<sup>1</sup> Previous years' figures adjusted owing to IFRS 8 and IAS 8; see "Changes in accounting policies and other adjustments".

<sup>2</sup> In 2012, our segment reporting was modified and no longer has a consolidation column. The figures for 2011 have been adjusted accordingly. Comparability with the year 2010 is thus limited.

<sup>3</sup> For 2010, 2013 and 2014, this contains own shares earmarked for retirement.

<sup>4</sup> Including those apportionable to minority interests and policyholders.

<sup>5</sup> The figures for 2011 are not adjusted for relief of 1.4 percentage points from economic risk transfer to the capital markets.

<sup>6</sup> Excluding health insurance conducted like life insurance.

**Dr. Nikolaus von Bomhard**  
Chairman of Munich Reinsurance  
Company's Board of Management

*Dear Shareholders,*

The seemingly erratic ups and downs in the financial markets are increasingly perplexing, not only for investors, but also for the general public. Such high volatility is not an inevitable feature of a globalised economy, but the consequence of growth that has often been overly dependent on debt and a financial system overflowing with liquidity. This leads to a rapid rise in the prices of many investments, which makes subsequent price falls all the more likely and dramatic. The larger a growth bubble becomes, the greater the risk of a shock correction when it bursts.

From my point of view, it would be preferable to see a slower and more constant rise in values. High volatility in the financial markets hampers stronger long-term growth, and major fluctuations in the capital markets generally go hand-in-hand with a less equitable distribution of income and assets.

Governments and central banks should therefore reflect on how much they intend to contribute to these effects, for example by not imposing restrictions on new debt or by pursuing a relaxed monetary policy. Interest is not a hurdle placed by evil forces in the way of sensible and sustainable investments; it is first and foremost an indication of the risk associated with an investment as assessed by the market. An investment that is

made only because the associated costs of the risk have been artificially reduced will usually prove to be unsustainable. And reduced demand for credit is not necessarily a negative economic indicator; it may also indicate that companies are financing their business models and households are making their investments (such as buying a house) in a more sustainable way. A reduction in debt is normal in the wake of a severe financial and economic crisis, and not something that has to be resisted at all costs.

Against this background, a critical view should be taken of the relaxed monetary and liquidity policy of major central banks. The European Central Bank recently even increased access to cheap money when it took the decision in January to purchase government bonds. In my opinion, this was a step in the wrong direction. The main argument for doing this – to counter an apparent threat of deflation – does not really hold water. And even if the analysis of deflation was correct, the purchase of government bonds by the ECB would not be the right solution, as it would cause considerable collateral damage while hardly alleviating any deflation that may occur. In view of the continuing rise in market liquidity, there will be a greater risk of substantial disruption to price structures and creation of price bubbles for some investments. This has already happened to many bonds. There is also less pressure on eurozone countries to introduce sustainable reforms to stimulate their economies, to reduce unemployment for young people in particular, and to consolidate their finances.

The flood of liquidity in important markets means that Munich Re can expect lower returns on its investments again in 2015. However, our strategy for a number of years has been to base our profitability primarily on the technical result achieved in our insurance business. That strategic decision is paying off in the current capital market environment. We are also attempting to diversify our investments even more – for

example by increasing our investments in alternative asset classes such as infrastructure. In primary insurance, a new generation of products in German life insurance, which we have also been offering for company pension schemes since January, provides an innovative and forward-looking answer to the challenges posed by low interest rates.

Not only the capital markets but also the reinsurance markets will remain challenging in 2015. We have to be prepared to face continuing fierce competition, which is being fuelled by excess market liquidity. Rigorous cycle management and underwriting discipline, and excellent client service, will therefore still be extremely important. At the same time, we intend to use innovations to secure new profitable business. There is potential for growth not only from a geographical perspective, as in the growth regions of Asia, but also in the risks not – or not fully – covered in the market. Examples of this are cyber risk, energy, supply chain and business interruption, and protection of reputation.

Much of this business potential lies at the interface between insurance and reinsurance. With our strategy of combining primary insurance and reinsurance under one roof, we are well positioned to move into previously untapped fields of business. As a Group, we are more innovative; this is a further advantage of our structure in addition to synergy effects and greater diversification.

Looking back, 2014 was a good year for Munich Re – despite the difficult environment. We were able to surpass our original result target of €3bn. Under the share buy-back programme approved last year, we will have repurchased €1bn worth of shares by the 2015 Annual General Meeting. We are proposing to the Annual General Meeting an increase in the dividend to €7.75 per share in order to allow you, our shareholders, to participate commensurately in the Group's success. Our

dividend policy, and our business, are based on the principle of sustainability. Although the dividend is being raised substantially by €0.50, or almost 7%, we are increasing it only to a level that we can maintain even after a less successful year and that will permit us to comfortably finance profitable growth and innovation.

Ladies and gentlemen, on behalf of my colleagues on the Board of Management and all our staff across the world, I would like to thank you for the confidence you have shown in us. We will, of course, make every effort to fulfil your expectations again this year.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'N. von Bomhard', with a stylized, cursive script.

Nikolaus von Bomhard

## Q1

**15 January 2014**

A risk rating system for industrial projects has been developed by Munich Re and TÜV SÜD. The new system facilitates the assessment of complex investment projects and thus the taking of investment decisions. The basis of Project Risk Rating (PRR) is a modular system of individual risk components reflecting an investment project's main risks. These components take account of macroeconomic, technical, ecological and contractual aspects of the project.

**19 March 2014**

The Supervisory Board appoints two new Board of Management members:

Doris Höpke

Pina Albo

## Q2

**1 April 2014**

ERGO's new customer and sales division commences operations – combining all client-centric functions associated with applications, contracts, and services. True to its slogan "To insure is to understand", the primary insurer gears its management even more closely to clients' needs. The new division is headed by Silke Lautenschläger, who transfers from the Board of Management of DKV to that of ERGO. Life and health insurance is pooled in a single division for insurances of the person, headed by Dr. Clemens Muth. At the same time, the new ERGO Beratung

und Vertrieb AG is launched. It provides uniform client-consulting and quality assurance tools to ERGO's tied-agency sales forces, which have been amalgamated into two units from a former total of five. The reorganisation of ERGO's sales forces in Germany is thus completed.

## Q3

**2 July 2014**

Germany's Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH and Munich Re support the establishment of a risk transfer system for agriculture in Peru. For this purpose, they launch the project "Integrated Financial Management of Climate Risks in Peru's Agricultural Sector". The aim is to develop, together with the Peruvian authorities, a legal, institutional and structural framework for a system to protect agricultural production against weather-related risks.

**27 August 2014**

Munich Re's primary insurance subsidiary Great Lakes Australia (GLA) reaches an agreement to support Australia's largest broker network, the Steadfast Group (Steadfast) in their proposed acquisition of Calliden Group Ltd (Calliden). Munich Re acquires the insurance company, Calliden Insurance Limited. At the same time, GLA

## Q4

**1 October 2014**

MEAG expands its infrastructure investments to include debt investments. To cover long-term payment obligations in its core business, Munich Re aims to make (equity and debt) investments of up to €8bn in infrastructure, renewable energy and new technology projects of an appropriate quality via its asset manager MEAG in the coming years.

**15 October 2014**

MEAG sets up two new bond funds, once again making the competence it has acquired in investing the Group's funds also available to private and institutional investors. MEAG Emerging Markets Rent invests in bonds issued by emerging markets and developing countries, and MEAG GlobalRent diversifies its investments globally in pursuit of absolute returns.

Doris Höpke (47) takes over responsibility for the Health Division from the Chairman of the Board of Management of Munich Re, Nikolaus von Bomhard, with effect from 1 May 2014. Höpke, who is a lawyer, has been Head of Munich Re in Madrid since 2011, and has worked for Munich Re since 1999.

Pina Albo (51) is appointed a member of the Board of Management with effect from 1 October 2014. Albo takes on responsibility for the Europe and Latin America Division in conjunction with

Georg Daschner from 1 October 2014, assuming sole charge of the Division as from 1 January 2015. Daschner, who has been a member of the Board of Management since 2003, retires on 31 December 2014. Albo, also a lawyer, has been working at Munich Reinsurance America, Inc. since 2009 as President of the Reinsurance Division in the USA, and joined Munich Re in 1992.

#### 20 March 2014

Munich Re's Board of Management avails itself of the authorisation granted at the Annual General Meeting on 30 April 2013 to buy back shares. On 20 March 2014, it resolves to acquire in the period between 1 May 2014 and, at the latest, the next Annual General Meeting on 23 April 2015 up to 13 million Munich Re shares for a maximum total purchase price of €1bn via the stock exchange. The repurchased shares are to be retired in order to optimise the Company's capital structure.

#### 30 April 2014

Munich Re pays an increased dividend of €7.25 per share for the financial year 2013 (previous year: €7.00). This puts Munich Re's overall payout to shareholders at more than €1.3bn.

#### 26 May 2014

Munich Re and the German software company RIB sign an exclusive agreement to jointly develop the first global IT-based insurance product for major construction projects, covering elements of unplanned increases in construction costs. The innovative solution is geared to project owners and combines RIB's iTWO Technology with Munich Re's risk know-how.

#### 20 June 2014

ERGO enters the insurance market in Singapore and acquires all of the shares in the property-casualty insurer SHC Insurance Pte. Ltd., thereby expanding its presence in southeast Asia. This acquisition marks a further significant milestone and positions the company very well for taking advantage of the city-state's plans to become the region's insurance centre. The insurer, which is renamed ERGO Insurance in October, provides a broad spectrum of property-casualty insurance covers.

obtains access to a leading-edge underwriter platform for commercial insurance covers and key expert personnel, previously part of Calliden, to strengthen GLA's business package and commercial insurance product distribution.

#### 12 September 2014

Since severe weather events are increasing, protection against floods is becoming more important – not only in the vicinity of rivers. With its new product line for homeowners' comprehensive insurance, ERGO pioneers insurance cover against flooding and heavy rainfall in all areas, including for residential buildings in regions with extreme exposure to flooding. Another core element of this product line is the "Get your house back" guarantee.

If a house has been destroyed, ERGO covers not only the costs of reconstruction, but also of demolition and disposal, as well as the costs for an architect.

Rainer Tögel

#### 30 October 2014

The Supervisory Board of property-casualty insurer ERGO Versicherung AG appoints Rainer Tögel to the Board of Management with effect from 1 January 2015. Tögel is responsible for plan business, i.e. above all for personal lines insurance.

#### 22 December 2014

Munich Re acquires shares in a wind farm in the USA with an installed capacity of 287 megawatts. MEAG thus makes Munich Re's first infrastructure investment in North America. Miami Wind Energy Center is located in northern Texas, in one of the windiest regions of the USA.

## Munich Re shares

- Munich Re shares showed solid performance: The share price increased by 3.5% in 2014, giving a return (including dividends) of 8.2%
- Supervisory Board and Board of Management to again propose payment of an increased dividend of €7.75 per share at the Annual General Meeting
- In 2014, own shares were repurchased with a transaction value of €1.4bn
- Since 2001, Munich Re shares have been listed in all the main sustainability indexes and have received excellent ratings

The investment year 2014 was dominated by declining interest rates and geopolitical risks on the one hand, and economic hopes and expansionary monetary policies of central banks on the other. At the end of 2014, the yield on ten-year German government bonds reached a new historical low of only around 0.5%. Shares thus became more attractive again given their generally higher dividend yield. The unresolved sovereign debt crisis drew much less attention in the capital markets than in previous years.

After gaining around 20% in value in the previous year, share prices worldwide grew only moderately in the first three months of 2014. Although the global economy seemed to have found its feet again, there were also a number of factors that caused some nervousness among investors. The US Federal Reserve gradually reduced the vast increase in money supply that was being used to stimulate the economy. Additional uncertainties resulted from turbulences in a number of emerging countries, the Crimean crisis, and doubts about the growth and stability of China.

In the second quarter, the stock markets continued to be volatile. Whilst a few historical highs were still reached in March, prices in some stock markets dropped by mid-April to below the levels recorded at the beginning of the year. Poor economic data, especially from Europe, were responsible for this development. Thereafter, hopes for economic recovery in the second half of the year alternated with fears of a reduction in the expansive monetary policy. The ECB's announcement that it intended to maintain its loose monetary policy caused the DAX to break the 10,000-point mark for the first time in June.

Stock market growth in the third quarter of 2014 was mainly driven by central bank measures and by significant amounts of liquidity, and alternated with rising concerns about global economic growth.

A correction on the stock markets beginning in September was a reaction to negative economic signals, and carrying on into October it caused the DAX to fall to an annual low of 8,355 points. This was rapidly followed by a rally, partly triggered by the falling oil price, which was seen as a boost to the economy. The DAX reached a new all-time high in early December, but by the end of the year rising oil price turbulences and concerns about the developments in Greece caused the DAX to slow again.

1 European share price index = DJ EURO STOXX 600

The European insurance sector continued its positive development

The European insurance industry continued to perform well in 2014, surpassing the development of the European share price index<sup>1</sup> for the third consecutive time. Once again it outperformed the European bank index<sup>2</sup> and the German DAX 30, mainly on account of the moderate economic recovery and decreased risk perception among investors. Given the improved growth perspectives and the prospects of increasing dividends, primary insurers benefited especially from these developments and their share prices responded positively.

Buoyed by higher bond prices, carrying amounts in the insurance sector improved further. Due to higher share prices across the board, by the end of the year the pricing levels for insurance stocks were thus about the same as in the previous year.

In the year under review, the price development of reinsurance company shares fell short of those for several primary insurance companies, despite the comparatively low incidence of major losses. Overcapacity and intense competition in the reinsurance market – combined with the entry of new market players, such as pension funds, and stagnating demand – led to significant pressure on margins. This was aggravated by lower income from investments. However, given the comfortable capital situation of reinsurers, distributions in the form of higher dividends, share buy-backs and special dividends were important investment criteria.

Having seen gratifying performance in the previous year, Munich Re shares again increased in value in 2014, despite the challenging environment, thus reaffirming their attractiveness as an investment. The price performance was underpinned by the still robust growth in operating earnings, and by the fact that our original profit guidance issued at the beginning of 2014 was again exceeded, the latter benefiting from the relatively low levels of major losses. Munich Re's capitalisation continued to be very comfortable, so that a new share buy-back programme totalling €1bn was launched by the Board of Management in May 2014. This underscores the Board's commitment to disciplined and responsible capital management in line with shareholders' interests.

Return of 8.2% on  
Munich Re shares

Munich Re shares closed the year at €165.75, equivalent to a 3.5% increase. Including the dividend paid for the financial year 2014, the return was a gratifying 8.2%. The DAX 30 rose by only 2.7%, whilst the European insurance index increased by 3.7%. Taking a longer period as a basis, the return on Munich Re shares including dividends has grown more strongly than the European insurance index over the last three- and five-year periods.

#### Share price performance 1.1.2014 = 100

<sup>2</sup> European bank index = DJ EURO STOXX Banks

Around 40 analysts from banks and brokerage houses regularly evaluate our shares. At the end of December 2014, some 24% of the analysts gave our shares a positive assessment, 55% a neutral one, and 21% a negative rating. You can find the analysts' current recommendations and result estimates on our website.

#### Weighting of Munich Re shares as at 31 December 2014

→  
More information on sustainability ratings is available on our website  
[www.munichre.com/cr/SRI-en](http://www.munichre.com/cr/SRI-en)

From a sustainability perspective, Munich Re shares remain an interesting investment. Since 2001, Munich Re has been an ever-present member of the Dow Jones Sustainability Index (DJSI) and the FTSE4Good. It is also listed on the MSCI Global Sustainability, the STOXX ESG Leaders and the Euronext World 120, and it is a member of the ETHIBEL Pioneer and Excellence investment registers.

Munich Re's rating by specialised sustainability rating agencies, e.g. Sustainalytics, oekom, MSCI, Vigeo and RobecoSAM, has been consistently excellent, and it is thus one of the best in the insurance sector. In 2014, Munich Re came in first compared with its peers in the same market capitalisation category of the Sustainalytics rating.

Munich Re won the German Investors' Award for Responsible Business Practices (Deutscher Investorenpreis für verantwortliches Wirtschaften) in December 2014. This was the fourth time that publishing house DuMont Verlag and Deutsche Asset & Wealth Management conferred the award on companies that understand sustainability to be a strategic objective and implement it in an exemplary way.

Active capital management is an integral component of our business policy. We therefore strive to give our shareholders an appropriate share in our corporate success. As a rule, we pay out at least 25% of the annual result as a dividend. Our policy is to at least maintain – and where possible even to increase – our level of dividend of the previous year. The last time we reduced our dividend was in 1970; we use share buy-backs as a more flexible means of managing our capitalisation.

#### Dividend of €7.75 proposed

For the financial year 2014, the Board of Management and the Supervisory Board intend to propose a dividend of €7.75 (previous year €7.25) at the Annual General Meeting on 23 April 2015. Altogether, this would mean a total payout of €1.3bn (previous year: €1.3bn). Subject to approval by the Annual General Meeting, the dividend will be paid on 24 April 2015. With an increase in the dividend, we are again underlining the profitability of our business model and the solidity of our capital position.

With a dividend yield of approximately 4.7% (dividend for the 2014 financial year in relation to the year-end share price), Munich Re shares remain an attractive equity investment in the DivDAX, a subindex of Deutsche Börse AG featuring the 15 DAX companies with the highest dividend yields.

An overview of Munich Re's  
ratings can be found on [page 100](#)

For many years, Munich Re has been awarded consistently excellent ratings by the leading rating agencies. In the financial year 2014, the outlook for all Munich Re's ratings remained stable at a high level.

## Our strategy

- Group's business model covers the relevant sections of the insurance industry's value chain
- Disciplined financial management ensures appropriate capitalisation at all times
- New insurance solutions secure competitive edge, generate profitable growth and win clients' loyalty
- A forward-looking and responsible approach is an integral part of our corporate strategy

### Turning risk into sustainable value

Our business as an insurer and reinsurer is the professional handling of risk. We create value by using our extensive risk knowledge and sophisticated underwriting techniques to make risks from many different areas of private and economic life manageable – for our clients and for us.

We combine primary insurance and reinsurance under one roof. This set-up allows us to cover all sections of the insurance industry's value chain. It benefits our clients, because we can offer them customised solutions that draw on our full spectrum of knowledge. As a Group, we are also less dependent on market cycles in individual insurance and reinsurance segments, and in national markets. We thus aim to secure an attractive return while simultaneously maintaining relatively low volatility.

Risk diversification reduces  
capital requirements

The risks that we write differ greatly in nature. Their predominant non-correlation in terms of potential loss occurrence enables us to balance the risks in the portfolio over time, across regions and across fields of business – a diversification benefit that is key for our success. The size and mix of the risks assumed mean we can cover a comparatively large number of risks with the capital available. This broad diversification and a risk underwriting strategy geared to technical profitability enable us to generate stable and sustainable profits and detach ourselves to a large extent from the fluctuations of the capital markets.

Our business model is supported by disciplined financial management based on Group-wide integrated risk management, an investment policy geared to the structure of our liabilities, and active capital management.

Our risk management encompasses much more than just the risks from our insurance business. It includes investment, credit and operational risks, and also models interactions between these different risks. Our investment policy takes into account the due dates, the currencies and the inflation sensitivity of our underwriting liabilities, thus reducing reinvestment, currency and inflation risks. With our active capital management, we ensure that Munich Re's capitalisation is always appropriate. Our economic equity covers the capital requirement derived from our internal risk model and takes into account the stipulations of regulators and rating agencies. Excess capital is returned to our shareholders in the form of dividends and share buy-backs.

An important success factor is the constant improvement of the value-based processes we use to control and manage our business. One important performance indicator in this context is return on risk-adjusted capital (RORAC), which relates the profit earned to the required risk capital, allowing the management of all activities in the Group to be geared to economic value added.

New, previously unknown risks pose a particular challenge. We want to be the first to identify and evaluate these, with a view to maintaining our competitive advantage. In so doing, we aim to expand the boundaries of insurability and, at the same time, calculate technically adequate prices. With new insurance solutions, we aim to clearly set ourselves apart from the competition, win our clients' loyalty, and generate profitable growth overall. Essential prerequisites for this are our broad risk knowledge, our experience in all global markets and intensive dialogue with our clients.

Corporate responsibility is one of  
our success factors

For Munich Re, a value-based, long-term approach is a basic prerequisite for business success. Mandatory rules for compliance with legal and ethical standards, responsible business practice and our environmental protection activities are part of our corporate strategy and are key factors in our success.

To meet our own requirements and those of our stakeholders, we have committed ourselves not only to the ten principles of the UN Global Compact, but also throughout our Group to codes and principles that go beyond what the law requires. Examples of this are the Principles for Sustainable Insurance (PSI), to which we were among the first signatories, and the Principles for Responsible Investment (PRI) for specific sustainability criteria on the investment side. By systematically anchoring the aspects of ecology, social responsibility and corporate governance (ESG aspects) in our core business and investments, we are able to identify risks even more extensively, and devise solutions for them together with our clients.

More information about our  
Group-wide activities in the area  
of corporate responsibility  
can be found at  
[www.munichre.com/cr-en](http://www.munichre.com/cr-en)

The protection of ecological resources – with the objective of Munich Re being carbon neutral worldwide by 2015 – and our social commitment, together with our three corporate foundations, are two further key focal points for our corporate responsibility. All these efforts are aimed at making an unambiguous value contribution for our clients, shareholders and staff members, as well as for the environment and society.

Munich Re operates in virtually all classes of reinsurance. Our products range from traditional reinsurance, comprehensive services and consultancy to complex individual solutions for assuming risks and optimising our clients' capital. In our business, we pursue an underwriting policy consistently based on risk-commensurate prices, terms and conditions. The transfer of risks to the capital markets is another service we offer to clients.

We write our business directly with primary insurers and also via brokers. In addition to traditional reinsurance business, we participate in insurance pools, public-private partnerships, business in specialist niche segments, and also as a primary insurer. Through our operating field Risk Solutions, we offer our clients in industrial and major-project business a wide range of specialised products, customised insurance solutions and services, which we manage from within our reinsurance organisation. Our clients thus have direct access to the expertise and capacity of a leading global risk carrier.

Our extensive knowledge in identifying and assessing risks and in structuring insurance solutions enables us to create value in a highly dynamic and global environment and to stand out from our competitors. Thanks to our capital management expertise, we are also a sought-after partner for products geared to our clients' balance-sheet, solvency and rating-capital requirements, as well as their risk models. Our reputation in the market and our global, client-focused set-up give us quick and direct access to all clients.

Munich Re's primary insurance operations are concentrated in the ERGO Insurance Group. ERGO offers a comprehensive range of insurances, pension products and services, and is one of the leading insurance groups in Germany and Europe. It is represented in over 30 countries, focusing mainly on Europe and Asia.

ERGO gears itself consistently to the needs and requirements of its clients and aims to measurably further improve through close communication with them. This encompasses high-quality, needs-oriented, customer-centric sales advice, clear and comprehensible communication, innovative services and rapid assistance in the event of a loss via efficient processes and a lean organisation. A central customer and sales division supports this ambition. In combination with its solid financial strength, this makes ERGO and its specialists reliable partners for insurance and pension product requirements.

ERGO offers the appropriate sales channel for every client. Self-employed agents, direct sales staff, brokers and strong cooperation partners provide services to private clients and firms in Germany and abroad. The primary insurer is making targeted use of its competence in direct selling in order to meet the growing demand from consumers for needs-based digital offerings and services. In addition, sales partnerships link ERGO with a large number of banks in Germany and in various international markets.

The international healthcare market will continue to grow strongly. The ageing of societies in many countries and medical advances are leading to rising healthcare costs, often putting immense pressure on social security systems and increasing the need for private insurance solutions. We tap this business potential via primary insurance and reinsurance offerings in our business field Munich Health. We service a broad spectrum of clients – from governments to private or state health insurers to private end customers – with a health-sector risk management approach tailored to their specific needs. Munich Health is thus active worldwide as a risk carrier and service provider, driving forward high-quality medical care and ensuring it remains financeable.

**Dr. Bernd Pischetsrieder**  
Chairman of the  
Supervisory Board

## Ladies and gentlemen,

In the financial year 2014, the Supervisory Board fulfilled all the tasks and duties incumbent upon it by law and under the Articles of Association and its rules of procedure. No member of the Supervisory Board or of the committees attended fewer than half the meetings. We monitored the Board of Management in its conduct of the business, and gave advice on all matters of importance for the Group. No inspection measures in accordance with Section 111 (2) sentence 1 of the German Stock Corporation Act (AktG) were required at any time.

### Collaboration between Supervisory Board and Board of Management

The Board of Management involved the Supervisory Board in all important business transactions and decisions of fundamental significance for the Group. During meetings, we held in-depth discussions with the Board of Management about the information provided to us. Cooperation with the Board of Management was characterised in every regard by targeted and responsible action aimed at promoting the successful development of Munich Re. The Board of Management satisfied its reporting obligations towards the Supervisory Board in all respects, both verbally and in writing.

Outside of Supervisory Board meetings, the Board of Management informed us promptly about important events in the Group, including the election of employee representatives to the Supervisory Board carried out in line with Munich Re's co-determination agreement, and ERGO's acquisition of the Greek insurance company ATE Insurance and the property-casualty insurer SHC Insurance Pte. Ltd. The shareholder representatives and the employee representatives met with the Chairman of the Board of Management regularly before the meetings for separate discussions of strategic issues and other matters of essential importance.

Between meetings, I held regular discussions with Dr. Nikolaus von Bomhard, Chairman of the Board of Management, about individual questions of strategic development and risk management, as well as about Munich Re's current business situation. Also between meetings, the Chairman of the Audit Committee, Professor Dr. Henning Kagermann, remained in close contact with Dr. Jörg Schneider, the member of the Board of Management responsible for Group reporting.

### Focal points of the meetings of the full Supervisory Board

There were seven meetings of the Supervisory Board in the year under review. Two representatives of the German Federal Financial Supervisory Authority (BaFin) routinely attended one of the meetings as guests. We regularly held in depth discussions with the Board of Management about Munich Re's business performance and current topics, with a special focus on strategic considerations of the Board of Management with respect to the individual business fields. In this context, we also always critically examined developments in life primary insurance. The Board of Management reported regularly on the situation of Munich Re's investments, addressing the development of the global economy and financial markets in detail, and their impact on the Group's assets and earnings. It also kept us informed about the relevant supervisory requirements, particularly regarding the developments in Solvency II, Europe's new supervisory regime. We also dealt with the following topics in the individual meetings in 2014:

The meeting on 19 March focused on the Company and Group financial statements for 2013 and the motions for resolution by the 2014 Annual General Meeting. We conferred and took decisions regarding two new

appointments to the Board of Management and regarding the extension of another appointment, and on related adjustments to the Board of Management's distribution of responsibilities. In addition, we established the personal objectives for the Board members' variable remuneration for 2014. We also asked for an overview of the Group's restructured compliance organisation, and the Board of Management informed us about developments in the reinsurance markets and Munich Re's positioning in those markets.

The meeting on 29 April was devoted solely to matters involving the Board of Management, specifically the evaluation of the individual Board members' annual performance for 2013 and their multi-year performance for 2011–2013. The personal objectives for a newly appointed member of the Board of Management were also set for 2014.

On 30 April, directly prior to the Annual General Meeting, we heard the Board of Management's report on the present status of business performance in 2014. We also used the meeting to make last-minute preparations for the impending Annual General Meeting.

Immediately after the Annual General Meeting, we held the constituent meeting of the newly elected Supervisory Board, at which we addressed in particular the election of the Chairman and first deputy of the Supervisory Board, and the election of members of the five Supervisory Board committees.

At the meeting held on 15 July, we dealt with the focal points of human resources work in the Group, and were briefed on the 2013 compensation report in accordance with the German Remuneration Regulation for Insurance Companies (VersVergV). During his regular report on current issues, Dr. Nikolaus von Bomhard also referred to important provisions contained in the Life Insurance Reform Act (LVRG).

On 14 October, we discussed corporate governance issues, including the annual efficiency review and the resolution regarding the Declaration of Conformity. The Board also presented strategies in life reinsurance business, successes and "lessons learned". The personal objectives for a newly appointed member of the Board of Management were set for 2014.

On 9 December, the Chairman of ERGO presented a report on ERGO sales development in Germany, and he set out the current status of implementation of the strategy "Moving forward – My ERGO 2018". The Munich Re Board of Management outlined the strategic and operative orientation of the business field Munich Health. After a comprehensive discussion, we decided on remuneration for the Board of Management as from 1 January 2015 and the financial targets for members of the Board of Management for 2015. We looked into the Group's risk strategy in the course of the report on Munich Re's risk situation by the Group Chief Risk Officer. The Board of Management also reported on Group planning for 2015–2017, and provided explanations in cases where actual business performance deviated from the planning for the year under review.

Details on the composition of the committees can be obtained on page 45 and from our website at [www.munichre.com/supervisory-board](http://www.munichre.com/supervisory-board)

### Work of the committees

There are five Supervisory Board committees. They prepare the topics to be addressed and resolved by the full Supervisory Board. At each Supervisory Board meeting, information about the work of the committees was provided to the full Board by the respective Chairs of the committees.

The Personnel Committee met six times in 2014. It essentially prepared the resolutions on matters involving the Board of Management already mentioned in the report on the work of the full Supervisory Board. It also dealt with fringe benefits for members of the Board of Management, with seats held by members of the Board of Management on supervisory, advisory and similar boards, and with Group-wide succession planning, especially with respect to Board-level appointments.

At its four meetings in 2014, the Standing Committee dealt with the preparation of Supervisory Board meetings and topics of corporate governance. In addition, the Standing Committee carried out a review of the efficiency of the Supervisory Board's work in 2014, and determined that overall the reporting by the Board of Management and the work of the Supervisory Board was efficient and appropriate. A regular report by Dr. Nikolaus von Bomhard to the Standing Committee covered changes to the shareholder structure and the status of the share buy-back programme. The Committee also received the annual report on expenses for donations and sponsoring.

The Audit Committee met six times in the period under review, and two of these meetings were attended by the external auditors. At these meetings attended by the auditors, the Audit Committee discussed the annual financial statements and the management reports for the Company and for the Group, the auditors' reports, and the Board of Management's proposal for the appropriation of the net retained profits for the financial year 2013. The Committee also concerned itself with the quarterly financial reports in 2014, and discussed the half-year financial report for 2014 in detail with the auditor.

Another key task of the Committee consisted in monitoring the Group's risk situation and risk management, and developing a risk strategy. The Group Chief Risk Officer provided verbal input at several meetings of the Committee and in four written reports. Further issues discussed regularly were the internal control system and compliance topics. The Head of Group Audit informed the members of the Committee in full about the outcome of the audits for 2013 and the audit planning for 2014. The Committee received regular updates on the current status of individual compliance issues and the progress of audits. The Committee took advantage of the opportunity – in the absence of the Board of Management – to confer amongst themselves or with the Head of Group Audit, the Group Chief Compliance Officer, the Group Chief Risk Officer and the external auditors.

The Audit Committee reviewed and monitored the auditors' independence, and received regular reports on auditing and non-audit-related services. At two meetings, the Committee also addressed the potential effects of the European Union's new Directive and Regulation on statutory audits. Pursuant to a resolution taken by the full Committee in November 2013 with respect to the tender for the external audit 2014, the Chair of the Committee commissioned KPMG with the audit for the financial year 2014, and also commissioned the auditor's review of the 2014 half-year financial report.

The Nomination Committee continued the preparations for the election of shareholders' representatives at the Annual General Meeting 2014 that had already begun in 2013. At three meetings held in the first quarter of the year, it discussed the re-election of Supervisory Board members and suitable candidates for election to the Supervisory Board. With regard to the nomination proposals submitted, the Committee took account of the catalogue of criteria and the objectives determined by the Supervisory Board for its composition.

Pursuant to rule 7.5 of the rules of procedure, the Conference Committee for the Supervisory Board did not need to be convened in 2014.

Details of this can be found in the  
corporate governance report on  
[page 26 ff.](#)

### Corporate governance and Declaration of Conformity

The Supervisory Board pays close attention to good corporate governance. Together with the Board of Management, we therefore published the mandatory annual Declaration of Conformity pursuant to Section 161 of the German Stock Corporation Act (AktG) in November 2014. We again complied with all recommendations of the German Corporate Governance Code, and intend to continue to comply with it in future. We confirmed the assessment we made in 2013 that all 20 members of the Supervisory Board are to be regarded as independent and that they do not have any relevant conflicts of interests.

Munich Re offered an internal information event to all the members of the Supervisory Board in 2014. Nearly all of them took advantage of the opportunity to enhance their understanding of increasing digitalisation and data management in the insurance industry, particularly at Munich Re, and to hold intensive discussions about these issues. Munich Re also held an induction course for newly elected members of the Supervisory Board. This provided a customised overview of risk management, corporate governance, financial control, accounting and Board remuneration with particular reference to Munich Re.

### Changes on the Supervisory Board

The five-year term of office of the Supervisory Board expired at the end of the Annual General Meeting on 30 April 2014. The following shareholders' representatives retired: Annika Falkengren and Peter Löscher. The following employee representatives also retired: Herbert Bach, Dina Bösch, Hans Peter Claußen, Silvia Müller, Reinhard Pasch and Richard Sommer. The Supervisory Board wishes to thank all the retired members for their valuable and constructive counsel and their dedication to the development and supervision of Munich Re, in some cases over many years.

The Annual General Meeting elected Professor Ursula Gather and Gerd Häusler as new members of the Supervisory Board. Prior to the Annual General meeting, the following members of the Supervisory Board were elected by the relevant employee representative bodies on the basis of the co-determination agreement: Dr. Anne Horstmann, Ina Hosenfelder, Beate Mensch, Ulrich Plottke, Gabriele Sinz-Toporzysek, and Angelika Wirtz. The period of office of the new and re-elected members of the Supervisory Board began at the end of the Annual General Meeting.

Dr. Ulrich Hartmann passed away on 13 January 2014. He was a member of the Supervisory Board from December 1993 until April 2009, and acted as the Board's Chairman from December 1996 to May 2004. He proved to be a knowledgeable, far-sighted and valuable advisor, and made a significant contribution to overcoming the challenges faced by Munich Re in this period. We mourn the loss of an exceptional man.

Professor Hubert Markl passed away on 8 January 2015. As a member of the Supervisory Board from December 2002 until April 2009, Professor Markl made an extremely important and valuable contribution because of his extraordinarily wide knowledge and experience, and also because of his scientific perspective. We are extremely grateful to him for this.

### Changes on the Board of Management

Dr. Doris Höpke was appointed a member of the Board of Management with effect from 1 May 2014, and has since been responsible for the business field Munich Health. Giuseppina Albo was appointed a member of the Board of Management with effect from 1 October 2014. Until 31 December 2014, she was jointly responsible with Georg Daschner for the Europe and Latin America Division; since 1 January 2015, she has had sole responsibility for this function.

Georg Daschner, who has been a member of the Board of Management since 2003, retired on 1 January 2015. We would like to thank him for his many years of dedicated service to the Group, and for his outstanding contribution to the success of Munich Re over many years.

### Company and Group financial statements for 2014

KPMG Bayerische Treuhandgesellschaft Aktiengesellschaft Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft duly audited the Company and Group management reports and financial statements as at 31 December 2014 and issued them with an unqualified auditor's opinion. The respective reports and the Board of Management's proposal for appropriation of the net retained profits were subsequently submitted directly to the members of the Supervisory Board. At its meeting on 4 February 2015, the Audit Committee had the opportunity to confer in detail about the preliminary year-end figures as at 31 December 2014. On 9 March 2015, it prepared the Supervisory Board's resolution on the adoption of the Company financial statements and the approval of the Group financial statements. To this end, the Audit Committee examined the Company and Group financial statements, the management reports and the Board of Management's proposal for appropriation of the net retained profits. It discussed these at length with the auditor present at the meeting, and gave detailed consideration to the auditor's reports. The Chair of the Audit Committee briefed the full Supervisory Board about the outcome of its consultations at the balance sheet meeting.

The full Supervisory Board also reviewed the Company and Group financial statements and management reports, and the proposal of the Board of Management for appropriation of the net retained profits. On the basis of this examination and having heard the auditor's report, the Supervisory Board raised no objections to the outcome of the external audit. It approved the Company and Group financial statements on 10 March 2015. The financial statements were thus adopted. Having carefully weighed all relevant aspects, the Supervisory Board followed the proposal of the Board of Management for appropriation of the net retained profits.

### Words of thanks to the Board of Management and employees

The Supervisory Board wishes to thank all the members of the Board of Management and staff worldwide. With their work and commitment, they have once again contributed to another gratifying result for Munich Re.

Munich, 10 March 2015

For the Supervisory Board

**Dr. Bernd Pischetsrieder**  
Chairman

# Corporate governance report

## Corporate governance report<sup>1</sup>

The corporate governance report and the Statement on Corporate Governance can also be found on our website at [www.munichre.com/cg-en](http://www.munichre.com/cg-en)

Good corporate governance creates lasting value. We therefore apply the highest standards to our operations and activities, complying with all the recommendations and proposals of the German Corporate Governance Code. Beyond this, we have our own Munich Re Code of Conduct specifying high-level ethical and legal requirements that must be met by employees. Since 2013, this has included a reference to the principles of the United Nations (UN) Global Compact, which are included in an annex to the Code of Conduct. Further information on Munich Re's corporate governance is included in the Statement on Corporate Governance. In accordance with Section 289a of the German Commercial Code (HGB), the Statement on Corporate Governance forms part of Munich Reinsurance Company's management report.

## How we view corporate governance

Corporate governance stands for a form of responsible company management and control geared to long-term creation of value. One of our aims in this context is to foster the confidence of investors, clients, employees and the general public. Efficient practices on the Board of Management and Supervisory Board, good collaboration between these bodies and with the Group's staff, and open and transparent corporate communications are also very important for us.

## What rules apply to Munich Re?

The benchmarks of good corporate governance are determined by national and international requirements, and by internal principles. As a result of its international organisation, Munich Re has to consider corporate governance rules in different national legal systems. We observe not only the respective national standards, but also internationally recognised best practices. In Germany, where Munich Reinsurance Company has its headquarters, corporate governance rules are set out in the Stock Corporation Act (AktG) and the German Corporate Governance Code. The German Insurance Supervision Act (VAG) and the European supervisory regulations (Solvency II implementation rules) formalise the requirements for the business organisation of insurance companies and the "fit and proper" criteria for their Board members and members of the Supervisory Board. The Insurance Supervision Act also provides particular rules for insurance companies' remuneration systems. These rules formed the basis for the Remuneration Regulation for Insurance Companies (VersVergV) issued by the German Federal Ministry of Finance.

<sup>1</sup> In accordance with Section 3.10 of the German Corporate Governance Code.

Also applicable to Munich Reinsurance Company is a co-determination agreement concluded pursuant to the German Act on the Co-Determination of Employees in Cross-Border Mergers (MgVG).

The Declaration of Conformity  
is available at  
[www.munichre.com/cg-en](http://www.munichre.com/cg-en)

The German Corporate Governance Code contains the main legal rules to be observed by listed German companies. In addition, it includes recommendations and proposals based on nationally and internationally recognised standards of good and responsible management. Every year, Munich Reinsurance Company's Board of Management and Supervisory Board make a declaration of how far they have complied, and are complying, with the Code's recommendations.

We have underscored our approach to corporate responsibility by adopting international guidelines. First and foremost among these is the UN Global Compact, which we joined in 2007. Its ten principles provide the fundamental framework for our corporate responsibility strategy. Since signing up to the agreement, we also report annually in our "Communication on Progress" on our progress in implementing the principles. Guidelines for investments geared to sustainability criteria are provided by the Principles for Responsible Investment (PRI), which we have implemented via our asset manager MEAG since 2006. In 2012, we signed up to the Principles for Sustainable Insurance (PSI). We also report annually on our progress with these two initiatives.

## Corporate legal structure

The Articles of Association and  
co-determination agreement  
can be viewed at  
[www.munichre.com/cg-en](http://www.munichre.com/cg-en)

Munich Reinsurance Company is a joint-stock company (Aktiengesellschaft) within the meaning of the German Stock Corporation Act (AktG). It has three governing bodies: the Board of Management, the Supervisory Board and the Annual General Meeting. Their functions and powers are derived from the Act, the Articles of Association, the co-determination agreement, rules of procedure and internal guidelines. The principle of parity co-determination on the Supervisory Board has been upheld in the co-determination agreement, and strengthened by taking into account staff employed in the rest of Europe.

## Board of Management

→  
An overview of the composition  
of the Board of Management and  
the distribution of responsibilities  
can be found on [page 43](#)

→  
The remuneration system for the  
Board of Management and the  
remuneration tables are provided  
on [page 49 ff.](#) of the management  
report

→  
Information about the working  
practices of the Board of  
Management can be found in the  
Statement on Corporate  
Governance

The Board of Management is responsible for managing the Company, setting objectives and determining strategy. In doing so, it is obliged to safeguard Company interests and endeavour to achieve a sustainable long-term increase in the Company's value. The Board of Management is responsible for effecting adequate risk management and risk control in the Company. It must ensure compliance with statutory requirements and internal company guidelines. The Group Compliance Division of Munich Reinsurance Company reports directly to the Chairman of the Board of Management. At the instigation of the Board of Management, we have established another channel to complement the external independent ombudsman and thus strengthen the compliance system: the compliance whistleblowing portal. Employees and third parties can use this portal to anonymously report criminal behaviour such as bribery and corruption, fraud, conduct liable to cause damage to reputation, and contraventions of antitrust, insider trading and data protection laws.

Pursuant to Article 16 of the Articles of Association, the Board of Management must consist of at least two members; beyond this, the number of members is determined by the Supervisory Board. The Board of Management of Munich Reinsurance Company had eight to ten members in the year under review (taking into account the two new appointments to the Board during the course of the year). In the period under review, the Supervisory Board appointed two women to the Board of Management who have extensive international experience and thus strengthen its diversity and internationality.

## Collaboration between Board of Management and Supervisory Board

The Board of Management and the Supervisory Board cooperate closely for the benefit of the Company. The Board of Management reports regularly to the Supervisory Board about all questions relevant to the Company. Certain types of transaction require the consent of the Supervisory Board.

## Supervisory Board

→  
An overview of the composition of the Supervisory Board can be found on page 43 ff. More details about the work of the Supervisory Board can be found in the Statement on Corporate Governance and in the Report of the Supervisory Board on page 21 ff.

The Supervisory Board monitors the Board of Management and gives counsel where appropriate, but it is not authorised to take management action in place of the Board of Management. The Supervisory Board also appoints the external auditor for the Company and Group financial statements and for the half-year financial report.

In compliance with the Articles of Association, the Supervisory Board has 20 members. Half are representatives of the shareholders, elected by the Annual General Meeting. The other half are elected representatives of the Group's employees in the European Economic Area (EEA).

### Objectives of the Supervisory Board for its composition, diversity and independence

In accordance with Section 5.4.1 (2) of the German Corporate Governance Code, the Supervisory Board has set itself the following objectives for its composition:

- The main criteria for selecting future members of the Supervisory Board are professional knowledge, personal abilities and experience (especially of an international nature), independence, commitment to sustained corporate profitability, and enterprise of the nominated persons.
- The Supervisory Board should have at least 16 independent members within the meaning of Section 5.4.2 of the German Corporate Governance Code, including at least eight shareholder representatives. No members of the Supervisory Board should have any relevant conflicts of interest.
- In selecting candidates for membership, the Supervisory Board should pay due regard to diversity, especially in terms of age, internationality and gender. The Supervisory Board set itself the objective that at the beginning of the current term of office at least 20% of the members should be women, with this figure increasing to at least 30% by the start of the following term of office (scheduled for 2019). This objective has already been surpassed: in the period under review, there were five women on the Supervisory Board until 30 April 2014, and eight after this date. This means that women made up 25% of the members until 30 April 2014 and 40% after that date.

The aforementioned objectives apply to the Supervisory Board as a whole. Shareholder and employee representatives will each contribute towards meeting these objectives. The Supervisory Board's Nomination Committee, which selects candidates for the shareholder representatives, and the European Electoral Board, which is responsible for the election of the employee representatives, both have a corresponding catalogue of criteria at their disposal. Besides the objectives mentioned, the catalogue includes criteria such as special professional skills and personal qualities.

In addition, the Supervisory Board's rules of procedure provide for a recommended age limit of 70 for candidates.

The Supervisory Board is of the opinion that all 20 of its members are to be regarded as independent within the meaning of Section 5.4.2 of the German Corporate Governance Code. The Supervisory Board is not aware of any business or personal relationship between a member and the Company, its governing bodies, a controlling shareholder or an entity affiliated with such a shareholder, as a result of which a major and not only temporary conflict of interest could arise. The Supervisory Board assumes that the members elected in accordance with the Act on the Co-Determination of Employees in Cross-Border Mergers and the co-determination agreement are independent as a matter of principle.

## Annual General Meeting

The regular responsibilities of the Annual General Meeting include reaching a resolution on the appropriation of profits and approving the actions of the Board of Management and Supervisory Board. Besides this, the Annual General Meeting elects the shareholder representatives on the Supervisory Board and, in particular, votes on changes to the Articles of Association and certain capital measures. Certain corporate contracts also require the approval of the Annual General Meeting to become effective.

The principle of “one share, one vote” applies at the Company’s Annual General Meeting. With the aim of making it easier for shareholders to take part and exercise their voting rights, the Company provides the option of online participation at the Annual General Meeting and a postal vote (also electronically).

## Share trading and shares held by Board members

The Company has to be notified promptly of the acquisition or sale of Company shares (or financial instruments based on these) by members of the Board of Management and Supervisory Board and by specified persons closely related to or connected with them. This notification must take place for acquisition and sales transactions totalling €5,000 or more in a single calendar year.

Munich Reinsurance Company is obliged to publish information of this kind on its website without undue delay.

The total number of Munich Reinsurance Company shares and related financial instruments held by all members of the Board of Management and Supervisory Board amounts to less than 1% of the shares issued by the Company.

## Munich Re

- Innovative insurance solutions push back the boundaries of insurability and tap new business potential in reinsurance.
- The majority of primary insurance operations are concentrated in ERGO Insurance Group.
- Munich Health streamlines its organisation and consolidates its market position in order to tap into growth opportunities in the international health insurance market.

### Group structure

Current information on  
Munich Re is also provided  
on our website at  
[www.munichre.com](http://www.munichre.com)

Munich Re combines primary insurance and reinsurance under one roof. This enables the Group to cover large stretches of the value chain in the risk market. At the same time, it leverages synergies in revenue and costs, whilst reducing the risk-based capital required through broad diversification. Almost all reinsurance units operate worldwide under the uniform brand of Munich Re. The ERGO Insurance Group (ERGO) is active in nearly all lines of life, health and property-casualty insurance. International business is increasingly gaining in importance for ERGO. The Group has taken this into account by changing our internal management reporting and thus also our segment reporting as of the fourth quarter of 2014. Our international health reinsurance business and health primary insurance outside Germany are combined under the Munich Health brand. Munich Re's investments worldwide are managed by MEAG, which also offers its expertise to private and institutional investors outside the Group. As of the fourth quarter of 2014, we are no longer showing asset management as a separate segment because MEAG's activities focus on intra-Group business.

The reinsurance companies of the Group operate globally and in virtually all classes of reinsurance. We offer a full range of products, from traditional reinsurance to innovative solutions for risk assumption. Our companies conduct their business from their respective headquarters and via a large number of branches, subsidiaries and affiliated companies. The reinsurance group also includes specialty primary insurers in niche segments, whose business requires special competence in finding appropriate solutions. These primary insurers have the words "Risk Solutions" added to their logo.

Domination and profit-transfer agreements are in place with many Group companies, especially between ERGO Versicherungsgruppe AG and its subsidiaries.

In ERGO, we combine all Munich Re's primary insurance activities with the exception of health insurance business outside Germany, which is handled by Munich Health, and the monoliners in reinsurance. Some 77% (78%) of gross premiums written by ERGO derive from Germany, and 23% (22%) from international business, mainly from central and eastern European countries. ERGO has also extended its activities to Asian markets such as India, China, Vietnam and Singapore.

Munich Health operates on a global basis in reinsurance and exploits business opportunities in the field of health primary insurance outside Germany in selected growth markets such as the Gulf region and India, and in established European markets.

Munich Reinsurance Company and ERGO Versicherungsgruppe AG are under unified control within the meaning of the German Stock Corporation Act (AktG). The relevant statutory regulations, domination agreements and Group directives govern the distribution of responsibilities and competences for key decisions between Group management and ERGO.

## Segmentation

## Reinsurance

In reinsurance, we operate in life and property-casualty business. Under reinsurance, we also include specialised primary insurance activities that are handled by the divisions of the reinsurance organisation and business from managing general agencies (MGAs).

As reinsurers, we write our business in direct collaboration with primary insurers, but also via brokers and increasingly within the framework of exclusive, strategic partnerships. In addition to traditional reinsurance business, we participate via our operating field Risk Solutions in the primary insurance business of industrial clients. Our risk expertise and solution-focused approach are key to our success.

Munich Re is already catering to an ever-increasing demand for capital optimisation, and other complex solutions for clients. This is a decisive element in our value proposition. We now bundle this expertise in the new business unit Capital Partners in the Special and Financial Risks Division. With the new unit, which has been set up to actively generate new business opportunities, we can offer our entire product range from a single source, and provide our clients with comprehensive and individual solutions. The new unit will start operations on 1 July 2015.

### The reinsurance divisions

Our international life business is written in the Life Division. This is split into four geographical regions and one international unit responsible for global activities in the area of risk and capital management, particularly the reinsurance of guarantees for savings products and transactions in the area of corporate financial management. In order to ensure proximity to our clients, we are represented in many markets with local subsidiaries and branches.

Four other divisions conduct property-casualty reinsurance. We further strengthened our competitiveness in 2014 by introducing various structural adjustments.

Global Clients and North America handles our accounts with major international insurance groups, globally operating Lloyd's syndicates and Bermuda companies. It also pools our know-how in the North American market. It is responsible for our

property-casualty subsidiaries there, and for international special lines business such as workers' compensation.

Our Europe and Latin America Division is responsible for property-casualty business with our clients from Europe (except Germany), Latin America and the Caribbean.

The Germany, Asia Pacific and Africa Division conducts property-casualty business with our clients in Germany, Africa, Asia, Australia and the Pacific Islands.

Special and Financial Risks is in charge of the classes of credit, aviation and space, agriculture, enterprise and contingency risks, and of risk solutions for industrial clients. Insurance risk securitisation and risk transfer to the capital markets are handled by our Risk Trading Unit. In addition, the division is responsible for handling our own reinsurance requirements (retrocession). Global marine business, previously split between different divisions, has been centralised and allocated to this division as a new divisional unit. The bundling of this business will further enhance underwriting quality, service for our clients worldwide, and product development.

<sup>1</sup> A detailed list of shareholdings can be found on page 292 ff. in the notes to the consolidated financial statements.

<sup>2</sup> The companies listed are mainly subsidiaries and branches outside Germany with equity capital exceeding €5m.

<sup>3</sup> Units that also transact business in Munich Health and are therefore allocated proportionately to reinsurance.

## ERGO

Current information  
is also provided at  
[www.ergo.com](http://www.ergo.com)

Munich Re's second pillar is primary insurance business, which is conducted by ERGO. Via ERGO, we offer products from all the main classes of insurance: life insurance, German health insurance, and in nearly all lines of property-casualty insurance, as well as travel insurance and legal protection insurance. These products, in combination with the provision of assistance, other services and individual consultancy, cover the needs of private and corporate clients.

Our primary insurer transacts life and property-casualty insurance under the ERGO brand. This broad offering is supplemented by legal protection insurance from D.A.S., health insurance from DKV, and travel protection insurance from ERV or ERGO Direkt, ERGO's specialist for direct sales. ERGO's many different sales channels include not only its companies' own successful intermediary organisations and direct selling by phone and via the internet but also broker relationships and cooperations with banks and other marketing partners.

### Segments

International business is increasingly gaining in importance for ERGO. Munich Re responded to this in its accounting in the fourth quarter of 2014 by pooling almost all of its activities outside Germany in the segment ERGO International. We report on business with insurances of the person in Germany in the segment ERGO Life and Health Germany. This includes ERGO Direkt companies' activities in life, health and property-casualty insurance. Travel insurance is also assigned to this segment. In the ERGO Property-casualty Germany segment, we bundle German property-casualty insurance business with the exception of direct insurance.

## Munich Health

Current information  
is also provided at  
[www.munichhealth.com](http://www.munichhealth.com)

The global health market is one of the fastest-growing sectors of the economy. This applies to healthcare and insurance alike. In order to maximise the opportunities involved, Munich Re has combined its health reinsurance worldwide and health primary insurance outside Germany under the brand of Munich Health. This covers large stretches of the health insurance value chain.

### The set-up of Munich Health

Munich Health operates global health reinsurance business under the Munich Re brand, and also assists local insurance companies with customised cost and quality control services. In primary insurance, we are active in many international markets via subsidiaries, participations and joint ventures. Vis-à-vis our clients, we operate under our proven local brands, e.g. DKV Seguros in Spain and DKV Belgium or Daman National Health Insurance in Abu Dhabi.

In 2014, we streamlined and restructured our organisation from a regional orientation in which primary insurance and reinsurance were combined, to a structure that separates primary insurance and reinsurance. We expect this organisational realignment to align ourselves more closely with the needs of our clients and to strengthen our market positions for growth opportunities.

We manage our worldwide activities in reinsurance via four decentralised units. The regions of Europe and Latin America are managed from Munich. Our North American business is based in Princeton. The Middle East and Africa are managed from Dubai, and the Asia-Pacific region via our office in Singapore. Our primary insurance units are managed centrally from Munich.

## Important tools of corporate management

### Munich Re's management philosophy – based on value creation

→ Details of our capital management are provided on [page 102 f.](#)

Munich Re's overarching objective is to analyse risks from every conceivable angle and to assess and diversify them, creating lasting value for shareholders, clients, and staff through high profits in relation to the risks assumed. A guiding principle of our entrepreneurial thinking and activity is to increase Munich Re's share price on a sustained basis. This is the aim of our active capital management and the consistent application of value-based management systems.

→ Details of our risk strategy are available on [page 118 ff.](#)

The framework for any business activity is our risk strategy, from which we derive various limitations and reporting thresholds. The core of this is available financial resources, which describe the economic capital position of Munich Re. We observe a range of important additional conditions in managing our business. They include national accounting regulations, tax aspects, liquidity requirements, supervisory parameters, and rating agency requirements. These conditions may even determine a unit's short-term orientation.

Our value-based management is characterised by the following aspects:

- We assess business activities not only according to their earnings potential but also relative to the extent of the risks assumed. Only the risk-return relationship reveals how beneficial an activity is from the shareholder point of view.
- With value-based performance indicators, we ensure an economic valuation and the comparability of alternative initiatives.
- We clearly assign responsibilities and specify the levers for adding value for both management and staff.

Contrasting aspects have to be considered and evaluated when selecting suitable target figures. On the one hand, undue complexity should be avoided in order to ensure target figures remain transparent for investors, staff, and the public. On the other hand, the challenge lies in reflecting the often complex economic realities as closely as possible and emphasising added value as the Group's overriding guiding principle. As our business activities are multifaceted, the parallel use of different performance indicators is unavoidable.

### The Group's performance indicators

The main performance metrics at Group level are economic earnings and the return on risk-adjusted capital after tax (RORAC).

#### Economic earnings

Economic earnings are the Group's key performance indicator

→ Information on the calculation of available capital and capital measures can be found on [page 133 f.](#)

The starting point for value-based management is the economic value added in a reporting period. We calculate the value we have created in a given period at Group level using the key performance indicator economic earnings, largely in alignment with the future Solvency II supervisory regime. Economic earnings are defined as the change in available financial resources in a given period, adjusted for capital measures, especially dividend payouts and share buy-backs.

|                   |   |                                       |   |                                      |     |                  |
|-------------------|---|---------------------------------------|---|--------------------------------------|-----|------------------|
| Economic earnings | = | Available financial resources 31 Dec. | – | Available financial resources 1 Jan. | +/- | Capital measures |
|-------------------|---|---------------------------------------|---|--------------------------------------|-----|------------------|

The main factors of central performance measurement, besides value changes from our new business, are in particular the changes from the market risk (interest, shares and exchange rates), changes from the credit risk (risk spreads, credit ratings and defaults), changes from the market environment of health and life insurance business (mortality, morbidity, longevity and lapses) and the development of claims and costs in property-casualty business.

In applying the uniform Group performance measurement model of economic earnings in the individual business fields, we use conceptually consistent measurement approaches that are individually geared to the characteristics of each of the respective businesses and responsibilities. They include the value added by property-casualty reinsurance and Munich Health, and the excess return from our investment activity (asset-liability management). In life insurance and the bulk of our health primary insurance business, the “value added by new business” and the “change in value of in-force business” on the basis of Market Consistent Embedded Value (MCEV) are additionally applied. In the future, we will derive these target figures from the calculation of the economic balance sheet under Solvency II. The performance metric economic earnings is used directly for ERGO, as no adjustments for this field of business are necessary. Group corporate management is designed so that we are in a position to maximise value creation while observing subsidiary parameters.

#### Return on risk-adjusted capital (RORAC)

To highlight Munich Re’s value orientation, we also use the after-tax return on risk-adjusted capital (RORAC) as a Group performance indicator applied at Group level. RORAC relates the performance indicator customary in the capital markets (IFRS consolidated result), which we adjust to eliminate the return on additional available equity, to the risk-based capital required (economic risk capital). We determine the level of risk-based capital with our internal, economically focused risk model that is oriented towards future regulatory frameworks.

Information on the internal risk model is provided on [page 126 ff.](#)

|         |                                                                                                                                                              |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RORAC = | $\frac{\text{Net income} - \text{Interest rate} \times (1 - \text{Tax rate}) \times \text{Additional available economic equity}}{\text{Risk-based capital}}$ |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|

We explain how the additional available economic equity is calculated on [page 134](#)

The numerator in the formula comprises the published IFRS net income after deduction of risk-free interest after tax (interest rate x [1 – tax rate]) generated on capital not subject to risk within the given risk tolerance. The basis for the adjustment is the capital exceeding the necessary risk-based capital, which is referred to as “additional available economic equity”; this may be necessary in certain cases for rating and solvency purposes, as well as for profitable growth. The additional available economic equity in the system presented here earns a risk-free interest rate because all the risk components of the investments and underwriting are covered with risk-based capital through the internal risk model, and assigned specific return requirements. If the risk capital exceeds the available economic equity, we set the adjustment item in the RORAC formula to zero.

RORAC is a pragmatic mixture of accounting ratios and economic indicators. Only when the requirements of Solvency II for capital resources and performance calculation have been reliably established and tested do we intend to gear our targets to these performance measures. Although we emphasise risk-based perspectives, we always aspire to meet the high, but fair, expectations of our investors with regard to the return on the total capital placed at our disposal – the return on equity (RoE).

A detailed presentation regarding MCEV is available on Munich Re's website at [www.munichre.com/embeddedvalue-en](http://www.munichre.com/embeddedvalue-en)

## Other performance indicators

### Market Consistent Embedded Value (MCEV)

For life insurance and most of our health primary insurance business, Group corporate management is carried out on the basis of Market Consistent Embedded Value (MCEV), which is valued on the basis of the European Insurance CFO Forum Market Consistent Embedded Value Principles ©<sup>1</sup>. The change in MCEV within one year, adjusted for effects from exchange-rate fluctuations, acquisition or sale of companies, dividends and capital injections, is shown as the total embedded value earnings. Additional adjustments to eliminate the influences of changes in fiscal and capital market parameters result in the operating embedded value earnings, which are a measure of the operative business performance for one year. This performance indicator can be broken down into parameters including "value added by new business" and "changes in value of in-force business". Our corporate management takes these two parameters into account.

### Value added

We use value added as a component of economic earnings for corporate management in property-casualty insurance and for Munich Health. The respective value added (adjusted for random fluctuation) is determined as follows:

---

|                 |   |                |   |             |
|-----------------|---|----------------|---|-------------|
| Adjusted result | - | Cost of equity | = | Value added |
|-----------------|---|----------------|---|-------------|

---

The adjusted result is derived from the income statement and consists primarily of the technical result, the normalised investment result and the remaining non-technical result. It contains value-based adjustments, including the smoothing of expenditure for major losses over time and the recognition of future claims expenses at their present value.

We compare the result adjusted in this way with the requisite cost of capital on the basis of risk capital.

### IFRS consolidated result

The IFRS consolidated result is a performance measure derived from our external accounting. It serves as an important criterion for investors, analysts and the general public to assess the performance of the Group and our segments. With its standardised measurement basis, the IFRS consolidated result can be compared to the results of our market competitors and is thus an indicator used in Munich Re's financial reporting.

### Asset-liability management

The economic value added by the investment result is calculated collectively for reinsurance and Munich Health due to their joint investment management. The main focus of Munich Re's investment strategy is asset-liability management (ALM), which is a fundamental pillar of our value-based management system, and in which we take into account key characteristics of underwriting and other liabilities in structuring our investment portfolio. With ALM, we aim to ensure that changes in macroeconomic factors influence the value of our investments and that of our technical provisions and

We mirror important features of our underwriting liabilities on the assets side of the balance sheet

<sup>1</sup> © Stichting CFO Forum Foundation 2008.

liabilities in the same way. For this purpose, we mirror important features of the liabilities – such as maturity patterns, currency structures and inflation sensitivities – on the assets side of the balance sheet by acquiring investments with similar characteristics where possible. This reduces our vulnerability to the effect of capital market fluctuations and stabilises our equity.

#### Combined ratio

The combined ratio is regularly posted for property-casualty business and international health business. Calculated as the percentage ratio of the sum of expenses for claims and benefits plus operating expenses to earned premiums (all of which are net, i.e. after reinsurance cessions), the combined ratio is the sum of the loss ratio and the expense ratio. A combined ratio of 100% means that premium income was exactly sufficient to cover claims and costs. Expenses for claims and benefits mainly include paid claims, the change in claims provisions, and the bulk of other underwriting expenses. Operating expenses chiefly comprise the costs arising in the acquisition of new business and for the ongoing administration of insurance contracts.

For us, the combined ratio by itself is not a sufficiently informative performance measure. It is only of limited suitability for comparing the financial performance of competitors owing to differing calculation methods and portfolio mixes. Generally, however, we aim to keep the combined ratio as low as possible by means of good underwriting and claims management.

#### Non-financial performance measures

In addition to these purely financial performance factors, non-financial performance measures like innovation, speed of processes, staff training level and client satisfaction also play a part. In the long term, a firm can only be successful if it operates sustainably and takes account of such future-oriented qualitative factors. On the basis of a comprehensive understanding of value creation with short-term and long-term, financial and non-financial parameters, we closely link strategy and operative planning by defining our strategies in structured overviews or “scorecards”, from which we derive initiatives, performance measures and responsibilities. The scorecards have four perspectives: “financial”, “market and client”, “process” and “employee”. We promote an entrepreneurial culture among our staff through the clear allocation of responsibility and accountability, recognising wherever possible how much the individual, unit or field of business contributes to increasing long-term value. Our incentive systems for staff, executives and Board members support this orientation: in general, the higher the hierarchical level, the more remuneration is based on performance.

## Governing bodies of Munich Re

### Board of Management

**Dr. jur. Nikolaus von Bomhard**  
(Chairman of the Board of Management)  
(Chairman of the Group Committee)

Group Development  
Group Investments

### Supervisory Board

**Dr. jur. Hans-Jürgen Schinzler**  
(Honorary Chairman)

Former Chairman of the Supervisory  
Board

**Dr. Ing. E.h. Dipl. Ing.  
Bernd Pischetsrieder**  
(Chairman)

Member since 17 April 2002,  
last re-elected 30 April 2014  
Former Chairman of the Board of  
Management of Volkswagen AG

**Marco Nörenberg**

(Deputy Chairman since 30 April 2014)

Member since 22 April 2009,  
last re-elected 30 April 2014  
Employee of ERGO  
Versicherungsgruppe AG

**Prof. Dr. oec. Dr. iur.  
Ann-Kristin Achleitner**

Member since 3 January 2013,  
last re-elected 30 April 2014  
Scientific Director of the Center for  
Entrepreneurial and Financial Studies  
(CEFS) at the Technical University of  
Munich

**Herbert Bach**

Member from 9 December 1994 until  
30 April 2014  
Employee of Munich Reinsurance  
Company

**Dina Bösch**

Member from 22 April 2009 until  
30 April 2014  
Member of the National Executive Board  
of ver.di (trades union)

**Hans Peter Claußen**  
(Deputy Chairman until 30 April 2014)

Member from 22 April 2009 until 30 April 2014,  
Employee of D.A.S. Deutscher Automobil Schutz Allgemeine Rechtsschutz-Versicherungs-AG (until 31 March 2014)

**Annika Falkengren**

Member from 20 April 2011 until 30 April 2014,  
President and Chief Executive Officer of Skandinaviska Enskilda Banken AB (publ)

**Frank Fassin**

Member since 22 April 2009, last re-elected 30 April 2014  
Regional Section Head Financial Services, ver.di North Rhine-Westphalia

**Dr. jur. Benita Ferrero-Waldner**

Member since 12 February 2010, last re-elected 30 April 2014  
President of the EU-LAC Foundation

**Christian Fuhrmann**

Member since 22 April 2009, last re-elected 30 April 2014  
Head of Divisional Unit, Munich Reinsurance Company

**Prof. Dr. rer. nat. Ursula Gather**

Member since 30 April 2014  
Rector of TU Dortmund University

**Prof. Dr. rer. nat. Peter Gruss**

Member since 22 April 2009, last re-elected 30 April 2014  
President of the Max Planck Society for the Advancement of Science (until 5 June 2014)  
Former Scientific Member of the Max Planck Society for the Advancement of Science

**Gerd Häusler**

Member since 30 April 2014  
Chairman of the Supervisory Board of BayernLB

**Dr. iur. Anne Horstmann**

Member since 30 April 2014  
Employee of ERGO Versicherungsgruppe AG

**Ina Hosenfelder**

Member since 30 April 2014  
Employee of ERGO Versicherungsgruppe AG  
Deputy Chair of the Union Council of the Neue-Assekuranz-Gewerkschaft (NAG)

**Prof. Dr. rer. nat. Dr. Ing. E. h. Henning Kagermann**

Member since 22 July 1999, last re-elected 30 April 2014  
President of acatech – German Academy of Science and Engineering

**Peter Löscher**

Member since 22 April 2009 until 30 April 2014  
President of the Board of Trustees of the Siemens Foundation and former Chairman of the Board of Management of Siemens AG

**Wolfgang Mayrhober**

Member since 13 December 2002, last re-elected 30 April 2014  
Chairman of the Supervisory Board of Deutsche Lufthansa AG

**Beate Mensch**

Member since 30 April 2014  
Trades Union Secretary, ver.di, Hessen

**Silvia Müller**

Member from 22 April 2009 until 30 April 2014  
Employee of ERGO Versicherungsgruppe AG

**Reinhard Pasch**

Member from 22 April 2009 until 30 April 2014  
Employee of ERGO Versicherungsgruppe AG

**Ulrich Plottke**

Member since 30 April 2014  
Employee of ERGO Versicherungsgruppe AG

<sup>2</sup> Own group company within the meaning of Section 18 of the German Stock Corporation Act.

## Remuneration report

The remuneration report is structured as follows:

- Remuneration system for the Board of Management
- Total remuneration of the Board of Management
- Remuneration structure for senior executives
- Total remuneration of the Supervisory Board

### Remuneration system for the Board of Management

The remuneration system for the Board of Management focuses strongly on long-term objectives, and thus creates a pronounced incentive for sustainable corporate development. It complies with the recommendations of the German Corporate Governance Code applicable since 2014, and with the provisions of the German Remuneration Regulation for Insurance Companies (VersVergV) of 6 October 2010.

The full Supervisory Board decides on the remuneration system for the Board of Management, and reviews it regularly. The Personnel Committee of the Supervisory Board, comprising the Chairman of the Supervisory Board, one shareholder representative and one employee representative, prepares the resolutions for the full Supervisory Board.

## Structure of the remuneration system for the Board of Management

| Component                                                                                                                                                                           | Share <sup>1</sup> | Assessment basis/<br>parameters                                                                                                        | Corridor                                       | Precondition for<br>payment                                                                                                                   | Payment                                                                                                                                                                                                   |

<sup>1</sup> For the variable remuneration, the share shown presupposes 100% performance evaluation/achievement of objectives.

<sup>2</sup> Target overall direct remuneration comprises basic remuneration plus variable remuneration based on 100% performance evaluation/achievement of objectives.

**Fixed components**

The fixed components of remuneration comprise basic remuneration plus remuneration in kind and fringe benefits.

**Basic remuneration**

The basic remuneration comprises a fixed cash compensation for the calendar year, paid out as a monthly salary.

### Remuneration in kind/fringe benefits

Remuneration in kind and fringe benefits include – in particular – company cars, policy benefits, security measures, health screening examinations and anniversary benefits, and are in line with what is normally offered in the market (DAX 30 companies). Income tax on the benefits in question is paid individually for each member of the Board of Management, with the Company bearing the amount due. Remuneration in kind and fringe benefits are valued on the basis of expenditure for disclosure in the annual report.

### Variable remuneration

The variable remuneration component is geared to the overall performance of the Group and defined organisational units and to the personal performance of the individual members of the Board of Management. The amount depends on the extent to which the annually set objectives for annual and multi-year performance are met, and how the component “Evaluation of overall performance” – which considers the overall performance of individual members of the Board and of the whole Board – is assessed.

Processes have been laid down for specifying objectives and assessing their achievement. These processes require review by the external auditor, who checks the criteria for measuring the envisaged financial objectives and whether their achievement has been assessed in accordance with the guidelines established by the Company. The outcome of this review is notified to the Supervisory Board.

Achievement and evaluation of objectives is measured at the end of the one-year and three-year periods in question, there being no adjustment of targets during these periods. The corridor for the achievement of the individual objectives and for the overall annual and multi-year performance is 0–200%. Payouts are made at the end of the periods under consideration. With a view to promoting a management approach that takes due account of the Company’s long-term interests, the members of the Board of Management are obliged to invest a fixed part of the paid-out variable remuneration in Munich Reinsurance Company shares.

Annual objectives, multi-year objectives, overall performance evaluation and investment in shares together form a well-balanced and economic (i.e. strongly risk-based) incentive system, with great importance being attached to ensuring that the targets set for the members of the Board of Management do not have undesirable effects. No guaranteed variable salary components are granted.

### Variable remuneration based on annual performance

Firstly, annual targets for the variable remuneration component geared to annual performance are set on the basis of the consolidated result of Munich Re (Group), the results from the business fields reinsurance and ERGO, divisional results and personal performance. In addition, the Supervisory Board assesses overall performance – particularly also performance not taken into account in the objectives – of the Board of Management as a whole and the individual Board members, and it also takes into account developments during the appraisal period that are beyond the influence of the Board. Full achievement of the annual objectives (100%) allows for payment of 30% of the overall target amount for variable remuneration.

The variable remuneration for annual performance is determined on the basis of evaluation by the full Supervisory Board and then paid out in the year after the one-year assessment period. Of the net payout amount, 50% must be invested in Munich Reinsurance Company shares that must be held for at least a four-year period.

Details of the assessment bases for the annual performance can be seen in the following table:

## Variable remuneration based on annual performance

| Category of objective                               | Share <sup>1</sup> | Assessment basis                                                                                                        | Parameters                                                                                                                                    |

<sup>1</sup> The objectives are weighted individually according to the responsibilities of the individual Board members.

<sup>2</sup> Further information on RORAC is provided on page 40.

<sup>3</sup> Further information on economic earnings is provided on page 39 f.

## Variable remuneration based on multi-year performance

For the multi-year performance remuneration component, three-year targets based on the financial results of the reinsurance, ERGO and Munich Health segments and on individual performance are fixed every year. The Supervisory Board also assesses the overall performance of the whole Board of Management and the individual Board members. This allows for a response to developments during the three-year appraisal period that are beyond the influence of Board members, and which can also be taken into account along with performance not included in the agreement of objectives. Full achievement of the multi-year objectives (100%) allows for payment of 70% of the overall target amount for variable remuneration.

The variable remuneration for the multi-year performance is determined on the basis of evaluation by the full Supervisory Board and then paid out in the year after the three-year assessment period. Of the net payout amount, 25% must be invested in Munich Reinsurance Company shares that must be held for at least a two-year period.

Details of the assessment bases for the multi-year performance can be seen in the following table:

### Variable remuneration based on multi-year performance

| Category of objective                               | Share <sup>1</sup> | Assessment basis                                                                                      | Parameters                                                                                                                                    |

1 The objectives are weighted individually according to the responsibilities of the individual Board members.

2 Further information on economic earnings is provided on page 39.

3 The business-field objective for Munich Health is an "individual contribution to corporate success" for the Board member responsible.

### Pro-rata calculation of the variable remuneration

Members of the Board of Management who have not been members of the Board for the full year receive a pro rata temporis amount of variable remuneration. The components based on annual performance are calculated for the months of the one-year plan term in which the Board members have held their position. Only the first year of the respective three-year plan term is pertinent for the pro-rata calculation of variable remuneration for the multi-year performance, i.e. the Board members receive pro-rata variable remuneration only for those months of the first plan year in which they have held their position. Pro-rata calculation also applies for the pertinent year in case of retirement, occupational disability, or death.

### Weighting of remuneration components

In the case of 100% achievement of objectives, the weightings of the individual components in terms of total remuneration were as follows: basic remuneration 30%, variable remuneration 70%, of which 30% was based on annual performance and 70% on multi-year performance.

### Share-based remuneration agreements that resulted in payments during the reporting period

#### Long-Term Incentive Plan

This remuneration component, with a long-term perspective, was linked to the sustained appreciation of Munich Re's share price. The Long-Term Incentive Plan was set up each year from 1999 to 2009 for members of the Board of Management. The participants were granted a certain number of stock appreciation rights. These could only be exercised if, after a two-year vesting period, Munich Re's share price had risen by at least 20% since inception of the plan and the shares have outperformed the EURO STOXX 50 at least twice over a three-month period during the term of the plan.

→  
Further information about the Long-Term Incentive Plan can be found in the notes to the consolidated financial statements on page 282 ff.

The exercising of the rights and proceeds obtained depended on the development of the share price and on fulfilment of the exercise conditions. The amount of income from the stock appreciation rights was limited. The members of the Board of Management were only able to exercise stock appreciation rights under the plans set up in 1999 and 2003–2009. There were no more exercisable stock appreciation rights in the reporting year, only payments based on the exercise of rights at the end of 2013.

#### Continued payment of remuneration in the case of incapacity to work

In the case of temporary incapacity to work due to illness or for another cause beyond the Board member's control, the remuneration is paid until the end of the contract of employment. The Company may terminate the contract prematurely if Board members are incapacitated for a period of longer than 12 months and it is probable that they will be permanently unable to fully perform the duties conferred on them (permanent incapacity to work). In this event, the Board member will receive a disability pension.

#### Other remuneration

##### Remuneration for other board memberships

In the case of seats held on other boards, remuneration for board memberships must be paid over to the Company or is deducted in the course of regular remuneration computation. Exempted from this is remuneration for memberships explicitly recognised by the Company as private.

#### Severance cap and change of control

The members of the Board of Management have no contractual entitlement to severance payments. If the Board member's activities on the Board are terminated prematurely, payments due may not surpass the equivalent of two years' total remuneration (three years' total remuneration in the event of acquisition of a controlling interest or change of control within the meaning of Section 29 (2) of the Securities Acquisition and Takeover Act – WpÜG) and may not cover more than the remaining period of the employment contract. If the employment contract is terminated for good cause on grounds that are within the Board member's control, no payments are made to the Board member. The calculation is to be based on the overall remuneration for the past financial year and, if necessary, on the probable overall remuneration for the current financial year.

#### Pensions

Up to and including 2008, the members of the Board of Management were members of a defined benefit plan, providing for payment of a fixed pension amount depending on their basic remuneration and years of service on the Board. The pension level started at 30% and could reach a maximum of 60% of annual basic remuneration.

Beginning in 2009, pension plans for Board members were changed to a defined contribution system. The main aim of this change was the fullest possible outsourcing of all pension-specific risks from Munich Reinsurance Company's balance sheet. This major risk transfer was achieved by financing increases in entitlements exclusively by paying premiums into insurance policies concluded to cover these benefit obligations. This means the Company is no longer liable for the pension benefits, as these are covered by the aforementioned insurance policies. The longevity risk, the biometric risks of premature occurrence of a pensionable event (e.g. disability or death of a member of the Board during active service), and the capital market risk were thus transferred to the insurer and the individual Board members.

As of 2009, members of the Board appointed for the first time have become members of a defined contribution plan. For this plan, the Company provides the Board members with a pension contribution which is geared to their target overall direct remuneration for each calendar year (contribution year) during the term of their contract and uniformly amounts to 25.5%. The pension contribution is paid over to an external pension insurer. The insurer's guaranteed interest rate is 2.25% (or 1.75% for Board

members newly appointed as from 2012). The insurance benefits that result from the contribution payments to the external insurer constitute the Company's pension commitment to the Board member.

Board members who had not reached the age of 55 by the end of 2008 retained as a vested pension their pension entitlement under the previous defined benefit plan (fixed amount in euros) existing at the point of transition on 31 December 2008. For future service years as of 1 January 2009, these Board members receive an incremental pension benefit generally based on the defined contribution plan for Board members first appointed from 2009. Since the conversion of the pension system took place while Board members' contracts were still in force, the pension contributions were calculated in such a way that the total of vested pension, pension-fund pension and incremental pension benefit results in an expected pension at age 60 equivalent to that of the previous pension benefit based on realistic estimates.

Board members who had already reached the age of 55 at the conversion date were not transferred to a defined contribution system and remain members of the previous system's defined benefit plan. The defined benefits are fixed on the basis of "pensionable basic remuneration", which corresponds to 25% of the target overall direct remuneration.

The Supervisory Board determines the relevant target pension level for pension commitments from defined benefit plans and defined contribution plans – also considering length of service on the Board – and takes account of the resultant annual and long-term cost for the Company.

#### Benefits on termination of employment

##### Occupational pension

Board members appointed before 1 April 2012 are entitled to an occupational pension on retiring from active service with the Company after reaching the age of 60 or, at the latest, at the end of the calendar year in which they turn 65.

Board members appointed as from 1 April 2012 are entitled to an occupational pension on retiring from active service with the Company after reaching the age of 62 or, at the latest, at the end of the calendar year in which they turn 67.

##### Benefit amount:

- For a period of six months, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- Under the defined contribution plan for members first appointed as from 2009: Annuity based on the policy reserve built up under the external insurance or payment of the policy reserve as a lump sum
- In the case of a combination between defined benefit plans and defined contribution plans: Vested pension from the defined benefit plan up to 2008 and annuity or lump sum from the policy reserve under the defined contribution plan
- In the case of defined benefit plans: Defined benefit of between 30% and 60% of pensionable basic remuneration.

**Disability pension**

Board members are entitled to a disability pension if, due to permanent incapacity to work, their contract ends by mutual agreement, is terminated by the Company, or their appointment is not extended or revoked. Permanent incapacity to work means that the Board Members are incapacitated for a period of longer than 12 months and it is probable that they will be permanently unable to fully perform the duties conferred on them.

Benefit amount:

- For a period of six months, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- Under the defined contribution plan for members first appointed as from 2009 or from 1 April 2012: 80% of the insured occupational pension up to the age of 59 or 61, with subsequent occupational pension
- In the case of a combination between defined benefit plans and defined contribution plans: Vested pension from the defined benefit plan up to 2008 and 80% of the insured occupational pension benefit up to age 59, with subsequent occupational pension based on the defined contribution plan.

**Reduced occupational pension on early retirement**

Board members are entitled to an occupational pension if the contract of employment is terminated as a result of non-extension or revocation of their appointment without the Board members having given cause for this through a gross violation of their duties, or at their own request. The precondition is that the Board members have already passed the age of 50, have been in the employment of the Company for more than ten years when the contract terminates, and have had their appointment to the Board of Management extended at least once.

Benefit amount:

- For a period of six months, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- Under the defined contribution plan for members first appointed as from 2009: Annuity based on the policy reserve built up under the external insurance or payment of the policy reserve as a lump sum at the date the pension benefit is claimed
- In the case of a combination between defined benefit plans and defined contribution plans: Entitlement of between 30% and 60% of pensionable basic remuneration, reduced by 2% for each year or part thereof short of the Board member's 65th birthday; the Company assumes payment of the difference between the monthly occupational pension and the monthly incremental pension from the external insurance.

**Vested benefits for occupational pension, disability pension and surviving dependants**

Vested benefits are paid upon the Board member reaching the age of 60 or 62, in the case of incapacity to work, or in the event of the Board member's death.

**Vested benefits under the Employers' Retirement Benefits Act (BetrAVG)**

Board members have vested benefits under the Employers' Retirement Benefits Act if they leave the Company before reaching the age of 60 or 62 and the pension commitment has existed for at least five years previously.

Benefit amount:

- Under the defined contribution plan for members first appointed as from 2009: Annuity based on the policy reserve built up under the external insurance or payment of the policy reserve as a lump sum at the date the insured event occurs

- In the case of a combination between defined benefit plans and defined contribution plans: The entitlement under the vested pension is a proportion of the vested pension based on the ratio of actual service with the Company to the period the Board member would have worked for the Company altogether up to the fixed retirement age (Section 2 (1) of the Employers' Retirement Benefits Act). The entitlement from the incremental pension comprises the pension benefits fully financed under the insurance contract up to the occurrence of the insured event based on the pension contributions made up to the date of leaving the Company (Section 2 (5a) of the Employers' Retirement Benefits Act). This entitlement is paid out as an annuity or a lump sum.

#### Improved vested benefits

Improved vested benefits are granted if the contract ends owing to non-extension of the Board member's appointment (by the Company) but not due to gross violation of duties or to the Board member giving notice. A further precondition is that the Board member leaves the Board before reaching the age of 60 and has had at least ten years' service with the Company.

The improved vested benefits do not apply to Board members first appointed as from 2009. For Board members with a combination between defined benefit plans and defined contribution plans, the improved vested benefits apply only to that part of their pension resulting from the vested pension under the defined benefit plan.

#### Benefit amount:

- For a period of six months after leaving the Board, previous monthly basic remuneration (only for Board members appointed prior to 2006)
- For the share from the defined benefit plan: Entitlement of between 30% and 60% of the pensionable basic remuneration, reduced by 2% for each year or part thereof short of the Board member's 60th birthday.

#### Provision for surviving dependants

In the event of the death of a Board member during active service, the surviving dependants receive the previous monthly basic remuneration for a period of six months if the deceased was appointed to the Board of Management before 2006. In the case of Board members appointed as from 2006, the previous monthly basic remuneration is paid to the beneficiaries for a period of three months. If the Board member's death occurs after retirement, the surviving dependants receive the previous monthly occupational pension for a period of three months, provided the marriage/registration of the civil partnership took place and/or the child was born before the Board member started drawing the occupational pension. If the Board member's occupational pension was reduced owing to early retirement, benefits for surviving dependants are based on the reduced occupational pension.

Subsequently, surviving dependants of a Board member who dies during active service or after retirement receive the following benefits:

- Widow(er)'s pension or pension for registered civil partner amounting to 60% of the defined benefit or insured occupational pension. If the spouse or registered civil partner is more than ten years younger than the Board member, the surviving dependant's pension will be reduced by 2% for each year or part thereof of age difference, but by not more than 50%.
- Orphan's pension amounting to 20% of the defined benefit or insured occupational pension per orphan
- Doubling of the orphan's pension if no widow(er)'s pension or pension for registered civil partner is payable
- Surviving dependants' pensions together may not exceed the occupational pension of the Board member. If necessary, the orphans' pensions will be reduced proportionally.

The benefits for surviving dependants are not payable for widow(er)s or registered civil partners if the marriage or registered civil partnership was not contracted until a point in time when the Board member was already drawing the occupational pension, and for orphans if they were not born until after such a point in time. The entitlement for orphans ceases on their reaching the age of 18 (or 20 for orphans of Board members with a combination between defined benefit plans and defined contribution plans). For orphans who are in full-time education or vocational training, doing military or civilian service, or unable to support themselves owing to a physical or mental disability, the entitlement is extended until they reach the age of 25 (or 27 for orphans of Board members with a combination between defined benefit plans and defined contribution plans). The entitlement to a surviving dependant's pension under the defined contribution plan ceases if the Board member draws the pension in the form of a lump sum. Pensions for surviving dependants cease upon their death.

#### Adjustment of pensions and benefits for surviving dependants

In the case of Board members appointed before 2009, occupational pensions and pensions for surviving dependants are reviewed for adjustment if salaries payable under pay-scale agreements in the insurance industry have increased by more than 12% (based on the average final salary of all pay-scale categories) since the pensions were last fixed or more than three years have passed since that date. The adjustment made will at least be in line with the increase in the cost of living in the meantime according to the consumer price index for Germany. This arrangement also applies to Board members newly appointed in the period from 1 January 2009 to 31 March 2012 who received a pension commitment from the Company for the first time before 1 January 1999. For Board members appointed as from 2009 who did not receive a pension commitment from the Company before 1 January 1999, and for Board members appointed as from 1 April 2012, occupational pension and benefits for surviving dependants are adjusted by 1% annually from the date when the pension or benefit starts being drawn, in accordance with Section 16 (3) no. 1 of the German Employers' Retirement Benefits Act. Vested benefits are not adjusted.

### Total remuneration of the Board of Management

The level of the target overall direct remuneration (= basic remuneration + variable remuneration on the basis of 100% achievement of objectives) for the individual members of the Board of Management is set by the full Supervisory Board, acting on recommendations from the Supervisory Board's Personnel Committee. Criteria for the appropriateness of compensation are the respective Board member's duties, the Board member's personal performance, the performance of the Board as a whole, and the financial situation, performance and future prospects of Munich Re. Other criteria are the relevant comparative benchmarks for Board remuneration and the prevailing remuneration structure at Munich Reinsurance Company. The Supervisory Board takes account of the level of Board salaries in relation to the level of salaries paid to senior managers and to general staff members over a period of time, and also determines how senior managers and general staff are to be classified for the purpose of this comparison. The consideration of what level of remuneration is appropriate also takes into account data from peer-group (DAX 30) companies. New Board members are placed at a level which allows sufficient potential for development of the remuneration in the first three years.

Board of management remuneration is disclosed under two different sets of rules: on the basis of German Accounting Standard No. 17 (DRS 17, revised 2010) and the new provisions of the German Corporate Governance Code applicable since financial year 2014. There are therefore deviations in individual remuneration components and total remuneration.

### Board of management remuneration under DRS 17

Under DRS 17, remuneration for annual performance 2014 is shown as the provisions set aside for that purpose taking into account the relevant additional/reduced expenditure for the previous year, since the performance on which the remuneration is based has been completed as at the balance sheet date and the requisite Board resolution is already foreseeable. Under DRS 17, remuneration for multi-year performance 2011–2013 is recognised in the year of payment, i.e. in 2014.

### Fixed and variable remuneration components

The members of Munich Reinsurance Company's Board of Management received remuneration totalling €24.1m (22.9m) for fulfilment of their duties in respect of the parent company and its subsidiaries in the financial year. Total remuneration thus shows an increase of around €1.2m compared with the previous year's figure, which was adjusted for the remuneration of a Board member who had left the Board as at 1 January 2014. The basic remuneration and remuneration in kind/fringe benefits accounted for €0.7m and the multi-year performance for €0.7m. In addition, the amount paid out for annual performance is projected to decrease by €0.2m, as the overall achievement of objectives was lower than in the previous year according to current estimates.

#### Remuneration of individual Board members as per DRS 17 (revised 2010)

(in accordance with Section 285 sentence 1 (9a) sentences 5–8 of the German Commercial Code (HGB) and Section 314 (1) (6a) sentences 5–8 of the German Commercial Code)

| Name                         | Financial year | Basic remuneration | Remuneration in kind/fringe benefits | Annual performance <sup>1</sup> | Multi-year performance <sup>2</sup> | Total      |
|------------------------------|----------------|--------------------|--------------------------------------|---------------------------------|-------------------------------------|------------|
|                              |                | €                  | €                                    | €                               | €                                   | €          |
| Nikolaus von Bomhard         | 2014           | 1,230,000          | 31,669                               | 895,361                         | 2,569,560                           | 4,726,590  |

<sup>1</sup> At the time of preparation of this report, no Supervisory Board resolution had yet been passed on the amounts to be paid for the 2014 annual performance.

The amount shown for annual performance remuneration is based on estimates and the relevant provisions posted.

For the 2013 annual performance, a total of €224,510 more was paid out than had been reserved in the financial year 2013. The additional/reduced expenditure breaks down as follows: von Bomhard €78,960, Arnoldussen –€27,930, Blunck €15,760, Daschner €12,285, Jeworrek €14,962, Röder €27,930, Schneider €58,653, Wenning €43,890. This results in the following actual bonus payments for 2013: von Bomhard €1,075,200, Arnoldussen €498,750, Blunck €498,750, Daschner €552,825, Jeworrek €748,125, Röder €542,640, Schneider €754,110, Wenning €450,870.

The amounts shown for the annual performance 2014 comprise the respective provision for 2014 and the relevant additional/reduced expenditure for 2013.

<sup>2</sup> The amounts paid out in 2014 were for multi-year performance 2011–2013.

<sup>3</sup> Remuneration in kind/fringe benefits for 2014 including travel expenses for flights home to family members owing to the maintenance of two households.

<sup>4</sup> Remuneration in kind/fringe benefits for 2014 including anniversary payment.

The following table shows the amounts payable for the variable remuneration:

Amounts payable for the variable remuneration of the individual Board members in the event of 100% performance evaluation as per DRS 17 (revised 2010), corridor 0-200%

1 At the time of preparation of this report, no Supervisory Board resolution had yet been passed on the amounts to be paid for 2014. The amount shown for annual performance remuneration is based on estimates and the relevant provisions posted in the table on page 59.

2 The remuneration set for multi-year performance for 2014 is payable in 2017, that for 2015 in 2018.

3 The information on the assessment bases and parameters on page 52 f. for the amounts set for 2014 also applies to the amounts set for 2015.

### Pension entitlements

Personnel expenses of €4.9m (4.4m) were incurred in the financial year to finance the pension entitlements for active members of the Board of Management. Of these, €1.2m was apportionable to defined benefit plans and €3.7m to defined contribution plans. As a consequence of the risk transfer to an external insurer under the defined contribution system, the visible pension costs since 2009 are noticeably higher. The Company accepts this increase in order to avoid higher costs in future and to eliminate long-term pension-specific risks. The following defined benefits, present values, contribution rates and personnel expenses result for the individual members of the Board of Management:

Pension entitlements

- 1 In the case of Board members with a combination between defined benefit plans and defined contribution plans, the amount corresponds to the value of the annual vested pension at 31 December 2008, in the case of Mr. Daschner, it corresponds to the defined benefit at 31 December of the year under review.
- 2 Expenses for defined benefit plan, including provision for continued payment of salary for surviving dependants.
- 3 Entitled to a reduced occupational pension on early retirement, and to an occupational pension in the event of regular termination of employment.
- 4 Entitled to an occupational pension in the event of termination of employment owing to incapacity to work.
- 5 Entitled to vested benefits under the Employers' Retirement Benefits Act in the event of premature or regular termination of employment.
- 6 Entitled to a reduced occupational pension on early retirement in the event of premature or regular termination of employment.
- 7 Entitled to vested benefits under the Employers' Retirement Benefits Act in the event of premature termination of employment up to 7 March 2015, and to a reduced occupational pension on early retirement in the event of premature termination of employment as from 8 March 2015 or regular termination of employment.
- 8 No transfer to defined contribution system, as Board member had already reached 55 at the conversion date. Retired at 1 January 2015 and entitled to an occupational pension of €255,000 p.a.
- 9 Defined Contribution Plan within the meaning of IAS 19, Employee Benefits, so no present value shown.

## Board of Management remuneration under the German Corporate Governance Code

As required by the provisions of the German Corporate Governance Code, the following table shows the benefits granted and remuneration paid out to individual members of the Board of Management in the reporting year.

The basic remuneration, remuneration in kind/fringe benefits and pension expenses (sum of personnel expenses for defined benefit plans and defined contribution plans) are in accordance with German Accounting Standard No. 17 (DRS 17). There are some deviations with regard to the variable remuneration for annual and multi-year performance. In addition, the German Corporate Governance Code requires the disclosure of proceeds from the exercise of stock appreciation rights under the long-term incentive plans. Under DRS 17, however, these proceeds are not disclosed.

Remuneration paid in accordance with the German Corporate Governance Code

1 At the time of preparation of this report, no Supervisory Board resolution had yet been passed on the amounts to be paid for the 2014 annual performance. The amount shown for the 2014 annual performance remuneration is based on estimates and the relevant provisions posted.

2 At the time of preparation of this report, no Supervisory Board resolution had yet been passed on the amounts to be paid for the 2012–2014 multi-year performance. The amount shown for the 2012–2014 multi-year performance remuneration is based on estimates and the relevant provisions posted.

3 Proceeds from the exercise of stock appreciation rights granted in 2006–2009.

## Remuneration structure for senior executives

The fixed components for Munich Reinsurance Company senior executives comprise a fixed annual basic remuneration, paid out as a monthly salary, plus customary market fringe benefits and remuneration in kind (most notably a company car and a company pension scheme). The variable components are made up of the short-term components "performance-related bonus" and "Company result bonus", and the longer-term share-price-linked component Mid-Term Incentive Plan.

The performance-related bonus is based on quantitative and qualitative objectives. We use indicators from operative planning for the quantitative objectives, while personal objectives are agreed on for the qualitative portion.

→  
Information on RORAC is  
provided on [page 40 f.](#)

The Company result bonus gives employees a share in corporate success. The key indicator used for the Company result bonus is RORAC. The targets correspond to the Group objective for the variable remuneration of members of the Board of Management. Depending on the degree to which the RORAC target is met, an aggregate amount is calculated that can be distributed among staff as a bonus. The higher the management level, the higher the share of the Company result bonus. The way this bonus works ensures that the performance of Munich Re as a whole is systematically reflected in the remuneration of all staff and that the bonus amount bears a reasonable relationship to overall corporate performance.

The Mid-Term Incentive Plan, with a duration of three years, is based on the same targets as the multi-year bonus of Munich Reinsurance Company's Board of Management. In addition, the development of the total shareholder return is taken into account. Besides the senior executives in Munich, selected executives in Munich Reinsurance Company's international organisation also participate in the Mid-Term Incentive Plan.

The individual variable components are granted – subject to different weightings – at all management levels. For the first management level below the Board of Management, the share of aggregate variable remuneration is more than 50% of total remuneration (fixed remuneration plus all variable components). Proceeding down the management hierarchy, this percentage decreases successively, making up around one-third at the lowest management level. There is a well-balanced combination of short- and long-term components. At the first management level below the Board of Management, the Mid-Term Incentive Plan makes up around 25% of total remuneration or more than 50% of overall variable remuneration, so that there is provision for a longer-term incentive system. No guaranteed variable remuneration components are granted.

## Total remuneration of the Supervisory Board

By resolution of the Annual General Meeting 2013, remuneration of the Supervisory Board was put on a purely fixed-remuneration basis. In addition, the remuneration for serving on Supervisory Board committees is to be adapted to reflect the amount of responsibility and actual work involved. The new rules are effective for remuneration to be paid as from the financial year 2014.

Each member of the Supervisory Board shall receive annual remuneration of €90,000. The Chairman of the Supervisory Board shall receive annual remuneration of €180,000, and the Deputy Chairman annual remuneration of €135,000.

Members of the Audit Committee each receive an additional €45,000; members of the Personnel Committee each receive an extra €27,000; and members of the Standing Committee each receive an additional €13,500. The Chairs of these committees also receive double the amounts stated for members. No additional remuneration is paid for serving on the Nomination Committee or the Conference Committee.

In addition, members of the Supervisory Board receive an attendance fee of €1,000 for each Supervisory Board meeting and each meeting of a Supervisory Board committee – with the exception of the Conference Committee.

Remuneration of Supervisory Board members in accordance with Article 15 of the Articles of Association<sup>1</sup>

2 Including attendance fees in each case insofar as provided for under the relevant provisions of the articles of association.

## Macroeconomic and industry environment

- Global economic growth only moderate
- Again significant fall in long-term interest rates
- Marked increase in global premium income, particularly in life business
- Prices in property-casualty reinsurance continue to fall

In 2014, as in the previous year, the global economy grew only moderately. Recovery in the eurozone was disappointing, and the Japanese economy slid back into recession. Slumps in the USA and China at the start of the year also had a dampening effect, though the world's two largest economies recovered during the year. The strong upturn in the United Kingdom continued.

### Capital markets

The US central bank began to gradually wind down its expansionary monetary policy. Step by step, it reduced the volume of its monthly bond purchases and ended the bond-buying programme in October. The European Central Bank (ECB) on the other hand relaxed its monetary policy. It lowered its key interest rate twice, bringing it down to 0.05%, introduced a negative interest rate for deposits at the central bank, and announced a new programme to buy private-sector bonds.

#### Geopolitical conflicts fuel uncertainty

Uncertainty in the global capital and foreign exchange markets increased in 2014, due mainly to geopolitical conflicts, deteriorating prospects in the eurozone and the steep fall in the oil price.

Long-term interest rates in the USA and in Germany fell significantly over the course of the year. At the year-end, yields on US and German bonds with periods to maturity of ten years were 2.2% and 0.5% respectively, compared with 3.0% and 1.9% at the end of 2013. The fall in interest rates had a positive impact on the market value of fixed-income bonds, but the deteriorating terms for new investments and reinvestments were a considerable burden for insurers. Regular interest income saw a further slight decline, because yields on new fixed-interest securities with high ratings are far lower than the average return on the securities maturing or sold. Life insurers, which have to meet interest-rate guarantees, are particularly affected.

Development of yields on ten-year government bonds (in %)

We write a large portion of our business outside the eurozone. Appreciation of the euro has an adverse effect on premium income development posted in euros, while depreciation increases it. The average exchange rate of the euro to the US dollar in 2014 was unchanged from the previous year. It was higher against the Canadian dollar (7.2%) and the Japanese yen (8.3%), but lower against the British pound sterling (-5.1%). Altogether, currency translation effects have slightly distorted premium income downwards compared with the previous year.

The value shown for investments on the other hand, which is translated at period-end exchange rates, was increased substantially by currency translation effects in 2014. On 31 December 2014, the exchange rate of the US dollar to the euro of US\$ 1.21 was 12.0% lower than the rate at the end of 2013 (US\$ 1.37). The euro was 3.7% down against the Canadian dollar, 6.5% down against the British pound sterling, and 0.1% higher against the Japanese yen.

## Insurance industry

According to provisional estimates, in primary insurance global premium income in the property-casualty and health segments grew moderately in 2014 when adjusted for inflation. Growth was muted in Europe, but solid in North America. However, world-wide premium development was buoyed by a further very dynamic increase in demand for insurance cover in many emerging markets. According to provisional estimates, global premium income in life primary insurance increased strongly in 2014 when adjusted for inflation, but there were hefty variations between individual markets. It was not only large emerging markets that managed to generate high growth rates, but some western European markets also achieved similar growth.

According to provisional estimates, the German insurance industry's premium income increased appreciably overall in 2014. While premiums in both property-casualty insurance and life insurance rose strongly as in the previous year, premium growth in health insurance was weak.

Price competition increased in the reinsurance market in 2014. There was already an abundance of capacity available in the property-casualty reinsurance renewals in January 2014. In the course of the year, most reinsurance groups saw their equity increase further as a result of the absence of major losses and the fall in interest rates. The latter tended to result in higher values for fixed-interest investments under international accounting standards. Prices also fell strongly for the renewals on 1 April and 1 July, and the trend continued for the 1 January 2015 renewals.

## Business performance

- Decline of 4.3% in gross premium income
- Major-loss expenditure well below projected range
- Increased investment result
- Return on risk-adjusted capital (RORAC) of 13.2% (12.1%) after tax
- Proposed dividend increase to €7.75 (7.25) per share

### Board of Management's overall assessment of the business performance and situation of the Group

Last year's consolidated profit exceeded the target we set ourselves. At €3.2bn, we again achieved a good result, partly thanks to tax income derived from a recalculation of taxes for prior years. In property-casualty reinsurance, our profit was really strong again at €2.5bn, with major losses remaining well below the volume to be expected. Life reinsurance contributed €0.4bn to the consolidated result, with some negative developments in the USA and Australia. The result contribution of the ERGO segments totalled €0.2bn, as it was adversely affected by goodwill impairments. At €0.1bn, Munich Health's result met our expectations.

### Munich Re's business performance – Overview and key figures

#### Return on risk-adjusted capital (RORAC) and economic earnings

|                   |     | 2014 | Prev. year | Change |
|-------------------|-----|------|------------|--------|
|                   |     |      |            | %      |
| RORAC             | %   | 13.2 | 12.1       |        |
| Economic earnings | €bn | 3.2  | 4.2        | -25.2  |

#### Dividend

|                       |     | 2014 | Prev. year | Change |
|-----------------------|-----|------|------------|--------|
|                       |     |      |            | %      |
| Total dividend payout | €bn | 1.3  | 1.3        | 3.5    |
| Dividend amount       | €   | 7.75 | 7.25       | 6.9    |

→  
A definition of RORAC is provided  
on page 40

The return on risk-adjusted capital (RORAC) totalled 13.2% for the 2014 financial year, compared with 12.1% in 2013. The RORAC for 2014 was thus below our long-term target of 15%. This target, which we set for the first time in 2006 when market interest rates were significantly higher, is very difficult to reach in the current environment of very low interest rates. We exceeded our profit target of €3bn for 2014, which is equivalent to a RORAC of over 12%.

→ Information on economic earnings can be found on page 39 f.

Dividend proposal:  
€7.75 per share

Economic earnings were attributable to factors from new and in-force business deriving from the field of underwriting and to the development of the economic parameters. The latter was strongly influenced by currency gains and positive effects from equities and credit risk spreads. These contrasted with the further fall in interest rates, and generally high interest-rate volatility. In addition, tax income from previous years was compensated for by more refined modelling.

We want our shareholders to participate in our gratifying result again. We will therefore propose to shareholders at the Annual General Meeting payment of a dividend of €7.75 (7.25) per dividend-bearing share.

<sup>1</sup> Previous year's figures adjusted owing to IAS 8; see "Changes in accounting policies and other adjustments".

<sup>2</sup> Excluding health insurance conducted like life insurance.

Gross premium income was down on the previous year. This was due to the development of exchange rates, which resulted in a 1.5% reduction in premium income, and to the reduction of large-volume reinsurance treaties.

Combined ratio 2014 at a gratifyingly low 92.7%

Expenditure for major losses, particularly from natural catastrophes, was well below the expected range. This is also reflected in the combined ratio for property-casualty reinsurance, which at 92.7% (92.1%) was better than the around 94% we had projected for 2014.

#### Group premium income

|                                |           |
|--------------------------------|-----------|
| Reinsurance life               | 21% (21%) |
| Reinsurance property-casualty  | 34% (33%) |
| ERGO Life and Health Germany   | 20% (20%) |
| ERGO Property-casualty Germany | 6% (6%)   |
| ERGO International             | 8% (7%)   |
| Munich Health                  | 11% (13%) |

## Consolidated result

|                                | 2014         | Prev. year   | Change      |
|--------------------------------|--------------|--------------|-------------|
|                                | €m           | €m           | %           |
| Reinsurance life               | 410          | 403          | 1.7         |
| Reinsurance property-casualty  | 2,483        | 2,372        | 4.7         |

| ERGO International             | -276         | 94           | -           |
| Munich Health                  | 109          | 150          | -27.3       |
| <b>Total</b>                   | <b>3,171</b> | <b>3,333</b> | <b>-4.9</b> |

→ Detailed information on the business performance of our segments can be found on page 75 ff.

In the financial year 2014, we posted a consolidated result of €3.2bn (3.3bn), i.e. roughly the same high level as the year before. The two reinsurance segments delivered the bulk of this figure. An adverse effect derived from the impairment losses of goodwill in the segment ERGO International.

Munich Re posted tax income of €312m (-108m) for the full year. A significant adjustment of €1,341m (946m) was made to the taxes for previous years, partly on account of court decisions at the highest level.

## Asset management for clients

MEAG MUNICH ERGO AssetManagement GmbH (MEAG) is the asset manager of Munich Re. In addition, MEAG MUNICH ERGO Kapitalanlagegesellschaft mbH also offers its expertise to private and institutional clients. The volume of assets under management rose by €1.0bn to €13.9bn. The increase of €0.6bn to €10.8bn in portfolios for institutional investors is particularly gratifying.

## Assets under management for third parties

|                                           | 31.12.2014 | Prev. year | Change |
|-------------------------------------------|------------|------------|--------|
|                                           | €bn        | €bn        | %      |
| Third-party investments                   | 13.9       | 12.9       | 8.2    |
| Thereof: External institutional investors | 10.8       | 10.2       | 5.7    |
| Thereof: Private-client business          | 3.1        | 2.7        | 17.8   |

## Events after the balance sheet date

Under the share buy-back programme decided on by Munich Reinsurance Company's Board of Management in March 2014, we repurchased a further 1.0 million Munich Re shares with a volume of €172m from the balance sheet date to 25 February 2015.

On 1 January 2015, via its subsidiary MR RENT-Investment GmbH, Munich, Munich Re acquired 100% of the voting shares in the solar park companies KS SPV 23 Limited, London, England, and Countryside Renewables (Forest Heath) Limited, London, England. The solar parks have a total installed capacity of 22.7 megawatts.

On 1 March 2015, via its subsidiary MR RENT-Investment GmbH, Munich, Munich Re acquired 100% of the voting shares in the solar park company Cornwall Power (Polmaugan) Limited, London, England. The solar park has a total installed capacity of 5 megawatts.

On 1 March 2015, the Austrian Financial Market Authority (FMA) initiated insolvency proceedings against Heta Asset Resolution AG, Klagenfurt (Heta) in accordance with the new EU Regulation on insolvency proceedings for banks. To be able to prepare an insolvency plan, FMA has imposed a deferral of Heta's liabilities towards its creditors until 31 May 2016. For the first quarter of 2015, we expect a write-down of our fixed-interest portfolio in the two-digit million euro range, after taking into account policyholder participation.

## Reinsurance – Life

- Decline in premium income of 7.3% to €10.0bn, partly influenced by currency translation effects
- Technical result of €280m below expectations
- Unchanged investment result of €811m
- Pleasing consolidated result of €410m

### Key figures

|                                                           |    | 2014   | Prev. year | Change |
|-----------------------------------------------------------|----|--------|------------|--------|
|                                                           |    |        |            | %      |
| Gross premiums written                                    | €m | 10,040 | 10,829     | -7.3   |
| Share of gross premiums written in reinsurance            | %  | 37.5   | 38.9       |        |
| Share of international business in gross premiums written | %  | 96.2   | 96.7       |        |
| Operating result                                          | €m | 460    | 542        | -15.1  |
| Consolidated result                                       | €m | 410    | 403        | 1.7    |

## Premium

At €10,040m, gross premium volume in life reinsurance was below the previous year's level (€10,829m), owing to currency translation effects. We generated around 89% of premium in foreign currencies, of which 37 percentage points were in Canadian dollars and 21 percentage points in US dollars. If exchange rates had remained unchanged, our premium income would have fallen by only 4.1%.

Premium development was significantly influenced by large-volume treaties. These serve as a capital substitute and were written especially in recent years. Some of these treaties were terminated as planned or renewed with a lower volume.

There were again positive impulses from growing markets in Asia, and from our selective underwriting of longevity risks in the United Kingdom.

This year we saw largely stable premium income in our remaining traditional reinsurance business. The sluggish economy in many regions that are important to our business had some impact on our clients' business and curbed demand for reinsurance.

## Result

The technical result totalled €280m (359m), which was below our target of around €400m. The operating result totalled €460m (542m) and the consolidated result €410m (403m). The reasons for this unsatisfactory technical result lie in Australia and the USA.

In Australia, as a result of negative impacts from disability business in 2011 and 2013, we took measures to ensure a sustained improvement in the quality of our business. For our disability business, this led to further burdens on the result of approx. €100m.

In the third quarter, we posted a one-off impact from the commutation of individual life treaties in the USA. Business written over the past decade continued to have an adverse effect on our result also in the year under review. Overall, claims experience in the USA was in line with our current expectations.

By contrast, we posted very gratifying results in Canada, Asia and the European markets, where our expectations were met overall.

At €811m, the investment result was at the same level as the previous year (€810m). The decline in regular income and the poorer result from derivatives were offset by higher gains on the disposal of equities and interest-bearing securities.

### Focus of our business activities

Our business model is geared to the characteristics of the individual markets

In life reinsurance, we operate on a global basis and have local presences in most of the important markets. Our business model is geared to the characteristics of the individual markets and the particular needs of our clients. Our focus is on traditional reinsurance solutions that concentrate on the transfer of biometric risks: the mortality risk predominates worldwide, but recent years have seen a significant increase in the reinsurance of living benefits products such as disability, long-term care, and critical illness. We write living benefits business selectively in specific markets. Finally, several years ago we began to provide a limited amount of capacity for longevity risks. Until now, we have offered this only in the United Kingdom. Where required, the assumption of insurance risks is complemented by a wide range of services along our clients' entire value chain. These include software solutions for automating the risk assessment process that are available worldwide from our subsidiary Munich Re Automation Solutions Limited. We also offer tailor-made structured concepts geared to optimising liquidity or specific items on our clients' balance sheets. These concepts have met with particular success in Europe, Asia and North America.

Given the increasing volatility on the capital markets, for some years the demand for reinsurance of capital market risks embedded in life insurance products has been growing. We have therefore created the infrastructure necessary to provide our clients with comprehensive solutions for covering options and guarantees dependent on the capital markets. Our exposure related to this is transferred back to the capital markets.

In all pillars of our business activity, our clients benefit from our global expertise relating to insurance products and biometric risks, from our structuring know-how and, in particular, from our capital strength.

### Our individual core markets

Based on premium volume, over half (approx. 55%) of our global life reinsurance business is written in North America, where the USA (approx. 20%) lags behind Canada (approx. 35%). Over a fifth (approx. 20%) of our premium comes from Europe, of which approx. 10% is from the United Kingdom and approx. 5% from Germany. Further shares are contributed by Asia (approx. 10%) and Australia/New Zealand (approx. 10%). We are also well positioned in Africa and Latin America, but due to the size of the markets their share of our global business is small (approx. 5%).

Our Canadian branch, Munich Re, Toronto (Life), had another successful year in 2014. Although premiums written in the life reinsurance segment decreased to €3.5bn (4.3bn), mainly due to the restructuring of a large-volume treaty, the unit was able to maintain its leading market position and posted a very good technical result.

In the USA, our subsidiary Munich American Reassurance Company posted an increase in gross premium income to €2.1bn (2.0bn), and we retained our position among the leading life reinsurance companies in this largest market worldwide. For the reasons mentioned previously, the technical result remained below expectations.

Premium income in Europe totalled €2.1bn (2.0bn), of which €1.0bn (0.9bn) was from our branch in the United Kingdom, and a further €377m (353m) from Germany. The technical result was satisfactory overall.

In Asia, our premium income remained almost unchanged at €870m (871m), with the decrease in large-volume treaties outlined above causing the underlying growth dynamics to slow. The technical result continued to develop at a pleasing level.

At our subsidiary Munich Reinsurance Company of Australasia Ltd., which writes our life reinsurance business in Australia and New Zealand, premium income increased to €727m (698m). For the aforementioned reasons, there was a significant strain on the technical result, which remained well below expectations.

On the African continent, our South African subsidiary Munich Reinsurance Company of Africa Ltd. posted an increase in premium volume to €164m (156m). As in prior years, the technical result showed pleasing development.

## Reinsurance – Property-casualty

- Slight decline in premium income of 1.7% to €16.7bn influenced by currency translation effects
- Very good combined ratio of 92.7%
- Investment result up slightly to €1,785m
- Very high consolidated result of €2,483m

### Key figures

|                                                           |                   | 2014   | Prev. year | Change |

## Premium

### Gross premiums by division

|                                  |           |
|----------------------------------|-----------|
| Global Clients and North America | 40% (38%) |
| Germany, Asia Pacific and Africa | 21% (21%) |
| Europe and Latin America         | 21% (21%) |
| Special and Financial Risks      | 18% (20%) |

In property-casualty reinsurance, we posted a slight decline in premium income of 1.7% to €16.7bn (17.0bn) in 2014. Approximately 14% of the portfolio is written in euros and 86% in foreign currency, of which 46 percentage points is in US dollars and 15 percentage points in pounds sterling. Compared with the previous year, the development of the euro against other currencies had a negative effect of €158m on our premium income. If exchange rates had remained unchanged, premium volume would have decreased by 0.8%.

The rise in premium adjusted for exchange rates is mainly attributable to the expansion of our motor business in Australia. Adverse effects came from portfolio reductions where it was no longer possible to achieve adequate prices, terms and conditions. A decline in prices in natural catastrophe business led to a deliberate reduction in property reinsurance. The capacity freed up was transferred to our stable specialty primary insurers operating in niche segments. The amount of premium income in the specialty class of agriculture is linked to development of commodity prices for agricultural products. As these prices have fallen, premium income has also declined.

The environment of the renewal rounds was highly competitive in 2014

The renewals in 2014 took place under market conditions that remained highly competitive. The demand for reinsurance has been falling in general, since the good capitalisation of primary insurers allows them to hold higher retentions. In some cases, these developments were accompanied by measures that curb demand, such as the centralisation of reinsurance buying. However, the capacity offered by reinsurers remained high, and there was intense worldwide competition between the traditional market players. This situation was exacerbated in the US market by the ongoing availability of alternative capital. Pension funds and hedge funds regard reinsurance as an attractive investment alternative for diversifying risks and meeting return requirements in the present low-interest-rate environment. These difficult overall conditions led to strong pressure on prices worldwide, and even to significant price falls in the area of non-proportional natural catastrophe covers.

In light of this, it is not surprising that prices for reinsurance cover fell in all segments in our portfolio. In line with general market developments, non-proportional natural catastrophe covers even saw significant price falls.

## Result

Technical result of €2,392m

At €2,483m, the consolidated result in property-casualty reinsurance was up against the previous year (€2,372m). The operating result, which includes the investment result and technical result, fell to €2,824m (2,999m). The technical result totalled €2,392m (2,468m), again benefiting from significantly lower-than-expected major-loss expenditure. Adjusted for commissions, Munich Re's customary review of reserves resulted in a reduction in the claims provisions for prior years amounting to around €900m for the full year, which is equivalent to around 5.3 percentage points of the combined ratio. This positive development is spread across almost all segments of our portfolio. Over the year as a whole, the safety margin in the reserves remained unchanged at a high level, as Munich Re adhered to its careful approach to determining and adjusting loss reserves.

Major-loss expenditure totalling –€1,162m (–1,689m) after retrocession and before tax was lower than in the previous year and below expectations. As in the previous year, 2014 was marked by a large number of major losses, but there were no individual occurrences that have exceptional loss potential. Reserve strengthening and run-off profits for major losses from previous years almost balance each other out.

Aggregate losses from natural catastrophes came to –€538m (–764m), representing 3.3% (4.7%) of net earned premiums. The largest major loss of 2014 (–€305m) was the snowstorm in Japan at the beginning of the year. Reserves of –€59m were set aside for Hurricane Odile, which hit Mexico in late summer. There was also an impact from an earthquake on the north coast of Chile (–€51m). Heavy summer rainfall in the northeast of the USA caused sizeable losses (–€50m), as did a strong hailstorm in Brisbane, Australia (–€42m). In addition, like other market players, we had to increase our provisions for the earthquakes in New Zealand in 2010 and 2011, as the series of three quakes in rapid succession made it more difficult for our cedants to settle claims.

At –€625m, man-made major losses were below the level of the previous year (–€925m), or 3.9% (5.7%) of net earned premiums. Extensive losses resulted from an explosion at a Russian refinery (–€150m), and –€60m was reserved for damage to a power station in Germany. Moreover, aircraft crashes impacted our result, with the two largest crashes costing us –€52m. Finally, a forest fire in Sweden in the summer caused losses of –€33m.

The investment result amounted to €1,785m (1,766m). The slightly increased figure was due to significantly higher gains on the disposal of equities and interest-bearing securities, which contrasted with a diminished result from our equity, inflation, interest and commodity derivatives, and a decline in regular income.

## Development of premium income and results in each division

### Germany, Asia Pacific and Africa

#### Key figures

|                        |    | 2014  | Prev. year | Change |
|------------------------|----|-------|------------|--------|
|                        |    |       |            | %      |
| Gross premiums written | €m | 3,588 | 3,524      | 1.8    |
| Combined ratio         | %  | 97.5  | 86.8       |        |

This division writes business in Germany, the Asia-Pacific region and Africa. In terms of the division's premium income, approximately 40% is written in Australia/New Zealand and Japan combined, around 25% in Greater China and approximately 10% in Africa/MENA. Whilst the focus in Australia/New Zealand and Japan is on natural hazards cover, the Greater China portfolio is largely made up of motor business.

The division's premium volume increased to €3,588m (3,524m) in total, which was mainly due to our portfolio in Australia. A decline in prices in natural catastrophe business led to attrition of business, but this was more than compensated for by a large tailored reinsurance treaty in motor business. We were also able to expand our business in Southeast Asia, South Korea and Africa, and the portfolio in Japan was renewed successfully, despite strong pressure on prices. By contrast, our premium volume in China and Germany was down year on year. Overall, we are consistently pursuing our strategy of seizing growth opportunities, but at the same time systematically reducing our portfolio where risk-commensurate prices, terms and conditions cannot be achieved.

Due to high levels of major losses in 2014, and the run-off of major losses from previous years, our combined ratio increased year on year to 97.5% (86.8%). This was in part compensated for by the positive run-off of provisions for basic losses.

### Europe and Latin America

#### Key figures

|                        |    | 2014  | Prev. year | Change |
|------------------------|----|-------|------------|--------|
|                        |    |       |            | %      |
| Gross premiums written | €m | 3,452 | 3,677      | -6.1   |
| Combined ratio         | %  | 85.0  | 88.5       |        |

The Europe and Latin America Division writes business in Europe (except Germany), the Caribbean, and Central and South America. Approximately 75% of the division's premium income derives from Europe. While the focus in the Caribbean and in Central

and South America is on property business, particularly in the area of natural hazards covers, in addition to property insurance our European business is strongly weighted in favour of UK motor business.

Overall, the division's premium volume fell to €3,452m (3,677m), owing to deliberate portfolio reductions. We kept constant the capacity we provide for the coverage of natural hazards, particularly windstorm and earthquake, and successfully defended our strong market position in the Caribbean, Latin America and Europe with margins still remaining adequate.

The division's combined ratio amounted to 85.0%, improving even on the very good result of 88.5% from the previous year. We benefited from much improved major-loss experience, and the loss reserve releases for prior years were above last year's level.

### Global Clients and North America

#### Key figures

|                        |    | 2014  | Prev. year | Change |
|------------------------|----|-------|------------|--------|
|                        |    |       |            | %      |
| Gross premiums written | €m | 6,702 | 6,471      | 3.6    |
| Combined ratio         | %  | 89.5  | 94.9       |        |

The Global Clients and North America Division writes the international business of defined global clients (about 20%), worldwide Lloyd's business (about 20%) and property-casualty business in the USA and Canada (about 60%).

The division's premium volume increased to €6,702m (6,471m). We saw slight growth in liability insurance and were able to selectively write profitable business, particularly in the USA. As pressure on reinsurance prices for natural catastrophes grew, we made a deliberate decision to reduce our property reinsurance business.

The premium income of our primary insurance companies American Modern and Hartford Steam Boiler Group (HSB Group) improved to €1,109m (967m) and €752m (712m) respectively, and, in contrast to traditional reinsurance, we profit here from slightly increasing original premiums. These contribute around 40% to our premium in North America, and a further €2,239m (2,300m) was contributed by Munich Reinsurance America. The results of our subsidiaries in the USA also developed very pleasingly. In 2014, they paid dividends totalling US\$ 910m to the Group parent Munich Reinsurance Company. Our strategy of combining insurance and reinsurance activities again proved successful, and we intend to continue along this path in future.

The division's combined ratio improved significantly to 89.5% (94.9%). We benefited from a very low incidence of major losses and from positive loss reserve releases for prior years.

### Special and Financial Risks

#### Key figures

|                        |    | 2014  | Prev. year | Change |
|------------------------|----|-------|------------|--------|
|                        |    |       |            | %      |
| Gross premiums written | €m | 2,988 | 3,341      | -10.6  |
| Combined ratio         | %  | 103.1 | 96.7       |        |

The Special and Financial Risks Division writes business in the specialty classes of agriculture (around 30%), credit and bond (around 20%), and aviation and space (around 15%). This division also comprises the unit Corporate Insurance Partner (around 20%), the Risk Trading Unit, and our Swiss subsidiary New Reinsurance Company Ltd. (New Re) (around 15%).

In our unit Corporate Insurance Partner, we offer our clients in industrial and major-project business a wide range of insurance products. These customised solutions and services are based on our recognised industry- and risk-related knowledge. In addition to traditional business with a focus on natural hazards covers, New Re has specialised above all in structured, made-to-measure reinsurance solutions.

Our Risk Trading Unit places insurance risks on the capital and retrocession markets. We mainly provide the unit's services to clients, but also use them for our own purposes in order to buy retrocession cover on the basis of our defined risk strategy. We placed three transactions with investors in 2014: there were two client transactions amounting to €190m and US\$ 250m, and an internal securitisation amounting to US\$ 100m (Queenstreet IX).

The division's premium income declined year on year to €2,988 (3,341m). As well as reduced premium income from declining commodity prices for agricultural goods, premium development was also impacted by strict cycle management triggering falls in premium. Due to the higher major-loss expenditure in comparison with the previous year, the division's combined ratio has deteriorated to 103.1% (96.7%).

## ERGO Life and Health Germany

- Decrease in overall premium income to €10.7bn, with gross premiums written down to €9.8bn
- Technical result of €144m
- Gratifying investment result of €4.5bn
- Good consolidated result of €269m

### Key figures

|                                         |    | 2014   | Prev. year | Change |
|-----------------------------------------|----|--------|------------|--------|
|                                         |    |        |            | %      |
| Total premium income <sup>1</sup>       | €m | 10,730 | 10,981     | -2.3   |

| Consolidated result                     | €m | 269    | 158        | 70.3   |

<sup>1</sup> Total premium income includes not only gross premiums written but also savings premiums for unit-linked life insurance and capitalisation products in accordance with the applicable statutory accounting guidelines.

## Premium

### Gross premiums by business segment

|                         |           |
|-------------------------|-----------|
| Life Germany            | 36% (37%) |
| Health Germany          | 54% (53%) |
| Direct business Germany | 10% (10%) |

In the ERGO Life and Health Germany segment, we report on German life business, German health business and German direct business.

At €10.7bn (11.0bn), overall premium income in the ERGO Life and Health Germany segment decreased by 2.3% in 2014, reflecting a decline in premium income across all three business segments. Gross premiums written also went down in the past financial year (-1.8 %). The decline in this segment was mainly attributable to lower regular premiums in life insurance and less business with the capitalisation product MaxiZins.

## Result

Decreased technical result of  
€144m

The technical result in the ERGO Life and Health Germany segment was €144m (383m). The fall is partly due to higher benefits in life and health insurance. At €4.5bn (3.8bn), the investment result developed favourably, one of the positive contributing factors being a higher balance from write-ups and write-downs, mainly due to write-ups of interest-rate derivatives. The drop in our technical result was the main reason for the decreased operating result of €44m (188m). The consolidated result climbed by 70.3% to €269m (158m). It includes a positive result contribution that is significantly

attributable to an anticipated tax refund. The main reason for this is a 2014 court decision at the highest instance that clarifies contested legal issues dating back to the time of introduction of the "half-income method". It is expected that the refund of taxes paid will be in the three-digit million euro range.

## Development of premium income and results by segment

### Life Germany

#### Key figures

|                                   | 2014  | Prev. year | Change |
|-----------------------------------|-------|------------|--------|
|                                   | €m    | €m         | %      |
| Total premium income <sup>1</sup> | 4,363 | 4,537      | -3.8   |
| Gross premiums written            | 3,553 | 3,706      | -4.1   |
| Technical result                  | -160  | -50        | -220.0 |
| Operating result                  | 53    | -119       | -      |

<sup>1</sup> Total premium income includes not only gross premiums written but also savings premiums for unit-linked life insurance and capitalisation products in accordance with the applicable statutory accounting guidelines.

Life Germany encompasses German life insurance with the exception of direct insurance business.

At €4.4bn (4.5bn), overall premium income in German life business was down 3.8% on the previous year. Gross premiums written were down by 4.1% to €3.6bn (3.7bn). The decrease was due especially to lower regular premium volume. By contrast, single-premium business increased by 1.4%, partly due to new business growth in company pension business. New business (regular premium) was down by 12.3% to €207m (236m). As in 2013, persistently low interest rates again created a difficult market environment in the past financial year. New business decreased slightly by 1.6% overall. In terms of annual premium equivalent (APE, i.e. regular premium income plus one-tenth of single-premium volume), which is the performance measure customary among investors, new business was down by 8.8%.

ERGO has been marketing the new generation of life insurance products in two variants since July 2013. In the financial year 2014, these products accounted for 67% of annuity policies ERGO sold in private-client business not sponsored by the state.

#### New business Life Germany

|                                        | 2014         | Prev. year   | Change      |
|----------------------------------------|--------------|--------------|-------------|
|                                        | €m           | €m           | %           |
| Regular premiums                       | 207          | 236          | -12.3       |
| Single premiums                        | 848          | 836          | 1.4         |
| <b>Total</b>                           | <b>1,055</b> | <b>1,072</b> | <b>-1.6</b> |
| Annual premium equivalent <sup>1</sup> | 292          | 320          | -8.8        |

<sup>1</sup> The annual premium equivalent corresponds to the regular premium income plus 10% of single-premium volume.

The technical result showed a reduction to -€160m (-50m) compared with the previous year. The negative development was due in particular to much higher benefits and lower premium income. The result was also reduced by the reserve set aside for possible repayment claims as a consequence of the decisions by the Court of Justice of

the European Union and the German Federal Court of Justice regarding policyholders' right to withdraw from life insurance policies concluded under the policy model. In the past financial year, the investment result totalled €2.9bn (2.3bn). This improvement was largely attributable to higher net gains on derivatives, mainly due to write-ups of interest-rate derivatives. The improvement in our investment result was one of the main reasons for the increased operating result of €53m (-119m).

## Health Germany

### Key figures

|                        | 2014  | Prev. year | Change |
|------------------------|-------|------------|--------|
|                        | €m    | €m         | %      |
| Total premium income   | 5,250 | 5,288      | -0.7   |
| Gross premiums written | 5,250 | 5,288      | -0.7   |
| Technical result       | 220   | 360        | -38.9  |
| Operating result       | -88   | 240        | -      |

In Health Germany, we report on domestic health insurance with the exception of direct insurance business. Our worldwide travel insurance activities are also included under this category. Approximately 92% of the premium income in Health Germany derives from health insurance, and around 8% from travel insurance.

At €5.25bn (5.29bn), premium income for the financial year 2014 was only slightly lower (-0.7%) than in the previous year. Premiums for 2014 showed 0.7% year-on-year growth in supplementary health insurance and fell by 0.8% in comprehensive health insurance. In comprehensive health business, premium growth was mainly impacted by two effects: the falling number of insureds, and low premium adjustments benefiting our customers as at 1 April 2014. New business in comprehensive health insurance declined year on year (-19.6%) as a result of a difficult market environment. We also saw a decline in new business in supplementary health insurance (-2.6%).

In travel insurance, which we account for in our Health Germany field of business and write in Germany and abroad, premium volume totalled €433m (448m) and was thus below the level of the previous year (-3.3%). German business expanded by 9.2%, whilst international business shrank by 22.9%.

The technical result totalled €220m (360m). The decline is mainly attributable to higher benefits due to the participation of our policyholders in the anticipated tax refund. At €1.4bn (1.3bn), the investment result was gratifyingly high, one positive contributing factor being an increased result from disposals. The significantly decreased operating result of -€88m (240m) was also attributable to the participation of our policyholders in the anticipated tax refund. Without the effect of the aforementioned tax refund, the technical result would have been significantly higher and the operating result would have been positive.

## German direct business

## Key figures

|                                   | 2014  | Prev. year | Change |
|-----------------------------------|-------|------------|--------|
|                                   | €m    | €m         | %      |
| Total premium income <sup>1</sup> | 1,117 | 1,156      | -3.4   |
| Gross premiums written            | 1,009 | 993        | 1.6    |
| Technical result                  | 84    | 73         | 15.1   |
| Operating result                  | 79    | 67         | 17.9   |

<sup>1</sup> Total premium income includes not only gross premiums written but also savings premiums for unit-linked life insurance and capitalisation products in accordance with the applicable statutory accounting guidelines.

German direct business encompasses direct life, health and property-casualty insurance business transacted in Germany. Life insurance accounts for approximately 50% of the business field's premium income. Approximately 36% of the premium income derives from health insurance, and around 14% from property-casualty insurance.

Overall premium income in direct insurance declined by 3.4% to €1.1bn (1.2bn). The decline in overall premium volume was solely attributable to the drop in single premiums from the MaxiZins capitalisation product. In accordance with the low capital-market interest rates, we too lowered the interest rates for our capitalisation product and thus realised €55m less premium than in 2013. Adjusted for premiums from the capitalisation product MaxiZins, however, overall premium income would have been up on the previous year by 1.6%. Some €560m (635m) of this figure was from life insurance (-11.8%), €406m (384m) from health insurance (+5.7%) and €151m (137m) from property-casualty insurance (+10.2%). Gross premiums written increased by 1.6% to €1,009m (993m).

## New business direct life Germany

|                                        | 2014       | Prev. year | Change       |
|----------------------------------------|------------|------------|--------------|
|                                        | €m         | €m         | %            |
| Regular premiums                       | 29         | 32         | -9.4         |
| Single premiums                        | 131        | 177        | -26.0        |
| <b>Total</b>                           | <b>160</b> | <b>209</b> | <b>-23.4</b> |
| Annual premium equivalent <sup>1</sup> | 42         | 50         | -16.0        |

<sup>1</sup> The annual premium equivalent corresponds to the regular premium income plus 10% of single-premium volume.

The technical result for the financial year totalled €84m (73m). The increase is partly attributable to lower costs combined with an increase in premiums earned. At €165m (196m), the investment result was below that of the previous year, one negative contributing factor being a diminished result from disposals. The operating result climbed by 17.9% to €79m (67m).

## ERGO Property-casualty Germany

- Slight decrease in premium income to €3.1bn
- Improved combined ratio of 95.3%
- Investment result of €204m down on previous year
- Consolidated result of €176m

### Key figures

## Premium

In the ERGO Property-casualty Germany segment, we report on property-casualty insurance business in Germany with the exception of direct insurance business. Our main classes of business include personal accident and motor insurance. Approximately 22% of the segment's premium income derives from personal accident insurance, and around 21% from motor insurance.

Premium income decreased by an overall 1.8% to €3.1bn compared with the previous year (€3.2bn). Performance in 2014 varied from one class of business to the next: commercial and industrial business saw a 2.3% fall in premium deriving chiefly from improvement measures – mainly in industrial property insurance and in marine business. Personal lines property business showed a 4.3% year-on-year reduction in premium income, above all due to measures to enhance profitability in homeowners' comprehensive insurance. By contrast, premium volume in private third-party liability insurance attained the previous year's level. In legal protection insurance and personal accident business, we saw a general decline in premium income as against the previous year. However, premium was up by 2.4% in motor insurance.

Protection against floods is gaining in importance – not only in the vicinity of rivers. Prompted by the consequences of the flooding on the Danube and Elbe in 2013, ERGO improved insurance coverage for residential buildings in Germany and permitted insurance cover to be given even for those buildings that are situated in particularly exposed areas, i.e. in zone 4 of the ZÜRS zoning system. Since September 2014, ERGO has been offering coverage against flooding and heavy rainfall in all areas.

## Result

The technical result in the ERGO Property-casualty Germany segment improved to €214m (177m). The investment result dropped year on year to €204m (238m). The decline is mainly due to the decreased net gains on derivatives. Overall, the operating result thus increased to €304m (291m) and the consolidated result to €176m (156m).

**Combined ratio fell to 95.3%**

At 95.3%, the combined ratio in 2014 was better than in the previous year (96.7%), particularly due to the favourable claims situation. Whilst bad weather across much of western Germany at the beginning of June caused considerable damage to buildings and motor vehicles, the effects on the combined ratio were much less pronounced than were those of the previous year's events. In the previous year, we had posted natural hazard losses from the catastrophic flooding in eastern and southern Germany, and from windstorm and hail events. Paid claims and the change in claims provisions totalling –€1,942m (–2,010m), along with net operating expenses of –€994m (–1,026m), compared with net earned premiums of €3,080m (3,139m).

## ERGO International

- Increase in overall premium income to €4.2bn
- Improved combined ratio of 97.3%
- Investment result of €662m up on previous year
- Consolidated result of –€276m due to impairment of goodwill of –€445m

### Key figures

<sup>1</sup> Total premium income includes not only gross premiums written but also savings premiums for unit-linked life insurance and capitalisation products in accordance with the applicable statutory accounting guidelines.

## Premium

In the ERGO International segment, we bundle our life and property-casualty insurance business outside Germany. Approximately 48% of the segment's premium income derives from life insurance, and around 52% from property-casualty insurance. Our biggest markets include Poland, which accounts for approximately 28% of the premium volume, Austria (approx. 18%) and Belgium (approx. 16%).

ERGO International increased its premium income by 8.7%

In 2014, premium income totalled €4.2bn (3.9bn). This represents an 8.7% increase. Adjusted to eliminate currency translation effects, premium growth would have been even higher. Expansion was particularly strong in Poland, Austria, Belgium and Russia. Our gross premiums written amounted to €3.8bn (3.5bn).

At €2.0bn (1.7bn), overall premium income from international life insurance business increased by 20.9% year on year. The marked year-on-year increase is due in particular to growth in Poland, Austria and Belgium. Gross premiums written showed a corresponding increase to €1.6bn (1.3bn). International new life insurance business grew robustly by 60.5% to €1,051m (655m). In terms of annual premium equivalent (APE, i.e. regular premium income plus one-tenth of single-premium volume), which is the performance measure more customary among investors, however, our new business volume was up 26.7%, mainly owing to the strong growth in Poland, where new business through banks developed pleasingly.

## New business Life International

|                                        | 2014         | Prev. year | Change      |
|----------------------------------------|--------------|------------|-------------|
|                                        | €m           | €m         | %           |
| Regular premiums                       | 194          | 173        | 12.1        |
| Single premiums                        | 857          | 482        | 77.8        |
| <b>Total</b>                           | <b>1,051</b> | <b>655</b> | <b>60.5</b> |
| Annual premium equivalent <sup>1</sup> | 280          | 221        | 26.7        |

<sup>1</sup> The annual premium equivalent corresponds to the regular premium income plus 10% of single-premium volume.

We posted premium volume of €2.18bn (2.20bn) in international property-casualty business. The decline is essentially attributable to lower premium volumes generated by our companies in Poland and Italy. In Poland, we had already posted the full premium from a major contract with a three-year term in 2013. Additionally, the difficult market conditions for Polish motor insurance are apparent from the figures. To benefit from existing synergies, our two Polish property-casualty companies were merged in 2014. Despite negative currency translation effects, particularly in Turkey and Russia, we posted gratifying premium growth of 3.1% in Turkey and 27.8% in Russia. In local currency, the growth in premium income was even more pronounced. Due to the acquisition of the property-casualty insurer ERGO Insurance in Singapore we posted an increase of €15m in gross premiums written in 2014.

In 2014, we acquired 100% of the shares in property-casualty insurer SHC Insurance Pte. Ltd (SHC) in Singapore. The company, which now operates under the name ERGO Insurance Pte. Ltd. (ERGO Insurance), offers a broad range of property-casualty insurance and generated premium equivalent to €45m in 2013. The Singapore property-casualty market has grown annually by about 10% in recent years and is profitable, its combined ratio amounting to just over 90%. Growth prospects for the next few years are also positive, making this acquisition an important element of ERGO's international growth strategy. It offers a good platform for further activities in target markets in Southeast Asia.

## Result

Technical result  
improved to €136m

The technical result in the ERGO International segment improved to €136m (123m). In the past financial year, the investment result totalled €662m (551m). This significant improvement was largely attributable to a higher balance from write-ups and write-downs, mainly due to write-ups of interest-rate derivatives. The increased investment result was one of the main reasons for the enhanced operating result of €278m (210m). The consolidated result amounted to –€276m (94m). The decrease is due to the impairment of goodwill of –€445m.

In property-casualty business, we recorded an improved combined ratio of 97.3% (98.7%). The result improvement measures we have taken in recent years are paying off. In the financial year 2014, we achieved improvements in particular in the Netherlands, the Baltic and in Greece. Paid claims and the change in claims provisions totalling –€1,152m (–1,209m), along with net operating expenses of –€763m (–754m), compared with net earned premiums of €1,968m (1,989m).

## Munich Health

- Gross premiums of €5.3bn below level of last year
- Slightly higher combined ratio of 98.8% in the year under review
- Decreased investment result of €87m
- Consolidated result down to €109m

| Gross premiums written                                    | €m | 5,342 | 6,551      | -18.5  |
| Share of international business in gross premiums written | %  | 98.6  | 99.0       |        |
| Loss ratio <sup>1</sup>                                   | %  | 82.0  | 79.8       |        |
| Expense ratio <sup>1</sup>                                | %  | 16.8  | 18.5       |        |
| Combined ratio <sup>1</sup>                               | %  | 98.8  | 98.3       |        |
| Operating result                                          | €m | 118   | 168        | -29.8  |
| Consolidated result                                       | €m | 109   | 150        | -27.3  |

1 Excluding health insurance conducted like life insurance.

With the exception of the German health insurers belonging to ERGO, Munich Re's global healthcare insurance and reinsurance business is combined under the Munich Health brand. We offer our international clients across the world innovative insurance solutions and individual consultancy and services.

## Premium

Gross premiums written were lower than in the previous year, falling by 18.5% to €5.3bn (6.6bn).

### Gross premiums

#### Reinsurance

|                          |           |
|--------------------------|-----------|
| North America            | 55% (54%) |
| Europe and Latin America | 12% (9%)  |
| Middle East/Africa       | 7% (5%)   |
| Asia-Pacific             | 2% (3%)   |

#### Primary insurance

|                      |           |
|----------------------|-----------|
| Spain                | 13% (10%) |
| Belgium              | 9% (7%)   |
| Other                | 2% (1%)   |
| Windsor Health Group | - (11%)   |

In reinsurance, the decrease of 12.1% to €4.0bn (4.6bn) was attributable to adverse effects from the exchange rate of the Canadian dollar, and to a reduction of our share in a large-volume treaty in North America. In primary insurance, there was a decrease of 33.6% to €1.3bn (2.0bn), which was mainly due to the sale of the Windsor Health Group (WHG). By contrast, our companies in Belgium and Spain increased their premium income. If exchange rates had remained unchanged, and adjusted for the sale of WHG, Munich Health's gross premiums would have decreased by 4.6% year on year.

## Result

### Technical result of €77 m

At €77m (135m), the technical result was significantly below the level of the previous year, owing mainly to positive one-off effects generated by WHG in that period. This can also be seen in the fall of the operating result, which decreased to €118m (168m), and in a declining consolidated result of €109m (150m). Munich Health generated an investment result of €87m (95m). The decrease of 8.4% was attributable to lower regular income.

The Munich Health combined ratio of 98.8% (98.3%) relates only to short-term health business, not to business conducted like life insurance. Business conducted like life insurance accounted for 9.9% (7.8%) of gross premiums written in the year under review. In reinsurance, the combined ratio amounted to 99.4% (99.8%); in primary insurance, it was 95.5% (93.5%).

## Investment performance<sup>1</sup>

- High portfolio weight of government bonds with very good credit ratings; rise in market values due to reduced interest-rate level
- Net on- and off-balance sheet unrealised gains up; at a very high level of €32.0bn
- Investment result reaches €8.0bn
- Return on investment (RoI) of 3.6%

### Investment mix

| <b>Total</b>                                                | <b>218,927</b> | <b>202,167</b> | <b>8.3</b> |

2014 was marked by further declines in capital-market interest rates and risk spreads. These developments were borne up by increasing speculation on an ECB government-bond buying programme. The stock markets came under pressure at times as concerns over growth and deflation flared up, but still ended the year positively. In the period under review, the EURO STOXX 50 climbed by about 1%, the Dow Jones by 8% and the DAX 30 by around 3%. Interest rates on German government bonds in particular fell to a historic low. Yields on corporate bonds also dropped sharply owing to shrinking risk spreads.

<sup>1</sup> Previous year's figures adjusted owing to separate disclosure of insurance-related investments.

## Distribution of investments by type

Total: €219bn (202bn)

|                           |           |
|---------------------------|-----------|
| Fixed-interest securities | 60% (57%) |
| Loans                     | 25% (27%) |
| Other investments         | 8% (9%)   |
| Shares and equity funds   | 4% (4%)   |
| Real estate               | 2% (2%)   |
| Participating interests   | 1% (1%)   |

We select our investments according to economic criteria and gear them to the characteristics of our technical provisions and liabilities. In addition, we use derivative financial instruments for portfolio management (especially for acquisition preparation), to hedge against fluctuations and protect against inflationary developments on the interest-rate, equity and currency markets. Volatilities on the capital markets result in changes in the values of derivatives, which under IFRS accounting we recognise in profit or loss.

The carrying amount of our investment portfolio, which continues to be dominated by fixed-interest securities, loans and short-term fixed-interest investments, was up compared with the position at the beginning of the year. At 31 December 2014, the carrying amount of our investments amounted to €218.9bn (202.2bn). Falling risk-free interest rates, credit risk spreads and the development of exchange rates led to increasing market values.

Our return on investment (RoI) rose to 3.6% (3.4%).

## Off-balance-sheet unrealised gains and losses

| €m                              | 31.12.2014    | Fair values   |  | Off-balance-sheet unrealised gains and losses |              | Carrying amounts |               |

1 Including owner-occupied property.

→  
An overview of the on-balance-sheet unrealised gains/losses is available in the notes to the consolidated financial statements on [page 217](#)

Our on- and off-balance-sheet unrealised gains and losses (including owner-occupied property), which could be turned into realised gains upon disposal of the relevant investments, climbed from €15.6bn to €32.0bn.

### Fixed-interest portfolio by economic category<sup>1</sup>

Total: €207bn (184bn)

<sup>1</sup> Presentation essentially shows fixed-interest securities and loans, including deposits and cash at banks, at market value. The approximation is not fully comparable with IFRS figures.

<sup>2</sup> Including other public-sector issuers and government-guaranteed bank bonds.

In the period under review, we reduced our portfolio of covered bonds and structured credit products, and invested more in government bonds.

Half of our fixed-interest portfolio is invested in government bonds. In the current financial year, we have mainly made new investments in US, Spanish, Italian and Australian government bonds. The purchase of government bonds from emerging markets is also part of our balanced investment strategy. Reductions focused on our holdings of bonds from German issuers. The vast majority of our government bonds continue to come from countries with a high credit rating. As part of our risk management, we gear our risk capital requirements and limits to the ratings of the relevant issuers, but we do not treat any credit exposure as risk-free. Approximately 45% of our government bond portfolio is made up of German and US bonds, with Italian, Spanish, Portuguese and Irish issuers accounting for 9%. We do not hold any government bonds from Greece, Cyprus or Argentina.

Covered bonds make up 27% of our fixed-interest securities. Despite a decline owing chiefly to scheduled redemptions, the emphasis remained on German pfandbriefs, with around 35%.

Corporate bonds account for 10% of our interest-bearing investments. Our credit exposure is increased by a further percentage point through derivatives.

<sup>1</sup> Presentation based on approximation and not fully comparable with IFRS figures.

Our investment in bank bonds is limited and at the reporting date amounted to 3% of our portfolio of fixed-interest securities. Financial instruments from states in southern Europe and Ireland make up 6% of the portfolio. Most of our bank bonds (81%) are senior bonds, i.e. bonds that are not subordinated or subject to loss participation. Subordinated bonds and loss-bearing bonds made up 19% of our bank bond holdings.

Fixed-interest securities: Bank bonds<sup>1</sup>

| %                  | 31.12.2014 | Prev. year |
|--------------------|------------|------------|
| Senior bonds       | 81         | 84         |
| Loss-bearing bonds | 5          | 5          |
| Subordinated bonds | 14         | 11         |

<sup>1</sup> Presentation essentially shows fixed-interest securities and loans at market value. The approximation is not fully comparable with the IFRS figures.

Our portfolio of structured credit products at market value sank to €6.0bn (7.1bn). This asset class involves securitised receivables (asset-backed securities or mortgage-backed securities), e.g. securitisations of real estate finance, consumer credit or student loans. Around 56% of our portfolio of asset- and mortgage-backed securities have a rating of AAA.

Due to the very low levels of interest rates, in reinsurance we brought the duration of our fixed-interest investments down closer to the lower duration of our technical liabilities, thereby decreasing our interest position on the assets side. At the end of the year, the interest-rate sensitivity of fixed-interest investments in reinsurance was slightly above the duration of the technical liabilities.

In primary insurance, the durations of fixed-interest investments have diverged from those of the technical liabilities. In an environment of falling interest rates, the duration of technical liabilities increased more strongly than for fixed-interest investments.

As a result of the reduced interest position in reinsurance, the compensatory effect between the reinsurance and primary-insurance interest positions at Group level decreased. Together with the changed duration position in primary insurance, at Group level this leads to a year-on-year increased exposure to falling interest rates.

Equity ratio increases  
slightly to 5.2%

The carrying amount of our equity portfolio (before taking derivatives into account, and including investments in affiliated companies, associates and joint ventures at market value) rose in the course of the year. Our equity-backing ratio amounted to 5.2% (4.8%). The derivatives used to hedge our equity portfolio were increased. Including hedges, our equity-backing ratio was 4.3% (4.6%). Besides this, we are protecting ourselves against accelerated inflation in an environment of continuing low interest rates. For this, we hold inflation-linked bonds with a market value of €8.5bn (6.8bn) and inflation-linked swaps with an exposure of €5.9bn (4.4bn). We are suffering losses of market value here due to particularly low inflation rates. Real assets like shares, property, commodities, and investments in infrastructure, renewable energies and new technologies also serve as protection against inflation. Additionally, our investments in real assets have a positive diversification effect on the overall portfolio.

1 Details of the result by type of investment are shown on page 259 f. in the notes to the consolidated financial statements.

2 Return in % p.a. on the average market value of the investment portfolio at the quarterly reporting dates.

In the 2014 financial year, regular income fell slightly against the previous year, despite the increased value of the investment portfolio. Our reinvestment return was 2.1% (2.4%). Higher dividend earnings only partially offset the lower interest payments from fixed-interest securities. Due to the decline in interest rates in the past financial year, yields on new investments remain far lower than the average return on our existing portfolio of fixed-interest investments.

In the past financial year, we posted net write-downs of -€234m (-436m) on non-derivative investments, particularly on our share portfolio. The main reason for the lower write-downs is the write-downs we made on our portfolio of physical gold in the previous year.

In the 2014 financial year, through active asset management we posted net gains of €2,629m (1,759m) on the disposal of non-derivative investments. These derive primarily from our portfolio of fixed-interest securities – most notably on government bonds – and equities. The year-on-year improvement in our result from disposals was due chiefly to higher gains realised on fixed-interest securities and equities.

In the past financial year, we posted a negative balance totalling -€1,068m (-985m) from write-ups and write-downs of derivatives and losses on the disposal of derivatives. The adverse effects resulted mainly from equity, inflation and commodities derivatives. Losses on inflation and commodities derivatives were up on the previous year. The gains on interest-rate derivatives (particularly from ERGO's interest-rate hedging programme) had a positive effect on the result.

## Financial position

- Increase in equity, especially due to rise in reserve for currency translation adjustments and improved net unrealised gains and losses on investments
- Further reduction in debt leverage
- Group capital around 3.1 times the legal solvency requirement

### Financial strength

Munich Re's financial strength continues to be assigned the second-highest rating category by each of the leading rating agencies.

#### Financial strength ratings for Munich Re

| Rating agency     | Rating            | Outlook |
|-------------------|-------------------|---------|
| A.M. Best         | A+ (Superior)     | Stable  |
| Fitch             | AA- (Very strong) | Stable  |
| Moody's           | Aa3 (Excellent)   | Stable  |
| Standard & Poor's | AA- (Very strong) | Stable  |

### Analysis of our capital structure

Our primary insurance and reinsurance operations have a significant influence on our balance sheet: as we have consistently geared our Group toward value creation in its core business, investments on the assets side of the balance sheet serve to cover technical provisions (75% of the balance sheet total). Equity (11% of the balance sheet total) and bonds classified as strategic debt (2% of the balance sheet total) are the most important sources of funds.

### Group equity

#### Development of Group equity

|                                                                                  | 31.12.2014    | Prev. year    | Change      |
|----------------------------------------------------------------------------------|---------------|---------------|-------------|
|                                                                                  | €m            | €m            | %           |
| Issued capital and capital reserve                                               | 7,417         | 7,426         | -0.1        |
| Retained earnings                                                                | 13,005        | 12,841        | 1.3         |
| Other reserves                                                                   | 6,458         | 2,374         | 172.0       |
| Consolidated result attributable to equity holders of Munich Reinsurance Company | 3,153         | 3,304         | -4.6        |
| Non-controlling interests                                                        | 271           | 243           | 11.5        |
| <b>Total</b>                                                                     | <b>30,304</b> | <b>26,188</b> | <b>15.7</b> |

The increase in equity was attributable not only to the consolidated result but also to a rise the reserve for currency translation adjustments and to higher net unrealised gains, which derived mainly from our fixed-interest securities available for sale. Above all, the equity was reduced by the dividend payment and share buy-back programme.

## Strategic debt

We define as strategic debt all financial instruments with the character of outside financing that do not have a direct link to our operative business. Strategic debt supplements our financial resources, is essentially designed to optimise the cost of capital and ensures that we have sufficient liquidity at all times. With a view to making our capital structure transparent, we quantify our debt leverage, which is pleasingly low compared with that of our competitors: it is defined as the ratio – expressed as a percentage – of strategic debt to the sum of Group equity and strategic debt. Our technical provisions are not considered, even though they are mostly available to us on a long-term basis as a source of financing for investment.

### Debt leverage

|                | 31.12.2014    | Prev. year    | Change      |
|----------------|---------------|---------------|-------------|
|                | €m            | €m            | %           |
| Strategic debt | 4,757         | 4,734         | 0.5         |
| Group equity   | 30,304        | 26,188        | 15.7        |
| <b>Total</b>   | <b>35,061</b> | <b>30,922</b> | <b>13.4</b> |
| Debt leverage  | %             | 13.6          | 15.3        |

→ The composition of our subordinated liabilities can be found in the notes to the consolidated financial statements on page 236 f.

Our subordinated bonds are recognised in part as own funds by the German Federal Financial Supervisory Authority (BaFin). When this is considered in calculating the strategic debt, the latter is reduced to €743m and the debt leverage amounts to only 2.4%.

## Technical provisions

Reinsurance business accounts for approximately 32% of technical provisions, around 67% comes from primary insurance and about 1% is from Munich Health. In contrast to liabilities under loans and securities issued, we cannot foresee with certainty how high our liabilities from underwriting business will be and when they will arise. This is especially true of reinsurance. Whereas in property insurance a major portion of the provisions is generally paid out within two to three years, in life or liability insurance substantial amounts may still be due decades after the contracts were concluded. The currency distribution of our provisions reflects the global orientation of our Group. Besides the euro, our main currencies are the US dollar and the British pound sterling.

## Restraints on disposal

→ Information on contingent liabilities is provided on page 287 f. in the notes to the consolidated financial statements

Since we are an international (re)insurance group, some of our financial resources are subject to restraints on disposal. Supervisory authorities in some countries, for example, require foreign reinsurers to establish premium and reserve deposits to the benefit of primary insurers, or set up trustee accounts or guarantees with certain financial institutions. At the reporting date, this involved investments with a volume of €8.4bn (8.4bn). In addition, there were contingent liabilities.

## Asset-liability management

→  
More details on ALM as a tool  
of corporate management  
are available on [page 41 f.](#)

The structure of our technical provisions and other liabilities is the basis for Munich Re's investment strategy, the main focus of which is asset-liability management (ALM). With ALM, we aim to ensure that macroeconomic factors influence the value of our investments and that of our technical provisions and liabilities in the same way. This stabilises our position against capital market fluctuations. For this purpose, we mirror important features of the liabilities, such as maturity patterns, currency structures and inflation sensitivities, on the assets side of the balance sheet by acquiring investments with similar characteristics where possible.

In this approach, any deviations from the structure of our liabilities are made consciously, taking due account of our risk tolerance and the achievable risk spreads. These have the purpose of generating income in excess of the expected return on funds required to meet the liabilities. Therefore, we measure investment risks incurred not only in absolute terms, but also in relation to changes of values in our liabilities. In terms of currency positioning, exchange-rate fluctuations thus affect assets and liabilities in equal measure as a result of this approach. Currency translation losses on assets are largely offset economically by currency translation gains on underwriting liabilities, although owing to accounting regulations that are imperfect from an economic perspective, this relationship is not always adequately reflected in the financial statements. To a limited extent, we also align our investment portfolio in such a way that it increases in value in line with rising inflation rates. To achieve this, we invest in inflation-sensitive asset classes such as inflation-linked bonds and inflation-linked swaps, as well as in real assets.

To configure our economic ALM as effectively as possible, we also use derivative financial instruments in order to hedge against fluctuations on the interest-rate, equity and currency markets. Under IFRS accounting, we recognise fluctuations in the value of these derivative products in profit or loss, i.e. as income or expense in our income statement. However, such recognition in the income statement is not usually possible with regard to the related underlying transactions themselves. Despite our economically well-balanced underwriting and investment portfolios, accounting inconsistencies of this kind and other differences between the economic and balance-sheet perspectives can give rise to considerable fluctuations in our IFRS investment, currency and consolidated result, particularly in times of greater volatility on the capital markets.

## Capital management

Through active capital management, we ensure that Munich Re's capital is always maintained at an appropriate level. Our available financial resources must always be sufficient to cover the capital requirements determined both by our internal risk model and by the requirements of supervisory authorities and rating agencies. We aim to ensure that our financial strength is such that it enables us to take advantage of profitable opportunities for growth, is not significantly affected by normal fluctuations in capital market conditions, and remains at a reasonable level even in the wake of major loss events or substantial falls in the stock markets. At the same time, we also define an appropriate level of Group economic equity as one which does not lastingly exceed that which is required. Such a needs-based, risk-commensurate capital level makes a decisive contribution to financial discipline in all our business processes.

→  
The adjustments are described  
on [page 133 f.](#)

We derive our economic equity from IFRS equity by means of various adjustments. We return surplus capital to equity holders mainly through attractive dividends, within the scope permitted by the revenue reserves of the Group parent, Munich Reinsurance Company, as determined under German commercial law, and provided this does not

impair our strategic flexibility or overall capital strength. Furthermore, in addition to dividend payments, we still generally consider share buy-backs an important instrument of active capital management. In March 2014, we announced another buy-back programme for up to €1bn by the 2015 Annual General Meeting. By 25 February 2015, we had repurchased shares with a value of €866m. Including dividend payouts and the share buy-backs from 2006 to 2014, we have been able to return over €17.4bn to our shareholders since 2006.

In the financial year 2014, Munich Reinsurance Company generated net retained profits of €1,340m according to German GAAP accounting. Including these net retained profits, the Company's revenue reserves amounted to €3,179m (3,812m) as at the balance sheet date. The shareholders' equity of Munich Reinsurance Company as determined under German GAAP accounting is protected effectively against the risk of loss arising from a random accumulation of losses by a claims equalisation provision totalling €9.1bn. Given this robust capitalisation according to all calculation methods, we intend – subject to the approval of the Annual General Meeting – to pay our shareholders a dividend that is €0.50 higher than in the previous year at €7.75 per share, or a total of €1.3bn, from Munich Reinsurance Company's net retained profits for the financial year 2014.

### Information in accordance with Section 315 (4) of the German Commercial Code (HGB) and explanatory report of the Board of Management

#### Composition of the subscribed capital

As at 31 December 2014, Munich Reinsurance Company's share capital of €587,725,396.48 was divided into 172,942,618 registered, no-par-value, fully paid shares. The rights and obligations deriving from these shares follow from the applicable statutory requirements and the Company's Articles of Association. With respect to the Company, the only parties deemed shareholders pursuant to Section 67 of the Stock Corporation Act are those entered as such in the Company's register of shareholders.

#### Restrictions on voting rights or the transfer of shares

The listed registered shares are subject to transfer restrictions. The issuing of restrictedly transferable registered shares by Munich Reinsurance Company dates back to the Company's foundation in 1880. Restricted transferability means that these shares may be transferred to another holder only with the Company's consent, which, according to Article 3 (2) of Munich Reinsurance Company's Articles of Association, is granted at the Company's discretion. Since the share-trading processes have been made very efficient, the consent requirement does not lead to any delays in entry in the register. In recent decades, it has been granted without exception. Contractual agreements are in place with the members of the Board of Management providing for two- or four-year minimum holding periods for the shares of the Company they have to purchase as part of share-based remuneration programmes.

Each share carries one vote at the Annual General Meeting and determines the shareholders' participation in the Company's profit. This excludes own shares held by the Company, from which it enjoys no rights. In the cases specified in Section 136 of the Stock Corporation Act, voting rights from the shares concerned are excluded by law. If shareholders are entered under their own name for shares which belong to a third party and exceed at this time the upper limit of 2% of the share capital as stated in the Articles of Association, pursuant to Article 3 (5) of the Articles of Association, the shares entered shall not carry any voting rights.

→  
Information relating to the  
remuneration report can be found  
on [page 49 ff.](#)

## Shareholdings exceeding 10% of the voting rights

Most recently as at 12 October 2010, Warren E. Buffett and companies in his group notified us in accordance with Section 21 of the German Securities Trading Act (WpHG) of the following direct or indirect shareholdings in Munich Reinsurance Company exceeding 10% of the voting rights:

### Shareholdings exceeding 10% of the voting rights

| %                                      | Direct holding | Indirect holding |
|----------------------------------------|----------------|------------------|
| Warren E. Buffett, USA                 | 0,053          | 10,191           |
| Berkshire Hathaway Inc., Omaha, USA    |                | 10,191           |
| OBH LLC, Omaha, USA                    |                | 10,191           |
| National Indemnity Company, Omaha, USA | 10,191         |                  |

Warren E. Buffett and the aforementioned companies in his group informed us in a letter dated 15 October 2010 that the objective of the investment is to generate trading profits and not to implement strategic objectives. In a statement from February 2015, Berkshire Hathaway Inc. reported that its participation in Munich Reinsurance Company as at 31 December 2014 was around 20 million shares, equivalent to an 11.6 % share of the voting rights. We have not been notified, nor have we otherwise learned, of any further changes.

## Shares with special control rights

There are no shares with special control rights.

## System of control for employee share scheme where the control rights are not exercised directly by the employees

Like other shareholders, employees of Munich Reinsurance Company exercise their control rights in accordance with statutory provisions and the Articles of Association.

## Statutory regulations and provisions of the Articles of Association regarding appointment and dismissal of members of the Board of Management and concerning amendments to the Articles of Association

The legal parameters for the appointment and dismissal of members of the Board of Management are specified in the Company's co-determination agreement, Articles 13 and 16 of the Articles of Association, Sections 84 and 85 of the German Stock Corporation Act (AktG), and Section 121a (1) and (7a) of the German Insurance Supervision Act (VAG). Munich Re's co-determination agreement and Articles of Association follow the legal tenets of the German Co-Determination Act (MitbestG). Pursuant to Article 16 of the Articles of Association, the Board of Management must comprise a minimum of two persons; beyond this, the number of members is determined by the Supervisory Board. The Board of Management currently comprises nine members. The Supervisory Board appoints the members of the Board of Management pursuant to Section 84 of the Stock Corporation Act and may dismiss them at any time for good cause. On initial appointment, members of the Board of Management are usually given contracts for a term of between three to five years, and extensions of up to five years are possible. For the appointment or dismissal of members of the Board of Management, Article 13 (3) of the Articles of Association stipulates a two-thirds majority of the votes cast on the Supervisory Board. If the requisite majority is not obtained in the initial resolution, the appointment or dismissal of the Board of Management requires a simple majority of the votes cast. The second resolution is only possible following a suitable period of reflection and after the issue

has been dealt with in the competent committee, but is thereafter also possible by written consent in lieu of a meeting. In exceptional cases, members of the Board of Management may also be appointed by a court of law, pursuant to Section 85 of the Stock Corporation Act.

The Stock Corporation Act contains general provisions governing amendments to the Articles of Association (Section 124 (2) sentence 2, and Sections 179–181 of the Act). These state that only the Annual General Meeting can make resolutions on changes to the Articles of Association. In order to be carried, such a resolution must receive the votes cast by at least three-quarters of the share capital represented in the vote. The Articles of Association may stipulate a different capital majority (higher or lower) or other requirements, but the Company's Articles of Association do not provide for any such special features.

The Stock Corporation Act contains special regulations on amendments to the Articles of Association where increases and reductions in share capital are concerned (Sections 182–240 of the Act). Under these regulations, resolutions on capital measures are generally to be made by the Annual General Meeting. Within a self-determined scope, however, the Annual General Meeting can authorise the Board of Management to initiate certain (capital) measures. The authorisations relating to Munich Reinsurance Company are listed below. In all such cases, a resolution of the Annual General Meeting is required that has been adopted by at least a three-quarter majority of the share capital represented in the vote. Where these resolutions are concerned, the Company's Articles of Association again do not provide for other (i.e. higher) majorities or further requirements. Pursuant to Article 14 of the Articles of Association and Section 179 (1) sentence 2 of the Stock Corporation Act, the Supervisory Board is empowered to make amendments to the Articles of Association which affect only the wording.

### Powers of the Board of Management with particular regard to the option of issuing or buying back shares

→ The complete text of the authorisations mentioned is provided in the agenda of the Annual General Meetings mentioned on our website at [www.munichre.com/hv/archive](http://www.munichre.com/hv/archive). Munich Reinsurance Company's Articles of Association are also available on the internet at [www.munichre.com/articles-of-association](http://www.munichre.com/articles-of-association)

The powers of the members of the Board of Management are defined in Sections 71 and 76–94 of the German Stock Corporation Act. The Board of Management has the following powers to issue and buy back shares:

- On 30 April 2014, the Annual General Meeting authorised the Company, pursuant to Section 71 (1) no. 8 of the Stock Corporation Act, to buy back shares until 29 April 2019 up to a total amount of 10% of the share capital. The shares acquired, plus other own shares in the possession of the Company or attributable to the Company in accordance with Section 71a ff. of the Stock Corporation Act, may at no time amount to more than 10% of the share capital. In accordance with the provisions of the authorisation, the shares may be acquired in various ways. The Company may buy back shares amounting to a maximum of 5% of the share capital using derivatives. The Board of Management is authorised to use shares thus acquired for all legally permissible purposes, in particular those specified in the authorisation, whilst excluding subscription rights. Among other things, the Board of Management is empowered under Section 71 (1) no. 8 of the Stock Corporation Act to retire the shares without requiring further approval from the Annual General Meeting. By resolution of 20 March 2014, the Board of Management decided to utilise this authorisation to acquire own shares. Around 4.4 million shares had been acquired by 31 December 2014 at a purchase price of €694m.
- The Annual General Meeting of 28 April 2010 authorised the Board of Management to issue, with the consent of the Supervisory Board, convertible bonds or bonds with warrants on one or more occasions up to 27 April 2015 for a maximum nominal amount of €3bn with or without a limited maturity period. Shareholders are generally entitled to a subscription right in respect of these bonds, but the Board of Management is authorised, with the consent of the Supervisory Board, to exclude this subscription right in the cases specified in the authorisation. The holders of such bonds may be granted conversion or option rights in respect of shares issued

by the Company up to a maximum amount of €117m of the share capital, in accordance with the respective bond or warrant conditions; as a precautionary measure, capital of €117m was conditionally authorised under Article 4 (3) of the Articles of Association (Contingent Capital 2010).

- Under Article 4 (1) of the Articles of Association, the Board of Management is authorised, with the consent of the Supervisory Board, to increase the Company's share capital at any time up to 24 April 2018 by an amount of up to €280m by issuing new shares against cash or non-cash contribution (Authorised Capital Increase 2013). In accordance with the above-mentioned provisions of the Articles of Association, it may exclude subscription rights.
- Under Article 4 (2) of the Articles of Association, the Board of Management is authorised to increase the share capital at any time up to 19 April 2016 by an amount of up to €10m by issuing new shares against cash contribution (Authorised Capital Increase 2011). The subscription right of shareholders is excluded insofar as this is necessary to allow the shares to be issued to employees of Munich Reinsurance Company and its affiliated companies.

### Significant agreements which take effect, alter or terminate upon a change of control following a takeover bid, and resultant implications

Based on our underwriting guidelines, our reinsurance agreements generally include a clause that grants both parties to the agreement a right of extraordinary cancellation in the event that "the other party merges with another company or its ownership and control undergoes a material change". Such or similar clauses are typical of the industry. Munich Reinsurance Company's Long-Term Incentive Plan also provides for special exercise options in the event of a change of control. This plan is for members of the Board of Management, senior management and top executives in Munich Re's international organisation, and is explained in detail in the remuneration report.

### Compensation agreements concluded with members of the Board of Management or employees for the event of a takeover bid

There are no compensation agreements with members of the Board of Management or employees for the event of a takeover bid.

### Group solvency

Munich Re is subject not only to the supervisory requirements applying to individual insurance companies but also to supervision at Group level.

Furthermore, Munich Reinsurance Company as the parent has introduced suitable control methods and – when reporting to the German Federal Financial Supervisory Authority (BaFin), which is also responsible for the Group – includes supplementary aspects at Group level, such as shareholdings, consolidated financial data and intra-Group transactions.

Munich Re's eligible capital  
around 3.1 times higher than the  
legal requirement

Solvency in the case of insurance companies is generally understood to be the ability of an insurer to always meet the obligations assumed under its contracts. In concrete terms, this means an insurance company must fulfil specific minimum capital requirements. The aim of the "adjusted solvency" rules is to prevent the multiple use of equity to cover risks from underwriting business at different levels of the Group hierarchy. To calculate the adjusted solvency, the minimum equity required for the volume of business (required solvency margin) is compared with the eligible equity actually available (actual solvency margin) on the basis of the IFRS consolidated financial statements. To determine the eligible capital elements, the IFRS equity is adjusted; in particular, it is increased by portions of the subordinated liabilities and reduced by intangible assets. Munich Re's eligible capital is around 3.1 times higher than the legal requirement.

#### Adjusted solvency

|                               |     | 31.12.2014 | Prev. year | Change |
|-------------------------------|-----|------------|------------|--------|
|                               |     |            |            | %      |
| Eligible capital of the Group | €bn | 30.6       | 26.2       | +17.1  |
| Adjusted solvency ratio       | %   | 307.9      | 262.4      |        |

The adjusted solvency ratio increased from 262.4% in the previous year to 307.9% in 2014. The increase was due mainly to the higher IFRS equity.

#### Analysis of the consolidated cash flow statement

Our primary insurance and reinsurance operations have a significant influence on Munich Re's cash flow. We generally first collect the premiums for the risks assumed and do not make payments until later, when claims need to be settled. Cash flow statements of insurance companies are therefore of limited relevance. The cash flow statement is adjusted to eliminate the effects of fluctuations in exchange rates and changes in the entities consolidated.

#### Consolidated cash flow statement

|                                          | 2014        | Prev. year | Change       |
|------------------------------------------|-------------|------------|--------------|
|                                          | €m          | €m         | %            |
| Cash flows from operating activities     | 7,527       | 2,187      | 244.2        |
| Cash flows from investing activities     | -4,939      | 292        | -            |
| Cash flows from financing activities     | -2,694      | -2,558     | -5.3         |
| <b>Cash flows for the financial year</b> | <b>-106</b> | <b>-79</b> | <b>-34.2</b> |

In the consolidated cash flow statement, the consolidated profit of €3,171m is used as the starting point for determining the cash inflows from operating activities. The consolidated result is adjusted by €5,193m to take account of the higher technical provisions. The net gains on the disposal of investments – which in adjusting the consolidated profit have to be deducted from the cash flows – are essentially attributable to the disposal of securities available for sale and to derivatives.

Outflows from investing activities were determined by payments for purchasing investments. They exceeded the inflows from the sale and/or maturity of investments by €4,431m.

In the financial year 2014, Munich Re acquired 100% of the voting shares in SHC Insurance Pte. Ltd. (SHC), Singapore for approx. €69m. In the cash flow statement, we have reduced the sales price by the cash held by the company acquired.

The cash outflows for financing activities stem mainly from the dividend payment in 2014 and the share buy-back programme.

Overall in the year under review, cash – which encompasses cash with banks, cheques and cash in hand – rose by €92m (including currency effects) to €2,912m. There were items pledged as security and other restrictions on title amounting to €15m (26m).

## Stakeholders

- Client orientation offers both traditional and innovative solutions
- Constant, open communication with all stakeholders
- Targeted development of our staff in light of changing markets and conditions
- Expansion of Group-wide environmental management

For Munich Re, dialogue with clients, brokers, shareholders, investors, staff members and the society within which we operate as an enterprise is a crucial requirement for identifying new challenges and changes at an early stage and for developing appropriate solutions.

### Clients and client relationships

Munich Re has different client bases in reinsurance and primary insurance.

In reinsurance, we do business with over 4,000 corporate clients from more than 160 countries. ERGO serves over 35 million (mainly private) clients in over 30 countries, with the focus on Europe and Asia. The Munich Health business segment has over six million clients in primary insurance and around 400 in reinsurance. In Germany, our asset manager MEAG offers its competence not only to well over 100,000 private investors, but also to over 50 institutional investors outside the Group, e.g. insurers, utilities, pension funds, church organisations, foundations, local authorities and industrial enterprises.

We want to have the best possible understanding of our clients and their risks, and to develop and offer them customised insurance solutions. Therefore, we need to be close to our clients to understand their needs and to give them comprehensive advice. All three business fields focus particularly on close consultation and successful cooperation with our clients and sales partners with the objective of offering them optimum solutions. We want to be a competent, reliable and transparent partner, whom they can trust.

### Reinsurance

We offer our clients the full range of underwriting products

As reinsurers, we use our extensive risk knowledge to develop individual solutions to meet our clients' diverse needs and add value. We know our cedants' needs, develop innovative risk transfer solutions with them, and aim to continue driving forward the expansion of risk competence through strategic cooperations, thus providing our clients with the full range of underwriting products and a wide variety of services. As well as our own client platform (connect) and special product publications, the range we offer includes tools to improve business processes, individual consulting services and client seminars on many aspects of the insurance business.

Depending on the clients' wishes, we work directly with them or via the reinsurance brokers they commission. We maintain relationships with all relevant reinsurance brokers at local operating and strategic level, and develop these contacts systematically in order to adapt them to changing circumstances. We view brokers as competent client representatives and key know-how partners in developing new, client-centric solutions.

Client managers are responsible for determining clients' needs as precisely as possible and offering tailor-made solutions and support. To this end, we bring all our knowledge and innovative strength to bear and do not shy away from taking unusual approaches – true to our claim NOT IF, BUT HOW. We regularly assume a pioneering role in new coverage concepts, such as preparing European cedants for the introduction of Solvency II. We reach new client groups through our operating field Risk Solutions, where we provide customised solutions for corporate clients and industrial firms. Predominantly in North America, but also in the Asia-Pacific region, we generate business via managing general agencies (MGAs). Beyond this, our target groups include public-private partnerships and insurance pools. With branches and subsidiaries around the world, we ensure that our clients can always find us where they need us.

#### Changed parameters generate demand for new insurance solutions

Economic growth and changes in the areas of technology, climate, society and politics mean that entirely new areas of risk are arising worldwide, and these can be covered with the help of innovative insurance solutions. We develop complex customised solutions together with our clients, and extend the frontiers of insurability with innovative products, such as coverage for cyber risks, business interruption, and reputational risk.

### ERGO

ERGO attends to the needs of private, commercial and industrial clients, with private clients making up the bulk of its customers. ERGO offers them products and services in connection with old-age provision and saving schemes, protection of property, health, legal cover and travel insurance. Clients can contact us through a wide range of channels: via full-time self-employed agents, through brokers, via the internet, by phone for direct insurance, or via various corporate partners.

You will find the  
ERGO customer report for 2014  
at [www.ergo.com/en/  
Unternehmen/Overview/  
Understand](http://www.ergo.com/en/Unternehmen/Overview/Understand)

ERGO's brand proposition "To insure is to understand" expresses the primary insurance group's aim of focusing systematically on customers' actual requirements, with an approach that sets it apart from the competition. We report annually on the implementation of the brand proposition in the ERGO customer report, which was published for the third time in May 2014.

In keeping with this motto, ERGO is developing new solutions to respond to new trends and client expectations. In particular, ERGO is expanding its services in a targeted manner to meet the needs of the growing number of internet-savvy consumers, using its many years of experience in direct sales. Since 2014, it has also been possible, in addition to private liability insurance, to select personal accident insurance from a modular structure and to make the application online. Further products are to follow. Since September 2014, ERGO Direct clients have been able to take out term life insurance by completing health questionnaires with an electronic signature.

In light of increasing severe weather events, in 2014 ERGO responded to the demand for flood insurance in risk areas with a new homeowners' comprehensive insurance product line. It offers flood protection insurance in all areas of Germany, so that even homeowners in areas with extreme exposure to flooding are able to take out insurance.

ERGO relies on feedback from consumers in order to constantly optimise its products. Listening to their opinions is an integral part of the process of developing new products. The ERGO Customer Advisory Board and ERGO's Customer Workshop on the internet are also a way of maintaining ongoing dialogue with its customers. In April 2014, responsibility for the most important client processes was pooled in the new customer and sales division.

In 2011, ERGO responded to consumer demand for clear and comprehensible communication with its "clear language" initiative. Insurance conditions and product information have been simplified and shortened, letters to clients revised and binding writing rules issued. As the first German insurer, ERGO underwent extensive testing by TÜV Saarland for comprehensibility, and received the TÜV certification for understandable communication in 2013. The TÜV experts will continue to monitor and evaluate these activities with the aim of anchoring the idea of comprehensibility in the company.

## Munich Health

Munich Health offers its expertise  
to a broad spectrum of clients

Munich Re's global healthcare insurance and reinsurance expertise is combined under the Munich Health brand, enabling a very broad spectrum of clients to be served. Munich Health devises integrated solutions tailored precisely to clients' needs in order to tap the strongly growing business potential in each market. Increasing digitalisation of our interaction with clients provides us with further tools for offering even more customised solutions in the future. In primary insurance, we offer individual policies (for private individuals) and group policies (e.g. for companies, employees or public servants). In some cases, brokers provide assistance with selling products and client care. For providers that do not operate their own health business, such as banks, Munich Health develops health insurance products and handles their administration. Munich Health's comprehensive core expertise in the health sector flows into the development of global offerings to meet current client requirements and address new trends. These include services for the management of severe medical conditions, and support in the standardisation and automation of processes.

In reinsurance, our cedants around the world are serviced locally by our client managers in regional units. We provide our clients with market-specific data models and reinsurance models. Alongside specialised client managers, further specialists are available to advise our clients directly on business development and offer specific service packages. These include underwriters for product design, actuaries for pricing and claims specialists for processing operative business. For mission-critical business processes such as claims handling, Munich Health offers clients supporting computer programs with automated test algorithms. Feedback from our clients plays a major role in the further development of our range of products.

Our clients can also outsource all elements of their business operations to Munich Health – from claims handling to management of medical networks (hospitals, medical centres, etc.). Our MedNet service units act as specialist Third Party Administrators (TPAs), particularly in the Middle East and southern Europe.

## Asset management

MEAG handles the investment activities of Munich Re and ERGO as their asset manager. Its range of services includes advice on strategic asset allocation, the tactical implementation of this, and the selection of the individual investments. It also offers its competence to other institutional and private investors. MEAG is represented in Europe, North America (MEAG New York) and Asia (MEAG Hong Kong) and manages all important asset classes. As well as the more traditional classes such as bonds, equities, currencies and real estate, these now also include forestry, infrastructure, renewable energies and new technologies.

→  
Information on our asset-liability  
management is available  
on [page 41 f.](#)

MEAG's investment experts adopt a stringent, risk-based approach with the aim of generating excess return – for the same risk – compared with the requirements of their clients within the Group and externally. Munich Re's insurance units derive their asset management targets from their payment obligations in their core business (asset-liability management) and also specify their risk and return preferences.

MEAG's Mandate Management Division is the interface between MEAG's various units on the one hand, and the Group's insurance companies and MEAG's external clients on the other. The Division advises the Group on strategic investment issues and is responsible for tactical asset management. The disciplined investment process means that MEAG's retail funds also achieve a generally above-average performance, leading to corresponding recognition from independent fund-rating agencies.

## Staff

The efforts of our staff are crucial to the success of Munich Re. Their professional expertise, commitment and readiness to embrace innovation are the factors that drive our business forward. We create the necessary conditions for nurturing and enhancing their personal development and performance in all areas. Developing and keeping this high-level expertise and broad experience for the benefit of the Group is one of our most important objectives.

One cornerstone of this strategy is uniform succession planning across the entire top management level of the Group. There is systematic development towards defined target positions based on coordination across business-field boundaries. The resulting transparency also improves the use of internal potential.

Rotation and exchange  
programme promotes  
practical experience and  
knowledge transfer

Rotation of managers and staff members within the Group supports the pooling of expertise and the transfer of knowledge. Depending on business requirements, these changes take place on the basis of flexible models – as exchanges, for extended periods and also on a project basis. We continued and expanded the initiative launched in reinsurance in the previous year to promote job changes to other areas and business fields and to other countries as part of the staff development process. This is intended to enhance both professional expertise and intercultural competences.

Munich Re's position as a knowledge leader is promoted by the systematic development of outstanding specialists in business-relevant knowledge areas. One key element of this is a wide range of up-to-date seminars and workshops. Internal training events provided by our in-house experts are an invaluable resource, especially with respect to fast-developing current topics such as the implementation of Solvency II. Whether by means of online training, internal conferences or traditional seminars, the communication of current developments ensures that our knowledge base is kept up-to-date and comprehensive.

The extensive development of the management culture and competences is the focus of the two-year initiative “ERGO – Focus on Leadership” launched in the autumn of 2013. All of ERGO’s approximately 2,300 managers in Germany are currently completing this “manager triathlon” – a mandatory, multi-stage development programme. In parallel, staff are giving systematic feedback on their managers in the form of upward appraisals. The initiative is an excellent example of our willingness to invest in the development of our staff.

A long-term and important issue for both staff and the Group is the maintenance of health. In all areas of the Group, staff benefits include measures to promote good health. Reinsurance staff in Munich are able to anonymously seek advice for professional and private crisis situations from external specialists. This Employee Assistance Programme goes beyond established internal corporate health-support initiatives. ERGO has also had a positive response to its group coaching and stress prevention training.

The challenges of today’s working world are characterised by rapidly-changing trends, internationalisation, dynamic team structures, increased mobility and rapid changes in the market. Staff also want to enjoy more individuality and a better work-life balance at the various stages of their lives. In order to meet these demands, Munich Re has developed a series of new models aimed at organising more flexible working hours and locations for its staff in Munich. At the same time, the IT infrastructure and working environment is being adapted to reflect these requirements when offices are renovated or under construction. An important aim is optimising client service in conjunction with flexible recognition of staff needs. ERGO also has a number of supporting measures in place, including childcare and time out for providing care to relatives, that promote the work-life balance.

The percentage of women  
in management is increasing  
continuously

Internationality is one of the three main pillars of diversity management. In this connection, the number of international assignments, job rotations and international project teams was further increased in 2014. The Group now employs staff from more than 55 countries, and the number of employees outside Germany has once again increased in this reporting year. Another directly measurable success of diversity management is the continually increasing number of women in management positions in the Group over the past four years. This is also illustrated by the fact that in 2014, more than 40% of all new managers in our German reinsurance business were women.

The number of staff in the Group decreased by 3.1% (1,349) in comparison with the previous year. The main reason for this was the socially acceptable implementation of ERGO’s “Future of Sales” quality and efficiency initiative launched in Germany in 2012.

## Staff

Total: 43,316 (44,665)

### Staff by field of business

|               |               |
|---------------|---------------|
| Reinsurance   | 27.1% (26.0%) |
| ERGO          | 65.9% (67.4%) |
| Munich Health | 7.0% (6.6%)   |

### Staff by region

|                      |               |
|----------------------|---------------|
| Germany              | 50.6% (51.8%) |
| Rest of Europe       | 33.7% (33.4%) |
| North America        | 12.4% (11.9%) |
| Asia and Australasia | 1.8% (1.5%)   |
| Africa, Middle East  | 1.2% (1.1%)   |
| Latin America        | 0.3% (0.3%)   |

## Age structure of staff

Average: 42.7 (42.5) years

## Length of service of staff

Average: 12.4 (12.1) years

## Percentage of women

|      |       |
|------|-------|
| 2014 | 53.9% |
| 2013 | 54.1% |

## Percentage of women in management positions

|      |       |
|------|-------|
| 2014 | 31.1% |
| 2013 | 30.2% |

## Shareholders

At the end of the year, our register of shareholders listed around 180,000 shareholders (previous year: 155,000). The vast majority of shares were held by institutional investors such as banks, insurers or investment companies; around 14.3% (12.0%) were in the hands of private investors. At around 67%, the percentage of foreign investors was at around the same level as in the previous year. Our shareholders include sustainability-minded investors, with whom we have an active dialogue.

→  
Additional information on the stake in Munich Reinsurance Company held by Warren E. Buffett and the companies in his group is available on [page 104](#)

Our largest shareholder at the end of the year was still Warren E. Buffett, who holds a stake of around 11.6% in Munich Reinsurance Company via several companies in his group (Berkshire Hathaway Inc., OBH Inc., and National Indemnity Co.). Asset manager BlackRock is our second-largest shareholder with around 5.5%.

We strive for open communication with all capital market participants

Our corporate strategy geared to a sustained increase in value is accompanied by ongoing and open communication with all capital market participants. The main task of Investor and Rating Agency Relations at Munich Re is to cultivate contact with existing shareholders and attract new ones. At the same time, we ensure that due account is taken of our investors' opinions and preferences in internal decision-making processes. We chiefly use roadshows and investor conferences to initiate and intensify dialogue with institutional investors, our main focus being on financial centres in Europe and the USA. We regularly supplement our investor relations activities with special events, such as the analysts' meeting we organised in London on the topic of Solvency II. We also offer regular forums for focused exchanges between investors who systematically gear their investment strategy to sustainability criteria.

Our investor relations work continues to meet with a positive response. In several cross-sector analyses of the quality of investor dialogue, Munich Re once more achieved leading positions in 2014, with our business partners particularly appreciating the consistency and transparency of our reporting. All the presentations we use in our meetings with analysts and investors and in our conferences and roadshows are published on the internet, and are also sent to interested private investors on request. Many of these events are transmitted live via webstreaming. Enquiries reaching us via our shareholder hotline or by e-mail are answered promptly by our team for private investors. Additionally, the service pages of our shareholder portal on the internet provide our registered share-holders with a wide range of information and communication options.

Detailed information on Munich Re's investor relations can be found at [www.munichre.com/ir-en](http://www.munichre.com/ir-en)

Around 4,500 shareholders and shareholder representatives participated in the 127th Annual General Meeting on 30 April 2014. Some 44.3% of the voting share capital was represented in the votes. All the motions were adopted with a clear majority in each case. With online participation in the Annual General Meeting and (electronic) postal voting, Munich Reinsurance Company again offered its shareholders all the facilities for casting their votes on agenda items.

→ We report on corporate responsibility in core business on page 17 in the strategy section, on page 136 in the risk report, and on page 141 ff. in the opportunities report

## Environment and society

In addition to strategic integration of sustainability aspects, the topics environment and social commitment constitute major elements of our corporate responsibility strategy.

### Environment

We regulate the protection of natural resources in our companies with Group-wide environmental guidelines; these are the cornerstones of our environmental management. We have set clear Group-wide targets that must be met at both Group level and in the local business units.

In order to reduce the CO<sub>2</sub> emissions which arise from our business operations, Munich Re decided in 2011 to combine all its efforts in a unified approach to achieve carbon neutrality throughout the Group by 2015. In addition, we set ourselves the Group-wide target of lowering CO<sub>2</sub> emissions across the Group by 10% in the period from 2009 to 2015. This reduction target is being implemented in our decentralised units, and was all but achieved as at 31 December 2014. Our environmental managers and the Board members in charge of the respective divisions are responsible for ensuring that we meet our environmental targets by defining corresponding goals and objectives. If these targets are met, it also impacts on remuneration of the respective staff members and Board remuneration. We are currently revising our environmental and climate protection strategy, and will define targets for the period 2016–2020.

→ Further information on our environmental management can be found online at [www.munichre.com/environment](http://www.munichre.com/environment)

### Environmental guidelines

Another focus is protecting natural resources. We have drawn up Group-wide environmental guidelines in order to minimise our environmental impact.

#### Improving environmental performance

We monitor and develop our environmental measures with the aim of continually improving environmental protection and our environmental performance in business operations.

#### Avoiding and reducing emissions

We avoid and reduce emissions wherever possible (from business travel, energy, water, paper and waste), establishing the highest technical standards wherever economically reasonable. We consider environmental principles while choosing materials, suppliers and service providers.

#### Raising staff awareness

We increase environmental awareness and the sense of responsibility of all staff members and motivate them to actively protect the environment.

#### Communication to stakeholders

We communicate openly and inform our stakeholders about our environmental activities and environmental performance on a regular basis. We raise awareness and share information on environmental issues where appropriate. Thus we promote a general culture of environmental protection.

Above all, the foundations of our efficient environmental management are clearly defined processes and responsibilities, and the organisation, data quality and degree of coverage of environmental data in the Group, in order to allow for comparability and evaluation of the changes. By the end of 2014, more than 75% of Munich Re (Group) employees were included in the Group-wide capture of environmental data. The vast majority of our staff work at locations that are already carbon-neutral. Seventeen of our locations have already been certified to international standard ISO 14001 and it has been demonstrated that we meet environmental management standards.

## Society

Examples of our non-profit projects and information about progress can be found in our corporate responsibility portal [www.munichre.com/cr-en](http://www.munichre.com/cr-en)

Our charitable commitments allow us to make a contribution to society, and these are governed by the clearly defined sponsorship guidelines set out in our corporate citizenship concept. In addition to basic assistance for social and cultural projects at corporate locations, we focus on topics that are related to our business activities. Above all, these are projects to prevent natural catastrophes, protect natural resources, and promote research and science. With this end in view, Munich Re enters into partnerships with charitable and non-profit organisations at national and international level, with the aim of establishing long-term sustainable partnerships geared to adding something of value to society. Our three corporate foundations – the Munich Re Foundation, the Dr. Hans-Jürgen Schinzler Foundation, and the ERGO Foundation “Youth & Future” – support both long-term projects and missions which show a measurable effect in meeting societal challenges and which are regularly evaluated with regard to their effectiveness. Examples of our non-profit projects and information about progress can be found in our corporate responsibility portal.

Successful projects undertaken during the past financial year include the following:

A multi-year cooperation with the Geo Hazards International (GHI) organisation to prevent losses in the north-east Indian town of Aizawl, which is strongly prone to earthquakes and landslides. The loss susceptibility of buildings and infrastructure was checked. The results enabled us to derive some specific preventive measures that were passed on to the population and political decision-makers and are now being implemented in a sustainable way.

A partnership between our companies Munich Reinsurance America and American Modern and the Institute for Business and Home Safety (IBHS). Independent experts and scientists use natural disaster and hazard scenarios to verify the safety and building standards of private and commercial buildings. The results of this research are then used as recommendations for the US building commissions and regulations. This allows for damage to be prevented and minimises risks. Higher resiliency standards mean better life and asset protection for property owners.

Our involvement in a public-private partnership (PPP) created by Water Benefit Partners (WBP) and the Swiss Agency for Development and Cooperation (SDC). The participants here are committed to developing an innovative financing and certification mechanism for sustainable water projects in regions with an acute water shortage. The Water Benefit Standard (WBS) developed in the meantime quantifies and certifies the results of water projects, mainly the volume of water savings, resulting from the use of innovative technology. The savings thus achieved enable other water projects to be set up, create jobs in the medium to long term, and are therefore intended to raise income levels of the local population in the project regions.

Projects related to the issue of disaster prevention and resiliency building: the Munich Re Foundation sponsors the RISK Award in cooperation with the Global Risk Forum in Davos (GRF) and the Secretariat of the International Strategy for Risk Reduction of the United Nations (UNISDR). The award is worth €100,000, and the winners can use the money to finance an innovative disaster management project. In 2014, the award went to an interdisciplinary integration project in South America. The Chilean NGO Inclusiva developed a comprehensive concept to ensure barrier-free access across the city of Peñaflor for people with physical disabilities during emergency and catastrophe situations. The results are to be published in a manual and distributed across Latin America so that other towns and local authorities can benefit from the findings.

## Risk report

- Risk situation manageable and under control.
- Capital position still comfortable
- Integrated, Group-wide system for managing operational risks

### Risk governance and risk management system

#### Risk management organisation, roles and responsibilities

##### Organisational structure

As required for Solvency II, Munich Re has set up an efficient risk management function (RMF) at Group level in addition to the key functions of Compliance, actuarial and Group Audit. It is part of the Integrated Risk Management Division (IRM) and reports to the Chief Risk Officer (Group CRO). In addition to the Group functions, there are risk management units in the fields of business, each headed up by its own CRO. Our extensive documentation, guidelines and instructions ensure that staff in our risk management structure and the Group as a whole are kept informed of our risk strategy and the RMF's organisation and processes. This provides the basis for active management of the risks we incur.

##### Risk governance

Our risk governance maintains and fosters an effective risk and control culture, which encompasses all significant risk categories. It is supported by various committees at Group and field-of-business level.

##### Group level

Ensuring that risk management and risk governance systems are in place and continuously enhanced at Group level is one of the most important tasks of the Group Committee of the Board of Management.

The Group Committee meets as the Group Risk Committee, on which it is joined by representatives from the fields of business with responsibility for risk management and the Group CRO. The Group Risk Committee is responsible for ensuring that risk management and risk governance systems are in place and continuously enhanced both at Group level and in the fields of business.

The Group Investment Committee is responsible for important issues affecting the investments made by the Group and the fields of business, including the assumption and management of specific investment risks. The Committee is made up of members of the Group Committee, representatives from the fields of business and MEAG with responsibility for investments, and the Group CRO.

The Group Compliance Committee deals with compliance risks and reputation issues and risks that have arisen in the business units. This ensures that we address those risks in a uniform way throughout the Group.

#### Field-of-business level

We have created further committees in our fields of business with risk governance responsibilities. The Group CRO is also a member of those committees, notably the Global Underwriting and Risk Committee, which is responsible for setting up appropriate risk management processes in the reinsurance field of business and ensuring that they are followed, the Munich Health Risk Committee and the ERGO Risk Committee. Munich Re's CRO is also a member of these committees.

#### Determining the risk strategy

Our business strategy essentially comprises the assumption of risks. The risk strategy, which is derived from the business strategy, defines when, where, how and to what extent we are prepared to incur risks. The further development of the risk strategy is embedded in the annual planning cycle, and hence in our business strategy. It is approved by the Board of Management and discussed regularly with the Supervisory Board.

We determine our risk strategy by defining risk appetites for a series of risk criteria. These criteria are based on the capital and liquidity available and on our earnings target within specified volatility limits, and provide a frame of reference for the Group's operating divisions:

- Whole portfolio criteria relating to the entire portfolio of risks are designed to protect our capital and limit the likelihood of an economic loss for the year. Of particular importance is the economic solvency ratio, which shows the extent to which available financial resources cover economic risk capital.
- Supplementary criteria are used to limit the amount of losses incurred for individual risk types and resultant accumulations, such as natural hazards, terrorism and pandemics, and also to limit market, credit and liquidity risks that could endanger Munich Re's ongoing viability.
- Other criteria support our objective of preserving Munich Re's reputation and protecting its future business potential. These criteria encompass limits for individual risks that, though they would not threaten Munich Re's existence, could cause lasting damage to the confidence in the Group of clients, shareholders and staff.

The risk appetite laid down ensures that an appropriate balance is maintained between business opportunities and risks incurred. Our risk strategy process has proved its worth during both the financial crisis and the sovereign debt crisis. Our business model of combining primary insurance and reinsurance ensures that – even in particularly difficult markets – we are in a position to be a strong partner for our clients and a stable

investment for our shareholders. With our broadly diversified portfolio of investments, we are well equipped for all market scenarios – even extreme ones – that could realistically arise.

### Implementation of strategy and the risk management cycle

The risk appetite defined by the Board of Management is reflected in our business planning and integrated into the management of our operations. If capacity shortages or conflicts with our system of limits and rules arise, defined escalation and decision-making processes must be followed. These have been designed to ensure that the interests of the business are reconciled with risk management considerations. If necessary, risks are ceded or hedged by means of reinsurance, derivatives or other forms of risk relief.

Our implementation of risk management at operational level embraces the identification, measurement, analysis and assessment of risks, which provide a basis for risk reporting, limits and monitoring. Risk identification is performed by means of appropriate processes and indicators, which are complemented by expert opinions and assessments by selected, highly experienced managers. Our ad-hoc reporting process provides for staff to report risks to the central risk management function (IRM) at any time.

We are constantly refining our risk measurement tools, which are tailored to each field of business. Our internal model is based on economic principles. We regularly compare the results produced by our risk model with those of supervisory authorities, rating agencies and commercial modelling companies at, for example, Group, field-of-business or legal entity level, or by risk type. We also regularly perform benchmarkings of our risk-model results and participate in industry surveys to constantly challenge and refine our risk measurement tools.

Risk analysis and assessment are carried out at the highest level in IRM in the form of a consolidated Group view. They are based on the analyses prepared by the fields of business. Besides this, IRM is responsible for checking and validating the analyses of upstream units, working closely with numerous areas and specialists to this end. This provides us with a quantitative and qualitative assessment that considers possible interactions between risks.

Our financial strength is an important criterion for the success of our business. In addition to our internal requirements, our objective is the second-highest rating for financial strength from each of the main agencies that rate us. Achievement of this objective is a supplementary parameter of our corporate management and is monitored at regular intervals. We currently assume that our financial strength, our good competitive position and our sophisticated risk management will continue to be recognised through correspondingly high ratings.

→  
We explain the results produced  
by our internal risk model  
on [page 126 ff.](#)

We compare our internal risk model with the Solvency II standard formula and take part in stress tests (e.g. the European Insurance Stress Test).

Risk limits are derived from the risk strategy. Taking the defined risk appetite as a basis, limits, rules and any risk-reducing measures required are approved and implemented. We also have a comprehensive early-warning system that draws our attention to any potential shortages of capacity. If a business unit identifies attractive business that exceeds its risk limits, the risk management departments responsible and IRM analyse its potential impact on the Group portfolio and the risk appetite of the Group as a whole. Taking these results and the expected earnings from the business into consideration, we devise a solution that enables us to take the risk onto our books if appropriate.

Quantitative risk monitoring based on indicators is carried out both centrally and within units, for example at MEAG for investments and at ERGO IRM, and then collated centrally. We monitor risks that cannot be expressed directly as an amount either centrally or in our units, depending on their materiality and allocation.

The risk management system is audited by Group Audit, which carries out audits of various functions in accordance with its audit plan.

### Control and monitoring systems

Our internal control system (ICS) is an integrated system for managing operational risks that covers all risk dimensions and areas of the Group. It meets Group management requirements, while complying with local regulations.

The risk and control assessments are performed at least annually by managers, specialists and staff in the relevant departments.

For each field of business, the ICS delivers a risk map at process level, thereby systematically linking every step in a process to the significant risks and the controls relating to them. By making our risk situation transparent in this way, we can focus on and react to weaknesses. This enables us to identify operational risks at an early stage, locate control shortcomings immediately and take effective remedial action.

Controls performed for the ICS at entity level are based on COSO (Committee of Sponsoring Organizations of the Treadway Commission), a recognised internal control standard in the finance industry. IT-level controls are based on COBIT (Control Objectives for Information and Related Technology), an internationally recognised framework for IT governance.

However, notwithstanding the careful design and diligent use of our ICS, which has now developed into a high-quality system, it cannot provide total certainty that all operational risks have been covered. We are nevertheless certain that the controls and documentation requirements in place justify the maximum possible confidence on the part of our stakeholders.

The Audit Committee of the Supervisory Board regularly calls for reports on the effectiveness of the ICS and changes to the risk and control landscape from the previous year. These describe the controls applied and state whether all controls considered necessary have been correctly performed. The reports of our external auditors and Group Audit support this.

The identification, management and control of risks arising out of the accounting process is indispensable for the production of reliable annual financial statements at both consolidated and individual-company level. It is essential for all items in the accounts to be shown correctly and valued appropriately, and for the information provided in the notes and the management report to be complete and correct.

#### Appropriate internal controls for accounting risks

Financial accounting and reporting are subject to carefully defined materiality thresholds to ensure that the cost of the internal controls performed is proportionate to the benefits derived. Significance, risk experience and compliance are taken into account in determining the thresholds. All risks significant for financial reporting from a Group perspective are integrated into the ICS in accordance with uniform criteria. The ICS risk map is checked annually by the risk carriers, and updated and amended as necessary.

An important feature of the accounting process is timely compliance with new legal requirements in our preparation of financial statements and our reporting. By means of an accounting manual and regular circulation of information on changes required, Munich Re ensures that uniform rules are applied throughout the Group for the treatment, valuation and disclosure of all items in the balance sheet, income statement and other components of the financial statements. Any amendments are subject to a prescribed procedure as regards timing, responsibilities and circulation of information.

The accounting process is to a large degree dependent on IT systems, which are subject to ongoing controls aimed at protecting against unauthorised access and guaranteeing the effectiveness and stability of the information and communication processes. A central IT solution drawing on general ledgers largely standardised throughout the Group is used to produce the consolidated financial statements. It is based on harmonised basic data, uniform processes and posting rules, and a standard interface for delivery of data to the Group or subgroup. Authorisation procedures regulate access to accounting systems. Group Audit regularly audits data management in the accounting systems to ensure that it is being performed in a proper and orderly manner.

## Risk reporting

Internal risk reporting provides the Board of Management with regular information on the risk situation in the individual risk categories and the Group as a whole. Early-warning mechanisms thus ensure that negative trends are identified in sufficient time for countermeasures to be taken. The Audit Committee of the Supervisory Board and the Federal Financial Supervisory Authority (BaFin) also receive the quarterly internal risk report.

The purpose of our external risk reporting is to provide clients and shareholders with a clear overview of the Group's risk situation. This includes information on our risk management methods and processes, our risk governance, and the individual risks to which Munich Re is exposed.

## Significant risks

Our general definition of risk is possible future developments or events that could result in a negative deviation from the Group's prognoses or targets. According to our classification, significant risks are risks that could have a long-term adverse effect on Munich Re's assets, financial situation or profitability. We have applied this definition consistently to each business unit and legal entity, taking account of its individual risk-bearing capacity. There are significant risks in the following risk categories:

### Underwriting risk: Property-casualty

The property-casualty risk category encompasses the underwriting risks in the property, motor, third-party liability, personal accident, marine, aviation and space, and credit classes of insurance, together with special classes also allocated to property-casualty. Underwriting risk is defined as the risk of insured losses being higher than our expectations. The premium and reserve risks are significant components of the underwriting risk. The premium risk is the risk of future claims payments relating to insured losses that have not yet occurred being higher than expected. The reserve risk is the risk of technical provisions established to cover losses that have already been incurred being insufficient.

### Premium risk

Line management have primary responsibility for controlling the premium risk, taking account of both the specific exposures in their business and the knowledge and experience of their staff.

→  
Further information on property-casualty insurance can be found in the notes to the consolidated financial statements on page 274 ff.

In particularly critical areas, the underwriting authorities granted to the operating units are restricted by mandatory Group-wide instructions or limited budgets.

Due to the diversity and extensive ramifications of the business, it is not possible to produce a set of rules for acceptance that would fully cover relevant risks. The expertise of our underwriters on the ground is therefore of prime importance, particularly in reinsurance. We recognise this by providing advanced training and IT systems for risk assessment and pricing, publishing internal information sheets and underwriting recommendations, and setting up working groups to create and transmit underwriting knowledge.

#### Reserve risk

The estimation of reserves is subject to uncertainty due to the fact that the settlement of claims that have arisen before the balance sheet date is dependent on future events and developments. Unforeseen loss trends can arise for a variety of reasons, for example court rulings, changes in the law, differences in loss adjustment practice or medical and long-term care, or economic factors such as inflation. They can have a significant impact on run-off results.

We calculate the reserves for losses and claims settlement costs in accordance with actuarial practice based on substantiated assumptions, methods and assessments. The assumptions are regularly reviewed and updated. Application of Group-wide reserving rules guarantees that the process is reliable and consistent. In addition, internal audits are carried out Group-wide to verify compliance with these rules and the appropriateness of the reserves.

#### Underwriting risk: Life and health

The underwriting risk is defined as the risk of insured benefits payable in life or health insurance business being higher than expected. Of particular relevance are the biometric risks and the customer behaviour risks, for example lapses and lump-sum options. We differentiate between risks that have a short-term or long-term effect on our portfolio.

Random annual fluctuations in insurance benefits can lead to short-term falls in the value of the portfolio. This applies particularly to expenses, which can rise as a result of exceptional one-off events such as a pandemic.

Changes in customer biometrics or lapse behaviour are risks that have a long-term effect on the value of a portfolio, making it necessary to adjust the actuarial assumptions. In health insurance, morbidity risks and risks linked to changes in the cost of treatment are understandably important, whereas mortality, longevity and disability risks are the most significant in life insurance. Limits are laid down for the short-term pandemic scenarios and the longer-term longevity scenarios in conformity with the risk strategy.

The information provided on underwriting guidelines and limits for property-casualty insurance also applies to life and health reinsurance. Regular reviews of the actuarial assumptions by actuaries and amendment of rating rules where necessary generally ensure that risks are effectively controlled. If there is a lasting change in the actuarial assumptions applied in health primary insurance, it is generally possible to adjust the premiums for long-term contracts.

Further information on risks in life and health insurance can be found in the notes to the consolidated financial statements on [page 268 ff.](#)

### Market risk

We define market risk as the risk of economic losses resulting from price changes in the capital markets. This includes equity risk, general and specific interest-rate risk, property risk and currency risk. The general interest-rate risk relates to changes in the risk-free yield curves, whereas the specific interest-rate risk arises out of changes in credit risk spreads, for example on government bonds or credit default swaps (CDSs). We also include in market risk the risk of changes in inflation rates and implicit volatilities (cost of options). Fluctuations in market prices affect not only our investments but also our underwriting liabilities, especially in life insurance. Due to the long-term interest-rate guarantees given in some cases and the variety of options granted to policyholders in traditional life insurance, the amount of the liabilities can be highly dependent on conditions in the capital markets.

→ Information on derivative financial instruments can be found on page 218 ff.

→ Sensitivity analyses of the market-price risks associated with financial instruments can be found on page 280 f.

We use appropriate limit and early-warning systems in our asset-liability management to manage market risks. By means of stress tests and sensitivity and duration analyses, we simulate market fluctuations and devise strategies for counteracting them where necessary. Derivatives such as equity futures, options and interest-rate swaps, which are used in particular for the hedging of exposures, also play an important role in our management of the risks.

Our investments must comply with Group-wide minimum standards as defined in our General Investment Guidelines. We also take account of risk restrictions on investments resulting from our risk strategy.

### Credit risk

We define credit risk as the financial loss that Munich Re could incur as a result of a change in the financial situation of a counterparty, such as an issuer of securities or other debtor with liabilities to our Group.

In addition to credit risks arising out of investments in securities and payment transactions with clients, we actively assume credit risk through the writing of insurance and reinsurance business, for example in credit and financial reinsurance.

We use a cross-balance-sheet counterparty limit system valid throughout the Group to monitor and control our Group-wide credit risks. The limits for each counterparty (a group of companies or country) are based on its financial situation as determined by the results of our fundamental analyses, ratings and market data, and the risk appetite defined by the Board of Management. The utilisation of limits is calculated on the basis of credit-equivalent exposure (CEE). There are also volume limits for securities lending and repurchase transactions. Investments in asset-backed securities (ABSs) are also controlled through volume limits separate from the counterparty limit system. Group-wide rules for collateral management, for example for OTC derivatives and catastrophe bonds issued, enable the associated credit risk to be reduced. Exposure to issuers of interest-bearing securities and CDSs in the financial sector is additionally limited by a financial sector limit at Group level.

We also make use of credit derivatives, especially CDSs, in our management of credit risks.

In order to take account of country risks other than the credit risk on government bonds, our advisory unit for strategic and economic issues, Group Development, also produces specific country scores in addition to the pure default ratings. The scores cover the significant political and economic risks and those relating to a country's internal security, and reflect its sustainability performance. They enable us to comprehensively assess additional country risks of varying importance for different fields of business.

In the area of retrocession and external reinsurance related to primary insurance activities in reinsurance and at ERGO and Munich Health, we manage the default risk through the Retro Security Committee. The experts on the committee review the quality of our main retrocessionaires and reinsurance counterparties independently and on the basis of various criteria (e.g. minimum ratings, market data and capital requirements) and allocate appropriate limits for the counterparties based on underwriting guidelines laid down by the risk management function.

### Operational risk

We define operational risk as the risk of losses resulting from inadequate or failed internal processes, incidents caused by the actions of personnel or system malfunctions, or external events. This includes criminal acts committed by employees or third parties, insider trading, infringements of antitrust law, business interruptions, inaccurate processing of transactions, non-compliance with reporting obligations, and disagreements with business partners.

Operational risks are managed via our internal control system, complemented by the results of scenario analyses. In addition, our Security and Continuity Risk Management Framework (SCRM) defines the rules for a standard Group-wide procedure for, in particular, identifying, assessing and managing security risks for people, information and property. Our aim is to protect our employees, ensure the confidentiality, integrity and availability of information, and guarantee the smooth operation of our businesses. To this end, we have put in place an all-embracing business continuity management system, which is an integral component of our business strategy. It includes contingency and recovery plans to ensure that processes and IT operations continue to function. The system is in place at all of the Group's locations and is subjected to regular tests.

### Liquidity risk

We manage liquidity risk through our holistic risk strategy, with the Board of Management defining limits on which minimum liquidity requirements for our operations are based. These risk limits are reviewed annually and compliance with the minimum requirements is continuously monitored.

The management of liquidity risk includes taking account of

- known and expected payment obligations through regular, detailed liquidity planning at individual-entity level, and a central cash-flow reporting system;
- margin calls and collateral requirements for derivative positions;
- unexpectedly high payments resulting, for example, from accumulation losses that far exceed normal loss expectations.

Our objective in managing liquidity risk is to ensure that we are in a position to meet our payment obligations at all times. We also optimise the availability of liquidity in the Group by means of internal funding. Through stringent requirements regarding the availability of liquidity, which also comply with supervisory rules, we ensure that every unit is able to meet its payment obligations.

Information on our ICS can be found on [page 120 f.](#)

### Strategic risk

We define strategic risk as the risk of making wrong business decisions, implementing decisions poorly, or being unable to adapt to changes in the operating environment. The existing and new potential for success in the Group and the fields of business in which it operates creates strategic risks, which we manage by discussing significant strategic issues and decisions in our Strategy Committee and regularly monitoring the implementation of the decisions taken. The Strategy Committee comprises the members of the Group Committee, the Chief Executive Officers (CEOs) of the fields of business and the Head of Group Development. IRM is additionally involved in the operational business planning and in the processes for mergers and acquisitions.

### Reputational risk

Reputational risk is the risk of a loss resulting from damage to the Group's public image (for example with clients, shareholders or other parties).

The action we take to monitor and limit reputational risk ranges from the general identification and recording of risks for the ICS to establishment of whistleblower procedures.

Actual reputation issues arising out of specific incidents are evaluated in the fields of business either by their own Reputational Risk Committee (RRC) or through a comparable procedure in which the opinions of experts are obtained. A legal entity's Compliance Officer can always be consulted on any matter relating to the assessment of reputational risks.

There is also a Group Compliance Committee, which deals with compliance and reputational issues and risks at Group level, with a view to standardising the way they are handled throughout the Group. The Committee considers mainly reputational risks that have actually arisen in the business units. We have also set up the Group Corporate Responsibility Committee, which concerns itself with identifying and undertaking a general analysis of sensitive issues and defining our position on them. The assessments it makes are used as a basis for strategic decisions taken by units in the Group.

## Economic risk capital

### Overview of the risk situation

We use our risk management to assess our risk situation on the basis of qualitative and quantitative factors. Throughout the entire period under review, the risk situation was manageable and under control. Our tried and tested, modern risk management processes combined with our solid level of capitalisation at all times ensure the solvency and viability of the Group expected by our clients and shareholders. In addition to the underwriting and capital market risks inherent in our business model, there are inevitably a large number of other risks to which Munich Re – like every other undertaking – is exposed. The incidence of these risks is random and their occurrence probability and impact are generally difficult to estimate. We therefore closely monitor our business and the environment we operate in to identify even these risks in good time and to take suitable measures to avert loss or damage.

### Internal risk model

We manage our business on the basis of a consolidated Group view, using an internal risk model to determine the capital needed to ensure that the Group is able to meet its commitments even after extreme loss events.

Our risk model indicates the profit and loss distribution of the available financial resources over a one-year time horizon. It is based on specially modelled distributions for the risk categories property-casualty, life and health, market, credit and operational risks.

Every risk category in reinsurance and at ERGO is shown. In the Munich Health field of business, the life and health risk categories and operational risks are shown, but not market and credit risk, which we cover through our internal risk control in reinsurance.

### Key figure – economic risk capital

A key figure calculated using the internal model is our economic risk capital (ERC). By economic risk capital, we mean the amount of capital that Munich Re needs to have available, with a given risk appetite, to cover unexpected losses in the following year. To determine Munich Re's economic risk capital, we use the economic profit and loss distribution across all fields of business. The economic risk capital corresponds to 1.75 times the value at risk of this distribution over a one-year time horizon with a confidence level of 99.5%. The value at risk with a confidence level of 99.5% equates to the economic loss for Munich Re which, given unchanged exposures, will be statistically exceeded in no more than one year in every 200. It represents the future risk tolerance under Solvency II. Our Group's approach of setting its capital requirement at 1.75 times this risk tolerance figure is thus conservative and provides its clients with a high degree of security.

We use primarily historical data for the calibration of our internal risk model, complemented in some areas by expert estimates. Our historical data cover a long period to take account of our one-year time horizon and to provide a stable and appropriate estimate of our risk parameters. We also show the diversification effects we achieve through our broad spread across the different risk categories (underwriting, market, credit and operational risks) and our combination of primary insurance and reinsurance business. At the same time, we recognise through tail dependencies that the various risks are not independent of each other. This gives rise to a smaller diversification effect than if independence is assumed.

The distribution of economic losses between the individual legal entities in Munich Re may vary, but the ability of one unit to support another financially in the event of a loss is in some cases subject to legal constraints. In determining Munich Re's capital requirements, restrictions of capital fungibility resulting from legal or regulatory requirements are therefore taken into account.

#### Economic risk capital (ERC)

The table shows Munich Re's economic risk capital and risk categories as at 31 December 2014. The economic risk capital was €3.2bn up on the previous year. The following factors contributed to the increase:

- The main reason for the rise of €1.0bn in the economic risk capital for the property-casualty category was currency translation effects, which affected both the basic loss risk and the large and accumulation loss risk. The depreciation of the euro against most of the main currencies resulted in an increase in the risk capital expressed in euros.
- The rise of €3.2bn in the economic risk capital for the life and health category was due primarily to currency effects as for the property-casualty category and to lower interest rates worldwide. The latter notably caused a significant rise in the economic risk capital for German life primary insurance, mainly due to the higher value of options and guarantees.
- The economic risk capital for market risks rose by €0.9bn. In the reinsurance field of business, the increase resulted from the globally lower interest rates and the depreciation of the euro. The risk capital decreased in the ERGO field of business, where the lower interest rates led to improved diversification between life and health insurance business.

- The economic risk capital for credit risks increased by €0.4bn, due mainly to the lower interest rates in the eurozone and the resultant rise in market values and durations. In the reinsurance field of business, the rise was more pronounced due to the depreciation of the euro against the main currencies, but reduced in the ERGO field of business by the more refined depiction of the risk-mitigating effect of profit sharing.
- The rise of €0.3bn in the economic risk capital for operational risks resulted from the dependencies between the scenarios underlying the modelling being taken into account for the first time.
- The diversification effect between the risk categories property-casualty, life and health, market, credit and operational risk increased by €2.6bn and stood at 32.6%. The main reasons for this were both the increase of €5.8bn to €39.9bn in the sum of the economic risk capital requirements for the individual risk categories, which led to a rise in the absolute amount of the diversification, and an improvement in the relative diversification effect between the risk categories as a result of their becoming closer in size.

### Property-casualty

Losses with a potential cost exceeding €10m within a field of business are classified as large losses. Accumulation losses are losses affecting more than one risk (or more than one line of business). We classify all other losses as basic losses. For basic losses, we calculate the risk of subsequent reserving being required for existing risks within a year (reserve risk) and the risk of under-rating (premium risk). To achieve this, we use explicit analytical methods (in our reinsurance field of business) and simulation-based approaches (in our ERGO field of business) that are based on standard reserving procedures, but take into account the one-year time horizon. The calibration for these methodologies is based on our own historical loss and run-off data. Appropriate homogeneous segments of our property-casualty portfolio are used for the calculation of the reserve and premium risks. To aggregate the risk to whole-portfolio level, we apply correlations that take account of our own historical loss experience.

We manage our risk exposure actively. This includes restricting our exposure, for example by setting limits and budgets for natural catastrophe risks, with our experts developing scenarios for possible natural events taking into account the scientific factors, occurrence probabilities and potential loss amounts. On the basis of these models, the impact of various events on our portfolio is calculated and represented in mathematical terms in the form of a stochastic model. These models form the basis for the ERC calculation for the “large and accumulation losses” category. Apart from natural hazard scenarios, this includes man-made losses, and the limits and budgets for accumulation losses. Our internal risk model treats the accumulation-risk scenarios as independent events.

The up-to-date exposure figures for each scenario are used for the quarterly ERC calculations, and the data are used to adjust the stochastic models for the natural hazards. The current limit utilisation is determined by a bottom-up process. As ERGO's portfolio is more stable, its exposure is only updated annually.

The underwriting risk capital for property-casualty is made up as follows:

Economic risk capital (ERC) – Property-casualty

|                               | Reinsurance |             | ERGO       |            | Segment diversification |             |
|-------------------------------|-------------|-------------|------------|------------|-------------------------|-------------|
|                               | 31.12.2014  | Prev. year  | 31.12.2014 | Prev. year | 31.12.2014              | Prev. year  |

| Diversification effect        | -4.6        | -4.3        | -0.3       | 7.0         |
| <b>Total</b>                  | <b>10.0</b> | <b>9.0</b>  | <b>1.0</b> | <b>11.1</b> |

Compared to the previous year, the economic risk capital requirement for basic losses increased as a result of the depreciation of the euro against most of the main currencies and the lower interest rates.

The economic risk capital for large and accumulation losses was also higher. This was due mainly to the appreciation of the US dollar against the euro, which led to an increase in the risk in euro terms for some major natural hazard scenarios. In addition, external reinsurance cover was reduced slightly. As in 2013, the largest natural catastrophe exposure for Munich Re is the €3.4bn currently retained for the "Atlantic Hurricane" scenario (value at risk for a 200-year return period). The second-largest scenario is "Storm Europe" with a retention of €2.3bn, followed by the "Los Angeles earthquake" scenario with a retention of €1.9bn.

The diagrams show our estimated exposure to the peak scenarios for a return period of 200 years.

**Atlantic Hurricane**

Aggregate VaR (return period: 200 years)  
€bn (before tax), retained

|      |     |
|------|-----|
| 2014 | 3.4 |
| 2013 | 2.9 |

**Storm Europe**

Aggregate VaR (return period: 200 years)  
€bn (before tax), retained

|      |     |
|------|-----|
| 2014 | 2.3 |
| 2013 | 2.0 |

**Earthquake Los Angeles**

Aggregate VaR (return period: 200 years)  
€bn (before tax), retained

|      |     |
|------|-----|
| 2014 | 1.9 |
| 2013 | 1.6 |

As a risk carrier operating worldwide, we can achieve a broad mix and spread of individual risks, which enables us to reduce the volatility of total insurance payments considerably and significantly increase value creation in all areas of our business.

#### Life and health

In life and health business, the risk modelling takes account of both short- and long-term developments in risk drivers that influence the value of our business.

In addition to the simple risk of random fluctuations resulting in higher claims expenditure in a particular year, the adverse developments with a short-term impact that we model notably include the risk of above-average claims that could arise on the occurrence of rare but costly events such as pandemics.

Life primary insurance products in particular, and a large part of our health primary insurance business, are long-term in nature, and the results they produce are spread over the entire duration of the policies. The adverse development of risk drivers with a long-term impact, such as changes in the forecast mortality and disablement trends, can cause the value of the insured portfolio to fall (trend risks). The risk modelling attributes probabilities to each modified assumption and produces a complete profit and loss distribution. We use primarily historical data extracted from the underlying portfolios to calibrate these probabilities and additionally apply general mortality rates for the population to model the mortality risk.

To enable us to define appropriate parameters for the modelling of the range of areas in which we operate, portfolios with a homogeneous risk structure are grouped together. We then aggregate the individual profit and loss distributions taking account of the dependency structure to obtain an overall distribution, ensuring in particular that we do not underestimate the effect of large losses that would affect various parts of the portfolio simultaneously, as would be the case for a pandemic, for example.

#### Market risks

Market risks are established using a scenario-based simulation calculation. The calibration of the scenarios, which depict the possible future values and dependencies of the financial instruments concerned, is based on historical weekly capital-market data (going back to 1999).

Economic risk capital (ERC) – Market

|                             | Reinsurance |             | ERGO        |             | Segment diversification |             |

Equity risk

The market value of our investments in equities, including participating interests, was €12.4bn (10.1bn) as at 31 December 2014. As at that date, on a market-value basis the ratio of equities to total investments was 5.2% (4.8%) before taking derivatives into account and 4.3% (4.6%) after derivatives. The main reason for the risk capital required for equities being lower than for the previous year was the increased use of equity options for hedging purposes.

Interest-rate risks

As a result of the significantly lower interest rates, the market values of Munich Re's interest-bearing securities and its sensitivity to movements in interest rates were higher than for the previous year.

In the reinsurance field of business, the market value of interest-sensitive investments as at 31 December 2014 was €72.3bn (64.0bn). Measured in terms of modified duration, the interest-rate sensitivity of those investments was 5.6 (4.4), while that of the liabilities was 4.6 (3.1). The change in the freely available financial resources in the event of a decrease in interest rates of one basis point would have been approximately €0.4m (4.1m),

In the ERGO field of business, the market value of interest-sensitive investments as at 31 December 2014 was €135.2bn (120.4bn). The modified duration was 8.3 (7.4) for interest-sensitive investments and 9.2 (8.1) for liabilities. Overall, we continue to have an exposure to falls in interest rates as a result of the long-term options and guarantees given in the life insurance business written. A decrease in interest rates of one basis point would have reduced the freely available financial resources by approximately €16.8m (10.3m).

The reason for the increase in the general interest-rate risk in the reinsurance field of business was the higher sensitivity to changes in the yield curve caused by the lower interest rates and the depreciation in the euro. In the ERGO field of business, the increase in risk resulting from lower interest rates was more than offset by the improved diversification between life and health insurance business, so that the general interest-rate risk decreased.

The reasons for the rise in the specific interest-rate risk in the Group were, in addition to the fall in interest rates, the increase in spread exposure and the more refined spread modelling.

#### Currency risk

Our underwriting liabilities are essentially covered in the currencies in which they are denominated. The currency risk was higher than in the previous year, partially as a result of the appreciation of the US dollar against the euro.

#### Credit risks

Munich Re determines credit risks using a portfolio model, which takes into account both changes in market value caused by rating migrations and debtor default. The model is calibrated over a credit cycle. The credit risk arising out of investments (including deposits retained on assumed reinsurance and CDSs) and the reinsurers' shares in technical provisions is calculated by individual debtor. We use historical capital-market data to determine the associated migration and default probabilities. Correlation effects between debtors are derived from the sectors and countries in which they operate, and sector and country correlations are based on the interdependencies between the relevant stock indices. We use our own historical company loss experience to calibrate the credit risk arising out of receivables. For life and health primary insurance business, we also take account of the share of the mitigating effect on the credit risk resulting from policyholders' participation in profits.

→  
Information on the ratings of the securities can be found in the notes to the consolidated financial statements on page 216 ff.

The market value of our investments in fixed-interest securities and loans as at 31 December 2014 was €199.7bn (176.6bn), representing 84.7% (83.9%) of the total market value of Munich Re's investments. These securities thus made up the bulk of our portfolio.

In our internal risk model, we calculate and allocate risk capital even for highly rated government bonds.

Our reserves ceded to reinsurers were assignable to the following rating categories as at 31 December 2014:

#### Ceded share of technical provisions according to rating

| %                   | 31.12.2014 | Prev. year |
|---------------------|------------|------------|
| AAA                 | 4.6        | 4.8        |
| AA                  | 50.0       | 50.3       |
| A                   | 40.8       | 36.9       |
| BBB and lower       | 0.9        | 4.7        |
| No rating available | 3.7        | 3.3        |

The shifts are mainly due to changes in the ratings of a small number of reinsurers.

#### Operational risks

We use scenario analyses to quantify operational risks. The analyses are produced or updated annually by experienced staff from the fields of business and affected companies. The results are fed into the modelling of the economic risk capital for operational risks and are validated using various sources of information, such as the ICS and internal and external loss data.

## Available financial resources

We compare the available financial resources with the economic risk capital requirement. The available financial resources are based on economic valuations. Investments are essentially valued using market prices where available or justifiable parameters. The valuation of underwriting liabilities is based on a yield curve used to determine and discount future cash flows. The available financial resources are calculated as the sum of the economic equity and the available hybrid capital. The economic equity is based essentially on the IFRS equity with various appropriate economic adjustments.

The unrealised gains and losses not accounted for in the financial statements include economic adjustments to items in property-casualty and Munich Health that have not been measured at market value. They relate primarily to land and buildings, and to loans. We perform various valuation adjustments for property-casualty and life and health, using pure swap curves, which incorporate neither the permitted nor the required credit-risk, volatility and matching adjustments, to discount and project cash flows. Neither is the extrapolation of the yield curve to the long-term target interest rate (the ultimate forward rate – UFR) taken into account. Overall, we assume that the adjustments to the curve currently used required for Solvency II will result in a rise in the available financial resources.

In property-casualty and Munich Health, we use actuarial methods to project future claims payments, discounting estimated cash flows and adding a risk margin derived in accordance with strict economic principles.

A detailed presentation regarding MCEV is available on Munich Re's website at [www.munichre.com/embeddedvalue-en](http://www.munichre.com/embeddedvalue-en)

In the case of our life and health business for which we show a Market Consistent Embedded Value (MCEV), we regard the embedded value as capital available to cushion risks, and hence adjust the portion not already included in IFRS equity. The MCEV also includes a risk margin determined in accordance with economic principles. To determine it, we calculate a risk-capital figure based on our internal economic risk capital model for non-hedgeable risks.

Capitalised goodwill and other intangible assets on the other hand are included in the Group's IFRS equity, but we deduct them when calculating economic equity, as they might not retain their value in crisis situations. We treat deferred tax assets recognised for loss carry-forwards under IFRS in the same way if they are not covered by an excess of deferred tax liabilities over deferred tax assets at the company concerned or in the US tax group.

### Available financial resources

| €bn                                                                      | 31.12.2014  | Prev. year  | Change     |
|--------------------------------------------------------------------------|-------------|-------------|------------|
| IFRS equity                                                              | 30.3        | 26.2        | 4.1        |
| Off-balance-sheet unrealised gains and losses                            | 1.5         | 1.3         | 0.2        |
| Value adjustments for property-casualty and life and health <sup>1</sup> | 4.8         | 9.1         | -4.3       |
| Goodwill and other intangible assets                                     | -3.6        | -4.0        | 0.4        |
| Tax effects and other                                                    | -0.1        | -0.2        | 0.1        |
| <b>Economic equity</b>                                                   | <b>32.9</b> | <b>32.4</b> | <b>0.5</b> |
| Hybrid capital                                                           | 5.9         | 5.8         | 0.1        |
| <b>Available financial resources<sup>2</sup></b>                         | <b>38.8</b> | <b>38.2</b> | <b>0.6</b> |

<sup>1</sup> The value adjustments are mainly due to a decline in MCEV amounts in life and health insurance owing to lower interest rates.

<sup>2</sup> The capital measures included in the available financial resources amount to €2.6bn (these mainly concern the dividend payment and share buy-backs).

Hybrid capital comprises subordinated liabilities and the funds financing new business of German life primary insurance companies. Attributable neither to shareholders nor to policyholders, they are available for the preliminary financing of new business by business in force.

The economic capital buffer is the amount by which the available financial resources exceed the economic risk capital. The economic solvency ratio is the ratio of the available financial resources (less announced, but not yet completed, capital measures such as the dividend payment for the year just ended) to the economic risk capital. The following table shows the changes in the figures:

#### Economic solvency ratio components

|                                                                               |     | 31.12.2014 | Prev. year | Change |
|-------------------------------------------------------------------------------|-----|------------|------------|--------|
| (A) Economic equity                                                           | €bn | 32.9       | 32.4       | 0.5    |
| (B) Available financial resources                                             | €bn | 38.8       | 38.2       | 0.6    |
| (C) Available financial resources after announced dividend and share buy-back | €bn | 37.2       | 36.2       | 1.0    |
| (D) Economic risk capital (ERC)                                               | €bn | 26.9       | 23.7       | 3.2    |
| (B) minus (D): Economic capital buffer                                        | €bn | 11.9       | 14.5       | -2.6   |
| (C) divided by (D): Economic solvency ratio                                   | %   | 138        | 153        |        |

→ We report on our regulatory solvency requirement on [page 106 f.](#)

The economic solvency ratio of 138% (153%) was down by 15 percentage points on the previous year, but continues to emphasise Munich Re's financial strength. Munich Re's economic risk capital, which produces the solvency ratio described above, corresponds to 1.75 times the capital that is likely to be necessary under Solvency II according to our internal risk model. Were we not to apply the safety cushion of 75% to the value at risk with a confidence level of 99.5% and merely comply with the Solvency II standard, the economic solvency ratio would be 242% (267%).

→ A definition of RORAC is provided on [page 40](#)

The "additional available economic equity" is also relevant for the calculation of RORAC: it is the difference between the economic equity and the economic risk capital, and amounted to €6.0bn (8.7bn) as at 31 December 2014.

### Selected risk complexes

#### Overarching accumulation risks

##### Global and regional economic and financial crises

Munich Re has substantial investments in the eurozone. We attach importance to maintaining a correspondingly broad diversification of investments to cover our technical provisions and liabilities in euros. We use government bonds to match our underwriting liabilities in terms of currency and duration, especially for life and health primary insurance. Growth in the eurozone stabilised in 2014, but economic uncertainty increased, further stoked for the future by the ECB's expansionary monetary policy. The spreads on government bonds of peripheral eurozone countries as compared to German Bunds have decreased further, though not in the case of Greek government bonds where there are still considerable political risks that could affect the eurozone.

The fundamental state of public finances remains critical in many countries. It is particularly difficult for national governments to reconcile the need for further budget consolidation with weak growth and high unemployment.

The low-interest-rate environment continues to present life insurance companies in the eurozone in particular with major challenges. The fluctuations in the capital markets gave rise to considerable volatility in our investments and liabilities at the valuation dates. We counter these risks with various risk management measures.

In monitoring the country risks, we do not simply rely on the usual ratings, but perform independent analyses of the political, economic and fiscal situation in key countries in which investments might potentially be made. Our experts also evaluate and draw conclusions from the movements in the market prices of the bonds or derivatives issued by the country concerned. On this basis, and taking account of the investment requirements of the fields of business in the respective currency areas and countries, proposals for limits or action to be taken are submitted to the Group Investment Committee. These limits are mandatory throughout the Group for investments and the insurance of political risks, and any exceptions must be approved by the Group Committee.

On the basis of defined stress scenarios relating to further developments in the eurozone sovereign debt crisis, our experts forecast potential consequences for the financial markets, the market values of our investments, and the present values of our underwriting liabilities. At Group level, we counter any negative effects with the high degree of diversification in both our investments and our liability structure, and with our active Group-wide asset-liability management.

In addition to the eurozone sovereign debt crisis, international crises such as that in Ukraine continue to create uncertainty, and any consequences will primarily affect our investments. To ensure that we initiate appropriate action to counter such risks as effectively as possible, the macroeconomic evaluations, the capital-market assessments, risk management and the investment process are closely coordinated.

### Pandemic

Another example of an overarching accumulation is a serious pandemic, which would expose Munich Re – like other companies in the insurance industry – to risks resulting from a marked increase in mortality and morbidity and from disruptions in the capital markets. We counter this risk by analysing our overall exposure in detail (scenario analysis) and defining appropriate measures to manage the risks.

### Climate change

Climate change represents one of the greatest long-term risks of change for the insurance industry. In our Corporate Climate Centre, we analyse and assess this risk and are developing and coordinating a holistic strategic approach. The findings are made available to all business areas, and to Corporate Underwriting and Integrated Risk Management.

We rapidly put new findings in climate research into practice

Whilst we are in a position to assess the known risks in our portfolio adequately on the basis of current climate research, scientific research into climate change is complex. The political and regulatory environment in which we operate is developing fast and we must remain vigilant with regard to the identification and evaluation of new and changing risks. We adopt a multidisciplinary approach, using and combining the

pertinent experience and expertise of our scientists, specialist underwriters, lawyers, economists and actuaries as appropriate for the risk situation. If new findings in climate research or actual claims trends necessitate adjustments in risk assessment, we are able to make these changes promptly because most of our natural-hazard covers are contracted for only one year.

### New and complex risks

Our early identification of risks also covers emerging risks, i.e. those that change or arise as a result of legislative, socio-political, scientific or technological changes, and that may have unmeasured or unknown effects on our portfolio. The degree of uncertainty as to the extent of damage and probability of occurrence is by its nature very high for these risks.

We identify trends and faint signals in many ways, including systematic trend research, using Munich Re's knowledge management. Regular structured discussions are held in our emerging-risks think tank and our global emerging-risk community, a group of experts who investigate the possible impact of emerging risks on Munich Re. They look at interconnections and interdependencies between different risks and further consequences linked directly – or indirectly – to emerging risks. Cooperation with external partners, such as the CRO Forum's Emerging Risks Initiative, complements our internal early-warning system.

One example of an emerging risk is cyber risk. The growing use of information technology in society and the economy is having serious repercussions. The rapid progress is changing our working life and social behaviour, and creating new conditions for industry, trade, transport, energy and raw materials. Healthcare systems, international economic and political relations and military systems are likewise changing constantly as a result of the rapid advances in IT. In our management of emerging risks, we monitor these developments very closely, at the same time both devising appropriate risk management methodologies and creating new business opportunities.

Risks arising out of environmental, social and governance issues are also systematically captured

We also systematically capture risks potentially arising out of environmental, social-responsibility and governance (ESG) issues. The Group Corporate Responsibility Committee identifies and prioritises especially sensitive issues, and commissions an analysis involving all relevant experts in the Group.

Our Group-wide network of coordinators ensures that there is an exchange of expertise and experiences in all parts of the Group – an exchange that also extends beyond the individual companies to others in the insurance industry via the Principles for Sustainable Insurance Initiative and the CRO Forum's Working Group on Sustainability.

As a consequence of increasing global dependencies and the rapid spread of technological innovations, events that test the limits of traditional scenario-based risk management are occurring frequently. Both the occurrence of an event and its potential consequences are increasingly difficult to foresee – past examples of this are the earthquake in Japan and the floods in Thailand in 2011. Not only did both natural catastrophes have a devastating impact on the population, infrastructure and economy in the affected regions, but they also hit worldwide supply chains, with industrial production being interrupted in far-away countries. Such chains of events will take on greater importance in future. We therefore adopt a system-based approach to analyse dependencies in complex risks, for which we have developed our Complex Accumulation Risk Explorer software (CARE). Using this method, risks and their interaction can be made more transparent

and at least partially quantified. With CARE, we can improve the identification and structuring of complex accumulation risks for our own risk management and provide support for our clients, which also enables us to meet the rising demand for reinsurance of these types of risk.

## Legal, supervisory, balance sheet and tax risks

### Legal risks

#### Legal disputes

In December 2009, Munich Re's Spain and Portugal branch lodged an appeal against the Spanish antitrust authority (Comisión Nacional de la Competencia – CNC) in respect of an administrative order imposing a fine of €15.9m for alleged collusion restricting competition. The appeal was upheld. The CNC then appealed against the court's judgment within the prescribed period. We now expect to see a decision in May 2015.

After the federal legislative procedure for the US Fairness in Asbestos Injury Resolution Act founded in February 2006, several US states adopted legislation initiatives (tort reform), which in our view may have a positive effect on the settling of asbestos claims. Following revelations about often questionable asbestos-related disease diagnoses and the resulting litigation, a number of investigation committees are looking into these issues. Similar questionable practices have come to light in silicosis litigation. These developments indicate that malicious liability claims are being contested in US legal circles with increasing resolve. However, it is too early to say whether and to what extent this will have favourable implications for future losses in the insurance industry, particularly as plaintiff attorneys are trying hard to repel the tort reform initiatives. We are currently still being affected by late-reported claims – in some cases for high amounts – for asbestos-related diseases and similar liability complexes. Although the total number of asbestos claims is declining, the number of severe cases of mesothelioma and other types of cancer has remained relatively constant in recent years.

Former minority shareholders of ERGO Versicherungsgruppe AG are seeking to gain increased squeeze-out cash compensation by way of shareholder compensation complaint proceedings. The material risk is limited by the number of shares eligible for compensation (approx. 237,000) and the upper end of the scale within which the corporate value of ERGO Versicherungsgruppe AG as at the date of valuation can be set.

The legal actions contesting and seeking annulment of resolutions adopted at the 2012 and 2013 Annual General Meetings of Munich Reinsurance Company ended in our favour following dismissal of the complaints and rejection of the plaintiffs' appeals during the year under review.

A number of cases are pending before courts against various companies in the Ideenkapital Group, which developed closed-end funds that it marketed in particular to private investors via banks. Its portfolio includes media, property, life insurance and shipping funds. The claimants are fund investors, who for the most part are filing claims in respect of defects in prospectuses and products. The possibility of other claims being filed and the resultant reputational risks cannot be excluded.

#### Risk of legal changes

On 19 December 2013, the Court of Justice of the European Union (CJEU) had ruled that the limitation period for the "policy model" for life insurance within the meaning of Section 5a (2) sentence 4 of the German Insurance Contract Act (VVG) (old version) contravened European law. On 7 May 2014, the German Federal Court of Justice confirmed the judgment, according to which customers may still have a right to

withdraw from an insurance contract more than a year after it has been concluded if they have not received proper instruction on that right. The same applies if they have not received the insurance terms and conditions or pertinent consumer information. Affected are life insurance policies using the “policy model” issued between 1995 and 2007. By judgment dated 17 December 2014, the Federal Court of Justice extended its ruling to cover contracts based on the “proposal model”, so that customers now have a right of withdrawal more than one month after payment of the first premium if they have not received proper instruction on that right. Affected are life insurance policies based on the proposal model or the invitation model issued from 29 July 1994 to 31 December 2007. The Federal Court of Justice has not reached a definitive decision on the legal consequences of the judgments dated 7 May 2014 and 17 December 2014. We await further rulings. The judgments cannot be applied to classes of business other than life insurance.

The ongoing discussions regarding the German healthcare system may result in further changes to the statutory parameters, notably the “citizens’ insurance scheme”. If, unlike now, all citizens were to be compulsorily included in the German public health insurance system, new business for private health insurers in comprehensive health insurance would dry up. We have been monitoring this risk for many years. Similar proposals have been put forward for citizens’ long-term care insurance.

### Supervisory risks

In the European Union, supervision for primary insurers and reinsurers is set to undergo profound changes with the Solvency II regulations. In particular, capital requirements will increase.

After many years of negotiation, the institutions involved in the EU legislation process (Council of the European Union, European Parliament, and European Commission) have agreed on standards which are scheduled to come into effect as at 1 January 2016 and will already impact supervisory practice before that date. The delegated acts were finalised in January 2015. The technical implementation standards are currently undergoing a public consultation phase and will be completed successively in the course of 2015. The European Insurance and Occupational Pensions Authority (EIOPA) has introduced a preparatory phase for 2014 and 2015, and published Preparatory Guidelines that include a stipulation for national supervisory authorities to bring forward the reporting requirements on selected areas. The German Federal Financial Supervisory Authority (BaFin) has substantiated the EIOPA Guidelines with further publications of its own. Implementing these will cause more extensive reporting requirements. With interest rates remaining low, the new capital requirements under Solvency II especially set a particular challenge for life insurance companies, and also for the Group. Low interest rates will mean much higher capital requirements at the level of insurance companies, whilst equity pertinent for regulatory solvency purposes will be reduced significantly. This may mean that in 2015 we will already have to provide support through intra-Group transactions or apply for statutory transitional relief for some individual units.

In the American Modern Insurance Group (American Modern), it was discovered that agents appointed by American Modern for its Financial Institutions Division had been quoting and charging some policyholders rates that were in some cases lower than, but in other cases higher than, the rates approved by the regulators. American Modern self-reported the rate deviations to the responsible regulators, and is currently in the process of completing a corrective action plan in consultation with the regulators.

→  
Information on the treatment of goodwill can be found in the notes to the consolidated financial statements on page 182, and the results of the impairment tests on page 202 ff.

### Balance sheet risks

Balance sheet risk is the risk of our annual results or our capital being adversely affected by unforeseen reductions in the value of our assets due to provisions or write-downs or increases in our liabilities. It arises primarily out of changes in capital-market parameters or an unforeseen need to adjust assumptions relating to insurance liabilities that could lead to reserves having to be strengthened. In addition, changes in the general macroeconomic environment may affect the cash flows achievable from assets. Assets include goodwill arising on first-time consolidation of subsidiaries, which is subjected to regular impairment tests. Changes in the assumptions on which we have based our calculations could result in decreases in asset values in the future.

### Tax risks

As a reaction to the financial markets and sovereign debt crisis, a trend towards increased corporate tax burdens is apparent across Europe. In Germany, discussion has focused on the introduction of a financial transactions tax and the restriction of tax privileges for investment funds. After the already implemented abolition of tax exemption for free-float dividends, it is not unlikely that in future there will be taxation of gains on disposals of free-float shareholdings. Which of these ideas will actually become reality is not yet clear. Additional annual tax burdens in the lower three-digit million euro range as a result of the plans under discussion cannot be ruled out.

## Regulatory developments

In February 2015, the German Bundestag passed a new Insurance Supervision Act (VAG) to translate the requirements of the Solvency II directive into national law. In addition to the Solvency II requirements, the new Act will retain many of the old rules, including in particular requirements added by the Life Insurance Reform Act in 2014 aimed at safeguarding the performance of life insurances in Germany and providing consumers with even better protection. Of particular note at European level in 2014 was the adoption of the revised financial markets directive (MiFID2) and the regulation on key information documents for investment products (PRIIPs Regulation). Consultations on the European Commission's proposals on a new version of the Insurance Mediation Directive (IMD2) continue. Controversy remains, especially on the issues of transparency of remuneration and prohibitions on commission. The Scandinavian countries, the Netherlands and the United Kingdom are all seeking to establish the predominance of their own national regulatory environment across the EU. However, the German government favours minimum harmonisation that leaves room for national distribution structures.

Work is still in progress at a global level on additional supervisory requirements for systemically important financial institutions (SIFIs). Systemic importance is determined not by the fundamental significance of a sector for the economy, but by the impact the insolvency of a company could have on global financial markets and the real economy. The insurance industry believes that the core business of primary insurers and reinsurers does not give rise to systemic risk. In fact, during the financial crisis insurers contributed towards increased stability. Nonetheless, the Financial Stability Board (FSB) has published a list of nine globally operating primary insurance companies that it classifies as systemically important – the “G-SIFIs” (global systemically important insurers). A review of the potential systemic importance of reinsurers has been repeatedly postponed by the FSB and is now expected to be undertaken in 2015. It is possible that the global debate will be followed by a national one. In addition, certain

legal consequences could have an indirect effect on companies that are not classified as systemically important. It is, for example, to be assumed that certain aspects of a recovery and resolution plan will ultimately be prescribed for all larger insurance companies. Supervisory experts and many supervisory authorities already regard such plans as constituting an integral part of good risk management today.

In addition to the SIFI issue, the FSB and the IAIS (International Association of Insurance Supervisors) are working on a “Common Framework” (ComFrame), which is expected to become the international standard for the supervision of large insurance groups operating internationally from 2019. One of the objectives of ComFrame will be to enable the diverse activities of such groups to be captured better through efficient cooperation and coordination between regulators, leading to harmonisation of the supervisory processes worldwide. An important component of ComFrame will be a new global capital requirement – the Global Insurance Capital Standard (ICS). There are already initial thoughts on the requirement, and high-level principles have been proposed.

### Summary

In accordance with the prescribed processes, our Board committees explicitly defined the risk appetite for significant risk categories in the year under review, and quantified it with key figures. We determined and documented the risk appetite across the Group hierarchy and communicated it throughout the Group. During the whole of 2014, risk exposures were regularly quantified and compared with the risk appetite. We consequently assess Munich Re’s risk situation as manageable and under control.

## Opportunities report

- Technical progress, demographic trends and regulatory changes offer avenues for profitable growth
- Development of emerging countries provides options for expanding and further diversifying the portfolio
- Opportunities also derive from innovative product and service solutions for our clients in key future areas such as renewable energies and weather risks

Information on current developments is provided in our press releases on our website at [www.munichre.com/press](http://www.munichre.com/press)

Munich Re's business model combines primary insurance and reinsurance under one roof. We are convinced of the future viability of traditional reinsurance. With the primary insurance activities we operate out of the reinsurance field of business and with our business fields ERGO and Munich Health, we have tapped further profitable growth opportunities. We assume risks from many different areas of private and economic life, and provide financial protection and risk management. However, surprising and unforeseen developments can never be ruled out entirely. To protect ourselves against resultant risks, we have established a sophisticated risk management system, which is described in detail in our risk report. Overall, we are well prepared to seize arising opportunities for the benefit of our Group.

Expanded business avenues will open up for Munich Re if key macroeconomic parameters develop better than expected. Stronger economic growth in the USA or Germany and a more rapid economic recovery in the eurozone or in major emerging markets would have a positive impact on the demand for insurance cover, and trigger higher premiums in most classes of insurance. Besides this, such a development could lead to a normalisation of the bond markets and thus to a gradual increase in yields, including those on US and German government bonds. This would have a negative impact in the short term on our investment result, but it would bring higher returns in the long run, thus benefiting our long-term insurance business.

Munich Re has undertaken to integrate environmental, social and governance aspects even more strongly into its core business

By signing the Principles for Sustainable Insurance (PSI), Munich Re has undertaken to integrate environmental, social and governance aspects (ESG aspects) even more strongly into its core business. The consideration of these aspects and hence a broadened view of potential risks is becoming increasingly important for our clients. Owing to Munich Re's competence in this field, we have the capacity to offer our clients even better assistance – for instance, through innovative coverage concepts and risk management services. As a precondition for entering into business relations with Munich Re, some clients now expect us to prove that we have strategic alignment concepts that are responsible and future-oriented. A number of international cooperation agreements were concluded only because we had these established structures in place.

Other trends and upheavals with an impact on our clients' demand for insurance and on supply include technological progress, in particular the key future issue of digitalisation, demographic shifts, and changes in the legal and regulatory environment. Given our good capitalisation and high degree of expertise, Munich Re can exploit this demand in all of its business fields. This will also benefit our clients, who will profit from a rapid adjustment of our product solutions to the circumstances of newly emerging or changing markets and regulations.

## Reinsurance

The business field of reinsurance offers many development opportunities, despite a still highly competitive environment. Given the ever more stringent regulatory requirements, many insurers face the significant challenge of sustainably managing their capital relief and optimisation programmes and diversifying as best they can. Thanks to our strong capital base and expertise, we are positioned to be a long-term strategic partner for our clients, with a wide range of products and services from overarching consultancy to tailor-made reinsurance and capital market solutions.

Demand for insurance is rising as values grow in regions exposed to natural hazards

There are long-term opportunities for expansion in reinsurance's core business. The demand for insurance is rising, since values and insurance density are increasing steeply as a result of growing industrialisation, in particular in many regions exposed to natural hazards. We are excellently positioned with our competence in the analysis of major loss events and possible product solutions on this basis.

Successful new developments, especially for covering economic risks, are another option for generating additional profitable business. We are constantly working together with our clients on pushing back the limits of insurability. The expansion of digital networking and the rapid rate at which hardware and software are evolving is opening up significant business avenues, for instance in the area of non-damage business interruption insurance or cyber risk coverage. Our experts have been working for many years on cyber risks and enhanced cover options. Munich Re now offers a broad spectrum of reinsurance solutions in this field and is also able to cover accumulation perils such as virus-related losses.

Another example of innovations introduced by Munich Re is a cover concept for reputation risks and the new launch-plus-life cover for the entire useful life of satellites.

A major impact on our business also derives from severe natural catastrophes. We expect climate change to lead to an increase in weather-related natural catastrophes in the long term, with the impact from weather extremes such as floods or seasonal water shortages varying from one region to another. We adapt our risk management and risk models to the latest findings.

The positive economic dynamics in many emerging countries also provide opportunities for profitably expanding and further diversifying our business portfolio. In growth markets such as Latin America and Asia in particular, we operate as one of the leading reinsurers and also increasingly participate in primary insurance activities.

Niche and specialty insurers that are part of the "Risk Solutions" unit, e.g. Hartford Steam Boiler, Corporate Insurance Partners and American Modern, are expected to generate promising synergies in product development as well as significant, sustained growth

thanks to their international innovation networks and high levels of expertise. In addition, this segment offers Munich Re valuable diversification effects, as its cycle is insulated from that of the reinsurance market and its exposure to natural hazards is minor.

We provide active and forward-looking support through public-private partnerships in the area of sustainable disaster management. We can increase risk awareness and develop risk transfer solutions that are politically and economically sustainable, and we can guarantee these solutions are implemented thanks to our strong capital base. In this way, we can support a paradigm change from ex-post disaster financing to ex-ante risk financing, thus helping countries to better handle the costs of natural catastrophes in future.

Additional opportunities exist in attractive niche markets. Crop failure insurance, for example, is seeing strong growth based on public-private partnerships (SystemAgro), since the provision of food to a growing world population and the consequences of climate change are increasing farmers' need to protect themselves against financial risks. A market leader in this area, Munich Re has built up competence and established sustainable insurance concepts together with supervisory authorities and primary insurers.

In the present economic environment, life insurance presents challenges and opportunities, with rising demand for old-age provision due to greater life expectancy on the one hand, and volatile capital markets with low interest rates on the other. As a reinsurer, we are a competent partner for life primary insurance companies thanks to our tailored offering of asset protection solutions. We also see growth potential in the coverage of longevity risk, although we are adopting a very prudent and selective approach here, given the difficulties involved in robust trend estimates.

## ERGO

In primary insurance, ERGO is consistently pursuing the strategy it adopted with its brand proposition "To insure is to understand". Its strong focus on customer requirements is a key differentiating factor in the market. This is a competitive advantage that is opening up additional growth opportunities for us. A technically supported customer advice and care process that is geared to the individual requirements of customers and interested parties safeguards the quality of sales. ERGO utilises the potential of its staff and sales partners, and promotes this in a targeted and consistent manner with forward-looking staff development. The competence and commitment of ERGO's staff and sales partners secure its success, which also benefits customers. ERGO's aim is to expand its high quality and performance levels, and this will enable ERGO to exploit competitive opportunities.

Customers are increasingly purchasing insurance cover via traditional and online channels in parallel, and so ERGO is offering its products through a variety of channels commensurate with requirements. In 2013, ERGO further enhanced its direct sales organisation. In the same year, the first health and property insurance products became available for purchase online. Its online product range was systematically extended with additional products, including motor insurance and personal accident policies. ERGO is largely building on the competence of ERGO Direkt and taking advantage of intra-group knowledge-sharing. We are taking account of increasing demand for digital products in our research and development activities. Hence, ERGO is investing heavily in the development of e-services, and it has already implemented various measures aimed at providing customers with tailored access to the various distribution channels. To promote and develop digital innovations, ERGO is also exploring avenues outside the organisation, e.g. with digital research laboratories in Berlin. ERGO's activities are also finding recognition outside the industry. In 2014, ERGO received the

“Digitaler Leuchtturm” (digital lighthouse) prize, which is awarded by the German daily Süddeutsche Zeitung and its cooperation partner Google for outstanding digital customer service. ERGO intends to continue pursuing its path of increasing digitalisation.

Demographic change is increasing the strain on state pension schemes, which is leading to a rise in customer demand for private provision. The growing need for private provision offers opportunities ERGO intends to seize. For years there has been an increasing trend towards pension insurance, and this trend is likely to continue. At the same time, people have a strong need for secure and reliable old-age provision. In the current capital market environment, the return opportunities available in traditional life insurance are limited. ERGO is thus focusing on pension products with guarantee components that offer customers enhanced return opportunities. In 2013, ERGO introduced a new product line: its innovative annuity insurance covers – ERGO Annuity Guarantee and ERGO Annuity Opportunity – offer private clients two variants of the product. As well as guarantees, the new product line also provides return opportunities and high flexibility, and was expanded in 2014. Since the beginning of 2015, a special company pension product has been added to ERGO’s range.

As of 2014, ERGO is now also active in Singapore

Growth opportunities will also derive from the not-yet-saturated markets of eastern Europe, and from China, India and Southeast Asia. With its internationalisation strategy primarily focused on these high-growth markets, ERGO reached further significant milestones in 2014. ERGO’s entry into the Singapore market has enabled it to further expand its presence in Southeast Asia. Singapore is also designed to serve as a platform for ERGO’s expansion into further property-casualty markets in Southeast Asia.

## Munich Health

The global health market is one of the fastest-growing sectors of the economy. The main reasons for this include worldwide population growth and increasing life expectancy, combined with the rising prosperity of broad sectors of the population and an enhanced medical infrastructure, particularly in developing and emerging countries. These developments are being accelerated by advances in medicine and the increasing significance of prevention and disease management programmes to support health preservation.

As a global health insurer and reinsurer, we have a variety of opportunities for expanding our business, depending on the level of development in the international health markets. With its broad set-up and combination of primary insurance and reinsurance know-how, Munich Health is in a position to meet many different client needs.

In industrialised countries, the pressure to reform historically evolved health and social security systems is rising. Consequently, there are opportunities for us in personal lines business in these highly developed markets. For the analysis of health risks, for example, we provide our reinsurance clients with modern programmes and tools for standardised medical risk assessment. To enhance the efficiency of internal processes, Munich Health offers new automation options and test algorithms, e.g. in the transmission of claims and their processing. Technical development in the area of digitalisation enables us to offer end customers more closely tailored products. Our aim is to strengthen customer ties even further and make our spectrum of services more comprehensive by offering digital solutions. These enable new and increased activities, especially in the field of prevention, including the use of wearables in diabetes prevention and management. Wearables are body-worn devices equipped with sensors for recording vital data and communicating it via an app to patients’ smart phones. Doctors can thus monitor their patients remotely, thus creating the basis for improved healthcare.

The developing and emerging countries are facing the challenge of swiftly establishing healthcare systems that provide large sections of the population with access to adequate, affordable healthcare. Private-sector insurance products, which may be closely intermeshed with state schemes, can play a valuable part in this situation. We have come up with successful ideas for expanding internationally, and these are continually being improved further and are transferable to new markets. For instance, a market-specific model has been developed for the Middle East. Its successful implementation in the United Arab Emirates enabled us to expand Munich Health's presence to Saudi Arabia and Qatar after a short period of time.

Stronger focus on prevention key  
to sustainable insurability of  
health risks

As in industrialised countries, digitalisation is also playing a major role in developing and emerging countries. Mobile solutions for smartphones are helping to offset weaknesses in healthcare infrastructure. They can be used, for instance, for ensuring that patients are quickly referred to the right physician in a network of doctors. The opportunities that digitalisation and advanced data management provide play a major part in the service concepts we develop and the way we expand our business. Our aim is to continue to take advantage of the new digital opportunities for the sustainable insurability of health risks and to expand the disease management and prevention programmes already in use by our health primary insurers to improve healthcare in the interests of our clients and comply with legal data protection requirements.

## Investments

The prolonged low-interest-rate phase presents our asset management with the challenge of generating returns with manageable risks. Our asset manager MEAG is always on the look-out for additional returns, but MEAG only takes advantage of higher-interest bond opportunities if the risks can be kept within reasonable bounds. To this end, MEAG has been continually expanding its competence in the assessment of credit risks. We take a very selective approach to investing in infrastructure credits and ensure that they are high quality. Given a tightening of regulations in this field, banks are currently reducing their investments. With our risk competence as an insurer, we can benefit from the freed-up capacities. In addition, there are improved return opportunities available in asset classes such as renewable energies, infrastructure, agricultural land and forestry.

MEAG not only provides its products and services to the insurance companies within our Group, but also achieves above-average performance in managing retail funds for private clients and investment portfolios for institutional investors in accordance with our sustainable investment strategy. On the basis of the methods and processes established for the Group companies in terms of portfolio management, reporting and risk management, we continue to see significant growth opportunities in business with institutional clients, whose conservative and safety-oriented requirements are similar to those of insurance companies on account of specific needs and preferences: to achieve steady returns whilst protecting capital. Institutional investors include pension funds, municipalities, church institutions, foundations, selected banks, and manufacturing companies.

## Prospects

- Consolidated result of €3.2bn beats target for 2014
- Dividend proposal for 2014: €7.75 per share
- Expected return on investment of at least 3% for 2015
- Consolidated result of €2.5–3bn envisaged for 2015

Our predictions for the forthcoming development of our Group are based on planning figures, forecasts and expectations. Consequently, the following outlook merely reflects our imperfect assumptions and subjective views. It follows that we do not accept any responsibility or liability in the event that they are not realised in part or in full.

→ Information on the special features of IFRS accounting can be found on [page 102](#)

It is not only the obvious fluctuations in the incidence of major losses that make an accurate forecast of IFRS results impossible. The pronounced volatility of the capital markets and exchange rates as well as the special features of IFRS accounting also make this difficult. Thus, there may be significant fluctuations in the investment result, currency result and consolidated result, despite the fact that our assets are geared to the characteristics of our liabilities. In particular, based on our position at the beginning of the year, a moderately rising interest-rate level will initially tend to lead to slightly lower results – and falling interest rates to higher results – than those forecast in this outlook. Changes in the market value and net gains or losses on the disposal of derivatives used by us as hedging instruments and for fine-tuning investments can also substantially impact the result. Changes in exchange rates influence our premium income and results in different directions, depending on which foreign currencies are affected. There may be significant swings if exchange-rate fluctuations are strong, although economically speaking – relative to the volume of our business and our investments – we hold few open currency items on our books.

### Comparison of the prospects for 2014 with the result achieved

#### Munich Re (Group)

##### Comparison of prospects for Munich Re (Group) for 2014 with results achieved

|                                         |     | Target<br>2014 | Result<br>2014 |
|-----------------------------------------|-----|----------------|----------------|
| Gross premiums written                  | €bn | Around 50      | 48.8           |
| Consolidated result                     | €bn | 3              | 3.2            |
| Technical result                        | €bn | 3.7            | 3.2            |
| Return on investment <sup>1</sup>       | %   | Around 3.3     | 3.6            |
| Return on risk-adjusted capital (RORAC) | %   | 15             | 13.2           |

<sup>1</sup> Excluding insurance-related investments.

At €48.8bn, gross premiums were below our target, due to currency effects and the reduction in large-volume reinsurance treaties.

With a consolidated result of €3.2bn, we beat our target of €3bn, in part because major-loss expenditure in property-casualty reinsurance was lower than expected. We were also able to release claims reserves for prior accident years and posted tax income, mainly as a consequence of the release of tax provisions for tax audits and an advantageous decision in a long-standing legal issue. By contrast, we had to write-off goodwill in the segment ERGO International.

At €3.2bn, our technical result was below our target of €3.7bn. Above all, this was due to the participation of our policyholders in an anticipated tax refund in the ERGO Life and Health Germany segment, and to deterioration in the life reinsurance market.

Our long-term objective of a 15% return on our risk-adjusted capital (RORAC) after tax across the cycle of the insurance and interest-rate markets is difficult to achieve in the current environment of very low interest rates on low-risk investments. We are very satisfied with the RORAC of 13.2% for 2014, as well as with the return of 11.3% on total IFRS capital (return on equity, ROE).

Economic earnings amounted to €3.2bn, and so we slightly surpassed our target in line with the expected IFRS result of €3bn.

## Reinsurance

The reinsurance business field posted gross premiums of €26.8bn, a figure that was below the target of around €28bn. Gross premiums in life reinsurance totalled €10bn, thus coming in below expectations of around €10.5bn. At €16.7bn, property-casualty reinsurance also did not reach the original forecast of around €17.5bn. In each case, the main reason why we missed our targets was negative currency effects. In life reinsurance, there was also a reduction in large-volume reinsurance treaties.

The technical result in life reinsurance totalled €280m, which meant that we fell short of our 2014 target of over €400m, mainly due to reserve strengthening in Australia and the USA.

The combined ratio of 92.7% in property-casualty reinsurance was better than the figure of around 94% envisaged. Above all, this was due to major-loss expenditure that was below our expectations and to the release of loss reserves.

The consolidated result of €2.9bn for 2014 was significantly above the target corridor of €2.3–2.5bn.

## ERGO

Munich Re changed its segment reporting in the fourth quarter of 2014, and now shows the business transacted by ERGO in the three segments Life and Health Germany, Property-casualty Germany, and ERGO International. Therefore, with respect to primary insurance business it is not possible to compare the figures for the changed segments as shown in this annual report with the outlook for 2014 we reported in our 2013 Annual Report. For this reason, we have taken the forecast results from the 2013 Annual Report and amended them to reflect the new segmentation when we compare the forecast for 2014 with the results achieved for the three new ERGO segments.

Total premium income in the ERGO field of business was €18.1bn, thus reaching the 2014 target of slightly more than €18bn; at €16.7bn, gross premiums written were also consistent with the forecast of “a good €16.5bn”. In ERGO Life and Health Germany, total premium income was €10.7bn, whereas our outlook had been around €10.9bn. Gross premiums written totalled €9.8bn and were in line with expectations. In ERGO International, gross premiums written totalled €3.8bn; at the beginning of the year, our assumption had been around €3.6bn. At 97.3%, the combined ratio in this segment was somewhat better than the expected figure of around 98%. In ERGO Property-casualty Germany, gross premiums written totalled €3.1bn, although our target for 2014 had been €3.3bn. At 95.3%, the combined ratio in this segment was higher than the anticipated figure of around 92%.

At the beginning of the year, we had aimed for a result of €400–500m for the ERGO field of business, and €350–450m for the ERGO Group. Our result for the ERGO Group was much better than expected at €620m. In the ERGO field of business, the result of €169m did not meet our target due to the write-off of goodwill in the segment ERGO International.

## Munich Health

At €5.3bn, gross premiums were below the forecast level of just over €5.5bn. The combined ratio – 99.8% – bettered our target of around 99%, and Munich Health's consolidated result was €109m, meaning that we met our original target of “around €100m”.

## Outlook for 2015

### Outlook for Munich Re (Group)

|                                               |     | 2015       |
|-----------------------------------------------|-----|------------|
| Gross premiums written                        | €bn | 47–49      |
| Consolidated result                           | €bn | 2.5–3      |
| Combined ratio property-casualty reinsurance  | %   | 98         |
| Combined ratio ERGO Property-casualty Germany | %   | 93         |

| Return on investment <sup>1</sup>             | %   | At least 3 |

<sup>1</sup> Excluding insurance-related investments.

## Reinsurance

Reinsurance remains an attractive business field, with a wide variety of long-term earnings opportunities for us. Although insurance density in the western industrialised countries and individual Asian nations that have been well advanced for decades is already high, even these markets often have an additional need for insurance cover. This is because weather-related natural hazards exposure is showing an increasing trend as the climate changes and the concentration of values in exposed regions becomes greater. And even previously, a large share of the losses from major natural catastrophes have also not been insured. In regions with very rapid economic development, the demand for insurance remains high for protecting the large centres of high-quality industrial manufacturing and the rising prosperity of the population. Moreover, generally only a small portion of the risks from potential liability claims by third parties are insured, particularly for those advanced and complex technologies that are important for the overall benefit of society. As a result, the strongly increasing capacity supply in the primary insurance and reinsurance sectors at present is matched by a demand potential in many classes of business that is not yet exhausted.

Munich Re offers its cedants specialist consulting services and extensive solutions, also for issues in connection with accounting, risk modelling and asset-liability management. Reinsurance provides primary insurers with efficient and flexible protection against major claims and accumulation losses, and strengthens their capital base. In addition to this, we devise innovative coverage concepts that go beyond the scope of traditional reinsurance and, to an increasing extent, also beyond the conventional boundaries of insurability. Thus, for example, we cover performance guarantees for solar modules, offer coverage for internet risks, and for the effects of weather fluctuations on the financial position of companies. This allows us to already take advantage of new profit potential, and balance out some of the reductions in traditional business. In connection with alternative risk transfer, we exploit the advantages of the dynamic market environment and securitise insurance risks on the capital markets both for our clients and for us. We also partner our clients in the often challenging task of adjusting to changes in regulatory requirements, which are currently being revised in many countries.

Gross premiums in reinsurance as a whole should be around €26-27bn overall in 2015, i.e. roughly the same as last year, although currency translation effects could potentially have a considerable impact on this estimate. For 2015, we expect the consolidated result in reinsurance to be at least €2bn, up to €0.9bn below the excellent result for 2014. This anticipated lower result will be due to the absence of one-off tax effects, the reduction in prices in property-casualty reinsurance, and pressure on our investment income in a continuing low-interest-rate environment.

We see further good development opportunities in life reinsurance. Stimuli will derive in particular from the dynamic expansion of the Asian life insurance markets and from the ongoing privatisation trends in provision for old age, long-term care and disability. We structure our products so that they are tailored to our clients' needs while conforming to our risk strategy.

We expect increasing demand for the management of investment risks in life insurance portfolios. Particularly in life reinsurance, there will also continue to be demand for solutions geared to the optimisation of capital and balance sheets. Despite a principally intact growth trend, premium volume in primary insurance has seen short-term stagnation in many important regions for us due to the weak economy and reduced readiness to purchase insurance because of the financial crisis, which has also had a dampening effect on the demand for reinsurance.

For 2015, we project that gross premiums written in life reinsurance will be in the region of around €9-10bn. We are adhering to our objective of achieving a technical result of around €400m. This is ambitious because we expect the results from parts of our US portfolio written over the past decade to be subdued in the coming years as well.

In property-casualty reinsurance, which is traditionally heavily exposed to pricing cycles and random fluctuations in major losses, Munich Re will maintain its clear, profit-oriented underwriting policy and accept risks only at commensurate prices, terms and conditions. We are currently experiencing unrelenting competition. On the one hand, given their good capitalisation, primary insurers are ceding fewer risks to reinsurance. On the other hand, reinsurers are able to provide ample capacity, since their capital base has also steadily improved thanks to the good results posted over the last few years. There is thus currently appreciable surplus capacity on the supply side. Last but not least, insurance-linked securities and other forms of reinsurance-like transactions are also increasingly being favoured by institutional investors such as pension funds in their search for a reasonable return. This capital is mainly being channelled into non-proportional catastrophe business, such as covers for hurricane losses in the USA, so reinsurers

that have previously focused on this area of business are seeking to diversify into other areas. The prices, terms and conditions for reinsurance cover have therefore come under increasing pressure across the board. This has also impacted Munich Re's portfolio, as the price erosion in the most recent treaty renewals has shown.

As a well-diversified reinsurer with extensive know-how, we are able to offer tailor-made solutions – in contrast to most providers. These include multi-year treaties (occasionally incorporating cross-line and cross-regional covers), retroactive reinsurance solutions, transactions for capital relief, and the insurance of complex liability, credit and industrial risks. Moreover, with our technical expertise and risk knowledge, we are in a position to support rapidly growing industries and to judiciously extend the boundaries of insurability with needs-based covers.

For 2015, we anticipate that gross premiums written in property-casualty reinsurance will total around €17bn, i.e. a somewhat higher figure than last year. We expect the combined ratio to be around 98% of net earned premium. The increase of more than 5 percentage points on the ratio achieved in 2014 is mainly due to the fact that in 2014 there were randomly fewer major losses than expected. In 2015, we anticipate major losses in the order of €2bn, which corresponds to 12% of net earned premium.

As in the previous year, the renewal negotiations at 1 January 2015 were marked by an oversupply of reinsurance capacity and good capitalisation of most market players. In January, treaties with a volume of €9.4bn – more than half of our treaty business in property-casualty reinsurance – were up for renewal. As a consequence of our profit-oriented underwriting policy, the termination of large-volume transactions, and increasing retentions by our clients, the premium volume generated by renewed business decreased in the year under review by around €900m, or 9.5%, to approximately €8.5bn.

On balance, we had to accept a slight reduction of 1.3% in the price level for the portfolio as a whole. Price reductions were seen mainly in natural catastrophe business, with North America showing somewhat greater declines than Europe and Asia, and in marine business. Price levels in casualty business and in credit and bond reinsurance were only marginally down overall, whilst they remained stable in aviation business, despite the aircraft crashes in the previous year. The fact that the price erosion for Munich Re was relatively low compared with the rest of the market underscores the importance of our consistently profit-oriented underwriting policy, and recognises the importance that individual clients are attaching to stable reinsurance relationships. Munich Re's comprehensive service and financial strength are valued more highly than an ever lower price.

The renewals at 1 April 2015 (mainly Japan) and 1 July 2015 (parts of the portfolio in the USA, Australia and Latin America) will involve a premium volume of almost €3bn of reinsurance treaty business. Munich Re is proceeding on the assumption that the market environment will not change significantly in these renewal rounds in 2015, unless extraordinary loss events occur or there are any major changes in the market.

## ERGO

Munich Re's consolidated financial statements show the business transacted by ERGO in the three segments Life and Health Germany, Property-casualty Germany, and ERGO International.

We see good opportunities for ERGO, not only in evolving foreign markets but also in various sectors of the German market.

Total premium income in 2015 in the ERGO field of business should be in the range of €17.5–18bn, with gross premiums written of €16–16.5bn, somewhat below the level of the previous year. We project a consolidated result for 2015 of around €500m for the ERGO field of business, which is much better than the low 2014 result, which was mainly caused by the write-off of goodwill in the segment ERGO International.

In ERGO Life and Health Germany, our total premium income is expected to be around €10.5bn, with gross premiums written ranging between €9bn and €9.5bn.

Given the persistently very low interest rates and a climate that is thus not conducive to private provision for old age, the environment remains challenging in the Life Germany segment. Premium development will be substantially influenced by volatile, heavily interest-rate-dependent single-premium business. We see good opportunities with our new product generation, which we extended in 2015 to include a company pension product. Nevertheless, we expect an overall fall in premium income in ERGO's German life business in the financial year 2015.

We expect gross premiums written to roughly maintain their current level in Health Germany. In private health insurance, the premium adjustment we make in the financial year 2015 will be slightly higher than in the previous year. The falling number of insureds is leading to a decline in premium volume in comprehensive health cover. In supplementary health business, by contrast, we see good growth opportunities overall, particularly in supplementary long-term care insurance and company health insurance. In travel insurance, we are adhering to our risk- and profit-oriented underwriting policy. We therefore expect a slight downward trend in premium, also due to the continuing difficult economic and political conditions in important travel destinations.

In 2015, gross premiums written for direct business in Germany should remain largely stable compared with 2014. Falls in life primary insurance will probably be compensated for in the ongoing year by renewed growth in health insurance.

Gross premiums written in the segment Property-casualty Germany should be somewhat over €3bn. We continue to attach great importance to risk-commensurate prices, and we are consistently implementing measures to improve the earnings situation. The combined ratio in property-casualty business in Germany should therefore improve by a good 2 percentage points, and reach a very good level of around 93%, provided major losses remain within normal bounds.

We want to achieve gross premiums written in the range of €3.5–4bn for the ERGO International segment in 2015, and generate overall premium volume of well over €4bn, with uncertainty concerning the demand for single-premium business in life insurance. We should see growth in property-casualty business provided there are no economic setbacks or exchange rate losses. There will also be a contribution from our business in Singapore, which we acquired in the second half of 2014 but which was first included in our figures in the third quarter of 2014. The combined ratio should be around 97%.

## Munich Health

Owing to medical advances, generally higher life expectancies and the increasing prosperity of broad sectors of the population, the international healthcare market offers diverse growth opportunities for Munich Health. We intend to utilise these opportunities even better in future, following some individual adjustments to our strategic orientation. In reinsurance, we see avenues for growth from our clients' increasing numbers of insureds and a strong demand for customised solutions. We expect to see a slight increase in profitability in light of changes to our reinsurance portfolio. We expect stable growth of our primary insurance business.

Gross premiums written should be a good €5bn in 2015, somewhat below the level of 2014, and the combined ratio is likely to be around 99%. Overall, we anticipate that we will achieve a profit in the range of €50-100m in 2015. The decrease is due to a reduction in investment income and to the absence of one-off tax effects.

### Investments<sup>1</sup>

The global economy is marked by a high level of geopolitical risks and subdued growth expectations in many economies, with the corresponding low inflation rates. In addition, the ample supply of liquidity made available by central banks is resulting in very low interest rates. We will continue to hedge the associated uncertainties and resultant volatilities in the capital markets by means of a widely diversified investment portfolio. The ongoing low-interest-rate environment will continue to have an impact on the whole insurance industry and other major investors.

Thanks to our strongly diversified investments, we are well prepared for a great variety of capital market scenarios, each of which involves potential losses in individual asset classes. Given the regional diversification of our portfolio, however, we are proceeding on the assumption that these losses will be absorbed by increases in value in other asset classes. This balanced investment strategy has proved its worth in recent years. For 2015, we are planning to further reduce our portfolio of government bonds in individual industrialised countries, and to moderately build up investments in corporate and emerging-market bonds.

The duration of the investment portfolio is a key lever of our asset-liability management. We gear the duration of our investments closely to the duration of our liabilities. As a result, both sides of the economic risk-based balance sheet – important for managing our business – respond similarly to changes in interest rates, whilst there may be significant fluctuations in the consolidated balance sheet under IFRS. The duration in the business field reinsurance increased in the financial year 2014, but decreased relative to the liabilities. In life primary insurance, we aim to prolong the average investment period somewhat in 2015. Besides the duration, we also take the individual currencies and inflation sensitivity of our liabilities into account in the development of our investment strategy. For 2015, we plan to keep our portfolio of inflation-linked bonds constant. Over the course of the year, we will make the fine-tuning of our investments dependent on our current market assessments, whilst rigorously adhering to our fundamental strategy of gearing assets to the structure of our liabilities.

In 2014, our investments and investment commitments in infrastructure (including renewable energies and new technologies) were kept largely constant in comparison with the previous year. We are planning to further expand this investment in 2015, provided that the parameters are reliable and we can generate an appropriate return. We continue to rely heavily on a regional, and technology- and infrastructure-specific diversification of these investments, thus spreading the risk of the portfolio, and focusing in particular on bonds and loans for infrastructure projects in 2015. We plan to slightly expand our real estate portfolio over the next few years, subject to market developments.

<sup>1</sup> The statements concern the investment portfolio excluding insurance-related investments.

For 2015, we expect interest-rate levels to remain very low overall, and hence generate lower regular income from reinvestment of fixed-interest securities and loans. We also intend to only moderately increase our moderate equity-backing ratio of 5.2%, so that write-down risks are low. Regular income from our investments should total around 3%, or 0.2 percentage points lower than last year. Taking into consideration the result from the disposal of investments, write-ups and write-downs, and other income and expenses, we expect the investment result to be lower than last year, but still reaching at least €7bn, equivalent to an annual investment return of at least 3%.

### Munich Re (Group)

We expect that the Group's gross premiums written for 2015 will be in the range of €47–49bn; the median value is around €0.8bn lower than the previous year.

We are adhering to our long-term objective of a 15% return on our risk-adjusted capital (RORAC) after tax across the cycle of the insurance and interest-rate markets. In the long term, we want our income to grow using innovative business. However, in the current environment of very low interest rates on low-risk investments, this target will be difficult to achieve.

→  
Information on economic earnings can be found on [page 39 f.](#)

As regards the economic value added in terms of economic earnings, we anticipate a pleasing albeit lower figure than in 2014, in line with the IFRS results anticipated for the Group and the fields of business. This forecast is based on the assumption of unchanged capital markets and modelling parameters, and a normal major-loss incidence. On the basis of current interest-rate developments, we anticipate poorer result contributions in life primary insurance than those of the other segments.

Provided that major-loss experience is in line with expectations, our assumption for 2015 is that Munich Re will post a technical result that is lower than last year at almost €3bn.

The consolidated profit is likely to fall short of the particularly good result in 2014, mainly due to falling prices in reinsurance, a decreased investment result, and the absence of one-off tax effects. Nevertheless, we still hope to achieve a consolidated result for 2015 of €2.5–3bn, and the effective tax rate should be much higher than in 2014, but below the generally expected rate of 20–25% for our Group. This profit guidance is subject to claims experience with regard to major losses being within normal bounds and to our income statement not being impacted by severe currency or capital market movements, significant changes in fiscal parameters, or other special factors.

In the period from the middle of May 2014 to the end of February 2015, we bought back shares with a value of around €866m; another €134m are to be repurchased before the Annual General Meeting in April 2015. We are using this measure to return unneeded capital to shareholders. Despite the buy-back, our good capital position will allow us to continue paying attractive dividends and selectively utilising opportunities for profitable growth. Since November 2006, Munich Re has carried out share buy-backs with a total volume of €7.9bn. Subject to approval by the Annual General Meeting, the dividend will rise by 50 cents to €7.75 per share.

## Notes to the consolidated financial statements

### Application of International Financial Reporting Standards (IFRSs)

Munich Re's consolidated financial statements have been prepared on the basis of Section 315a (1) of the German Commercial Code (HGB) in conjunction with Article 4 of Regulation (EC) No. 1606/2002 of the European Parliament and of the Council of 19 July 2002 concerning the application of international accounting standards. We have complied with the international accounting standards adopted in accordance with Articles 2, 3 and 6 of the aforementioned Regulation and with the rules designated in Section 315a (1) of the German Commercial Code.

In accordance with the rules of IFRS 4, Insurance Contracts, underwriting items are recognised and measured on the basis of US GAAP (United States Generally Accepted Accounting Principles) at first-time adoption of IFRS 4 on 1 January 2005.

### Declaration of Conformity with the German Corporate Governance Code in accordance with Section 161 of the German Stock Corporation Act (AktG)

In November 2014, the Board of Management and Supervisory Board of Munich Reinsurance Company published an updated Declaration of Conformity with the German Corporate Governance Code in accordance with Section 161 of the German Stock Corporation Act (AktG) and made this declaration permanently available to shareholders on the internet.

### Recognition and measurement

#### Use of judgements and estimates in recognition and measurement

In preparing the consolidated financial statements, we have to use our judgement in applying accounting policies and to make estimates and assumptions that affect the year-end items shown in the consolidated balance sheet, the consolidated income statement and the disclosures on contingent liabilities.

Particularly in insurance and reinsurance, the use of estimates for measuring technical provisions is of substantial significance, given that measurement is invariably based on models and the development of future cash flows from insurance contracts cannot be conclusively predicted. But judgements and estimates play a significant role in the case of other items as well.

Our internal processes are geared to determining amounts as accurately as possible, taking into account all the relevant information. The basis for determining amounts is management's best knowledge regarding the items concerned at the reporting date. Nevertheless, it is in the nature of these items that estimates may have to be adjusted in the course of time to take account of new knowledge.

Discretionary judgements and estimates are of significance for the following items in particular and are described in more detail in the respective explanatory notes:

- Consolidated group
- Goodwill and other intangible assets
- Fair values and impairments of financial instruments
- Deferred acquisition costs
- Technical provisions
- Pension provisions
- Deferred tax
- Contingent liabilities

### Non-current assets and disposal groups held for sale

Non-current assets and disposal groups classified as "held for sale" are recognised at the lower of carrying amount or fair value less sales cost and shown separately in the consolidated balance sheet.

### Presentation currency and use of plus and minus signs

Our presentation currency is the euro (€). Amounts are rounded to million euros, with figures in brackets referring to the previous year. Expenses, outflows and losses are shown using the minus sign; income and inflows are shown without a plus or minus sign.

### Figures for previous years

Changes in accordance with the rules of IAS 8 necessitated the retrospective adjustment of the figures from the consolidated balance sheet for the financial years 2012 and 2013, and of the consolidated income statement and relevant items of the notes to the consolidated financial statements for the year 2013 (see section "Changes in accounting policies and other adjustments"). The other previous-year figures have been calculated on the same basis as the figures for the financial year 2014.

### Changes in accounting policies and other adjustments

Application of the recognition, measurement and disclosure methods follows the principle of consistency.

In the financial year 2014, the following new or amended IFRSs had to be applied for the first time:

**IFRS 10 (05/2011), Consolidated Financial Statements**, supersedes the provisions of IAS 27 and SIC 12 and creates a uniform definition for control, irrespective of whether this control is based on company law or on contractual or economic circumstances. There are no longer any independent provisions for structured entities (special purpose entities). A situation of control exists when an investor has the ability to direct an investee's relevant activities and is exposed to the returns from those activities.

Furthermore, IFRS 10 addresses issues that have not been dealt with until now, including the rule that a situation of control exists even if an investor holds less than a majority of the voting rights but regularly has a de facto majority of voting rights at the annual general meetings. The changes do not have any major effects on Munich Re's group of consolidated companies. Only one associate is now to be recognised as a fully consolidated company. We have therefore applied the amendments prospectively, as a retrospective application for prior periods did not appear appropriate, also from a cost-benefit point of view. The conversion from the equity method to full consolidation led to a minor result effect of less than €2m and increased the balance sheet total by around €10m in the first quarter.

**IFRS 11 (05/2011), Joint Arrangements**, defines joint operations and joint ventures and specifies how they are to be recognised in the balance sheet. The changes compared with IAS 31, Interest in Joint Ventures, mainly concern the elimination of the option of proportionate consolidation for joint ventures, the amended definition of joint control, and the extended scope of application of joint operations. These may now include arrangements structured through a separate vehicle. The elimination of the option of proportionate consolidation has no impact on Munich Re, as we do not avail ourselves of this option and already apply the equity method. The two other amendments do not have any major effects on Munich Re.

**IFRS 12 (05/2011), Disclosure of Interests in Other Entities**, combines the disclosures regarding facts and circumstances governed by IFRS 10, 11 and IAS 28. The objective of the standard is to provide information on the type and risk of interests in other entities and their implication for the consolidated financial statements. As a consequence, the information provided needs to be more comprehensive than before. In particular, IFRS 12 requires disclosures relating to unconsolidated structured entities, subsidiaries with significant non-controlling interests, discretionary judgments and assumptions in evaluating the nature of interests in other entities, as well as more detailed information on joint arrangements and associates. Munich Re is mainly affected by the extended disclosure requirements relating to unconsolidated structured entities and interests in joint arrangements and associates. Munich Re provides aggregated financial information regarding its interests in associates and joint ventures, and for unconsolidated structured entities it provides comprehensive information on the nature, purpose, scope, activities and carrying amount of the interests held by Munich Re in the unconsolidated structured entities. Munich Re also discloses the maximum exposure to loss from its interests in unconsolidated structured entities.

**IAS 27 (rev. 05/2011), Separate Financial Statements**, now deals only with balance sheet recognition of investments in subsidiaries, joint ventures and associates in separate single-entity financial statements in accordance with IFRS, including the relevant disclosures in the notes. The definition of control and balance sheet recognition of subsidiaries in consolidated financial statements is now regulated by IFRS 10. The standard is not applicable to Munich Re.

**IAS 28 (rev. 05/2011), Investments in Associates and Joint Ventures**, specifically includes amendments following from the publication of IFRS 11 and IFRS 12. Among other things, the standard integrates the balance sheet recognition of joint ventures and circumstances previously governed by SIC 13, Jointly Controlled Entities – Non-Monetary Contributions by Venturers. Furthermore, investments in associates or joint ventures held by open-ended investment funds or for unit-linked insurance, for example, are no longer excluded from the scope of application of the standard. Instead, there is now an option to measure these at fair value with impact on profit or loss. The amendments do not have any material effects for Munich Re.

In June 2012, the IASB adopted **IFRS Consolidated Financial Statements, Joint Arrangements, and Disclosure of Interests in Other Entities – Transition Guidance (Amendments to IFRS 10, IFRS 11 and IFRS 12) (06/2012)**, which clarifies that the requirement to provide adjusted comparative information on first-time application is limited to the preceding comparative period only. Insofar as first-time application results in a change in the need to consolidate an entity only for the comparative period, no adjusted comparative information for prior periods is necessary. In addition, the requirement to provide information for prior periods was removed for unconsolidated structured entities.

**IFRS Investment Entities (Amendments to IFRS 10, IFRS 12 and IAS 27) (10/2012)** introduces a definition of the term “investment entities” and specifies that in future such entities are to be generally excepted from the requirement to consolidate their subsidiaries. Instead, they are required to measure them at fair value through profit or loss. The exception from the consolidation requirement does not apply to parents of investment entities that are not themselves investment entities. There are also additional disclosure requirements for investment entities. The amendments are of no relevance for Munich Re.

The amendments to **IAS 32 (rev. 12/2011), Financial Instruments: Presentation – Offsetting Financial Assets and Financial Liabilities**, clarify some issues in relation to the requirements for offsetting financial assets and financial liabilities. The changes currently have no practical significance for Munich Re.

**IAS 36 (rev. 05/2013), Recoverable Amount Disclosures for Non-Financial Assets**, affects corrections and extensions of required disclosures if the recoverable amount of impaired assets is based on fair value less costs of disposal. We already applied the amendments in advance in the financial year 2013.

The amendments in **IAS 39 (rev. 06/2013), Financial Instruments: Novation of Derivatives and Continuation of Hedge Accounting**, determine that the novation to a central counterparty of a derivative that is designated as a hedging instrument will not lead to a discontinuation of hedge accounting where that novation is required by legislation or regulation. The involvement of a central counterparty is not mandatory for existing business transactions. The amendments currently do not have any effects on Munich Re.

In 2014, Munich Re further optimised its internal management reporting, resulting in **changes in its segment reporting**. The corresponding items in the segment reporting and the notes to the consolidated financial statements have been adjusted for the previous year.

Previously, the monitoring and management of the ERGO Insurance Group had been based on three segments geared to the different main products, i.e. life, German health (including global travel insurance) and property-casualty.

Internal management reporting was adapted with effect from the fourth quarter 2014 to include geographical market features that better reflect the increasing importance of international business. International business was allocated to the ERGO International segment. With effect from the fourth quarter of 2014, the monitoring and management of German life and health primary insurance business, which still includes global travel primary insurance, was integrated into the segment ERGO Life and Health Germany. Since the premiums written by ERGO Direkt mainly derive from German life and health primary insurance business, ERGO Direkt is also reported

under German life and health primary insurance business. ERGO's German property-casualty primary insurance business (with the exception of direct property-casualty insurance business) is now reported under the segment ERGO Property-casualty Germany.

As part of the change in segmentation of the ERGO Insurance Group, other improvements have also been made to management reporting. The asset management segment was divided among the segments that write insurance business, to better reflect the close interlinking between asset management and insurance, since the assets managed mainly comprise Group assets.

Analogous to our internal management, since the fourth quarter of 2014 the result from unit-linked life insurance and our other insurance-related investments has been disclosed separately from the result of other investments in the new line item "Insurance-related investment result" in our segment income statement. Assets have been disclosed analogously. The modified management reporting takes account of the fact that the result from unit-linked life insurance is not allocable to shareholders. Besides, separate disclosure of other insurance-related investments underscores their increased importance.

For reasons of consistency and comparability, we have adjusted the structure of our consolidated income statement in accordance with our segment income statement. Differences merely exist in the degree of detail of the items, which is more limited in segment reporting in line with the performance measures defined. In addition, the segment income statement now shows only the net figures for technical and non-technical results, without any subdivision of the amounts indicated as "thereof" items. The segment-specific disclosures required under IFRS 8 can be found in the corresponding sections of the notes to the consolidated income statement. For the sake of clarity, the investment result is also shown net in the consolidated income statement. In addition, the structure of the consolidated balance sheet has been adjusted, with insurance-related investments and other investments disclosed separately. The adjustments increase the usefulness of the information for the purposes of making decisions to the users of the financial statements.

The following modifications were also applied retrospectively and the previous year's figures were adjusted:

- a) Since the first quarter of 2014, we have adjusted the disclosure of "other provisions" and "miscellaneous liabilities" in order to improve the information content. Liabilities hitherto allocated to "other provisions", but more certain than provisions in terms of the timing and amount of their payment, are shown under "miscellaneous liabilities" with immediate effect. "Outstanding invoices", "bonuses", "holiday and overtime pay" and "miscellaneous" are affected.
- b) In previous years, the amount of claims paid for a reinsurance portfolio was set too low as part of the fast-close process. The amounts for claims paid and accounts payable were corrected retrospectively in the third quarter.
- c) In future the insurance-related investment result will be disclosed as a new line item in the operating result. The portfolio is separated in the balance sheet in the same way (see above).

The changes a) and c) have been made in accordance with IAS 8.14 and IAS 8.22. The consolidated balance sheet for the financial years 2012 and 2013 is affected by the adjustments as follows:

## Consolidated balance sheet

#### Standards or changes in standards not yet entered into force

Unless otherwise stated, all standards or amendments to standards that have not yet entered into force will be applied by Munich Re for the first time as from the mandatory effective date for entities domiciled in the European Union.

The following standards are mandatory for Munich Re for the first time in the financial year 2015. They were adopted into European law in June and December 2014 respectively.

The IASB concluded the project **Annual Improvement to IFRSs 2011–2013 Cycle** in December 2013 with the publication of the revised standards. These amendments concern IFRS 1, First-time Adoption of International Financial Reporting Standards; IFRS 3, Business Combinations; IFRS 13, Fair Value Measurement; and IAS 40, Investment Property Measured at Fair Value. These amendments provide clarifications of individual provisions that have turned out to be unclear in practice; they are unlikely to be relevant for Munich Re.

**IFRIC Interpretation 21 (05/2013), Levies**, clarifies the point of recognition of a liability within the scope of IAS 37 for levies imposed by governments, other than income taxes, that do not fall within the scope of application of other IFRSs. As well as determining the point of recognition, the Interpretation clarifies how to interpret the definition of “present obligation” within the meaning of IAS 37 with respect to such levies. As mandated by the IASB, application of this Interpretation should have been mandatory for the 2014 financial year. However, it was not adopted into European law until 13 June 2014, and may thus only be applied by companies domiciled in the European Union with respect to financial years beginning on or after 17 June 2014. It has no material effects on Munich Re.

The following new and/or revised standards are mandatory for Munich Re for the first time in the 2016 financial year. With the exception of the changes to IAS 19 from November 2013 and the 2010–2012 Cycle of Annual Improvements from December 2013, which were both adopted into European law in December 2014, all of the following legal amendments have yet to be formally adopted into European law.

In November 2013, the IASB published an amendment to **IAS 19 (rev. 11/2013), Employee Benefits**, which aims to clarify the allocation of contributions from employees or third parties that are linked to the employee's service rendered in the same period in which they are payable. This amendment will not have any material effects on Munich Re.

The amendments published in December 2013 under the project **Annual Improvements to IFRSs 2010–2012 Cycle** refer to: IFRS 2, Share-based Payment; IFRS 3, Business Combinations; IFRS 8, Operating Segments; IFRS 13, Fair Value Measurement; IAS 16, Property, Plant and Equipment; IAS 24, Related Party Disclosures; and IAS 38, Intangible Assets. The amendments mainly concern clarifications of individual provisions that have turned out to be unclear in practice; they are unlikely to be relevant for Munich Re.

As mandated by the IASB, application of the above amendments to IAS 19 and the Annual Improvements to IFRSs 2010–2012 Cycle are mandatory as from the 2015 financial year. However, as they were not adopted into European law until December 2014, application of the two shall not be mandatory for companies domiciled in the European Union until financial years beginning on or after 1 February 2015. Voluntary application before that date is permitted, but they are of little relevance for Munich Re.

**IFRS 14 (1/2014), Regulatory Deferral Accounts**, is an interim standard that is only to be used by companies that are subject to rate regulation and are preparing IFRS financial statements for the first time. The rules are not applicable to Munich Re.

The publication of the IFRS **Clarification of Acceptable Methods of Depreciation and Amortisation (Amendments to IAS 16 and IAS 38) (05/2014)**, provides guidance on issues, including that revenue-based depreciation and amortisation of real estate, other assets and intangible assets is not permissible, or is only permissible under specified circumstances. The clarifications do not have any material effects for Munich Re.

The amendments of **IFRS 11 (05/2014), Accounting for Acquisitions of Interests in Joint Operations**, clarify the accounting for acquisitions of interests in joint operations when the operation constitutes a business. The acquirer of such interests is required to apply all of the principles on business combinations accounting in IFRS 3 and other IFRSs, with the exception of those principles that conflict with the guidance in IFRS 11. This amendment is unlikely to have any material effects on Munich Re.

In June 2014, the IASB published the IFRS **Agriculture: Bearer Plants, Amendments to IAS 16 and IAS 41**. The amendments bring bearer plants that are only used to grow agricultural produce within the scope of IAS 16. These can now be accounted for in the same way as property, plant and equipment. Currently, the amendments do not appear to be relevant for Munich Re.

In August 2014, **Equity Method in Separate Financial Statements (Amendments to IAS 27)** was published. This again permits entities to use the equity method to account for investments in subsidiaries, associates and joint ventures in their separate financial statements. The amendment is not applicable to Munich Re.

The amendments published in September 2014 as part of the project **Annual Improvements to IFRSs 2012-2014 Cycle**, affect IFRS 5, Non-current Assets Held for Sale and Discontinued operations; IFRS 7, Financial Instruments: Disclosures; IAS 19, Employee Benefits; and IAS 34, Interim Financial Reporting. The amendments mainly concern clarifications of individual provisions that have turned out to be unclear in practice; they are unlikely to be relevant for Munich Re.

The amendments in **IFRS 10 and IAS 28 (09/2014), Sale or Contribution of Assets between an Investor and its Associate or Joint Venture**, govern the recognition of gains or losses for transactions between an investor and an associate or joint venture dependant on whether the sale concerns a business or just assets that do not constitute a business. This amendment is unlikely to have any material effects on Munich Re.

In December 2014, amendments to IFRS 10, IFRS 12 and IAS 28 were published in **Investment Entities: Applying the Consolidation Exception**. The amendments clarify the consolidation exception where a parent company meets the definition of an investment company. This amendment is unlikely to have any material effects on Munich Re.

As part of the Disclosure Initiative, in December the IASB published the amendment **Disclosure Initiative, Amendments to IAS 1 (12/2014)**, which is designed to eradicate uncertainties in the exercise of discretion when drawing up financial statements. It makes clear which considerations need to be taken into account with respect to materiality, the line items in the financial statements, and the order of the notes. Munich Re will analyse if these amendments have any effect on our reporting requirements.

The following new or revised standards will not become mandatory until a later date. The relevant information will be disclosed separately. Without exception, the legal changes have not yet been adopted into European law.

**IFRS 9 (07/2014), Financial Instruments**, replaces IAS 39 as regards the requirements relating to recognition and measurement of financial instruments. Under this revision, the categorisation of financial assets will be made in future on the basis of contractual cash flow characteristics and the business model of the asset held. Accordingly, subsequent measurement is made at amortised cost, at fair value without impact on profit or loss, or at fair value through profit or loss.

The possibility of voluntary measurement at fair value (fair value option) remains. However, the requirement for separate accounting of the component parts of certain structured products is no longer mandatory; under IFRS 9 they must be measured in their entirety at fair value through profit or loss. For financial liabilities, there are no changes in the measurement rules except that if the fair value option is applied, value changes attributable to a change in the entity's credit risk must be recognised without impact on profit or loss in future.

IFRS 9 envisages an expected loss model for recognising impairments, by which – unlike under the current incurred loss model of IAS 39 – expected losses are anticipated before they arise and must be accounted for in the balance sheet as an expense. There is to be only one model for recognising impairments that is to be used for all financial assets falling under the impairment rules of IFRS 9.

Hedge accounting under IFRS 9 focuses more strongly on the entity's risk management activities than was the case under the current rules of IAS 39. The new rules include provisions to ease requirements with respect to qualified hedged items and hedging instruments, and the assessment of hedge effectiveness.

The provisions of IFRS 9 are associated with extensive additional disclosures required in the appendices that were adopted in IFRS 7, Financial Instruments: Disclosures. The provisions are mandatory for financial years beginning on or after 1 January 2018. They are particularly important for Munich Re, and will involve significant implementation costs.

**IFRS 15 (05/2014), Revenue from Contracts with Customers**, governs the time and amount of the company's revenue to be recognised. As the recognition of revenue from insurance contracts and financial instruments does not fall within the scope of the new standard, it is not material for the accounting of our core business. We do not currently expect that the revisions will have any significant effects for Munich Re. The standard is mandatory for financial years beginning on or after 1 January 2017.

## Consolidation

### Consolidated group

The consolidated financial statements include Munich Reinsurance Company (the parent) and all the entities over which Munich Reinsurance Company directly or indirectly exercises control (subsidiaries).

Munich Reinsurance Company directly or indirectly holds all the voting rights in most of the entities included in the consolidated group. In a few cases when assessing whether control exists, there are some non-Group shareholders, but Munich Reinsurance Company directly or indirectly holds a clear majority of the voting rights. In these cases, no significant judgements or assumptions were made as to whether the entities are to be included.

We include a small number of entities in the consolidated group even though Munich Reinsurance Company does not directly or indirectly hold a majority of the voting rights in those entities. The inclusion is generally made on the basis that contractual rights are taken into consideration that result in determination of power over the relevant business activities.

Pursuant to IFRS 10, investment funds are included in the consolidated financial statements if they are controlled by Munich Re. In assessing the need to consolidate shares in investment funds, we take particular account of the role of the fund manager (including our assessment of its status as an agent for us), of similar rights that could lead to us exercising control over the fund, and of the degree of variability in the remuneration of the fund manager. This can sometimes result in an assessment that we do exercise control even though the shareholding is below 50%.

On behalf of our policyholders, in the area of unit-linked life insurance we invest in numerous retail funds that are mainly managed by companies which are not related parties of Munich Re. We do not generally control these companies, as we cannot determine the business activities that are relevant for the investee's returns. In the case of the other investment funds for unit-linked life insurance, we take the above criteria into account in determining whether there is control.

In assessing whether control exists for structured entities, we focus our analysis on the decisions still to be made within the corresponding unit and on the agency relationships between the parties. For structured entities used by us to issue catastrophe bonds, we focus above all on our relationship to the trustees and our possibilities to influence their decision-making. Generally, we do not control such structured entities, even if we hold their bonds.

#### Number of consolidated subsidiaries<sup>1</sup>

|                        | Germany | Other countries | Total |
|------------------------|---------|-----------------|-------|
| 31 Dec. previous year  | 100     | 226             | 326   |
| Additions              | 2       | 14              | 16    |
| Reductions             | -4      | -9              | -13   |
| 31 Dec. financial year | 98      | 231             | 329   |

<sup>1</sup> In addition, 58 German and 4 non-German investment funds were included in the consolidated group.

A list of all our shareholdings can be found in the section “List of shareholdings as at 31 December 2014 pursuant to Section 313 (2) of the German Commercial Code (HGB)”.

Cash flows and net assets from obtaining and losing control of consolidated subsidiaries or other operations are shown below:

#### Cash flows arising from obtaining control

| €m                                              | 2014        | Prev. year |
|-------------------------------------------------|-------------|------------|
| Total consideration for obtaining control       | -134        | -95        |

| <b>Total</b>               | <b>-</b> | <b>158</b> |

Further information on our gains and losses from losing control can be found in the notes to the consolidated balance sheets under Assets (17) Non-current assets and disposal groups held for sale that were sold in the reporting period.

## Business combinations occurring during the reporting period

With legal effect from 2 January 2014, via its subsidiary Cannock Chase Holding B.V., Amsterdam, Munich Re acquired 100% of the voting shares in Cannock Chase B.V., Leidschendam, 100% of the voting shares in Cannock Chase Incasso B.V., The Hague, 100% of the voting shares in Cannock Connect Center B.V., Brouwershaven, 100% of the voting shares in Mandaat B.V., Druten, 100% of the voting shares in Cannock Chase Purchase B.V., The Hague, and 62.50% of the voting shares in X-Pact B.V., The Hague. The Cannock Chase Group is the market leader in the public-sector client segment of the credit-management services market. The acquisitions are aimed at expanding the market position of DAS Nederlandse Rechtsbijstand Verzekeringmaatschappij N.V., Amsterdam, in the area of credit management. A purchase price of €32m in cash was paid for the acquisition.

On 1 August 2014, via its subsidiary ERGO International AG, Düsseldorf, Munich Re acquired 100% of the voting shares in SHC Insurance Pte. Ltd., Singapore, which in October was renamed ERGO Insurance Pte. Ltd. (ERGO Insurance), Singapore. The purchase price was S\$ 117m (€69m). It was paid in cash and fully financed from internal resources. ERGO Insurance offers a broad spectrum of property-casualty policies, including motor, liability, bond, personal accident, fire, marine, and engineering insurance. Market entry in Singapore ties in perfectly with ERGO's international growth strategy, which is focused on the highly attractive property-casualty markets of Southeast Asia.

Growth prospects for the next few years are also positive, one reason being the local supervisory authority's endeavours to turn Singapore into an international insurance hub similar to the London market by 2020. ERGO Insurance itself is well positioned for further growth.

In connection with the acquisition of ERGO Insurance, its existing client sales channels and software have been identified as other intangible assets. As part of the transaction, goodwill of approximately €21m and other intangible assets of around €19m were capitalised. The goodwill derives from anticipated synergies, the growth potential of ERGO Insurance and the further geographical spread of the ERGO Group in the desired growth regions. ERGO is already present in this region in Vietnam, where it owns a 35% share of the voting rights in Global Insurance Company (GIC). The single-entity national companies are led and supported by a regional management team, which can draw on the comprehensive expertise of the ERGO Group in the area of risk management and its vast experience in developing innovative products and sales channels. The goodwill includes the value assigned to ERGO Insurance's staff and is not tax-deductible.

The provisional IFRS carrying amounts of ERGO Insurance at the acquisition date are as follows:

Investments totalling €59m; ceded share of technical provisions amounting to €31m; cash at banks, cheques and cash in hand of €3m; intangible assets, receivables and other assets of €31m; equity of €48m; gross technical provisions of €65m; and other provisions, liabilities and deferred tax liabilities of €11m.

The fair value of the receivables acquired as part of the transaction largely corresponds to the carrying amount. No material defaults were anticipated at the time of acquisition.

No contingent liabilities or material separate transactions within the meaning of IFRS 3 were identified.

Gross premiums written of €15m and a result of €0.4m for ERGO Insurance have been included in the consolidated income statement. If Munich Re had acquired ERGO Insurance at the beginning of the financial year, ERGO Insurance would have contributed €39m in gross premiums written to the consolidated premium and a result of €3m to the consolidated result.

On 23 December 2014, via its subsidiary Munich Holdings of Australasia Pty Limited, Sydney, Munich Re acquired 100% of the voting shares in Calliden Insurance Pty Limited (Calliden), Sydney for a cash payment. Calliden specialises in commercial insurance, including niche products. Calliden has been an important partner of Munich Re since establishment in 2005. As part of this transaction, our newly-established subsidiary Calibre Commercial Insurance Pty Limited, Sydney, purchased via an asset deal, the distribution rights to certain commercial insurance portfolios of the Calliden Group Limited, Sydney, and its related IT underwriting platforms. The purchase price was also settled in cash. With these transactions, Munich Re will seek to develop niche products specifically tailored to current-market commercial insurance needs.

### Consolidation principles

The annual financial statements of the consolidated subsidiaries are subject to uniform accounting policies.

The balance sheet date of the consolidated companies is generally 31 December. Some of the investment funds have different balance sheet dates. These funds are consolidated on the basis of interim accounts as at 31 December. Acquisitions are accounted for by the purchase method. In order to determine the equity capital at the time of acquisition, we measure the acquired identifiable assets and liabilities of the subsidiary at fair value. The consideration transferred in exchange for the acquired shares is netted against the equity capital apportionable to the Group at the time of acquisition. Any residual positive amount is capitalised as goodwill. Profits earned by the subsidiaries after their first consolidation are included in Group equity. Amounts relating to intra-Group transactions (receivables and liabilities, expenses and income between consolidated companies) are eliminated unless they are determined as not being material.

### Associates and joint ventures

Pursuant to IAS 28, associates are generally all entities which are not subsidiaries or joint ventures but on whose financial and operating policies the investors can exercise a significant influence. In the case of shareholdings amounting to between 20% and 50% of the voting power, the entities in question are deemed to be associates unless it can be clearly demonstrated that there is no significant influence.

We classify a small number of entities as associates even though we hold less than 20% of the voting rights, mainly because we are represented on their supervisory boards and/or have significant business relations with them.

Under IFRS 11, a joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of that arrangement.

**Number of companies valued at equity**

|                        | Germany | Other countries | Total |
|------------------------|---------|-----------------|-------|
| 31 Dec. previous year  | 22      | 25              | 47    |
| Additions              | -       | -               | -     |
| Reductions             | -4      | -               | -4    |
| 31 Dec. financial year | 18      | 25              | 43    |

**Number of companies not valued at equity**

|                        | Germany | Other countries | Total |
|------------------------|---------|-----------------|-------|
| 31 Dec. previous year  | 39      | 10              | 49    |
| Additions              | 1       | -               | 1     |
| Reductions             | -5      | -1              | -6    |
| 31 Dec. financial year | 35      | 9               | 44    |

Information on the measurement of investments in associates and joint ventures can be found in the notes under Assets B – Investments.

**Joint operations**

Under IFRS 11, a joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets specified in the arrangement, and assume obligations for the liabilities relating to the arrangement. Unlike a joint venture, a joint operation does not confer rights to net assets.

We measure joint operations on the basis of the corresponding attributable assets, liabilities, income and expenses in accordance with the relevant IFRSs.

**Structured entities**

Structured entities are entities that have been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to administrative tasks only and the relevant business activities are directed by means of contractual arrangements.

Munich Re has interests in both consolidated and unconsolidated structured entities. An interest in an unconsolidated structured entity is classified as such where Munich Re receives variable returns from relevant activities of the structured entity but does not control that entity.

**Consolidated structured entities** In 2014, Munich Re provided no financial or other support to consolidated structured entities, or intended to do so in future, without having a contractual obligation to do so.

Munich Re classifies **unconsolidated structured entities** as either investment funds or securitisation vehicles on the basis of the type of structured entity.

**Investment funds** As part of its investment activities Munich Re invests in investment funds on its own behalf and on behalf of policyholders under unit-linked life insurance. Investment funds are mainly financed by issuing redeemable shares or units.

Munich Re above all invests in mutual and specialised funds in Germany and in other countries that invest in securities and real estate. Some of the investment funds are managed by MEAG MUNICH ERGO AssetManagement GmbH, others by fund managers outside the Group. They also include investments in forestry, infrastructure (including renewable energies and new technologies) and private equity.

On behalf of our policyholders, we invest in numerous investment funds for unit-linked life insurance that are mainly managed by companies which are not related parties of Munich Re. These funds are usually equity and bond funds which can be found under C – Insurance-related investments – Investments for unit-linked life insurance contracts.

**Securitisation vehicles** Munich Re invests in debt securities that are issued by securitisation vehicles which are not set up by Munich Re. Munich Re also uses securitisation vehicles to issue catastrophe bonds, and it also invests in third-party catastrophe bonds. Securitisation vehicles finance themselves by issuing securities.

The investments in debt securities comprise asset-backed securities (ABS), mortgage-backed securities (MBS), collateralised debt obligations (CDO) and collateralised loan obligations (CLO).

In order to protect its own portfolio, Munich Re uses alternative risk transfer in addition to traditional retrocession. Under this process, underwriting risks are transferred to the capital markets with the assistance of securitisation vehicles. The sole purpose of these vehicles is to securitise underwriting risks, mostly in the area of natural catastrophes, and to issue catastrophe bonds. Depending on the design of the risk transfer agreement with the securitisation vehicle, the transaction is classified as a derivative or as an insurance contract. Derivatives are designated as at fair value through profit or loss under “other securities” or “other liabilities”. The agreements designated as insurance contracts are not recognised in the balance sheet until a loss has occurred, and they are shown under “ceded share of technical provisions”.

Munich Re also invests in the area of catastrophe risks. Munich Re invests in various securities whose repayment and interest is generally linked to the occurrence of natural catastrophes. The securities are issued by securitisation vehicles which as a matter of general policy are not set up by Munich Re. If the risk transfer agreement is not an insurance contract, the bond component of the catastrophe bond is recognised under “securities available for sale”, and the derivative portion is recognised under “other securities at fair value through profit or loss” or under “other liabilities”. If there is an insurance contract, recognition is made under “deposits retained on assumed reinsurance” or “technical provisions”.

**Size of structured entities** For investment funds, including investments in forestry, infrastructure (including renewable energies and new technologies) and private equity, investment funds for policyholders under unit-linked life insurances, and investments in debt securities, the carrying amount gives an indication of the size of the structured entity. For the securitisation of underwriting risks, the total emitted volume (nominal

value) is used as an indicator for the valuation of the size of the structured entity. The size of the funds refers to both the issued volume of the securitisation vehicles set up by Munich Re and that of those securitisation vehicles in which Munich Re has invested.

#### Unconsolidated structured entities

|                                                      | Investment funds – Munich Re investments | Investment funds – Investments for unit-linked life insurance | Securitisation vehicles – Debt securities | Securitisation vehicles – Underwriting risks | Total         |

| <b>Total equity and liabilities</b>                  | <b>-</b>                                 | <b>-</b>                                                      | <b>-</b>                                  | <b>1</b>                                     | <b>1</b>      |
| Size of structured entity                            | 2,871                                    | 7,395                                                         | 5,757                                     | 8,078                                        | 24,101        |

**Maximum exposure to loss** With the exception of investment funds for investments for unit-linked life insurance, the maximum exposure to loss is the carrying amount of the respective items on the assets side, and zero for the items on the liabilities side. Therefore, for the items on the assets side, there is usually no difference between the carrying amount of interests in unconsolidated structured entities and the maximum exposure to loss.

Normally, the maximum exposure to loss for investments for unit-linked life insurance is also the carrying amount of the interests. However, the investment is held for the benefit of policyholders who bear the investment risk.

**Managed fund assets** MEAG MUNICH ERGO Kapitalanlagegesellschaft mbH also manages investment funds for private clients and institutional investors, for which it receives a management fee. The management fees are recognised as an expense in the consolidated income statement (commissions). The maximum exposure to loss relates to the loss of future management fees. Fund management activities generated income of €28m in the financial year 2014. The value of fund assets under management provides information about the size of the unconsolidated structured entities. As at 31 December 2014, the managed fund assets amounted to €3,073m, and Munich Re itself also holds a small interest in these funds.

**Financial support** Munich Re has not provided any non-contractual financial or other support to the unconsolidated structured entities presented above, nor does it have the intention to do so in the foreseeable future.

**Sponsored unconsolidated structured entities** Sponsored unconsolidated structured entities Munich Re provides structuring and consultancy services for clients within the context of the foundation and structuring of third-party securitisation vehicles. As at 31 December 2014, Munich Re did not have any interests in these structured entities.

## Assets

### A Intangible assets

**Goodwill** resulting from the first-time consolidation of subsidiaries is tested for impairment at least annually, in accordance with IAS 36. We additionally carry out ad-hoc impairment tests if there are indications of impairment. For impairment testing, the goodwill is allocated to the cash-generating units or groups of cash-generating units expected to derive benefit from the synergies of the business combination. To ascertain whether there is any impairment, the carrying amount (including allocated goodwill) of a cash-generating unit or group of cash-generating units is compared with that unit's or group's recoverable amount. The recoverable amount is the greater of the fair value less costs to sell and the value in use. If this recoverable amount is lower than the carrying amount, a write-down for impairment is made on the goodwill.

The **other intangible assets** mainly comprise acquired insurance portfolios, acquired and self-developed software, and acquired sales networks, client bases and brand names.

Acquired insurance portfolios are recognised at their present value on acquisition (PVFP – present value of future profits). This is determined as the present value of expected profits from the portfolio acquired, without consideration of new business and tax effects. The acquired insurance portfolios are amortised in accordance with the realisation of the profits from the insurance portfolios underlying the PVFP calculation. They are regularly tested for impairment using a liability adequacy test as per IFRS 4; see notes under Liabilities C – Gross technical provisions. Write-downs are recognised under operating expenses.

Self-developed and other software, acquired sales networks, client bases and brand names are carried at cost. Self-developed and other software is amortised on a straight-line basis at a rate of 20–33% over its useful life – three to five years – or in exceptional circumstances at a rate of at least 10% over a period of up to ten years. The useful lives and depreciation rates of the acquired sales networks and client bases are 2–17 years or 6–50% respectively, and those of the brand names 1–30 years or 3–100%; the items in question are generally amortised on a straight-line basis. Impairments or impairment losses reversed are recognised if required. Recognised impairments and impairment losses reversed are distributed in the consolidated income statement between investment expenses, expenses for claims and benefits and operating expenses. If it is not possible to allocate impairments and impairment losses reversed to the functional areas, they are shown under other non-operating expenses or income.

### B Investments

**Land and buildings** shown under investments comprise property used by third parties and are carried at cost. Maintenance expenses are recognised as an expense. Structural measures equivalent to 5% or more of the historical cost of a building are generally assessed with regard to whether they have to be capitalised. Buildings are depreciated on a straight-line basis in accordance with the component approach, depending on the weighted useful life for their specific building class. The underlying useful lives mainly range between 40 and 55 years. If the recoverable amount of land and buildings falls below their carrying amount, the carrying amount is written down to the recoverable amount. Impairment losses are recognised as investment expense in the consolidated income statement, and reversals of impairment losses as investment income.

**Investments in affiliated companies** that we do not consolidate because they are not material are generally carried at their fair values. If the investments are quoted on a stock exchange, we use the share prices at the balance sheet date (market values); for unquoted investments, the fair value is measured using the discounted earnings or net asset value method. Changes in the fair value are recognised in “other reserves” under unrealised gains and losses.

**Investments in associates and joint ventures** are valued by the equity method at the Group's proportionate share of their net assets. The earnings of the associate or joint venture attributable to the Group are included in the investment result. As a rule, the equity and annual result from the most recent individual or consolidated financial statements of the associate or joint venture are used; in the case of the annual financial statements of important associates or joint ventures, appropriate adjustments are made to ensure they conform with Munich Re's accounting policies; exceptional transactions of material importance for a true and fair picture of the financial position of the associate or joint venture are recognised in the same financial year. Investments in associates and joint ventures that are not material for assessing the Group's financial position are generally accounted for at fair value. To determine the fair value, we use the share prices at the balance sheet date if the investments are quoted on a stock exchange; for unquoted investments, the fair value is measured using the discounted earnings or net asset value method. Changes in the fair value are recognised in “other reserves” under unrealised gains and losses.

**Loans** are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are measured at amortised cost in accordance with the effective interest method. Write-downs for impairments are made in cases where the repayment of a loan can no longer be expected.

**Fixed-interest securities** held to maturity are measured at amortised cost in accordance with the effective interest method.

**Fixed-interest or non-fixed-interest securities available for sale** that are not designated as at fair value through profit or loss or recognised under loans are accounted for at fair value, with resulting changes in value recognised in equity with no effect on profit or loss. If no quoted prices in an active market are available, fair values are based on recognised valuation methods in line with the present value principle. Unrealised gains or losses are calculated taking into account interest accrued and, after deduction of deferred taxes and the amounts apportionable to policyholders by the life and health insurers on realisation (provision for deferred premium refunds), are recognised directly in equity under “other reserves”.

**Securities at fair value through profit or loss** comprise securities held for trading and securities designated as at fair value through profit or loss. Securities held for trading are all fixed-interest and non-fixed-interest securities that we have acquired for trading purposes to earn short-term profits from price changes and differences. In addition, they include all derivative financial instruments with positive fair values which we have acquired to manage and hedge risks but which do not meet the requirements of IAS 39 for hedge accounting. Securities designated as at fair value through profit or loss comprise structured securities. This designation may only be made at the time of acquisition; reallocation to this category in later periods is not possible.

Securities at fair value through profit or loss are accounted for at fair value at the balance sheet date. If no quoted prices in an active market are available, fair values (particularly with derivatives) are based on recognised valuation methods. Munich Re uses a range of valuation models for this purpose. Information on the valuation models and processes can be found in the Notes to the consolidated balance sheet – Assets (4) Hierarchy for the fair value measurement of investments.

All unrealised gains or losses from such valuation are included in the investment result.

**Deposits retained on assumed reinsurance** are receivables from our cedants for cash deposits that have been retained under the terms of reinsurance agreements; they are accounted for at face value.

**Other investments** comprise deposits with banks and tangible assets in renewable energies, physical gold, and forestry investments. Deposits with banks are measured at cost in accordance with the effective interest method. Tangible assets in renewable energies are generally accounted for at amortised cost. The items in question are amortised on a straight-line basis at a rate of at least 5% over a useful life of 20 years at most. In addition, these items are tested for impairment at each balance sheet date and write-downs for impairment or reversals of impairments are made if required. We measure physical gold at the acquisition cost; if the recoverable amount is lower than the carrying amount, a write-down for impairment is made. If there is a subsequent recovery in value, the impairment is reversed, with impact on the income statement. The resultant carrying amount may not exceed the acquisition cost. Forestry investments are measured at fair value less estimated costs to sell.

#### Repurchase agreements and securities lending

Under repurchase agreements we, as the lender, acquire securities against payment of an amount with the obligation to sell them back to the borrower at a later date. As the risks and rewards from the securities remain with the borrower, the amounts paid are not posted as such in our accounts but are shown as a receivable from the borrower under “other investments, deposits with banks”. Interest income from these transactions is recognised in the investment result.

Securities that we lend by way of securities lending continue to be recognised in our balance sheet, as the main risks and rewards remain with Munich Re; securities that we have borrowed are not recognised in the balance sheet. Fees from securities lending are recognised in the investment result.

#### Recognition of financial instruments

Financial assets are accounted for at the trade date.

#### Determining fair values

IFRS 13 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. All investments and other items that are recognised at fair value, and such investments and other items that are not recognised at fair value but for which a fair value is disclosed in the notes, are allocated to one of the fair value hierarchy levels of IFRS 13. This fair value hierarchy provides for three levels.

The allocation reflects which of the fair values derive from transactions in the market and where valuation is based on models because market transactions are lacking.

In the case of Level 1, valuation is based on unadjusted quoted prices in active markets for identical financial assets which Munich Re can refer to at the balance sheet date. A market is deemed active if transactions take place with sufficient frequency and in sufficient quantity for price information to be available on an ongoing basis. Since a quoted price in an active market is the most reliable indicator of fair value, this should always be used if available. The financial instruments we have allocated to this level mainly comprise equities and equity funds for which either a stock market price is available or prices are provided by a price quoter on the basis of actual market transactions. We have also allocated exchange-traded derivatives and exchange-traded subordinated bonds to Level 1.

Assets allocated to Level 2 are valued using models based on observable market data. For this, we use inputs directly or indirectly observable in the market, other than quoted prices. If the financial instrument concerned has a fixed contract period, the inputs used for valuation must be observable for the whole of this period. Moreover, we have allocated to this level such investments for which prices are provided by price quoters but for which there is no proof that these were based on actual market transactions. The financial instruments we have allocated to this level mainly comprise bearer bonds and bond funds, borrowers' note loans, covered bonds, subordinated securities, derivatives not traded on the stock market, and physical gas.

For assets allocated to Level 3, we use valuation techniques not based on inputs observable in the market. This is only permissible insofar as no observable market data is available. The inputs used reflect Munich Re's assumptions regarding the factors which market players would consider in their pricing. We use the best available information for this, including internal company data. The financial instruments allocated to this level of the fair value hierarchy largely comprise land and buildings, real-estate funds, investments in private equity, certain credit structures, and investments in subsidiaries, associates and joint ventures measured at fair value. Insurance-linked derivatives are also allocated to Level 3.

In the case of loans and investments in associates and joint ventures accounted for using the equity method, as well as bank borrowing and bond and note liabilities not traded on an active market, we have decided on a case-by-case basis to which level of the fair value hierarchy to allocate the respective fair values.

Owing to their leverage effect, changes in individual inputs may significantly affect the fair value shown for instruments measured under Level 3. If we make such adjustments in measuring fair value in the individual case, we explain the resultant effects.

#### **Net investment result**

The net investment result comprises regular income, income from write-ups, gains and losses on the disposal of investments, other income, write-downs of investments, management expenses, interest charges and other expenses. Regular income and

expenses from investments not measured at fair value through profit or loss are calculated in accordance with the effective interest method, i.e. any premiums or discounts are deducted from or added to the acquisition costs, with impact on profit or loss, until maturity.

### Impairment

At each balance sheet date, we assess whether there is any substantial objective evidence of impairment in a financial asset or group of financial assets. Impairments in value are recognised as an expense in the income statement. IAS 39.59 contains a list of such factors providing evidence of impairment of financial assets. In addition, IAS 39.61 states that for equity investments, a significant or prolonged decline in the fair value of the investment below its acquisition cost is objective evidence of impairment. These rules are given more concrete form by means of internal guidelines. For equities quoted on the stock exchange, we assume a significant decline in fair value if the market value at the review date is at least 20% below the average purchase price or has been lower than this amount for at least six months. In the case of fixed-interest securities and loans, the main basis for establishing impairment is an indication of substantial financial difficulty on the part of the issuer, the current market situation or media reports on the issuer.

We determine acquisition cost on the basis of the average purchase price. In the case of an impairment, a write-down is made to the fair value at the balance sheet date, i.e. generally the publicly quoted market price. If there is a further fall in the fair value of equity investments that have already been written down once, a further write-down recognised in the income statement is made again immediately. Such impairments recognised in profit or loss may not be reversed through profit or loss. If, in a subsequent period, the reasons for the impairment of fixed-interest securities or loans cease to apply, the impairment is reversed, with impact on the income statement. The resultant carrying amount may not exceed the original amortised cost.

## C Insurance-related investments

### Investments for unit-linked life insurance contracts

Investments for policyholders under unit-linked life insurance are measured at market value. Unrealised gains or losses from changes in market value are included in the insurance-related investment result. They are matched by corresponding changes in the technical provisions (see Equity and liabilities – D Technical provisions for unit-linked life insurance), which are included in the technical result. The change in technical provisions also includes changes from additional premium components to be recognised on the liabilities side of the balance sheet. Recognising these investments at market value, with impact on profit or loss, avoids valuation mismatches that would otherwise occur due to different measurement of the corresponding provisions.

### Other insurance-related investments

This refers to investments that are not utilised for asset-liability management. It includes insurance-linked derivatives, derivatives to hedge variable annuities, weather and commodity derivatives, and physical gas. Insurance-linked derivatives include derivatives embedded in variable annuities, the derivative components of natural catastrophe bonds and from securitisations of mortality and morbidity risks, individually structured insurance-linked derivatives, and derivative components which are separated from their host insurance contract in accounting. Insurance-linked

derivatives also include retrocessions in the form of derivatives to hedge insurance risks assumed. Insurance risks are defined as risks which – in a modified form – can also be assumed under an insurance contract within the meaning of IFRS 4. Other insurance-related investments are accounted for at fair value, although we recognise changes in value in profit or loss. For physical gas, the fair value is reduced by estimated costs to sell. If no quoted prices in an active market are available, fair values are based on recognised valuation methods. Munich Re uses a range of valuation models for this purpose. Information on the valuation models and processes can be found in the Notes to the consolidated balance sheet under Assets (4) Hierarchy for the fair value measurement of investments.

#### Net insurance-related investment result

The net result from these investments comprises regular income, income from write-ups, gains and losses on the disposal of insurance-related investments, other income, write-downs of insurance-related investments, management expenses, interest charges and other expenses.

### D Ceded share of technical provisions

The share of technical provisions for business ceded by us is determined from the respective technical provisions in accordance with the terms of the reinsurance agreements; see Equity and liabilities – C Gross technical provisions. Appropriate allowance is made for the credit risk.

### E Receivables

Current tax receivables are accounted for in accordance with local tax regulations and other receivables at amortised cost. In impairment tests of our receivables, we generally first assess whether objective evidence of impairment exists for items that are individually significant. If this is not the case, and also in the case of individually insignificant items, the impairment test is carried out collectively on the basis of groups of similar receivables. Receivables that are individually assessed for impairment are not included in the collective assessment. The amount of the probable loss is measured as the difference between the amortised cost and the present value of estimated future cash flows. The impairment thus determined is recognised as an expense. We generally deduct impairments directly from the items concerned on the assets side, without using a value adjustment account. If, in a subsequent period, the reasons for the impairment cease to apply, the impairment is reversed, with impact on the income statement. The resultant carrying amount may not exceed the original amortised cost.

Current tax receivables comprise current taxes on income of the individual companies, including any interest on taxes, based on their respective national taxation. Other tax receivables are shown under “other receivables”.

### F Cash at banks, cheques and cash in hand

Cash and cheques are accounted for at face value.

## G Deferred acquisition costs

Deferred acquisition costs comprise commissions and other variable costs directly connected with acquisition or renewal of insurance contracts. In accordance with IFRS 4, we do not use shadow accounting for deferred acquisition costs in life primary insurance. In life business and long-term health primary insurance, acquisition costs are capitalised and amortised over the duration of the contracts. This is done either proportionally to the premium income (FAS 60) or proportionally to the respective contracts' expected gross profit margins calculated for the relevant year of the contract term (FAS 97, 120). The allocation of individual contracts to the FASs concerned is shown under Equity and liabilities – C Gross technical provisions. In determining the amount of amortisation, we take into account an actuarial interest rate and changes resulting from the disposal or withdrawal of contracts from the portfolio. In property-casualty business, short-term health primary insurance and health reinsurance, the deferred acquisition costs are amortised on a straight-line basis over the average term of the policies, from one to five years. Deferred acquisition costs are regularly tested for impairment using a liability adequacy test pursuant to IFRS 4; see Equity and liabilities – C Gross technical provisions.

## H Deferred tax assets

Under IAS 12, deferred tax assets must be recognised in cases where asset items have to be valued lower, or liability items higher, in the consolidated balance sheet than in the tax accounts of the Group company concerned and these differences will be eliminated at a later date with a corresponding effect on taxable income (temporary differences). Also included are tax assets deriving from tax loss carry-forwards. Deferred tax assets are recognised to the extent that, on the basis of tax result planning, it is sufficiently probable that they will be utilised. As a rule, a five-year forecast period is considered. We take into account the tax rates of the countries concerned and the consolidated company's respective tax situation; in some cases, for purposes of simplification, we use uniform tax rates for individual circumstances or subsidiaries. Changes in tax rates and tax legislation that have already been adopted by the government at the balance sheet date are taken into account.

## I Other assets

Other assets are generally carried at amortised cost. The owner-occupied property recognised under other assets is accounted for as outlined under Assets – B Investments – Land and buildings. Plant and equipment is amortised mainly on a straight-line basis, the underlying useful lives ranging between 1 and 50 years. Where required, impairment losses are recognised or reversed for the Group's owner-occupied property. These impairment losses or impairment losses reversed are distributed between the functional areas.

## Equity and liabilities

### A Equity

The item **issued capital and capital reserve** contains the amounts that the equity holders of Munich Reinsurance Company have paid in on shares. The issued capital comprises the subscribed capital less the accounting value of own shares held by Munich Reinsurance Company at the balance sheet date. Acquisition costs exceeding the accounting value are deducted from retained earnings. The capital reserve contains gains from the sale of own shares by Munich Reinsurance Company.

Under **retained earnings**, we show the profits which consolidated companies have earned and retained since becoming part of Munich Re, and income and expenses resulting from changes in the consolidated group. In addition, the adjustment amount resulting from changes in accounting policies for earlier periods not included in the consolidated financial statements is recognised in the opening balance of the retained earnings for the earliest prior period reported. The retained earnings are reduced by the externally generated costs directly connected with equity capital measures, after taking into account tax effects.

Own shares held by Munich Re subsidiaries at the balance sheet date have been deducted directly from retained earnings.

**Other reserves** contain unrealised gains and losses resulting from the recognition of other securities available for sale at fair value and from investments in unconsolidated affiliated companies, and in associates and joint ventures that we do not value at equity. These reserves also include unrealised gains and losses from the valuation of associates and joint ventures at equity, differences resulting from the currency translation of foreign subsidiaries' figures, and the valuation result from the hedging of cash flows. In addition, reversals of impairment losses on equity investments available for sale are recognised in this equity item, without impact on profit or loss.

**Non-controlling interests** are accounted for in the balance sheet as part of equity. These are the shares of third parties in the equity of subsidiaries that are not wholly owned directly or indirectly by Munich Reinsurance Company. Direct minority interests in investment funds and in partnerships are recognised under "other liabilities". The portion of the result attributable to non-controlling interests is shown in the consolidated result.

### B Subordinated liabilities

Subordinated liabilities are liabilities which, in the event of liquidation or insolvency, are only satisfied after the claims of other creditors. They are measured at amortised cost in accordance with the effective interest method.

### C Gross technical provisions

The technical provisions are shown as gross figures in the balance sheet, i.e. before deduction of the ceded share; see the explanatory remarks on Assets – D Ceded share of technical provisions. The ceded share is calculated and accounted for on the basis of the individual reinsurance agreements. Acquisition costs for insurance contracts are capitalised and amortised over the terms of the contracts; see notes on Assets – G Deferred acquisition costs. The measurement of technical provisions is based on US GAAP FAS 60, FAS 97 and FAS 120. Credit insurance contracts are accounted for in accordance with the rules of IFRS 4.

**Unearned premiums** are accrued premiums already written for future risk periods. For primary insurance, these premiums are calculated separately for each insurance policy pro rata temporis; for reinsurance, nominal percentages are used in some cases where the data for a calculation pro rata temporis is not available. The posting of unearned premiums is restricted to short-term underwriting business; i.e. property-casualty business and parts of accident and health business. In the case of long-term business, a provision for future policy benefits is established.

The **provision for future policy benefits** in long-term underwriting business is posted for the actuarially calculated value of obligations arising from policyholders' guaranteed entitlements. As well as life insurance, this concerns portions of health and personal accident insurance, insofar as the business is conducted like life insurance. Measurement is usually based on the prospective method, by determining the difference between the present values of future benefits and future premiums. The actuarial assumptions used for their calculation include, in particular, assumptions relating to mortality, disablement and morbidity, as well as assumptions regarding interest-rate development, lapses and costs. These are estimated on a realistic basis at the time the insurance contracts are concluded and they include adequate provision for adverse deviation to make allowance for the risks of change, error and random fluctuations. The actuarial assumptions are adjusted if this is shown by a liability adequacy test in accordance with IFRS 4 to be necessary.

In reinsurance, measurement is carried out partly individually for each risk and partly collectively for reinsured portfolios, using biometric actuarial assumptions based on the tables of the national actuarial associations. These are adjusted for the respective reinsured portfolio, in line with the probabilities observed for the occurrence of an insured event. Discount rates are chosen that reflect the best estimate of expected investment income, less a safety margin. For the major part of the portfolio, these assumptions are fixed at the beginning of the contract and not changed over its duration.

In primary insurance, measurement is generally carried out individually for each risk. For German life primary insurance, biometric actuarial assumptions based on the tables of the German Association of Actuaries (Deutschen Aktuarvereinigung e.V.) are used. We also largely use the tables of the national actuarial associations for the rest of the primary insurance business. The actuarial interest rate employed for discounting in life primary insurance is limited by the respective maximum actuarial interest rate prescribed by the supervisory authorities. In health primary insurance, discount rates are chosen that reflect the best estimate of expected investment income, less a safety margin.

The measurement of the provisions for future policy benefits depends on the type of contract, being based either on FAS 60 (life primary insurance without performance-related participation in surplus, health primary insurance and the bulk of reinsurance treaties), on FAS 97 (life primary insurance based on the universal life model, unit-linked life insurance and life reinsurance for assumed policies based on FAS 97) or on FAS 120 (life primary insurance with performance-related participation in surplus).

For contracts in accordance with FAS 60, the provision for future policy benefits is calculated from the present value of estimated future policy benefits (including claims adjustment expenses) less the present value of future net level premiums. Net level premium is that part of the gross premium that is needed to finance future policy benefits. Life primary insurance contracts with limited premium payment are generally valued in accordance with FAS 97.

For all other contracts as per FAS 97, an account is kept to which net level premiums and interest earnings are credited and from which risk premiums and administration expenses are debited, not all credits and debits being contractually fixed at the time the contracts are concluded. The provision for future policy benefits for life primary insurance where policyholders bear the investment risk themselves (unit-linked life insurance) is shown separately under Equity and liabilities – D Technical provisions for unit-linked life insurance (gross).

In the case of contracts as per FAS 120, the provision for future policy benefits comprises the net level premium reserve and liabilities for terminal dividends. The net level premium reserve is calculated from the present value of guaranteed policy benefits (including acquired bonuses but excluding claims adjustment expenses) less the present value of future net level premiums. The net level premium is the net premium less the portion of the premium envisaged for covering claims adjustment expenses. The actuarial assumptions are generally the same as those used for premium calculation. The provision for terminal dividends is built up proportionally with a fixed share of the expected gross profit margins. The same method is used for this as for determining the amortisation of the deferred acquisition costs.

The **provision for outstanding claims** is for payment obligations arising from insurance contracts in primary insurance and reinsurance where the size of the claim or the timing of the payment is still uncertain. Part of the provision is for known claims for which individually calculated provisions are posted. Another part is for expenses for claims whose occurrence is not yet known (e.g. because they have not been reported yet or have not yet manifested themselves). A third class of provisions covers claims which are known but whose extent has turned out to be greater than originally foreseen. All these provisions include expenses for internal and external loss adjustments. The provision for outstanding claims is based on estimates: the actual payments may be higher or lower. The amounts posted are the realistically estimated future amounts to be paid; they are calculated on the basis of past experience and assumptions about future developments (e.g. social, economic or technological factors). Future payment obligations are generally not discounted; exceptions are some provisions for occupational disability pensions and annuities in workers' compensation and other lines of property-casualty business, which we discount. For determining the provision for outstanding claims, Munich Re uses a range of actuarial projection methods, including the chain ladder and the Bornhuetter-Ferguson method. In applying the statistical methods, we regard large exposures separately. The standard actuarial methods we use are applied both to the run-off triangles for the payments and to the run-off triangles for the reported claims, so that we obtain a range of estimates for the ultimate loss. Within this range, a realistic estimated value for the ultimate loss is determined.

**Other technical provisions** mainly include the provision for premium refunds in primary insurance and the provision for profit commission in reinsurance. Provisions for premium refunds are posted in life and health primary insurance for obligations involving policyholder bonuses and rebates that have not yet been irrevocably allocated to individual contracts at the balance sheet date. Where these provisions are posted on the basis of national regulations, a retrospective approach is usually taken based on supervisory or individual contract regulations. The provision for premium refunds based on national regulations relates only to German primary insurance business. The provision for premium refunds also incorporates the provision for premium loadings and the provision for future premium reductions in German health primary insurance.

For life insurance companies, health insurance companies and pension funds subject to supervision by the German Federal Financial Supervisory Authority (BaFin), the supervisory rules in accordance with the German Insurance Supervision Act (VAG) and with the respective regulations must be observed.

Besides this, there are provisions for deferred premium refunds, which are posted for the amounts apportionable to policyholders from the valuation differences between IFRS and local GAAP on the basis of the expected future participation quotas. For unrealised gains and losses on investments available for sale, which are recognised directly in equity (see Assets – B Investments), the resultant provision for deferred premium refunds is also posted without impact on profit or loss; otherwise, changes in this provision are recognised in the income statement.

All technical provisions are regularly subjected to a **liability adequacy test in accordance with IFRS 4**. If current experience shows that the provisions posted on the basis of the original assumptions – less the related deferred acquisition costs and the present value of the related premiums – are inadequate to cover the expected future benefits, we adjust the relevant technical provisions with recognition in profit or loss and disclose this under impairment losses/unscheduled changes in the notes to the consolidated balance sheet; see Notes to the consolidated balance sheet – Assets (2) Other intangible assets, Assets (14) Deferred acquisition costs, and Equity and liabilities (22) Provision for future policy benefits. The appropriateness of unearned premiums and of the provision for outstanding claims is assessed in relation to the realistically estimated future amount to be paid. The appropriateness of the provision for future policy benefits is assessed on the basis of realistic estimates of the actuarial assumptions, the proportional investment result and, for contracts with participation in surplus, the future profit sharing.

## D Gross technical provisions for unit-linked life insurance

This item encompasses the provision for future policy benefits in life primary insurance where policyholders bear the investment risk themselves (unit-linked life insurance). The value of the provision for future policy benefits essentially corresponds to the market value of the relevant investments shown under Assets C – Insurance-related investments – Investments for policyholders under unit-linked life insurance. Besides this, as with the provision for future policy benefits in accordance with FAS 97, they may include additional premium components; see the notes on Equity and liabilities C – Gross technical provisions. Changes in this provision are fully recognised in the technical result. Insofar as these changes derive from unrealised gains and losses from alterations in the market values of the related investments, they are matched by opposite changes of the same amount in the insurance-related investment result. Recognising these provisions at market value, with impact on profit or loss, avoids valuation mismatches that would otherwise occur due to different measurement of the corresponding investments.

## E Other accrued liabilities

This item includes **provisions for post-employment benefits and similar obligations**. Munich Re companies generally give commitments to their staff in the form of defined contribution plans or defined benefit plans. The type and amount of the pension obligations are determined by the conditions of the respective pension plan. In general, they are based on the staff member's length of service and salary. Under defined contribution plans, the companies pay fixed contributions to an insurer or a pension fund. This fully covers the companies' obligations. Under defined benefit plans, the

staff member is promised a particular level of retirement benefit either by the companies or by a pension fund. The companies' contributions needed to finance this are not fixed in advance. If pension obligations are covered by assets held by a legally separate entity (e.g. a fund or a contractual trust agreement in the form of a two-way trust) – assets that may only be used to cover the pension commitments given and are not accessible to creditors – the pension obligations are shown less the amount of these plan assets. If the fair value of the assets exceeds the related outsourced pension commitments, this reimbursement right is recognised under "other receivables".

Pension obligations are recognised in accordance with IAS 19, using the projected unit credit method and based on actuarial studies. The calculation includes not only the pension entitlements and current pensions known on the balance sheet date but also their expected future development.

The interest rate at which the pension obligations are discounted is based on the yields for long-term high-quality bonds (e.g. commercial or government bonds).

Revaluations of pension obligations can result from changes in demographic or financial assumptions or from the change in the effect of the asset ceiling. They are recognised in equity, without impact on profit or loss.

The **other provisions** included in this item are established in the amount of the probable requirement. Such amounts are not discounted if the interest-rate effect is insignificant.

## F Liabilities

This item comprises bonds and notes issued, deposits retained on ceded business, current tax liabilities, and other liabilities. Financial liabilities are generally recognised at amortised cost. Derivatives (derivative financial instruments) are recognised at fair value. Details of how the fair value is determined are provided under Assets – B Investments – Determining fair values.

Current tax liabilities comprise current taxes on income and interest on back tax of the individual companies, based on their respective national taxation. Other tax liabilities are shown under "other liabilities".

Tax liabilities for current taxes are posted – without discounting – in accordance with the probable tax payments for the year under review or previous years.

Deferred tax liabilities are shown under equity and liabilities item G.

The non-controlling interests in investment funds and partnerships are recognised at fair value.

## G Deferred tax liabilities

Under IAS 12, deferred tax liabilities must be recognised if asset items have to be valued higher, or liabilities items lower, in the consolidated balance sheet than in the tax accounts of the reporting company, and these differences will be eliminated at a later date with a corresponding impact on taxable income (temporary differences); see notes on Assets – H Deferred tax assets.

## Foreign currency translation

Munich Re's presentation currency is the euro (€). The balance sheets of foreign subsidiaries whose national currency is not the euro are translated in accordance with the functional currency principle using the year-end exchange rates, and their income statements using quarterly average exchange rates. Any exchange differences arising in the process are recognised in equity (reserve for currency translation adjustments).

In contrast to this, currency translation differences are largely recognised in profit or loss in our subsidiaries' individual financial statements. This involves the translation of foreign currency items into the respective functional currency in accordance with IAS 21. An excess of assets over liabilities in a particular foreign currency results on balance in a gain if that currency appreciates, and in a loss if it falls in value. The reverse applies if cover is insufficient.

The object of our asset-liability management, on which we report on page 102, is to economically minimise excess or insufficient cover in foreign currencies within the Group. Insofar as this is done across Group companies with different functional currencies, it produces economically non-existent fluctuations in the consolidated result. Where exchange gains or losses occur in the translation of foreign-currency transactions into the national currencies of the consolidated companies, they are accounted for under "other non-operating income" and "other non-operating expenses" respectively.

Beyond this, the impact of changes in exchange rates is reflected in period-to-period comparisons of all items in the income statement.

The following table shows the exchange rates of the most important currencies for our business:

### Currency translation rates

| Rate for €1       | Balance sheet |            |          | Income statement |          |          | Income statement |          |          |          |

## Segment reporting

In accordance with the management approach, the segmentation of our business operations is based on the way in which Munich Re is managed internally. Segment reporting was changed in the fourth quarter of 2014 in connection with changes to internal management, see Recognition and measurement – Changes in accounting policies and other adjustments.

We have consequently identified six segments to be reported:

- Life reinsurance (global life reinsurance business)
- Property-casualty reinsurance (global property-casualty reinsurance business)
- ERGO Life and Health Germany (German life and health primary insurance business, German property-casualty direct business, and global travel insurance business)
- ERGO Property-casualty Germany (German property-casualty insurance business, excluding direct business)
- ERGO International (ERGO primary insurance business outside Germany)
- Munich Health (global health reinsurance business and health primary insurance business outside Germany)

Certain primary insurers whose business requires special solution-finding competence are coupled to reinsurance as the risk carrier. We therefore transact their business from within reinsurance and consequently allocate them to the reinsurance segment.

Munich Re uses different performance indicators and measures. The main performance metrics at Group level are economic earnings and the return on risk-adjusted capital (RORAC). Besides this, IFRS result contributions are the basis of planning and strategy in all segments. Therefore the uniform assessment basis used for measuring the segment result is the operating result adjusted to eliminate non-operating components. The operating result is split into a technical result and a non-technical result, with an interest component allocated to the underwriting business in the form of technical interest (see Notes to the consolidated income statement – (31) Income from technical interest). The non-technical result also separately discloses the insurance-related investment result and the result of other investments. The segments reported under IFRS 8 are now shown after elimination of all intra-Group transactions (mainly dividend payments, sales, reinsurance transactions, receivables and corresponding interest income). Our segment reporting has no consolidation column.

In the case of intra-Group sales of assets where a provision for premium refunds has to be posted, the latter always has to be shown by the selling segment.

Intra-Group loans are completely eliminated in the balance sheet through consolidation. By contrast, the expenditure for the borrowers and income for the lenders is shown unconsolidated under “Other non-operating result, impairment losses of goodwill and net finance costs” for the segments concerned. All intra-Group shareholdings are consolidated, and all earnings and expenditure of the subsidiaries are shown in their segments.

## Allocation of goodwill to cash-generating units

For impairment testing, the goodwill is allocated to the cash-generating units or groups of cash-generating units that derive benefit from the synergies of the business combination. At the same time, the unit or group of units to which the goodwill is allocated represents the lowest level at which goodwill is monitored for internal

management purposes. In reinsurance, we have allocated the goodwill to divisions or groups of divisions, while in primary insurance it has been allocated to the ERGO segments Life and Health Germany and Property-casualty Germany, and to legal entities.

Our goodwill was fully allocated to the following cash-generating units or groups of cash-generating units:

#### Allocation of goodwill to cash-generating units

| €m                           | Reinsurance<br>property-<br>casualty<br>segment | ERGO<br>Life and<br>Health<br>segment<br>Germany | ERGO<br>Property-<br>casualty<br>segment<br>Germany | Various<br>cash<br>generating<br>units |
|------------------------------|-------------------------------------------------|--------------------------------------------------|-----------------------------------------------------|----------------------------------------|
| Goodwill at 31 December 2014 | 1,565                                           | 489                                              | 910                                                 | 99                                     |

The goodwill from the acquisition of Munich Re America has been allocated to a group of divisions (cash-generating units), which together make up the “reinsurance property-casualty segment”. Apart from the goodwill from the acquisition of Munich Re America, the carrying amount shown for this includes other goodwill that is impairment-tested on the basis of cash-generating units at the level of divisions or groups of divisions within the segment. This other goodwill is not significant in comparison with the total goodwill and is tested for impairment on the basis of the same key assumptions used for the goodwill from the acquisition of Munich Re America. The goodwill from the acquisition of shares in the ERGO Insurance Group was originally allocated to the cash-generating unit “ERGO”. The change in management reporting and the corresponding change in segment reporting (see Recognition and measurement – Change in accounting policies and other adjustments) required a reallocation of the goodwill, as there has been a change in the composition of the cash-generating unit ERGO. On the basis of a relative valuation, the goodwill has been allocated to the new primary insurance segments ERGO Life and Health Germany, ERGO Property-casualty Germany and ERGO International. The goodwill proportionately allocated to the segment ERGO International for the acquisition of shares in ERGO Insurance Group was written off in full after impairment testing (see “Amount of impairment losses recognised in profit or loss during the period”).

Goodwill allocated across other multiple cash-generating units or groups of cash-generating units is not significant in comparison with the total goodwill, either individually or in total. We regard as “significant” within the meaning of IAS 36.134 and IAS 36.135 amounts of 10% or more of total Group goodwill.

#### Significant assumptions for determining the recoverable amount in impairment testing

Impairment tests for cash-generating units to which a significant portion of the goodwill is allocated were carried out on the basis of the following assumptions:

| Cash-generating unit or group of cash-generating units                           | Reinsurance property-casualty segment                                                                                                                                                                                                                | ERGO Life and Health Germany segment                                                                                                                                                                                | ERGO Property-casualty Germany segment                                                                                                                                                                                                                                |

The calculation of these values in use is based on distributable target results derived from the current market environment and the latest corporate planning approved by management. Prepared in an interactive process involving the operational units, the responsible controlling units and the Board of Management, the corporate plans are reviewed and updated at least every quarter. The aforementioned key assumptions regarding premium income development, the combined ratios and the results derive from the aggregation of the company plans of the individual companies of a cash-generating unit. The key assumptions regarding developments in the equity market and interest-rate level are uniformly defined within Munich Re (Group) on the basis of the current market environment. After the detailed planning phase, we estimate the target results achievable long term on the basis of the last adjusted planning year and a growth rate derived in taking macroeconomic forecasts into account.

Cost-of-equity rates derived using the Capital Asset Pricing Model (CAPM) were used as discount rates. Calculations are based on distributable target results after consideration of normalised taxes. In the above table, for disclosure purposes, a corresponding discount rate before tax is given in each case. Sensitivity analyses were performed for the discount rates, growth rates and distributable target results. No impairments were identified.

#### Amount of impairment losses recognised in profit or loss during the period

In the 2014 financial year, our impairment testing of goodwill identified impairments totalling –€445m. These have been recognised in the item “impairment losses of goodwill” in the income statement and are attributable in particular to the following:

The goodwill totalling €440m from the acquisition of shares in the ERGO Insurance Group and proportionately allocated to the segment ERGO International was written off in full in the fourth quarter 2014. The recoverable amount for the segment ERGO International is €2,117m. The impairment is mainly also attributable to the low-interest-rate environment. The impairment was identified as a result of the calculation of the recoverable amount on the basis of the fair value less costs to sell. To be able to take account of the different business activities and maturity of the companies in the segment

ERGO International, a sum-of-the-parts valuation was undertaken. Major life insurance companies were measured on the basis of Market Consistent Embedded Value (MCEV) plus the value of expected new business. The value of expected new business was established using a company-specific multiplier (with a multiple of 0-10.7) of the present value of the last annual new business generation. The MCEV calculations are based on the interest-rate swap curves relevant in the markets. For ERGO Italy and ERGO Austria we have additionally taken into consideration a market-consistent derived illiquidity premium of 28 basis points. The other companies of the segment were mainly valued in accordance with the discounted cash flow equity method. The discounted cash flow calculations were based on discount rates (before normalised taxes) between 9.6% and 15.5%. The detailed planning phases generally comprise three years. The growth rates after the detailed planning phases range between 0% and 4.8%. In measuring all the companies of ERGO International, the current valuation levels of insurance companies listed on the stock exchange and the acquisition prices of recent market transactions were taken into consideration. The fair value thus determined is allocated to Level 3 of the fair value hierarchy. The resulting impairment loss is recognised in the ERGO International segment.

| Gross carrying amount at 31 Dec. financial year                                      | -              | -          | 87            | 88         | 4,035        | 3,836        |

The impairment losses are distributed between the following different Group segments: in reinsurance, -€1m (-3m) is apportionable to life and -€27m (-11m) to property-casualty; in the ERGO field of business, -€6m (-43m) is apportionable to Life and Health Germany, - (-€1m) to Property-casualty Germany and -€62m (-) to ERGO International. The Munich Health segment saw impairment losses of - (-€3m).

Intangible assets from the purchase of sales networks/client bases were written down by –€86m, mainly owing to reduced business prospects. The impairments were recognised in the segments property-casualty reinsurance (–€25m) and ERGO International (–€61m).

Assets pledged as security and other restrictions on title amount to €159m (160m). Commitments to acquire other intangible assets total €8m (7m). Costs of –€4m (–3m) for research and development incurred in connection with software projects were not capitalised but recognised as expenses.

| Accumulated depreciation and accumulated impairment losses at 31 Dec. financial year | -1,197       | -1,130       |
| Gross carrying amount at 31 Dec. financial year                                      | 4,929        | 4,892        |

The impairment losses reversed are distributed between the following: in reinsurance, €2m (1m) is apportionable to life and €8m (4m) to property-casualty; in the ERGO field of business, €22m (15m) is apportionable to Life and Health Germany and €1m (–) to Property-casualty Germany.

Impairment losses reversed are chiefly attributable to appreciations in value following the revitalisation of real estate and to positive market development.

The impairment losses are distributed between the following segments: in reinsurance, –€1m (–1m) is apportionable to life and –€1m (–2m) to property-casualty; in the ERGO field of business, –€6m (–11m) is apportionable to Life and Health Germany and –€1m (–) to Property-casualty Germany.

The impairment losses were mainly due to the fact that the life cycle of property had been exceeded.

The fair value of investment property at the balance sheet date amounted to €5,738m (5,525m). Valuations for the directly held portfolio are performed by valuers within the Group, and those for the indirectly held portfolio by external valuers. Property is allocated to Level 3 of the fair value hierarchy; see Assets – B Investments –

Determining fair values. Determining the sustainability of cash inflows and outflows, taking into account the development of market conditions at the property location, is material for the valuation. The fair value is determined individually per item by discounting the future cash flow as at the valuation date. Depending on the type of property and its individual opportunity/risk profile, discount rates of 2.75% to 4.00% are used for residential buildings, 3.75% to 7.00% for office buildings, and 3.75% to 7.25% for retail.

Property pledged as security and other restrictions on title amount to €835m (838m). Contractual commitments to acquire property amount to €29m (14m).

#### 4 Hierarchy for the fair value measurement of investments

All investments recognised at fair value are allocated to one of the fair value hierarchy levels of IFRS 13, as are those investments which are not recognised at fair value in the balance sheet but for which a fair value has to be disclosed in the notes. Information on the criteria for allocation to the individual levels of the fair value hierarchy can be found in the notes under Assets – B Investments, Determining fair values. Regularly, at each reporting date, we assess whether the allocation of our investments to the levels of the fair value hierarchy is still appropriate. If changes in the basis of valuation have occurred – for instance, if a market is no longer active or the valuation was performed using inputs requiring another allocation – we make the necessary adjustments.

The following table provides an overview of the models used to measure the fair values of our investments.

## Valuation models

| Bonds                                                   | Pricing method    | Parameters                                                                                             | Pricing model                                                                                |
|---------------------------------------------------------|-------------------|--------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|

Insurance-linked derivatives (excluding variable annuities) are allocated to Level 3 of the fair value hierarchy. The valuation of the derivative components of catastrophe bonds is based on the values supplied by brokers for the underlying bonds, which is why it is not possible to quantify the inputs used that were not based on observable market data. If no observable inputs are available for customised insurance-linked derivatives, valuation is made using the present-value method on the basis of current interest-rate curves and historical event data. Due to the low volume, the effects of alternative inputs and assumptions are immaterial.

At Munich Re, the valuation of variable annuities is performed on a fully market-consistent basis. The inputs requiring consideration in this valuation are derived either directly from market data, in particular volatilities, interest-rate curves and currency spot rates, or from actuarial data, especially biometric data and lapse rates. The lapse rates used are modelled dynamically and range between 0.5% and 20%, depending on the specific insurance product and current situation of the capital markets. A 10% increase or decrease in the lapse rates would lead to a change of  $\pm 1\%$  in the fair value of the portfolio. The assumptions with regard to mortality are based on published mortality tables, which are adjusted with a view to the target markets and the actuaries' expectations. The impact of these and other non-observable assumptions is not material. The dependency between different capital market inputs is modelled by correlation matrices. Since inputs not observable on the market were also used in valuation, we allocate these products to Level 3 of the fair value hierarchy.

The other investments allocated to Level 3 are mainly external fund units (in particular, private equity and real estate) as well as relatively illiquid credit structures (especially collateralised mortgage-backed securities and credit-linked obligations). In the case of the former, market data are not available on a regular basis; rather, net asset values (NAVs) are provided by the asset managers. With regard to the latter, the quality of the market quotes available from market data providers is insufficient, so we resort to broker valuations. With these investments, we thus do not perform our own valuations using inputs not based on observable market data but rely on what is supplied by the brokers. We regularly subject the valuations supplied to plausibility tests on the basis of comparable investments.

At 31 December 2014, around 11% (12%) of the investments measured at fair value were allocated to Level 1 of the fair value hierarchy, 86% (84%) to Level 2 and 3% (4%) to Level 3.

## Allocation of investments (including insurance-related investments) to levels of the fair value hierarchy

1 Including hedging derivatives of €204m (229m) accounted for under "other assets".

2 Owing to the changes made to our balance sheet structure in 2014, insurance-linked derivatives for 2013 are still recognised under investments held for trading.

In the financial year, we reallocated portions of the asset-backed securities (ABSs) in our portfolio from Level 3 to Level 2. These portfolios are now valued solely on the basis of observable market inputs. Apart from this, we maintained the allocation to the individual levels of the fair value hierarchy unchanged.

The only investments held for trading that are allocated to Level 3 are derivatives.

The following table presents the reconciliation from the opening balances to the closing balances for investments allocated to Level 3.

Reconciliation for investments allocated to Level 3

|                                                                                                                               | Investments in affiliated companies measured at fair value |            | Investments in associates and joint ventures measured at fair value |            |

<sup>1</sup> Owing to changes made in our balance sheet structure in 2004, investments for 2013 are still recognised under investments held for trading.

## 5 Investments in affiliated companies, associates and joint ventures

### Breakdown of investments in affiliated companies, associates and joint ventures

| €m                                           | 31.12.2014   | Prev. year   |
|----------------------------------------------|--------------|--------------|
| Investments in affiliated companies          |              |              |
| Accounted for at fair value                  | 274          | 214          |
| Investments in associates and joint ventures |              |              |
| Accounted for using the equity method        | 1,280        | 1,291        |
| Accounted for at fair value                  | 5            | 9            |
| <b>Total</b>                                 | <b>1,559</b> | <b>1,514</b> |

The fair value of investments in associates and joint ventures accounted for using the equity method amounted to €1,796m (1,721m) at the balance sheet date. In the financial year, shares of losses of associates amounting to - (€2m) were not recognised in the balance sheet. Altogether, the losses not recognised in the balance sheet totalled - (€4m).

The impairment losses reversed with respect to associates and joint ventures amounted to €22m (1m). They are distributed between the following different Group segments: in reinsurance, €16m (1m) is apportionable to property-casualty; in the ERGO field of business, €5m (-) is apportionable to Life and Health Germany and €1m (-) to Property-casualty Germany.

Write-downs with respect to these companies amounted to –€34m (–101m). They are distributed between the following different Group segments: in reinsurance, – (–€1m) is apportionable to life and –€16m (–81m) to property-casualty; in the ERGO field of business, –€1m (–4m) is apportionable to Life and Health Germany and –€2m (–15m) to Property-casualty Germany; –€15m (–) is allocable to Munich Health.

At the balance sheet date, there were contingent liabilities of €26m (24m) from investments in associates and joint ventures. These essentially comprised payment obligations.

There are also other financial commitments in the amount of €104m (95m) with respect to joint ventures. These essentially comprised investment obligations for financing.

These contingent liabilities and other financial commitments are also included under Other information (51) Contingent liabilities, other financial commitments.

There were no significant limitations on the possibility for associates and joint ventures to transfer dividends or liquid funds to Munich Reinsurance Company and its subsidiaries, or to repay loans to Munich Reinsurance Company and its subsidiaries.

The total carrying amounts of the holdings (investments) in associates and joint ventures amounted to €1,285m (1,300m) in the period under review.

Further information about associates and joint ventures can be found in the section “List of shareholdings as at 31 December 2014 in accordance with Section 313 (2) of the German Commercial Code (HGB)”.

## 6 Loans

#### Breakdown of loans

| €m                                               | Carrying amounts |               |
|--------------------------------------------------|------------------|---------------|
|                                                  | 31.12.2014       | Prev. year    |
| Mortgage loans                                   | 4,440            | 4,482         |
| Loans and advance payments on insurance policies | 519              | 593           |
| Other loans                                      | 49,591           | 50,170        |
| <b>Total</b>                                     | <b>54,550</b>    | <b>55,245</b> |

The other loans mainly comprise covered bonds, government bonds and borrowers' note loans of banks.

The fair value of the loans is based on recognised valuation methods in line with the present value principle and taking observable market inputs into account; see note (4) Hierarchy for the fair value measurement of investments. The fair value totalled €68,950m (61,316m) at the reporting date.

**Contractual period to maturity**

Over half the corporate debt securities are covered bonds or issues by development banks and comparable institutions. The remaining portfolio is composed of securities issued by companies outside the banking sector, with each individual risk making up less than 1%, bonds issued by banks and state central savings banks (with state guarantees) and asset-backed securities/mortgage backed securities. The asset-backed securities/mortgage-backed securities are largely rated A or better. Assets pledged as security and other restrictions on title amount to €7,327m (7,309m). Some €2,073m (1,525m) of the securities shown are loaned to third parties. These securities are not derecognised, as the main resultant risks and rewards remain with Munich Re. Of the €14,237m (6,636m) in unrealised gains and losses, €5,773m (3,121m) has been recognised in equity (other reserves), after deduction of provisions for deferred premium refunds, deferred taxes, non-controlling interests, and consolidation and currency translation effects.

| BBB          | 22,394         | 19,071         |
| Lower        | 4,563          | 3,064          |
| No rating    | 270            | 185            |
| <b>Total</b> | <b>129,806</b> | <b>113,671</b> |

The rating categories are based on those of the leading international rating agencies.

## 9 Other securities at fair value through profit or loss and insurance-related investments

Securities at fair value through profit or loss comprise securities of €1,964m (2,136m) held for trading and securities of €205m (164m) designated as at fair value through profit or loss.

The securities held for trading are made up of fixed-interest securities totalling €45m (647m), non-fixed-interest securities totalling €45m (37m) and derivatives amounting to €1,874m (1,452m). The securities designated as at fair value through profit or loss comprise €204m (163m) assignable to fixed-interest securities and €1m (1m) to non-fixed interest securities. Some €37m of the securities at fair value through profit or loss is due within one year.

Rating of fixed-interest securities according to fair values

| €m           | 31.12.2014 | Prev. year |
|--------------|------------|------------|
| AAA          | 66         | 472        |
| AA           | 22         | 107        |
| A            | 91         | 136        |
| BBB          | 70         | 95         |
| Lower        | -          | -          |
| No rating    | -          | -          |
| <b>Total</b> | <b>249</b> | <b>810</b> |

The rating categories are based on those of the leading international rating agencies.

The insurance-related investments include investments for unit-linked life insurance contracts of €7,592m (6,699m) and other insurance-related investments of €869m (608m).

Derivative financial instruments are used by Munich Re to manage and hedge against interest-rate, currency, and other market risks. This is done at the Group companies within the framework of individual supervisory regulations and additional internal company directives. The risk of default is practically non-existent in the case of products traded on the stock exchange. Over-the-counter products, on the other hand, harbour a theoretical risk in the amount of the replacement costs. Therefore, Munich Re selects only top-quality counterparties for such transactions.

As at 31 December 2014, Munich Re held collateral for derivatives in the form of securities with a rating of at least AA that may either be sold or transferred as collateral. The fair value of this collateral amounts to €867m (1,056m).

Under the risk type “insurance risks”, we essentially subsume the derivative portions of the line item “Other insurance-related investments”. This excludes derivatives that fall under the risk type “weather or commodity risks”. Information about other insurance-related investments can be found under Assets – C Insurance-related investments.

Although the derivatives used by Munich Re essentially serve to manage and hedge risks, only an amount of €190m (219m) meets the requirements of IAS 39 for hedge accounting.

IAS 39 distinguishes between fair value hedges and cash flow hedges.

**Fair value hedges** In the case of fair value hedges, the change in the fair value of the hedging instrument and the change in the fair value of the hedged instrument are generally recognised in profit or loss under the items “investment income” and “investment expenses”. With Munich Reinsurance Company’s hedged subordinated bond, this information is shown under net finance costs. Munich Re uses hedging relationships in the form of fair value hedges to selectively and efficiently mitigate interest-rate and other market risks. The main types of transaction employed for hedging are swaps and forwards. The fair value of the derivatives used for this purpose amounted to €153m (184m) at the balance sheet date. In 2014, the following changes in value were recognised in the consolidated income statement: –€31m for the hedging instruments and €30m for the relevant underlyings.

**Cash flow hedges** play a role in countering fluctuations that may be caused, for example, by variable interest payments. Munich Re uses cash flow hedges chiefly to hedge against interest-rate risks, with interest-rate swaps being the main instruments employed. Changes in the fair value of the hedging instrument are recognised directly in equity for this purpose. Only when the actual cash inflow or outflow takes place, as a result of the hedged circumstance, is the relevant equity item reversed with recognition in profit or loss.

The change in fair value assignable to the ineffective portion of the hedging was negligible at the reporting date.

At the balance sheet date, there is an equity item of –€2m (3m) from cash flow hedges. The net fair value of the derivatives falling into this category amounted to €37m (35m) at the balance sheet date.

#### Periods to maturity and amount of the hedged cash flows at the balance sheet date

| €m                                      | < 1 year | 1–2 years | 2–3 years | 3–4 years | 4–5 years | > 5 years | 31.12.2014 | Prev. year |
|-----------------------------------------|----------|-----------|-----------|-----------|-----------|-----------|------------|------------|
| Notional amounts of hedged transactions | 68       | 37        | 25        | –         | 50        | 200       | 380        | 389        |

## 10 Deposits retained on assumed reinsurance

Deposits retained on assumed reinsurance serve directly as collateral for technical provisions covering business assumed from cedants in reinsurance. They do not trigger any cash flows and may not be used by the cedant independently. The credit risk is therefore limited. The amount of and changes in deposits retained on assumed reinsurance in the financial year generally derive from the values for the changes in the related technical provisions for the reinsured business. Deposits retained on assumed reinsurance business thus do not have a fixed maturity date, their release generally being dependent on the run-off of the corresponding provisions.

## 11 Other investments

Other investments comprise deposits with banks totalling €3,513m (3,006m), tangible assets in renewable energies amounting to €470m (498m), physical gold of €331m (290m), and forestry investments totalling €10m (9m). Deposits with banks include receivables of €347m (144m) from borrowers under repurchase agreements that have been booked by us as the lender.

Of the amounts held on deposit with banks, €3,473m (2,993m) is due within one year. With these deposits, the fair values largely correspond to the carrying amounts. Assets pledged as security and other restrictions on title amount to €16m (10m) for deposits with banks.

### Development of tangible assets in renewable energies

Details of the ceded share of technical provisions are shown in the Notes to the consolidated balance sheet – Equity and liability (21) Unearned premiums, (22) Provisions for future policy benefits, (23) Provisions for outstanding claims, (24) Other technical provisions and in the Disclosures on risks from insurance contracts and financial instruments (41) Credit risks from ceded reinsurance business.

## 13 Other receivables

### Breakdown of other receivables

| €m                                               | 31.12.2014    | Prev. year    |
|--------------------------------------------------|---------------|---------------|
| Amounts receivable on primary insurance business | 1,373         | 1,345         |
| Accounts receivable on reinsurance business      | 4,382         | 4,255         |
| Interest and rent                                | 2,748         | 2,722         |
| Miscellaneous receivables                        | 2,966         | 3,053         |
| <b>Total</b>                                     | <b>11,469</b> | <b>11,375</b> |

Of the amounts receivable on primary insurance business, €549m (498m) is apportionable to receivables from insurance agents. The miscellaneous receivables contain receivables of €1,079m (887m) resulting from reinsurance contracts without significant risk transfer, which do not fall within the scope of IFRS 4.

Assets pledged as security and other restrictions on title amount to €47m (35m).

Other receivables include received cash collateral for derivative transactions of €244m (437m).

#### Contractual period to maturity of other receivables according to carrying amounts

| €m                                    | Carrying amounts |               |
|---------------------------------------|------------------|---------------|
|                                       | 31.12.2014       | Prev. year    |
| Up to one year                        | 10,246           | 10,061        |
| Over one year and up to two years     | 128              | 91            |
| Over two years and up to three years  | 74               | 100           |
| Over three years and up to four years | 269              | 386           |
| Over four years and up to five years  | 31               | 24            |
| Over five years and up to ten years   | 539              | 87            |
| Over ten years                        | 182              | 626           |
| <b>Total</b>                          | <b>11,469</b>    | <b>11,375</b> |

As the other receivables mainly have a period to maturity of less than one year, the fair values largely correspond to the carrying amounts.

As at 31 December 2014, our accounts receivable on ceded reinsurance business were split between the following ratings (based on those of Standard & Poor's):

#### Rating of accounts receivable

| €m                 | 31.12.2014 | Prev. year |
|--------------------|------------|------------|
| AAA                | 2          | -          |
| AA                 | 23         | 26         |
| A                  | 29         | 61         |
| BBB and lower      | -          | 1          |
| No external rating | 133        | 113        |

Of all our receivables on underwriting business at the balance sheet date, €255m (367m) was outstanding for more than 90 days. The average defaults of the last three years amount to €202m (161m).

The amortisation includes accrued interest as well as write-downs. The impairment losses comprise write-ups and write-downs stemming from changes in the assumptions underlying the calculations which require an adjustment in the measurement.

An adjustment in the assumptions led to an impairment loss of deferred acquisition costs in the segments life reinsurance and property-casualty reinsurance.

In the ERGO Life and Health Germany segment, assumptions regarding future mortality, lapses and profit participation, and regarding long-term interest-rate levels were adjusted in 2014 on the basis of the long-term regular return on investments. Overall, the adjustment led to impairment losses of deferred acquisition costs.

## 15 Deferred tax

The deferred tax assets and liabilities recognised in the consolidated balance sheet concern the following balance sheet items:

### Deferred tax

| €m                                  | 31.12.2014   |              | Prev. year   |              |

The deferred taxes for technical provisions include the deferred taxes for deferred acquisition costs and €2,625m (2,207m) for claims equalisation provisions, which are not posted under IFRS.

The excess of deferred tax liabilities over deferred tax assets amounts to €2,175m (1,193m). The change of -€982m (1,387m) was recognised as follows: -€837m (1,008m) without impact on profit or loss and -€166m (419m) in earnings. The remaining change is due to obtaining or losing control and to currency translation.

No deferred taxes were posted for temporary differences of €54m (45m) in connection with investments in subsidiaries and associates, also referred to as outside basis differences.

We have broken down the existing deferred tax assets relating to loss carry-forwards and the loss carry-forwards themselves.

Loss carry-forwards excluding deferred tax assets stem mainly from Australia and New Zealand. Based on planning for future taxable income, no deferred tax assets were set aside to cover most of these loss carry-forwards.

## 16 Other assets

These mainly comprise owner-occupied property totalling €2,424m (2,419m), plant and equipment of €274m (249m), advance payments on insurance amounting to €384m (389m), derivatives totalling €204m (229m), miscellaneous deferred items of €162m (134m), and recoveries from policyholders totalling €38m (33m). Of the owner-occupied property, – (€12m) involves finance leases.

## Development of property, plant and equipment

| Accumulated amortisation and accumulated impairment losses at 31 Dec. financial year | -1,091                  | -729                           | -31        | -1,851       |
| Gross carrying amount at 31 Dec. financial year                                      | 3,510                   | 978                            | 51         | 4,539        |

The impairment losses reversed are distributed between the following different Group segments: in reinsurance, €2m (1m) is apportionable to life and €2m (1m) to property-casualty; in the ERGO field of business, €2m (5m) is apportionable to Life and Health Germany, and €1m (-) is allocable to Munich Health.

The impairment losses are distributed between the following different Group segments: in reinsurance, -€2m (-) is apportionable to life and -€2m (-) to property-casualty; in the ERGO field of business, - (-€4m) is apportionable to Life and Health Germany, -€1m (-1m) to Property-casualty Germany, and -€1m (-1m) is allocable to Munich Health.

The fair value of the property amounts to €2,909m (2,828m). This is allocated to Level 3 of the fair value hierarchy; see Assets – B Investments, Determining fair values. The methodology for determining the fair values is described in (3) Land and buildings, including buildings on third-party land.

The expenditures recognised in the carrying amount for assets in the course of construction total €21m (78m) for property and €21m (15m) for plant and equipment. Commitments to acquire property total €5m (33m) and commitments to acquire plant and equipment €12m (13m). For plant and equipment, no assets were pledged as security or other restrictions on title.

## 17 Non-current assets and disposal groups held for sale and sold during the reporting period

In the third quarter of 2014, ERGO Versicherungsgruppe AG, via its subsidiary Victoria Lebensversicherung Aktiengesellschaft, Düsseldorf, sold its shares in its associates TERTIANUM Besitzgesellschaft Berlin Passauer Strasse 5-7 mbH, Munich, TERTIANUM Besitzgesellschaft Konstanz Marktstätte 2-6 und Sigismundstrasse 5-9 mbH, Munich, TERTIANUM Besitzgesellschaft München Jahnstrasse 45 mbH, Munich, TERTIANUM Seniorenresidenz Betriebsgesellschaft München mbH, Munich and TERTIANUM Seniorenresidenzen Betriebsgesellschaft mbH, Constance. The sale price for all five companies totalled €26.9m. The sale affected our operating result to the amount of €0.7m.

In the fourth quarter of 2014, Munich Health Holding AG, Munich, decided to sell its shares in the fully consolidated company DKV Luxembourg S.A., Luxembourg. The sale is planned for the first half-year of 2015.

In the fourth quarter of 2014, MEAG MUNICH ERGO AssetManagement GmbH sold its shares in its associate PICC Asset Management Company Limited, Shanghai, probably with effect from the first half-year 2015. The participation is accounted for using the equity method, and we expect a positive result from disposals in the low single-digit million euro range. The sale is subject to approval by the supervisory authorities.

How the non-current assets held for sale are allocated between the segments is disclosed in the segment reporting.

## Notes to the consolidated balance sheet – Equity and liabilities

## 18 Equity

The total share capital of €587,725,396.48 at 31 December 2014 is divided into 172,942,618 no-par-value registered shares, each fully paid up and carrying one vote. In the year under review, the number of shares in circulation developed as follows:

## Development of shares in circulation

| <b>Status at 31 Dec. financial year</b>                                                  | <b>168,515,007</b> | <b>177,421,900</b> |

On 31 December 2014, a total of 4,427,611 Munich Reinsurance Company shares with a calculated nominal value of around €15.0m were held by Group companies. This represents around 2.6% of the share capital.

On 7 November 2013, Munich Reinsurance Company's Board of Management decided on a share buy-back programme, thus availing itself of the authorisation granted by the Annual General Meeting on 20 April 2011, in accordance with Section 71 (1) no. 8 of the German Stock Corporation Act (AktG). From 14 November 2013 to 22 April 2014, a total of 6,398,594 Munich Reinsurance Company shares were purchased via the stock exchange. Of these, 4,492,756 shares were acquired in the 2014 calendar year at an average price of €155.81. All shares from this buy-back programme were retired on 30 April 2014 in a simplified process, without reducing the share capital, by adjusting the proportion of the Company's share capital represented by each of the remaining no-par-value shares.

On 20 March 2014, Munich Reinsurance Company's Board of Management decided on another share buy-back programme. The share buy-back will be restricted to a total purchase price (excluding incidental expenses) of €1bn up to the 2015 Annual General Meeting. Munich Reinsurance Company's Board of Management thus availed itself of the authorisation granted by the Annual General Meeting on 30 April 2014, in accordance with Section 71 (1) no. 8 of the Stock Corporation Act. From 14 May 2014 to 31 December 2014, a total of 4,425,081 shares were acquired at an average price of €156.74 as part of this new programme.

MEAG Munich ERGO AssetManagement GmbH sold 10,944 Munich Re shares at an average price of €158.94 in the financial year 2014 in connection with the hedging of obligations from its long-term incentive plan. The sale generated proceeds of €1.7m, which were used to strengthen liquid funds. With the remaining Munich Re shares acquired in prior years to hedge the stock appreciation rights granted, MEAG had a total portfolio of 2,530 shares at 31 December 2014.

The acquisition costs of all Munich Re shares in the possession of Group companies at the end of the financial year totalled €693,905,654.78.

In the year under review, a total of €1,254m was distributed to Munich Reinsurance Company's equity holders for the financial year 2013 in the form of a dividend of €7.25 per dividend-bearing share.

#### Composition of the capital authorised for capital increases

The taxes of -€931m (1,111m) recognised directly in equity comprise current taxes on unrealised gains and losses of -€94m (103m) on assets, with the remainder of -€837m (1,008m) being deferred tax assets.

## Non-controlling interests

| €m                          | 31.12.2014 | Prev. year |
|-----------------------------|------------|------------|
| Unrealised gains and losses | 24         | 8          |
| Consolidated result         | 18         | 29         |
| Other equity                | 229        | 206        |
| <b>Total</b>                | <b>271</b> | <b>243</b> |

The non-controlling interests are mainly minority interests in individual companies of the primary insurance group. We disclose direct minority interests in special funds and in partnerships under "other liabilities". In the financial year 2014, there were no significant changes in the percentage interest held in consolidated subsidiaries.

Information on capital management and minimum capital requirements is provided in the management report under "Financial position - Capital management" and "Financial position - Group solvency" respectively.

## 19 Fair value hierarchy of liabilities

All financial liabilities that are recognised at fair value, and such financial instruments that are not recognised at fair value but for which a fair value is disclosed in the notes, are allocated to one of the fair value hierarchy levels of IFRS 13.

Regularly, at each reporting date, we assess whether the allocation of these liabilities to the levels of the fair value hierarchy is still appropriate. If changes in the basis of valuation have occurred – for instance, if a market is no longer active or the valuation was performed using inputs requiring another allocation – we make the necessary adjustments.

For information on the valuation models used for measuring derivatives, please see the table and explanations in the Notes to the consolidated balance sheet - Assets (4) Hierarchy for the fair value measurement of investments. The valuation of subordinated bonds for which no market prices are available is conducted using the present value method and taking observable market inputs into account. For the bonds we have

issued, we use the market values provided by price quoters for the corresponding assets. The fair values of our amounts due to banks are determined using the present value method, in part exclusively with observable market inputs, and partly also taking into account non-observable inputs.

The following table shows the allocation of the financial liabilities to levels of the fair value hierarchy.

#### Allocation of liabilities to levels of the fair value hierarchy

|                                               |              |              |            | 31.12.2014   |
|-----------------------------------------------|--------------|--------------|------------|--------------|
| €m                                            | Level 1      | Level 2      | Level 3    | Total        |
| <b>Liabilities measured at fair value</b>     |              |              |            |              |

In the financial statements, only derivatives with a negative market value are currently recognised at fair value. Of these, we allocate the derivative portions to level 3 of the fair value hierarchy.

The following table presents the reconciliation from the opening balances to the closing balances for other liabilities allocated to Level 3.

**Reconciliation for liabilities allocated to Level 3**

| €m                                                                                                                                  | Other liabilities at fair value<br>through profit or loss |            |

1 In the first quarter of 2014, the issuer redeemed bonds with a nominal value of €50m.

2 ERGO International AG holds bonds with a nominal value of €3m; the volume outstanding has been reduced accordingly.

3 ERGO Versicherungsgruppe AG holds bonds with a nominal value of €3m; the volume outstanding has been reduced accordingly.

In the case of Munich Reinsurance Company's bonds, annual outflows of liquidity amounting to the respective interest payments occur until the first possible call dates in 2022, 2021, 2017 and 2018. In the financial year, these amounted to -€259m. Thereafter, the liquidity outflows will vary, depending on the respective interest-rate level. On 2 January 2014, we fully redeemed the registered bonds (from 2004) of ERGO Versicherung Aktiengesellschaft, Vienna, with a nominal value of €50m. For its registered bonds from 2001 and 1998, and for the HSB Group bonds, the annual outflow is variable, depending on the respective interest-rate levels.

The fair value of the subordinated bond issued by Munich Reinsurance Company in June 2007 is hedged in respect of the risk-free interest rate by means of an interest-rate swap. The hedged changes in value of the subordinated liabilities and of the interest-rate swap are shown in the net finance costs with impact on profit or loss in each case.

The fair value of the subordinated liabilities at the balance sheet date amounted to €5,017m (4,828m). For the Munich Reinsurance Company bonds, we take the stock market prices as fair values. For the other subordinated liabilities, we determine the fair values using net present value methods with observable market parameters.

The provision for future policy benefits in life reinsurance largely involves contracts where the mortality or morbidity risk predominates. In reinsurance, annuity contracts have a significantly lower weight than in primary insurance.

Essentially the same actuarial assumptions have been used as in the previous year for measuring the provisions for future policy benefits for business in force. For German primary insurance, to which approx. 87% of the provisions for future policy benefits are apportionable, biometric actuarial assumptions based on the tables of the German Association of Actuaries (Deutsche Aktuarvereinigung e.V.) are used.

In the ERGO Life and Health Germany segment, assumptions regarding future mortality, lapses and profit participation, and regarding long-term interest-rate levels were adjusted in 2014 on the basis of the long-term regular return on investments. The provision for future policy benefits was increased as a result of these adjustments.

Further information on the underwriting risks and discount rates can be found in the Disclosures on risks from insurance contracts and financial instruments (39) Risks from life and health insurance business and (40) Risks from property-casualty insurance business.

#### Development of gross provision for future policy benefits

| €m                                      | 2014           | Prev. year     |
|-----------------------------------------|----------------|----------------|
| Status at 31 Dec. previous year         | 111,427        | 109,769        |
| Currency translation differences        | 770            | -571           |

| Scheduled                               | 361            | -60            |
| Unscheduled                             | 193            | 69             |
| <b>Status at 31 Dec. financial year</b> | <b>112,648</b> | <b>111,427</b> |

The change under "Other" contains €433m (361m) in savings premiums for capitalisation products and -€647m (1,266m) for portfolio entries and withdrawals. Scheduled changes in the provision for future policy benefits contain the changes deriving from prospective calculation as a result of premium payments, benefit cases and the unwinding of discount in the year under review.

The provision for annuity claims involves periodic payments for disability cases and is usually due long term. A major part of this provision is established in the life reinsurance and life primary insurance segment for future annuity payments; a small part refers to provisions for annuities in personal accident, liability and workers' compensation insurance. The biometric actuarial assumptions are selected using appropriate actuarial principles. Provisions for annuity claims are calculated as the present value of the expected future payments. The discount rates used are presented in the Disclosures on risks from insurance contracts and financial instruments (39) Risks from life and health insurance business and (40) Risks from property-casualty insurance business.

The case reserve reflects the amount which is expected to be needed to settle claims which are known and have already been reported at the balance sheet date. The major part of this provision is measured at face value. The IBNR reserve is calculated using actuarial methods on the basis of historical claims development data and taking into account foreseeable future trends.

## Expected payments from the provisions for outstanding claims (property-casualty only)

| %                                      | Reinsurance |            | Primary insurance |            |
|----------------------------------------|-------------|------------|-------------------|------------|
|                                        | 31.12.2014  | Prev. year | 31.12.2014        | Prev. year |
| Up to one year                         | 31.9        | 29.8       | 35.1              | 37.3       |
| Over one year and up to five years     | 43.0        | 44.7       | 39.4              | 39.4       |
| Over five years and up to ten years    | 13.6        | 14.3       | 14.3              | 13.3       |
| Over ten years and up to fifteen years | 5.4         | 5.4        | 5.6               | 4.9        |
| Over fifteen years                     | 6.1         | 5.8        | 5.6               | 5.1        |

The expected timing of payments from the provisions for outstanding claims may involve considerable uncertainty.

1 Comprises the segments property-casualty reinsurance, ERGO Property-casualty Germany and the property-casualty section of the ERGO International segment.

The claims expenses for the year under review show payments made for the year under review and expenses for posting the claims reserve in that year. The provisions set up for claims from previous years are regularly updated using best estimates based on exposure and claims information and past claims experience. The respective change is shown under "Claims expenses for previous years".

In the year under review, most sectors experienced comparatively low claims-reporting activity from previous years, which had a positive influence on the ultimate-loss projection.

**Net run-off results in property-casualty business** The values in the following run-off triangles cover more than 99% of our Group's portfolio of property-casualty business.

The ultimate loss of an accident year comprises all payments made for that accident year up to the reporting date, plus the claims reserve at the reporting date. Given complete information regarding all losses incurred up to the balance sheet date, the ultimate loss status for each accident-year period would remain the same. In practice, however, it may be assumed that the ultimate-loss status (based on estimates) is exposed to fluctuations that reflect the growth in knowledge about the claims cases. Changes in the consolidated group, especially new acquisitions or the composition of segments to be reported, can also have an influence on the ultimate-loss status.

The run-off triangles are prepared on a currency-adjusted basis. To this end, all figures are translated from the respective local currency into the Group currency (euro), consistently using the exchange rates applicable at the end of the year under review (i.e. at 31 December 2014). This ensures that currency translation does not lead to run-off effects.

## 24 Other technical provisions

### Breakdown of other technical provisions

Of the provision for premium refunds based on national regulations, €87m (84m) is apportionable to property-casualty insurance. The provision for deferred premium refunds is established solely for life and health insurance.

The ceded share of "Other technical provisions" amounts to €6m (3m), of which - (€2m) is apportionable to the ceded share of the provision for premium refunds based on national regulations.

### Development of provision for premium refunds based on national regulations

| <b>Status at 31 Dec. financial year</b> | <b>7,557</b> | <b>6,652</b> |

#### Development of provision for deferred premium refunds

| €m                                                                                               | 2014          | Prev. year   |
|--------------------------------------------------------------------------------------------------|---------------|--------------|
| Status at 31 Dec. previous year                                                                  | 6,243         | 6,849        |
| Change in consolidated group                                                                     | -             | -231         |
| Change resulting from unrealised gains and losses on investments (recognised directly in equity) | 3,600         | -952         |
| Change resulting from other revaluations (recognised in profit or loss)                          | 779           | 577          |
| <b>Status at 31 Dec. financial year</b>                                                          | <b>10,622</b> | <b>6,243</b> |

The above change resulting from unrealised gains and losses on investments reflects the proportional allocation to expected future policyholders' bonuses of the change in market values that occurred in the past year. Changes in the provision for deferred premium refunds are only recognised in the income statement to the extent that they result from valuation differences recognised in profit or loss.

To determine the portion of the valuation differences allocable to the provision for deferred premium refunds, rates of between 50% and 92.5% after tax were used.

## 25 Gross technical provisions for unit-linked life insurance

#### Development of gross provision

| €m                                                | 2014         | Prev. year   |
|---------------------------------------------------|--------------|--------------|
| Status at 31 Dec. previous year                   | 7,043        | 6,258        |
| Change in consolidated group and other influences | 148          | 107          |
| Savings premiums                                  | 722          | 780          |
| Unrealised gains/losses on fund assets            | 495          | 401          |
| Withdrawal for expenses and risk                  | -84          | -80          |
| Withdrawal for benefits                           | -487         | -423         |
| <b>Status at 31 Dec. financial year</b>           | <b>7,837</b> | <b>7,043</b> |

These provisions are valued retrospectively. The withdrawal for underwriting risks from the premiums and provision for future policy benefits is made on the basis of prudent assumptions regarding expected mortality and morbidity. Here, as with the provision for future policy benefits for non-unit-linked life insurance, we base the underlying calculation on best estimates, with appropriate provisions for adverse deviation.

The provisions are directly covered by the investments for unit-linked life insurance contracts. Small differences in relation to these investments arise as a result of including unearned revenue liability in these provisions.

## 26 Other accrued liabilities

## Breakdown of other accrued liabilities

| €m                                      | 31.12.2014   | Prev. year   |
|-----------------------------------------|--------------|--------------|
| Provisions for post-employment benefits | 2,965        | 2,140        |
| Other provisions                        | 1,508        | 1,602        |
| <b>Total</b>                            | <b>4,473</b> | <b>3,742</b> |

## Provisions for post-employment benefits

Munich Re companies generally give pension commitments to their employees in the form of defined contribution plans or defined benefit plans. Special regional economic, legal and tax features are taken into account. The type and amount of the pension obligations are determined by the conditions of the respective pension plan. The pension commitments comprise obligations towards active beneficiaries or retired beneficiaries with vested benefits, and current pension payments. Defined benefit plans are funded internally through provisions for post-employment benefits and externally through funds and insurance contracts concluded to cover the benefit obligations.

Expenses for defined contribution plans in the year under review totalled –€72m (–69m). Expenses for contributions to state plans totalled –€114m (–117m) in the financial year.

The present value of obligations under defined benefit pension plans amounted to €5,584m (3,992m), the plan assets to be deducted totalled €2,741m (2,012m). The defined benefit obligations comprise the following main plans:

Munich Reinsurance Company's pension obligations account for €1,484m (1,014m) of the present value of obligations under defined pension plans and €1,432m (1,022m) of plan assets. The obligations include disability and old-age pensions, and pensions for surviving dependants. The amount of the pensions generally depends on salary and length of service. The defined benefits granted up to 31 December 2007 are financed through a fund. New members on or after 1 January 2008 receive pension commitments in the form of defined contribution plans financed by means of intra-Group insurance contracts securing the obligations under pension schemes. The fund and insurance contracts have been grouped in a contractual trust agreement (CTA).

The pension obligations of the ERGO Insurance Group account for €2,779m (1,966m) of the present value of obligations under defined pension plans and €285m (194m) of plan assets. The obligations include disability and old-age pensions, and pensions for surviving dependants. The amount of the pensions generally depends on salary and length of service. The commitments are generally funded through pension provisions. New members receive pension commitments in the form of defined contribution plans financed by means of intra-Group insurance contracts securing the obligations under pension schemes. There are medical-care benefit obligations.

The pension obligations of Munich Re America account for €695m (524m) of the present value of obligations under defined pension plans and €466m (326m) of plan assets. The obligations include pensions for employees and surviving dependants. The amount of the pensions generally depends on includable compensation and length of service. The plan is financed through a trust and pension provisions. The plan was closed to new members effective 1 January 2006 and to all remaining members effective 31 December 2011. With effect from 1 January 2012, all members now receive pension commitments in the form of defined contribution plans. There are also retiree medical-care benefit obligations.

**Change in the present value of the defined benefit obligations**

| €m                                                        | 2014         | Prev. year   |

| Interest expense                                          | 145          | 132          |
| Payments                                                  | -121         | -110         |
| Payments from plan settlements                            | -28          | -2           |
| Transfer of obligations                                   | 1            | 6            |
| Actuarial gains/losses: Change in demographic assumptions | 35           | 2            |
| Actuarial gains/losses: Change in financial assumptions   | 1,281        | -319         |
| Actuarial gains/losses: Experience adjustments            | 28           | -34          |
| Other                                                     | 5            | 4            |
| <b>Status at 31 Dec. financial year</b>                   | <b>5,584</b> | <b>3,992</b> |

Defined benefit obligations include medical-care benefits. The present value of defined benefit obligations for these items amounted to €285m (207m) at the balance sheet date.

The plan settlements mainly derive from an offer made by Munich Re America to compensate for pension commitments towards departing staff members with vested benefits.

The present value of the obligations under defined benefit plans breaks down as follows:

**Breakdown of the present value of defined benefit obligations**

| %                | 31.12.2014 | Prev. year |
|------------------|------------|------------|
| Active members   | 53         | 50         |
| Deferred members | 13         | 13         |
| Pensioners       | 34         | 37         |
| <b>Total</b>     | <b>100</b> | <b>100</b> |

The consolidated companies used the following actuarial assumptions (weighted -average values) for calculating their pension obligations:

**Actuarial assumptions**

| %                                      | 2014 | Prev. year |
|----------------------------------------|------|------------|
| Discount rate                          | 2.1  | 3.6        |
| Future increases in entitlement/salary | 1.9  | 2.0        |
| Future pension increases               | 1.5  | 1.5        |
| Medical cost trend rate                | 3.9  | 3.9        |

Pension obligations are measured using generally recognised biometric actuarial assumptions, adjusted as a rule to take account of company-specific circumstances.

## Change in the fair value of plan assets for defined benefit plans

| <b>Total</b>                                   | <b>100</b> | <b>100</b> |

As in the previous year, the plan assets do not include any own shares.

For the financial year 2015, capital transfers of €78m (63m) to plan assets are expected.

## Change in the reimbursement rights for defined benefit plans

| €m                                      | 2014       | Prev. year |
|-----------------------------------------|------------|------------|
| Status at 31 Dec. previous year         | 177        | 167        |
| Interest income                         | 6          | 5          |
| Return excluding interest income        | 46         | -12        |
| Contributions by the employer           | 16         | 15         |
| Contributions by plan participants      | -          | -          |
| Payments                                | -5         | -5         |
| Transfer of assets                      | -          | 7          |
| Other                                   | 7          | -          |
| <b>Status at 31 Dec. financial year</b> | <b>247</b> | <b>177</b> |

The reimbursement rights derive from insurance concluded to cover the benefit obligations.

There were no effects resulting from the asset ceiling on overfunded defined benefit plans.

#### Funded status of defined benefit plans

| €m                                                   | 31.12.2014   | Prev. year   |

| Present value of defined benefit obligations         | 5,584        | 3,992        |
| Fair value of plan assets                            | -2,741       | -2,012       |
| Assets from the defined benefit plan                 | 122          | 160          |
| Effect of asset ceiling                              | -            | -            |
| Other                                                | -            | -            |
| <b>Net balance sheet liability</b>                   | <b>2,965</b> | <b>2,140</b> |

The plan assets have the exclusive purpose of fulfilling the defined benefit obligations to which they are allocated and making provision for future outflows. This is required by law in several countries, whilst in other countries plan assets are provided on a voluntary basis.

The relationship between the fair value of the plan assets and the present value of the defined benefit obligations is referred to as the funded status. If the present value of defined benefit obligations exceeds the fair value of the plan assets, this excess of liabilities over assets is financed by means of provisions for post-employment benefits. If the fair value of the plan assets exceeds the present value of the defined benefit obligations, an asset arises out of the defined benefit plan. As each plan is analysed individually, this may give rise to both a provision for post-employment benefits and an asset from the defined benefit plan.

Market fluctuations may give rise to changes in the fair value of the plan assets over the course of time. Adjustments to the actuarial assumptions (e.g. life expectancy, actuarial interest rate) or deviations in actual risk experience from the risk experience assumed may result in changes in the present value of the defined benefit obligations. Both factors may therefore lead to fluctuations in the funded status. To avoid these fluctuations wherever possible, care is taken, when choosing investments, that fluctuations in the fair value of the plan assets and in the present value of defined benefit obligations offset each other as far as possible whenever changes in certain influencing variables occur (asset-liability matching).

#### Breakdown of expenses booked in the financial year

| €m                             | 2014        | Prev. year  |
|--------------------------------|-------------|-------------|
| Net interest income or expense | -59         | -60         |
| Service cost                   | -125        | -140        |
| Other                          | 11          | 11          |
| <b>Total</b>                   | <b>-173</b> | <b>-189</b> |

The expenses are distributed between the functional areas and shown mainly under "Operating expenses" and "Expenses for claims and benefits" in the consolidated income statement.

The actual return on plan assets amounts to €596m (13m), and the actual gains on reimbursements to €52m (actual losses of -€7m).

#### Contractual period to maturity of pension obligations

| €m                                    | 31.12.2014    | Prev. year   |
|---------------------------------------|---------------|--------------|
| Up to one year                        | 133           | 119          |
| Over one year and up to five years    | 599           | 537          |
| Over five years and up to ten years   | 867           | 788          |
| Over ten years and up to twenty years | 2,257         | 2,106        |
| Over 20 years                         | 6,585         | 6,442        |
| <b>Total</b>                          | <b>10,441</b> | <b>9,992</b> |

The weighted average contractual period to maturity of our pension obligations is 21 (18) years.

An increase or decrease in the following essential actuarial assumptions has an impact on the present value of defined benefit obligations:

#### Sensitivity analysis

| €m                                             | 31.12.2014 | Prev. year |

The provisions for restructuring also included in this item mainly concern €140m (178m) for the ERGO Group's "Continuous improvement of our competitive position" project and €327m (343m) for the comprehensive restructuring of its sales organisation. The miscellaneous other provisions comprise a large number of different items, including €22m (19m) for competitions for sales staff, €22m (25m) for settlements, and €42m (43m) for litigation risks.

The provisions for restructuring, early-retirement benefits/semi-retirement, anniversary benefits and medium- and long-term incentive plans are mainly long term, whereas the provisions for earned commission, salary obligations, other remuneration for desk and field staff and miscellaneous are essentially short term.

## 27 Bonds and notes issued

Outflows of liquidity occur annually in the amount of the interest payments until the notes mature. These totalled -US\$ 25m in the financial year. We use the prices provided by price quoters to determine the fair value of the notes issued. The fair value at the reporting date amounts to €371m (309m).

## 28 Deposits retained on ceded business

Deposits retained on ceded business are collateral for technical provisions covering business ceded to reinsurers and retrocessionaires, and do not trigger any cash flows. As a rule, the changes in deposits retained on ceded business derive from the changes in the relevant technical provisions covering ceded business. Deposits retained on ceded business thus do not have a fixed maturity date, their release generally being dependent on run-off of the corresponding provisions.

## 29 Other liabilities

### Breakdown of other liabilities

| €m                                            | 31.12.2014    | Prev. year    |
|-----------------------------------------------|---------------|---------------|
| Amounts payable on primary insurance business | 3,086         | 3,358         |
| Accounts payable on reinsurance business      | 5,462         | 4,553         |
| Amounts due to banks                          | 443           | 462           |
| Miscellaneous liabilities                     | 5,646         | 4,548         |
| <b>Total</b>                                  | <b>14,637</b> | <b>12,921</b> |

The accounts payable on primary insurance business mainly contain liabilities towards policyholders resulting from accumulated participation in surplus, premium deposits and insurance contracts without significant risk transfer.

Of the amounts owed to banks, €164m is attributable to bank borrowing by Group companies acquired by Munich Re under its infrastructure investment programme including renewable energies and new technologies.

The miscellaneous liabilities contain liabilities of €500m (230m) resulting from reinsurance contracts without significant risk transfer, derivative financial instruments with a negative fair value of €1,228m (528m), and negative fair values totalling €675m (427m) for insurance-linked derivatives and hedging derivatives of variable annuities. The miscellaneous liabilities also include €28m (17m) for social security and €190m (199m) for interest and rent.

The following table provides information on the remaining contractual maturities of the items shown under "Other liabilities". Since the amounts payable on primary insurance business are directly linked to the underlying insurance business, we analyse the liquidity risk arising from these together with the corresponding insurance contracts. This currently also applies to the derivatives embedded in variable annuity business; see Disclosures on risks from insurance contracts and financial instruments (39) Risks from life and health insurance business and (40) Risks from property-casualty insurance business. The derivatives listed below are recognised at market value.

**Remaining terms of the other liabilities according to carrying amounts**  
(excluding amounts payable on primary insurance business and excluding liabilities from derivative components embedded in variable annuities)

| €m                                    | Carrying amounts |              |
|---------------------------------------|------------------|--------------|
|                                       | 31.12.2014       | Prev. year   |
| Up to one year                        | 8,713            | 7,087        |
| Over one year and up to two years     | 106              | 156          |
| Over two years and up to three years  | 31               | 135          |
| Over three years and up to four years | 45               | 179          |
| Over four years and up to five years  | 267              | 35           |
| Over five years and up to ten years   | 856              | 531          |
| Over ten years                        | 837              | 865          |
| <b>Total</b>                          | <b>10,855</b>    | <b>8,988</b> |

The major portion of the liabilities up to one year involve interest-free items, where the carrying amounts and the undiscounted cash flows are identical. A total of €50m (56m) of the amounts owed to banks and €399m (389m) of the liabilities from derivatives are due within one year. Any deviations in the liabilities with remaining terms of over one year from the undiscounted cash flows are not material for the presentation and significance of the financial liabilities for our financial position and performance.

The total gross premiums include not only the gross premiums written but also savings premiums from unit-linked life insurance and capitalisation products. Premiums from long-term insurance business, especially in life primary insurance, are recognised in full

as earned premiums and income when they become due. Under gross premiums written, only those parts of the premium from unit-linked life business are included that are used to cover the risks and associated costs.

Of the gross premiums written from short-term insurance business, the portions attributable to periods after the balance sheet date are posted as unearned premiums; see notes to the consolidated balance sheet – Equity and liabilities (21) Unearned premiums. Over the duration of the contracts, unearned premiums are reversed in accordance with the reduction in risk.

The income from technical interest is the amount earned by assumed insurance business from the mainly risk-free investment of assets covering the technical provisions. The deposits retained on ceded business are also taken into account as a basis for the technical interest. Thus the portion of investment income corresponding to the deposit interest expense is included as a component in the calculation of the technical interest and reallocated to the technical result.

In terms of the assets required to cover the technical provisions, the composition of the technical interest varies from segment to segment, depending on the type of insurance business conducted and the related statutory regulations.

In the life reinsurance segment, the income from technical interest corresponds to the risk-free interest on our technical provisions. For deposited provisions, the income from technical interest corresponds to the contractually agreed interest rate.

In property-casualty reinsurance, we allow for the fact that provisions established in prior years were invested at higher interest rates than the current level of market interest rates. The income from technical interest therefore corresponds to the risk-free interest on our discounted technical provisions at the respective historical interest rate, taking into account the relevant period of insurance and currency. For balance sheet provisions in excess of the discounted provisions, short-term interest rates are applied.

In the ERGO Life and Health Germany segment, the income from technical interest for life primary insurance companies comprises the gains and losses from unit-linked life insurance plus the guaranteed interest rate and profit sharing on the basis of the non-

technical result sources. For health primary insurance companies, the income from technical interest for primary insurance business corresponds to the allocation of interest to the ageing reserve (actuarial interest) and the allocation to the provision for premium refunds. The latter is based on the allocation of interest to the provision for non-performance-related premium refunds, on the investment result exceeding the actuarial interest rate, and on policyholders' participation in the other non-technical result components.

In the ERGO Property-casualty Germany segment, the income from technical interest is calculated analogously to the procedure in the property-casualty reinsurance segment.

In the ERGO International segment, the income from technical interest for life primary insurance companies corresponds to the risk-free interest on the provision for future policy benefits at the relevant national interest rate, the gains and losses from unit-linked life insurance, and profit sharing where there are types of contract providing for this. The income from technical interest for property-casualty primary insurance companies is calculated analogously to the procedure in the property-casualty reinsurance segment.

In the Munich Health segment, income from technical interest for primary insurance business is based on the interest on other technical provisions at the relevant national risk-free interest rate and, where applicable, on the interest allocated to the provision for future policy benefits. In the case of long-term reinsurance treaties, the interest corresponds to the contractually agreed allocations of interest. For short-term reinsurance business, the income from technical interest is calculated on the basis of the risk-free interest on technical provisions at the relevant national interest rate.

The change in the provision for future policy benefits (net) contains €495m (401m) in unrealised gains/losses from unit-linked life insurance. Expenses for claims and benefits include expenses for policyholders' bonuses. Of this, –€1,414m (–1,135m) is for the allocation to the provision for premium refunds on the basis of national regulations, –€763m (–337m) for the change in the provision for deferred premium refunds recognised in the income statement, and –€102m (–173m) for direct crediting. The "Other technical result" for life primary insurance mainly includes interest on policyholders' accumulated credit.

Expenses for profit commission in reinsurance are shown under "Operating expenses", not under "Expenses for claims and benefits".

The other non-operating income and expenses are unrelated to the conclusion, administration or settlement of insurance contracts or the administration of investments.

Besides foreign currency exchange gains of €2,572m (2,560m), the other non-operating income contains other non-technical income of €156m (177m).

Besides foreign-currency exchange losses of –€2,707m (–2,868m), the other non-operating expenses comprise write-downs of –€145m (–87m) on other intangible assets, and other non-technical expenses of –€372m (–453m), such as restructuring expenses and other amounts that cannot be allocated elsewhere.

Net finance costs include all interest income, interest expenses and other expenses directly attributable to strategic debt. They also include income and expenses from intra-Group financing that cancel each other out. Debt has a strategic character for us if it does not have an original, direct link with our operative business.

## Net finance costs by financing instrument

Information on the Group's strategic debt can be found in the management report on page 101 and in the Notes to the consolidated balance sheet – Equity and Liabilities (20) Subordinated liabilities and (27) Bonds and notes issued.

## 38 Taxes on income

This item shows the corporation tax and municipal trade earnings tax paid by the German consolidated companies (including solidarity surcharge and interest on back tax) and the comparable taxes on earnings paid by the foreign consolidated companies in the Group. In accordance with IAS 12, the determination of taxes on income includes the calculation of deferred taxes.

## Recognised tax expenses/income broken down according to Germany and other countries

| <b>Taxes on income</b>                                                           | <b>312</b> | <b>-108</b> |

The current tax for the year under review is derived from the tax results of the financial year, to which the local tax rates of the respective Group companies are applied.

The following table shows the reconciliation between the expected taxes on income and the tax on income actually shown. The expected tax expenses are calculated by multiplying the consolidated result before taxes on income (after "other tax") by the Group tax rate. The applicable Group tax rate amounts to 33%. This takes into account corporation tax including solidarity surcharge, and trade tax (GewSt). Trade-tax municipal factors range from 240% to 490%.

## Reconciliation to effective tax expenses/income

| €m                                                          | 2014       | Prev. year  |
|-------------------------------------------------------------|------------|-------------|
| Result before taxes on income (after "other tax")           | 2,859      | 3,441       |
| Group tax rate in %                                         | 33         | 33          |
| Derived taxes on income                                     | -943       | -1,136      |
| Tax effect of:                                              |            |             |
| Tax rate differences                                        | 320        | 142         |
| Tax-free income                                             | 245        | 255         |
| Non-deductible expenses                                     | -586       | -494        |
| Valuation allowances for deferred taxes/loss carry-forwards | -48        | 227         |
| Change in tax rates and tax legislation                     | 3          | 12          |
| Tax for prior years                                         | 1,341      | 946         |
| Trade tax adjustments                                       | 14         | -11         |
| Other                                                       | -34        | -49         |
| <b>Taxes on income shown</b>                                | <b>312</b> | <b>-108</b> |

The effective tax burden is the ratio between the "Taxes on income shown" and the "Result before taxes on income (after "other tax")". In the year under review, there was tax relief of -10.9% (in the previous year, a tax burden of 3.1%).

"Tax-free income" is made up of tax-free currency gains, gains on the sales of share-holdings in joint-stock companies, and other tax-free income.

The non-deductible expenses mainly comprise non-tax-deductible write-downs of goodwill, expenses in connection with tax-free income and interest on back tax payments.

The tax effect of -€48m (227m) from changes in valuation allowances for deferred taxes/loss carry-forwards mainly involves an amount of -€66m (35m) in expenses from the subsequent revaluation of deferred tax assets for loss carry-forwards and the non-application for new loss carry-forwards, and an amount of €14m (211m) in tax savings from the offsetting of positive taxable income with tax loss carry-forwards for which no deferred tax assets had previously been recognised. The remaining amount involves counter-effects from the change in valuation allowances for deferred tax assets from temporary differences.

The income from changes in tax rates and tax legislation primarily relates to the UK.

"Tax for prior years" is for actual and expected changes to tax assessments for previous years and includes deferred tax for other periods totalling -€130m (33m) as well as current tax for other periods amounting to €1,471m (913m). Deferred taxes result from adjustments to tax accounts after the tax returns have been filed or tax audits have been concluded. Current tax results in particular from adjustments made to the tax provisions for all years not yet finally assessed to take account of recent legal judgments, changes in administrative opinion and ongoing tax audits. A significant one-off effect in this context is the retroactive recognition of the tax deductibility of losses on equities incurred in 2001 and 2002 in our special fund investments.

## Disclosures on risks from insurance contracts and financial instruments

Munich Re's reporting is based on various legal regulations governing risks it is exposed to as a result of its business operations:

IFRS 4 prescribes disclosures on the type and extent of risks from insurance contracts. Under IFRS 7, analogous disclosures on risks from financial instruments are required. Besides this, Section 315 (2) no. 2 of the German Commercial Code (HGB) prescribes disclosures in the management report on risk management objectives and methods, hedging and risks in connection with financial instruments. These requirements are specified in more detail in German Accounting Standard No. 20 (DRS 20) for management reports.

Risk reporting concerns not only accounting but also the activities of integrated risk management (IRM) at Munich Re. To take both perspectives into account, information on risks is provided in the risk report within the management report, in the disclosures on risks from insurance contracts and in the disclosures on financial instruments in the notes to the financial statements. The disclosures in the risk report largely adopt a purely economic view. The report provides a detailed account of the organisation of risk management and Munich Re's risk strategy, briefly outlines the main risks we are exposed to, and describes in detail the economic risk capital calculated by means of our internal risk model and available financial resources. The report also contains information on specific risk complexes.

In accordance with the requirements of IFRS 4, the quantitative effects of a change in the assumptions underlying the measurement of insurance contracts and/or in the market environment are covered by information about economic risk capital stated in the risk report.

The notes to the financial statements deal in detail with the various risks from insurance contracts and describe uncertainties in measuring them. For risks from financial instruments, IFRS 7 stipulates that the disclosures must comprise information on the remaining terms, the rating, and a sensitivity analysis regarding the market risk. This information is also relevant for assessing the risk.

To obtain a complete overview of the risks to which Munich Re is exposed, the reader needs to refer to both the risk report and the disclosures on risks from insurance contracts and financial instruments in the notes to the financial statements, along with further information in the notes. Where necessary, we refer to the relevant information in the risk report and information on the respective items.

### 39 Risks from life and health insurance business

Of primary importance for life and health insurance contracts are biometric risks, interest-rate risks and lapse risks. The measurement of technical provisions and deferred acquisition costs is based on biometric calculation tables, i.e. on assumptions with regard to mortality, disablement and morbidity, and on the respective contract-specific or plan-specific discount rates and actuarial interest rates. Besides this, measurement includes assumptions regarding the lapse rate and profit sharing. In addition, other market risks from unit-linked contracts and risks from embedded derivatives, as well as the liquidity risk, have to be taken into account.

**Biometric risks** Our portfolios' degree of exposure to biometric risks depends on the type of insurance contracts:

## Biometric risks

| Product category                  | Characteristics                                                                                                                                                                                                                                                                                                                                 | Important risks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

The quantitative structure of our business is shown in the notes to the consolidated balance sheet – Equity and liabilities (22) Provision for future policy benefits.

The biometric assumptions we use for measuring insurance contracts in our portfolios are regularly reviewed on the basis of updated portfolio information. Especially in primary insurance, this includes considering country-specific reviews by supervisory authorities.

We also take account of market standards when checking the adequacy of biometric actuarial assumptions and the trend assumptions included in them. This may result in a change in the provision for adverse deviation allowed for in the actuarial assumptions. The amount of the technical provisions or the deferred acquisition costs is not directly affected as long as there is provision for adverse deviation. In the view of the appointed actuaries, the biometric actuarial assumptions used by us are deemed sufficient. However, in long-term health insurance, we are proceeding on the assumption that there will be further advances in medical treatment, potentially giving rise to higher costs. For this business, it is generally possible to modify the actuarial assumptions by means of a premium adjustment to reflect the changes.

For short-term health insurance business, on the other hand, the main risk is a sudden increase in expenses due to exceptional one-off events.

Interventions by legislatures or courts in the distribution of risks and rewards underlying the contracts concluded between the parties to insurance may mask or aggravate the biometric risks described, making it necessary to adjust the provision.

**Interest-rate risks** A distinction must be made between risks of changes in interest rates on the one hand, and interest-rate guarantee risks on the other. Risks of changes in interest rates would result from the discounting of the provision for future policy benefits and of parts of the provision for outstanding claims. In accordance with accounting valuation rules, the discount rate is fixed at contract commencement and will generally not be adjusted during the term of the contract. To this extent, the accounting valuation of these technical provisions does not depend directly on the level of the market interest rates.

Economically, however, an interest-rate risk derives in principle from the need to earn a return on the investments covering the provision that is commensurate with the discount rate used in measuring the provision.

In reinsurance, we use the following discount rates for the provision for future policy benefits and the provision for outstanding claims:

#### Discount rates used for provisions – Reinsurance (gross)

| €m                                                  | 31.12.2014    | Prev. year    |
|-----------------------------------------------------|---------------|---------------|
| Without discount rate                               | 3,093         | 2,663         |
| Discount rate ≤ 1.5%                                | 139           | 38            |
| 1.5% < discount rate ≤ 2.5%                         | 193           | 199           |
| 2.5% < discount rate ≤ 3.5%                         | 2,515         | 2,026         |
| 3.5% < discount rate ≤ 4.5%                         | 2,700         | 2,319         |
| 4.5% < discount rate ≤ 5.5%                         | 3,681         | 3,310         |
| 5.5% < discount rate ≤ 6.5%                         | 1,183         | 1,095         |
| 6.5% < discount rate ≤ 7.5%                         | 460           | 438           |
| Discount rate > 7.5%                                | 203           | 176           |
| Covered by deposits retained on assumed reinsurance | 7,135         | 7,875         |
| <b>Total</b>                                        | <b>21,302</b> | <b>20,139</b> |

If provisions are covered by deposits retained on assumed reinsurance, the interest is directly secured by an inflow of investment income generally guaranteed by the cedants. Consequently, for provisions for which at least the discount rate is guaranteed by the cedants, there is no interest-rate risk. For deposits amounting to €1,000m (1,035m), cedants do not provide any interest-rate guarantee. Therefore, for the remaining group of all provisions whose interest is not guaranteed by cedants, the application of the liability adequacy test as per IFRS 4 ensures that the expected income from the investments covering the technical provisions is sufficient to meet future obligations as a whole.

In life primary insurance, an implicit or explicit interest-rate guarantee is granted for the majority of contracts over their whole duration, based on a fixed interest rate applying at the time the contract is concluded. The discount rate used to calculate the provision for future policy benefits is identical with this interest rate for the majority of contracts in our portfolios. An appropriate minimum return needs to be earned in the long term from the investment result (possibly also with assistance from the technical result) for the contractually guaranteed benefits. In health primary insurance, a discount rate is also used for calculating the provision for future policy benefits, but for long-term business this rate can generally be altered by way of premium adjustment. For short-term business, there is no direct interest-rate risk.

The discount rates relevant for the portfolio in calculating the provision for future policy benefits and the provision for outstanding claims are as follows:

#### Discount rates used for provisions – Primary insurance (gross)

|                             | Life          |               | Health        |               | Total          |                |

| 2.5% < discount rate ≤ 3.0% | 15,429        | 15,855        | 3,345         | 251           | 18,774         | 16,106         |
| 3.0% < discount rate ≤ 3.5% | 25,402        | 25,925        | 4,950         | 6,779         | 30,352         | 32,704         |
| 3.5% < discount rate ≤ 4.0% | 12,199        | 13,319        | 2,866         | 2,964         | 15,065         | 16,283         |
| 4.0% < discount rate ≤ 4.5% | 26            | 27            | 2,546         | 2,575         | 2,572          | 2,602          |
| 4.5% < discount rate ≤ 5.0% | 9             | 11            | 15,514        | 15,290        | 15,523         | 15,301         |
| Discount rate > 5.0%        | 12            | 12            | 93            | 97            | 105            | 109            |
| <b>Total</b>                | <b>70,742</b> | <b>70,940</b> | <b>30,703</b> | <b>29,371</b> | <b>101,445</b> | <b>100,311</b> |

Besides this, in German health primary insurance, discount rates of 2.5–3.5% are applied for calculating the provision for premium loadings and the provision for future premium reductions, which are both part of the provision for premium refunds and total €4,552m (4,152m). These discount rates can be altered by way of a premium adjustment.

Provisions in reinsurance and primary insurance that are not covered by deposits retained are covered by investments. In the case of a discrepancy between the durations of these investments and the liabilities (duration mismatch), the main risk lies in the fact that if interest rates fall markedly over the remaining settlement period of the liabilities, the return on the reinvested assets may be lower than the discount rates and thus necessitate further expenses. But a complete duration matching of liabilities with fixed-interest investments of identical maturities would not be expedient, because if interest rates rise significantly, policyholders might make increasing use of their surrender rights, resulting in a liquidity requirement for premature payouts.

**Other market risks and embedded derivatives** In reinsurance, other market risks are generally ruled out through suitable contract design.

Some primary insurance and reinsurance contracts contain derivative components of variable annuities. These are measured separately from the underlying contract and their changes in value are recognised in the investment result. The valuation of these embedded derivatives is sensitive to share prices, exchange rates and interest rates, but these sensitivities are nearly fully compensated for by the fact that such derivatives are for the most part directly matched by financial derivatives for hedging purposes.

In primary insurance, the risks to be considered – besides the interest-rate guarantee, which we analyse in the modelling of the interest-rate risk – are particularly risks from unit-linked life insurance and the lump-sum option in the case of deferred annuity policies. Other embedded derivatives are financially insignificant.

For the unit-linked insurance contracts in our portfolios, the investments are held for the benefit of life insurance policyholders who bear the investment risk, meaning that there is no direct market risk. Appropriate product design ensures that the necessary premium portions for payment of a guaranteed minimum benefit on occurrence of death are based on the current fund assets.

The lump-sum option in the case of deferred annuity policies gives policyholders the option of having their annuity paid out in a single payment at a fixed date. As a result, there is a potential risk if an unexpectedly large number of policyholders exercise their option at an interest-rate level markedly higher than the discount rate used for the annuity calculation. But there is no direct interest-rate sensitivity or market sensitivity, since the exercise of the option by the policyholder is determined to a crucial extent by individual factors and relates to the insurance components. This option is specifically taken into account when applying the liability adequacy test prescribed by IFRS 4 to technical provisions.

**Lapse risks** In reinsurance, a lapse risk derives primarily from the indirect transfer of lapse risks from cedants. As a rule, both this risk and the financial risk from extraordinary termination of reinsurance contracts are largely ruled out through appropriate contract design.

In life primary insurance, the reported technical provision in the case of contracts with a surrender option is generally at least as high as the relevant surrender value. As with the lump-sum option in the case of deferred annuity policies, a potential lapse risk may result from a higher interest-rate level than that on which the calculation was based. This is allowed for by means of appropriate liquidity planning and adequate calculation of the surrender value. Expected surrenders are taken into account in the amortisation of deferred acquisition costs in life primary insurance and reinsurance. The policyholder's right in some contracts to maintain the contract with a waiver of premium and an adjustment of the guaranteed benefits constitutes a partial lapse and is taken into account in the calculations analogously. Based on the relevant legal parameters, reserves for primary health insurance business are calculated considering amounts payable due to cancellation of policies. The underlying assumptions are regularly checked and can be altered by means of a premium adjustment.

**Liquidity risks** For Munich Re, there could be a liquidity risk if the cash outflow for insurance claims payments and the costs related to the business were to exceed the cash inflow from premiums and investments. For our mainly long-term business, we

therefore analyse the expected future balance from cash inflows due to premium payments and outflows for payment of insurance claims and benefits plus costs.

At the balance sheet date, this results in the future expected technical payment balances (including variable annuities) shown in the following table according to duration bands. As only the technical payment flows are considered, inflows from investment income and investments that become free are not included in the quantifications. Taking into account the inflows from investments, whose cash flows are largely aligned with those of the liabilities through our asset-liability management, items in the future expectations are positive throughout, so that the liquidity risk of these insurance contracts is minimised accordingly.

#### Expected future technical cash flow (gross)<sup>1</sup>

| €m                                  | 31.12.2014 | Prev. year |
|-------------------------------------|------------|------------|
| Up to one year                      | -3,441     | -2,738     |
| Over one year and up to five years  | -12,505    | -11,208    |
| Over five years and up to ten years | -17,913    | -17,518    |
| Over ten years and up to 20 years   | -41,192    | -40,326    |
| Over 20 years                       | -101,918   | -95,349    |

1 Premiums less benefits guaranteed at the balance sheet date and costs (excluding unit-linked products).

With these numerical estimates, it should be borne in mind that this forward-looking data may involve considerable uncertainty.

Further information on the liquidity risk is provided in the risk report on [page 124](#).

**Risk minimisation measures** In reinsurance, we control the assumption of biometric risks by means of a risk-adequate underwriting policy. Risks are restricted through appropriate treaty design, specifically by limiting the coverage in the case of non-proportional business. In particular, the underwriting of longevity risks from reinsured portfolios is limited. Interest-rate and other market risks are frequently ruled out by depositing the provisions with the cedant, with a guaranteed rate of interest from the deposit. In individual cases, these risks are also hedged by means of suitable capital market instruments.

In primary insurance, there is substantial risk minimisation through product design. For the most part, prudent actuarial assumptions are used in fixing the guaranteed benefits, in addition to which policyholders are granted a performance-related participation in surplus. More than 94% (96%) of the amounts shown in the notes to the consolidated balance sheet – Equity and liabilities (22) Provision for future policy benefits is apportionable to such contracts. Given the relevant margins in the actuarial assumptions, it is also possible to fulfil the future guaranteed obligations without adjusting the provisions in the case of moderate changes in assumptions. Of great significance for risk-balancing in the case of adverse developments are parts of the provision for premium refunds based on national regulations, parts of the provision for deferred premium refunds resulting from other revaluations, and unrealised gains and losses on investments taken as a basis for posting the provision for deferred premium refunds; see notes to the consolidated balance sheet – Equity and liabilities (24) Other technical provisions.

In health primary insurance, there is the additional possibility of adjusting premiums for most long-term contracts. If it is foreseeable that the assumptions behind the calculation are permanently inadequate to cover expenses for claims or the actual mortalities deviate significantly from the calculated ones, premiums can be raised accordingly, thus closely limiting the financial and balance sheet effects of cost increases in healthcare and permanent changes in morbidity.

For information on our risk management processes, reference is made to [pages 117-122](#) of the risk report.

**Impact on equity and the consolidated income statement** In the liability adequacy test pursuant to IFRS 4, the technical provisions and deferred acquisition costs are regularly tested to ensure they are adequate. An adjustment is made if such tests show that, as a whole, the amounts calculated using the previous assumptions for biometric actuarial rates, for discounting provisions and for lapses are no longer sufficient. Particularly in primary insurance, the possibilities of adjusting participation in surplus are taken into account.

If an adjustment is required, we recognise any deficit as an expense in the consolidated income statement.

**Quantitative impacts of changes in assumptions on long-term insurance business** If Munich Re manages its business on the basis of a consolidated Group view, using its internal risk model to determine the capital needed to ensure the Group's ability to meet its commitments even after extreme loss events. The key figure calculated using the internal model is our economic risk capital. Detailed information and relevant data are provided in the risk report on [pages 126-130](#).

#### 40 Risks from property-casualty insurance business

Of particular importance for property-casualty insurance contracts is the estimation risk with regard to the amount of the expected claims expenditure for future claims from current insurance contracts (premium risk) and for claims already incurred (reserve risk). In estimating claims expenditure, we also take cost increases into account. There is an interest-rate risk for parts of the portfolio. Besides this, the liquidity risk has to be taken into account.

The basis for measuring the risk assumed is an estimate of the claims frequency to be expected for a contract or a portfolio of contracts. In addition, an estimation of the claims amount is necessary, from which a mathematical distribution of the expected losses is derived. The result of these two steps is an estimation of the expected overall claims in a portfolio. A third element comprises the expected cash flows to settle claims incurred, a process which frequently extends over several years.

As the proportion of business ceded is small, the following analysis of underwriting risks largely adopts a gross approach.

**Premium risks** The degree of exposure to estimation risks differs according to class of business and also between primary insurance and reinsurance. On the basis of the loss ratios and combined ratios of past years, conclusions can be drawn about the historical volatilities in the different classes of business and about possible interdependencies. The differences in volatility are due equally to fluctuations in claims burdens and fluctuations in the respective market-price level for the covers granted.

Premiums, loss ratios and combined ratios by class of business<sup>1</sup>

<sup>1</sup> In 2012, our segment reporting was modified and no longer has a consolidation column. The figures for the previous year have been adjusted accordingly. Comparability with 2010 is thus limited.

<sup>2</sup> The figure for 2011 is not adjusted for relief of 4.9 percentage points from economic risk transfer to the capital markets.

The estimation of technological, social and demographic parameters plays an important part in assessing and pricing risks assumed in all classes of business. Beyond this, in liability insurance, workers' compensation insurance, credit insurance and sections of motor insurance, the development of economic and legal parameters can be significant, whereas – especially in the lines of business accident, fire and marine, and also in sections of engineering reinsurance and in primary insurance – there is a high degree of sensitivity regarding the underlying assumptions about natural catastrophes. In the latter area, we include expected trends in our considerations when assessing the risks, with special importance given to a precise analysis of climate-related changes in the risk profile. The following table shows Munich Re's combined ratios for property-casualty reinsurance including and excluding natural catastrophe losses.

Combined ratio in reinsurance for the last ten years<sup>1</sup>

| %                                           | 2014 | 2013 | 2012 | 2011  | 2010  | 2009 | 2008 | 2007 | 2006 | 2005  |
|---------------------------------------------|------|------|------|-------|-------|------|------|------|------|-------|
| Including natural catastrophes <sup>2</sup> | 92.7 | 92.1 | 91.0 | 113.8 | 100.5 | 95.3 | 99.4 | 96.4 | 92.6 | 111.7 |
| Excluding natural catastrophes              | 89.4 | 87.4 | 83.3 | 84.4  | 89.5  | 93.9 | 93.2 | 91.7 | 91.6 | 92.5  |

<sup>1</sup> In 2012, our segment reporting was modified and no longer has a consolidation column. The figures for the previous year have been adjusted accordingly. Comparability with the years up to and including 2010 is thus limited.

<sup>2</sup> The figure for 2011 is not adjusted for relief of 1.4 percentage points from economic risk transfer to the capital markets.

Large losses, by which we mean individual losses exceeding €10m, are of particular relevance for property-casualty business in reinsurance. The analysis below shows that the volatility of the individual years in this loss category is mainly attributable to the respective intensity of natural catastrophe losses, whilst the other accumulation risks exhibit a distinctly less volatile pattern.

Large losses in reinsurance according to individual calendar years (net)<sup>1</sup>

|------------------------------------------|--------|--------|--------|--------|--------|
| Large losses                             | -1,162 | -1,689 | -1,799 | -5,048 | -2,228 |
| Thereof losses from natural catastrophes | -537   | -764   | -1,284 | -4,538 | -1,564 |
| Thereof other accumulation losses        | -625   | -925   | -515   | -510   | -664   |

<sup>1</sup> In 2012, our segment reporting was modified and no longer has a consolidation column. The figures for the previous year have been adjusted accordingly. Comparability with 2010 is thus limited.

Further information on risks from large and accumulation losses can be found in the section on business performance on [pages 78–82](#) and [87–88](#), and in the risk report on [pages 128–130](#).

**Reserve risks** The provision for outstanding claims is subject to the risk that actual claims settlement may be less than or exceed the amount reserved (reserve risk). Particular attention is given to those situations where the funds dedicated to future claims payments may be inadequate.

The measurement of the provision for outstanding claims is based on an analysis of the historical loss-development data for the different classes of business. We use a range of well-established actuarial methods for this purpose, which embed various pricing, coverage and benefit/inflation levels. In so doing, we draw on the specialist knowledge present in our claims and underwriting departments and take all foreseeable future trends into account. As part of our regular results-monitoring process, we keep a close eye on trends to ensure that the assumptions underlying the measurement of the provisions always reflect the latest developments. Consequently, in the course of reserve run-off, it may be necessary to revise the original estimates of the claims expenditure required and to adjust the provisions accordingly.

The development of our claims reserves and the corresponding run-off results are shown in the notes to the consolidated balance sheet – Equity and liabilities (23) Provision for outstanding claims.

A particular sensitivity exists in the case of contracts with long run-off periods. This characteristic applies especially to casualty insurance, where liabilities may manifest themselves with a considerable time lag. In addition, changes in court verdicts, class actions, inflation in medical care costs and modifications in general life expectancy can

influence the valuation of reserves. The following section discusses the areas in the current reserve portfolio where, within the framework of an appropriate reserve estimate, the uncertainty is the greatest.

Asbestos insurance liabilities currently emanating predominantly from the US and some European countries are an area of concern for the entire insurance and reinsurance industry. Since the mid-1980s, industrial insurers writing business worldwide have found themselves being confronted with losses from policies taken out decades before. This also applies to Munich Re. In our case, the policies mainly cover claims which manifest themselves after a latency period of as long as 30–50 years. In response, we have posted provisions for claims under long-cancelled general liability policies which provided coverage according to the legal environment applicable at that time.

Time lags in claims settlement may assume significant dimensions, especially in reinsurance. Loss notification often involves a long chain: exposure to the loss, manifestation of an injury, possible filing of a lawsuit against a defendant and adjudication of the suit, reporting and payment of an insurance recovery and, finally, notification to the reinsurer. Therefore, besides monitoring these developments on a claim-by-claim level, we also monitor the development from an industry perspective, as this may be considered an important early indicator.

#### Provisions for asbestos and environmental claims

| €m <sup>1</sup> | 31.12.2014 |       | Prev. year |       |
|-----------------|------------|-------|------------|-------|
|                 | Gross      | Net   | Gross      | Net   |
| Asbestos        | 1,944      | 1,597 | 2,067      | 1,707 |
| Environmental   | 401        | 326   | 422        | 317   |

1 The previous year's figures have been adjusted to eliminate currency translation effects.

In addition, there are loss scenarios which are highly influenced by the continuously evolving jurisprudence of tort law, but also by a growing number of class actions. The main lines of business affected are product liability and professional liability in the USA. Besides this, we see increased uncertainties in the assessment of the liability scenarios for pure financial losses as a result of the massive change in economic parameters. We continue to carefully monitor trends and respond to the emergence of new information as appropriate.

In the area of bodily injury losses, Munich Re carries a significant amount of reserves for individual claims where the claimant is severely injured and is in need of a high degree of individual, specialised medical treatment and care. US workers' compensation business and motor liability business in some European countries are particularly affected by such claims. In both instances, coverage is provided for permanent disability cases where the claimant is expected to live for a considerable length of time and requires significant medical attention. Accordingly, the loss provisions are highly sensitive in particular to inflation of medical care costs and to the trend with regard to general life expectancy. Owing to unexpectedly high price inflation, we have repeatedly had to increase these provisions in the past. Actual claims reported are compared with projected amounts to check whether the loss development patterns used are still appropriate for projecting future claims payments.

**Risk minimisation measures** With our underwriting policy geared to systematic diversification, i.e. the greatest possible mix and spread of individual risks, we substantially reduce the volatility for our insurance portfolio as a whole.

Another important measure for controlling underwriting risks is the cession of a portion of our risks to other carriers via external reinsurance or retrocession; see notes to the consolidated balance sheet – Assets (12) Ceded share of technical provisions and notes to the consolidated income statement (30) Premiums. All our companies have intra-Group and/or external reinsurance and retrocession cover. Particularly important in this context is an accumulation excess-of-loss cover, which provides protection against property damage losses from natural catastrophes. The dimensions of this cover are based on analyses of our accumulation budgets in those parts of the world exposed to natural catastrophes. The protection afforded by retrocession comes into play if we are hit by an extremely large loss.

We further diversify our risk management instruments by issuing catastrophe bonds.

For information on our risk management processes, reference is made to pages 117-121 of the risk report.

**Interest-rate risks** Economically, an interest-rate risk derives in principle from the need to earn a return on the investments covering the provision that is commensurate with the discount rate used in measuring the provision. In balance sheet terms, the interest-rate risk affects only those parts of the technical provisions that are discounted and for which an inflow of investment income from deposits retained is not secured from cedants in at least the same amount.

#### Discounted technical provisions according to discount rates (gross)

| €m                          | Reinsurance  |              | Primary insurance |            | Total        |              |
|-----------------------------|--------------|--------------|-------------------|------------|--------------|--------------|
|                             | 31.12.2014   | Prev. year   | 31.12.2014        | Prev. year | 31.12.2014   | Prev. year   |
| Discount rate ≤ 2.5%        | 40           | 30           | 343               | 304        | 383          | 334          |
| 2.5% < discount rate ≤ 3.5% | 218          | 175          | 539               | 545        | 757          | 720          |
| 3.5% < discount rate ≤ 4.5% | 1,446        | 1,260        | 51                | 54         | 1,497        | 1,314        |
| Discount rate > 4.5%        | -            | -            | -                 | -          | -            | -            |
| <b>Total</b>                | <b>1,704</b> | <b>1,465</b> | <b>933</b>        | <b>903</b> | <b>2,637</b> | <b>2,368</b> |

The major part of the discounted provisions in reinsurance are for US workers' compensation business, for which the discount rates are governed by supervisory law and are determined prospectively per accident year. We currently do not expect any changes in the US regulatory authorities' approval procedure. A sustained reduction in the level of market interest rates is taken into account through appropriate discount rate assumptions for future provisions for outstanding claims. If the discount rate were subsequently lowered by 100 BP, this would necessitate additional reserving of €174m (157m), which would have to be recognised as an expense in the income statement.

The discounting of the provisions in primary insurance is also largely governed by supervisory law. An interest-rate risk arises for us here primarily for annuity insurance claims. However, as only around 14.4% (14.6%) of the actuarial and claims reserves to be considered in this connection in our property-casualty primary insurance are discounted, this risk can be assessed as small. If the investment income failed to cover the expenses arising from the discounting, this would result in losses not included in the calculations. In such a case, a reserve adjustment might be necessary. Conversely, if the investment income were higher, this would result in unforeseen gains.

**Liquidity risks** Such risks could result for Munich Re if the cash outflow for insurance claims payments and the costs related to the business were to exceed the cash inflow from premiums and investments. In property-casualty insurance, a distinction must be made between payments for claims for which reserves were posted in previous years

and immediate payments, i.e. payments for claims incurred in the current financial year. If claims reserves are posted, the liquidity risk can be minimised through our asset-liability management, in which investments are geared to the character of the liabilities. The proportion of immediate claims payments, which is temporally stable according to our experience, constitutes only a fraction of the total payments to be made. Consequently, the liquidity risks in respect of these payments can also be minimised by means of asset-liability management.

The following table shows that in the past calendar years the liquidity situation in underwriting has always been positive. Besides this, we also have extensive, sufficiently liquid investments available to fulfil our liquidity obligations. We pursue a consistent asset-liability management approach in our investment strategy. The structure and characteristics of the payment obligations from insurance business determine the investments selected. In addition, we regularly simulate the impact of major shock scenarios on our liquidity situation; details of our risk-bearing capacity with regard to large losses and accumulation situations are provided in the risk report on [page 124](#).

#### Payment flows and liquid funds in the individual calendar years (gross)

| €m                                 | 2014   | 2013   | 2012   | 2011   | 2010   |
|------------------------------------|--------|--------|--------|--------|--------|
| Premiums received                  | 22,335 | 22,520 | 22,606 | 22,152 | 20,834 |
| Claims payments for financial year | -5,495 | -5,617 | -5,968 | -5,930 | -5,213 |
| Claims payments for previous years | -8,193 | -7,388 | -8,898 | -8,096 | -8,613 |
| Costs                              | -7,298 | -7,024 | -6,839 | -6,808 | -6,517 |
| Balance                            | 1,349  | 2,491  | 901    | 1,318  | 491    |

**Impact of changes in underwriting assumptions on equity and the consolidated income statement** As part of the monitoring of our portfolio, we check whether original assumptions need to be adjusted. By means of the IFRS 4 liability adequacy test, we review expected claims expenditure in the light of updated assumptions, taking into account our risk minimisation measures. If this test shows that an adjustment to technical provisions is required, the amount is recognised in the consolidated income statement.

#### 41 Credit risks from ceded reinsurance business

In connection with the business we cede, the credit risk is of relevance. For our reinsurance and retrocessions placed externally, we choose only business partners that meet the requirements of our Retro Security Guideline and analogous regulations.

The credit ratings of our retrocessionaires and reinsurers for the externally ceded share of our provisions are given on [page 132](#) of the risk report, which also includes further information on credit risks on [page 123-124](#).

Of the ceded share of provisions, 50% (52%) is directly collateralised through deposits, so the credit risk can be ignored for this portion. Apart from this, there are credit risks from the underwriting of credit reinsurance contracts. Information on these can be found under (40) Risks from property-casualty insurance business. We do not conduct active credit insurance business to any material extent in our primary insurance.

## 42 Market risks from financing instruments – Sensitivity analysis

The sensitivity analysis shows the effect of capital market events on the value of investments and the corresponding impact on the consolidated income statement. Sensitivities of investments to share prices and interest rates are analysed independently of one another, i.e. *ceteris paribus*, with the change in market value being determined under selected capital market scenarios as follows:

To analyse equities and equity derivatives, a change in market value of  $\pm 10\%$  and  $\pm 30\%$  is calculated on the basis of the portfolio's delta. Non-linear effects of equity options or other asymmetrical strategies are not taken into account in this presentation. For interest-rate-sensitive instruments, on the other hand, the change in market value resulting from a global change in interest rates of  $\pm 100$  BP,  $\pm 50$  and  $-25$  BP is determined using duration and convexity. The currently low level of interest rates in the capital markets is responsible for the asymmetrical selection of scenarios for presenting the market risk of investments sensitive to interest rates. The reaction of interest-rate derivatives to the change in market value of the underlying investment is taken into account using the delta of the derivative. Alternative investments (private equity, hedge funds and commodities) are analysed together with the equities.

The effects of the capital market events listed here do not take account of tax or the provision for premium refunds (gross disclosure), i.e. the analysis does not take into account the effects resulting from policyholders' participation in surplus in insurances of the person. The impact on the results and equity shown below would be substantially reduced if these effects were considered. It is also assumed that changes in the capital markets occur instantaneously, preventing our limit systems and active countermeasures from taking effect. The analysis considers around 99% of Munich Re's investments.

**Market risk – Share prices** The impact of a change on the stock markets in terms of absolute amounts on the market value of investments sensitive to share prices and on equity increased in the year under review. This is due to additional equity investments and the good development of the stock markets in the reporting period. A change in the stock market by 10% has an impact of 8.8% (10.4%) on the market value of investments sensitive to share prices. The relative change in market value is influenced in particular by additional and restructured derivative hedging. This also contributes to the impact shown on the consolidated income statement at the reporting date.

## Change in market value of investments sensitive to share prices

| Change in share prices | 31.12.2014                            |                               |                              | Prev. year                            |                               |                              |

| Increase of 10%        | -0.124                                | 1.178                         | 1.273                        | 0.054                                 | 0.950                         | 1.249                        |
| Decrease of 10%        | -0.341                                | -0.708                        | -1.268                       | -0.391                                | -0.641                        | -1.248                       |
| Decrease of 30%        | -1.650                                | -1.499                        | -3.806                       | -1.728                                | -1.370                        | -3.743                       |
| Market values          |                                       |                               | 14.410                       |                                       |                               | 12.021                       |

<sup>1</sup> Gross before tax and policyholder participation in surplus.

**Market risk – Interest rates** The change in the market value of investments sensitive to interest rates is calculated using a parallel shift of the interest-rate curve and a revaluation of the fixed-interest securities and interest-rate derivatives on the basis of their duration and convexity. Cash and other derivatives are not included in the calculation.

The interest-rate sensitivity of Munich Re's investments increased in the year under review. Restructurings of the interest-rate derivatives used for hedging result in the impact on the consolidated income statement shown as at the reporting date.

The impact on the consolidated income statement is small compared with the impact on equity, as most of the changes in the value of fixed-interest investments are accounted for in equity, with no effect on profit or loss. Also, around a third of the investments considered in this analysis are measured at amortised cost, so that changes in market value have no effect on the balance sheet or income statement.

Economically speaking, the impact of the interest-rate sensitivity of fixed-interest investments on equity is paralleled by a change in the market value of the underwriting liabilities. That is why, in managing interest-sensitive investments, our asset-liability management takes particular account of the effect of interest-rate changes on the economic value of the underwriting liabilities. This offsetting does not have an impact on the balance sheet, however, since significant portions of the underwriting liabilities are not valued on the basis of the current interest-rate curves.

#### Change in market value of investments sensitive to interest rates

| Change in interest rates | 31.12.2014                            |                               |                              | Prev. year                            |                               |                              |

<sup>1</sup> Gross before tax and policyholder participation in surplus.

## Other information

### 43 Parent

The Group parent is Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München (Munich Reinsurance Company Joint-Stock Company in Munich), Königinstrasse 107, 80802 München.

Its registered seat is Munich, Germany.

In addition to its function as a reinsurer, the parent also fulfils the function of holding company for the Group.

### 44 Related parties

Information on the remuneration of Board members and transactions with these persons can be found in the remuneration report, starting on page 49 and under (48) Remuneration report. Transactions between Munich Reinsurance Company and subsidiaries that are to be deemed related parties have been eliminated in consolidation and are not disclosed in the notes. Business relations with unconsolidated subsidiaries are of subordinate importance as a whole; this also applies to business relations with associates and joint ventures.

Munich Reinsurance Company has established a contractual trust agreement in the form of a two-way trust for its unfunded company pension obligations. The Munich Re pension scheme is considered a related party in accordance with IAS 24. Contributions to the pension scheme are recognised as expenses for defined contribution plans; see Notes to the consolidated balance sheet – Equity and liabilities (26) Other accrued liabilities. For transactions of related parties with Munich Reinsurance Company shares, please refer to Notes to the consolidated balance sheet – Equity and liabilities (18) Equity.

### 45 Personnel expenses

The following personnel expenses are included in the operating expenses, in the expenses for claims and benefits (for claims adjustment) and in the investment result:

#### Breakdown of personnel expenses

| €m                                                    | 2014         | Prev. year   |
|-------------------------------------------------------|--------------|--------------|
| Wages and salaries                                    | 2,728        | 2,733        |
| Social security contributions and employee assistance | 510          | 487          |

| <b>Total</b>                                          | <b>3,463</b> | <b>3,435</b> |

### 46 Long-Term Incentive Plan

Every year from 1999 to 2010, Munich Reinsurance Company set up long-term incentive plans, each with a term of seven years. From 1999 to 2009, the members of the Board of Management and senior management in Munich, and the top executives in Munich Re's international organisation, were participants in the scheme. In 2010, this share-price-related remuneration plan was provided only for senior management members and selected top executives in the international organisation.

Under each long-term incentive plan, participants received a certain number of stock appreciation rights.

The relevant initial share price for the stock appreciation rights was calculated from the average of closing prices for Munich Re shares in Frankfurt Xetra trading over the last three months prior to the respective plan commencement.

The personnel expenses and income incurred for the stock appreciation rights are determined on the basis of the change in the fair value of the underlying options. The fair value recognises not only the intrinsic value (difference between current share price and initial share price of the stock appreciation rights) but also the possibility of growth in value up to the date of forfeiture or expiry of the rights and is determined on the basis of recognised valuation models, taking into account the exercise conditions. At each balance sheet date, the fair value is calculated and reserved in full. In the year under review, provisions of €5.8m (10.9m) had to be posted for Munich Reinsurance Company. The personnel expense/income recognised in the income statement corresponds to the change in the provision in the year under review, taking into consideration any rights exercised. In 2014, this resulted in expenses of –€1.1m (–18.6m). The weighted average share price for the stock appreciation rights in 2014 was €161.49 for plan year 2007, €161.63 for plan year 2008, €159.38 for plan year 2009, and €150.26 for plan year 2010. The intrinsic value of the exercisable stock appreciation rights amounted to €5.8m at the balance sheet date.

| Exercisable at year-end            | -                      | 24,512                 | 27,800                 | 59,662                 |

From 2002 to 2009, ERGO Versicherungsgruppe AG and some of its subsidiaries, as well as the MEAG companies, also set up long-term incentive plans at yearly intervals and with terms of seven years each. The persons eligible for participation – Board of Management members, managing directors and, in individual cases, also top executives – were granted a defined number of stock appreciation rights in respect of Munich Re shares. In 2010, these share-price-related remuneration plans were provided only for senior management at the MEAG companies and for the managing directors of MEAG MUNICH ERGO Kapitalanlagegesellschaft mbH. The design of the plans is identical to that of Munich Re's long-term incentive plans and they are accounted for in the same way. The obligations arising from the long-term incentive plans are covered by options on Munich Reinsurance Company shares. In the year under review, provisions of €0.2m (1.2m) had to be posted for the ERGO and MEAG companies. The personnel expense/income recognised in the income statement corresponds to the change in the provision in the year under review, taking into consideration any rights exercised. In 2014, this resulted in income of – (€0.5m). The weighted average share price for the stock appreciation rights exercised in 2014 was €161.89 for plan year 2007, €161.75 for plan year 2008, €159.00 for plan year 2009, and €158.05 for plan year 2010. The intrinsic value of the exercisable stock appreciation rights amounted to €0.2m at the balance sheet date.

Each stock appreciation right entitles the holder to draw in cash the difference between the Munich Re share price at the time when the right is exercised and the initial share price. The stock appreciation rights may only be exercised after a two-year vesting period and then only if the share price is at least 20% higher than the initial price. In addition,

Munich Re shares must have outperformed the EURO STOXX 50 twice at the end of a three-month period during the term of the plan. The gross amount that may be obtained from the exercising of the stock appreciation rights is limited to an increase of 150% of the initial share price.

When the stock appreciation rights are exercised, the cash payment is made (in the respective national currency) by the company that granted the rights. Stock appreciation rights not exercised on the last trading day of the plan term are exercised on the participant's behalf insofar as the prerequisites for this are met. If the prerequisites are not met, the stock appreciation rights are forfeited. If another company acquires control of Munich Reinsurance Company or if the latter's group of shareholders changes significantly due to a merger or comparable transaction or intended business combination ("change of control"), all plan participants from Munich Re may exercise their stock appreciation rights within 60 days after the change of control becomes effective, even if the prerequisites for exercising the rights are not yet met at that juncture.

#### 47 Mid-Term Incentive Plan

Since 1 January 2009, Munich Reinsurance Company has set up medium-term incentive plans, each with a term of three years. Eligible for participation in these cash-settled share-based remuneration plans are senior management in Munich. The participants receive performance share units (PSUs). In the fourth year after plan commencement, participants are entitled to a bonus payment dependent on the achievement of value-based performance targets and the increase in the total shareholder return (TSR).

The value-based performance targets are set in the form of an average target to be achieved over the following three years of the plan and are allocated according to responsibilities.

The share-based factor TSR represents the total return on Munich Re shares and comprises share price increases plus dividends paid over a certain observation period. The initial TSR value and the final TSR value are determined from the average of the last 60 calendar days prior to plan commencement and plan termination respectively.

At plan commencement, the PSUs are granted on the basis of the set target amount for 100% achievement of objectives and the initial TSR value. The total return index of the Xetra listing of Munich Re shares, starting on 22 January 1996, is used for the TSR. The basis for the full and partial allocation of the PSUs is the first plan year.

The final number of PSUs is calculated by multiplying the number of PSUs at plan commencement by the percentage achievement of the performance target at plan termination. The number of PSUs may fluctuate between 0 and 1.5 times the initially allocated number. Payment is capped if the TSR doubles. The maximum amount payable is limited to 300%.

The Mid-Term Incentive Plan at the reporting date is valued indirectly at the fair value of the liabilities. The fair value takes account of the value-based performance target and the total shareholder return (TSR) during the performance period. To this end, the TSR index value observable in the market is updated with the current dividend yield of Munich Re shares at the termination date and discounted with appropriate market interest rates.

In the financial year 2014, expenses of -€7.9m (-26.6m) were recognised for the Mid-Term Incentive Plan. The provision at the reporting date amounted to €58.9m (79.5m).

## 48 Remuneration report

The members of Munich Reinsurance Company's Board of Management received remuneration totalling €24.1m (24.7m). The total remuneration of Munich Reinsurance Company's Supervisory Board amounted to €2.6m (2.3m); not included in this figure is €0.2m (0.1m) for membership of supervisory boards at other Group companies, so that the overall amount came to €2.8m (2.4m).

Payments to retired members of the Board of Management or their surviving dependants totalled €7.2m (5.7m).

Personnel expenses were not incurred for retired members of the Board of Management. After deduction of plan assets held by a separate entity (under a contractual trust agreement), there were no pension provisions or provisions for comparable benefits for retired members of the Board of Management or their surviving dependants.

There are no pension commitments for former members of the Supervisory Board or their surviving dependants.

The members of the Supervisory Board and Board of Management did not receive any cash advances or loans in the year under review. For their service as employees of the Group, Supervisory Board members received remuneration in the amount of €1.4m (1.3m). There were no significant notifiable transactions between Board members and Munich Re.

All other disclosures on the remuneration and structure of the remuneration system for the Board of Management can be found in the remuneration report on [page 49](#). Information on share trading and shares held by members of the Board of Management and the Supervisory Board is provided in the corporate governance report on [page 29](#).

## 49 Number of staff

The number of staff employed by the Group at year-end totalled 21,899 (23,131) in Germany and 21,417 (21,534) in other countries.

### Breakdown of number of staff

|               | 31.12.2014    | Prev. year    |
|---------------|---------------|---------------|

| <b>Total</b>                                | <b>11,059</b> |

<sup>1</sup> Thereof fees totalling €5,978k for KPMG Bayerische Treuhandgesellschaft AG Wirtschaftsprüfungsgesellschaft Steuerberatungsgesellschaft.

## 51 Contingent liabilities, other financial commitments

Munich Re enters into contingent liabilities in connection with its normal business operations. In this context, the obligations from guarantees total – (€50m), those from legal disputes €7m (3m), and those from letters of support – (€5m). There are other financial commitments amounting to €3m (–). Additionally, Munich Re has entered into a payment commitment of £20m towards an associate, the amount being payable in the event of over-indebtedness. Further information on risks arising from legal disputes can be found on [page 137 f.](#) in the risk report.

Estimates and judgements are necessary for contingent liabilities where the likely impact cannot be clearly determined. This is the case, for example, with respect for contingent liabilities in legal disputes. Like the evaluation process for other accrued liabilities, the assessment is made by experts in the affected units on the basis of the best estimate. Contingent liabilities are stated unless the experts estimate that the possibility of an outflow of resources is remote.

ERGO companies have assumed unlimited liability for the sale of insurance products by insurance intermediaries acting exclusively on their behalf. In this respect, there is a risk of a claim being made by customers. In case of a claim, there is a general possibility of recourse against the insurance intermediary or the latter's fidelity guarantee insurance carrier.

The application of fiscal regulations may yet be unresolved at the time of calculation of tax refund claims and tax liabilities. The calculation of tax items is based on the regulations most likely to be applied in each case. Regardless of this, the tax authorities may take a different view, which may give rise to additional tax liabilities.

In accordance with the German Insurance Supervision Act (VAG), all German life and health insurers of our Group are obliged to be members of a protection fund. For life insurers, the protection fund can levy special contributions of up to one per mille of total net technical provisions, in addition to a regular contribution of 0.2 per mille of total net technical provisions. For the health insurers, there is no pre-financing, but the fund may levy special contributions of up to two per mille of net technical provisions to fulfil its functions. This could give rise to a potential payment obligation of €135m (129m) at Group level. The functions and powers of the statutory protection fund for life insurance rest with Protektor Lebensversicherungs-AG, and those of the statutory protection fund for health insurance with Medicator AG.

Besides this, Munich Re has entered into various other financial obligations amounting to €303m (192m) for work and service contracts and €1,075m (831m) for investment obligations. At the reporting date, there were loan commitments amounting to €610m (385m). These figures represent undiscounted nominal amounts. There are other financial commitments amounting to €7m (-).

There are no other financial commitments of significance for the assessment of the Group's financial position. No contingent liabilities have been entered into for the benefit of Board members.

Contingent liabilities and other financial commitments of associates and joint ventures are presented in the Notes to the consolidated balance sheet – Assets (5) Investments in affiliated companies, associates and joint ventures. These are included in the figures set out here.

## 52 Significant restrictions

Regulatory, legal or contractual restrictions and protective rights of non-controlling interests may restrict the Group's ability to access or use assets, and settle liabilities.

As at 31 December 2014, there were no protective rights of non-controlling interests restricting Munich Re's transfer of assets.

There are no significant restrictions on Munich Re's ability to settle the liabilities of the Group.

The carrying amounts of Group assets with restrictions on title can be found in the notes to the consolidated balance sheet – Assets. The restrictions primarily result from contractual agreements, including pledged securities deposits to collateralise payment obligations from insurance business, the collateralisation of derivative transactions with securities or of bank liabilities with non-financial assets.

As insurers, we are subject to supervisory requirements that may restrict access to assets. Individual national regulations require that assets held to cover insurance liabilities be managed separately. In principle, there are special supervisory regulations governing access to these assets and their use.

In addition, we are subject to supervisory requirements that may restrict dividend payments or other capital distributions, loans and advance payments within the Group.

Our subsidiary Munich American Reassurance Company shows a negative earned surplus in its local financial statements as at 31 December 2014 (Statutory Accounting Principles). For this reason, the company can only pay dividends or transfer capital to the parent company with the approval of the competent US regulatory authority.

## 53 Leasing

**Munich Re as lessee** At the balance sheet date, future minimum lease payments under non-cancellable operating leases totalled €440m (446m).

### Due dates

| €m                                                | 31.12.2014 | Prev. year |
|---------------------------------------------------|------------|------------|
| Not later than one year                           | 84         | 90         |
| Later than one year and not later than five years | 212        | 222        |
| Later than five years                             | 144        | 134        |
| <b>Total</b>                                      | <b>440</b> | <b>446</b> |

The contracts mainly concern offices and business premises of the Group, IT infrastructure, and land that we use in connection with our infrastructure investment programme (including renewable energies and new technologies). They include extension options as well as restrictions regarding the agreement of subleases. In the period under review, minimum lease payments of –€108m (–89m) and contingent lease payments of –€9m (–9m) were recognised as an expense. The total of future minimum sublease payments expected to be received under non-cancellable subleases was €15m (16m) at the reporting date.

There were no finance leases at 31 December 2014.

**Munich Re as lessor** Operating leases mainly involve leased property. The total of future minimum lease payments under non-cancellable leases at the balance sheet date was €845m (911m).

### Due dates

Net investments in leases correspond to the carrying amounts of the lease payments receivable at the balance sheet date.

#### 54 Events after the balance sheet date

Under the share buy-back programme decided on by Munich Reinsurance Company's Board of Management in March 2014, we repurchased a further 1.0 million Munich Re shares with a volume of €172m from the balance sheet date to 25 February 2015.

On 1 January 2015, via its subsidiary MR RENT-Investment GmbH, Munich, Munich Re acquired 100% of the voting shares in the solar park companies KS SPV 23 Limited, London, England, and Countryside Renewables (Forest Heath) Limited, London, England, von BayWa r.e. 205. Projektgesellschaft mbH, Gräfelfing, Germany and BayWa r.e. 149. Projektgesellschaft mbH, Gräfelfing, Germany. The solar parks have a total installed capacity of 22.7 megawatts.

On 1 March 2015, via its subsidiary MR RENT-Investment GmbH, Munich, Munich Re acquired 100% of the voting shares in the solar park company Cornwall Power (Polmaugan) Limited, London, England from BayWa r.e. 148. Projektgesellschaft mbH, Gräfelfing, Germany. The solar park has a total installed capacity of 5 megawatts.

The acquisitions are part of our infrastructure investment programme (including renewable energies and new technologies).

On 1 March 2015, the Austrian Financial Market Authority (FMA) initiated insolvency proceedings against Heta Asset Resolution AG, Klagenfurt (Heta) in accordance with the new EU Regulation on insolvency proceedings for banks. To be able to prepare an insolvency plan, FMA has imposed a deferral of Heta's liabilities towards its creditors until 31 May 2016. For the first quarter of 2015, we expect a write-down of our fixed-interest portfolio in the two-digit million euro range, after taking into account policyholder participation.

#### 55 Earnings per share

There were no diluting effects to be disclosed for the calculation of earnings per share either in the financial year or in the previous year. Earnings per share can be potentially diluted in future through the issue of shares or subscription rights from amounts authorised for increasing the share capital and from contingent capital.

#### Earnings per share

|                                               |    | 2014        | Prev. year  |
|-----------------------------------------------|----|-------------|-------------|
| Consolidated result attributable to           |    |             |             |
| Munich Reinsurance Company equity holders     | €m | 3,153       | 3,304       |
| Weighted average number of outstanding shares |    | 172,170,439 | 179,065,855 |
| Earnings per share                            | €  | 18.31       | 18.45       |

The previous year's figures have been adjusted retrospectively, see "Changes in accounting policies and other adjustments". Without adjustments, the earnings per share in the previous year would have been €18.50. The number of outstanding shares decreased by 8,906,893 (1,105,370) over the course of the financial year 2014, essentially owing to the share buy-back programme.

#### 56 Proposal for appropriation of profit

Munich Reinsurance Company's net retained profits for 2014 according to its financial statements prepared on the basis of German GAAP accounting amount to €1,340,305,289.50. The Board of Management will propose to shareholders at the Annual General Meeting that these net retained profits be used for payment of a dividend of €7.75 per dividend-bearing share, with the remaining amount being carried forward to new account.

## List of shareholdings as at 31 December 2014 pursuant to Section 313 (2) of the German Commercial Code (HGB)

The following disclosures relate to companies in which our directly and indirectly held shareholdings (as defined in Section 16 (2) and (4) of the German Stock Corporation Act – AktG) add up to 20% or more of the share capital, and large companies (as defined in Section 267 (3) of the German Commercial Code – HGB) in which our directly and indirectly held shareholdings add up to more than 5% of the voting rights.

- 1 The market capitalisation (MC) of this company as at 31 December 2014 is €XXm.
- 2 This fully consolidated German subsidiary with the legal form of a partnership, as defined in Section 264a of the German Commercial Code (HGB), intends to fulfil the conditions required in Section 264b of the Commercial Code and, in the financial year 2014, to avail itself of the relevant provision exempting it from preparing annual financial statements.
- 3 This fully consolidated German subsidiary intends to fulfil the conditions required in Section 264 (3) of the Commercial Code and, in the financial year 2014, to avail itself of the relevant provision exempting it from preparing annual financial statements.
- 4 Control pursuant to IFRS 10.
- 5 Significant influence owing to representation of Munich Re on the board of directors and/or equivalent governing body of the associate.
- 6 No significant influence, as there are no close links with Munich Re of the kind defined in IAS 28.6.
- 7 Not currently utilised.
- 8 No significant influence, as this is a purely financial investment managed by an external asset manager.
- 9 Significant influence owing to reduced voting power.
- 10 Not currently utilised.
- 11 No significant influence because, under the articles of association, statutes or other agreement, all key decisions regarding the company's financial and operating policy are subject to a quorum which cannot be attained by the majority shareholder without the non-controlling shareholders.
- 12 Not currently utilised.

Drawn up and released for publication,  
Munich, 2 March 2015.

The Board of Management

## Auditor's report

We have audited the consolidated financial statements prepared by Münchener Rückversicherungs-Gesellschaft Aktiengesellschaft in München, Munich, comprising the consolidated balance sheet, the consolidated income statement, the statement of recognised income and expense, the Group statement of changes in equity, the consolidated cash flow statement and the notes to the consolidated financial statements, together with the Group management report for the financial year from 1 January to 31 December 2014. The preparation of the consolidated financial statements and the Group management report in accordance with IFRS, as adopted by the EU, and the additional requirements of German commercial law pursuant to Section 315a (1) of the German Commercial Code (HGB) are the responsibility of the parent company's management. Our responsibility is to express an opinion on the consolidated financial statements and on the Group management report based on our audit.

We conducted our audit of the consolidated financial statements in accordance with Section 317 of the German Commercial Code and German generally accepted standards for the audit of financial statements promulgated by the Institute of Public Auditors in Germany (IDW). Those standards require that we plan and perform the audit such that misstatements materially affecting the presentation of the net assets, financial position and results of operations in the consolidated financial statements in accordance with the applicable financial reporting framework and in the Group management report are detected with reasonable assurance. Knowledge of the business activities and the economic and legal environment of the Group and expectations as to possible misstatements are taken into account in the determination of audit procedures. The effectiveness of the accounting-related internal control system and the evidence supporting the disclosures in the consolidated financial statements and the Group management report are examined primarily on a test basis within the framework of the audit. The audit includes assessing the annual financial statements of those entities included in consolidation, the determination of entities to be included in consolidation, the accounting and consolidation principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements and Group management report. We believe that our audit provides a reasonable basis for our opinion.

Our audit has not led to any reservations.

In our opinion, based on the findings of our audit, the consolidated financial statements comply with IFRS, as adopted by the EU, and the additional requirements of German commercial law pursuant to Section 315a (1) of the German Commercial Code and give a true and fair view of the net assets, financial position and results of operations of the Group in accordance with these requirements. The Group management report is consistent with the consolidated financial statements and as a whole provides a suitable view of the Group's position and suitably presents the opportunities and risks of future development.

## Responsibility statement

"To the best of our knowledge, and in accordance with the applicable reporting principles, the consolidated financial statements give a true and fair view of the assets, liabilities, financial position and profit or loss of the Group, and the Group management report includes a fair review of the development and performance of the business and the position of the Group, together with a description of the material opportunities and risks associated with the expected development of the Group."

## Glossary

- Aa** **Accumulation** Situation where a number of risks insured or reinsured with the same company may be affected simultaneously by a loss event.
- Actuary** Qualified expert concerned with the modelling, evaluating and managing of risks using mathematical statistical methods. Actuaries work primarily in the areas of insurance and finance, pensions and home loans, developing long-term solutions for financial protection against future contingencies.
- Asset-liability management** Management of a business in a way that coordinates decisions on assets and liabilities. Specifically, it is the ongoing process of formulating, implementing, monitoring, and revising strategies related to assets and liabilities in an attempt to achieve financial objectives for a given set of risk tolerances and constraints.
- Available financial resources** IFRS equity adjusted for various economically appropriate factors, plus hybrid capital (subordinated bonds and, in German life insurance, funds available for preliminary financing of new business by business in force).
- Bb** **Biometric actuarial assumptions** Parameters that describe insured risks such as mortality, morbidity and disability. Presented in tables (e.g. mortality tables), they usually depend on age attained and gender.
- Bornhuetter-Ferguson method** Standard actuarial method used to estimate the reserves needed for future claims expenditure resulting from losses that have already occurred but are not yet sufficiently specific. With this method, the overall loss expected is determined on the basis of historical data on the run-off of losses in the portfolio and an independent assessment by the insurer. These parameters are given different weightings, depending on the information available on the status of the losses.
- Cc** **Capital Asset Pricing Model (CAPM)** Capital market model used to evaluate securities, based on the portfolio theory. The CAPM expands the portfolio theory to include the question of which part of a security's overall risk cannot be eliminated by means of risk diversification, and explains how investment opportunities entailing risk are assessed in the capital markets. Accordingly, in efficient markets where prices already incorporate all the information available, a greater return can only be achieved by assuming more risk.

**Catastrophe bond** Capital market instrument for transferring (natural) catastrophe risks to the capital markets. The buyers of such bonds profit from a comparatively high coupon rate, but assume the (re)insurer's risk if the (natural) catastrophe occurs. If a predefined parametric trigger is activated by the catastrophe, the buyers' capital is only partially repaid or not repaid at all, and the interest payments to the buyers are reduced or stopped. The capital made available serves to compensate the financial loss incurred by the (re)insurer as a result of the (natural) catastrophe.

**Cedant** Client of a reinsurance company (primary insurer).

**Chain ladder method** Standard (multiplicative) actuarial method used to estimate the reserves needed for future claims expenditure. It assumes that the cumulative loss rises by the same factor in all accident years. With this method, the overall loss expected is determined exclusively on the basis of historical data on the run-off of losses in the insurer's portfolio.

**Combined ratio** Percentage ratio of the sum of net claims expenses plus net operating expenses to net earned premiums. It corresponds to the sum of the loss ratio and the expense ratio.

**Compliance** Acting in accordance with applicable laws and internal company rules. Internal company rules also include the principles and values set forth in Munich Re's Code of Conduct. Compliance requires that a company has the necessary organisational and control measures in place – including appropriate information and documentation systems – to prevent violations of laws and regulations.

**Composite insurer** Insurer that writes both life and non-life business.

**Convexity** Volatility measure to describe how a bond's price will change as interest rates rise or fall. As with duration, the concept of convexity is based on an estimate of the bond's present value. A customary bond with regular coupon payments and complete repayment of the principal on maturity will rise in price more strongly if interest rates decline than it will fall in price if interest rates rise. This phenomenon of convexity is caused by an alteration in the bond's duration when interest rates change. Falling interest rates result in an increase in the bond's duration and thus in its interest-rate sensitivity, so that if interest rates continue to fall, the price rise accelerates. In the case of rising interest rates, the opposite occurs.

**Corporate citizenship** A company's social involvement, i.e. its active involvement as a "good citizen" in local civil society, and in ecological or cultural issues, above and beyond the defines of its business activities.

**Corporate responsibility** Concept whereby organisations consider the interests of society by taking responsibility for the impact of their activities on customers, employees, shareholders, communities and the environment in all aspects of their operations.

**Credit Equivalent Exposure (CEE)** Reference figure used to combine and compare the credit exposure from various product types involving credit risk under a common counterparty limit. The CEE is calculated regardless of the likelihood of a counterparty's default and reflects the estimated loss amount in the event of a default.

**Cycle management** Continuously analysing and managing the course of a cycle. Insurance, reinsurance and retrocession markets are subject to global and regional cycles that may have external (interest-rate development, economic development, major losses, etc.) and internal causes (price competition, premium calculation methods, etc.). Managing the cycle means using an analysis to take proactive strategic measures and ensure risk-commensurate terms (prices, scope of cover, and conditions) in every phase.

- Dd** **Deferred acquisition costs** Costs incurred for the acquisition or the renewal of insurance policies (e.g. commission, cost of processing applications) which are capitalised and amortised over the term of the contracts.
- Delta** Measure of the change in the option price relative to a change in the value of an underlying asset by one unit. If, for example, an option has a delta of 2, the option price rises by 2% if the value of the underlying asset increases by 1%.
- Deposits retained on assumed reinsurance and ceded business** Receivables which reinsurers have vis-à-vis their cedants for collateral (cash deposits) that has been retained by the cedants as a security to cover future reinsurance claims. The cedants show the retained funds as deposits withheld on ceded business.
- Duration** Average term of an interest-sensitive investment (or portfolio) in years.
- Ee** **Economic capital buffer** Amount by which the available financial resources exceed the economic risk capital.
- Economic risk capital (ERC)** Amount of economic equity that Munich Re needs, with a given risk appetite, to cover unexpected losses in the following year. In Munich Re's risk model, economic risk capital is calculated as 1.75 times value at risk for a 12-month time horizon with a confidence level of 99.5%.
- Economic solvency ratio** Ratio calculated by dividing the available financial resources (after dividend and share buy-backs) by the economic risk capital. It is an expression of Munich Re's capital strength.
- Expense ratio** Percentage ratio of net operating expenses to net earned premiums.
- Ff** **Facultative reinsurance** Reinsurance of selected individual risks. The primary insurer can offer an individual risk in reinsurance, which the reinsurer for its part can either accept or decline (cf. obligatory reinsurance).
- Fair value** The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (definition in accordance with IFRS 13 "Fair value measurement").
- Gg** **Gross/net** In insurance terminology, designation for before/after deduction of the portion attributable to business ceded in reinsurance.
- Guaranteed interest** Interest rate to be paid out by the insurer on the savings component of the insurance premium under an endowment insurance policy. This minimum interest rate is contractually guaranteed.
- li** **IBNR reserve** Provision for claims that are not yet known to the insurer (IBNYR = incurred but not yet reported) but also for claims whose case reserves are not sufficient (IBNER = incurred but not enough reserved).
- Income from technical interest** Amount earned by assumed insurance business from the mainly risk-free investment of assets covering the technical provisions. The deposits retained on ceded business are also taken into account. Thus the portion of investment income that corresponds to the deposit interest expense is included in the calculation of the technical interest.
- Insurance pool** Risk community in which legally and economically independent insurers and reinsurers combine (or in some cases are required by the government) to create cover for particularly large or unbalanced risks. The participants undertake to write the risks defined in the pool contract only within the framework of the insurance pool and to transfer such risks to it in return for a commission. Every pool member participates in the pool's profit or loss in accordance with its predefined quota share. To spread the

risk further, reinsurance covers are often ceded or taken out. Types of pool include coinsurance pools, where all members act as primary insurers, and reinsurance pools, where primary insurers write the risks and then divide these between the participating insurers via reinsurance.

**Interest-rate curve** Curve that models the relationship between interest rates and the term of an investment (e.g. fixed-interest securities). As a rule, the interest rate increases the longer the term. This type of interest-rate curve is therefore referred to as rising (or normal). An interest-rate curve is defined as flat if the interest rate is independent of the term. Inverse (or declining) interest-rate curves are rare. They are produced when less interest is paid on long-term securities (bonds) than on short-term securities. The interest-rate curve is plotted on a graph.

## L

**Liability adequacy test** Regular check of the technical provisions, including the related deferred acquisition costs, on the basis of the current estimates for future cash flows. The test provides an assessment of whether the technical reserves or deferred acquisition costs need to be adjusted.

**Longevity** Insurer's risk that an insured person lives longer than expected or that life expectancy within an insured portfolio rises as a whole.

**Loss ratio** Percentage ratio of net expenses for claims and benefits to net earned premiums.

## Mm

**Major loss** Loss which is of particular significance to insurers or reinsurers because its amount or other criteria are exceptional in relation to historical loss experience. A distinction is typically made between man-made major losses and those caused by natural catastrophes.

**Managing general agency business** Insurance business where the insurer transfers the underwriting authority for a specific portfolio to a managing general agent or managing general agency (MGA) that acts on its behalf. Depending on the arrangement involved, the agent/agency may be assigned additional responsibilities such as claims handling or administrative tasks.

**Market Consistent Embedded Value (MCEV)** Valuation measure for long-term insurance business. Embedded value is the total of a company's equity (at market price) and the value of its in-force covered business. The latter is the present value of future profits (where profits are post-taxation shareholder cash flows from the in-force covered business and the assets backing the associated liabilities) calculated using actuarial methods. The value of in-force covered business additionally takes into consideration the time value of the financial options and guarantees, the explicitly determined cost of holding capital for the whole term of the portfolio, and the costs for non-hedgeable risks. Munich Re calculates embedded value in accordance with the MCEV Principles.

**Modified duration** Sensitivity measure indicating (in per cent) how much a bond's overall yield rises or falls when there is a change in interest rate in the market.

**Morbidity** Probability that an individual in a given group will develop a certain disease or disorder.

**Mortality** Ratio of deaths to the entire population or to a particular age group. It is globally expressed in numbers or rates, and set out in mortality tables.

**Mortality table** Table developed using methods of probability theory for estimating the expected mortality of policyholders in a portfolio of life or health insurance contracts. It shows the probability of future mortality on a differentiated basis according to age and

other factors, often taking into account demographic trends. Mortality tables with provision for adverse deviation are generally used for measuring technical provisions.

**Nn** **Net asset value** Value of all tangible and intangible assets of a company or fund minus its liabilities. It reflects a company's or fund's fundamental value.

**Net expenses for claims and benefits** Expenses for claims, such as claims payments and the change in the provision for outstanding claims. They also include expenses for premium refunds and the change in the remaining technical provisions (provision for future policy benefits and other), in each case after deduction of the ceded share.

**Net operating expenses** Commission plus personnel and non-personnel expenses for the acquisition and ongoing administration of insurance contracts, less commission reimbursed by reinsurers (including profit commission), plus expenses from amortisation of the present value of future profits (PVFP).

**Non-proportional reinsurance** Form of reinsurance under which the reinsurer assumes payment of the primary insurer's losses above a certain amount. Calculation of the reinsurance premium is based on claims experience with the type of business concerned.

**Oo** **Obligatory reinsurance** Type of reinsurance in which the primary insurer is obliged to cede all risks specified in the contract to the reinsurer within a certain scope. The reinsurer accepts these risks without assessing them on a case-by-case basis. Although obligatory reinsurance agreements contain agreed periods of notice, they are generally concluded for an unlimited duration. These treaties between insurers and reinsurers may therefore run for long periods (cf. facultative reinsurance).

**Pp** **Pandemic** Spread of a disease or – in the narrower sense – infectious disease across national borders and continents. Unlike an epidemic, which is a disease occurring in a limited area and time, a pandemic is not restricted to a certain geographical area.

**Policyholders' bonuses** Appropriate share of the surplus earned by insurers in life and health insurance to which policyholders are entitled contractually and by law. The amount of this bonus is newly determined each year. As a rule, in life insurance these bonuses increase the benefit payable on maturity of the policy or on occurrence of the insured event; in health insurance, they are paid by way of premium refunds.

**Premium** Amount that has to be paid for insurance cover. It may be paid as a regular or single premium. Premiums written means all premium income that has become payable in the financial year. The portion of this premium income that constitutes payment for insurance cover in the financial year is referred to as earned premiums. In the case of products that are largely of an investment nature (e.g. capitalisation products and unit-linked life insurance), it only includes – under IFRSs – the amount serving to cover the risk and costs. However, under applicable statutory accounting rules, premium income may also include the policyholders' savings premiums from unit-linked life insurance and capitalisation products.

**Present value of future profits (PVFP)** Present value, capitalised in the balance sheet, of the expected earnings from the business acquired when insurance companies or individual insurance portfolios are taken over. This intangible asset arises in particular when life or health insurance companies are acquired.

**Proportional reinsurance** Form of reinsurance in which the sum insured written by the primary insurer is divided proportionally between the primary insurer and the reinsurer. The reinsurer is allocated a corresponding share of the premiums and claims.

**Provision for future policy benefits** Technical provision calculated using actuarial methods to cover future benefits to which policyholders are entitled, especially in life, health and personal accident insurance. It amounts to the balance of the present value of future obligations less the present value of future premiums.

**Provision for outstanding claims** Provision for claims that have already been incurred at the balance sheet date, but have either not yet been reported or not yet fully settled.

**Provision for premium refund** Provision made for obligations involving bonuses and rebates – especially in life and health insurance – which are not yet payable at the balance sheet date; the amount posted is based on supervisory or contractual regulations. It also includes the policyholders' share of accumulated valuation differences between IFRSs and German GAAP accounting (provision for deferred premium refunds).

**Public-private partnership (PPP)** Long-term arrangement between private companies and public bodies with the aim of providing public services in a more efficient manner.

**Rr Reinsurance capacity** Amount of cover that a reinsurance company or the market as a whole can make available.

**Renewals** Although obligatory reinsurance agreements contain agreed periods of notice, they are generally concluded for an unlimited duration. These treaties between insurers and reinsurers may therefore run for long periods. In such cases, the treaty conditions are usually adjusted in renewal negotiations each year, and the treaties renewed.

**Retrocessionaire** Company that reinsures reinsurance business assumed by other insurance companies. Retrocession enables the reinsurer to lay off part of its risk to other insurance companies.

**Risk exposure** Extent of a risk in terms of its potential deviation from the expected value under certain probability assumptions. In connection with accounting, the term is also used to quantify the potential loss resulting for a company from certain assets.

**Run-off triangle** Also known as „loss triangle“. A tabular representation of claims-related parameters (such as payment, claims reserve, ultimate loss) in two, time-related dimensions. One of these is the calendar year, while the other is usually the accident year (year of the loss occurrence). Run-off triangles – as the basis for measuring claims reserves – make clear how the claims reserve changes over the course of time due to payments made and new estimates of the expected ultimate loss at the respective balance sheet date.

**Ss Scenario analysis** Type of analysis used to investigate how certain key figures (market values or carrying amounts) change in the event that predefined market developments occur. Scenario analyses usually take the form of average if-then analyses.

**Shadow accounting** Non-binding practice wherein an insurer changes its accounting policies so that a recognised but unrealised gain or loss on an asset affects the measurement of technical provisions, related deferred acquisition costs and related intangible assets in the same way that a realised gain or loss does.

**Solvency II** Project of the European Commission to fundamentally reform and harmonise European insurance supervisory regulations. Solvency II follows the three-pillar approach: minimum capital requirements (quantitative), supervisory review processes (qualitative) and market discipline (disclosure).

**Spread** Risk premium in the form of an interest-rate margin that an issuer of a fixed-interest security pays to investors above a risk-free benchmark interest rate such as the yield on German government bonds. This premium covers the risk run by investors that the issuer may become insolvent. A high spread indicates a high default probability and thus low creditworthiness, and vice versa.

**Stress test** Special form of scenario analysis. It allows a quantitative statement to be made on the loss potential of portfolios in the event of extreme market fluctuations.

**Structured entities** Entities that have been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to administrative tasks only and the relevant business activities are directed by means of contractual arrangements.

**Tt Tail dependencies** The result of risk drivers interacting in exceptional situations, i.e. different lines of business, geographies and risk types being affected by extreme events at the same time. Compared with a situation where the risks are assumed to be independent, this results in a lesser diversification effect, which is reflected in a higher capital requirement.

**Technical provisions** Uncertain liabilities directly connected with insurance business. These provisions are made to ensure that obligations under insurance contracts can always be met.

**Technical result** Balance of income and expenses apportionable to (re)insurance business. The technical result includes an interest component, the income from technical interest, which is reallocated from the non-technical result.

**Uu Ultimate loss** Estimated aggregate claims expenditure for the accident year of a claim until final settlement, as calculated at the end of the calendar year. It comprises the claims payments already made for the accident year in question and the remaining claims reserve posted for payments in future years. Since claims reserves are based on estimates, the ultimate loss changes from one calendar year to the next. Reference may therefore also be made to the ultimate loss position or the ultimate loss estimate.

**Underwriter** Member of an insurance or reinsurance company that acts on behalf of his or her employer to negotiate, accept or reject the terms of a (re)insurance contract. Underwriters are responsible for ensuring the quality and reliability of risk-transfer solutions offered. Their job is to develop products that best reflect the characteristics of the risks and clients' needs.

**Unearned premium** Portion of premium income in the financial year that is attributable to periods after the balance sheet date. It is accounted for in the item „unearned premiums“ within the technical provisions on the liabilities side of the balance sheet.

**Unit-linked life insurance** Type of life insurance with a savings component, where the premium is invested in a fund and the benefits payable depend on fund performance. The investment risk is borne by the policyholder.

**Universal life** Contracts in life primary insurance where the amount of the premiums and benefits is flexible, the policyholder being able to vary the premium payments within certain limits.

## Vv

**Value at risk** Method of quantifying risk which measures the potential future losses that may not be exceeded within a specified period and with a specified probability.

**Value in use** Present value of the future cash flows expected to be derived from a cash-generating unit or group of cash-generating units. A cash-generating unit is the smallest identifiable group of assets that generates cash inflows largely independent of the cash inflows of other assets or groups of assets.

**Variable annuities** Special form of unit-linked life insurance where the investment risk is borne primarily by the policyholder but the insurer guarantees a minimum payment on occurrence of the insured event.

## Index of key terms

|                                                    |                                         |                                         |                                                         |

# Our brands

The diagram provides a general overview of our Group and makes no claim to completeness. For further details, please see the list of shareholdings on [page 292 ff.](#)

Our operations encompass all aspects of risk assumption in primary insurance and reinsurance.  
We are one of the world's largest reinsurers, and one of the largest primary insurers in Germany and Europe.

- Reinsurance: We have been in the business of insuring insurers since 1880.
- Munich Health: We have a strong footing in the international health market.
- ERGO: Our primary insurers offer security mainly for private clients and for small and medium-sized businesses.
- Our subsidiary MEAG manages our assets and offers investment products for private clients and institutional investors.
