewide association study (GWAS) of the phenotypes included in GAIT-1.
- Design of new epidemiological projects on the risk of venous thromboembolism. The RETROVE Project: with the goal of establishing a score of individual risk, by jointly analyzing clinical data, plasma phe-

notypes and genetic markers). The PAN Project: on the influence of contraceptives on the phenotypes of the Hemostasis system and on the thrombosis risk.

- Continue the collaboration with the RECAVA Spanish network of cardiovascular patients and with other European groups. Mainly with the goal of applying the GAIT Project findings to cohorts of patients with venous and arterial thrombosis in Spain and other European countries.

Active Grants

- Fontcuberta J. Funds in support of Catalan research groups. Thrombosis and Haemostasis Group. AGAUR Project. September 2009-December 2013. 2009SGR 1147. €43,860.

Main Lines of Research

- Mechanisms of atherogenicity in low density lipoproteins (LDL).
- Electronegative LDL, interaction with cells from atherosclerotic lesions.
- Vulnerability markers in atherosclerotic plaque: electronegative LDL, myeloperoxidase, phospholipase.

- New markers of acute cardiovascular disease: cardiac troponins, natriuretic peptides, ST-2.
- New markers of cardiovascular risk in HIV: phospholipases, LDL size.
- New markers of cardiovascular risk in diabetes: phospholipases, HDL function, electronegative LDL.

Challenges

- Demonstrate that electronegative LDL is a marker of vulnerable atherosclerotic plaque.
- Determine the intracellular mechanisms involved in the inflammatory response induced by LDL(-) and the components of the particle that entail atherogenicity.

- Development of novel molecular strategies to inhibit the aggregation and binding to arterial wall proteoglycans of LDL.
- Find new markers of cardiovascular risk in diseases as diabetes, HIV or cardiac failure.

Active Grants

- Benítez S. Study of the mechanisms involved in the inflammatory effects of LDL(-) in monocytes and the inhibitory role of HDL. FIS Project. Carlos III Health Institute. January 2010-December 2012. PI09/0160. €56,500.
- Ordóñez J. Funds in support of Catalan research groups. Cardiovascular Biochemistry Group. AGAUR Project. August 2009-December 2013. 2009SGR 1205. €46,800.
- Ordóñez J. Metabolic effects of Atazanavir/Ritonavir versus Darunavir/Ritonavir in combination with Tenofovir/Emtricitabine in naïve HIV-1 infected patients. ATADAR Trial. 2011-2012. NCT01274780. €17,000.
- Ordóñez J. Performance Study of the Cobas b101 device for lipid profile and hemoglobin A1c evaluation. Roche Diagnostics. 2011-2012. €55,000.
- Ordóñez J. Evaluation of the High Sensitive Cardiac Troponin I Assay of Abbott Diagnostics and Prognostic Value of high sensitive Troponin I measurements in Severely Ill Patients. Abbott Diagnostics. 2011. €15,000.

-------------	----------

Main Lines of Research

Cardiovascular research:

- Inflammatory mechanisms involved in vascular disorders.
- Genetic basis of vascular pathologies: atherothrombosis, aortic aneurisms, and chronic venous insufficiency.
- New, more effective targets. Research into pharmacologic targets for NSAIDs of cardiovascular interest.

Cancer research:

- Intense peritumoural inflammatory response as a therapeutic strategy in solid tumours.
- Role of inflammatory mediators in head and neck squamous carcinoma, and in regulating gene expression in tumour relapse.

Challenges

- Our main challenge is to strengthen our collaboration with other groups. To do so we need to incorporate more predoctoral researchers, establish collaborations with the industry sector to develop new antiinflammatory drugs based on the inhibition of mPGES-1, and set up training progra-

mes for clinical physicians with a strong interest in research.

Active Grants

- Camacho M. Modulation by hypoxia of PGE2 biosynthesis in vascular cells and leukocytes: role of the PGE Synthases. Spanish Ministry of Industry, Energy and Tourism. January 2009-December 2011. SAF08-01777. €72,600.
- Vila L. RECAVA. FIS Project. Carlos III Health Institute. January 2008-December 2012. RD06/0014/1005. €143,251.

- Vila L. Identification of new therapeutic targets for the abdominal aortic aneurysm. Caixa Tarragona 2010. June 2010-May 2011. TU AYUDAS. €1,070.
- Vila L. Microsomal PGE-synthase-1 as a target for generation of new anti-inflammatory drugs useful in cardiovascular disorders: study in the abdominal aortic aneurysm context. Spanish Ministry of Industry, Energy and Tourism. January 2011-December 2013. SAF2010-21392. €145,200.

Awards

- Award for best scientific communication. 19 th National Congress of the Spanish Chapter of Phlebology. Spanish Society of Angiology and Vascular Surgery (SEACV) (Granada, April 2011). Romero J.M., Martí-

nez A., Souto J.C., Rib L., Vila L., Escudero J.R., Soria J.M. Genetic Basis of Chronic Venous Insufficiency and its involvement in VTE.

Main Lines of Research

- Physiopathological role of LRP family proteins in chronic diseases.
- Identification and characterization of transcription factors and genetic targets. Role of HDL and LDL.
- Vascular impact of ischaemia and angiogenesis in heart disease. Cellular therapy.

Challenges

- Set up and maintain an NMR/PET platform, essential for the strategic development of this programme and requiring the use of imaging techniques to evaluate the function of new targets for later therapeutic development.
- Use nuclear magnetic resonance is needed to answer questions arising from myocardial perfusion.
- Broaden the experimental focus to include transgenic animal models with/without cardiovascular risk factors in order to proceed to in-depth analysis of molecules involved in the modulation of new proteins.
- Maintain present relationships with collaborators and establish new multidisciplinary collaborations.
- Strengthen international funding for new platform development apply to international bodies for financing once we have the platforms necessary to carry out the proposed activities.

Awards

- Eurothrombosis Investigator Award 2011. First prize for the poster "Proteomic profiling of the human thrombus components". Eurothrombosis (Porto, Portugal).
- Journal of the American Heart Association. Karl Link New Investigator Award 2011 in Thrombosis, to the article "Glucose – regulated Protein 78 and Platelet Deposition: Effect of rosuvastatin", published in Atherosclerosis, Thrombosis and Vascular Biology. Arterioscler Thromb Vasc Biol 2010;30:1246-1252.

Main Lines of Research

- Inflammation and vascular remodelling. Regulation of vascular homeostasis by lysyl oxidase (LOX).
- Molecular and cellular mechanisms in atherosclerosis.
- Molecular basis of abdominal aortic aneurysm (AAA).

Challenges

- Identify and characterize the components of MEX involved in the appearance, progression and complication of atherosclerosis and AAA.
- Characterize new cellular and molecular mechanisms in the modulation of ECM stability.
- Determine the role of LOX and other enzymes that modify MEX in the development of cardiovascular diseases such as atherosclerosis and AAA.
- Characterize the role of LOX in the control of vascular homeostasis and identify genes modulated by this enzyme in vascular cells.
- Identify new therapeutic targets, progression markers and biomarkers in atherosclerosis and AAA.

Active Grants

- Rodríguez C. Mechanisms involved in the control of vascular homeostasis by lysyl oxidase (LOX): LOX as a new marker of the evolution of abdominal aorta aneurysms. FIS Project. Carlos III Health Institute. 2009-2012. PS09/01797. €152,460.

**Main Lines
of Research**

- Identification of new biomarkers of atherothrombosis and ischaemic heart disease with potential use in diagnosis and prognosis, performing studies in cell cultures, animal models of cardiovascular disease and human samples of patients with coronary heart disease risk factors.

Challenges

- Advance research aiming to identify and characterize new biomarkers of vascular injury, atherothrombotic disease and/or ischaemic, coronary and cerebrovascular syndromes using post-genomic techniques.
- Generate new information on potential soluble biomarkers (in serum, plasma) and in microparticles circulating in blood, as well as in blood and/or vascular cells, using proteomic techniques based on liquid chromatography and bidimensional electrophoresis, antibody array systems and mass spectrometry (MALDI-TOF/TOF; linear ion trap).
- Validate biomarkers identified in the diagnosis and prognosis of cardiovascular and/or cerebrovascular disease using specific quantitative techniques (confocal microscope, ELISA, multiplex assays, etc.).
- Characterize molecular and functional mechanisms for which the selected biomarkers in cardiovascular pathology (biology of systems).
- Consolidate the Proteomic Platform.
- Lead and launch the BIOBANK for the SAFE-T European project.

Main Lines of Research

- Pharmacogenetics: genetic determinants in drug-response profiles.
- Monogenic muscular disorders: dystrophinopathies, dysferlinopathies, limb girdle dystrophies. Myotonic dystrophy.
- Hereditary breast/ovarian cancer.
- Motor neuron disorders: pathogenic mechanisms during human development and validation of biological markers for therapeutic follow-up.
- Monogenic blood disorders: haemochromatosis, haemophilia A and B, thalassemic syndromes.

Challenges

Pharmacogenetics:

- Pharmacogenetic studies in the treatment of colorectal cancer.
- Pharmacogenetic studies in the treatment of chronic inflammatory diseases.

Muscular dystrophies:

- Study of post-transcriptional regulation of the dystrophin gene using nonsense-mediated decay analysis in DNA from patients with Duchenne muscular dystrophy.
- Study of genes associated with new phenotypic forms of limb girdle muscular dystrophy.

Hereditary breast/ovarian cancer:

- DNA studies to classify DNA variants found in the BRCA1 and BRCA2 genes as pathogenic or neutral.
- Study of circulating tumour cells (CTCs) as prognostic markers in patients with locally advanced and disseminated breast cancer.

Hereditary motor neurone diseases:

- Development of neuromuscular junction in health and disease. Generation of iPS from fibroblasts or keratinocytes from patients.
- Broadening the spectrum of study of motor neuron diseases such as bulbar and spinal muscular atrophy, distal muscular atrophies and amyotrophic lateral sclerosis.

Monogenic hereditary haematological diseases:

- Study of genetic factors in the appearance of inhibitors to treatment with factor VIII and in the variability of phenotypic expression in haemophilia A.

Active Grants

- Baiget M. Pharmacogenetic and pharmacogenomic studies of solid tumour treatments (colorectal cancer and advanced rectal cancer). FIS Project. Carlos III Health Institute. January 2009-December 2011. PI08/0199. €246,598.
- Gallano P. Study of messenger RNA of the gene for Duchenne muscular dystrophy (DMD): interference of the mRNA degradation mechanism mediated by nonsense mutations (nonsense-mediated decay) in suppression therapy for premature termination codons. FIS Project. Carlos III Health Institute. January 2009-December 2011. PI08/0347. €279,389.
- Tizzano E. Study of the involvement of the poliovirus receptor (PVR) and androgen receptor (AR) in infantile spinal muscular atrophy. FIS Project. Carlos III Health Institute. January 2009-December 2011. PI08/0729. €76,835.
- Baiget M. Funds in support of Consolidated Catalan Research Groups. AGAUR Project. August 2009-December 2013. 2009SGR 1299. €42,640.

Collaborations

External Collaborations

- Participation in CIMBA (The Consortium of Investigators of Modifiers of BRCA1/2.)
- Collaboration with the University of Udine (Italy). Spinal muscular atrophy (SMA).
- Collaboration with the Royal Holloway University of London

(United Kingdom). Development of iPSC derived fibroblasts from SMA patients.

- Molecular Genetics Unit. Ramón y Cajal Hospital (Madrid, Spain). Genotype-phenotype studies in SMA patients.
- National Cancer Research Centre (CNIO) (Madrid, Spain).
- Catalan Institute of Oncology (ICO) (Barcelona, Spain).

Awards

- Scientific Committee Award of the Spanish Society of Clinical Biochemistry and Molecular Pathology (SEQC) to Montserrat Baiget.
- Research Excellence Prize of the College of Physicians of Barcelona (COMB) to Eduardo Tizzano.

---------------	-------

Main Lines of Research

- HDL and susceptibility to diabetes / arteriosclerosis: modification of the relationship by metabolic disorders, genetic modification and drug intervention.
- Genetic determinants of metabolic factors of cardiovascular risk: dyslipidaemia, type 2 diabetes, hyperhomocysteinaemia.
- Positive health effects of phytosterols.
- Development, validation and application of new clinical laboratory methods in the field of metabolic and cardiovascular medicine.

Challenges

- Analyse the effects of diabetes mellitus and hyperhomocysteinaemia in reverse cholesterol transport in vivo.
- Determine the pathogenic relevance of alterations in cholesterol metabolism in diabetic retinopathy.
- Compare the effects of niacin and fenofibrate in the HDL of patients with type 2 diabetes.
- Evaluate the importance of liver lipase and endothelial lipase on macrophage-specific reverse cholesterol transport in vivo.
- Study anti-cancer mechanisms of phytosterol action in depth.
- Define the genes/polymorphisms in chromosome 3p related to type 2 diabetes.
- Demonstrate the relationship of the four SNPs identified in the NNMT gene with homocysteine and thrombosis in a case-control study.
- Develop new molecular techniques to diagnose metabolic inherited diseases to be used in the clinical laboratory.

Active Grants

- Blanco F. Role of the lipases involved in lipoprotein metabolism in modulating the anti-atherogenic properties of HDL (reverse cholesterol transport specific to macrophage and antioxidant capacity). FIS Project. Carlos III Health Institute. January 2010-December 2012. PI09/0178. €92,570.

Main Lines of Research

- The role of the natural immune system in the development of autoimmune and inflammatory processes.
- Immunological response and clinical course in immunomodulator treatment.
- The role of autoantibodies, components of the adaptive immunity system, in the pathogenesis of autoimmune processes, and their use as diagnostic and prognostic markers in these diseases.
- Mechanisms involved in immunodeficiency.
- Study of lymphocyte subpopulations involved in the chronic rejection of the graft in cardiac post-transplant patients.

Challenges

- Research into the role of innate immunity molecules in the development and control of inflammatory processes, in the appearance of autoimmune phenomena, immunodeficiencies, infections, cardiovascular diseases and development of tumours.
- Analysis of the evolution of immunological parameters and their correlation with clinical response to treatment with immunomodulators.
- Role of TLR and STAT signalling in inflammatory diseases.
- Involvement of STAT family of transcription factors in response to superantigens.
- Study of mechanisms implicated in immunodeficiency caused by alterations of the CD8a molecule.
- Effects of rituximab, tocilizumab and adalimumab in immunological variables and their correlation with the clinical response in patients with inflammatory diseases.
- Role of perivascular adipocytes and TLR signalling pathways in the development of atherosclerosis.
- Inflammation and rejection in heart transplantation.
- Effects of immunobiological treatments on immunological variables.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Multi-organ Damage Group.
- Nephrology Group.
- Digestive Diseases Group.

--------------	----------

Main Lines of Research

Telemedical Artificial Pancreas:

- The second year of activities of the research Grant "Idosing" (FIS/Carlos III Health Institute) allowed, with success, the validation in vitro, as well as the development of phase I of a clinical pilot. The pertinent report was submitted to the Carlos III Health Institute in due time. PI: Dr. Ana Chico.

Diabetes and Gestation:

- The registration of demographic characteristics of GDM patients in Spain and Portugal has made a significant progress in 2011. Both research lines ("Vitamin D and prevention of GDM" and "Optimization of glycemic control during the preconceptional period and pregnancies of type 1 diabetes") accomplished the proposed objectives for the year 2011. Periodical reports were submitted to the Coordinating Center, in Graz (Austria) (EC-FP-VII-Health).

Epithelial Thyroid Cancer and Cell-Nanothyroid:

- Over 110 surgical samples have been processed so far. Identification of tumor markers of prognostic values (BRAF, K-Ras) and testing the identified signature for poor prognosis are in progress. In 2011, the incorporation of Nano-particles to the human anaplastic cell-lines have been partially carried out, providing information on the cellular capacity to incorporate the nanoparticles by both normal cells and tumoral cells, and also confirming the promising incorporation of nanoparticles (designed already in 2010) as vehicles for one antitumoral agent specifically directed against the overexpression of epidermal growth factor receptor (EGFR). Annual report of activities was submitted to the Carlos III Health Institute (second year).

Challenges

- The application of "Efectividad Clínica del Páncreas Artificial Telemédico en pacientes con Diabetes Mellitus Tipo 1 (PAT-Dia1)" was successful, and qualified as high priority (number 4 in the national list of approved Grants). This is a Cooperative Research project, coordinated by this group, with the participation of the following Scientific Partners: Sansum Research Institution (University of California, Santa Barbara, USA), San Carlos Hospital (Madrid,

Spain), La Fe Hospital-University of Valencia (Spain), and GBT (CIBERBBN)-UPM. At present, we are negotiating the budget with the CAIBER's Central Office.

- The group has also been successful in receiving an additional Grant from CAIBER (Carlos III Health Institute), as a financial complement to the EC Project "DALI" (Grant Application by Dr. Rosa Corcoy).

Active Grants

Main Lines of Research

- Morbimortality, low grade inflammation and cardiovascular risk in patients with acromegaly or Cushing's syndrome. FIS PI05/0448.
- ERCUSYN: European Registry on Cushing's syndrome. SANCO, EU Public Health Programme: PHP A800200 (www.ercusyn.eu).
- Neuroradiological, neuropsychological and clinical study of endogenous hypercortisolism: comparison of Cushing's syndrome and chronic major depressive disorder. FIS 08/0302.
- Validation of psychological properties of specific questionnaires to evaluate health-related quality of life (HRQoL) in Cushing's syndrome and acromegaly.
- Study of signal transduction of GH in muscle by gene expression in a C2C12 cell line stimulated with GH.
- Etiology of cardiopathy in acromegaly and its relation to body composition. FIS 11/0001.

Challenges

- Investigate the neuropsychological, neuroradiological and clinical correlation of patients with endogenous hypercortisolism (due to Cushing's syndrome or chronic major depressive disorder) or exogenous exposure to low-dose glucocorticoids (due to treatment of adrenal insufficiency or rheumatoid arthritis). Similar studies for acromegaly.
- Study gene expression in cultured muscle cells after exposure to GH, by means of microarrays.
- Validate psychological properties of questionnaires specifically developed to evaluate QoL in patients with Cushing's syndrome or acromegaly.
- Evaluate long-term morbidity and mortality in patients who have had Cushing's syndrome or acromegaly in the last 25 years.
- Analyse and update the European database of patients with Cushing's syndrome (ERCUSYN); over 500 patients from 36 countries were included by the end of 2011.
- Conduct in vitro molecular analysis of operated pituitary adenomas in coordination with the Department of Biochemistry and Molecular Biology at the University of Cordoba (Spain).

Active Grants

- Webb S. Neuropsychological, neuroradiological and clinical study in endogenous hypercortisolism: Comparison in Cushing's syndrome and chronic major depressive disorders. FIS Project. Carlos III Health Institute. January 2009-March 2012. PI08/0302. 220,068.75.

Main Lines of Research

Experimental research:

- Experimental rat model of cirrhosis and ascites.
- Mechanisms and prevention of bacterial translocation in rats with cirrhosis.
- Experimental model of spontaneous and induced bacterial peritonitis: physiopathology and treatment.
- MiRNAs expression profile in inflammatory bowel disease after stimulation with toll-like receptors ligands.

Clinical investigation:

- Physiopathology, diagnosis, treatment and prevention of bacterial infections, ascites and hepatorenal syndrome in cirrhosis.
- Diagnosis and treatment of hepatic encephalopathy in cirrhosis.

- Physiopathology, diagnosis, treatment and prevention of digestive haemorrhage due to portal hypertension of non-varicose origin.
- Chronic hepatitis B and C: diagnosis and treatment.
- Diagnosis and treatment of hepatocarcinoma.
- Physiopathology, diagnosis and treatment of intestinal inflammatory disease (inflammatory bowel disease).
- Polyps and colorectal cancer: epidemiology and early diagnosis.
- Diagnosis and treatment of acute pancreatitis.
- Prevention of acute pancreatitis post-ERCP.
- Chronic pancreatitis and pancreatic neoplasms: molecular studies, early detection and treatment.

Challenges

- Consolidate the CIBEREHD research group studying complications in cirrhosis.
- Expand the hepatology research lab and develop new research.
- Consolidate the research group on portal hypertension.
- Consolidate the line of research on pan-

- creatic illnesses.
- Consolidate the line of research on inflammatory bowel disease.
- Consolidate the line of research on polyps and colon cancer.
- Develop a line of research on digestive endoscopy.

Main Lines of Research

CLINICAL MICROBIOLOGY UNIT

- Study of resistance mechanisms.
- Tuberculosis, epidemiology and antituberculosis resistance mechanisms.
- Molecular biology applications to infectious disease detection, taxonomy and epidemiology.
- Medical care projects.

HIV AND AIDS UNIT

- Medical care projects.
- Study of pathogenic mechanisms altering body fat distribution.
- Study of metabolic disorders associated with antiretroviral treatment.
- Body composition changes.
- New antiretroviral drugs.

CLINICAL MICROBIOLOGY UNIT

Resistance mechanisms:

- Study of increased resistance as a result of gene carrier-vector spread.
- Continuity of work in the context of the Spanish Network for Research into Infectious Pathologies (REIPI), heading certain projects (e.g., epidemiology of the class C beta-lactamases in Spain) and cooperating with a project on the epidemiology of resistance to amoxicillin-clavulanic acid among others.
- Advancement of other research lines, both in-house and in cooperation with other centres, leading to 2 doctoral theses.

Tuberculosis, epidemiology and resistance mechanisms:

- Prospective monitoring of primary and acquired Mycobacterium tuberculosis re-

- Cardiovascular risk associated with antiretroviral treatment.
- Comorbid conditions associated with HIV-1 infection.
- Pharmacogenetics (toxicokinetics).
- Bacterial meningitis.

INFECTIOUS PATHOLOGY UNIT

- Restricted-use policies for antibiotic and antimicrobial agents and suitable use of antimicrobial agents.
- Study of infections associated with foreign bodies (joint prostheses, catheters, cardiac prostheses and pacemakers).
- Study of infections due to multiresistant microorganisms or requiring isolation.
- Tuberculosis.

Challenges

sistance to first – and second-line drugs.

- Molecular detection of resistance using a molecular antibiogram.
- Study of the epidemiology and spread of resistant strains and assessment of the impact of immigration and the contribution of new M. tuberculosis families (Beijing, EA1, CAS).

Molecular biology applications to infectious disease detection, taxonomy and epidemiology:

- Study of the usefulness of the 16S RNA gene for microbiological diagnosis and molecular identification.
- Genotype characterization of Cryptosporidium spp. oocysts from stool samples collected by the HSCSP microbiology service.

Medical care projects:

- Continuing with the government health department agreement regarding the development of epidemiological surveillance support functions for nosocomial infections and flaccid paralysis.
- Study of mycoses in depth, especially invasive fusariosis and aspergillosis and respiratory tract viral infections in patients with onco-haematological diseases.
- Continuing with multicentre studies of HIV.
- Monitoring of congenital infection in pregnant patients with Chagas disease.

HIV AND AIDS UNIT**Medical care projects:**

- Continuing with, expanding and, as appropriate, consolidating the care team for HIV-1 infected patients, consisting currently of 3 staff physicians, 4 grant-aided research assistants (including a Río Hortega-funded research assistant) and 2 nurses).
- Continuing with participation in multicentre projects (especially the AIDS network, Gesida, VACH, EuroSIDA and ART collaboration).
- Exploration of possible participation in clinical trials of new antiretroviral drugs.
- Increasing the number of HIV-1 infected patients attended to in our hospital (given current mortality rates, an estimated annual increase of 50 patients is required).
- Continuing with current clinical research and mixed basic research-clinical research lines.

Pathogenic mechanisms altering body fat distribution:

- Study of metabolism in pyrimidines and derivatives in the genesis of lipodystrophy associated with HIV-1 and antiretroviral treatment.
- Development of an animal (mouse) model of lipodystrophy.
- Development of in vitro models (adipocyte cultures) to study the adipose toxicity of antiretroviral drugs.
- Study of new manifestations of the lipodystrophy syndrome.
- Development of measurements for antiretroviral drug concentrations in adipose tissue.

- Exploration of the role of inflammation in the pathogenesis of lipodystrophy associated with HIV-1 and antiretroviral treatment.
- Metabolism of uridine and its role in the pathogenesis of lipodystrophy.

Metabolic disorders associated with antiretroviral treatment:

- In vivo assessment of metabolic toxicity associated with antiretroviral treatment.
- Development of in vitro models (adipocyte cultures) to study the adipose toxicity of antiretroviral drugs.
- Study of factors contributing factors to hepatic steatosis in patients receiving antiretroviral treatment.
- Study of the pathogenic role of FGF21 in insulin resistance in HIV-1 – infected patients.
- Study of role of FABP4 in metabolic disorders associated with antiretroviral treatment.

Body composition:

- Definition of normal fat distribution in the general population.
- Establishment of abnormal fat distribution patterns.
- Development of a definition of lipodystrophy associated with HIV-1 and antiretroviral treatment.

New antiretroviral drugs:

- Clinical trials of new antiretroviral drugs (phases 2 and 3).
- Ritonavir and non-ritonavir pharmacokinetic potentiation of antiretroviral drugs.

Cardiovascular risk associated with antiretroviral treatment:

- Establishment of a multicentre cardiovascular risk cohort.
- Study of antiretroviral treatment-dependent and non-treatment-dependent factors in multicentre cohorts.
- Development of in vitro models (adipose cultures) to study adipose toxicity for antiretroviral drugs.

Comorbid conditions associated with HIV-1 infection:

- Study of ageing in different tissues associated with HIV-1 infection and antiretroviral treatment.
- Study of fragility in patients with HIV-1 infection and the role of HAART.

- Evaluation of the neurocognitive function in patients with HIV-1 infection with and without antiretroviral treatment.

- Participation in multicentre cohort studies to determine the incidence of specific comorbidities (cancer, HCV, cardiovascular disease, osteogenesis/osteoporosis): EuroSIDA, ART Collaboration, Gesida, VACH, etc.

- Treatment of HCV in patients with HIV-1 and its prognostic significance.

Pharmacogenetics (toxicogenetics):

- Role of enzyme polymorphism of the pyrimidine pathways in the pathogenesis of lipodystrophy.
- Role of enzyme polymorphism of the pyrimidine pathways in the pathogenesis of clinical toxicity (neuropathy, pancreatitis).
- Role of IL28B polymorphism in spontaneous HCV clearance in the response to antiviral treatment based on interferon and ribavirin.

Bacterial meningitis:

- Identification of prognostic factors in adult bacterial meningitis.
- Continuation with a cohort study of adult bacterial meningitis.
- Identification of host-intrinsic factors in the pathogenesis and prognosis of adult bacterial meningitis and meningo-coccal disease.

INFECTIOUS PATHOLOGY UNIT**Restricted-use antibiotic and antimicrobial agent policies:****Suitable use of antimicrobial agents:**

- To minimize the appearance of resistance.
- To reduce cost.
- To improve compliance with surgical prophylaxis (at the time of administration).

Epidemic outbreaks and infections caused by multiresistant microorganisms and microorganisms requiring isolation:

- To study epidemiology for our hospital.
- To reduce incidence.
- To prevent/contain epidemic outbreaks in the hospital and to work with the microbiology department in epidemiology and molecular studies.

Microbiology and Infectious Diseases

Challenges

Infections associated with foreign bodies (joint prostheses, catheters, cardiac prostheses, pacemakers):

- To reduce incidence.
- To develop effective conservative treatment regimes.

Infections in transplant patients (heart, haemopoietic progenitors):

- To study current epidemiology.
- To assess the efficacy of prophylaxis and other preventive measures.

Tuberculosis:

- To cooperate with studies of resistance and with new treatment regimes for tuberculosis.

Other care projects:

To continue with the government health department agreement regarding the development of support functions as follows:

- Epidemiological surveillance of nosocomial infections (VINCat).
- Tuberculosis control: Barcelona-Dreta Tuberculosis Operations Committee (Coordinator: Dr. Sambeat).
- New influenza control: Barcelona-Dreta Epidemiological Surveillance Operations Committee (Coordinator: Dr. López-Contreras).

Active Grants

- Coll P. Introduction of molecular biology techniques in CFGS Clinical Diagnostic Laboratory. MEC Grant. October 2011-June 2012. INNOVACIÓN APLICADA 2011. €21,366.32.
- Coll P. Spanish Network for Research in Infectious Diseases (REIPI). Retics Project. January 2007-December 2011. RD06/0008/0013. €71,520.
- De Benito N. Comparative study of the effectiveness of 'short' and 'long' doses for the rifampin-levofoxacin combination in the early postoperative staphylococcal infection and haematogenous infection of prosthetic joints. FIS Project. Carlos III Health Institute. January 2009-April 2013. EC08/00135.
- Domingo P. Prospective observational study of polymorphisms in pyrimidinemetabolic enzymes in the pathogenesis of lipodystrophy associated with HIV-1 and HAART based on thymidine analogues. FIS Project. Carlos III Health Institute. January 2009-December 2011. EC08/00256.
- Domingo P. AIDS Network. Retics Project. January 2007-December 2011. RD06/0006/0022.

Main Lines of Research

Bone metabolism and osteoporosis:

- Analysis of the genetic influence on osteoporosis by means of aggregation studies in families of 3 or more generations with a minimum of 15 members. Research on the influence of biological markers and the predictive capacity of whole body composition and bone mineral density of the hip and spine.
- Bone structure study with quantitative CT of hip and spine, analysing the contribution of trabecular and cortical components using HRCT.
- Study of biomechanical hip and spine resistance of hip and spine with HRCT using the QCT PRO software package.
- Study of bone resistance using the hip structural analysis system and DXA in members of different families.
- Development of normalization equations of fat measurement using three different DXA whole body composition scanners.
- Description of fat values and percentages in a normal population (in collaboration with HIV Unit and CETIR Medical group).

Hypertension and vascular risk:

- Hypertension and quality of life.
- 24 hour Ambulatory blood pressure monitors (ABPM).
- Refractory hypertension.

Clinical management, general internal medicine and geriatrics:

- Health care quality indexes (mortality, readmissions, etc).

Rheumatology:

1. Rheumatoid arthritis:

- Evaluation of lymphocyte (B) subpopulations and reactivation of disease after the depletion of B lymphocytes due to anti-CD20 (rituximab) treatment.
- Evaluation of innate immune and adaptive immune cell responses in rituximab treatment in the depletion and reactivation phases after depletion.
- Evaluation of serologic components in the reactivation of rheumatoid arthritis after reactivation with rituximab.

2. Predictors of response to rituximab in rheumatoid arthritis patients:

- Study of the LIRB1 polymorphisms in rheumatoid arthritis with absence of a shared epitope.
- Evaluation in the prognosis for rheumatoid arthritis.
- Pharmacokinetics of methotrexate in collaboration with Héctor Corominas and Montserrat Baiget.

3. Psoriasis:

- Evaluation of enthesitis by ECO-Doppler in collaboration with Lluís Puig and Carme Moragues.

4. Scleroderma:

- Capillaroscopy patterns and correlation with auto-antibodies.

5. Gout:

- Epidemiology of hyperuricemia and gout.

6. Other studies:

- Study of biomarkers in biopsies of several joint disorders in collaboration with Frank Pessleer and Ralf Shumaker. Evaluation of C1q, antibodies anti-C1q, properdin and other auto-antibodies in relation to lupus nephropathy in collaboration with José Ballarín at the Puigvert Foundation.

Challenges

The core goal is to develop and coordinate research in several internal medicine areas. More specifically our aims are as follows:

- To merge the hypertension and lipids departments in the HSCSP and create a vascular risk unit. This is currently being considered as a model that would enable us to work jointly with the Puigvert Foundation hypertension unit.

- To establish stable work relations between the HSCSP bone metabolism and complex disease genomics units and the bone metabolism unit of Hospital del Mar-Municipal Institute for Medical Research (IMIM) and the Faculty of Biology of the University of Barcelona.
- To strengthen the ties between the HSCSP rheumatology and immunology departments regarding the study of immunological diseases.

Active Grants

- Casademont J. Study of the genetic basis of osteoporosis and risk of hip fracture. Mutua Madrileña Foundation. July 2008-July 2011. 08/FMM.
- Casademont J. Identification of the genetic factors influencing the risk of developing osteoporosis. FIS Project. January 2009-December 2011. PI08/0667.
- Casademont J. Intermediate phenotypes in the risk of developing

osteoporosis. The GAO project (Genetic Analysis of osteoporosis). FIS Project. 2012-2014. PI11/01175. €169,345.55.

- Torres O. Study on the misuse of drugs in elderly patients hospitalized in internal medicine from different Spanish hospitals. Spanish Ministry of Health. January 2011-December 2011. EC10-077.
- Díaz Torné C. studies of methotrexate in rheumatoid arthritis. Catalan Society of Rheumatology. Juny 2011. €6,000.

Awards**Clinical Management, General Internal Medicine and Geriatrics:**

- 1st prize of 10th edition of the Mutua Convivir Research Foundation Awards for the project "Predicting intrahospital mortality in geriatric patient at admission in Internal Medicine". Authors: Francia E., Torres O., Barceló M., Casademont J.

Hypertension and Vascular Risk:

- Prize to the best abstract of its session in the 21st European Meeting on Hypertension and Cardiovascular Prevention (Milano, 2011) to "Quality Of Life According To Blood Pressure And comorbidities in Spanish Hypertensive Patients". Authors: Roca-Cusachs A., Abellán J., Font B., Lahoz R., Salazar J., on behalf of the ALHAMBRA Study Group.

Main Lines of Research

Clinical research:

- Development of new therapeutic strategies.
- Studies to improve tumour staging.
- Studies to detect residual disease.

Translational research:

- Personalized anticancer therapy.
- Studies of predictive and prognostic molecular markers.

Challenges

- Consolidate clinical research into cancer.
- Foster translational research into cancer in cooperation with other internal and external research groups.
- Consolidate the bank of tumours, DNA and serum for patients with cancer diagnosed and treated in our hospital.

Active Grants

- Páez D. Río Hortega Postdoctoral Contract. February 2009-January 2012. CM08/00065.
- Ramón y Cajal T. FIS Predoc training contract 2008. January 2010-December 2012. PI09/1024.
- Tibau A. Biological predictive markers of the response to primary chemotherapy with anthracyclines and taxanes in breast cancer. January 2010-May 2011. SEOM 2009.

Main Lines of Research

- Development of novel animal models of disseminated disease in solid tumors and hematological neoplasias.
- Study of the role of the oncogene K-ras in colorectal cancer metastasis.
- Development of an inhibitor of focal adhesion as an anticancer agent in acute myeloid leukaemia and non-Hodgkin B lymphoma and study of its mechanism of action.
- Development of molecular markers predictive of the response to genotoxic therapy in head and neck squamous cell carcinoma.
- Development of a nanoparticle for targeted drug delivery of antitumor drugs.

Challenges

- Obtain funding to ensure stable employment of senior researchers and potentiate current collaborations with clinicians.
- To develop inhibitors of focal adhesion signaling as novel antitumor drugs.
- To develop molecular markers for therapeutic decision making in head and neck carcinomas.
- To demonstrate targeted drug delivery and improved therapeutic threshold of antitumor drugs using a nanoparticle vehicle.
- Increase the number of industrial contracts in the preclinical development of antitumor drugs.
- Potentiate international collaborations, and participation in EU projects.

Active Grants

- Mangues R. Improved metastasis efficiency in a model of human colorectal cancer and the effect of the K-RAS oncogene in the transition from micro-to macro-metastases. FIS Project. Carlos III Health Institute. January 2010-December 2012. PI09/0965. €278,300.
- Mangues R. Biobank Network. FIS Project. Carlos III Health Institute. January 2011 – December 2011. RD09/0076/00081. €98,843.
- Mangues R. Oncogenesis by HTLV-1. Inhibition of focal adhesions as a therapeutic strategy. Spanish Ministry of Economy and Competitiveness. December 2010-December 2013. PIB2010BZ-00563. €90,000.
- Mangues R. Grants to support research groups in Catalonia. Oncogene and Antitumour Group. AGAUR Project. September 2009-December 2013. 2009SGR 1437. €69,680.
- Mangues R. Development of a high-affinity chimeric protein scaffold as a vehicle for gene therapy of metastatic colorectal cancer. AGAUR Project. January 2011-October 2011. 2010 CONP1 00076. €8,985.
- Mangues R. Preparation of a Grant Proposal to the 7WP, EU HEALTH.2011.1.4-3, Scafmet Project. Spanish Ministry of Economy and Competitiveness. September 2010-October 2011. SAF2010 11697E. €6,000.

Main Lines of Research

Malignant haemopathies:

- Diagnosis and morphological, immunophenotyping, cytogenetic and molecular characterization of malignant haemopathies, particularly acute leukaemias.
- Impact of biological characteristics in response to treatment.
- Studies of new treatments aimed at molecular targets using cell line models.
- Application of the genomic platform (microarrays) and proteomic platform to the diagnosis of malignant haemopathies.

Non-neoplastic haemopathies:

- Diagnosis and characterization of thrombocytopenias, thrombocytopathies and other platelet pathologies, especially complex pathologies (of genetic, mixed or unknown origin) and including unusual presentations of common diseases.
- Study of the relationship between platelets and thrombotic phenomena, including clinical, diagnostic and therapeutic aspects.
- In the framework of the GAIT-2 (genetic analysis of idiopathic thrombophilia, phase 2) project, to seek new phenotypes that favour the development of thrombosis, specifically related to the structure and function of platelets and other blood cells.

Challenges

- Consolidate the functional structure of the group that characterizes haematological tumours and complex, rare and genetic nonneoplastic haematopathologies.
- Include the results of mass-analysis genomic and proteomic platforms in diagnostic algorithms and establish prognostic factors for haematological disorders, preferably complex or genetic neoplastic and non-neoplastic pathologies.
- Develop functional models: cell cultures and simple animal models.

- Consolidate cooperation with the GAIT-2 project, especially regarding platelet and other blood cell participation in the generation of thrombosis.
- Promote interaction with other hospital groups (clinical haematology, pathology, gastrointestinal, haemostasis and thrombosis, complex disease genomics) and with other centres in Spain and abroad, especially those with complementary technologies and groups with which stable links can be established.

Active Grants

Main Lines of Research

- Pathogenic mechanisms of endometrial/ovarian cancer.
- Clinical application of prognostic factors in common cancers (endometrial, ovarian, etc.).
- Clinical application of tumour markers.
- Molecular biology of uterine and extra-uterine sarcomas.

Challenges

- Progress as a productive translational gynaecological cancer research group capable of competing with other highly visible groups in Barcelona that publish regular articles in reputable journals and cooperate with other groups at the national and international levels.

Active Grants

- Prat J. Role of epithelial-mesenchymal transition (EMT) in endometrial carcinoma. FIS Project. Carlos III Health Institute. January 2009-December 2011. PI08/0410. €68,002.
- Prat J. Role of CDC42-macrophages in the development of clear cell carcinoma and endometrioid carcinoma in endometriosis. Mutua Madrileña Foundation. July 2011-July 2013. 9438/2011. €16,000.
- Prat J. Agreement between the Department of Health and Farmaindustria. Farmaindustria. September 2010-June 2012. CAT-BIO-03. €44,694.
- Prat J. Cancer Cooperative Research Thematic Network (RTICC). Retics Project. January 2007-December 2012. RD06/0020/0015. €400,472.
- Prat J. Stable Research Groups: Molecular

Alterations related with progression in endometrial cancer. Spanish Association Against Cancer (AECC). September 2011-September 2016. AECC 2011. €1,200.000.

- Catásus L. Prognostic value of CpG island methylator phenotype (CIMP) in endometrioid endometrial cancer: study of the degree of methylation of the MLH1, P16, APC, E-cadherin, MGMT, RASSF1A, RASF2A, DAPK and SFRP gene promoters. FIS Project. Carlos III Health Institute. January 2008-March 2011. PI07/0899. €67,760.
- Espinosa I. Desmoid tumour (fibromatosis): mutational and immunohistochemical study of beta-catenin and analysis of gene expression with clinicopathological correlation. Spanish Group of Sarcoma Research (GEIS). March 2009-March 2011. 09/GEIS. €9,000.

Main Lines of Research

- Genetic and molecular predictors of response to head and neck cancer: collaboration with the Oncogene and Antitumour Drug Group.
- Molecular mechanisms of inflammation in head and neck cancer: collaboration with the inflammation laboratory.
- Nasosinal endoscopic surgery: innovations in skull base techniques.
- Internal ear: aspects related to severe deafness, cochlear implants and otoneurological surgery of tumours.

Challenges

- Promote clinical and translational research in the field of head and neck cancer with a database containing a very large series of head and neck cancers. We aim to study relevant clinical issues in depth (second-third neoplasms, staging concerns, prognostic factors, etc.) and investigate translational aspects such as genetic and molecular predictors.

Active Grants

- León X. Study of PGE-synthetase isoenzymes in head and neck lines of squamous cell carcinoma and their role in regulating gene expression of tumour progression. FIS Project. Carlos III Health Institute. €70.000. January 2009-December 2011. PI08/0537.

Collaborations

Collaborations with other IIB Sant Pau Groups

Main Lines of Research

- Study of molecular and cellular physiopathology of haematological cancers.
- Study of the prognostic value of clinical and biological parameters in hematologic malignancies.
- Design of new modalities of chemotherapy, biotherapy and drug treatment to target molecular mechanisms.
- Biological diagnosis and innovation in infectious complications related to immunodepression.
- New forms of hematopoietic stem-cell transplantation and cell therapy.
- Psychological intervention and quality of life in patients with haematological malignancies.

Challenges

- Identifying new prognostic parameters for risk and therapeutic stratification.
- Evaluation of targeted therapy in cell lines and animal models.
- Reduce toxicity of allogeneic transplants.
- Dissect graft vs tumor effect from graft versus host disease.
- Molecular characterization of AML. Determination of the prognostic value of known genes and other genes of uncertain significance (in cooperation with the Haematology Laboratory).
- Animal modelling of leukaemia and lymphoma (in cooperation with the Oncoge-

ne and Antitumour Laboratory) so as to better understand the cell physiopathology of these diseases and to test new drugs (in cooperation with the oncogenesis and antitumour programme).

- Cell physiology and immunotherapy for lymphoproliferative diseases. Molecular characterization and prognostic significance. Evaluation of antitumour immunotherapy in animals and humans.
- Genomic, proteomic and animal models of transplantation. Exploration of predictive indicators of complications, particularly in graftversus-host disease and infections. Early therapeutic intervention.

Main Lines of Research

- Pathogenic mechanisms of breast cancer.
- Identification and validation of therapeutic targets derived from previous studies.
- Mechanisms of response to chemotherapy treatment.

Challenges

- Progress as a breast cancer research group publishing regular articles and cooperating with other groups in our centre and at the national and international levels.

Active Grants

- Lerma E. The epithelial-mesenchymal transition and membrane receptors in breast carcinoma invasion. Comparative study on invasive and noninvasive neoplastic foci by microarray gene expression RT-PCR and immunohistochemistry. Mutua Madrileña Foundation. September 2008-December 2011. 08/FMM.

Lavinia Dinia HSCSP RI
Josep Lluís Martí HSCSP

Technicians

Elena Jiménez HSCSP RI
Rebeca Marín HSCSP RI

Main Lines of Research

- Neurogenesis and neurorepair after ischaemic stroke.
- Growth of haematoma in the acute phase of spontaneous brain haemorrhage.
- Endothelial progenitor cells in ischaemic stroke.
- Monitoring the effect of thrombolysis in acute ischaemic stroke.
- Benefit and risk of thrombolysis in acute ischaemic stroke.
- Beta-amyloid and cerebral haemorrhage: diagnostic and prognostic studies
- Risk of cerebral hemorrhage in patients receiving oral anticoagulant therapy.
- Sonothrombolysis.

Challenges

- Enhance cooperation with other groups in the framework of the Spanish Stroke Research Network (RETICS/RENEVAS) and also intrahospital cooperation (the Catalan Institute of Cardiovascular Sciences and the Haemostasis-Thrombosis Unit) and extra-hospital cooperation (with groups managed by Dr. García-Verdugo

in Valencia, Dr. Arús at the Autonomous University of Barcelona, Dr. Anna Planas at Clinic Hospital, Dr. Turgut Durduran at ICFO). To obtain funding from FIS, regional authorities and private companies.

- Increase the number of contracted and grant-aided researchers and professionally develop existing researchers.

Active Grants

- Delgado R. Development of multiscale and multiparameter optical monitoring for the study of acute cerebral ischaemia: from animal model to the patient. FIS Project. Carlos III Health Institute. January 2010-December 2012. PI09/0557. €104,665.
- Martí J. RENEVAS Neurovascular Network, RETICS (Redes Temáticas de Investigación Cooperativa). FIS Project. Carlos III Health Institute. January 2007-December 2011. RD06/0026/0019.
- Martí J. Sonothrombolysis enhanced with microbubbles as a new treatment for acute ischemic stroke: a pilot study, prospec-

tive and randomized. La Marató de TV3. 2011-2013. €199,924.

- Martí J. Cerebral hemorrhage with anti-coagulant therapy in the secondary prevention of stroke: predictive value of leukoaraiosis and microbleedings detected by MRI. FIS Project. Carlos III Health Institute. FI12/00296. €37,741.11.
- Martí J. Diffuse-Optical monitor of cerebral hemodynamics after rtPA administration in acute ischemic stroke. Beca Marie Curie FP-PEOPLE (Comunidad Europea). 2008-2012. €100,000.

Awards

- Award to the best communication for the job "Endothelial progenitor cell count in patients treated with statins". Congress of the Catalan Society of Neurology (Vic, Spain, 2011).
- Grupo Ferrer Award for best paper published on cerebrovascular diseases "Proliferation in the human ipsilateral subventricular zone after ischemic stroke". Spanish Society of Neurology (Madrid, Spain, 2011).

Collaborations

Collaborations with other IIB Sant Pau Groups

- Molecular Pathology and Therapeutic of Ischaemic and Atherothrombotic Diseases Group.
- Thrombosis and Haemostasis Group.

External Collaborations

Dementias

Coordinator

M^a Teresa Gómez-Isla HSCSP
mgomezi@santpau.cat

NOTE:

In 2011, Dr. Gomez-Isla developed only 10% of her work in the HSCSP. Most of the content of her publications has been developed from the Massachusetts General Hospital (Boston, USA).

Main Lines of Research

- Development and characterization of new in vitro models of Alzheimer disease.
- Development and characterization of new in vivo models of Alzheimer and other neurodegenerative diseases.
- Identification of signalling pathways and molecular mechanisms involved in neurotoxicity mediated by beta amyloid.
- Study of mechanisms involved in neuron and synapsis resistance in the Alzheimer pathology in human brains.
- Testing of new therapeutic strategies in Alzheimer disease.

Challenges

- Development of new in vitro, mouse and human disease models recapitulating the main aberrant features of Alzheimer disease. We are investigating the usefulness of these models for understanding the pathophysiology of the disease and for testing new neuroprotective strategies and evaluating individual susceptibility to the disease.
- Development and characterization of new mouse disease models for the testing of new therapeutic strategies in Alzheimer disease and for molecular imaging in vivo.
- Study of the brains of individuals who meet Alzheimer histopathology criteria but who never developed symptoms in life, designed to identify the molecular pathways responsible for disease resistance and new potentially useful therapeutic targets for Alzheimer and other neurodegenerative diseases.
- Exchange and training of basic and clinical research personnel and collaborative projects between the HSCSP and Massachusetts General Hospital attached to Harvard University (Boston, MA, USA).

Active Grants

- Gómez-Isla T. Study of molecular neurodegeneration mechanisms and testing of a new therapeutic strategy in a double transgenic mouse model of Alzheimer disease. FIS Project. Carlos III Health Institute. October 2007-September 2011. PI07/1057.

Main Lines of Research

Immune-mediated neuromuscular diseases:

- Immunopathogenesis studies, with characterization of new targets, and innate immunity studies in immune-mediated neuromuscular diseases.
- Analysis of the effect of new immuno-modulating therapies on functional aspects of immune system cells (response to ligands, production of antibodies, etc.).

Muscular dystrophy, dysferlinopathy and distal myopathies:

- Clinical characterization, new diagnostic tests for dysferlinopathy and distal myopathies, and study of molecular pathways involved in differentiation and molecular and functional interactions of dysferlin.
- Functional analysis of truncated forms of dysferlin with possible therapeutic implications.

Challenges

- Advance knowledge of the immunological mechanisms involved in the pathogenesis of immune-mediated neuromuscular diseases.
- Search for new antigens and development of diagnostic tests.
- Implement new diagnostic methods for muscular dystrophies resulting from dysferlinopathy and distal myopathies.
- Advance knowledge of the pathogenetic mechanisms involved in muscular dystrophy resulting from a dysferlin deficiency.
- Implement cell therapy in mouse models of muscular dystrophy using mesoangioblasts and bone marrow, to study possible applications in humans, and to study immune system response to cell therapy in mouse models of human disease.
- Cleanroom access to manipulate cells for use in humans.
- Evaluate the effects of treatment with lithium in patients with amyotrophic lateral sclerosis.
- Evaluate the effects of treatment with vitamin D in carriers of a DYSF gene mutation.

Active Grants

- Gallardo E. Grants to support research groups in Catalonia. Neuromuscular Disease Group. AGAUR Project. September 2009-December 2013. 2009SGR 1004.

Main Lines of Research

Cognitive impairment and behavioural dysfunctions in Parkinson disease:

- Knowledge and detection of the neural correlates of cognitive performance in Parkinson disease using neurophysiological techniques (event-related brain cognitive potentials) and structural and functional neuroimaging (voxel-based morphometry, cortical thickness and spectroscopy).
- Development of more sensitive tools for cognitive and functional assessment in Parkinson disease that will allow detection of subtle changes in cognitive performance and treatment response.
- Surgery and treatments of continuous infusion in Parkinson's disease.
- Prospective follow-up analysis of cognition and mood in patients with deep brain stimulation of the subthalamic nucleus.
- Follow-up and etiologic study of weight loss in patients treated with continuous infusion of intraduodenal levodopa.

Essential tremor and other movement disorders:

- Molecular neuroimaging in essential tremor.
- Clinical, neurophysiological and neuroimaging assessment of patients with FX-TAS (fragile X-associated tremor/ataxia syndrome).
- Physiological correlates and pharmacological approach to apathy in Parkinson disease and other movement disorders.

Translational research – Parkinsonian animal models:

- Assessment of behavioural and cognitive modulations exerted by distinct antiparkinsonian drugs in murine models of Parkinson disease with lesions in particular neurotransmitter systems (dopaminergic and noradrenergic lesions).

Huntington Disease:

- Creating a specialized unit of Huntington Disease oriented to the diagnosis, monitoring and comprehensive treatment of patients with the disease and their families. The team consists of an interdisciplinary group of neurologists, neuropsychologists and nurses working in synergy with the dietary, rehabilitation and psychiatry services of the Hospital. The current research lines are:
 - Registry Study: Active participation in the Registry study of the European Network for the Study of Huntington's Disease (EHDN) with the inclusion, to date, of 51 new participants.
 - Participation in two multicenter sub-projects of EHDN in Spain: 1) Study on Nutrition in Huntington's disease (PI: Ester Cubo, Burgos, Spain), 2) Validation Study of the PBA-S scale in the Spanish (PI: Jesús Iñaki, Barcelona, Spain).
 - Development of instruments to evaluate cognitive state of patients: 1) Development of a neuropsychological rating scale specific to pre-symptomatic patients (preHD-CRS), 2) Validation of the PD-CRS scale in Huntington disease for diagnosing mild cognitive impairment and dementia.
 - Study of the prevalence of hallucinations in Huntington's disease.

Active Grants

- Arenas F. Juan de la Cierva Contract. MINECO. 2011. Juan de la Cierva Contract. December 2011-December 2014. JCI-2011-08810. €96,000.

- Ribosa R. AGAUR Contract 2010 FI-DGR 2001. January 2011-January 2014. 2011 FI-DGR. €40,030.80.

Challenges**Cognitive and behavioural dysfunctions in Parkinson disease:**

- Study and understanding of the neural substrates of cognitive impairment in Parkinson disease so as to improve diagnostic and therapeutic approaches.
- Development of specific tools to assess and track cognitive changes in Parkinson disease.

Essential tremor and other movement disorders:

- Genetic studies and genotype-phenotype correlations in essential tremor.
- Development of new therapeutic interventions in essential

tremor.

- Neurochemical and structural neuroimaging studies on the pathophysiological bases of essential tremor.

Translational research – Animal models of parkinsonism:

- Behavioural, physiological and pharmacological characterization of animal models of parkinsonism with combined dopaminergic and noradrenergic lesions.
- Physiopathology of motor, cognitive and behavioural complications linked to antiparkinsonian drugs in animal models of parkinsonism.

Collaborations**Collaborations with other IIB Sant Pau Groups**

Main Lines of Research

- Molecular and behavioral characterization of opioid and cannabinoid receptors during chronic pain.
- The role of nitric oxide and carbon monoxide on the development and expression of neuropathic or inflammatory pain.
- The involvement of nitric oxide-carbon monoxide/CG/PKG pathway on the effects and expression of opioid and cannabinoid receptors during chronic pain.

Challenges

- Identify new therapeutic strategies for the treatment of chronic pain.
- Determine the main genes involved in the regulation of inflammatory and neuropathic pain.
- Study the mechanisms implicated in the regulation of opioid and cannabinoid receptors gene expression in different pain models.
- Evaluate the possible interactions between nitric oxide and carbon monoxide during acute and chronic pain.
- Investigate the prevention/reversion of opioid tolerance in several animal chronic pain models.

Active Grants

Main Lines of Research

Clinical trials that offer no therapeutic benefits to volunteer participants:

- Phase I clinical trials (healthy volunteers) whose main objectives include: first-time-in-humans, safety and tolerability (local and systemic – dermatological, ophthalmological, vaginal), pharmacokinetics, bioavailability and bioequivalence (generic drugs), pharmacodynamics, interactions (drug-drug, drug-food), evaluation and characterization of biomarkers, proofs of concept, acceptability and preference studies.
- Follow-up studies in populations with same or different characteristics: the elderly, obese volunteers, postmenopausal volunteers, patients with liver or kidney failure.
- Collaboration with clinical services to conduct phase II or phase III studies.

Neuro-physio-pharmacology of sleep/wake states:

- Investigate human brain activity in sleep and wakefulness, mechanisms involved in these two states, problems derived from sleep disturbances and possible interventions to treat these.
- Approach the phenomenon as a continuum, that is, that appropriate interpretation of the impact of a certain intervention, whether pharmacological or not, should take into account the complementarity of evaluations performed during sleep and during wakefulness. The phenomenon under study cannot be evaluated without taking this interactivity into account: develop studies that consider the 24-hour day/night cycle.
- Use psychomotor performance tests, subjective evaluation scales, neurophysiologic recordings (quantitative EEG, evoked-sensorial potentials and polysomnography), psychophysiological tests and pupillometric tests.

Challenges

- Consolidate and strengthen leadership in this field in Spain, conserve relationships with the pharmaceutical industry on a national level and strengthen and extend relations abroad with multinational enterprises and industries from other sectors.
- Broaden the range of questions to address in research projects along the lines of neuro-physio-pharmacology of sleep/wake states, not focusing only on pharmacotherapeutic objectives but also on physiopathologic objectives in related fields, such as dreams.
- Develop the performance of neurophysiologic recordings in ambulatory conditions, simplifying participation of volunteers but not lowering the quality of data obtained (non-negotiable element of their application as a research variable).

- Promote dissemination of our activity with a double objective: to return the knowledge generated to the society and to demystify research in humans, bringing it closer to the community so as to foster participation in clinical trials (particularly in specific sectors of the populations, such as the elderly).
- Set up educational activities related to the two main research lines, i.e., the application of good clinical practices (GCPs) in clinical research sleep medicine and its medical (pathology and treatment) and social (quality of life, prevention of accident risk) consequences.

---------------	----------

Main Lines of Research

- Psychotic disorders (first episodes).
- Affective disorders (major depression).
- Borderline personality disorder.
- Mental health therapy.

Challenges

- Foster research that reduces the healthcare, social and personal costs of mental illness by exploring areas such as epidemiology, etiopathogenesis, physiopathology, prevention and treatment.
- Foster research into mental health therapies.
- Foster research to improve quality of life of patients with mental disorders.

- Neuroimaging studies in early psychotic episodes.
- Biological and genetic markers in affective disorders.
- Implementation of new therapeutic programmes, depression evaluation and social aspects of depression.

Research into personality disorders:

- Clinical trials regarding the usefulness of mixed treatment in patients with borderline personality disorder and validation of diagnostic instruments.
- Genetic-neuroimaging studies of borderline personality disorder.
- Efficacy and effectiveness studies of psychotherapy for treating BPD.

Mental health therapy research:

- Efficacy and treatment resistance.
- Systematic reviews.
- Validation of diagnostic and assessment scales.

Research into psychotic disorders:

- Neuroimaging studies in early psychotic episodes.
- Study of environmental, biological and genetic factors in psychosis.
- Efficacy and effectiveness studies of anti-psychotic drugs.
- Efficacy and effectiveness study of psychotherapy for hallucinations.

Research into affective disorders:

- Identification and evaluation of new therapeutic targets in depression.

Main Lines of Research

Challenges

Genetics in presenile Alzheimer disease:

- A multicentre project compiling genetic samples from over 200 presenile patients with Alzheimer (disease onset before 65 years), already giving rise to several international papers. A new project is now underway with these samples to investigate new genes involved in presenile forms without APP or presenilin gene mutations (FIS 529/766).

Genetic alterations in familial and sporadic Lewy body disease:

- This line of investigation studies genetic alterations that may be related to dementias with familial and/or sporadic Lewy body disease. Several papers on results have been published to date. We are presently studying sporadic forms: we have requested brain tissue samples from the Barcelona University Neurological Tissue Bank and we are recruiting Neurology Service Memory Clinic patients with a clinical probability of Lewy body dementia. Mutations in genes related to this illness have been ruled out in about 55 samples (half confirmed by pathological diagnosis). In samples without mutations we will study the genotype of the genome to detect possible presence of genomic anomalies associated with the disease.

Genetic risk factors of dementia in Parkinson disease:

- In collaboration with the Movement Disorders Unit we are collecting samples from patients with Parkinson disease. All patients undergo specific tests to detect dementia associated with the disorder. We will conduct sequencing of genes related to familial or sporadic Parkinson disease, and genetic variants related to neurodegenerative dementias will be genotyped. The objective is to find genetic risk factors for dementia in patients with Parkinson.

Prevalence of mutations in genes related to amyotrophic lateral sclerosis (ALS):

- In collaboration with the Neurology Service Neuromuscular Nursing Unit we are creating a gene bank of patients with ALS in order to study mutations in genes that promote familial and sporadic forms of the disease.

Genetic architecture of complex diseases caused by neurodegenerative processes:

- Research into familial aggregation for specific diseases to determine genetic links and clone new genes.
- Genetic association studies to establish genetic and genomic risk factors for different diseases.

- Study of the prevalence of genetic mutations in the Spanish population.
- Expansion of the genetic library already consisting of over 1,500 DNA samples.
- To continue to expand the DNA bank to achieve a numerous, well-characterized, homogenous sample of patients and their relatives. This will provide invaluable potential for high-level genetic research into diseases of this nature.

Human Experimental Neuropsychopharmacology

Coordinator

Jordi Riba
jriba@santpau.cat

HSCSP RI

Collaborators

José Carlos Bousó
Rafael Guimaraes

HSCSP RI
UAB

**Main Lines
of Research**
General neuropsychopharmacology:

- Pharmacological modulation of the different neurotransmission systems so as to study the role of these systems in advanced cognitive functions (executive control) and emotion.

Neuropsychopharmacology of abused substances:

- Study of the effects on the central nervous system of psychodysleptic drugs such as ayahuasca, salvinorin A, dimethyltryptamine and THC. Assessment of the impact of long-term drug use.

Challenges

- Consolidate existing research lines and extend them through possible cooperation agreements with other groups and according to the growth of the group itself.
- Obtain emerging-group recognition for the Experimental Human Neuropsychopharmacology.
- Obtain stable funding for the group and support in terms of technical staff.

- Communicate our activities.
- Maintain existing external cooperation agreements.
- Establish new cooperation agreements within the HSCSP Research Institute.

Active Grants

- Riba, J. Evaluation of reward processing and executive functions in cocaine-dependent subjects using MRI. FIS Project. Carlos III Health Institute. January 2008-December 2011. PI07/0952. €80,102.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Pharmacokinetic/Pharmacodynamic Modelling and Simulation Group.
- Parkinson Disease and Movement Disorders Group.
- Clinical Psychiatry Group.

External Collaborations

- Cognition and Brain Plasticity Group. Hospital de Bellvitge (Barcelona, Spain).
- Clinic for Neurology (Lübeck, Germany).
- Department of Comparative Biomedical Sciences (Louisiana State University, Baton Rouge, USA).

Main Lines of Research**Identification of new biochemical markers in cerebrospinal fluid in Alzheimer disease and other neurodegenerative dementias:**

- CSF biomarkers in Alzheimer disease and frontotemporal dementia.
- Amyloid imaging in neurodegenerative dementias.
- Novel MRI markers in preclinical Alzheimer

disease.

- Integral molecular characterization of the gamma-secretase complex in Alzheimer disease.
- Interaction and synergic effects between the tau protein and alphasynuclein in Lewy body disease.
- Role of progranulin and TDP-43 in frontotemporal dementia.

Challenges

- Maintain and increase scientific production and funding in the next 5 years.
- Develop a training plan for researchers entering the group while maintaining its translational nature.
- Establish new cooperation agreements

that support applications for European and international projects.

- Establish links with technological innovation groups and companies to foster patent applications and set up contracts.

Active Grants

- Blesa R. Cerebral amyloid deposits in Alzheimer's disease: role of genetic risk factors and genes involved in neuroplasticity and synaptogenesis. FIS Project. Carlos III Health Institute. January 2011-December 2013. PI10/00018. €260,936.
- Fortea J. Multimodal studies of cerebrospinal fluid and MRI in preclinical Alzheimer's disease. FIS Project. Carlos III Health Institute. 2011-2013. PI11/02425. €112,000.

Main Lines of Research

- Ours is a multidisciplinary research group, which has the added value of joining clinical neuroimaging skills from the members of the Clinical Unit of Neuroradiology at Hospital Sant Pau, and technological knowledge from investigators at the PIC/IFAE of the Autonomous University of Barcelona (Spain).

- The main focus is the search for neuroimaging biomarkers in diseases involving the central nervous system, such as neurodegenerative and neuropsychiatric conditions, among others.
- A second research line is the implementation of automatic procedures, and software tools to improve neuroradiological practice.

Active Grants

Jordi González	IE-UAB
Xavier Rojano	IE-UAB
Marta Roqué	IE-UAB
Technicians	
Àlex Domingo	IE-UAB
Administrative Staff	
Eva Julià	IE-UAB

Main Lines of Research

- Health research on ageing:
 - Healthy ageing: physical activity, nutrition and cognition.
 - Frequent health problems among older adults: falls, frailty and sarcopenia, functional loss, Alzheimer and other dementias, malnutrition and other geriatric syndromes.
 - Epidemiological studies.
- Health and social services research.
- Research on caregivers of older adults.
- Promotion of active ageing among older people.
- ICT application on health and social services and active ageing.

Challenges

Health research area:

- The health research area is mainly aimed at health promotion and disability prevention in order to improve quality of life among older people.
- The clinical and epidemiological research that we undertake includes both observational and intervention studies. Our main topics of interest include lines of research on mobility, nutrition and cognition.
- Health and Social Services research: Social and health care are key for the maintenance of autonomy. Our interest in health and social services focuses mainly on the following topics:
 - Models of social and health care.
 - The organization of health and social services.
 - Comprehensive needs assessment.
 - Quality of care.

- Good caregiving practices.
- Assessment of dependence.
- Home care services.
- Analysis of economic costs.

Research on application of ICT (Information and Communication Technologies) in the field of Health, Social Services and active aging:

- ICT are making a great development to create new resources that are useful and easy to use for the elderly, their families, caregivers and professionals. We work with technology companies to develop systems aimed at monitoring health, facilitate participation and ensure safety.
- Our interest in this area mainly focuses on the following topics:
 - Social appropriation of ICTs.
 - E-Health development.
 - Development of new technological products to promote active aging.

Collaborations

Collaborations with other IIB Sant Pau Groups

Main Lines of Research

Alcohol:

- Study of the usefulness of the EMCA, IRISA and SPECT scales with IBZM as possible predictors of outcome in alcohol-dependent patients during the first 12 weeks of recovery.
- Clinical study with escitalopram for treatment of depression and anxiety associated with alcoholism.
- Randomized, double-blind, parallel, placebo-controlled study on the efficacy of nalmefene in alcohol-dependent patients.

Cocaine:

- Evaluation of cocaine craving during hospitalization conditions.

Smoking:

- Multicentre, open, randomized clinical trial to measure the efficacy of proactive telephonic follow up as an aid to smoking cessation in comparison with in situ methods.
- Multicentre interventional project on smoking in psychiatric patients. Treatment of tobacco smoking with varenicline in psychiatric patients.

Opiates:

- Patient satisfaction concerning maintenance treatment with opioid agonists.
- Satisfaction of the heroin-dependent patient regarding methadone and methadone pharmacogenetics.

Challenges

- Establish bidirectional links between clinical practice and investigation both to suggest hypotheses and to incorporate recent advances.
- Participate in controlled clinical trials on the treatment of addictive disorders.
- Develop clinical research studies into the perspective of patients with addictions.

Collaborations

External Collaborations

- Factor structure, reliability, convergent validity, discriminating power and sensitivity to change of the Spanish version of Remission from Depression Questionnaire (RDQ). 11BI02. Financing Entity: Banco de Instrumentos CIBERSAM. PI: Víctor Pérez Sola (Department of Psychiatry).
- Psychometric properties of the Spanish version of the Clinically Useful Depression

Outcome Scale (CUDOS). BI03. Financing Entity: Banco de Instrumentos CIBERSAM. PI: Joaquín Soler (Department of Psychiatry). 2009-2011.

- Psychometric properties of the Spanish version of the Borderline Symptom List (short Version). BSL-23. BI109. Financing Entity: Banco de Instrumentos CIBERSAM. PI: Juan Carlos Pascual (Department of Psychiatry). 2010-2012.

Active Grants

- Pérez de los Cobos J. Case-control study to assess the association between heroin-dependent patient satisfaction with methadone maintenance treatment and methadone pharmacogenetics. FIS Project. January 2010-December 2012. PI09/1072. €61,710.
- Trujols J. The perspective of patients with schizophrenia in the identification, prioritization and measurement of pragmatic outcome variables: meta-synthesis and systematic review of studies evaluating preferences. FIS Project. January 2010-December 2011. PI09/90034. €12,000.

HSCSP RI

Main Lines of Research

Gastrointestinal surgery:

- Application of laparoscopic surgery in diseases of the spleen.
- Application of laparoscopic surgery in disorders of the oesophagogastric junction.
- Advanced application of colorectal laparoscopy.
- New stratification and treatment options in colorectal cancer.

Oncological and hepatobiliarypancreatic surgery:

- Surgery for liver metastasis in colorectal cancer.
- Development of diagnostic and therapeutic techniques in the global context of treatment for liver metastasis in colorectal carcinoma.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Metabolic Bases of Cardiovascular Risk Group.
- Endocrinology, Diabetes and Nutrition Group.
- Angiology, Vascular Biology and Inflammation Group.
- Clinical and Translational Cardiology Group.

■ Surgery for primary hepatic tumours: determination of efficient prognostic parameters for surgical resection of hepatocarcinoma and likelihood of tumour recurrence after resection.

■ Introduction of the laparoscopic methodology in biliary lithiasis.

■ Surgery for sarcomas: participation in GIST research through GEIS (Spanish Sarcoma Research Group) and other entities.

■ Surgery for sarcomas: participation in the development and results of surgery for retroperitoneal tumours.

Emergency care:

■ Collaborative project on clinical safety for the introduction of safe practices in polytraumatized patients.

External Collaborations

■ At the National level the group has participated in a CNIC-financed project in collaboration with Jiménez Díaz Fundación, Family Hypercholesterolemia Foundation (Madrid, Spain) and Reina Sofía Hospital (Córdoba, Spain).

■ At the international level Dr. Teresa Padró participates in IMI-collaborative project based in academic, SMEs, and pharmaceutical comp

Challenges

Active Grants

Gastrointestinal surgery:

- Design, develop and manage a dry laboratory for endoscopic surgery, creating a multifunctional research and teaching space to conduct applied technological research in minimally invasive surgery.

Hepatobiliopancreatic surgery for cancer:

- Development of techniques to study liver volume and function.
- Development of experimental studies on the function and healing of bilio-intestinal sutures.
- Studies of the value of nutrition in patients undergoing aggressive surgery for highly debilitating cancer.
- Suitable stratification of GIST tumours in accordance with an anatomopathological classification.
- Viability of surgical interventions considering the likelihood of disease recurrence.

Emergency surgery:

- Consolidation of a multidisciplinary group for polytraumatized patient care.

Breast surgery:

- Technological innovations in surgery.
- Possible role of genetic studies in diagnosis and follow-up.

Endocrinial and cervical surgery:

- Technical innovations in surgery.

- Balagué C, Targarona E, Trias M. Bariatric Surgery project: virtual reality platform to control the evolution, simulation and prediction of bariatric surgery. Sub INNPACTO, National Plan for Scientific Research, Development and Technological Innovation. 2008-2011. IPT-2011-1377-900000.
- Martínez C. Study of the stress response after colon surgery comparing conventional treatment and the fast-track method (FT) in open and laparoscopic surgery. The preparation method will not objectify FT advantages of laparoscopy. FIS Project. January 2009-December 2011. PI08/0437.

- Targarona E. Prediction of pathological features of the mesorectum after laparoscopic resection of low rectal cancer, based on preoperative pelvimetry and volume analysis after 3D reconstruction of the pelvis and its contents. FIS Project. January 2010-December 2012. PI09/1437.

HSCSP RI

**Main Lines
of Research**

- Study of biomaterials.
- Tumour biology: gliomas, hypophysis adenomas.
- Anatomy of the skull base.
- Clinical evaluation of neurostimulation techniques in different neurological entities (treatment-resistant depression and neuropathic pain).

Challenges

- Monitor the clinical trial on treatment for treatment-resistant depression using deep brain stimulation techniques, jointly with the psychiatric department.
- Evaluate neurostimulation for other disorders: cluster headache.

Cooperation with research into gliomas:

- Oncogenesis and Antitumour Group (GOA-HSCSP. PI: Dr. R. Mangues) in cooperation with the HSCSP Neurosurgery Department.
- Cooperation with the Cardiovascular Research Institute (managed by Drs. J. Blanco and N. Rubio) investigating the development of antitumour cell therapy strategies for the treatment of malignant gliomas.
- Cooperation with the endocrinology group regarding hypophyseal tumour biology.
- Cooperation with CREAL in a multicenter study on incidence of intracranial gliomas and use of mobile phones. European Study ENV 2008. Risk of brain cancer from exposure to radiofrequency fields in childhood and adolescence.
- Anatomical studies to develop new surgical approaches to skull base tumours in cooperation with the University of Barcelona-Clínic Hospital anatomy professor.

**2 cerebrovascular disease
multicentre clinical trial
projects (jointly with the HSCSP
Neurology Department):**

- Impact-24 study of the effects of stimulation of the sphenopalatine ganglion on cerebral perfusion in patients with CVA.
- Clear III study of intraventricular fibrinolysis to treat cerebral intraventricular haemorrhaging.

Main Lines of Research

- Proteomics applied to nephrology and hypertension induced by anti-calcineurin agents.
- Hereditary kidney diseases: genetic and clinical studies in disorders such as polycystic kidneys, Alport disorder, corticosteroid-resistant nephrotic syndrome.
- Fabry disease and treatment of angiomyolipomas with rapamycin.
- Glomerular disorders: molecular and clinical studies in disorders such as Sjögren's syndrome, membranous glomerulopathy and vasculitis with renal involvement.
- Kidney transplant: cardiovascular risk factors, chronic nephropathy of renal graft, pharmacogenetic and genomic studies.
- Chronic kidney disease and cardiovascular risk: early diagnosis, studies of genetic damage in patients with chronic renal insufficiency, epidemiological studies, clinical studies of chronic renal insufficiency, hyperparathyroidism, renal anemia, renal osteodystrophy and haemodialysis techniques.
- Mechanisms of epithelial-mesenchymal transition and renal fibrosis.

Challenges

- To maintain the level of national and international publications.
- To continue with clinical and basic research in all previously described areas both in clinical and basic research.
- To actively participate in the elaboration of most important Clinical Nephrology Guidelines.

Active Grants

Main Lines of Research

- Clinical epidemiology.
- Systematic reviews.
- Clinical practice guidelines.
- Health service evaluations.
- Clinical trials (phase 3/4).
- Methodological research.

Areas of interest:

- Evidence-based medicine.
- Cancer.
- Perioperative medicine.
- Cardiovascular medicine.
- Public health.
- Lower back pain.
- Appropriateness.

Challenges

- Become a reference group in Spain and in Latin America regarding the preparation of systematic reviews on the effects of healthcare interventions, enhancing the group's capacity to provide technical and methodological support and increasing its scientific production in the framework of the Iberoamerican Cochrane Network. The group is currently participating directly in the preparation of a number of systematic reviews and is providing support to other reviews inspired by the Iberoamerican Cochrane Network, expected to be published by the Cochrane Library (with an impact factor of 6.186) in the next 2 years.
- Promote greater use of scientific evidence and evidence-based medicine tools in clinical and healthcare decision making by means of stable agreements with governmental, academic and scientific entities and institutions, thereby ensuring the ongoing development and dissemination of these

tools and the implementation of training in their use. It is also developing clinical practice guidelines and a number of training activities regarding evidence-based medicine.

- Become a reference group for independent applied clinical research that fosters relevant and scientifically sound studies aimed at meeting the real needs of the national healthcare system, whether on its own initiative or through networked relationships with similar groups (CIBERESP, Cochrane Collaboration, Latin-American Clinical Epidemiology Network and other academic groups such as McMaster University in Canada). Apart from research studies already underway, the group is currently setting up clinical and epidemiological studies (phase 3/4 trials with non-commercial interests, research into healthcare services and results and studies of research methodologies) and apply for additional public funding for new projects aimed at consolidating these research lines.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Locomotor System Research Group.
- Evaluation of Public Health Policies and Programmes Group.
- Nephrology Group.
- Palliative Care Group.

External Collaborations

Main Lines of Research

- Public Health Injury Surveillance.
- Evaluation of road safety strategies at urban level.
- Evaluation of road safety strategies in Spain.
- Indicators of mobility exposure and risk of traffic injuries
- Determinants of walking as a mode of transport.
- Social inequalities in fatality injuries.

Participation in international projects:

- Road Safety Data Collection, Transfer and

- Analysis (DACOTA).
- Joint Action on Monitoring Injuries in Europe (JAMIE).
- Social and spatial inequalities in terms of traffic safety.

Research projects in the planning and design phase:

- Active ageing and fall prevention.
- Motorcycle and moped injury determinants.

Challenges

- Study of the nature of injuries and their severity according to the characteristics of the collision and the vehicles involved, particularly in urban settings.
- Evaluation of road safety policies and interventions.

- Development of exposure denominators for the calculation of indicators.
- Study of motorized and non-motorized mobility and its impact on health.

Active Grants

- Pérez C. Road Safety Data Collection, Transfer and Analysis (DACOTA). EU-Seventh Framework Programme. 2010 – 2012. 233659. 5,550.012.
- Pérez C. Mobility practices and risk of road accidents: social, cultural and regional inequalities in France and Spain. Agence Na-

tionale de Recherche Française. 2010-2012. 2009I046. €149,977.

- Pérez C. Joint Action on Monitoring Injuries in Europe (JAMIE). European Commission. 2011-2014. 20102205. 1,588.646.

Collaborations

External Collaborations

- The three abovementioned active projects are collaborations with international groups.

Main Lines of Research

Application of the new technologies to tuberculosis (TB) control:

- Significant international diffusion has been achieved. Google Analytics offers a highly effective system for analysing website visits that enables us to assess the kind of users interested in our portal. In 2007 there were 13,429 visitors, 21% from Latin America.
- The main objective of TB Research Unit (UITB) is to produce scientific knowledge of relevance on the control, diagnosis, treatment and prevention of TB. From the visits and discussion forum comments, it is clear that we continue to play a key role in Spain and in Latin America.

Clinical trials for the prevention and treatment of tuberculosis:

- Our centre, which is the only such centre in Europe, is part of a network of international centres (in Canada, Brasil, South Africa and Uganda) associated with the Tuberculosis Trials Consortium of the CDCs, promoting international involvement in laying the therapeutic and strategic bases for the treatment of TB and tubercular infection. Preliminary results have recently been presented at the ICAAC and other important international conferences (such as that of the American Thoracic Society). The article with definitive study data is pending publication.

Challenges

- Investigate the transmission of hepatitis B in autochthonous and immigrant populations.
- Evaluate HIV screening programmes in gay saunas.
- Improve detection and research into causes of hepatitis C.
- Study legionella and TB outbreaks.

Active Grants

- Caylà J.A. Quick study of the characteristic of the outbreaks of influenza A (H1N1) v. Factors associated with the index case and with preventive measures. Carlos III Health Institute. 2010-2011. GR09/0029. 184,811.34.
- Caylà J.A. Study 26. Comparison of a pattern of 12 doses per week for 3 months of supervised treatment based on 900 mg RPT versus daily self-administration of 300 mg isoniazid (270 doses) for 9 months. Centers for Disease Control and Prevention (USA). 2003 (opened). TBTC26. €113,266.
- Caylà J.A. Study 26A. Impact of chronic viral hepatitis in discontinuation of treatment for latent tuberculosis infection due to hepatotoxicity. Centers for Disease Control and Prevention (USA). 2004 (opened). Substudy of Study 26.
- Caylà J.A. Evaluation of a test for determining interferon-gamma in the diagnosis of tuberculosis infection from a cohort study of individuals at risk for tuberculosis. FIS Project. 2008-2011. PI081711. €136,972.
- Caylà J.A. Hospitalization risk factors for influenza A (H1N1) 2009 and effectiveness of pharmacological interventions, hand hygiene, respiratory hygiene and other non-pharmacological preventive measures. Case-control study. CIBER Project. 2009-2011. €865,532.

Main Lines of Research

- Health inequalities according to social class in Spain and worldwide have been analysed in depth.

- The main contributions of some of these studies lies in the exploitation of information at the census section level as the maximum disaggregation unit, and also at higher geographic aggregation levels, such as the neighbourhood, town and region. This enables an examination of both the individual and contextual effects of using multilevel techniques and Bayesian methods for geographic data.

Gender inequalities in health:

- Sexual division between productive and reproductive work (gender roles) and differences in male and female identities are the 2 main structural factors that generate gender inequalities in health.

- Specifically, men and women experience different kinds of exposure and perceive and react differently to the same exposure. This, combined with the existence of gender bias in healthcare, explains the existence of gender inequalities in health, aspects that have been researched by members of this group. Unemployment and employment instability in the health arena have been analysed in terms of gender and class differences. A theoretical framework and explanatory charts have been developed to guide comprehension of the gender determinants that affect health.

Social and political determinants of health and their impact on policy building and interventions:

- This group has produced evidence of the macroeconomic determinants of health inequalities between countries. A society's wealth explains a significant proportion of health inequalities. Leaving aside economic reasons, social and political settings are very important in explaining inequalities.

- In recent years, the group has also studied the impact of the political context on the health of the population, concluding that countries with better developed welfare states had better levels of health. An analysis of policies was one of the tools used from the perspective of both formulation and application in specific interventions.

Challenges**Study health inequalities according to different inequality axes:**

- To date the group has essentially studied the social determinants of health separately in terms of social class and gender. We now aim to integrate these 2 axes and analyse inequalities among immigrants.
- In the last decade interest has grown into research into the impact of area of residence, especially smaller urbanized areas, on the health of the population. This explains why individual factors are not enough to explain diseases and poor health, as contextual factors regarding the area of residence (e.g., the unemployment rate) need to be taken into account. Furthermore, the characteristics of the area of residence can contribute to socioeconomic and environmental inequalities in health. Finally, the study of health inequalities in smaller urban areas enables the detection of areas for intervention. This research has recently been facilitated by the use of methods such as GIS and Bayesian hierarchical models of spatial epidemiology.

Study gender inequalities in health:

- This research line aims to further explore the theoretical framework and explanatory charts developed to guide comprehension of the gender determinants that affect health.

Study the social and political determinants of health and the impact on policy building and interventions:

- It is planned to continue studying the influence of policies on the health of populations and on social inequalities in health.

Study sex and reproductive inequalities in health:

- It is planned to establish a line of research to investigate the different aspects of sexual and reproductive health (sexuality, contraception, pregnancy, birth, miscarriage, abortion, birth rates, etc).

Main Lines of Research

Epidemiology of drug use patterns:

- Study of variables such as socioeconomic level, social network and violence as determinants of heroin use and associated health problems.
- Patterns of heroin and cocaine use, associated health problems and implications for health care services.
- Methadone treatment programmes, cost/effectiveness of auxiliary programmes and improvements in quality of life.
- Development and evaluation of new instruments for diagnosis and screening for alcohol-related problems.

Health problems associated with drug abuse:

Infections:

- Prevalence and patterns of HIV/AIDS in Spain, especially among drug users.
- HTLV-1 and syringe user. Molecular epidemiology of HTLV-2.
- Prevalence of other infections related to injected-drug use and associated factors. Prevention policies.

Injuries:

- Prevalence of substance abuse in individuals involved in traffic accidents and other accidents. Effectiveness of brief motivational interventions to reduce alcohol consumption in the injured who arrive at emergency rooms under the influence of alcohol but without alcoholic dependence.

fluence of alcohol but without alcoholic dependence.

Psychiatric comorbidity:

- Psychiatric comorbidity in illegal drug users. Development of criteria for heroin and cocaine dependence for application in semi-structured questionnaires and similar in areas of mental health.

Impact of drug consumption on mortality:

- Main causes of mortality among drug users (overdoses, AIDS, accidents, homicide, suicide, chronic liver disease, etc.). Mortality rates and life-expectancy estimates.
- Effects related to the route of heroin administration and relationships between factors such as frequency of consumption, overdose, level of education and knowledge of causes of mortality.

Quality of life in drug users:

- Factors determining decreased quality of life in active cocaine and heroin users.

Evaluation of health care policies:

- Analysis of health care policies and differences in immigrant access to health care services in European cities.
- Evaluation of Spanish policy concerning legal and illegal drug consumption and its impact on the general population.

Active Grants

- Brugal M., Espelt A. Monitoring of HIV, HCV and other STIs and risk behaviours in IDUs recruited in harm-reduction centres in Catalonia (REDAN). 2009-2012. CEEISCAT/ICO.

Epidemiology and patterns of drug use:

- Incidence and patterns of cocaine use.
- Incidence and patterns of heroin use.
- Prevalence of cocaine, heroin and alcohol.

Health problems associated to drug use:

- Aggressive and violent attitudes and behaviour in young cocaine users.
- Quality of life in users with psychiatric comorbidity.
- Use of services among young heroin, cocaine and alcohol users.
- Factors associated with retention in treatment programmes for cocaine and alcohol addiction.
- Mortality and its determinants in cohorts of alcohol and cocaine-dependent subjects.
- Factors associated with acute health problems following cocaine use.
- Analysis of differential social and health determinants among immigrants who use illegal drugs.

Evaluation of health policies:

- Evaluation of supervised drug consumption rooms and other policies to reduce harm.
- Study of social inequalities in evaluating results and adherence to treatment.
- Evaluation of brief motivational intervention programmes as an alternative to disciplinary measures in teenagers who consume psychoactive substances.

Primary Care Research

Coordinator

Carlos Brotons EAP Sardenya
cbrotons@eapsardenya.cat

Researchers

Núria Soriano EAP Sardenya

Technicians

Irene Moral EAP Sardenya
Mireia Puig EAP Sardenya

Administrative Staff

Tony Fernández EAP Sardenya

Main Lines of Research

- Prevention and health promotion in primary care settings.
- Implementation of cardiovascular risk prevention guidelines in clinical practice.
- Systematic review of clinical practice guidelines for cardiovascular risk prevention.
- Health related quality of life in patients with cardiovascular disease.

Challenges

- Enlarge the research team by linking up with other primary care centres associated with the ACEBA Family Medicine Teaching Unit.
- Work with other research teams in IIB Sant Pau.
- Work with other European institutions in implementing projects on risk prevention and health promotion in primary care settings.

Active Grants

- Soriano N. Randomized clinical trial to assess the effectiveness of memory training workshops in people of 65 to 80 years. FIS Project. Carlos III Health Institute. December 2011-December 2014. PI11/02060.

Collaborations
Collaborations with other IIB Sant Pau Groups

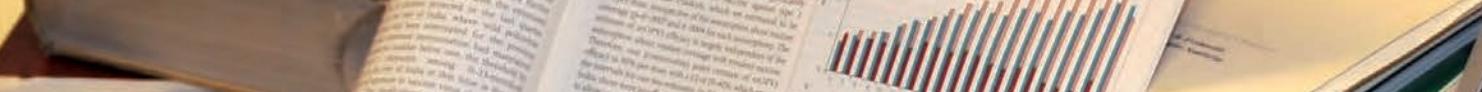

- Ageing Institute Group. Project "Pathways: From Solitude to participation".
- Nephrology Group. Project "Diabetic nephropathy: urinary proteome characterization and evaluation of the response to the inhibition of the renin angiotensin system (SRA)".
- Clinical Epidemiology and Healthcare Services Group. Project "Clinical trial on the evaluation of differed treatment strategies with antibiotics in uncomplicated acute respiratory infections in pediatrics (PDA-pediatrics)".
- Pharmacological Research in Humans Group. Project: A randomized, 2-way cross-

over, placebo controlled single dose study to evaluate the effect of the functional fruit concentrate on post-prandial glycaemic response and the bioavailability of phenolic compounds, in pre-diabetic and type 2 diabetic subjects.

- Evaluation of Public Health Policies and Programmes Group. Project "Randomized clinical trial to assess the effectiveness of memory training workshops in people of 65 to 80 years".

External Collaborations

- Evaluation of the ESC-EASD guideline on prevention of Cardiovascular Disease in Diabetic Patients. European Heart Health Strategy II. EuroHeart II. Executive Agency for Health and Consumers of the EU.

--------------	----------

Main Lines of Research

- Prevention and control of passive smoking.
- Studies evaluating the impact of lifestyle interventions.
- Evaluation of public health programmes and services, including management, or-

- ganization, results and impact.
- Evaluation of the effectiveness and impact of policies and programmes.
- 2009 MILESTONES: Main challenges that materialized in 2009.

Challenges

- Promote research into the evaluation of policies and programmes.
- Support the debate on conceptual and methodological aspects of results evaluation in prevention and health promotion.
- Consolidate the group's research, fostering less developed aspects such as fi-

- nancial assessment and the evaluation of health protection interventions.
- Develop a theoretical corpus of concepts, principles, methods and examples that contribute to filling the gap in under – and post-graduate teaching regarding the design and evaluation of risk prevention and health promotion interventions.

Active Grants

- Ariza C. Design and evaluation of the effectiveness of an intervention to prevent childhood obesity in school children. FIS Project. Carlos III Health Institute. January 2010-December 2012. PI09/02259. €127,171.
- Ariza C. Evaluation of the effectiveness of early treatment intervention for cigarette and cannabis smoking cessation in young people. National Drug Plan. Spanish Ministry of Health. November 2009-October 2012. 2009/046. €38,000.
- Nebot M. Evaluation of the impact of preventive recommendations regarding influenza A(H1B1)v in the population at risk and the adoption of non-pharmacological measures in the general population, school community and risk group. FIS Project. Carlos III Health Institute. September 2009-March 2012. GR09/0036. €199,480.
- Nebot M. Evaluation of the impact of smoke-free policies in Member States on exposure to second-hand smoke and tobacco consumption (IMPASHS). EAHC (European Agency for Health and Consumers). May 2008-April 2011. 2007313. €591,889.
- Nebot N. Research group for evaluation of

- public health policies and programmes. AGAUR Project. September 2009-December 2013. 2009 SGR 1345. €42,640.
- Nebot M. Improving Knowledge and Communication for Decision Making on Air Pollution and Health in Europe-APHE-KOM. EAHC (European Agency for Health and Consumers). June 2008-March 2011. 2007105. €1,470,900.
- Nebot M. Public Health Policies. Training Romanian staff at the regional level to develop Public Health Policies (PHPHO). Education, Audiovisual & Culture Executive Agency. February 2010-January 2012. LLP/LdV/Tol/2009/RO/017. €317,776.
- López M.J. Measuring the exposure to the environmental smoke and the estimate of its impact on mortality in Spain. FIS Project. Carlos III Health Institute. January 2011-December 2013. PI10/00400. €48,521.
- Nebot M. Factors associated with alcohol consumption in young people by place of origin and family migratory path. National Drug Plan. Spanish Ministry of Health. November 2011-November 2013. 2011/107. €74,890.

Main Lines of Research

- Genetic Epidemiology and Bioinformatics.

Genomic of Complex Diseases:

- Genetic Analysis of Idiopathic Thrombophilia (GAIT).
- Genetic Analysis of Osteoporosis (GAO).
- Genetics of Chronic Venous Insufficiency.
- Genetics of Abdominal Aortic Aneurysms (TAGA).

Pharmacogenomics:

- Markers of Genetic Susceptibility and Pharmacogenomics of Cardiovascular Diseases.

Challenges

- Consolidate the genetic epidemiology and bioinformatics research lines.
- Increase human and material resources so as to achieve the goals defined for different projects.
- Coordinate an international cardiovascular genomic project.
- Establish pharmacogenomic agreements with biopharmaceutical companies.

Awards

- Spanish Society of Thrombosis and Haemostasis (SETH). López Borrasca Prize 2011. Project: Identification of the genetic determinants of the intrinsic coagulation pathway and its involvement in thromboembolic disease.

Active Grants

- Athanasiadis G. Juan de la Cierva Research Contract. Spanish Ministry of Economy and Competititvity. January 2010-December 2013. JCI-2010 – 07202.
- García C. Contracts for health professionals who have completed specialized health training period. FIS Project. Carlos III Health Institute. February 2008-January 2011. FIS CM07/00126.
- López S. Sara Borrell Postdoctoral Research Contract. FIS Project. Carlos III Health Institute. January 2009-December 2012. FIS CD08/00059.
- López S. Identification of the genetic factors that determine the levels of fibrinogen in the Spanish population. FIS Project. Carlos III Health Institute. January 2009-December 2011. FIS PI08-0756. €122,936.
- Martínez A. Genetic basis of primary hemostasis phenotypes and their relationship to thrombosis. Spanish Ministry of Economy and Competititvity. January 2009-December 2011. SAF 2008-01859. €108,900.
- Soria J.M.. A genome-wide mapping and functional genomics approach to elucidating PRecOcious Artery Disease (PROCARDIS). European Union Project. April 2007-September 2011. 07/LS-HM-CT037273. €257,000.
- Soria J.M.. Genetic Analysis of Idiopathic Thrombosis (GAIT II). National Institute of Health (NIH). December 2008-May 2011. 07/2R01 LH070751-05. €598,000.
- Soria J.M.. Genetic Analysis Linked to an International Action on Thrombosis (GALIA-Thromb), XXV Anniversary of Spanish Society of Thrombosis and Haemostasis (SETH). Sociedad Española de Trombosis y Hemostasia (SETH). January 2010-December 2011. €25,000.
- Soria J.M.. Identification of genetic factors determining the variability of the FVIII levels and their implication in thromboembolic disease. FIS Project. Carlos III Health Institute. January 2009-December 2011. FIS PI08/0420. €137,335.
- Soria J.M.. Support Funds to Catalonian Research Groups. Unit of Genomics of Complex Diseases. AGAUR Project. September 2009-December 2013. 2009SGR 1240. €41,600.

Erick Hernández HSCSP RI

Main Lines of Research

Basic and applied structure-and-function studies of human proteins of biomedical interest, currently focusing on:

Thrombosis and Haemostasis:

- Structural and functional investigations of blood coagulation factors, with emphasis on 1) thrombin generation by the prothrombinase complex, as well as on 2) thrombin interactions with both physiological substrates (factor V, factor VIII and protease-activated receptors), and with exogenous inhibitors from haematophagous animals (e.g., anophelin from Anopheles mosquitoes; collaboration with Dr. P. Pereira, IBMC, Porto).

Lipid Metabolism and Dyslipidemias:

- Structure and function analysis of mutant apoA-V proteins identified in individuals with hypertriglyceridemia (collaboration with Dr. F. Blanco-Vaca, Biochemistry Laboratory, HSCSP & CIBERDEM).

Neurodegenerative Diseases:

- Analysis of mutations that affect the SMN genes, whose deficiency results in spinal

muscular atrophy (SMA) (collaboration with Dr. E. Tizzano, Genetics Department, HSCSP).

- Structure and function investigations of proteins associated with inherited forms of Parkinson's disease (PINK1, DJ-1 and Parkin) (collaboration with Dr. J. Kulisevsky, Movement Disorders Unit, Department of Neurology, HSCSP).

Cancer and Innate Immune Responses:

- Structure and function analysis of innate immune responses mediated by Toll-like receptors (TLRs), and in particular the role of the major adaptor, MyD88.
- Analysis of mutations and SNPs that affect the TET2 gene and their implications for acute myeloid leukaemia (ALM) (collaboration with Dr. J. Nomdedéu, Laboratory of Haematology, HSCSP).
- Structure and function analysis of the microsomal prostaglandin E synthase (mPGES-1) as a target for the generation of novel anti-inflammatory drugs with fewer side effects (collaboration with Dr. L. Vila, Laboratory of Angiology, Vascular Biology and Inflammation, HSCSP RI).

Challenges

- To consolidate and extend our research programme within the HSCSP Research Institute and the rest of the IIB Sant Pau in a context of limited access to financial support. To this end, we will need to participate in at least one financed structure-and-function project in each of the three major areas of our research (cardiovascular diseases, neurodegenerative diseases, and cancer and innate immune responses). These projects are being or will be conceived, planned and executed in close collaboration with the Principal Investigators from the HSCSP with whom we work together in these biomedical research areas (see above), and will have an important added value to the current research at the HSCSP/IIB Sant Pau.

Active Grants

- Fuentes-Prior P. Thrombus stabilization as a therapeutic target: in vitro studies and animal models. La Marató de TV3. March 2009-December 2012. 08/2231. €135,500.
- Fuentes-Prior P. Programme i3. General Research Directorate. Spanish Ministry of Economy and Competitiveness. January 2009-December 2011. 09/13.
- Fuentes-Prior P. Structural basis of the generation, inhibition and activity of thrombin. Spanish Ministry of Economy and Competitiveness. January 2011-December 2013. SAF2010-15668. €110,500.
- Hernández E. Aid for the realization of the PhD dissertation. MAEC-AECID (Spanish Ministry of External Affairs and Cooperation). September 2009 – September 2012. 586939. €57,600.
- De Mendoza E. Aid for the realization of the PhD dissertation. Spanish Ministry of Economy and Competitiveness. January 2009-December 2012. BES-2008-006713. €57,600.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Metabolic Bases of Cardiovascular Risk Group.
- Parkinson Disease and Movement Disorders Group.
- Haematological Diagnosis Group.
- Genetic Diseases Group.
- Angiology, Vascular Biology and Inflammation Group.

External Collaborations

Nationals:

- Dr. R. Gutiérrez-Gallego. IMIM-Hospital del Mar and Pompeu Fabra University (Barcelona, Spain). Analysis of intermolecular interactions between thrombin and substrates/inhibitors using Surface Plasmon Resonance (Biacore).
- Dr. M. Pons. IRB and University of Barcelona (Spain). Analysis of intermolecular interactions between thrombin and FVIII using Nuclear Magnetic resonance (NMR).

Internationals:

- Dr. P. E. Bock. Vanderbilt University (Nashville, USA). Studies of thrombin interaction with major substrates. Mechanism of blood clot formation by the prothrombin activator from *Staphylococcus aureus*, staphylocoagulase.
- Dr. P. Pereira. IBMC (Porto, Portugal). Structure and function analysis of novel thrombin inhibitors from haematophagous animals.

Pharmacokinetic/Pharmacodynamic Modelling and Simulation

Coordinator

Marta Valle HSCSP RI
mvallec@santpau.cat

Technicians

Javier Estévez HSCSP RI
Maite Garrido HSCSP RI

Main Lines of Research

- Populational pharmacokinetic analysis aimed at establishing the pharmacokinetic characteristics of medical products and at differentiating and quantifying the degree of intra – and inter-individual variability.
- Continuous response analysis aimed at the analysis of effects (in the presence or absence of drugs) where the variable being evaluated changes values gradually.
- Non-continuous response analysis, for responses most frequently observed in clinical practice and including categorical responses and categorical survival, frequency and censored responses.

- Simulation of clinical trials and therapy applications, aimed at assisting with the planning of clinical trials from the perspectives of developing new drugs and of maximizing data yield and also aimed at studying the therapeutic application of narrow-therapeutic-margin drugs.

Challenges

- Obtain recognition as an emerging group for the Pharmacokinetic/Pharmacodynamic Modelling and Simulation Group.
- Maintain existing external cooperation agreements.
- Establish new cooperation agreements within the Hospital de la Santa Creu i Sant Pau Research Institute.
- Generate sufficient financial resources to maintain and expand the number of staff in the group.
- Communicate our activities.

Active Grants

- Valle M. Pharmacokinetic-pharmacodynamic approach to evaluating the interaction between delta-9-tetrahydrocannabinol and cannabidiol in healthy volunteers after oral administration: pharmacokinetic, antinociceptive and subjective effects. La Marató de TV3. February 2008-December 2012. €70,710.
- Valle M. Quantification of unwanted effects following administration of delta-9 tetrahydrocannabinol and cannabidiol: Evaluation of interaction and establishment of risk/ benefit relationship via populational pharmacokinetic/pharmacodynamic modelling. FIS Project. January 2009-December 2012. PI08/0471.
- Valle M. Pharmacological interactions between silymarin and darunavir/ritonavir. FIS Project. January 2011-December 2011.
- Valle M. Pharmacological interactions between Echinacea purpurea and etravirine. FIS Project. January 2011-December 2011.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Pharmacological Research in Humans Group.
- Pharmacy Group.

External Collaborations

- Collaboration with Lluita contra la SIDA Foundation. Germans Trias i Pujol Hospital (Badalona, Spain).
- Collaboration with Pharmacy Service. Hospital del Mar (Barcelona, Spain).
- Collaboration with Department of Pharmacology. Liverpool University (United Kingdom).

Main Lines of Research

Emerging processes in prevalent diseases:

- The general aim is to study and analyse processes that are frequently observed in emergency departments so as to transfer the results to clinical practice and so provide better care to patients.

Clinical organization and management:

Mireia Puig and Josep Ris.

- Patient safety and emergency service quality. PI: Maite Álvarez.
- Nosocomial infection. PI: Albert Mauri.

Organ Donation and Coordination:

Dr. Francisco Caballero and Jesús Leal.

Respiratory system disorders:

Salvador Benito.

- Respiratory pattern analysis in the return to spontaneous breathing. PI: Iván Díaz.

- Ventilatory pattern analysis in heart failure. PI: Sergio Herrera.
- Pneumonia in the emergency department. PI: Míriam Mateo.

Cardiovascular system:

Miquel Santaló.

- Acute coronary syndrome in elderly patients. PI: Josep Antoni Montiel.
- Acute coronary syndrome in women. PI: Marta Blázquez.
- Ultrasensitive markers in acute coronary syndrome. PI: Leopoldo Higa.
- Complications in patients implanted with an ICD. PI: Olga Trejo.
- Cardiac failure. PI: Aitor Alquézar.
- Supraventricular arrhythmias. PI: Aitor Alquézar.

Drug abuse-HIV:

- HCV in patients with HIV. PI: Josep M. Guardiola.
- Acute intoxication. PI: Hector Hernández.

Main Lines of Research

External beam radiotherapy:

- Characterization of various "in vivo" dose measurement detectors for radiation therapy treatments (RT) with intensity modulation (IMRT).
- Validation of dose calculation algorithms for external beam radiotherapy planning systems.

Biologic dosimetry:

- In cooperation with the Autonomous University of Barcelona team led by Dr. María Rosa Caballín:
 - Cytogenetic evaluation of the relative biological efficacy of low-energy X-rays.

Challenges

- Optimization of QA procedures for IMRT, SBRT and gating respiratory treatments.
- Index dose assessment on multislices CT.

Main Lines of Research

- Erythropoietin as an alternative to transfusion in paediatrics.
- Clinical application of peritoneal drainage in the treatment of enterocolitis in infants.
- Chronic functional constipation: Treatment with PEG.
- Creation of a Catalan network for diagnosis and clinical monitoring of rare anemias due to major hemoglobinopathies. PI: Dr. Isabel Badell. Research collaborator: Dr. Montse Torrent. Funding Entity: La Marató de TV3 Foundation (2010).

Montse Torrent. Funding Entity: La Marató de TV3 Foundation (2010).
■ Implementation of the study of minimal residual disease in risk assessment in the treatment of children acute lymphoblastic leukemia in the protocol SHOP (in collaboration with the Hematology Department of the HSCSP). PI: Dr. Isabel Badell. Research collaborator: Dr. Montse Torrent. Funding Entity: Enriqueta Villavecchia Foundation for Infantile Oncology.

Challenges

- Transplant haematopoietic progenitor cells from alternative donors.
- Make pre-implant genetic diagnoses.
- Transplant haematopoietic progenitor cells in congenital immunodeficiencies.
- Transplant haematopoietic progenitor cells in congenital metabolic pathologies.
- Research congenital immunodeficiencies.
- Research Fanconi anaemia (group recognized by the Autonomous University of Barcelona, Spain).

- Apply adaptive cell immunotherapy for tumours.
- Intervention in post-asphyxia neuronal damage in asphyctic infants by applying therapeutic hypothermia (in the context of a Catalan network).
- Polytraumatized patient Care Program. PPT implementation code in HSCSP and in CatSalut Central registrar.
- Implementation of a multidisciplinary institutional protocol of Massive Transfusion in HSCSP.

Main Lines of Research

Asthma:

- Inflammatory, remodelling and genetic mechanisms in severe asthma.
- Role of the toll-like receptors.
- Study of the inflammatory asthma phenotypes.
- Novel skills to determine bronchial inflammation by exhaled air temperature (EAT) and electronic nose.
- Changes in exhaled air temperature as a non-invasive measure of inflammation.
- Studies in education and allergies, meta-analysis and clinical practice guidelines.
- Inflammation and rhinitis.

Chronic obstructive pulmonary disease (COPD) and respiratory failure:

- New techniques of weaning from home-based non-invasive ventilation and their viability.
- Correlation of lung function and imaging techniques in patients with neuromuscu-

lar disorders.

- Role of mucines in COPD infections.
- Specificity and selectivity of the electronic nose to identify COPD.
- Respiratory rehabilitation studies.
- Predictive mathematic model to establish COPD patients at risk of future exacerbations. Coordination between care levels (primary and hospital care) for COPD and aneurysm and COPD.

Obstructive Sleep Apnea Syndrome (OSAS):

- Physiology and clinical therapeutic consequences of OSAS.
- Obesity-hypoventilation syndrome.
- Airway inflammation and OSAS.

Bronchoscopy:

- Cryowave efficacy in obtaining lung biopsies from patients with interstitial disease.
- Efficacy of thermoplasty in selected severe asthma patients.

Challenges

- Enhance basic research into obstructive respiratory diseases.
- Recruit young researchers to the team.
- Cooperate with other research groups and hospital departments in setting up re-

search groups in a local multidisciplinary network and in other Spanish centres (inclusion in CIBERES), Programa Investigación Integrada (PII) de asma de la SEPAR and European centres (joint studies).

Awards

- Original Award with better evaluation published in 2010 in Archives of Bronco-pneumology. Authors: Pajares V., Torrejo A., Puzo C., Lerma E., Gil de Bernabé M.A., Franquet T. Arch Bronconeumol 2010;46:111-5.

Main Lines of Research

Oncology:

- Design of new diagnostic methods based on identifying and visualizing molecular targets from metabolic mechanisms, receptor systems, hypoxia, angiogenesis and apoptosis.
- Development of new applications for sentinel ganglion and radioguided surgery models.

Cardiovascular research:

- New methods for non-invasive assessment of ischaemic heart disease and heart failure.

- Cardiovascular functional studies.

- New methods for assessing cardiac innervation and determining applications.

Functional neuroimaging:

- Development of new functional imaging methods for evaluating neurodegenerative diseases whether or not they involve dementia (Parkinson, Parkinson-Plus, Alzheimer and DCL).
- Dopaminergic system studies using IBZM and Datscan.

Challenges

- Introduce new technologies to clinical research. Imaging techniques are evolving very rapidly towards multimodal systems that integrate biological, molecular, anatomical and functional information in a single examination. The group aims to include these technologies, mainly PET/CT and PET/MR, in its own and the hospital's research activities.

New molecular imaging techniques:

- Date the group has developed pre-clinical and clinical molecular imaging models using SPECT and conventional nuclear medicine technologies. In the next 5 years, the group plans to develop

- new hybrid molecular imaging technologies, mainly PET/CT and PET/MR.

PET imaging biomarkers:

- The group uses radioactive tracers to view *in vivo* diagnostic and therapeutic targets. In the next 5 years, the group plans to develop new PET radioactive tracers to be used as biomarkers in new imaging techniques.

Active Grants

- Flotats A. EVINCI: Evaluation of Integrated Cardiac Imaging for the Detection and Characterization of ischaemic heart disease. European Union Project. January 2009-December 2011. 08/UE222915.

Main Lines of Research

- Acute respiratory failure and artificial ventilation.
- Non-invasive ventilation
- New ventilation modes: proportional-assist ventilation and NAVA.
- Prone decubitus in acute respiratory dysfunction syndrome (ARDS).
- Artificial ventilation withdrawal.
- Expert ventilation systems.
- Sleep and artificial ventilation.
- Early and active mobilization of the critical patient.

Study of the usefulness of new biomarkers in critically ill patients:

- BNP in weaning from mechanical ventilation.
- Use of the NGAL protein in the renal prognosis of critically ill patients.
- Strict control of blood glucose in critically ill patients.
- Prophylaxis of acute gastric mucosal injury in critically ill patients.
- Study of the haemodynamic effects of different antipyretic drugs in critically ill patients.
- Influence of position change to supine decubitus position in intra-abdominal pressure.

Challenges

- Consolidate clinical and physiological research into ventilation in critically ill patients through multicentre and multinational networking.
- Create a stable and well-trained group of researchers in this discipline.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Pharmacological Research in Humans Group.

Main Lines of Research

Critical analysis of new clinical technologies:

- Anaconda-inhaled sedation in patients undergoing postoperative mechanical ventilation.
- New monitoring systems for anaesthesia depth and cerebral oxygen status.
- Systematic review of intraoperative active warming systems.

Rational use of perioperative blood products:

- Usefulness of thromboelastography in postoperative bleeding in cardiac surgery.
- Critical evaluation of the reliability of point-of-care systems in the management of perioperative blood count.

Perioperative medicine:

- VISION Study: Evaluation of vascular complications in patients undergoing major non-cardiac surgery.
- POISE Study I: Clinical trial of metoprolol versus placebo in patients scheduled for non-cardiac surgery with moderate or high risk of experiencing perioperative cardiac events.
- POISE Study II: Factorial clinical trial of clonidine and aspirin in patients undergoing non-cardiac surgery with moderate or high risk of experiencing perioperative cardiac events.
- GLUCOVISION Study: Evaluation of glucose as a predictor of vascular events in patients undergoing non-cardiac surgery.
- Systematic review of intraoperative active warming systems.
- ECT: Anaesthetic alternatives to enhance therapeutic effect.

New health service delivery systems:

- Bronchial cryobiopsies.
- Professional team preoperative evaluations.

Physiology, pharmacology and anaesthetic techniques:

- Intraoperative respiratory physiology.
- Efficacy and safety of levosimendan in postoperative refractory heart failure.

Acute and chronic pain (neuroscience research group):

- Stride Study (E05-CL-3001). Open arm multicentre study of repeated administration of Qutenza for the treatment of peripheral neuropathic pain.
- Evaluation of the effectiveness, safety and tolerability of extended-release tapentadol versus a combination of extended-release tapentadol and pregabalin in patients with severe chronic lower back pain with a neuropathic pain component (KF5503/58).
- Application of high-field MRI and its analysis tools to the evaluation of brain alterations in patients with chronic pain compared to acute pain and a control group (PI08/0678).

Anaesthesiology

Challenges

- Critical analysis of new clinical technologies.
- Rationalization of perioperative transfusions.
- Perioperative medicine.
- Development of new health service systems.
- Clinical and preclinical research into physiology, pharmacology and anaesthetic/analgesic techniques.

Subgroup: Pain and Neurosciences

Main Lines of Research

- Involvement of brain areas and release of substances in chronic pain (in conjunction with HSCSP neuroradiology unit and the Autonomous University of Barcelona).
- Adverse effects of epidural steroids administered for lumbar spine pathologies.
- Effectiveness of topical long-term treatment with high-dose capsaicin of peripheral neuropathic pain.
- Sleep disturbance on initiating systemic opioid treatment in patients with severe chronic pain and altered sleep patterns.

Coordinator

ecatala@santpau.cat

HSCSP

Collaborators

Marta Ferrández	HSCSP
M. Mercè Genové	HSCSP
Mª Teresa Santeularia	HSCSP
Miren Eli Revuelta	HSCSP
Beatriz Gómez	HSCSP

Challenges

- Establish the possible differences in brain area involvement between acute and chronic pain.
- Determine the extent of chronic pain according to the involvement of different brain areas.
- Determine if the intensity of chronic neuropathic pain assessed by the patient is correlated with the patient's psychopathology, essentially, anxiety, depression and catastrophizing.
- Determine the duration and intensity of undesirable effects of epidural steroids and establish early diagnostic criteria.
- Determine the profile of patients who would benefit from treatment with major systemic opioids in relation to night rest and establish the recommendable opioid.

Active Grants

- Català E. Application of high-field MRI and its analysis tools to evaluating brain alterations in patients with chronic pain compared to acute pain and a control group. FIS Project. January 2009-December 2012. PI08/0678.

Main Lines of Research

- Pharmaceutical care.
- Artificial nutrition.
- Oncohaematology.
- Independent clinical trials.

Challenges

- Evaluate the impact on effectiveness and safety of pharmacological treatments in different pharmaceutical care programmes: clinical pharmacokinetics, health education for outpatients, medicine reconciliation and identification and prevention of medication-related problems.
- Evaluate the impact of artificial nutrition on the clinical evolution of patients.
- Study the stability of cytostatics in different conditions of use.
- Predict response to anti-tumour treatment in a number of tumoural processes.
- Develop focal adhesion inhibitors, e.g., antitumour agents.
- Actively cooperate in independent clinical trials performed in the HSCSP.

Active Grants

- Scholarship Joaquim Bonal to the project "Pharmaceutical care program for patients with heart failure and/or COPD users of emergency department versus conventional monitoring". Catalan Society of Clinical Pharmacy. PI: Juanes A. Directors: Mangues M.A., Baena I.

Palliative Care

Coordinator
 Antonio Pascual HSCSP
 apascual@santpau.cat

Researchers
 Óscar Fariñas HSCSP
 Ernest Güell HSCSP
 Adelaida Ramos HSCSP

Collaborators
 María Rufino MutuaM

Main Lines of Research

- Symptom evaluation and control: pain, dyspnoea, cognitive failure, complex situations.
- End-of-life ethical issues: sedation, expression of a desire for death and euthanasia.
- Psychosocial care for patients and families: adaptation to the terminal situation, grief, spiritual needs.
- Training in palliative care: training needs and outcomes.

Challenges

- Psychosocial care for patients and families.
- Counselling and hospital sensitization.
- Quality evaluation and control.
- Symptom evaluation and control.
- Integrated care: analysis and care of end-of-life emotional, social and spiritual dimensions and adequate ethical reflection in decision making.

HSCSP

Researchers

Antonio Barros
Alberto Hidalgo
Sandra Pujadas

HSCSP
HSCSP
HSCSP

Main Lines of Research

- Participation in the development of clinical follow-up databases that determine the diagnostic value and cost-benefit of new cardiac imaging techniques.
 - Computer modelling of electromechanical activation and cardiac ventricular function.
- Non-invasive multidetector CT coronary angiography:**
- Validation of the technique.
 - Development of software to characterize and quantify coronary artery lesions.

- Studies of clinical usefulness in primary prevention.

Cardiac Magnetic Resonance Imaging:

- Quantification of myocardial perfusion in ischaemic heart disease.
- Myocardial tagging study of heart mechanics.
- Optimization of diffusion tensor sequences for the identification of myocardial fibers.
- Development of 4D sequences for viewing intra-vascular flow direction.

Challenges

- Non-invasive multidetector CT coronary angiography: to consolidate use in clinical practice by improving viewing and quantification tools that confirm its diagnostic value for cardiology.
- Cardiac Magnetic Resonance Imaging: to improve physiopathological knowledge of ischaemic heart disease, cardiomyopa-

thies and heart failure.

- To explore and understand heart mechanics and to study ventricular function.
- To design ventricular electro-mechanical computer-models.
- To improve cardiac imaging diagnostic techniques for a complete non-invasive assessment of heart diseases.

Active Grants

- Carreras F. Advanced information technologies for the healthcare sector (CARE4ME, Cooperative Advanced Research for Medical Efficiency). Spanish Ministry of Industry, Energy and Tourism. January 2010-February 2011. TSI-020400-2009-83.

Main Lines of Research

Perforator microsurgery:

- Application of imaging techniques to preoperative studies of perforators using MRI without contrast (in collaboration with Clínica Creu Blanca radiology department).
- Anatomical studies of the variability of perforators in the following regions: internal mammary artery, descending genicular artery, inferior epigastric system and internal superficial circumflex system (in collaboration with the University of Barcelona human anatomy department).
- Locating new donor anatomical areas for morphological and functional reconstruction of oncology post-surgery defects.

Lymphoedema:

- Study and characterization of the anatomy and pathophysiology of the superficial and deep lymphatic system.
- Preoperative magnetic resonance study of the lymphatic system in order to define surgical indication patterns.
- Preoperative magnetic resonance study of the surgical effectiveness of lymphatic-venous anastomosis.

Challenges

- Consolidation and optimization of preoperative management techniques for locating perforating vessels suitable for each microsurgical flap.
- Development of research into the surgical treatment of both primary and secondary lymphoedema.
- Development of research into preventive surgery of secondary lymphoedema in breast cancer by total breast anatomy restoration (TBAR).
- Development of research into regenerative surgery using specific growth factors.

- Lymphogenesis study in experimental animals (sheep) after vascularized lymph node tissue transplantation (popliteal lymph nodes).

Regenerative surgery:

- Industry-funded research project (BIO-MET): Application of growth factors in tissue regeneration in irradiated head and neck surgery.
- Development of regenerative lymphatic system surgery in the context of primary lymphoedema through specific lymphatic system growth factors (VEGF-C and VEGF-D).

Breast cancer surgery:

- Industry-funded clinical trials (Allergan Medical, USA). SURE-002 study of Seriscaffold used in immediate breast reconstructive surgery in a single surgical period.

- Consolidation of facial paralysis functional surgical reconstruction by microsurgical transfer of innervated flaps.
- Development of multidisciplinary protocols for the treatment of vascular malformations.
- Collaboration with other research groups both in the HSCSP and internationally to establish a multidisciplinary research network.

Collaborations**External Collaborations**

- International Framework on Lymphedema Surgical Treatment.
- 6th Barcelona Meeting on Plastic Surgery "Up-dating Head & Neck Surgery" (March, 2011).

Deborah Lo Giacco
Olga Martínez
Cristian Palma
Osvald Rajmil
César Rojas
Àlvar Vives

Main Lines of Research

Infertility and preimplantation genetic diagnosis:

- We are presently developing a project on the genetic causes of cryptorchidism in humans. Besides, we have been awarded a ISCIII grant for a project on genetic alterations of the Y chromosome. Results from both projects may have clinical implications. Members of the service also collaborate in externally funded ISCIII projects (with the University of Barcelona, Vall d'Hebron) studying genetic anomalies, spermatogenesis and preimplantation genetic diagnosis.

Male sexual dysfunction:

- As a referral centre it is essential to extend investigation into the mechanisms that trigger endothelial damage and erectile dysfunction so as to develop new treatment strategies.
- We are presently developing an animal model of erectile dysfunction (cavernous nerve injury in rats). This will later allow research on the mechanisms of endothelial damage and erectile dysfunction in different situations, substances and/or surgeries, with a focus on identifying preventive strategies and transferring results to research in humans.

Challenges

- The strategic plan is to develop basic and clinical research projects in andrology for the period 2009-2012, with emphasis on translational research to the clinical area.

Active Grants

- Krausz C. Gene dosage of the AZFc region of chromosome Y: clinical implications and spermatozooid-gene expression profile. Carlos III Health Institute. January 2009-December 2011. PI 08/1138.

Main Lines of Research

Tissue engineering:

- Application in urological oncology and congenital urogenital malformations. In 2002 we began this line of research focusing on vesicular reconstruction. The endpoints have high clinical translational potential as the objective is organ procurement for genitourinary reconstruction, especially in urology pediatrics.

New techniques (surgical techniques and healthcare products):

- Application in urological oncology and benign urogenital pathology (e.g. incontinence, benign hyperplasia of the prostate, lithiasis).
- The Puigvert Foundation is a referral centre for treatment of urological disorders. It performs a high number of studies, parti-

cularly at a clinical level, aiming to determine the best techniques for diagnosis and treatment of these disorders.

Genetics (diagnostic and prognostic markers):

- Application in urological oncology. In 2003, when the molecular biology lab was set up, the objective was to identify diagnostic and prognostic markers of urological cancers. Results from this line of study led to a patent in cancer of the bladder. We are now developing studies on the prostate. Besides our own work we collaborate with other centres and universities and with biotechnology labs (Progenika, Oryzon, Neocodex) to develop new diagnostic and prognostic markers in blood, urine and tissues that will optimize patient management in oncology.

Challenges

- The Service of Urology has a multidisciplinary team of professionals who develop translational research in the field of diagnosis and treatment of urological disorders. To further our knowledge about kidney disorders and thereby improve health care for patients we seek to continue active projects, develop new lines

Active Grants

- Rodríguez O. Relationship between phenotype of chronic inflammatory cells and stromal fibroblasts, and development of tumor recurrence and progression of bladder urothelial carcinoma. Research Grants "Pedro Cifuentes Díaz" FIU. 2010-2012

of investigation, increase the number of international publications, train professionals and increase collaboration with hospital and university groups inside and outside our centre.

External Collaborations

- Three national registries of tumors (prostate, bladder and kidney) with the Spanish Association of Urology (AEU).

- Best poster of the session. International Cooperation in Endourology: Percutaneous and flexible ureteroscopic treatment of lower pole kidney Stones. Millán F., Sanguedolce F., et al. 26th EAU Annual Congress. Viena (Austria).
- Third prize Julian Perez de Toledo to the best oral communication. Retrospective study of the different Treatment Options for category T1G3 vesical carcinoma: the support guideline establishes the differences. Palou J., Solsona E., Angulo J., Fernández J.M., Unda M., Martínez Piñeiro M., Portillo J.A., Chantada V., Moyano J.L. LXXVI National Congress of Urology. Málaga (Spain).
- Third prize for the best poster Joaquin Albaran. Preservation of neurovascular bundles in robotic assisted cystoprostatectomy and orthotopic neobladder. Ramos E., Palou J., Gausa L.I., Gaya J.M., Azuero J., Villavicencio H. LXXVI National Congress of Urology. Málaga (Spain).
- Second prize for best video Joaquin Albaran. Robotic assisted laparoscopic transmesenteric pyeloplasty. Palou J., Gausa L.I., Gaya J.M., Rodríguez O., Villavicencio H. LXXVI National Congress of Urology. Málaga (Spain).
- Best Video Award.. Pieloplastia transmesentérica laparoscópica asistida por robot. Caffaratti J., Serrano M., Azuero J., Bujons A., Garat J.M., Villavicencio H. XXVIII Meeting of the group of Pediatric Urology. Málaga (Spain).
- Prize for the best scientific paper published in any medium. Predictive clinical factors of poor outcome in patients with radical cystectomy pT0. Rodríguez O., Palou J., Rosales A., Breda A., Algaba F., Urdaneta G., Villavicencio H. XVII Symposium of the Catalan Society of Urology. Lleida (Spain).
- Award to the best doctoral dissertation for "Effect of anterior urethra urethroplasty in male sexuality". Ponce de Leon J. XVII Symposium of the Catalan Society of Urology. Lleida (Spain).
- Award to the best scientific paper published in any medium for "Clinical predictors of poor outcome in patients with radical cystectomy pT0". Rodríguez O., Palou J., Rosales A., Breda A., Algaba F., Urdaneta G., Villavicencio H. XVII Symposium of the Catalan Society of Urology. Lleida (Spain).
- Silver Beníque of the Catalan Society of Urology to Lluís Gausa by the activity developed in recent years in the positions of treasurer, secretary and vice president of the Society. XVII Symposium of the Catalan Society of Urology. Lleida (Spain).

HSCSP

Main Lines of Research

The Radiation Oncology Group's research is conducted on the premises of the Translational Research Laboratory of the Catalan Oncology Institute (ICO)-IDIBELL under a framework agreement between the HSCSP and the ICO. The main lines of research are:

- Modulation of radiosensitivity by SRC protein inhibitors in combination with anti-EGFR.
- Modulation of radiosensitivity by HMG-CoA reductase inhibitors in combination with anti-EGFR.

Challenges

- Establishment of relatively radioresistant cell lines compared with the parental cells from which they derive (by clonal selection).
- Determination of the resistant phenotype in cultures and xenografts.
- Determination of molecular radioresistance.
- Evaluation of the effect on carcinomas of SRC and HMG-CoA reductase inhibitors in combination with anti-EGFR.
- Explore signal transduction changes in EGFR-MAPK pathway and SRC-EGFR/SRC-STAT3 cooperation induced by SRC and HMG-CoA reductase inhibitors.

ANTIRESORPTIVES IN ORTHOPEDIC AND TRAUMA SURGERY:

- Effect of zoledronic acid (Aclasta) on peri-prosthetic bone mineral density in patients undergoing total knee arthroplasty. Study approved by the HSCSP ethics committee and authorized by the Spanish Medicines and Health Products Agency (AEMPS) for the out-of-context indication of Aclasta.

KNEE:

Haemostasis:

- Blood loss control using tranexamic acid in primary prosthetic and knee revision surgery.
- Retrospective study of revision knee arthroplasty to compare the effects of intravenous tranexamic acid and normal haemostasis.
- Clinical trial comparing outcomes for intravenous tranexamic acid with fibrin glue (Tissucol©) and normal haemostasis in primary knee prosthetic surgery.
- Observational study of blood loss in redon drainage over time in peritrochanteric hip fractures.

Cartilage:

- Regeneration of cartilage defects using tissue engineering and a matrix seeded with characterized allogeneic chondrocytes.

Meniscus:

- Effect of normal and growth-factor-enriched cell cultures on the meniscal collagen network and glycosaminoglycan expression.
- In vitro experimental study of the feasibility of a polyurethane replacement meniscus pre-seeded with stem cells.

- Evolution of allogeneic meniscal transplants and relationship with extrusion.

HIP:

- Coxarthrosis in young adults: etiological study of biomechanical factors.
- Biomechanics of coxarthrosis in young adults: finite element study.
- Influence of hip anatomy in early development of coxarthrosis: controlled, prospective radiographic study.

UPPER LIMB:

- Anatomical study of stabilizing ligaments in the trapeziometacarpal joint: the role played by dorsoradial and anterior oblique ligaments in Bennett and Rolando fractures.
- Surgical treatment of middle-third clavicle fractures in high-energy trauma in young patients.
- Retrospective study of the use of vascularized bone graft using the 1,2-ICSR artery in the revascularization of proximal pole necrosis in scaphoid pseudarthrosis.

Multiple Sclerosis and Epilepsy Research

Coordinator

Antonio Escartín HSCSP
aescartin@santpau.cat

Researchers

Mariana López	HSCSP RI
Nuria Vidal	HSCSP RI
Alejandro Martínez	HSCSP RI
Luis Querol	HSCSP RI

Main Lines of Research

- Neuropsychological impairment in patients with multiple sclerosis.
- Pharmacogenetics in epilepsy.
- Neuropsychological impairment in juvenile myoclonic epilepsy.

Challenges

- Study of the validity of cognitive evoked potentials in early detection of cognitive impairment in patients with radiologically isolated syndrome, clinically isolated syndrome and newly diagnosed multiple sclerosis.
- Study of the effects of immunomodulatory and immunosuppressive treatments on the cognitive functions of patients with multiple sclerosis.
- Determination of the pharmacogenetic variations involving different responses to antiepileptic treatment.
- Study of neuropsychological alterations in patients diagnosed with juvenile myoclonic epilepsy.

Collaborations

External Collaborations

- Participation in the European registry of pregnant women with epilepsy (EURAP).
- Epidemiological study to determine the diagnosis and follow-up in patients with a first demyelinating episode suggestive of multiple sclerosis. EPI-CIS Study.
- Registration of new cases of multiple sclerosis in Catalonia. Epidemcat Register.

General Coordinator

Joaquim Calaf
jcalaf@santpau.cat

HSCSP

Main Lines of Research

- Qualitative study of foetal motility by means of 2D ultrasound in foetuses with spinal muscular atrophy.
- Value of foetal nuchal translucency as a marker of neuromuscular diseases and other monogenic diseases.
- Utility of Doppler ultrasound of the umbilical artery during the second trimester as a discriminator of pregnancies at high risk of poor perinatal outcomes.
- Cutoff point for foetal pyelectasis as a nephrological pathology discriminator.
- Value of ultrasound in the control of foetal anaemia.

Challenges

- Consolidate a line of work with the HSCSP genetics department concerning possible early clinical manifestations detectable using 2D and 4D ultrasound in foetuses affected by genetic diseases, particularly neuromuscular disorders, given that HSCSP is a referral centre for a particular group of rare diseases.
- Early screening for chromosomal abnormalities from the ultrasound and biochemistry points of view, investigating the potential usefulness of the markers used either alone or in combination as indicators of populations at risk of placental insufficiency.
- Investigate the usefulness of new technologies such as 3D power Doppler angiography of the placenta in the diagnosis and control of certain foetal diseases.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Genetic Diseases Group.

Reproductive Health

Main Lines of Research

Hormonal alteration with reproductive and metabolic implications:

- Polycystic ovary syndrome is characterized by the frequent coexistence of alterations of the reproductive system and metabolic control of carbohydrates. This relationship determines changes in ovulation, given that insulin acts on the steroidogenic cells of the ovarian theca.
- The consequences of this situation ranges from androgenetic cutaneous manifestations at puberty (acne, hirsutism, etc.) to infertility, obesity, gestational diabetes and subsequent development of type 2 diabetes or metabolic syndrome.

- The working group headed by Dr. Espinós focuses on research into factors that promote these synergies and interventions that can positively alter evolution.

Disorders related to hypo-oestrogenism:

- For some time the group has been active in clinical research (especially clinical trials) related to physiological hypo-oestrogenism in menopause and its consequences. It is currently finalizing a prospective randomized trial on the possible role of phytotherapy in menopausal symptoms in a multicentre study designed in collaboration with the Iberoamerican Cochrane Centre.

Challenges

Hormonal alteration with reproductive and metabolic implications:

- The project to assess the impact of changes induced by exercise and diet on the results of in vitro fertilization opens new perspectives for identifying mediators between obesity and fertility control.
- The group has obtained a grant to coordinate a state wide multicentre study on the impact of lifestyle on fertility, confirming the strength of metabolic-reproductive life-styles as a key direction of research into reproduction.
- One goal is to advance research into study methodologies and incentives for patients to adopt healthy life styles and so strengthen the capacities of the group. Explored is the possibility of using tools developed for external and self-control of physical activity when assessing the degree of compliance of patients advised to include regular exercise in their weight loss programme.

- We also plan to continue with optimization programmes for controlled stimulation and multiple follicular development, the preservation of fertility in young cancer patients and the application of pre-implantation genetic diagnoses.

Disorders related to hypo-oestrogenism:

- Because of the ongoing ageing of the population, new fields for the study of hypo-oestrogenism are emerging. The increasing survival for oncological diseases in young people and preventive measures in families at risk of hormone-dependent cancers (especially preventive ovariectomy) opens new fields such as the preservation of fertility or hormone replacement in this type of patient.

Main Lines of Research

The group develops independent research projects focused on care. The active projects are grouped under the following lines:

- Fall prevention and analysis of fall-related factors.
- Translation and validation of care evaluation questionnaires.
- Constipation and ageing.

- Quality of life related to nursing care.
- Development and application of health science methods: qualitative and quantitative methods, text analysis and discourse.
- Patient satisfaction with nursing care.
- Attention to the family.
- Pain.
- Technological innovations in nursing care.

Challenges

- Strengthen implemented care research lines and disseminate the results of active projects.
- Explore the impact of nursing care for patients, strategies for care improvement and the application of results in care models.

- Improve the development and understanding of qualitative research in the context of the health sciences and disseminate qualitative methods and analysis of text and discourse as tools in health science research.
- Create the synergies necessary to consolidate the group's activities.

Active Grants

- Juandó C. Economic and cultural inequalities faced by women with breast cancer: Barriers and facilitators in the use of health services. FIS Project. January 2009-December 2011. PI08/0888.
- Ricart M.T. Anxiety in patients discharged from the intensive care units (UCIs). MIA Grant. 2011-2012.
- Robleda G. Efficacy and safety of the administration of opioid agents as preventive treatment of pain associated with nursing care of critically ill patients on me-

chanical ventilation. COIB Grant. January 2011-March 2012. PR-3569/10. €7,770.

- Romero M. Perception of critically ill patients regarding to satisfaction with nursing care. COIB Grant. January 2011-January 2014. PR-3663/10.
- Romero M. Quantitative and qualitative research design "Critical patient perception of nursing care: an approach to the concept of satisfaction". COIB Grant. 2010-11. PI11/00447.

Translational Molecular Oncology

Coordinator	
Matilde Parreño	HSCSP RI
	mparreno@santpau.cat
Technicians	
Tatjana Dediulia	HSCSP RI
Collaborators	
Sabina Cisa	UAB

Main Lines of Research

The main lines of research are focused on basic mechanism of human neoplasias, as follows:

- Identification of prognostic and predictive markers in patients with locally advanced HNSCC with poor clinical outcome. In collaboration with the Oncogenes and Antitumour Drugs Group and the Ear, Nose, Throat Cancer Group.
- Study "in vitro" and "in vivo" by genetic manipulation of putative biomarkers of poor prognosis in HNSCC in tumor progression and as potential therapeutic targets. Now the studies are focused in genes of the Wnt signaling and/or induced by hypoxia.

Challenges

- To evaluate the survival pathways, epithelial-mesenchymal transition (EMT), enrichment of cancer stem cell and the resistance to chemotherapeutic treatment in which the study genes are involved.
- To obtain a preclinical model for studying new anti-tumor drugs or alternative treatment to improve survival in patient with recurrent tumors and progression of the disease in HNSCC, and its use in personalized therapy.
- To reinforce and to encourage the translational research in tumor progression and tumor initiating cells through the collaboration with internal and external groups of research.
- To be consolidated as a group of research through obtaining new research staff and new financed projects.

Active Grants

- Parreño M. Study of poor prognosis markers in squamous cell carcinoma of the head and neck and the search for therapeutic alternatives. FIS Project. January 2010-December 2012. PI09/0334. €183,31.
- Parreño M. SNS Researcher Stabilization. Department of Health: SNS Spanish National Health System. January 2008-April 2012. FIS01/3085.

Collaborations

Collaborations with other IIB Sant Pau Groups

- Haematological Diagnosis Group.

External Collaborations

- Development and improvement of a xerograph mouse model of head and neck carcinoma, based on the orthotopic implantation of human primary and recurrent tumor of HNSCC, with the objective to study populations of cancer stem cells, their role in the tumor progression and the resistance to treatment. This work is being carried out in collaboration with Alberto Villanueva of the Translational Research Laboratory of the Catalan Institute of Oncology (ICO-IDIBELL, Barcelona, Spain), Purificación Muñoz (PEBC-IDIBELL, Barcelona, Spain), and the Ear, Nose, Throat Cancer Group.
