

Annual Report and Accounts 2017

Becoming simple, safe and customer focused

RBS is a UK-based banking and financial services company, headquartered in Edinburgh.

RBS provides a wide range of products and services to personal, commercial and large corporate and institutional customers through its two main subsidiaries, The Royal Bank of Scotland and NatWest, as well as through a number of other well-known brands including Ulster Bank and Coutts.

Dr Lena Wilson

2017 performance highlights

RBS reported an operating profit before tax of £2,239 million for 2017 and an attributable profit of £752 million, its first 'bottom-line' profit in ten years.

RBS delivered against its targets to increase income, reduce costs and use less capital across its businesses. In addition, RBS made substantive progress on resolving its remaining legacy issues. Net loans and advances growth of 2.2% across PBB, CPB and RBSI was lower than target, however, the bank made greater progress than anticipated on RWA reductions.

Common Equity Tier 1 (CET1) ratio of 15.9% increased by 2.5 percentage points during 2017 and remains ahead of our 13% target.

We retain our target of achieving a sub 50% cost:income ratio and above 12% return on equity by 2020.

Notes:

(1) Based on end-point Capital Requirements Regulation (CRR) Tier 1 capital and leverage exposure under the CRR Delegated Act.

(2) Criticality 1 incidents are defined as having an adverse impact on segment's customers, employees or third parties.

(3) Operating expenses excluding litigation and conduct costs £1,285 million (2016 - £5,868 million), restructuring costs £1,565 million (2016 - £2,106 million), and VAT recoveries of £86 million (2016 - £227 million).

(4) Operating expenses excluding litigation and conduct costs £1,285 million (2016 - £5,868 million), restructuring costs £1,565 million (2016 - £2,106 million). Operating lease depreciation included in income of £142 million (December 2016 - £141 million). Income excluding own credit adjustments £69 million loss (2016 - £180 million gain), loss on redemption of own debt £7 million (2016 - £126 million), and strategic disposals £347 million (2016 - £164 million).

(5) Includes people supported through the following enterprise programmes during 2017: The Prince's Trust, Skills & Opportunities Fund and Entrepreneurial Spark.

Chairman's statement

Howard Davies
Chairman

2017 was another year in which we saw the bank move closer to achieving sustainable profitability.

Our share price increased 20% in the year, outperforming other main UK banks. We also welcomed the UK Treasury announcement in November 2017 to potentially restart the privatisation process by the end of March 2019. This announcement showed confidence in our strategic approach, the progress that we have made in making the bank safer and in a position to succeed as we approach a new era of disruption in banking.

The bank made an operating profit before tax of £2,239 million, and an attributable profit of £752 million, the first full year profit since 2007.

Progress in resolving legacy issues

We resolved a number of major legacy issues during the year. The Competition Directorate of the European Commission announced that it had agreed a revised scheme to satisfy the remaining State Aid obligations which were imposed on the bank in 2009. The new scheme replaces the need to divest the business formerly described as Williams & Glyn, and involves the creation of a capability fund to benefit challenger banks, alongside incentivised transfers of some of our small business customers. The scheme is not only practical, it will enhance competition.

Another potentially damaging reputational risk was the 2008 Rights Issue litigation. That has now been resolved. The settlement announced in June 2017 brought the proceedings to an end.

In 2017 we continued with the run down of our non-core bank, with legacy risk weighted assets, excluding Alawwal, reducing by £12.6 billion in the year. Given its reduced scale, in December we announced the wind-up of this

division, with the remainder of the assets now folded back mainly into NatWest Markets.

We also settled an action with the Federal Housing Finance Agency related to this bank's participation in the US subprime mortgage market in the run up to the financial crisis.

There is, however, one major piece of litigation we need to resolve in relation to our past subprime mortgage activity, with the Department of Justice in the United States. At this point we cannot say when that issue will be closed, as the timing is not in our gift, but we continue to hope to resolve it in the coming months.

The treatment of some of our small business customers between 2008 and 2013 has been under scrutiny, and has received significant political and media attention. The Financial Conduct Authority (FCA) published a summary report into the historical operation of our former Global Restructuring Group (GRG) and the full report by Promontory was published by the Treasury Select Committee on 20 February 2017. The most serious allegations made against the bank in an earlier report by Dr. Lawrence Tomlinson were not upheld. Promontory stated that "they did not find that defaults were engineered to transfer business simply to generate revenue for RBS". However, the bank was strongly criticised in the report and we acknowledge that we could have done better for many small business customers in GRG. I again apologise for the mistakes that were made during that time. The attitudes to customers displayed by some staff were not acceptable, and communication with clients was often poor. We have, as a result, refunded complex fees to many customers and established a complaints

scheme which is overseen by an independent third party - retired High Court judge Sir William Blackburne, who is working through our cases. The FCA have described this as an appropriate response to these findings. We have provided a sum of £400 million for these redress schemes.

Economy and Regulation

In 2017 the UK economy continued to grow, albeit below its long-term trend rate. Inflation is currently running at around 3%, above the Bank of England's 2% target. In its latest outlook the Bank of England has indicated that rates may have to rise somewhat sooner, and to a somewhat greater extent than they had previously anticipated. The Monetary Policy Committee believes that inflation will still be above target three years from now when they expect price pressures to be mounting, necessitating a monetary tightening.

Surveys of business confidence increasingly point to longer term uncertainty over how businesses will structure their operations, once the UK leaves the EU. The depreciation of sterling pushed up inflation but provided a boost to UK exporters, giving them the opportunity to reduce prices in overseas markets or to boost margins. With the International Monetary Fund (IMF) and Organisation for Economic Co-operation and Development (OECD) pointing to improving global growth prospects in 2018, the UK economy could gain from this favourable tailwind, albeit the scale of these gains is uncertain. In recent weeks, sterling has appreciated against the dollar, but remains weak against the euro.

In terms of regulation it was good to receive clarity on one of the most significant reforms following the financial crisis. The Basel Committee scrutinised the way in which banks assess risk on their balance sheet, with the aim of bringing more consistency and tighter controls. The impact on RBS of the package announced in December 2017 is likely to be small and we are well positioned for when the new rules come into force in 2022.

We are also on track to meet our ring-fencing obligations by 2019. The majority of the bank will be within the ring-fence, so I will chair the Boards of the Group and the ring-fenced bank. We are well advanced in the process of securing the legal permissions we need

to transfer some of our customers to the most appropriate post ring-fenced legal entity. This will allow us to continue to serve them with little or no change to their day-to-day banking. The services they use (their local branch, sort code, account numbers and where relevant Relationship Manager) will not change as a result of the Ring-Fencing Transfer Scheme and they will not need to do anything differently.

Brexit

While there is some more clarity on the regulatory environment, the political context remains uncertain, especially in relation to Brexit. Since our business is largely UK-focused, the impact on RBS is not as significant as it is on many other banks. However, in common with them, we are preparing contingency plans to maintain our Western European business. One option is to use our existing banking licence in the Netherlands to provide continuity of service from NatWest Markets to our EU customers.

Changing customer behaviour and disruption

Our operating environment is also changing. The UK financial services sector is experiencing its most significant period of disruption for some time. More accessible data, cheaper technology, new competition regulation and shifting customer expectations are the key drivers of change and are creating new challenges and opportunities for incumbent banks. These drivers are enabling new challenger banks to compete more effectively, from a lower cost base, and we have to respond. There will be more external partnerships with others than we have seen before as we offer new products and services. In 2017 we created a Technology and Innovation Committee of the Board to oversee and monitor RBS's strategic direction in what has become one of the most important areas of focus for the bank. The Committee is chaired by Alison Davis. Frank Dangeard and a new Board member, Yasmin Jetha, have also been appointed as members.

We also announced a significant reduction in our branch network. The decision to close a branch is always a difficult one to make, and is never taken lightly. However, customer behaviour is changing, with more customers choosing mobile and online over traditional branch counters, and we

must respond to these changes. This shift in behaviour, combined with our partnership with the Post Office, mobile branches and Community Bankers, means there are now more ways to bank than ever before.

Our branches will remain key outlets for customers and we are investing in those that remain, to reflect the way customers want to use them, typically for financial advice related to buying a home or starting a business rather than for routine transactional banking.

Colleague engagement, diversity and inclusion

We are making good progress in improving the culture of the organisation. Our annual colleague sentiment survey scores are the highest they have been in ten years and there is generally a more positive outlook from colleagues across the bank.

In 2017 we were recognised as the 'Diverse Company of the Year' at the National Diversity Awards; a Top 10 Employer for Working Families; a Times Top 50 Employer for Women and retained a gold rating for our work on Race in Business in the Community's Race for Opportunity benchmark. We also have a Black, Asian and Minority Ethnic (BAME) focus on recruitment, talent identification and promotion, and have introduced explicit targets for BAME representation at senior levels in 2018.

Today, for the first time, we have also published details of the average pay gap between male and female colleagues in the bank, which is 37.2%. Gender pay is markedly different to equal pay which looks at the difference in pay between men and women for similar roles. We are confident that we pay our employees fairly and keep our HR policies and processes under regular review to ensure we do so.

Our gender pay gap reflects an under representation of women at senior levels. That is not a satisfactory position and we know that we still have much to do to narrow the gap. We are therefore putting more impetus behind our work to achieve a better gender balance.

We are strongly committed to having more female colleagues in senior positions across the organisation. In 2015 we set ourselves a target to have at least 30% of roles in the three most senior levels of each of our businesses

filled by women by 2020. Our latest figures show we are now at 37% on aggregate, and on track to achieve 40% by 2020. Furthermore, 44% of our top 5000 roles are occupied by women and we are aspiring to achieve full gender balance at all levels of our business by 2030.

Building a sustainable bank

We are committed to running the bank as a more sustainable business, serving today's customers in a way that also safeguards future generations.

In 2017, RBS publicly committed to support the Financial Stability Board's Task Force on Climate-related Financial Disclosures (TCFD) – a voluntary set of guidelines encouraging consistent climate-related disclosures in annual reporting. We also improved our position in a number of rankings – for example achieving 13th in top 100 organisations in the Stonewall Workplace Equality Index and maintained inclusion in the FTSE4GOOD index and high scores in the CDP climate index.

Our volunteering and fundraising partnerships also continue to make a difference for the communities we serve. In 2017, our employees supported a wide variety of charities by raising £4.3m in giving through their giving and fundraising efforts. We also won the Platinum award for Payroll Giving and the Payroll Giving Award for the Most Successful Sustained Scheme; 3,454 charities received funding.

Shareholder engagement

This year, we have increased the overall level of our non-financial disclosures in our Strategic report by featuring our performance highlights against each of our key influences we have described. We have introduced a new section, entitled Our Stakeholders, which describes our stakeholder groups and our approach to managing key topics of interest such as climate change.

As well as encouraging a more open culture internally, the Board has also made a considered effort to listen to the views of all shareholders. In 2017 we hosted two retail shareholder events in London and Edinburgh. Those events provided shareholders with the opportunity to share their views on our progress and our future initiatives directly with members of the Board and executive committee. Individual shareholders' views on our plans to build a better bank are important to us.

The Board has, during 2017, as in previous years, run a series of stakeholder engagement sessions with representatives from a wide variety of different organisations to discuss key topics such as financial capability and technological disruption with members of our Board and senior executives. This is helping us to make better informed decisions and ensure our future strategy addresses emerging sustainability risks and opportunities. We will continue to run these events in future years. Board members have also visited business customers, and will undertake more such visits around the country this year.

Board Changes

In 2017 Mark Seligman and Yasmin Jetha joined the Board and have already brought a wealth of experience and fresh perspectives to our discussions. Mark became the Senior Independent Director at the end of the year. Sadly, John Hughes, who joined in June 2017, had to step down in September 2017 for health reasons. Dr Lena Wilson was appointed as a non-executive director on 1 January 2018. Lena brings strong commercial and public sector experience to the Board, having previously served as Chief Executive of Scottish Enterprise and Senior Investment Advisor to The World Bank. With effect from 1 January 2018, Sandy Crombie stepped down from the Board and Penny Hughes has told us that she does not plan to stand for re-election at the 2018 Annual General Meeting. I would like to thank both Sandy and Penny for their outstanding commitment and huge contributions to RBS over a number of years. Sandy was, as Senior Independent Director, a great support to my predecessor and to me. Penny has led the Remuneration and, later, the Sustainable Banking Committee with great enthusiasm. We wish them both well for the future.

Conclusion

Overall, the Board believes that in 2017 we have made further progress in resolving the legacy issues which have hung over the bank for too long. We still have important issues to resolve and tough decisions to make, particularly on cost control, but in 2017 we made several important steps in the right direction. Thank you for your patience as we continue the bank's turnaround.

Chief Executive's review

Ross McEwan
Chief Executive

Putting the past behind us. Investing for the future.

In 2017 we continued to make good progress in building a simpler, safer and more customer focused bank. I am pleased to report to shareholders that the bank made an operating profit before tax of £2,239 million in 2017, and for the first time in ten years we have delivered a bottom line profit of £752 million.

We have achieved profitability through delivering on the strategic plan that was set out in 2014. The first part of this plan was focused on building financial strength by reducing risk and building a more sustainable cost base. So far, we have reduced our risk-weighted assets by £228 billion and today can report a Common Equity Tier 1 ratio of 15.9% up from 8.6% in 2013. Our financial strength is now much clearer. Over the same period we have reduced operating costs by £3.9 billion. We still have more to do on cost reduction, however this reflects the progress we have made in making the bank more efficient.

A clear indication of the outstanding progress we have made is that from the first quarter of 2018, we will no longer report adjusted financials.

At the same time as building financial strength, we have also made progress with the legacy of our past and improving our core bank. We have delivered on this by resolving a number of our litigation and conduct issues. This includes reaching settlements last year

with FHFA in respect of our historical Retail Mortgage Backed Securities (RMBS) activities and with claimants in relation to our 2008 Rights Issue. In 2017 we also continued to run down our legacy assets. The wind-up of our non-core division, Capital Resolution in 2017, was an important moment.

As part of the support we received in 2008 and 2009, the bank was mandated to meet certain requirements under a State Aid restructuring plan. In 2017, we received approval for an alternative remedies package, which replaced our original plan to divest of the business formally known as Williams & Glyn. This is a good solution, both for improving competition in the UK SME banking market, and for shareholders.

With this solution in place and currently being implemented, the number of legacy issues the bank faces has reduced. However, we have one major legacy issue that we have yet to resolve which is with the US Department of Justice. The timing of the resolution of this issue is not in our control.

The bank has received significant media attention for its treatment of some small business customers between 2008 and 2013. To those customers who did not receive the experience they should have done while in GRG we have apologised. We accept that we got a lot wrong in how we treated customers in GRG during the crisis. However, these were complex and subjective cases with each case having unique facts about what was the right thing to do. The bank welcomes the FCA's confirmation that the most serious allegations made against the bank have not been upheld and that the steps the bank announced in November 2016 to put things right for customers are appropriate.

We have made significant progress in improving our culture since then.

Today this bank is a simpler and safer organisation, with colleagues now fully focused on our customers.

I want to thank our colleagues for their commitment and resolve during what has been a difficult chapter in the bank's history. Our most recent colleague survey, *Our View*, reported the highest engagement levels in ten years. We also recently won the 'Employee Engagement Company of the Year' at the UK Employee Engagement Awards. This shows that our culture is improving. This bank is now more open, less hierarchical and more focused on our customers. Our colleagues serve and support millions of customers across the UK and Republic of Ireland every day, it is vital to our success that they feel engaged and motivated.

Investing to transform our business

When I started as CEO in 2014 the bank was far too complex. We operated in 38 countries, with over 5,000 systems supporting hundreds of different products. In our credit card business alone we offered 55 different card designs, as the organisation had grown we had added complexity which distracted us from our key stakeholder, the customer. Our customers want a bank which protects their safety and security, and is also responsive to their needs.

Today we have exited 26 countries and now have a more focused product set, underpinned by almost half the number of systems we previously had. Simplification will continue to be a key focus for the organisation in 2018.

We are going through all of our end-to-end customer processes to ensure they are fit for purpose.

Our mortgage application journey is experienced by thousands of customers every day. With one of our strategic aims being to grow in this market, the benefits of simplification and automation in this area are vast. Given this, in 2017 NatWest was the first UK bank to offer paperless mortgages. Customers can now apply for a completely digital mortgage which uses the latest technology to securely share and verify documents online. With this new proposition, mortgage offers can now be made within 11 days, down from 23 days before. The process also eliminates close to 4.3 million sheets of paper a year, reducing our impact on the environment.

The opportunities created by greater simplification and automation, in terms of improved controls, cost reduction and a better customer experience, are significant for this bank.

As well as transforming our processes and products, in 2017 we continued to reap the benefits of refocusing our main customer-facing brands. With each now speaking to a unique constituency of customers, we are better placed to differentiate ourselves from our competitors. With NatWest for England and Wales, Royal Bank of Scotland, for Scotland and Ulster Bank for the island of Ireland – we truly are a bank of brands in the UK and the Republic of Ireland.

Customer driven change

Listening and responding to our customers is helping us to get closer to meeting our goal to be No.1. In light of this we have continued with the roll out of Closed Loop Feedback in 2017. Today, within 24 hours of an interaction taking place, customers can provide specific, actionable feedback directly to the teams that serve them, empowering colleagues to listen, learn from and act on what our customers are telling us. With our complaints volumes down 9% on the previous year, and our Net Promoter scores improving in half of our chosen customer segments, we continue to see the benefits of customer driven change in this bank. We still have a lot of work to do to meet our 2020 ambition of being the number one bank for customer service, trust and advocacy.

Listening to our customers is not only reducing complaints, it's also driving product and service improvements. In our commercial bank for instance, in response to customers' demand for greater speed and efficiency, we have developed self service account opening. Through this channel more than 90% of our new to bank commercial customers are able to initiate account openings themselves and, crucially, are doing it 30 minutes faster than if they used telephony. Customers told us this was a pain point for them and we have responded.

Listening to our customers and investing to simplifying our processes is helping us build a bank which is lower cost, and competitive in our target markets – improving outcomes for both customers and shareholders.

We are committed to running the bank as a more sustainable business, serving today's customers in a way that also helps future generations. As technological, social and environmental changes shape the world, it's important to stay connected with evolving customer needs, our shareholders and the wider expectations of society. One of the ways in which we are doing this is through our Board-level stakeholder engagement programme where we proactively listen, learn and engage with our stakeholders to improve the way we do business.

Supporting the UK economy

While transforming the bank, we have continued to support the UK economy. In 2017 we extended £33.9 billion in new mortgage lending, helping grow our mortgage market share for the fifth consecutive year. We continue to target growth in our mortgage market share in 2018.

We are also the biggest supporter of UK business. Our commercial bank grew lending in our target markets, this commitment supported both recognised household names and fledgling start-ups. Our commitment to business goes beyond simple financing, our Entrepreneurial Spark programme continued to grow in 2017 and has supported over 3,800 new businesses since 2012 with award-winning facilities and an outstanding support network. Our work is also being recognised externally. In 2017 NatWest was awarded Best Business Bank in the UK by the National Association of Commercial and Finance Brokers.

Throughout 2017 NatWest Markets has continued to deepen its customer relationships by providing global market access and innovative and tailored solutions. As well as increasing employee engagement and improving the control environment, the business has made material progress to realise cost and operating efficiencies.

Responding to technological change

The financial services industry is going through one of the most significant periods of change we have seen in many years, and we are responding.

Like other industries, the digital revolution has naturally led to lower footfall in our branches. Branch transactions are down 40% on 2013, as increasingly our customers prefer the convenience and ease of digital banking. Given this we have made some difficult, but necessary, decisions around the scale of our branch network in 2017. This does not mean we are not supporting our customers. In fact we are providing customers more ways to bank than ever before, be that through a visit to their local Post Office, a visit from one of our 39 mobile branches, which visit over 600 towns and villages on a weekly basis, meeting one of our 100 community bankers, a digital appointment with one of our video bankers, logging on to internet banking platform, or banking on the go with our market leading mobile app. Our customers have never had as many channels through which to undertake their banking.

For the first time we now have more active mobile users than users online, a clear indication of the direction of travel of our customers' banking preferences.

Our ambition is for the standard of service we provide to always be outstanding, no matter how our customers choose to interact with us. In 2018 our branches will increasingly focus providing specialised expertise and advice as well as on helping customers tap into the wealth of ease

and efficiency they can experience through using our digital channels.

In our commercial bank, we are supporting customers shift to mobile through building our online service Bankline service into an app. Currently, 90,000 commercial customers are active on Bankline. In the future we expect this to move increasingly to mobile. In 2018, we will also launch Bankline mobile for our larger commercial customers. This new service will act as a companion to our current Bankline on-line technology. Initially, customers will be able to view transactions and send payments with biometric approval. In the coming quarters we will further expand the scope of what Bankline Mobile offers.

Embracing the latest in digital innovation

We know that we cannot stand still on innovation as our competitors certainly are not. Over the last few years we have invested in building our partnerships and scouting networks across the globe to ensure we are at the cutting edge of technology. We have developed some excellent partnerships and one area we have advanced significantly in is Artificial Intelligence (AI).

By harnessing the latest in computer learning and speech recognition, in partnership with IBM, we have built an AI chatbot, called Cora. Cora is helping our customers with many of their most common queries. Crucially Cora is available 24/7, has no 'wait-time' to serve a customer and can handle an unlimited number of queries at the same time. Since Q1 2017 Cora has handled over four hundred thousand conversations responding to over two hundred different questions.

In partnership with Soul Machines, we are investing now to build an evolution of Cora for 2018, giving her a visual avatar acting as the interface with our customers. Initial trials are proving a

success with customers telling us that using Cora made them less concerned about converting to our other digital channels. While many customers felt empowered to be more direct in their questioning of Cora, as they felt much safer and more secure with her.

Through digital innovation we will serve customers more efficiently, be more responsive to their needs and at the same reduce costs in the business and build a more solid control environment.

Looking forward

In the past our legacy has dominated our corporate story. In 2017 our financial strength improved and we continued to put the past behind us. We are entering a new phase of transforming the core bank through technology innovation and end-to-end process re-engineering. Our future will be high tech and high touch, which means lower cost, high quality digital services with human expertise available when required.

Conclusion

I would like to thank shareholders for their continued support. We welcome the indication in the Chancellor's budget statement about the potential to restart share sales during the fiscal year 2018/2019, again this is a further proof of the progress we have made.

We recognise our responsibility towards the society we serve and operate in. It is only by supporting our customers and communities to succeed that we will be become a more sustainable bank. I, together with my management team, view this as a core part of our ambition to be No.1 for customer service, trust and advocacy.

As the number of our legacy issues reduces, and our business performance improves, the investment case for this bank is clearer, and the prospect of us rewarding our shareholders is getting closer.

“In 2017 we continued to make good progress in building a simpler, safer and more customer focused bank.”

2017 performance summary

RBS reported its first 'bottom-line' profit in ten years

- 2017 operating profit of £2,239 million, an increase of £6,321 million compared with 2016.
- Adjusted operating profit^(1,2) increased by 31.1% to £4,818 million.
- 2017 attributable profit of £752 million.
- 4.0% increase in adjusted income⁽¹⁾ and an 8.1% reduction in adjusted operating expenses⁽²⁾ driving a 12.1% improvement in operating leverage.
- Net interest margin (NIM) reduced by 5 basis points to 2.13% compared with 2016.
- Supported the UK economy through a £6.0 billion, or 2.2%⁽³⁾, increase in net lending across PBB, CPB and RBSI. Whilst behind our 3% target, this represents strong growth in a competitive environment.

Delivery against our 2017 targets

Strategy goal	2017 target	2017
Strength and sustainability	Maintain bank CET1 ratio of 13%	CET1 ratio of 15.9%; up 250 basis points from 2016
Customer experience	Significantly increase NPS or maintain No.1 in chosen customer segments	We have achieved target in half our key customer segments and Commercial Banking remains ahead of its main competitors. Trust has improved for both NatWest and Royal Bank of Scotland
Simplifying the bank	Reduce adjusted operating expenses by at least £750 million	Adjusted operating expenses down £810 million, or 9.6%, excluding VAT recoveries ⁽²⁾
Supporting growth	Net 3% growth on total PBB, CPB and RBSI loans to customers	Net customer loans in PBB, CPB, and RBSI up 2.2% ⁽³⁾ for the year
Employee engagement	Improve employee engagement	Employee engagement improved by 7 points to 83, 1 point above the GFS norm

Notes:

(1) Income excluding own credit adjustments £69 million loss (2016 - £180 million gain), loss on redemption of own debt £7 million (2016 - £126 million) and strategic disposals £347 million (2016 - £164 million).

(2) Operating expenses excluding litigation and conduct costs £1,285 million (2016 - £5,868 million), restructuring costs £1,565 million (2016 - £2,106 million) and VAT recoveries of £86 million (2016 - £227 million).

(3) Excluding transfers. See notes on page 15 for further details.

Continued track record of delivery against our stated objectives

- **Grow income:** Adjusted income increased by £490 million, or 4.0%.
- **Cut costs:** Excluding VAT recoveries, adjusted operating expenses reduced by £810 million⁽²⁾, or 9.6%.
- **Reduce capital usage:** Excluding volume growth, RWAs reduced by £20.8 billion across PBB (£0.6 billion), CPB (£12.9 billion), RBSI (£4.4 billion) and NatWest Markets core (£2.9 billion), already achieving our 2018 target.
- **Resolve legacy issues:**
During 2017, RBS:
 - ▶ Wound up the former Capital Resolution business. Legacy RWAs now represent around 11% of total;
 - ▶ Received formal approval from the European Commission for its alternative remedies package in respect of the business previously described as Williams & Glyn; and
 - ▶ Reached settlement with the Federal Housing Finance Agency (FHFA) and the California State Attorney General in the US and resolved the 2008 rights issue shareholder litigation.

Significant capital build throughout 2017

- CET1 ratio increased by 250 basis points to 15.9%, despite absorbing significant additional legacy costs.
- IFRS 9 adoption on 1 January 2018 increased CET1 by a further 30 basis points.

Prioritising transformation acceleration

- Increased investment and innovation spend focused on achieving higher levels of digitisation and automation.
- Faster repositioning of the bank's existing distribution network and technology platforms towards mobile, cloud based platforms and virtualisation.

Building a more sustainable bank

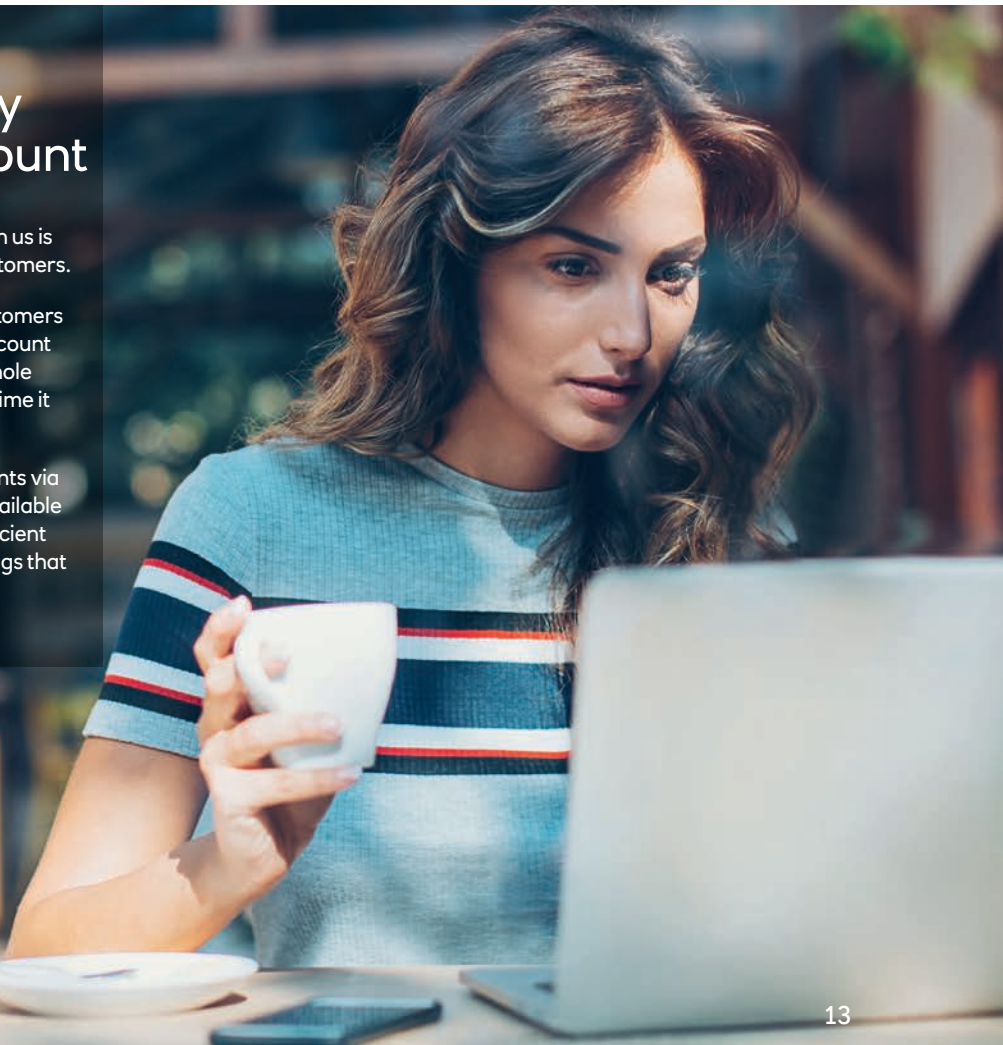

- Our Board Sustainable Banking Committee hosted four stakeholder engagement sessions, inviting a broad mix of stakeholders to share their perspective on key issues with us.
- RBS is a founding partner with the National Trading Standards Scam Team on their 'Friends Against Scams' initiative.
- RBS was recognised by InfraDeals as the leading lender to the UK renewables sector by number of transactions over the past six years (2012- 2017).
- We helped over one million customers with a free Financial Health Checks to help customers organise their finances and achieve their financial goals.
- We supported over 3,830 people through our enterprise programmes. This includes the following enterprise programmes: Entrepreneurial Spark, Prince's Trust and Skills & Opportunities Fund.

15 minutes to apply for a business account

The process of applying for an account with us is now quicker than ever for our business customers.

Using our new online service, business customers who are new to the bank can open their account at a time and place to suit them, and the whole process can be completed in less than the time it takes to enjoy a coffee break.

85% of new customers have opened accounts via our self-service offering since it became available in 2017, benefiting from a simpler, more efficient process that frees up more time for the things that really matter – like running a business.

Segmental highlights

RBS continues to deliver on its plan to build a strong, simple and fair bank for both customers and shareholders. During 2017 RBS's activities were organised on a franchise basis as follows; Personal & Business Banking (PBB) comprising two reportable segments, UK Personal & Business Banking (UK PBB) and Ulster Bank Rol; Commercial & Private Banking (CPB) comprising two reportable segments, Commercial Banking and Private Banking; RBS International and NatWest Markets.

For more details refer to the Business Review on pages 130 to 148.

UK Personal & Business Banking

- UK PBB now includes the business previously described as Williams & Glyn. Adjusted operating profit of £3,084 million was 18.4% higher than in 2016, including a £185 million debt sale gain. Income increased by 5.7% to £6,477 million supported by a 5.9% increase in net loans and advances, which more than offset margin contraction. Adjusted operating expenses were 7.1% lower than 2016 reflecting reduced headcount and lower back-office operations costs. Adjusted return on equity increased to 30.7% in 2017 from 25.1% in 2016. There are a range of variables that could impact near to medium term returns, including RWA inflation as a result of a change in Bank of England mortgage risk weighting.
- Gross new mortgage lending was £31.0 billion, with market share of new mortgages at approximately 12%, supporting growth in stock share to approximately 10%. Mortgage approval share in Q4 2017 decreased to approximately 12%, from around 14% in Q3 2017, and mortgage new business margins were 14 basis points lower in the quarter, in part reflecting intense price competition in the market.
- UK PBB continues to invest in its digital offering and now has 5.5 million customers regularly using its mobile app, 20% higher than December 2016, and in 2017 was the first bank to launch a paperless mortgage journey.

Ulster Bank Rol

- Ulster Bank Rol reported an adjusted operating profit of €109 million and an adjusted return on equity of 3.6% in 2017. Adjusted income decreased by €8 million, or 1.1%, primarily reflecting a reduction in income on free funds, partially offset by one-off items, higher lending income and reduced funding costs.
- Gross new lending increased by 3.4% from €2.5 billion in 2016 to €2.6 billion. Further cost efficiencies have been achieved, with adjusted expenses reducing by €43 million in 2017.
- Ulster Bank Rol was amongst the first banks in Ireland to introduce Apple Pay and Android Pay, and now over 70% of our customers are actively using our digital proposition, increased from 58% of our active customer base in 2016. We continue to reposition capital, with REILs down by 9.8% to €3.7 billion, representing 15.9% of gross customer loans, compared with 17.5% in 2016.

Commercial Banking

- Commercial Banking includes selected assets from the former Capital Resolution business from 1 October 2017. Adjusted operating profit of £1,308 million was 2.7% higher than 2016 and adjusted return on equity remained broadly stable at 8.2%. Income increased by 2.0% due to increased volumes in targeted segments and deposit re-pricing benefits.
- Adjusted operating expenses reduced by 6.3% reflecting operating model simplification and productivity improvements, including a 16.4% reduction in front office headcount. Commercial Banking net impairment losses of £362 million increased by £156 million and reflecting a small number of single name impairments.
- Adjusting for transfers ⁽¹⁾, net lending decreased by £4.9 billion in 2017, as growth in targeted segments has been more than offset by active management of the lending book, achieving gross RWA reductions of £12.5 billion.
- With the successful launch of our entrepreneur accelerator hub in London we now have 12 business accelerators throughout the UK. Across these hubs, over 3,800 start ups have benefitted from our support, which has helped them raise £255 million of investment while creating over 8,000 jobs.

Private Banking

- Private Banking now includes the Collective Investment Funds business transferred from UK PBB on 1 October 2017. Adjusted operating profit increased by £78 million, or 52.3%, to £227 million and adjusted return on equity increased to 11.3% from 7.8%. Adjusting for transfers, income increased by £12 million due to higher lending volumes and an £8 million gain on a property sale, partially offset by margin pressure. A 12.9% reduction in adjusted operating expenses was supported by an 11.8% reduction in front office headcount.
- Net loans and advances increased by 10.7% to £13.5 billion and assets under management increased by 14.4%, adjusting for transfers ⁽²⁾.
- We continue to focus on delivering the best customer experience, including investing in digital by launching Coutts Invest and an enhanced mobile experience, and we were awarded Best Private Bank in the UK at the Global Private Banking Awards 2017.

RBS International (RBSI)

- RBSI reported an adjusted operating profit of £184 million, 5.6% lower than 2016. Income increased by 4.0% driven by increased lending and deposit volumes and re-pricing actions on the deposit book. Adjusted operating expenses increased by 19.5% reflecting increased operational costs associated with becoming a non ring-fenced bank. Despite this, adjusted return on equity remained robust at 12.6%.
- RWAs of £5.1 billion reduced by £4.4 billion compared with 2016 reflecting the benefit of receiving regulatory approval for RBSI to adopt an advanced internal ratings based approach on the wholesale corporate book.

Notes:

- (1) Shipping and other activities which were formerly in Capital Resolution were transferred from NatWest Markets on 1 October 2017, including net loans and advances to customers of £2.6 billion and RWAs of £2.1 billion. Commercial Banking transferred whole business securitisations and relevant financial institution's (RFI) to NatWest Markets during December 2017, including net loans and advances to customers of £0.8 billion and RWAs of £0.6 billion. Comparatives were not re-presented for these transfers.
- (2) UK PBB Collective Investment Funds (CIFL) business was transferred from UK PBB on 1 October 2017, including total income in Q4 2017 of £11 million and assets under management of £3.3 billion. Private Banking transferred Coutts Crown Dependency (CCD) to NatWest Markets during Q4 2017, including total income of £2 million and assets under management of £1.3 billion. Comparatives were not re-presented for these transfers.
- (3) Shipping and other activities which were formerly in Capital Resolution were transferred to Commercial Banking on 1 October 2017, including RWAs of £2.1 billion. Whole business securitisations and relevant financial institutions (RFI) were transferred from Commercial Banking during December 2017, including RWAs of £0.6 billion. Comparatives were not re-presented for these transfers.
- (4) Transfers include £0.4 billion loans and advances transferred from Commercial Banking to UK PBB during 2017 to better align Business banking customers. Comparatives were not re-presented for these transfers.

NatWest Markets

- Following the closure of the former Capital Resolution business in Q4 2017, NatWest Markets now includes legacy run-off assets alongside its core businesses. An operating loss of £977 million was reported in 2017, including a profit of £41 million in the core business. Adjusted operating loss of £264 million, compared with £1,231 million in 2016. Adjusted income in the core business increased by 9.5% to £1,665 million, largely driven by Rates as the business navigated markets well.
- Legacy disposal losses, other adjustments and impairments of £513 million were incurred in 2017, compared with £825 million in 2016. Adjusted operating expenses reduced by 26.7% reflecting a significant reduction in the legacy business, as it moved towards closure, and cost reductions in the core business.
- RWAs decreased by £15.3 billion, adjusting for transfers, to £52.9 billion primarily reflecting legacy business reductions. At the end of 2017 the legacy business within NatWest Markets had RWAs of £14.0 billion, excluding RBS's stake in Alawal Bank, a reduction of £10.9 billion, adjusting for transfers ⁽³⁾, over the course of the year.

Video banking – a different way to bank

Today's busy lifestyles mean visiting a branch is not convenient for everyone. So we are developing alternative ways for customers to bank with us.

Our new Video Banking service lets customers chat face-to-face with a senior personal banker – at a time and location to suit them, whether they are at home, at work or on the move. Appointments are available from 9am- 8pm Monday to Friday and 9am-3pm on Saturday.

Video Banking Manager David Hunter explains; “We connect with the customer using a live video link and can discuss and arrange anything from a personal loan, credit card or overdraft, to opening a current or savings account, or setting up a meeting with a mortgage adviser.”

Looking forward

2018 Outlook⁽¹⁾

We reiterate our medium term outlook on both return on tangible equity and cost:income ratio. We also now intend to accelerate the transformation of the bank which necessitates increased investment and innovation spend together with additional restructuring costs. As a result operating costs, excluding restructuring and litigation and conduct costs, will reduce compared with 2017, but the rate of cost reduction will be materially lower than in 2017. We expect to incur restructuring charges of around £2.5 billion across 2018 to 2019 cumulatively, of which c.£0.3 billion relates to the completion of the State Aid remedy and reintegration of the former Williams & Glyn (W&G) business into UK PBB. This is compared to previous guidance of around £1 billion excluding the impact of W&G, with around two thirds of the remaining c.£1.2 billion increase being driven by costs associated with the accelerated transformation.

RBS continues to deal with a range of significant risks and uncertainties in the external economic, political and regulatory environment and manage both conduct-related investigations and litigation, including relating to RMBS. Substantial additional charges and costs may be recognised in the coming quarters.

With the introduction of IFRS 9, impairments are expected to be more volatile and we continue to remain mindful of potential downside risks, particularly from single name and sector driven events. The consensus view of Brexit suggests a weaker UK economy in the short to medium term. With the current high level of UK household debt and real wage compression, any increases in unemployment and interest rates present a threat to retail impairment rates. In wholesale portfolios further softening of GDP growth would be expected to impact credit losses negatively. We retain our guidance that through the cycle losses would be in the range of 30-40bps.

By the end of 2018, we expect Bank RWAs to be lower by £5-10 billion. This is despite model uplifts in Commercial Banking in 2018 which are expected to drive some RWA inflation. The majority of the gross RWA reductions will be within NatWest Markets legacy assets, including the benefit of the anticipated merger between Alawwal Bank and Saudi British Bank, and Commercial Banking.

RBS Group capital and funding issuance plans for 2018 focus on issuing £4-6 billion MREL-compliant securities. We do not currently anticipate the need for either AT1 or Tier 2 issuances. As in 2017, we will continue to target other funding markets to diversify our funding structure. In support of the ring-fencing requirements and to build up RBS Plc (to be renamed NatWest Markets Plc) as a standalone non ring-fenced bank, we anticipate issuing £2-4 billion of senior unsecured issuance from this entity in addition to continued reliance on short term funding.

In the near to medium term, we would expect the bank to maintain a CET1 ratio in excess of our 13% target given a range of variables that are likely to impact us over the coming years. These include:

- potential final costs of a resolution with the US Department of Justice;
- future potential pension contributions and the interplay with capital buffers for the bank for investment risk being run in the pension plan;
- RWA inflation as a result of IFRS 16, Bank of England mortgage floors and Basel 3 amendments;
- expected increased and pro-cyclical impairment volatility as a result of IFRS 9; and
- the collective impact of these items on our stress test results

We remain committed to restarting capital distributions when permitted, with resolution with the US Department of Justice being a key milestone to enable this.

Medium term outlook

We retain our target of achieving a sub 50% cost:income ratio and above 12% return on equity by 2020.

While we expect operating costs to reduce each year from 2018 to 2020, given the increased level of investment and innovation spend expected over the coming years we are no longer guiding to an absolute 2020 cost base.

The NatWest Markets segment balance sheet as at end 2017 is broadly similar to the expected target balance sheet of the NatWest Markets Plc after the ring-fence transfer schemes to be carried out during 2018. In preparation for the UK ring-fencing regime, the previously reported operating segments were realigned in Q4 2017 and a number of business transfers completed. These changes included the NatWest Markets segment absorbing the former Capital Resolution segment (other than for certain shipping and portfolio assets). Notwithstanding a planned capital reduction exercise in July 2018, by 2020 this entity is targeting a capital base with a consolidated end state CET1 of 14%, a leverage ratio greater than 4% and a total capital ratio of at least twice the CET1 ratio, including the benefit of downstreamed internal MREL.

By 2020, NatWest Markets targets a RWA position of c.£35 billion including legacy assets, with the legacy assets generating minimal associated income, and an overall cost base of around £1 billion.

Trading update

Overall, RBS has had a positive start to 2018.

Note:

(1) The targets, expectations and trends discussed in this section represent management's current expectations and are subject to change, including as a result of the factors described in this document and in the Risk Factors on pages 372 to 402. These statements constitute forward looking statements, refer to Forward Looking Statements on page 407.

Cora

How bots are changing banking

Artificial Intelligence (AI) is fundamentally changing how customers interact with services across a number of industries from healthcare to journalism and even manufacturing.

Banking is no different, and that is why, in partnership with IBM, we have introduced Cora – our helpful, digital assistant – for Royal Bank of Scotland, NatWest and Ulster Bank customers. Cora answers questions from customers 24/7, freeing up colleagues' time, so they can help customers with more complex queries. Customers can find Cora across our digital channels whenever they need help. Whether that is when they are using online banking, or browsing our websites, she is there to solve the tricky questions.

Jane Howard, MD Personal Banking says: "The great thing about Artificial Intelligence is that it's a machine that learns the more you interact with it. This has the opportunity to be game-changer for banking as we strive to offer a better service for our customers."

Our business model and strategy

Our Strategy

Our ambition is to become number one for customer service, trust and advocacy as we meet the aspirations and needs of our retail, business, commercial, corporate and institutional customers. Our core businesses are centred around the UK and Republic of Ireland markets with a focused international capability.

We are building a better bank for our customers, and one that will deliver sustainable returns for shareholders. Our purpose is to serve customers well, and to do so, we are becoming a safe, simple, customer-focused UK and Ireland bank.

Our plan

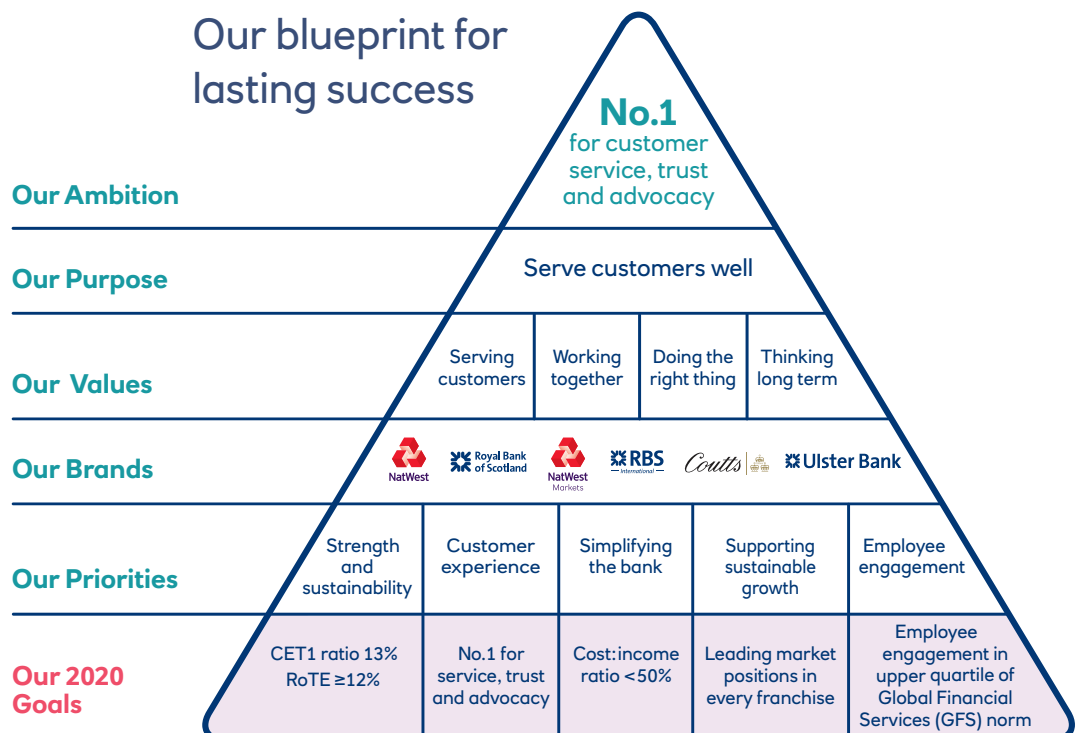

Underpinning that ambition is our blueprint for success. This is our plan which drives our strategic decision making.

RBS is continuing to build a bank that is easy to do business with, and meets customers' continually evolving needs.

Our plan focuses on delivering excellent customer service through all of our brands.

Creating lasting relationships with our customers, who advocate for our bank, is the key to generating sustainable value.

Our blueprint for lasting success

Our 2020 vision

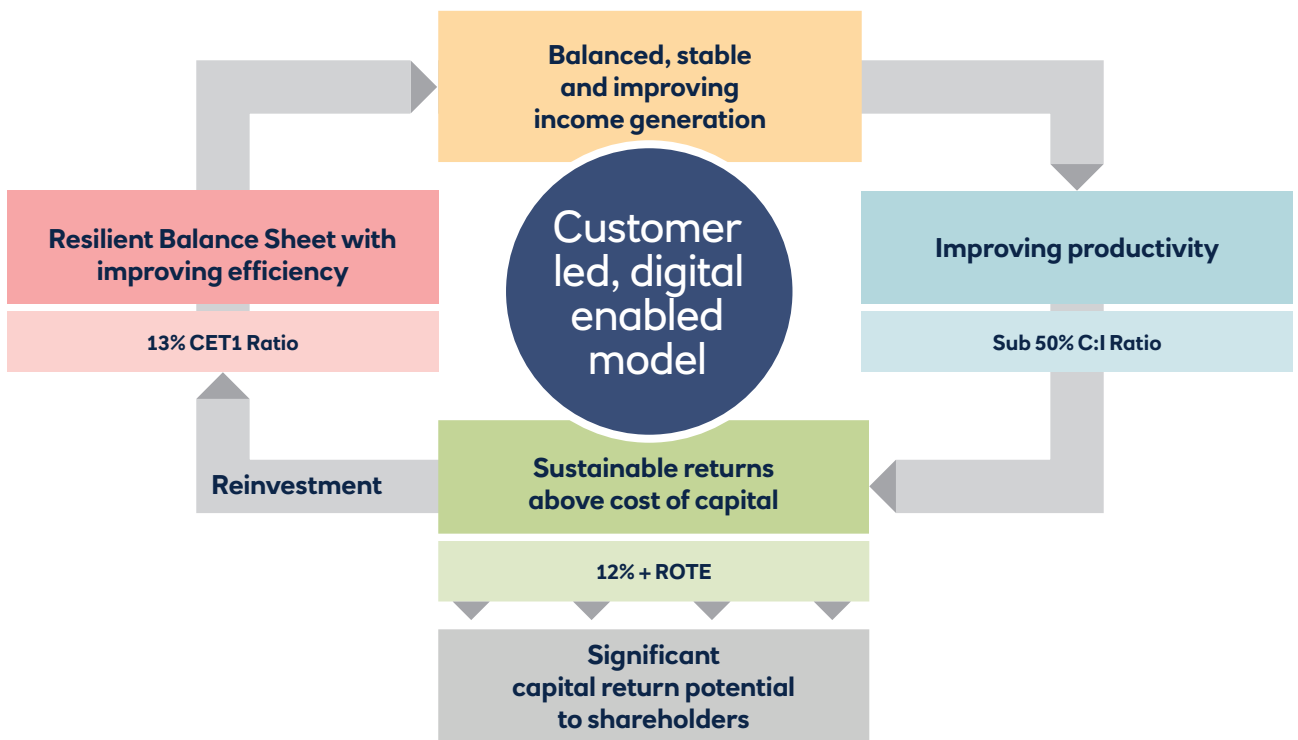

The bank of 2020 will be high tech and high touch, which means lower cost, high quality digital services with human expertise available when required. This will be underpinned by a clear commitment to our customers, shareholders and other stakeholders.

2020

- A leading UK retail and commercial bank with a focused financial markets division
- Strong brands and market positions
- Growing in attractive chosen markets

- Track record of cost and risk reduction
- Improving returns and capital generation
- Significant distribution potential

Our priorities

Strength and sustainability

We remain focused on building a strong and stable bank. We have continued to improve the fundamentals, by increasing our capital strength, building a robust liquidity position and balancing our loan to deposit ratio. As one of the UK's largest banks we understand the importance of supporting the UK's economic and social development. Through our balance sheet lending and range of sustainable banking initiatives, we are working to improve outcomes for all stakeholders.

Customer experience

We are investing in our people, service, and product proposition to ensure we provide market leading technology and signature customer experiences, through a wide variety of channels.

Simplifying the bank

Streamlining of processes and removing unnecessary complexity lowers our operating costs, and makes our customer interactions more straightforward.

Supporting sustainable growth

A strong sustainable business grows with its customers. We continue to support our customers through offering products and services which meet their needs.

Employee engagement

Engaged colleagues lead to engaged customers. At RBS we are committed to investing in our colleagues and creating leaders who inspire and empower their teams.

Our Structure

We have four customer franchises, and each is underpinned by a range of distinct brands, which are the route through which we engage with our customers.

Our Functions & Services

Services provide business-aligned technology, operations and property services across the bank.

It is also accountable for technology risk, payments, data, change management and the bank's fraud and security functions.

These teams define functional strategy and the financial plan to support the franchises and other functions.

Most functions are a mix of control, expertise and advisory. All common support activities across the organisation are included.

Pain-free small business accounting

Research in 2017 showed that only half of our one million small-business customers used accounting software, and that cash flow management was one of their biggest pain points.

We wanted to help make their lives easier, so we have partnered with FreeAgent, an Edinburgh-based Fintech that provides accounting software which lets small-business owners track their finances and report their taxes digitally.

Now all of our small-business customers can sign up to FreeAgent using their existing business banking login details. The process is safe, secure and completely paper-free, and the software helps to make financial reporting and cash flow management quick and easy.

Our Brands

Our brands are our main connection with customers. Each takes a clear and differentiated position that will help us strengthen our relationships with our customers, stand out in the market, and build the value of our brands.

NatWest

NatWest serves customers in England and Wales, supporting them with their banking needs, at all stages in their lives.

Royal Bank of Scotland is committed to serving Scottish communities and English commercial business.

Ulster Bank operates both in the Republic of Ireland and Northern Ireland.

Exceptional service sits at the heart of Coutts, a business that has been built on understanding the needs of their private and commercial clients.

Lombard is the UK's largest provider of asset finance, helping to take businesses to the next level with a forward-looking entrepreneurial approach.

Adam & Company provides progressive private banking, tailoring its services and solutions to match each client and their unique needs.

Child & Co.

Child & Co is one of the oldest private banks in the UK, providing bespoke banking services from the legal heart of London.

Drummonds has served private banking customers for over 300 years, providing a discreet and professional service.

**HOLT'S
MILITARY
BANKING**

As the bank of the British Armed Forces, Holt's prides itself on understanding the complexities of serving in the military and providing a personalised service.

ISLE OF MAN BANK

Isle of Man Bank is the 'community bank' and the island's oldest native bank, offering retail, private and business banking services to local customers.

RBS International is one of the world's leading offshore banks, operating under three distinct brands – RBS International, NatWest and Isle of Man Bank.

**NatWest
Markets**

NatWest Markets offers its customers global market access, providing them with trading, risk management and financing solutions through its trading and sales operations.

Building a more sustainable bank

Our long term success is dependent on our ability to generate value for society by providing products, services and facilities that are useful to people and the communities in which we operate. Our value creation model is a simplified way of showing how this works, including the way we use resources, skills and relationships to deliver value for all our stakeholders.

One of the ways by which we meet the expectations of our shareholders is by delivering the best possible service for customers to meet their needs. At the same time, we recognise our responsibility towards society as a whole. It is only by supporting our customers and communities to succeed that we will be become a more sustainable bank.

Our key resources and relationships

RBS provides financial services to individuals and businesses, primarily in the UK and Ireland. We rely on financial, human and intellectual, social and relationship, infrastructure and natural capital to do so. We leverage these forms of capital through our expertise, technology and customer focus across our different brands. This helps to improve the quality of customer service. We also seek to create sustainable value for our shareholders and other stakeholders, including customers, employees, and civil society.

Inputs		How we earn income
<p>Financial</p>  <p>We make use of shareholder capital and other forms of financial capital, including £367.0 billion in customer deposits.</p>	<p>Natural</p>  <p>690 GWh of energy consumed and 8,700 tonnes of paper used in 2017. The bank has reduced total carbon emissions linked to energy and business travel by 39% since 2014. The electricity we buy in the UK is from renewable sources, further reducing our environmental impact.</p>	<p>Our purpose is to serve our customers well</p> <p>We earn income by providing lending and deposit services to our customers.</p> <p>We incur operating expenses in providing these services, and accept risk; including credit risk, liquidity risk and currency risk.</p> <p>The operating profit generated by the bank is either re-invested to improve products and services for our customers or returned to shareholders.</p> <p>Building a safe and customer-focused bank is central to our ability to create value.</p> <p>The main source of our income is the interest income earned from loans and advances to our personal, business and commercial customers. We also earn fees from transactions and other services provided to our customers.</p> <p>We pay interest to customers and other investors who have placed deposits with us and bought our debt securities. The difference between these is our net interest income. We also pay benefits to our customers, through loyalty products such as our Reward Account.</p>
<p>Social and Relationship</p>  <p>19 million customers in the UK and Republic of Ireland.</p>	<p>Human and Intellectual</p>  <p>A capable, caring and motivated workforce of 71,924 (permanent headcount). We recruited 216 graduates and 255 apprentices.</p> <p>Over 64,600 employees underwent training by the Chartered Banker Professional Standards Board (CB:PSB), with 94% of applicable employees achieving the CB:PSB Foundation Standard</p> <p>Almost 3,000 leaders participated in 'Determined to Lead', our core management system for the bank to support our leaders putting our values into practice every day.</p>	
<p>Infrastructure</p>  <p>We now have a trained TechXpert in every branch to help our customers get the most from our digital services. We also provide telephony and webchat and self service options like ATMs and Cash Deposit Machines. Our customers also have access to our fleet of mobile branches covering more than 600 communities every week, and 11,500 Post Office branches where they can carry out every day transactions face-to-face.</p>		

How we create value for customers and society

Sustainable Energy

We have over twenty-five years experience in supporting the sector. We were recognised by InfraDeals as the leading lender to the UK renewables sector by number of transactions over the past six years (2012-2017).

Tax payments

Payment of £1.46 billion in tax to the UK Government, which supports central government and local authority spending.⁽¹⁾

Empowering customers

Following a successful pilot we launched FreeAgent, free cloud-based accounting software which helps small and medium sized enterprises keep track of their finances and report taxes digitally.

We are making good progress in using artificial intelligence to help customers to get answers to simple questions without needing to go to a branch or use an automated telephone service.

We now have 5.5 million active users regularly enjoying the speed and convenience of our mobile banking app.

Customers can also now tell us about travel plans, make international payments, manage helpful alerts, message us at anytime and get personalised notifications through the app.

Protecting customers' money

Keeping money safe and accessible for our depositors, including preventing 485,000 cases of attempted fraud amounting to £244 million in the UK. There has been a sustained improvement in the number of customers impacted by fraud in 2017 with a 26% reduction from 2016.⁽²⁾ We completed over one million Financial Health Checks with our personal, private and business customers.

Helping customers

Offering lending advice and services to individuals. Supporting customers with financial life events, including £33.9 billion of gross new mortgage lending to help our customers buy homes.

Enterprise

We supported over 3,830 people through our enterprise programmes.⁽³⁾

We are determined to make the bank a great place to work

We launched 'Building a great place to work' to outline our commitment to giving our employees a fulfilling job, fair pay, excellent training and good leadership.

Supporting business

Providing working capital and lending to help businesses meet their goals, including £28.8 billion in lending to small and medium-sized enterprises across England, Scotland and Wales.⁽⁴⁾

Supporting local communities

Our Skills & Opportunities Fund distributed £2.5 million to 110 organisations that support people from disadvantaged communities to access the skills and opportunities they need to build their financial capability skills or to start or develop a new business in 2017.⁽⁵⁾

MoneySense

MoneySense is the longest running bank-led financial education programme in the UK, which has helped over five million young people learn about money for over 23 years.

Our programme is designed to help teachers and parents equip young people with the financial skills they need to manage their money now and in adulthood.

Life saving skills

Over 40,000 colleagues completed CPR training. Three colleagues have since had to apply their training, which helped save three lives.

Notes:

- (1) Comprises £443 million corporate tax, £504 million irrecoverable VAT, £237 million bank levies and £273 million employer payroll taxes.
- (2) Data relates to reported attempted fraud cases and prevented third party losses in the UK (not including policy declines for debit cards).
- (3) Includes people supported through the following enterprise programmes during 2017: The Prince's Trust, Skills & Opportunities Fund and Entrepreneurial Spark.
- (4) SME lending balances in over 9,854 postcode sectors across England, Scotland and Wales.
- (5) Data is compiled by Project North East (PNE) and is based on the total spend allocated by each Regional Board.

Our approach

Our Values

Our Values guide our actions every day, in every part of our business. The values are the foundation of how we work at RBS.

Doing the right thing

We do the right thing.

We take risk seriously and manage it prudently.

We prize fairness and diversity and exercise judgment with thought and integrity.

Working together

We care for each other and work best as one team.

We bring the best of ourselves to work and support one another to realise our potential.

Serving customers

We exist to serve customers.

We earn their trust by focusing on their needs and delivering excellent service.

Thinking long term

We know we succeed only when our customers and communities succeed.

We do business in an open, direct and sustainable way.

TechXperts

As our customers' lives change, so to does the way they choose to interact with us. One in five customers already exclusively uses digital channels for their everyday banking, and this number is only expected to rise.

Based in our UK branches, our TechXperts are helping more customers to understand how mobile and online banking can help them make the most of technology to do their banking in a way that is convenient for them.

Zac Hamoudi is one of the Bank's 1,200 TechXperts. "We see customers not fully confident with how to get the most out of their online banking," he explains. "It's about supporting them. We might have customers who are finding it difficult to visit a branch. It can make their lives so much easier to do their banking online. Just working with people for 30-minute online lessons can have a positive impact."

Get connected
I show you how

Our Stakeholders

RBS exists to serve customers well and we put our customers at the heart of everything we do. This means having an understanding of our impact across all stakeholders of the bank. Understanding who our stakeholders are and their views helps inform our overall strategy. Below is an overview of some of our stakeholder groups.

We have provided three examples below of how we work with different stakeholder groups:

Shareholder engagement sessions

Individual shareholder views on our plans to build a better bank are important to us.

In 2017 we hosted events in Edinburgh and London for our retail shareholders. A diverse group, selected by postcode, were invited to learn more about our business and participate in an interactive Q&A session with a panel of senior management and Board members.

These events gave those in attendance the opportunity to hear from different parts of RBS, ask questions about progress so far and learn more about our plans for the future. We set up market stalls on topics of interest including customer experience, innovation and security. They could talk with employees from different parts of the bank on progress and our plans for the future.

Additionally, we held four external stakeholder engagement sessions with our Sustainable Banking Committee on Financial Capability, UK Housing, Climate Risks and Technology Innovation for Social Good.

Working together to tackle fraud and scams

To help our customers protect themselves against fraud and scams we have been working with various partners across the industry.

NatWest sponsored the production of a Code of Practice on protecting customers from financial harm. The specification, launched in November 2017, included input from Financial Fraud Action UK, the National Trading Standards Scams Team, the Office of the Public Guardian, the Metropolitan Police, and two other major UK banks.

NatWest continue to support 'Friends Against Scams' run by National Trading Standards and in 2017 trained over 20,000 colleagues. In 2018 we will be the official bank partner of the One Million Friends Against Scams initiative.

Closed Loop feedback

We are listening, learning and acting on our customers' feedback. We have taken customer feedback on board and acted on it. Closed loop feedback is about continuously seeking customer feedback and closing the loop on the issues that our customers raise with us.

Examples include:

"It would be good if you could diarise payments". Customers can now make diarised payments via their mobile app.

"Customers living abroad are unable to use the mobile app with an international number". Customers can now use our mobile app in various countries including Australia, Gibraltar, Hong Kong, New Zealand, Singapore and South Africa.

"I want all audio statements to have a braille section that allows the customer to know who and what the audio tape is for and what month this relates to". All our audio statements now have a date so that customers can easily differentiate between them.

In addition, as part of our net promoter system in 2017 we sent out 11.5 million survey invites, with 875,500 responses.

Changing face of banking

Since 2014, customers are choosing to do their banking in different ways that suit them and reflect what they do in everyday life. The number of customers using our branches across the UK has fallen by 40% and during the same period mobile banking transactions increased by 73%; in the first half of 2017, there were 1.1 billion mobile and online transactions carried out by our customers.

We are committed to ensuring that our customers have a wide range of ways in which they can bank with us. Every customer is individual and that is why customers can choose from a combination of digital, telephone and face-to-face banking options, each designed to suit their preferences and needs. Customers might carry out simple everyday transactions using our mobile app but still preferring to speak to someone over the phone or via webchat for other banking queries. For more complex needs, such as a Financial Health Check or mortgage advice, customers value having the

option to discuss the matter face-to-face or by video.

We are working hard to develop new services to respond to the changing needs and expectations of our customers. All our personal customers can bank with us using our mobile app and online banking services and we have Bankline for business and commercial customers. We also provide a 24/7 webchat service for personal customers, telephony and secure text messaging for when customers want to contact us quickly, digitally and securely.

Closing branches is always a difficult decision and one we do not take lightly. When these decisions are made, we look at each branch and take into account a range of factors including, how customers are choosing to bank with us; how often customers are using the branch; the impact on customers who currently use the branch; other options available to customers including online, mobile, telephony, webchat, cash machines, video banking and local Post Offices and, the proximity of our other branches, including our network of mobile branches and local transport routes and timetables.

We know that for some customers, in particular vulnerable customers, closing branches can be unsettling. We are committed to ensuring that we support all customers with these changes. We aim to provide six months notice before we close a branch (the industry norm is 12 weeks) and we proactively contact our regular branch users and vulnerable customers to talk to them about our decision and the options available to them.

Our national contract with the Post Office means that customers can undertake everyday banking in any of the 11,500 Post Offices throughout the UK. In many areas, we operate mobile branches, which bring our banking services direct to local communities, many of which have not had a branch before.

We acknowledge that some of our customers are not comfortable with using online or mobile banking, and for those customers who would value some support we have created a specialist taskforce of TechXperts who are dedicated to supporting our customers with training and support with digital skills. Our TechXperts support customers with the varied ways to bank and for example accompany customers to the local Post Office to show them how their banking can be done.

We have introduced a number of roles to provide personal, face-to-face banking services in communities, assisting customers with access to our non-cash services, offering support with financial planning and education. Our Community Bankers base themselves in places like libraries, local businesses and community centres so as to best serve local communities. Business Growth Enablers focus on our small business customers. They are specially trained to help source advice that will help local businesses with banking support, as well as harnessing their own network to support business needs. Business Growth Enablers work with industry partners to run free events for customers on issues such as fraud, scams and digital tax returns.

Community Bankers - taking the branch to our customers

As more and more customers choose to use mobile banking instead of traditional branch counters, our branch network needs to change. Our Community Bankers are ensuring that we can still play an active role in communities, even when we no longer have a dedicated building.

Our team of Community Bankers take the branch to the places where it is convenient for our customers, including libraries, rugby clubs and church halls. They also deliver community events on fraud, scams and online security, to help people keep their money safe.

Aby Evans is a Community Banker on the Kent coast. "I run regular drop in clinics in the local libraries," she explains. "Although I'm not in a bank building, customers know where and when they can find me each week.

"I wear a purple branded fleece and I get stopped in the street because people spot me and want to ask a quick question. It's really nice to feel part of the community."

Climate change

We recognise climate change is a significant global issue and we fully support the objectives of the Paris Climate Agreement and the emissions reductions strategies set by the UK and devolved governments. We have publicly pledged our support for the Financial Stability Board's (FSB) Taskforce on Climate-related Financial Disclosures (TCFD) and we have included more detail on our approach to the TCFD recommendations in the Additional Information section of the 2017 Annual Report and Accounts. We also plan to announce further details of our long term approach to climate change.

We believe there is a need to support our customers to reduce their emissions, save energy and manage their costs. Over the last decade, we have become one of the leading lenders to the UK Sustainable Energy market, with expertise and services designed for customers from small businesses up to large corporations. RBS was recognised by InfraDeals as the leading lender to the UK renewables sector by number of transactions over the past six years (2012- 2017).

As we have refocused our business on the UK, Ireland and Western Europe, we've also substantially reduced our lending to carbon intensive parts of the global economy such as coal mining and oil extraction. Our total exposure to the oil and gas industry, for example, now accounts for just 0.5% of our lending exposures. In 2017 we did not directly finance any new coal mining or coal power projects. More details of our lending to the energy sector will be published on our Sustainable Banking webpages on rbs.com in April 2018.

Relative to our size, our operational footprint from serving our customers is quite small, but still significant. Our primary emissions impact comes from the energy used to heat, cool and power our buildings and data centres. We have set targets using a science-based method in order to align our efforts to reduce emissions with the climate science that sits behind the Paris Climate Agreement. Our target for 2020 is to reduce our direct carbon emissions by 45% from a 2014 baseline and at the end of 2017 we had already recorded a 39% reduction. The table below provides more detail.

We have also set 2020 targets to reduce water use by 10% and paper use by 60%, whilst continuing to target zero waste to landfill. We engage colleagues, suppliers and customers in these efforts and in 2017, 3,200 colleagues logged over 24,000 activities to reduce our environmental impact via our green reward app. More information on our targets and initiatives can be found on the Sustainable Banking webpages at rbs.com.

GHG Emissions	2014 (Baseline)	2016	2017	Change 2014 to 2017 (%)
Location-based CO ₂ e emissions (Scope 1, 2 and Business Travel) (tonnes)	512,583	388,648	311,583	-39%
Scope 1* CO ₂ e emissions (tonnes)	36,857	29,131	27,172	-26%
Scope 2** Market-based*** CO ₂ e emissions (tonnes)	391,105	159,629	76,197	-81%
Scope 2 Location-based CO ₂ e emissions (tonnes)	370,374	270,481	215,959	-42%
Scope 1 and 2 Location-based CO ₂ e emissions per FTE (tonnes)	4.16	3.32	3.18	-24%
Scope 3**** CO ₂ e emissions from business travel (tonnes)	105,352	89,036	68,452	-35%

We have reported on all emission sources under the Companies Act 2006 (Strategic Report and Directors' Reports) Regulations 2013. To our knowledge there are no material omissions. Independent Limited assurance has been provided by Ernst & Young LLP over total reported CO₂e emissions (tonnes) (Scope 1*,2** and 3**** location based emissions). Our reporting year runs from October 2016 to September 2017.

These emissions have been calculated using the methodology advised in the Greenhouse Gas Protocol revised edition (2004). The boundary of reporting is set as all entities and facilities either owned or under operational control. Emissions factors used are from UK Government's GHG Conversion factors (DEFRA), IEA, or relevant local authorities.

*Scope 1: Emissions from fluorinated gas loss and fuel combustion in RBS premises/vehicles. **Scope 2: Emissions from electricity, district heating and district cooling used in RBS premises. *** market-based emissions have been calculated using the GHG Protocol guidelines. ****Scope 3: Emissions associated with business travel (air, rail and road) by RBS employees.

NatWest Markets energises the SSE Green bond deal

NatWest Markets continues to build its presence in the sustainable finance market with an active role on the issuance of a landmark Green bond by SSE.

SSE, one of the UK's leading energy suppliers, issued its first Green bond raising EUR600 million, the largest ever Green bond by a UK company. It will use the proceeds to re-finance existing environmentally-friendly projects, in particular onshore windfarms.

SSE has invested around GBP 3.2 billion in renewable energy since 2010 and has the largest renewable energy capacity in the UK and Ireland.

Human rights and Modern Slavery Act

RBS takes a proactive approach to upholding our commitment to respect human rights and our approach is centred on identifying and mitigating potential human rights risks across our business and our wider sphere of influence. The Modern Slavery Act 2015 (MSA) forms part of our approach to human rights as this regulation brings together the serious criminal offences of

slavery, servitude, forced or compulsory labour and human trafficking together under one piece of legislation. In 2017 we published our first annual statement on the MSA on rbs.com. This built upon our interim statement which was published in December 2016 and our existing policy framework.

Our approach is underpinned by Our Values and Our Standards. For employees this is via the RBS Code of Conduct 'Our Code'. Our Code includes a clear commitment to respect human rights, supported by the Yes Check, a tool to guide good decision making. Employees are consulted on key aspects of their working environment, and they can utilise a confidential helpline to discuss any matters of concern.

Our commitment to the international progress of human rights includes upholding the principles of the United Nations Global Compact since 2003.

We are committed to the implementation of the United Nations Guiding Principles on Business and Human Rights and participate with our peers in groups such as the Thun Group and United Nations Environment Programme Finance Initiative. We have been adopters of the Equator Principles since their inception in 2003 to manage social and environmental risks, including human rights, in project-related transactions.

We have sector-specific Environmental, Social and Ethical (ESE) risk policies (available at rbs.com/sustainable) which include human rights considerations for high-risk sectors. For customers outside these sectors, our general ESE risk concerns policy ensures due diligence is carried out on clients when human rights risks are identified. We expect our customers to share our commitment to respecting human rights within their operations.

Our Customers

We are aware that as a High Street bank we come into contact with millions of customers, some of whom may be victims of modern slavery. Our relationship with our customers is governed by a wide range of risk considerations, including our Anti-Money Laundering (AML) and Environmental, Social, and Ethical (ESE) risk assessments on current or new customers, to consider whether any of their activities carry human rights infringements.

Our People

All of our people are recruited legally and must meet the 1998 Immigration Act requirements.

RBS is a fully accredited Living Wage Employer. We gained accreditation in 2014. RBS' commitment as a Living Wage accredited employer applies to everyone working for the bank in the UK and has been extended to staff who are employed via suppliers (e.g. cleaning, security and catering staff). Employees are regularly consulted on their working conditions and a confidential helpline is available at all times.

Our Suppliers

We expect our suppliers to uphold the same values and commitments that we have made in relation to social and environmental impacts. Adherence to these policies is required as part of our supply chain tendering process and within our supplier contracts.

Our Sustainable Procurement Code sets out the international human rights commitments we expect of the companies that we work with, including labour standards and non-discrimination.

Our Colleagues

Engaging our colleagues is critical to delivering on our strategy and ambition as a bank. Being better for our colleagues means we are better for our customers, and this makes us a better bank.

Creating a Healthy Culture

Building a healthy culture that embodies Our Values is one of our core priorities. Our Values guide the way we identify the right people to serve our customers well, and how we manage, engage and reward our colleagues. Our Values are at the heart of both Our Standards, the bank-wide behavioural framework and Our Code, the bank-wide Code of Conduct.

Our values are integral to the way we behave and do business and we continue to reinforce them in our systems, policies and processes, communications training and leadership role modelling.

We set ourselves clear cultural priorities each year and manage these through our Executive Committee.

We monitor our progress against our goals. We gather feedback from our colleagues through our listening strategy, and through metrics and key performance indicators to assess our progress and respond accordingly. We do this along with feedback from regulators and industry bodies.

Almost 60,000 colleagues completed our most recent colleague opinion survey. The results were the most positive we've seen in recent times and showed we're changing the culture of the bank for the better. Key measures of engagement, leadership and our culture have improved significantly, and we're now above the global financial services norm in the majority of our survey categories. The results are encouraging, and show that our hard work is paying off. However, we recognise that we have more to do to make this a stronger bank and a great place to work.

We encourage colleagues to tell us what they think via the annual colleague survey and our regular

comments boards. When colleagues wish to report concerns relating to wrong doing or misconduct they can raise concerns via Speak Up, the bank's whistleblowing service. In 2017 289 cases were raised compared to 213 in 2016.

Performance and Reward

Our approach to performance management provides clarity for our colleagues about how their contribution links to our ambition and all our colleagues have goals set across a balanced scorecard of measures.

Further progress has been made in making sure employees are paid fairly for the work they do and are supported by simple and transparent pay structures. More employees have moved to a purely fixed pay construct during the year, allowing them to concentrate on providing excellent customer service. We will continue to make further changes in 2018 which will result in over half of our employees being on a purely fixed pay construct making their pay fairer and easier to understand.

We are confident that we pay our employees fairly. We keep our HR policies and processes under review to ensure we do so.

Our rates of pay continue to exceed the Living Wage and changes have been introduced to ensure people performing the same roles are paid more consistently.

More information on our remuneration policies can be found in the 2017 Annual Report and Accounts.

Learning

'Determined to lead' (DtI), our core leadership programme is now embedded as business as usual. DtI provides consistent tools to lead and engage our colleagues and is

Our approach

transforming the way we operate. In 2017 a further 3,000 leaders participated in the programme.

2017 saw over 16,000 colleagues undertake stage one of Service Excellence training, our customer service programme. This first module introduces our Core Service Behaviours and provides an awareness of the tools and techniques that will help us to deliver the best possible service, every time.

We continue to work closely with the Chartered Banker Institute and Chartered Banker Professional Standards Board (CB:PSB) to professionalise our colleagues. In 2017 we again achieved an Excel rating in the CB:PSB Foundation Standard review, and remain one of only two CB:PSB member firms to have secured 'Earned Autonomy'.

We also offer a wide range of additional learning opportunities.

Health and Wellbeing

Wellbeing is a strong pillar in making the bank a great place to work. In 2017 our wellbeing programme successfully delivered against three wellbeing pillars; Physical, Mental, Social and we have started to put in place support against our fourth area of Financial Wellbeing. For the third year running we participated in the Global Challenge (formerly GCC) and with 34,000 colleagues taking part we won the Global Challenge 1st Most Active Organisation Financial Industry. Building on this success, we embraced the rapid acceleration of digital wellbeing and are one of the few large organisations to pilot a digital wellbeing platform.

During 2017 we have continued to support Time to Change (removing the stigma of mental health) and actively

encouraged open dialogue across the bank to support Mental Health in the Workplace. We were successful in running bankwide major online campaigns to support Mental Health Awareness Week and World Mental Health Day.

As we continue to support our colleagues through change we have fully utilised the services of our Employee Assistance Programme.

Inclusion

Building a more inclusive RBS is essential for our customers and colleagues.

Our inclusion policy applies to all our colleagues globally to make sure everyone feels included and valued, regardless of their background.

- ▶ As at 31 December 2017, our permanent headcount was 71,924. 49% were male and 51% female.
- ▶ We continue to work towards our target of having at least 30% senior women in our top three leadership layers across each Function and Franchise by 2020. As at the 31 December 2017 we have, on aggregate, 37% women in our top three leadership layers, and our pipeline (around 5000 of our most senior roles) has 44% women. We are on track to have a fully balanced workforce at all levels of the organisation by 2030.
- ▶ RBS plc's gender pay gap in Great Britain is 37.2% (median 36.5%). The figures also show a gender bonus gap of 64.4% (median 36.6%).
- ▶ A key driver behind the gap is the fact that we have more men in senior roles (which attract higher pay) than women. In order to close the gender pay gap, we must continue to improve our gender balance in our most senior roles,

and here we are making good progress. We have a positive action approach in place, tailored by business, according to the specific challenges they face. As we continue to increase the proportion of women working in senior roles, we expect our gender pay gap will lessen.

- ▶ During 2017, we continued to roll out unconscious bias learning to all our colleagues to create a solid platform for the wider inclusion agenda. 70% of colleagues have now participated in unconscious bias training since it was introduced in 2015.
- ▶ We have plans in place for all segments of our pan-bank disability plan. It addresses areas for improvement including branch access, accessible services, improving colleague adjustment processes and inserting disability checkpoints into our key processes and practices.
- ▶ We continue to focus on building an ethnically diverse RBS. Our plan focuses on positive action and includes reciprocal mentoring, targeted development workshops and leadership programmes and ensuring we have a Black, Asian and Minority Ethnic (BAME) focus on recruitment, talent identification and promotion. We will introduce explicit targets for BAME representation at senior levels in 2018.
- ▶ Our LGBT agenda continues to deliver a better experience for our LGBT colleagues and customers. We have processes in place to support updating gender and title on customers' banking records and to support colleagues undergoing gender transition. And, we continue to support our c.20,000-strong colleague networks.

Grade	#Women	#Men	%Women
CEO – 1	5	9	36
CEO – 2	35	66	35
CEO – 3	232	397	37
CEO – 4	1,309	1,681	44
Target population (CEO – 3 and above)	272	472	37

	Male	Female
Executive Employees	90 (76%)	28 (24%)
Directors of Subsidiaries	184 (80%)	45 (20%)

There were 347 senior managers (in accordance with the definition contained within the relevant Companies Act legislation), which comprises our executive population and individuals who are directors of our subsidiaries. The RBS Board of directors has fourteen members, consisting of nine male and five female directors.

Helping young people keep their money safe

Were you thinking about identity theft, fraud or insurance as a youngster? Probably not, but thanks to MoneySense – our flagship financial education programme for 5 to 18 year olds – today's young people are becoming a lot more financially aware.

MoneySense has been helping young people towards a better financial future for more than 23 years and the varied content aims to help them to understand the changing nature of fraud and how they can protect themselves. A range of resources for each age group are available including quizzes, videos and worksheets.

These resources help teach pupils about money safety in the real world and how to avoid the dangers of fraud in a fun and interactive way.

MoneySense content also looks at a wide range of financial dilemmas including budgeting for a party, choosing a mobile phone contract and understanding when it is important to have insurance.

MoneySense has now reached more than five million young people and over 5,000 colleagues from across the bank have signed up as MoneySense volunteers to help deliver workshops in schools.

MoneySense resources are used in 66% of secondary schools across the UK and Ireland.

Our Customers

RBS remains committed to achieving its target of being the number one bank for customer service, trust and advocacy by 2020.

Customer

In 2017 we made it our goal to significantly increase NPS or maintain number one in our chosen customer segments. This strategy was implemented to support the overall aim of being the number one bank for customer service, trust and advocacy by 2020.

We use independent surveys to track the progress we are making to achieve our goals in each of our markets and to also measure our customers' experience.

To measure advocacy, customers are asked how likely they would be to recommend their bank to a friend or colleague, and respond based on a

0-10 scale with 10 indicating 'extremely likely' and 0 indicating 'not at all likely'. Customers scoring 0 to 6 are termed detractors and customers scoring 9 to 10 are termed promoters. The net-promoter score (NPS) is established by subtracting the proportion of detractors from the proportion of promoters.

We also use independent experts to measure our customers' trust in the bank. Each quarter we ask customers to what extent they trust or distrust their bank to do the right thing. The score is a net measure of those customers that trust their bank (a lot or somewhat) minus those that distrust their bank (a lot or somewhat).

Our Commercial Banking NPS has remained stable during 2017 and remains ahead of its main competitors. In England & Wales, NPS for NatWest Personal Banking has also remained stable and we have met our target for customer trust. In Scotland, while we have not met our target for customer trust for Royal Bank of Scotland, it has increased strongly year on year. We do recognise that significant work is required to improve our customer experience and we continue our work to resolve the ongoing reputational and legacy issues.

Taking paper out of the mortgage process

Our new paperless mortgage process is saving our customers time and money. Documents which were previously received by post can now be uploaded in seconds via a safe, temporary portal. Signatures can also be provided digitally, so customers no longer have to sign paper documents and post them back to us.

As well as being much more convenient for customers, the new process is also more environmentally friendly (saving around 4.3 million sheets of paper a year) and much more efficient. By removing the need for paper documents, which need to be sent through the postal system, we are now able to complete the appointment to offer in less than half the time than before, from 23 working days to 11 on average.

Our operating environment

Key influences in our operating environment

Our ability to serve customers and create value for the long term is heavily influenced by the environment in which we operate. Every year we assess the importance of these influences both in terms of their relevance to our stakeholders (including customers, investors, UK government, employees and civil society) and their potential commercial impact on us.

An assessment of the most important influences in our operating environment are detailed below. The influences have been identified through various means, including, internal and

external stakeholder engagement and review of internal and external sources. These considerations have the potential to influence our ability to serve customers and create value for the long term. They carry both risks and opportunities, driven by a mixture of direct commercial impact and stakeholder interest as a result of wider societal trends.

In the following pages, each influence is briefly described together with selected highlights in 2017 and with guidance on where you can find more information on that key influence.

Key Influences	Definition	Selected highlights in 2017	Where to find out more
Critical considerations that support our ambition to be No.1 for customer service, trust and advocacy			
Customer service	Delivering excellent customer service is essential for the banking sector to build trust. Maintaining and growing a loyal and satisfied customer base requires an appropriate digital and physical presence and clear distribution strategy.	<ul style="list-style-type: none"> Approximately 5.5 million active users regularly benefit from the speed and convenience of our mobile banking app with +51 net promoter score. Closed Loop Feedback provides us real-time feedback from our customers which we are listening to, learning from and acting on every day. Rolled out a Service Excellence programme, to further improve our customer service. 	
Employee wellbeing & engagement	Employee engagement and satisfaction is highly correlated with overall performance. A key determinant of the bank's success will be ensuring all of its employees are clear on their roles and responsibilities, capable and feel motivated to do the best job possible.	<ul style="list-style-type: none"> Our View, the bank's annual employee feedback survey showed that engagement is up by seven percentage points to 83% compared with 2016, the highest level since 2002. Launched 'Building a great place to work' to support our commitment to giving our employees a fulfilling career, fair pay, relevant training and good leadership. Actively supported Mental Health Awareness Week, enabling employees to speak more openly about mental health and support each other. 	
Ethics, culture and integrity	Professional integrity is a key governance consideration in the banking sector. Services provided must satisfy the highest professional standards, avoid conflicts of interest, bias, or negligence, and ensure that all stakeholders, including employees, contractors and business partners, are treated fairly and equally.	<ul style="list-style-type: none"> Improved our position in the latest Banking Standards Board (BSB) survey, which seeks to promote high standards of behaviour and competence across the UK banking industry. RBS improved in all nine BSB survey categories compared with 2016 results and in quartile performance against its peer group. Employed the greatest number of UK employees with professional banking qualifications. RBS employs more bankers with a professional banking qualification from the Chartered Banker Institute than any other UK financial institution. Members are required to comply with the annual CPD requirements of the professional body. The Chartered Banker Institute is the UK's only and world's oldest professional body for banking. 'Speak Up', our whistleblowing service, received 289 reports compared to 213 reports in 2016. The service allows employees to raise concerns in a safe and supportive environment so that potential issues can be addressed quickly and effectively. 	
Operational competence	Delivering appropriate digital infrastructure is important to ensure a 'technically-able' bank that supports its long-term future. Cyber security is also a vital part of providing a safe and secure banking service. Banks need to proactively identify and manage risks and efficiencies in their operations and facilities.	<ul style="list-style-type: none"> RBS is a founding partner of 'Friends Against Scams', the National Trading Standards Scams Team's fraud and scams awareness initiative. More than 20,000 colleagues have completed the relevant training. Improved the in-branch digital experience with TechXperts in every branch to advise and support customers on how to have a secure online banking experience. The in-branch wi-fi capability has also been improved. There has been a sustained improvement in the number of customers impacted by fraud with a 26% reduction compared with 2016. Resilient, simple and efficient systems are critical to building the number one bank for customer service, trust and advocacy. Our systems are available 99.9% of the time. 	
Strength and stability	Banks need to demonstrate their ability to survive financial stress arising from economic turmoil, and potential large scale fines and legal cases resulting from historic events. They must also demonstrate they have sufficient capital, liquidity and resilience as well as the ability to generate sufficient returns.	<ul style="list-style-type: none"> The CET1 ratio increased by 250 basis points to 15.9% in 2017 despite absorbing significant additional legacy costs. RWAs reduced by £27 billion (12%), ending the year at £201 billion (from £228 billion in 2016). This reduction was driven by NatWest Markets, where RWAs fell by £16.8 billion due to the continued run-off of the legacy business and mitigation activities in the core business, together with active management of the lending book in Commercial Banking. A key milestone in our ring-fencing journey was achieved through the application to the Court of Session in Edinburgh to initiate a 'Ring-Fencing Transfer Scheme' so as to carry out a legal transfer of some of our business. 	

Our operating environment

Key Influences	Definition	Selected highlights in 2017	Where to find out more
Current Priority Considerations			
Banking regulation	Banks continue to operate in an environment where regulatory change is frequent and increasingly complex requiring significant time and resources.	<ul style="list-style-type: none"> RBS continues to deliver on its plan to build a strong, simple and fair bank for both customers and shareholders. To support this, and in preparation for the UK ring-fencing regime, the previously reported operating segments were realigned in Q4 2017 and a number of business transfers completed. Refer to the Report of the directors for further details. NatWest Markets aligned the majority of Functions and Services employees in 2017 in preparation for operating as a non-ring-fenced bank. RBS Group published a Tax Strategy. Regulatory changes that RBS worked on in 2017 included MiFID II / MiFIR, Open Banking and reform of capital and liquidity regulations. 	   
Conduct	Banks remain focused on putting in place measures to prevent issues related to conduct. At the same time, legacy conduct issues, such as RMBS, continue to have major financial and reputational impacts.	<ul style="list-style-type: none"> A settlement with the Federal Housing Finance Agency (FHFA) and the California State Attorney General in the US was reached. The 2008 rights issue shareholder litigation was resolved. 	   
Competition and Innovation	The banking sector is going through a period of rapid change with regulatory and technological trends converging to increase competition. Together with accelerating innovation, the UK implementation of the Open Banking Standards raises the potential for significant disruption of the traditional banking business model.	<ul style="list-style-type: none"> Partnered with FreeAgent, an Edinburgh-based Fintech that provides online accounting software, to help our small business customers track their finances and report their taxes digitally. Introduced a chat bot called 'Cora' that answers questions from customers 24/7, freeing up colleagues time so that they can help customers with more complex queries. Cora currently handles over 100,000 customer conversations per month across our web and online channels. Plans are in place for Open Banking, including customer education around security awareness. 	    
Diversity, equality & inclusion	The inclusion agenda is quickly moving up the corporate agenda and driving the need to foster corporate cultures that value diversity, teamwork, quality leadership and training.	<ul style="list-style-type: none"> Made progress against our 2020 targets on our four priorities: Lesbian, Gay, Bisexual, Transgender (LGBT), Gender Balanced, Disability Smart, Ethnically Diverse. Supported the International Day of Persons with Disability sharing stories across the bank and with customers. Recorded an increase in the total number of female leaders within our top three senior layers, including the appointment of two new female non-executive board directors. RBS was named a Times Top 50 employer for Women and rated as a Stonewall Top Global Employer. 	   
Health of the UK and global economy	The outlook for the UK and global economy remains uncertain due to a number of factors including: the UK's vote to leave in the EU referendum, wider political instability, an extended period of low interest rates, high debt levels and delays in normalising monetary policy.	<ul style="list-style-type: none"> The UK economy grew by 1.8% in 2017, down slightly from 1.9% in 2016, below the long-run average of more than 2%. The main development in 2017 was higher inflation. Along with weak wage growth it meant that households' incomes were squeezed. The eurozone economy was 2.7% larger in the final quarter of 2017 than in the same period of 2016, up from 1.8% in 2016. Unemployment fell but remained high at 8.7%. US growth accelerated to 2.3%. The job market remained buoyant with 1.8 million jobs added during the year and the unemployment rate falling to 4.1%. 	  
Political landscape	Political risks continue to evolve with the UK's vote to leave in the EU referendum creating significant economic, political and regulatory uncertainty. Heightened geopolitical tensions and rising populism in advanced economies have also contributed towards a rise in uncertainty.	<ul style="list-style-type: none"> In 2017 NatWest Markets announced its plan to repurpose the existing licence in the Netherlands in the event of loss of EU passporting as a result of the UK's departure from the EU. We engage the UK Government and opposition political parties to understand their priorities for the sector. 	  

Our operating environment

Key Influences	Definition	Selected highlights in 2017	Where to find out more
Privacy	As a bank our customers not only trust us with their finances but also with their information. It is therefore important that we deal with their information the right way. By doing the right thing in meeting the privacy expectations of our employees, customers and shareholders we build confidence, which in turn builds trust and therefore has a tangible influence on delivering the bank's ambition to be No.1 for customer service, trust and advocacy.	<ul style="list-style-type: none"> The bank takes privacy and the protection of customers and employee data very seriously, and has worked with other banks to make sure it is factored into the Open Baking architecture. The new General Data Protection Regulation (GDPR) comes into effect on 25 May 2018 and brings a new era in safeguarding personal data by businesses. The bank has been preparing for GDPR since April 2016. The GDPR grants new and enhanced rights for individuals in relation to their personal information and, as 25 May approaches, the bank will communicate more fully with customers and clients about these changes and how they can exercise their rights. 	 
Skills and capability of staff	Financial services companies face competition for skilled employees, in particular with specific skillsets (e.g. IT). As the industry transforms to more digital banking, the need for such skills may become more acute.	<ul style="list-style-type: none"> Delivered the Entrepreneurial Development Academy, a programme designed in partnership with E-Spark, specifically for RBS employees to develop an entrepreneurial mindset. Over 5,900 employees participated in the programme. Over 64,600 employees underwent training by the Chartered Banker Professional Standards Board (CB:PSB) with 94% of applicable staff achieving the CB:PSB Foundation Standard. Introduced a new tool to help our people learn and develop for example career development days and mobile learning. RBS was recognised as a Top 5 Apprentice UK Employer. 	   
Support for enterprise	A healthy economy needs a pipeline of new and growing businesses to spur innovation and growth. Entrepreneurs, start-ups and small businesses require particular support in terms of financing and building market share.	<ul style="list-style-type: none"> Rolled out ESME, a digital platform which offers SMEs the ability to digitally obtain loans quickly, potentially within an hour, on a 24/7 basis. Launched Pitch App to help entrepreneurs communicate with impact. Entrepreneurial Spark opened an accelerator hub in London, our 12 accelerators are now in every region of the UK. 	   
Trust in the banking sector	Trust in traditional large UK banks often lags behind smaller competitors and new market entrants. Rebuilding trust remains a key challenge.	<ul style="list-style-type: none"> Customer trust in NatWest in England & Wales has met its 2017 target of 57%, improving from 55% at Q4 2016 to 57% at Q4 2017. Trust in RBS in Scotland has increased strongly year on year (from 13% in Q4 2016 to 27% in Q4 2017) but remains behind its target of 38% for 2017. Our Board Sustainable Banking Committee hosted stakeholder engagement sessions and two retail shareholder events. 	    
Housing	Demand for housing in some parts of the UK and Republic of Ireland outstrips supply, reducing affordability and harming family disposable incomes.	<ul style="list-style-type: none"> Board Sustainable Banking Committee held a stakeholder engagement session on housing, inviting a variety of external stakeholder groups to share their perspectives with us. Your Mortgage Awards 2016 - 2017: Best First-Time Buyer Mortgage Lender, Best Bank. What Mortgage Awards 2017: Best National Bank, Best Lender Customer Service. Gross new mortgage lending of £33.9 billion in UK PBB, Ulster Bank RoI, Private Banking and RBSI. 	 
Long term and emerging considerations			
Changing customer needs	Customer needs are changing and different types of customer often have significantly different banking needs. In order to be attractive and useful, financial products and services need to fit in with customers' lives and be flexible to differing levels of digital and financial understanding.	<ul style="list-style-type: none"> 68% of our personal customers are active across our mobile and online banking platforms. Launched Strategic Account Opening meaning our personal customers can open an account in five minutes. Launched the UK's first ever paperless mortgage - customers can now apply for a completely digital mortgage which uses the latest technology to securely share and verify documents online. Our Home Insurance Quote and Buy system gives customers cover in less than fifteen minutes. One of the first large UK banks to launch robo-investment advice service through NatWest Invest. 	   

Key Influences	Definition	Selected highlights in 2017	Where to find out more
Climate change	The Paris Agreement provides a framework by which the world will seek to prevent dangerous climate change but further challenges remain. Climate change presents both physical and transition risks. The transition to a low carbon economy is also presenting opportunities for low carbon sectors of the economy. There are also increasing regulatory and stakeholder expectations of banks to address climate change.	<ul style="list-style-type: none"> RBS has pledged its support to the Task Force on Climate-related Financial Disclosures (TCFD). Board Sustainable Banking Committee held a stakeholder engagement session on Climate risk, inviting a variety of external stakeholders groups to share their perspectives with us. We have been recognised by InfraDeals as the leading lender to the UK renewables sector by number of transactions over the past six years (2012- 2017). Set a new carbon reduction target using a 'science-based' method, aligning our ambition with the Paris Climate Agreement. 	   
Executive pay	Shareholders, employees and the general public have shown increasing concerns about the inequality in pay in large companies between senior executives and the general workforce.	<ul style="list-style-type: none"> Bonus pools have fallen by around 75% since 2010, aligned with the restructuring that has taken place and the actions taken by Group Performance and Remuneration Committee. Remuneration is allocated over a multi year basis, with the ability to apply malus and clawback to encourage good behaviours and a long-term focus. Introduction of a new policy for Executive Directors in 2017, with significantly lower maximum award levels and with increased shareholding requirements. 	 
Financial capability	A customer's ability to manage money well, both day to day and through significant life events, and their ability to handle periods of financial difficulty. It focuses on developing financial skills and knowledge, attitudes, and motivation, which can help customers avoid falling into financial difficulty and can improve their financial health and well being.	<ul style="list-style-type: none"> MoneySense, our financial education programme for 5 to 18 year olds, won Digital Information Product of the Year (PPA Digital Awards) in recognition of how it has adapted to the digital age with engaging and interactive content to support teachers and parents. Completed over one million Financial Health Checks in 2017. 	
Social inequality & financial exclusion	The increasing gap between rich and poor and the rising cost of living means many UK consumers find themselves in precarious financial situations and are struggling to manage their money day to day. This, with future economic uncertainty, may well lead to increased bad debt and over indebtedness. In addition millions do not have access to mainstream financial services such as free ATMs, credit, and banking products together with lack of digital footprint and skills and are forced to rely on high-cost products.	<ul style="list-style-type: none"> Helped over 680,000 customers in financial hardship find a solution to their debt problem. Provided over 27,500 customers with 'breathing space' and extra time for them to find support and to put in place a repayment arrangement. Innovative Citizens Advice partnership, where Citizens Advice colleagues are located within one of our Specialist Support teams providing independent advice to over 900 of our most vulnerable customers. In partnership with the Money Advice Trust, we developed industry leading Addictions Training for our colleagues and use across the sector. 	
UK infrastructure	The UK has a significant need for new infrastructure, such as energy, transport and project finance. Banks have an important role in supporting infrastructure investment across the UK.	<ul style="list-style-type: none"> Banks like RBS have a key role supporting this investment, through lending and sourcing global capital markets financing. 	 

Independent assurance

The Royal Bank of Scotland Group plc appointed Ernst & Young LLP to provide limited independent assurance over selected sustainability content within the Strategic Report ("the Report"), as at and for the period ended 31 December 2017. The assurance engagement was planned and performed in accordance with the International Standard for Assurance Engagements (ISAE) 3000 Revised, Assurance Engagements Other Than Audits or Reviews of Historical Financial Information.

These procedures were designed to conclude on:

- The consistency of selected narrative claims on sustainability with underlying performance information, and;

- The accuracy and completeness of the sustainability performance indicators listed below:

- Value (£) of attempted fraud prevented in the UK
- Total gender balance in top 3 senior layers
- Total number of people supported through our enterprise programmes
- % personal customers who are digitally active
- Total number of Financial Health Checks
- Banking Standards Board survey results
- % of staff who received CB:PSB standards certification
- Total scope 1 and 2 location based CO₂e emissions and Scope 3 emissions from business travel.

An unqualified opinion was issued and is available on rbs.com, along with further details of the scope, respective responsibilities, work performed, limitations and conclusions.

Keeping the UK economy moving

Whether it's supporting tourism or business, and creating local jobs, airports provide an essential service and play a vital role in the UK economy.

We're helping to support infrastructure projects right across the UK, including airports. By giving them access to the funding they need to invest in their future and enhance the passenger experience, we're playing our part keeping people, goods – and the economy – moving.

We've helped Gatwick with seven bond issuances – including its September issue of £350 million 22-year bonds; prepared Manchester Airports Group for its first bond issuance since 2014, and provided long-term debt financing for Leeds Bradford and London Luton airports.

Reflecting on the support he received in 2017, Neil Thompson, Chief Financial Officer for Manchester Airport Group says: "We were delighted to work with NatWest for the launch of this important bond transaction. The bond will form a key part of the company's capital structure to fund future growth of Manchester Airport Group's airports."

Key economic indicators

The UK economy grew by 1.8% in 2017, down slightly from 1.9% in 2016. That was below the long-run average of more than 2%.

UK gross domestic product growth (%)

Unemployment rate, UK (%)

Number of people in employment, UK (thousands)

In a healthy job market, the number of people in work increased by around 400,000 and unemployment fell to 4.3%, the lowest rate since 1975. As a result of the 17% fall in the value of sterling that began in 2015, inflation accelerated, peaking at 3.1%. Higher inflation was one reason the Monetary Policy Committee (MPC) voted to increase Bank Rate to 0.5% in November. With wage growth of around 2.5%, households' spending power was squeezed. Business profitability remained strong and business investment grew by 1.7% in the year to the third quarter. House price inflation remained around 5%.

Summary

The main development in 2017 was higher inflation. Along with weak wage growth it meant that households' incomes were squeezed. As a result, household spending grew by 1.0% in the year to the third quarter and retail sales volumes increased by 1.4% in the year to December. While some households curbed their spending others ran down their savings – the saving ratio reached a record low of 4.0% in the first quarter – and consumer credit grew by 9.5% in the twelve months to December. Employment continued to rise strongly but wage growth remained modest for most of the year, meaning domestically-generated inflationary pressures were muted. However, the MPC judged that the pace of growth – including the still-improving labour market – combined with what it judges to be a slower rate of potential expansion would have resulted in higher than acceptable inflation had it not raised Bank Rate. In indicating that Bank Rate would rise further, the Committee emphasised that subsequent increases would be gradual and limited. At the year's end, markets

believed that Bank Rate would be at or close to 0.75% in December 2018.

The Republic of Ireland appears to have grown strongly. Unemployment continued to fall, ending the year at 6.2%, its lowest rate since 2008. Consumer price inflation remained subdued at 0.4%. House price inflation accelerated to around 12% from 9.0% in 2016. This returned prices to their 2009 level and still almost one-quarter below the peak in nominal terms.

The eurozone economy was 2.7% larger in the final quarter of 2017 than in the same period of 2016, up from 1.8% in 2016. Unemployment fell but remained high at 8.7%. While inflation increased to 1.4% it remained short of the European Central Bank's target of "at or below" 2%. The ECB continued to provide stimulus through low interest rates and quantitative easing. It announced in October that it would reduce the amount of its monthly asset purchases while extending the period during which it will make purchases until at least September 2018.

US growth accelerated to 2.3%. The job market remained buoyant with 1.8 million jobs added during the year and the unemployment rate falling to 4.1%. However, wage growth remained modest and consumer price inflation was well below the Fed's 2% target. However, the central bank continued to tighten policy with three rate rises during the year, taking the Fed Funds Target Rate to 1.25% - 1.50%.

In China, growth was broadly stable at 6.9%. This was in part a consequence of continued stimulus, which resulted in a further rise in indebtedness. Recognising this, the authorities took steps to limit the growth of credit.

Risk overview

Effective risk management is at the heart of the successful development and execution of the RBS strategy

An emphasis on strong risk management has a key role in positioning RBS to prepare for, and respond to, developments in the wider competitive, economic and regulatory environment. Risk appetite is set in line with overall strategy and approved by the Board. Current and emerging risks, that could materially affect the delivery of the strategy, are identified and managed through the risk management framework.

Progress in 2017

RBS continued to make progress against its strategic objectives by reducing risk and strengthening both the balance sheet and the capital position.

There was a strong focus during 2017 on developing an enhanced operating model for the risk management function. This work aims to ensure the function continues to meet the needs of our evolving business as well as the structural requirements of the UK's ring-fencing legislation.

The merger of parts of the former Conduct & Regulatory Affairs function with RBS's Risk function took effect on 1 January 2017. This integration was designed to take advantage of synergies between the two functions. Work continued through the year to optimise these. In addition, there continued to be an emphasis on refining the risk appetite framework throughout 2017. As well as consolidating the progress made in previous years, further advances were made to enhance the framework in line with RBS's structural reform. Significant emphasis was placed on reviewing the current measures, along with associated limits and triggers, for each of our material risks and further embedding the reporting of risk profile compared to risk appetite across RBS.

Risk culture continued to be at the forefront of our activity as RBS moves towards its aim of making risk simply part of the way colleagues work and think. In support of this, during 2017 the RBS-wide action plan focused

on building clarity, and developing capability. Work to standardise risk culture assessment and reporting has enabled progress to be measured across RBS as well as at an individual franchise and function level. In turn, this informed the risk culture element of performance reviews for RBS's Executive Committee.

Throughout 2017, work continued to consolidate enhancements to the operational risk management framework. The framework plays a key role in helping RBS maintain a safe and secure environment for its customers and is central to the overall risk management strategy. There was an ongoing focus on risk and control assessment, particularly relating to the most material products, processes and services. Significant progress was made in strengthening the fraud defence framework and reducing fraud losses as a result of the successful implementation of various tactical and strategic solutions. The emphasis on understanding and managing the risks relating to RBS's transformation agenda remained a key theme during the year.

Cyber Security

In an increasingly digital landscape across the industry, cyber security continued to be a priority issue in 2017. RBS has a multi-layered defence approach and continues to invest in its defences as the external threat evolves. As part of this ongoing focus, a number of enhancements were made during the year ranging from improved protection of IT systems to mandatory awareness training for all employees. RBS has continued to participate in industry-wide initiatives to monitor and anticipate developments, identify vulnerabilities and share best practice. However, ongoing vigilance will be essential as the threat continues to evolve.

Open Banking

RBS welcomes the Competition & Markets Authority initiative to provide consumers with more choice and more control over their money and financial information by making it easier to compare the details of current accounts

and other banking services. During 2017, oversight of the implementation programme was executed in parallel with a strategic assessment of the threats and opportunities in the mid-to long-term. Robust analysis and oversight will continue as the landscape evolves.

Innovation

RBS continues to embrace innovation in the field of financial technology. From the roll-out of the award-winning NatWest and Royal Bank of Scotland mobile app in 2011 to the launch, in 2017, of the NatWest Invest online investment advice service, developments with the potential to improve the banking experience are an integral element of the customer service proposition. Strong risk oversight has kept the security agenda at the forefront of these developments. Throughout the year RBS continued to focus on innovation while emphasising the importance of safety and protection for customers.

Financial Crime

Financial Crime was a key area of focus during 2017. The function continues to monitor the external environment and developments that could affect or change RBS's exposure to financial crime risk. In particular there was a focus on the anti-money-laundering control environment, with additional enhancements to policies and procedures to address the new regulatory requirements of the Fourth Money Laundering Directive. There was also a strong emphasis on the implementation of proportionate and risk-focused customer due diligence standards – with an increased focus on the management of higher-risk customer segments. While progress was made during the year, more work is required and RBS continues on its journey of improvement in respect of these controls. Enhancements to sanctions screening were also introduced.

Anti-Bribery & Corruption (ABC)

RBS is committed to ensuring it acts responsibly and ethically, both when

pursuing its own business opportunities and when awarding business. Consequently it has embedded appropriate policies, mandatory procedures and controls to ensure its employees, and any other party it does business with, understand these obligations and abide by them, whenever they act for, or on behalf of, RBS. The requirements of RBS's ABC Policy apply to all RBS employees and non-employees, in every part of the business. All employees are required to complete ABC training on an annual basis, with targeted training appropriate for certain roles.

RBS considers ABC risk in its business processes where there could be a risk of offering an improper advantage or being perceived to do so. This includes, but is not limited to, corporate donations, charitable sponsorships, political activities and commercial sponsorships.

To mitigate against bribery and corruption risks, RBS's ABC policy and supporting mandatory procedures require employees to assess bribery and corruption risk, and conduct the appropriate level of ABC due diligence on business activities. Where appropriate, there is a requirement for ABC contract clauses in written agreements. In adopting this approach, RBS aims to protect the interests of its customers, shareholders and employees.

Reputational Risk

Reputational risk issues can develop from either strategic choices or conduct issues and may even arise from customer activity. RBS continues to remain alert to the reputational risk it is exposed to – both in its day-to-day business and as a result of legacy issues. During 2017, further work was done to enhance the reputational risk framework and embed it across all business lines. This work will continue in 2018 as RBS continues to evolve its risk management practice to meet the challenges of the changing external environment.

Key Metrics

Risk-weighted assets (RWAs)

RWAs reduced by £27 billion (12%), ending the year at £201 billion (from £228 billion in 2016). This reduction was driven by NatWest Markets, where RWAs fell by £16.8 billion due to the continued run-off of the legacy

business and mitigation activities in the core business, together with active management of the lending book in Commercial Banking.

Common Equity Tier 1 ratio

The CET1 ratio increased by 250 basis points to 15.9% in 2017. This was well above the 13% target and reflected the profit in the year and the RWA reductions in NatWest Markets and Commercial Banking.

Leverage ratios

The leverage ratio increased by 20 basis points to 5.3% during 2017 reflecting the increase in the CET1 position. The Bank of England leverage ratio increased by 50 basis points as a result of increased central bank reserves which are excluded from the leverage exposure measure.

Stress testing

Under the hypothetical adverse scenario in the Bank of England 2017 stress test, RBS's low-point CET1 ratio was below the CET1 ratio hurdle rate and the systemic reference point. Calculated after the impact of management actions, RBS's CET1 ratio was above the minimum requirement. The Tier 1 leverage ratio remained above the minimum requirement throughout the test.

As a result of the steps RBS had already taken to strengthen its capital position, a revised capital plan was not required by the PRA.

Liquidity and funding

RBS maintained a robust liquidity and funding risk profile in 2017. Its loan-to-deposit ratio was 88% at 31 December 2017, compared with 91% in 2016. The latest Internal Liquidity Adequacy Assessment Process (ILAAP) showed that RBS is in a strong position to withstand liquidity stress scenarios. It suggested that RBS's liquidity portfolio was large enough to cover more than 168% of the expected outflows in the worst of three severe scenarios.

Litigation and conduct

Litigation and conduct costs of £1,285 million included a £664 million provision in relation to various investigations and litigation matters relating to RBS's issuance and underwriting of residential mortgage-backed securities (RMBS) and additional PPI provision of £175 million. In July 2017 RBS reached a settlement with the Federal Housing Finance Agency (FHFA), as a result of which the FHFA's outstanding litigation

against RBS relating to those securities was withdrawn. Further details on these issues can be found in the Litigation, Investigations & Reviews section.

Climate risk

While no climate-related risks have been identified that would have a major impact on RBS's strategy over a five-year horizon, RBS manages and monitors a number of associated threats. These include physical impacts, such as flooding, as well as the impact of climate-related regulation, though exposure to the sectors most vulnerable to climate risks, or climate-related regulation, has significantly reduced (for example RBS exposure to the power and oil & gas sectors has fallen to 1.2% of total lending exposures in 2017). RBS supports the work of the Financial Stability Board's Task Force on Climate-Related Financial Disclosures (TCFD). Adoption of the TCFD recommendations is an important step forward in pricing climate-related risks and opportunities as the transition to a low-carbon economy – under the terms of the Paris Climate Agreement – progresses.

Top and emerging risks

RBS employs a continuous process for identifying and managing its top and emerging risks. These are defined as scenarios that could have a significant negative impact on RBS's ability to operate. A number of scenarios attracted particular attention in 2017. The factors discussed below and elsewhere in this report should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties facing RBS.

Refer to the Risk Factors section on pages 372 to 402.

Macro-economic and political risks

RBS remains vulnerable to changes and uncertainty in the external economic and political environment, which have intensified in the past year. Stress testing and scenario planning is used extensively to inform strategic planning and risk mitigation relating to a range of macroeconomic and political risks. Scenarios identified as having a potentially material negative impact on RBS include: the impact of the UK's exit from the EU; a second Scottish independence referendum; a UK recession including significant

Our operating environment

falls in house prices; global financial market volatility linked to advanced economy interest rate increases or decreases; a protracted period of low interest rates in the UK; vulnerabilities in emerging market economies resulting in contagion in RBS's core markets; a eurozone crisis; and major geopolitical instability.

Risks related to the competitive environment

RBS's target markets are highly competitive, which poses challenges in terms of achieving some strategic objectives. Moreover, changes in technology, customer behaviour and business models in these markets have accelerated. RBS monitors the competitive environment and associated regulatory technological strategy development and makes adjustments as appropriate.

Impact of cyber attacks

Cyber attacks are increasing in frequency and severity across the industry. RBS has participated in industry-wide cyber attack simulations in order to help test and develop defence planning. To mitigate the risks, a number of control enhancements have been delivered as part of a bank-wide security programme. This has improved the protection of IT systems and data for both employees and customers. Further enhancements are underway and planned to ensure RBS continues to maintain an effective control environment as the cyber threats evolve.

Regulatory and legal risks

Future litigation and conduct charges could be substantial. RBS is involved in a number of litigation and investigations matters, including: ongoing class action litigation, securitisation and mortgage-backed securities related litigation, investigations into foreign exchange trading and rate-setting activities, continuing LIBOR-related litigation and investigations, and investigations into the treatment of small and medium-sized business customers in financial difficulty, anti-money laundering,

sanctions, mis-selling (including mis-selling of payment protection insurance products). Settlements may result in additional financial penalties, non-monetary penalties or other consequences, which may be material.

More detail on these issues can be found in the Litigation, Investigations and Reviews and Risk Factors sections of the 2017 Annual Report and Accounts. To prevent future conduct from resulting in similar impacts, RBS continues to embed a strong and comprehensive risk and compliance culture.

Failure of information technology systems

RBS's information technology systems are complex. As such, recovering from failure is challenging. To mitigate these risks, a major investment programme has significantly improved the resilience of the systems and further progress is expected. System sustainability has improved as we continue to simplify and modernise our infrastructure and applications.

An increase in obligations to support pension schemes

The value of pension scheme assets may not be adequate to fund pension scheme liabilities. The actuarial deficit in the RBS pension schemes may therefore increase, requiring RBS to increase its current and future cash contributions. An acceleration of certain previously-committed pension contributions was made in Q1 2016 to reduce this risk. Depending on the economic and monetary conditions and longevity of scheme members prevailing at that time, the actuarial deficit may increase at subsequent valuations and is also expected to be affected by ring-fencing.

Operational and execution risks

Increased losses may arise from a failure to execute major projects successfully. These currently include the transformation plan, the restructuring of NatWest Markets, compliance with structural reform requirements including the statutory ring-fencing

requirements implemented as a result of the Independent Commission on Banking and the implementation of obligations under the policy framework for resolution (including Operational Continuity in Resolution). These support the delivery of a robust control environment and the embedding of a strong and pervasive customer-centred organisational and risk culture, which are essential to meet RBS's strategic objectives. These projects cover organisation structure, business strategy, information technology systems, operational processes and product offerings. RBS continues to work to implement change in line with its project plans while assessing the risks to implementation and is taking steps to mitigate those risks where possible.

Risks to income, costs and business models arising from regulatory requirements

RBS is exposed to the risk of further increases in regulatory capital requirements as well as risks related to new regulations that could affect its business models.

RBS considers and incorporates the implications of proposed or potential regulatory activities in its strategic and financial plans.

Inability to recruit or retain suitable staff

There is a risk that RBS lacks sufficient capability or capacity at a senior level to deliver – or to adapt to – change. RBS monitors people risk closely and has plans in place to support retention of key roles, with wider programmes supporting engagement and training for all employees.

Governance at a glance

Our Board

The Board has fourteen directors comprising the Chairman, two executive directors and eleven independent non-executive directors, one of whom is the Senior Independent Director. Biographies for each director can be found on pages 51 to 55.

The Board is collectively responsible for the long-term success of RBS and delivery of sustainable shareholder value. Its role is to provide leadership of RBS within a framework of prudent and effective controls which enables risks to be assessed and managed.

In 2017, the Board and committee evaluation process was conducted internally by the Deputy Secretary and Director, Corporate Governance, and overseen by the Company Secretary.

Our Board committees

In order to provide effective oversight and leadership, the Board has established a number of Board committees with particular responsibilities. The work of the Board committees is discussed in their individual reports. The terms of reference for each of these committees is available on rbs.com.

The full Governance report is on pages 50 to 105 of the 2017 Annual Report and Accounts.

Group Audit Committee

Assists the Board in discharging its responsibilities for monitoring the quality of the financial statements of RBS. It reviews the accounting policies, financial reporting and regulatory compliance practices of RBS and RBS's systems and standards of internal controls, and monitors the work of internal audit and external audit.

Board Risk Committee

Provides oversight and advice to the Board on current and potential future risk exposures of RBS and future risk strategy. It reviews RBS's compliance with approved risk appetite and oversees the operation of the RBS Policy Framework and submissions to regulators.

Sustainable Banking Committee

Provides support to the Board in overseeing actions being taken by management to run a sustainable long term business, with specific focus on culture, people, customer, brand and environmental social and ethical issues.

Group Performance and Remuneration Committee

Responsible for approving remuneration policy and reviewing the effectiveness of its implementation. It also considers senior executive remuneration and makes recommendations to the Board on the remuneration of executive directors.

Group Nominations and Governance Committee

Assists the Board in the selection and appointment of directors. It reviews the structure, size and composition of the Board, and the membership and chairmanship of Board committees. It considers succession planning taking into account the skills and expertise which will be needed on the Board in future. Its remit also includes governance oversight.

Technology and Innovation Committee

The Technology and Innovation Committee was established in August 2017 and is responsible for assisting the

Board in overseeing and monitoring execution of the Group's strategic direction in relation to technology and innovation.

Executive Committee

The Board is supported by the Executive Committee comprising the executive directors and other senior executives. It supports the Chief Executive in managing RBS's businesses. It reviews and debates relevant items before consideration by the Board. It is responsible for developing and delivering RBS's strategy and it monitors and manages financial performance, capital allocation, risk strategy and policy, risk management, operational issues and customer issues.

UK Corporate Governance Code

Throughout the year ended 31 December 2017, RBS has complied with all of the provisions of the UK Corporate Governance Code issued by the Financial Reporting Council dated April 2016 except in relation to provision (D.2.2) that the Group Performance and Remuneration Committee should have delegated responsibility for setting remuneration for the Chairman and executive directors. RBS considers that this is a matter which should rightly be reserved for the Board.

Viability statement

In accordance with provision C.2.2 of the UK Corporate Governance Code, the Board of Directors (the “Board” of RBSG (the “bank”)) have assessed the viability of the bank taking into account the current position of the bank, the Board’s assessment of the bank’s prospects, and the bank’s principal risks, as detailed in the strategic report on pages 46 and 47. The Board’s assessment is further informed by the application of regulatory standards of capital and liquidity adequacy and stress test thresholds under extreme conditions.

The Board consider a period of three years to be an appropriate period for the assessment to be made. This period is within the bank’s strategic plan and regulatory and internal stress testing periods.

The bank’s business and strategic plans provide long term direction and are reviewed on, at least, an annual basis, including multi-year forecasts showing the expected financial position throughout the planning horizon. The base case plan indicates that the bank will have sufficient capital and liquidity resources over the three year assessment period.

The bank’s base case plan is also tested in a series of extreme stress scenarios as part of internal and external stress testing. Results from the stress scenarios, including management’s response, are used as part of the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP). These processes are summarised in the Capital and Risk Management section of the Annual Report and Accounts on pages 157 to 165.

Assessments of the risks of the greatest concern are captured through the bank’s processes for continuously identifying and effectively managing the principal top and emerging risks, as detailed on page 46 and 47 of the strategic report. These assessments provide a view on the impact of the top risks crystallising, both individually and in combination. These risks are outlined in the Risk Overview and further discussed in the Risk Factors, both contained in the Annual Report and Accounts on pages 150 and 156 and 372 to 402, respectively, and include political, legal, macroeconomic, regulatory, operational and execution risks.

On the basis of this robust assessment of the principal risks facing the bank, the Board’s review of the business and strategic plans and other matters considered and reviewed during the year, and the results of the stress tests undertaken, the Board has a reasonable expectation that the bank will be able to continue in operation and meet its liabilities as they fall due over the period of the assessment.

Our Board

Chief Governance & Regulatory Officer and Board Counsel

Aileen Taylor

Nationality: British

Date of appointment: 1 May 2010
(Company Secretary)

Experience: A qualified solicitor, Aileen joined RBS in 2000. She was appointed Deputy Group Secretary and Head of Group Secretariat in 2007, and prior to that held various legal, secretariat and risk roles including Head of External Risk (Retail), Head of Regulatory Risk (Retail Direct) and Head of Legal and Compliance (Direct Line Financial Services).

Aileen is a fellow of the Chartered Institute of Bankers in Scotland and a member of the European Corporate Governance Council. She is also a member of the FCA's Listing Authority Advisory Panel.

Executive Committee

The Board is supported by the Executive Committee comprising the executive directors and other senior executives. Details of the composition of the Executive Committee and biographies of its members can be found at [rbs.com>about us>board and governance>ceo and board>executive committee](http://rbs.com/about-us/board-and-governance/ceo-and-board/executive-committee).

Corporate governance

Chairman's introduction

The corporate governance report provides an overview of key roles and responsibilities of the Board, how the Board spent its time in 2017 and how we communicate with shareholders. Board effectiveness and performance evaluation are also covered.

As mentioned in my Chairman's Statement on page 6, during 2017 the Board has considered a number of key strategic, financial, regulatory and risk matters together with legacy issues such as Williams & Glyn; Global Restructuring Group (GRG); and various litigation matters including the 2008 shareholders' rights issue litigation. The Board has also been able to spend time focussing on forward-looking matters, including ring-fencing preparations; innovation; technology; and culture. The establishment of the Board's Technology and Innovation Committee will further support our focus on the Group's future strategic direction.

During 2017 we made a number of changes to our Board and committee composition, to support our preparations for ring-fencing and to ensure orderly succession planning. Further details are set out below under Board and committee changes.

On 28 July 2017, the Group Board Directors were appointed to the Board of Ulster Bank Limited (UBL) and the existing Directors of UBL stepped down. This common board and committee structure with Group, RBS plc and NatWest promotes simplification and efficiencies.

I and my fellow directors are committed to observing high standards of corporate governance, integrity and professionalism. Our statement of compliance with the UK Corporate Governance Code (the Code) can be found on page 106.

I would like to take this opportunity to thank my fellow Directors for their continued commitment and dedication throughout 2017.

Howard Davies, Chairman of the Board

The Board

The Board has fourteen directors comprising the Chairman, two executive directors and eleven independent non-executive directors, one of whom is the Senior Independent Director.

Biographies for each director and details of which Board committees they are members of can be found on pages 51 to 56. The Board considers that the Chairman was independent on appointment and that all non-executive directors are independent for the purposes of the Code.

Board and committee changes

A number of changes were made to Board and committee composition during 2017, as follows:

- Mark Seligman was appointed as a non-executive director on 1 April 2017.
- Yasmin Jetha was appointed as a non-executive director on 21 June 2017, and became a member of the Sustainable Banking Committee with effect from 3 August 2017.
- With effect from 3 August 2017 Baroness Noakes, Penny Hughes and Mark Seligman were appointed members of the Group Nominations & Governance Committee and Alison Davis stepped down.
- On 1 September 2017 the Technology and Innovation Committee was established with Alison Davis as Chairman and Yasmin Jetha and Frank Dangeard as members.

John Hughes was also appointed as a non-executive director on 21 June 2017, but unfortunately resigned on 1 September 2017 due to health reasons.

Also, with effect from 1 January 2018:

- Sandy Crombie stepped down as a non-executive director of RBS, and as Senior Independent Director and Chairman of the Group Performance & Remuneration Committee;
- Mark Seligman assumed the role of Senior Independent Director and became a member of the Group Performance & Remuneration Committee;
- Robert Gillespie assumed the role of Chairman of the Group Performance & Remuneration Committee; and
- Dr Lena Wilson joined the board as a non-executive director.

Dr Wilson became a member of the Sustainable Banking Committee with effect from 31 January 2018.

In addition, with effect from close of business of the 2018 Annual General Meeting, Penny Hughes will step down as a non-executive director of RBS and Chairman of the Sustainable Banking Committee. Mike Rogers will assume the role of Chairman of the Sustainable Banking Committee.

Roles and responsibilities

The Board

The Board is collectively responsible for the long-term success of RBS and delivery of sustainable shareholder value. The terms of reference include a formal schedule of matters specifically reserved for the Board's decision and are reviewed at least annually. They are available at rbs.com/about.

A number of Board members are designated as "Senior Managers" under the PRA and FCA's Senior Managers' Regime. The role profiles of relevant directors reflect their regulatory responsibilities and they receive ongoing support to ensure they can demonstrate the reasonable steps they have taken to meet their responsibilities. This support includes a practical handbook for non-executive directors on the Senior Managers' Regime.

Chairman

The role of Chairman is distinct and separate from that of the Chief Executive and there is a clear division of responsibilities with the Chairman leading the Board and the Chief Executive managing RBS business day to day.

Corporate governance

The Chairman's key responsibilities are to:

- provide strong and effective leadership to the Board;
- ensure the Board is structured effectively, observes the highest standards of integrity and corporate governance, and sets the tone from the top in terms of culture and values;
- build an effective and complementary Board with an appropriate balance of skills and personalities, and as Chairman of the Group Nominations and Governance Committee consider succession planning for Board appointments;
- foster open and inclusive discussions at each Board / Committee meeting which challenge executives, where appropriate;
- in conjunction with the Chief Executive and Company Secretary, ensure that members of the Board receive accurate, timely and clear information to enable the Board to lead RBS, take sound decisions and monitor effectively the performance of executive management;
- ensure that the performance of individual directors and of the Board as a whole and its committees is evaluated regularly; and
- ensure RBS maintains effective communication with shareholders and other stakeholders.

Chief Executive

The Chief Executive has responsibility for all of RBS's business and acts in accordance with the authority delegated by the Board.

The Chief Executive's key responsibilities are to:

- exercise executive accountability for the RBS businesses delivering operational management and oversee the full range of activities of the customer businesses and functions;
- develop, drive and deliver the strategy approved by the Board;
- drive and deliver performance against financial plans, acting in accordance with authority delegated by the Board;
- consult regularly with the Chairman and Board on matters which may have a material impact on RBS;
- lead the culture and values of RBS, creating an environment where employees are engaged and committed to good customer outcomes;
- lead, manage and develop RBS's senior leadership team, ensuring professional capability is developed and that succession coverage meets the needs of RBS;
- ensure RBS has effective frameworks and structures to identify, assess and mitigate risks; and
- in conjunction with the Chairman and Company Secretary, ensure the Board receives accurate, timely and clear information.

Senior Independent Director

Throughout 2017 Sandy Crombie, as Senior Independent Director, acted as a sounding board for the Chairman and as an intermediary for other directors when necessary. He was also available to shareholders to discuss any concerns they may have, as appropriate. Mark Seligman assumed the role and responsibilities of Senior Independent Director with effect from 1 January 2018.

Non-executive directors

Along with the Chairman and executive directors, the non-executive directors are responsible for ensuring the Board fulfils its responsibilities under its terms of reference. The non-executive directors combine broad business and commercial

experience with independent and objective judgement and they provide independent challenge to the executive directors and the leadership team. The balance between non-executive and executive directors enables the Board to provide clear and effective leadership across RBS's business activities.

The standard terms and conditions of appointment of non-executive directors are available on rbs.com or from RBS Corporate Governance and Regulatory Affairs.

Board Committees

In order to provide effective oversight and leadership, the Board has established a number of Board committees with particular responsibilities. Refer to page 48 of the Strategic Report for more details. The terms of reference are available on rbs.com.

The GRG Board Oversight Committee was established in 2015 in relation to the Financial Conduct Authority review of the treatment of SME customers and continued to meet during 2017. The Committee oversees and provides advice to the Board in relation to the review, the external independent review of GRG instigated by the Group and other matters generally related to GRG.

The US Risk Committee was disbanded in May 2017 following the closure of the Connecticut branch.

A Board Oversight Committee was established in September 2017 in order to provide oversight of required enhancements to the governance and risk management practices within Ulster Bank Ireland DAC (UBI DAC), reporting to the Board, as appropriate.

The NatWest Markets Working Group has continued to oversee the transition towards establishment of the board of NatWest Markets Plc which will be stood up in 2018.

Company Secretary

Aileen Taylor is the Company Secretary. Aileen also leads the Bank's Regulatory Affairs function.

The key responsibilities of the Company Secretary include:

- working closely with the Chairman to ensure effective functioning of the Board and appropriate alignment and information flows between the Board and its committees, including the Executive Committee. This includes Board succession planning, induction, and professional development;
- providing support and advice to the Board on a broad range of strategic, governance, legal and regulatory issues;
- executive responsibility for Chairman/non-executive director search and appointment process;
- management of RBS's profile with key stakeholders, including oversight of relations with key influencers and regulators;
- defining and delivering the corporate governance and regulatory affairs strategy across RBS; and
- the provision of professional support to the Board and its committees and leading on implementation of recommendations from the annual Board evaluation.

Corporate governance

Conflicts of interests

RBS has procedures in place to ensure that the Board's management of conflicts of interest and its powers for authorising certain conflicts are operating effectively. On appointment, each director is provided with RBS's guidelines for referring conflicts of interest to the Board. Each director is required to notify the Board of any actual or potential situational or transactional conflict of interest and to update the Board with any changes to the facts and circumstances surrounding such conflicts.

Situational conflicts can be authorised by the Board in accordance with the Companies Act 2006 and the company's Articles of Association. The Board considers each request for authorisation on a case by case basis and has the power to impose conditions or limitations on any authorisation granted as part of the process.

Details of all directors' conflicts of interest are recorded in a register which is maintained by the Company Secretary and reviewed annually by the Board.

Board meetings

In 2017, 9 Board meetings were scheduled and individual attendance by directors at these meetings is shown in the table below.

In addition to the 9 scheduled meetings, 9 additional meetings and committees of the Board were held, including meetings to consider and approve financial statements. The Chairman and the non-executive directors meet at least once per year without executive directors present.

	Attended/ scheduled
Howard Davies	9/9
Ross McEwan	9/9
Ewen Stevenson	9/9
Frank Dangeard	9/9
Alison Davis	9/9
Morten Friis	9/9

Brendan Nelson	9/9
Baroness Noakes	9/9
Mike Rogers	9/9
Mark Seligman (2)	6/6
Former Directors	
Sandy Crombie (3)	9/9
John Hughes (4)	2/2

Notes:

(1) Appointed to the Board on 21 June 2017.

(2) Appointed to the Board on 1 April 2017.

(3) Stepped down from the Board with effect from 1 January 2018.

(4) Appointed to the Board on 21 June 2017 and stepped down from the Board on 1 September 2017.

Principal areas of Board focus during 2017

In advance of each Board meeting, the directors are provided with comprehensive papers.

At each scheduled Board meeting the directors received reports from the Chairman, Chief Executive, Chief Financial Officer, Chief Risk Officer, Chief Operating Officer, Chief Administration Officer, Franchise CEOs, General Counsel and the Board Committee Chairmen. Other relevant senior executives attend Board meetings to present reports to the Board as appropriate. This provides the Board with an opportunity to engage directly with management on key issues and supports the Board's succession planning activity.

An overview of the principal areas of Board focus during 2017 is set out below.

Customer & Culture

- customer service
- open banking and innovation
- branch network strategy
- payments strategy
- customer metrics
- branding, communications and marketing updates
- overseeing culture and quarterly culture updates
- external fraud update
- Banking Standards Board assessments

Finance

- annual financial budget and plan
- capital strategy and planning
- Internal Capital Adequacy Assessment Process
- Individual Liquidity Adequacy Assessment Process
- dividend planning and policy
- pension strategy
- tax strategy
- mergers and acquisition strategy
- recovery and resolution planning
- results and analysts' presentations
- IFRS 9 accounting policies
- legal entity capability and plans

Corporate governance

Strategy

- annual Board strategy offsite and deep dives into each of the franchises
- Brexit implications and response planning
- structural reform, including ring-fencing and legal entity transfers
- transformation programme
- Williams & Glyn alternative remedies package and re-integration

Risk & Conduct

- stress testing
- risk appetite governance and framework
- annual review of strategic risk appetite
- preventing the facilitation of tax evasion

Legal, Regulatory & Governance

- Annual Report and Accounts
- AGM arrangements
- Board appointments
- Board policies, including Board Appointments and Boardroom Inclusion
- Board and Committee evaluations
- annual PRA presentation to the Board
- external auditor evaluation
- Individual Accountability Regime: embedding and ring-fencing implications
- internal audit evaluation
- Modern Slavery Act

Human Resources

- internal employee survey results
- executive director remuneration proposals
- executive director performance and pay review
- executive succession planning
- health and safety

The Board also visited the RBS International (“RBSI”) business in Jersey in September 2017. The agenda included a deep dive on the RBSI business, strategy, risks and challenges, and directors also met with key customers and local businesses.

In October 2017, an event for subsidiary non-executive directors provided a useful opportunity for subsidiary non-executive directors to gain a broader knowledge of the Group and education on areas of interest as well as providing a deeper understanding of their roles and responsibilities within the Group. A Board reception was also held at Gogarburn in October 2017, during which directors were able to meet and spend time with RBS customers, stakeholders and other influencers.

Board effectiveness

Skills and experience of the Board

The Board is structured to ensure that the directors provide RBS with the appropriate balance of skills, experience and knowledge as well as independence. Given the nature of RBS’s businesses, experience of banking and financial services is clearly of benefit, and we have a number of directors with substantial experience in that area. The Board also benefits from directors with experience in other fields.

The table below illustrates the breadth of skills and experience on the Board.

• Retail banking	• Chief executive experience
• Broad financial services	• Finance and accountancy
• Commercial & Private Banking	• Risk
• Markets/investment Banking	• Technology (infrastructure)
• Government and regulatory	• Digital and innovation
• Mergers and acquisitions	• Operations
• Corporate restructuring	• Change management
• Stakeholder management	• Consumer facing

Board committees also comprise directors with a variety of skills and experience so that no undue reliance is placed on any individual.

Induction and professional development

Each new director receives a formal induction on joining the Board, which is co-ordinated by the Company Secretary. This includes visits to RBS’s major businesses and functions and meetings with directors and senior management. Meetings with external auditors, counsel and stakeholders are also arranged as appropriate. An illustrative list of the meetings arranged during a new director’s induction programme is set out below:

• Chairman	• Chief Human Resources Officer
• Chief Executive	• Chief Administrative Officer
• Chief Financial Officer	• Head of Investor Relations
• Senior Independent Director	• Head of Public and Consumer Affairs
• Other non-executive directors	• Head of Recovery and Resolution Planning
• Company Secretary	• Director of Strategy & Corporate Development
• Chief Risk Officer	• Director of Transformation
• Chief Marketing Officer	• Head of Restructuring
• Chief Operating Officer	• Chief Economist
• RBS Treasurer	• External Auditors
• Chief Audit Executive	• External Counsel
• Chief Legal Officer and General Counsel	• Regulators
• Chairmen and CEOs of principal subsidiaries	• Business visits (UK and overseas)
• Franchise Chief Executive Officers	
• Deputy Chief Financial Officer	
• Chief Accountant	
• Head of RBS Tax	

Corporate governance

The directors have access to a wide range of briefing and training sessions and other professional development opportunities. Internal training relevant to the business of RBS is also provided. Business visits are arranged as part of the Group Audit Committee and Board Risk Committee schedule (details of which can be found on pages 67 and 74) and all non-executive directors are invited to attend. Non-executive directors are also welcome to attend the stakeholder engagement sessions run by the Sustainable Banking Committee (further details of which are on page 82).

Directors undertake the training they consider necessary to assist them in carrying out their duties and responsibilities as directors. Directors may also request individual in-depth briefings from time to time on areas of particular interest.

During 2017, the directors received updates on a range of subjects to enhance their knowledge, including:

- RBS customer service excellence programme training
- Financial Crime and anti-money laundering training, including Criminal Finances Act 2017
- Embracing Innovation and Disruption
- Diversity and inclusion
- UK Corporate Governance Reform agenda
- Stakeholder engagement
- Remuneration developments
- General Data Protection Regulation
- Reporting on Payment Practices and Performance Regulations 2017
- Structural Reform

In addition, all directors have access to an online resources portal, which contains internal policy information and external briefing notes on topical subjects, to support their professional development and competence.

The Company Secretary maintains continuing professional development logs. These are reviewed regularly between the Chairman and each director individually, to assist in identifying future training and development opportunities that are specific to the individual director's requirements.

Information

All directors receive accurate, timely and clear information on all relevant matters and have access to the advice and services of the Company Secretary. In addition, all directors are able, if necessary, to obtain independent professional advice at the company's expense.

Time commitment

It is anticipated that non-executive directors will allocate sufficient time to RBS to discharge their responsibilities effectively and will devote such time as is necessary to fulfil their role. Directors have been briefed on the limits on the number of other directorships that they can hold under the requirements of the fourth Capital Requirements Directive (CRD IV).

Each director is required to advise RBS as early as possible and to seek the agreement of the Board before accepting additional commitments that might affect the time the director is able to devote to his or her role as a non-executive director of RBS. The Board monitors the other commitments of the Chairman and directors and is satisfied that they are able to allocate sufficient time to enable them to discharge their duties and responsibilities effectively. The time commitment currently required of our non-executive directors continues to be significant.

Election and re-election of directors

In accordance with the provisions of the Code, all directors stand for election or re-election by shareholders at the company's Annual General Meeting. In accordance with the UK Listing Rules, the election or re-election of independent directors also requires approval by a majority of independent shareholders.

Performance evaluation

In accordance with the Code, an external evaluation of the Board takes place every three years. An internal evaluation takes place in the intervening years. The most recent external evaluation of the Board was conducted in 2015.

Progress following the 2016 evaluation

A number of actions were progressed during 2017 in response to the findings of the 2016 performance evaluation, overseen by the Group Nominations & Governance Committee.

These included further enhancement of the Board's composition with the appointments of Mark Seligman and Yasmin Jetha, and the introduction of a Board Appointment Policy to support succession planning. Work continued on improving the quality of information provided to the directors and the 2017 Board agenda reflected directors' feedback on agenda balance and priorities. The Board continued to dedicate significant time to culture and customers, and this focus will continue into 2018. In conclusion, the specific actions identified during the 2016 evaluation have been appropriately addressed, and where high level themes remain relevant, these have been appropriately incorporated into the 2017 action plan.

2017 Performance evaluation process

In 2017, the Board and committee evaluation process was conducted internally by the Deputy Secretary and Director, Corporate Governance, and overseen by the Company Secretary.

The Deputy Secretary and Director, Corporate Governance undertook a formal and rigorous evaluation by:

- preparing surveys that were completed by each director and holding interviews with each director;
- discussing the key themes and recommendations for action with the Chairman; and
- recommending the key themes and proposed actions to the Board.

Corporate governance

Outcomes of the 2017 performance evaluation

The conclusion of the 2017 performance evaluation was that the Board operated effectively throughout the year and fulfilled its remit as set out in its terms of reference.

Positive feedback was provided in relation to the operation of the Board, including its composition, focus of the agenda, the Chairman's leadership, meeting dynamics and the support the Board receives.

Key themes and findings arising from the evaluation included:-

Strategy

As legacy matters reach their conclusion, the Board has an opportunity to devote more of its time to discussing forward looking strategy.

Customers

Acknowledging the work of the Sustainable Banking Committee in this area, the general consensus was that there is scope for even greater focus on customers at Board level.

Risk

Noting the work of the Board Risk Committee, it was agreed that continued Board focus on major strategic risks should remain a priority.

Engagement with management

It was agreed that the Board provides effective challenge and oversight to management and the importance of continuing to balance the Board's challenge / oversight role with providing appropriate support to management was also highlighted.

Executive succession planning

There is appetite at Board level for greater focus on Executive Committee succession and talent development.

Board information and time commitment

Acknowledging the progress made during 2017, it was noted that there remains room for improvement in length and timeliness of papers. The length of committee meetings was also raised in the context of directors' time commitment.

Next steps

A detailed action plan has been developed in response to the themes and findings during the 2017 evaluation, and its implementation will be overseen by the Group Nominations & Governance Committee during 2018.

Individual director and Chairman effectiveness reviews

The Chairman met with each director individually to discuss their own performance and ongoing professional development and also shared peer feedback provided as part of the evaluation process. Separately, the Senior Independent Director sought feedback on the Chairman's performance from the non-executive directors, executive directors and key external stakeholders and discussed it with the Chairman.

Relations with investors

The Chairman is responsible for ensuring effective communication with shareholders. The company communicates with shareholders through the Annual Report and Accounts and by providing information in advance of the Annual General Meeting. Individual shareholders can raise matters relating to their shareholdings and the business of RBS at any time throughout the year by letter, telephone or email via rbs.com/ir.

Shareholders are given the opportunity to ask questions at the Annual General Meeting and any General Meetings held or can submit written questions in advance. The Senior Independent Director and the chairmen of the Board committees are available to answer questions at the Annual General Meeting.

During 2017, RBS also held events in Edinburgh and London for our retail shareholders. Further details can be found on page 28 of the Strategic Report.

Communication with the company's largest institutional shareholders is undertaken as part of the Investor Relations programme:

- the Chief Executive and Chief Financial Officer meet regularly with UKFI, the organisation set up to manage the Government's investments in financial institutions, to discuss the strategy and financial performance of the business. The Chief Executive and Chief Financial Officer also undertake an extensive annual programme of meetings with the company's largest institutional shareholders;
- the Chairman independently meets with RBS's largest institutional shareholders annually to hear their feedback on management, strategy, business performance and corporate governance. Additionally, the Chairman and Senior Independent Director met with the governance representatives of a number of institutional shareholders during the year;
- the Senior Independent Director is available if any shareholder has concerns that they feel are not being addressed through the normal channels; and
- the Chairman of the Group Performance and Remuneration Committee consults with major shareholders in respect of the Group's remuneration policy.

Throughout the year, the Chairman, Chief Executive, Chief Financial Officer and Chairman of the Group Performance and Remuneration Committee communicate shareholder feedback to the Board. The directors also receive reports reviewing share price movements and performance against the sector. Detailed market and shareholder feedback is provided to the Board after major public announcements such as a results release. The arrangements in place are to ensure that directors develop an understanding of the views of major shareholders.

The Investor Relations programme also includes communications aimed specifically at its fixed income (debt) investors. The Chief Financial Officer and/or the RBS Treasurer give regular presentations to fixed income investors to discuss strategy and financial performance. There is also a separate section on the RBS website for fixed income investors which includes information on credit ratings, securitisation programmes and securities documentation. Further information is available at rbs.com/ir.

Report of the Group Nominations and Governance Committee

Letter from Howard Davies Chairman of the Group Nominations and Governance Committee

Dear Shareholder,

As Chairman of the Board and Chairman of the Group Nominations and Governance Committee I am pleased to present our report on the committee's activity during 2017.

Role and responsibilities

The Group Nominations and Governance Committee was constituted in January 2016 and assumed the responsibilities of the previous Group Nominations Committee to review the structure, size and composition of the Board, and membership and chairmanship of Board Committees. In addition, the Committee monitors the Group's governance arrangements to ensure that best corporate governance standards and practices are upheld and considers developments relating to banking reform and analogous issues affecting the Group in the markets where it operates. The Committee makes recommendations to the Board in respect of any consequential amendments to the Group's operating model.

The Committee engages with external consultants, considers potential candidates and recommends appointments of new directors to the Board.

The terms of reference of the Group Nominations and Governance Committee are reviewed annually, approved by the Board and are available at rbs.com.

Principal activity during 2017

As highlighted in the Board's 2016 performance review, the Committee acknowledges the tenure of a number of the current Board directors and therefore made succession planning a priority in 2017.

In addition to recruitment, the Committee continues to oversee the process to reach agreement with the PRA in respect of a governance model that is compatible with ring-fencing legislation. Ring-fencing also gives rise to a requirement to recruit additional non-executive directors to the boards of our material regulated subsidiaries, which the Committee has overseen.

The Committee has spent time considering the Group's arrangements in respect of legal entity governance. This work continues and is complementary to the Group's preparations for the implementation of ring-fencing legislation.

The Committee has overseen the establishment of the Group's Technology and Innovation Committee, which was constituted on 1 September 2017 with a remit to assist the Board in overseeing and monitoring execution of the Group's strategic direction in relation to technology and innovation.

Membership and meetings

For most of 2017, the Group Nominations and Governance Committee comprised the Chairman of the Board and four independent non-executive directors. In August 2017, the Committee composition was amended to include the Senior Independent Director, as well as the Chairmen of the Board Risk Committee, Group Audit Committee, Group Performance & Remuneration Committee and Sustainable Banking Committee. Alison Davis stood down from the Committee in August 2017, simultaneous with her appointment as Chairman of the Technology and Innovation Committee. Sandy Crombie stepped down from the Committee with effect from 1 January 2018.

The Committee holds at least four scheduled meetings per year and also meets on an ad hoc basis as required. In 2017, there were seven meetings. Individual attendance by directors at these meetings is shown in the tables below.

	Attended/ scheduled
Howard Davies (Chairman)	7/7
Robert Gillespie	7/7
Penny Hughes (1)	1/2
Brendan Nelson	7/7
Baroness Noakes (2)	2/2
Mark Seligman (3)	2/2

Former Members

Sandy Crombie (4)	7/7
Alison Davis (5)	4/4

(1) Became a member of the committee on 3 August 2017. Did not attend meeting in September due to a clash with an external commitment in place prior to appointment.

(2) Became a member of the committee on 3 August 2017

(3) Became a member of the committee on 3 August 2017

(4) Stood down from the Board with effect from 1 January 2018.

(5) Stood down from the committee on 3 August 2017

Consideration of new non-executive directors

Both JCA Group and Spencer Stuart have been engaged during this year to support the search for new non-executive directors. JCA Group and Spencer Stuart do not provide search services to any other part of RBS. During 2017, the Committee considered a number of potential candidates. In April 2017, June 2017 and January 2018 respectively, Mark Seligman, Yasmin Jetha and Dr Lena Wilson, were appointed to the Board as non-executive directors.

Tenure of non-executive directors

The tenure of non-executive directors is set out below.

	Attended/ scheduled
0 – 3 years	46%
3 – 6 years	18%
6+ years	36%
	100%

Report of the Group Nominations and Governance Committee

Board and Committee membership

As previously mentioned, Mark Seligman joined the board as a non-executive director on 1 April 2017 and was subsequently appointed to the Group Nominations and Governance Committee on 3 August 2017. Mark brings broad financial services knowledge to the Board, having substantial FTSE 100 Board experience gained in various industry sectors. Mark assumed the role of Senior Independent Director with effect from 1 January 2018. Yasmin Jetha joined the Board as a non-executive director on 21 June 2017 and was subsequently appointed to the Sustainable Banking Committee on 3 August 2017 and the Technology and Innovation Committee on 1 September 2017. Yasmin brings a fresh skillset to the Board from her career as a Chief Information Officer in the consumer and media sectors coupled with extensive experience in financial services. Dr Lena Wilson was appointed to the Board as a non-executive director on 1 January 2018. Lena brings strong commercial and public sector experience to the Board, having previously served as Chief Executive of Scottish Enterprise and Senior Investment Advisor to The World Bank.

Performance evaluation

The annual review of the effectiveness of the Board and its senior Committees, including the Group Nominations and Governance Committee, was conducted internally in 2017. The Committee has considered and discussed the outcomes of the evaluation and accepts the findings. Overall the review concluded that the Group Nominations and Governance Committee operated effectively. However, certain recommendations for action were recognised including the need to: regularly engage with the external search firm to provide clarity and guidance on RBS's expectations of information to be provided to the Committee; and rebalance the agenda of the Committee to ensure greater focus on strategic issues, including director performance and board and senior management succession.

The outcomes of the evaluation have been reported to the Board and the Committee will track progress during the year.

Boardroom diversity and inclusion

RBS values and promotes inclusion in all areas of recruitment and employment. We're proud to be building an inclusive bank. The Board understands the need for a diverse mix of talented directors to effective decision-making.

Boardroom Inclusion Policy

The Board approved a revised Boardroom Inclusion Policy in February 2018 which reflects the most recent industry targets and is aligned to the RBS Inclusion Policy and Principles applying to the wider bank. This Policy provides a framework to ensure that the Board attracts, motivates and retains the best talent and avoids limiting potential caused by bias, prejudice or discrimination. The Boardroom Inclusion Policy currently applies to the most senior RBS boards: The Royal Bank of Scotland Group plc, The Royal Bank of Scotland plc, National Westminster Bank Plc and Ulster Bank Limited. A copy of the Boardroom Inclusion Policy is available on [rbs.com>about us](https://www.rbs.com/about-us).

Objectives and targets

The Boardroom Inclusion Policy contains a number of measurable objectives, targets and ambitions reflecting the Board's ongoing commitment to inclusion progress.

The Policy's objectives exist to ensure that the Board, and any Committee to which it delegates nominations responsibilities, follows an inclusive process when making nomination decisions. That includes ensuring that the nomination process is based on the principles of fairness, respect and inclusion, that all nominations and appointments are made on the basis of individual competence, skills and expertise measured against identified objective criteria and that searches for Board candidates are conducted with due regard to the benefits of diversity and inclusion.

Targets and ambitions

The Board aims to meet the highest industry standards and recommendations wherever possible. This includes, but is not limited to, aspiring to meet the targets set by the Hampton-Alexander Report: FTSE100 Women Leaders (33% female representation on the board) and the Parker Report: Beyond 1 by '21 (at least one director from an ethnic minority background on the board) by the recommended target dates, 2020/2021. The policy supports our bank-wide ambition to aim for a 50/50 gender balance across all levels of the organisation by 2030.

Monitoring and reporting

The Board currently meets the Parker target and, following the appointment of Dr Lena Wilson on 1 January 2018, now meets the Hampton-Alexander target with female representation on the Board reaching 36%. The Board's composition as at 31 December 2017 against the stated targets is set out below:

	2017
Female	29%
Male	71%
	<hr/>
	100%
	<hr/>
Ethnic minority background	1
Non-ethnic minority background	13
	<hr/>
	14

Inclusion and diversity progress, including information about the appointment process, will continue to be reported in the Group Nominations and Governance Committee's report in the RBS Annual Report. The balance of skills, experience, independence, knowledge and diversity on the Board, and how the Board operates together as a unit is reviewed annually as part of the Board evaluation. Where appropriate, findings from the evaluation will be considered in the search, nomination and appointment process.

Further details on RBS's approach to diversity can be found on pages 111 and 112.

Howard Davies
Chairman of the Group Nominations and Governance Committee
22 February 2018

Report of the Group Audit Committee

Letter from Brendan Nelson,
Chairman of the Group Audit Committee

“Our primary focus is the integrity and quality of RBS’s financial statements”

Dear Shareholder,

The Group Audit Committee (GAC) has responsibility for monitoring and reviewing RBS’s financial reports and disclosures, its accounting policies and practices and standards of internal control. This report provides an overview of the issues considered and debated by the GAC during 2017 and our expected priorities for 2018.

Accounting and financial reporting

The GAC’s primary focus is the integrity and quality of RBS’s financial statements, comprising quarterly, interim and full year results announcements and supporting documentation, in addition to the 2017 annual report and accounts.

Throughout 2017 the GAC received detailed reports from management on the key assumptions and judgements underpinning RBS’s financial results. The GAC also received quarterly reports from both the internal and external auditors. The GAC provided robust challenge and detailed feedback on the financial results and in my role as Chairman of the GAC I reported to the Board on the GAC’s discussions. On behalf of the GAC, I also confirmed the GAC’s recommendation of the financial results to the Board for approval.

RBS resolved a number of significant legacy issues during 2017, in particular the settlement of the UK shareholder litigation and the US Federal Housing Finance Agency litigation and reaching agreement with the EC and HMT regarding the bank’s remaining state aid obligations. The GAC was closely engaged on all of these issues in order to ensure they were appropriately disclosed and provided for.

The GAC also reviewed judgements in relation to asset and credit impairments. The value of goodwill, deferred tax and RBS’s investments in subsidiaries were all key areas of focus during 2017 and the impact of macro economic risks, including developments in relation to Brexit, on the credit environment was a discussion topic throughout the year.

The GAC invested considerable time during 2017 reviewing and discussing the key assumptions, judgements and processes behind RBS’s IFRS 9 calculations, in anticipation of the accounting standard coming into effect on 1 January 2018. Significant work undertaken by management, together with close scrutiny from the GAC allowed RBS to disclose the estimated impact of IFRS 9 in its H1 2017 interim results announcement.

In H2 2017 we then provided guidance on the drafting of the IFRS 9 Transition Report, which is published alongside this report, and explains the pillars of IFRS 9 compared with IAS 39 and the updated impact on RBS.

The ring-fencing programme was a crucial work stream for the bank in 2017 and, in Q3, the GAC considered the basis of preparation of the financial information included within the Ring-fencing Transfer Scheme that was ultimately presented to Court and recommended this to the Board for approval. The GAC kept existing provisions for liabilities such as those in relation to PPI and GRG under close review throughout the year to ensure that they continued to be appropriate. Additional litigation and conduct charges were taken in Q4 2017 in relation to PPI, UBI DAC customer redress and RMBS (US residential mortgage-backed securities matters) with oversight from the GAC. We also considered the suitability of significant loan impairment charges in Q3 and Q4 2017 and a revised strategy for Non-Performing Lending Assets in UBI DAC.

Systems of internal control

RBS made substantial progress in improving its control environment during 2017. The GAC, in conjunction with the Board Risk Committee (BRC), oversees RBS’s control environment. In particular, we monitor the systems of internal control relating to financial management, financial reporting and accounting issues. During the year we received bi-annual updates on the control environment certification process, quarterly reports on internal controls over financial reporting plus updates from the internal and external auditors on the control environment. Most areas of the bank succeeded in obtaining an improved control environment rating by the year end and the GAC will continue to oversee this work over the coming months.

In order to support a robust control environment and to ensure that RBS promotes a culture of doing the right thing, an effective and accessible whistleblowing process is vital. RBS has whistleblowing procedures in place and the GAC receives regular updates on the whistleblowing framework. As GAC chair, I act as RBS’s whistleblowing champion and met regularly with the whistleblowing team to discuss developments, trends and proposed changes to RBS’s whistleblowing framework. In March 2017, I issued a communication to all staff emphasising the importance of this process and encouraging staff to participate. An audit of the bank’s internal whistleblowing service was completed during the year which concluded that the process is well controlled.

External audit

Having completed their first year as RBS’s external auditors in 2016, Ernst & Young LLP (EY) have continued to build and embed their knowledge of the bank during 2017. EY attended each meeting of the GAC in 2017, providing quarterly audit reports and updates on various other bespoke topics. EY’s input has been invaluable in assisting the GAC’s deliberations throughout 2017 and the year-end audit period and I would like to thank them for their contributions.

Report of the Group Audit Committee

Key priorities for 2018

Looking forward to 2018, the GAC will continue to ensure the integrity of the financial statements of both RBS and its subsidiaries. The changes that will be introduced to reporting structures as a result of the ring-fencing programme will be a key focus and we will continue to monitor the impact of the economic environment on RBS's credit portfolio and financial results. The GAC will also review Internal Audit's validation of control environment ratings and will strive to ensure that recent improvements in the control environment are sustained.

As ever, I would like to thank all GAC members and attendees for their continued support and dedication during 2017, in particular Sandy Crombie who stepped down from the Board at the end of the year. I would personally like to thank Sandy for his extremely valuable contribution to the work of the GAC over the years.

Brendan Nelson
Chairman of the Group Audit Committee
22 February 2018

Report of the Group Audit Committee

Report of the Group Audit Committee

Membership

The Group Audit Committee is comprised of independent non-executive directors.

	Attended/ scheduled
Brendan Nelson (Chairman)	7/7
Morten Friis	7/7
Baroness Noakes	7/7

Former Member

Sandy Crombie	7/7
---------------	-----

John Hughes was also a member of the GAC during his tenure as a director from 21 June until 1 September 2017. During this period John Hughes attended one scheduled meeting of the GAC. Sandy Crombie stepped down from the Committee with effect from 1 January 2018.

Brendan Nelson, Morten Friis and Baroness Noakes are also members of the BRC. Sandy Crombie was Chairman of the Group Performance and Remuneration Committee throughout 2017. Brendan Nelson and Sandy Crombie were also members of the Group Nominations and Governance Committee. Baroness Noakes was also appointed as a member of the Group Nominations and Governance Committee with effect from 1 September 2017. This cross committee membership helps facilitate effective governance across all finance, risk and compensation issues. It also helps to ensure that agendas are aligned and that overlap of responsibilities is avoided where possible.

The members of GAC are selected with a view to the expertise and experience of the GAC as a whole and with proper regard for the key issues and challenges facing RBS.

The Board is satisfied that all GAC members have recent and relevant financial experience and that each member of the GAC is independent as defined in the SEC rules under the US Securities Exchange Act of 1934 (the "Exchange Act") and related guidance. The Board has further determined that Brendan Nelson, Committee Chairman, and Baroness Noakes are both 'financial experts' for the purposes of compliance with the Exchange Act Rules and the requirements of the New York Stock Exchange, and that they have competence in accounting and auditing as required under the Disclosure Guidance and Transparency Rules. Full biographical details of GAC members are set out on pages 51 to 56.

During 2017 GAC meetings were attended by: the Group Chairman; the Chief Executive; the Chief Financial Officer; the Deputy Chief Financial Officer; the Chief Accountant; the Chief Legal Officer and General Counsel; and the Internal and External Auditors. Other executives, subject matter experts and external advisers were also invited to attend, as required, to present and advise on reports commissioned by the GAC. The GAC also met privately with the external auditors and separately with Internal Audit management.

Purpose of the Group Audit Committee

The GAC's responsibilities are set out in more detail in its terms of reference which are reviewed annually by the Committee and approved by the Board. These are available on: rbs.com.

Meetings and visits

The GAC held seven scheduled meetings during 2017, four of which were held shortly in advance of submission of the quarterly financial statements to the Board.

During 2017, in conjunction with members of the BRC, members of the GAC took part in an annual programme of visits to businesses and control functions in order to gain a deeper understanding of the risks and issues they face. This programme comprised:

- two visits to Risk, Conduct and Restructuring;
- two visits to Internal Audit;
- a visit to each of Services CAO and Services COO;
- a visit to Commercial & Private Banking;
- a visit to NatWest Markets; and
- a visit to Finance.

In addition to these business and functional visits, the GAC and BRC also undertook a teach-in session on IFRS 9 and visited the bank's operations in Poland. During the visit to Poland the GAC and BRC received updates on the control environment in the Global Hub Europe, met with key leaders and talent and with the external audit team in Poland.

Allocation of Group Audit Committee agenda time during 2017 was as follows:

Financial affairs of the group	42%
Standards of internal control	19%
Internal audit	18%
External audit	13%
Regulatory relationships and compliance	4%
Governance and procedural	4%
Total	100%

Performance evaluation

The performance of the GAC is evaluated annually, and at least once every three years is facilitated by an external party. Following an externally facilitated evaluation in 2015, the evaluation of the GAC's performance in 2017 was conducted internally. The evaluation process involved the completion of questionnaires by both GAC members and members of management and follow up interviews to discuss the findings.

The Board and the GAC have considered and discussed the outcomes of this evaluation. Overall the evaluation concluded that the GAC operated effectively during 2017. A small number of recommendations for improvement were made in relation to the length and timeliness of Committee papers, the length of meetings and the schedule of visits, which were approved by the GAC and the Board. Progress against these actions will be tracked in 2018 and reported back to the GAC and the Board.

The GAC conducts an annual evaluation of both the external auditor and the Internal Audit function each year. The 2017 evaluations found that EY were performing the audit of RBS effectively and that Internal Audit continued to operate effectively during the year. Further details are provided in the report below.

Report of the Group Audit Committee

Matters considered by the Committee in 2017

Key area	Matters considered and action taken by the Committee
Accounting and financial reporting	
Accounting judgements and reporting issues considered in the preparation of financial reports	<p>The Group Audit Committee focused on a number of salient judgements and reporting issues in the preparation of the financial results throughout 2017, including the quarterly, half year and full year results and the Annual Report and Accounts. In particular, the Committee considered, discussed and, where appropriate, challenged:</p> <ul style="list-style-type: none"> • provisions and disclosures relating to ongoing regulatory, litigation and conduct issues including: US RMBS investigations and litigation; the UK shareholder action; Payment Protection Insurance claims including whether changes were required as a result of FCA advertising campaigns; the FCA's investigation into RBS' former Global Restructuring Group; and the CBI's review of Irish Tracker mortgages. During 2017 RBS has recognised £1.3 billion of litigation and conduct provisions; • the adequacy of loan impairment provisions, focusing in particular on judgements and methodology applied to provisions. The Committee was satisfied that the overall loan impairment provisions and underlying assumptions and methodologies were reasonable and applied consistently; • the key judgements made in interpreting IFRS 9, the key features of the IFRS 9 impairment process and the impact of IFRS 9 on the bank's financial results, capital, stress testing and earnings volatility together with the IFRS 9 Transition Report, which is published alongside this report; • valuation methodologies and assumptions for financial instruments carried at fair value including RBS's credit market exposures and own liabilities assessed at fair value; • judgements made by management in relation to the carrying value of intangible assets including in particular goodwill, and RBS's investment in subsidiaries within the stand-alone parent company accounts. • management's assessment of the adequacy of internal controls over financial reporting, and identified deficiencies. The GAC noted significant deficiencies in relation to user-access to the general ledger system and the process around provisions for restructuring costs and action is being taken by management to improve these processes. There were no Material Weaknesses reported in relation to RBS Group at the year-end; • the quality and transparency of financial and risk disclosures; • the viability statement in the 2017 report and accounts and the going concern basis of accounting including consideration of evidence of RBS's capital, liquidity and funding position. The GAC considered the process to support the assessment of principal risks; assessed the company's prospects in the light of its current position and the identified principal risks; challenged the evidence to support some of the statements made; and reviewed the disclosure on behalf of the Board. The GAC supported the viability statement and the directors' going concern conclusion. (Refer to the Report of the Directors for further information); and • the comprehensive review process which supports the GAC and the Board in reaching the conclusion that the disclosures in the annual report and accounts, taken as a whole, are fair, balanced and understandable and provided the information necessary for shareholders to assess the company's position and performance, business model and strategy. The review process included: central co-ordination of the annual report and accounts by the Finance function with guidance on requirements being provided to individual contributors; review of the annual report and accounts by the Executive Disclosure Committee prior to consideration by the GAC; and a management certification process which required members of the Executive Committee and other senior executives to provide confirmation following their review of the annual report and accounts that they considered them to be fair, balanced and understandable. This process was also undertaken in respect of the half year and quarterly results announcements. The External Auditor also considered the fair balanced and understandable statement as part of the audit process. <p>Having considered the above, the Committee recommended the quarterly, interim and full year results announcements and the Annual Report and Accounts, together with supporting documentation (including Pillar 3 reports, financial supplements and investor presentations) to the Board for approval.</p>
Ring-fencing	<p>In Q3 2017, the Committee considered the basis of preparation and governance of the pro forma financial information, including the adjustments made, and forecast information that was included within the Ring-fencing Transfer Scheme and recommended this to the Board for approval.</p>

Report of the Group Audit Committee

Key area	Matters considered and action taken by the Committee
Systems of internal control	
Annual Risk and Control report	Considered the effectiveness of RBS's internal control system, including any significant failings or weaknesses. The GAC also considered RBS's disclosure on internal control matters in conjunction with the related guidance from the Financial Reporting Council subsequent to review by the Board Risk Committee.
Control Environment Certification	Considered the outputs of bi-annual self-assessments of the robustness of the internal control environment for RBS's customer-facing businesses, and its support and control functions. This informs the control environment disclosure in the annual report and accounts. Most areas reported an improved Control Environment Certification rating by the year end and the remaining areas are expected to report an improved rating during 2018. Management's plans to address certain control issues are covered in more detail in the report of the Board Risk Committee on page 75.
Three lines of Defence	Received a report on RBS's three lines of defence model, including accountabilities under each of the lines of defence, the impact of ring-fencing governance and actions taken to improve the understanding and effectiveness of the model across RBS.
Whistleblowing	Received updates on whistleblowing activity and the performance of RBS's whistleblowing service, monitored the effectiveness of the whistleblowing framework and enquired as to any trends or themes. Also received updates on communications and awareness activity relating to whistleblowing and testing of the framework. The GAC Chairman acts as RBS's Whistleblowing Champion, in line with PRA and FCA regulations. This role carries the responsibility for ensuring and overseeing the integrity, independence and effectiveness of the firm's whistleblowing arrangements. As part of this role the GAC Chairman meets regularly with the internal whistleblowing team. During 2017 he also met with RBS's external whistleblowing supplier and with the internal resourcing team responsible for the RBS's relationship with that external supplier. An audit of RBS's internal whistleblowing service was completed during the year by Internal Audit which concluded that the process is well controlled and that management understand the risks they need to manage. A small number of improvements were also recommended and management has committed to address these by 31 October 2018.
Complaints	Updates were provided to the GAC on customer complaints, including the complaints process, compliance with complaints policy and any emerging themes. The GAC is focused in particular on complaints relating to accounting, internal accounting controls or auditing matters; or submitted directly to the Chief Executive Officer, his executive team, or the Chairman.
Ledger Transformation Programme	Received updates in relation to the delivery of RBS's new general ledger which was implemented in August 2017. The new ledger replaces previous legacy systems and supports new functionality such as discrete legal entity views and multi-currency accounting on a single ledger platform. The implementation of the new ledger was an important step in improving the Finance function's control environment.
Taxation	Reviewed RBS's tax position, including a deep dive in October 2017 which covered: UK corporate tax compliance; tax provisions; the status of RBS's relationship with HMRC; deferred tax assets; the RBS Tax operating model; and external tax developments including making tax digital.
Legal Reports	Considered quarterly reports on the most significant legal risks and developments affecting RBS, including the status of ongoing major litigation and investigations, privacy issues and relevant legislative and regulatory changes.
Notifiable Event Process	Received bi-annual reports on control breaches which are captured by RBS' notifiable event process. Under this process all Board directors were alerted to the most significant breaches.
Sarbanes-Oxley Act of 2002	Considered RBS's compliance with the requirements of the Sarbanes-Oxley Act of 2002, and was satisfied in this respect. The GAC noted Significant Deficiencies in relation to user-access to the general ledger system and the processes around provisions for restructuring costs and action being taken by management to improve these processes. Remediation of a significant deficiency previously identified in relation to its subsidiary, NatWest Bank, in connection with legal entity recharge accounting was monitored during 2017 and downgraded in December 2017. No Material Weaknesses were reported in RBS Group at the year-end. Provided oversight of the drive to continue to improve SOX processes and received a number of updates in this regard.
Internal audit	
Reports and Opinions	Received quarterly reports and opinions from Internal Audit throughout 2017. These reports and opinions updated the GAC on Internal Audit's view of the progress made in improving RBS's risk and control environment and risk and control awareness by reference to the relevant ratings for each business and function, and the risks which may impact the bank achieving its targets. Internal Audit also provided updates on the audit plan and any anticipated changes to the plan and outlined material and emerging concerns identified through their audit work. In addition, Internal Audit reported on items including: Pillar 3 reporting; RBS's Global Systemically Important Bank status; and the whistleblowing process.

Report of the Group Audit Committee

Key area	Matters considered and action taken by the Committee
Internal audit continued	
Annual Plan and Budget	Considered and approved Internal Audit's plan for 2017, which is focussed on RBS's highest risks. An interim update on performance against the plan was provided to GAC at the end of H1 2017. The GAC also considered Internal Audit's budget and was satisfied that this was sufficient to allow Internal Audit to deliver the plan.
Internal Audit Charter and Independence	Updates to Internal Audit's charter were approved by GAC. The updates aligned the charter with the language of the October 2016 revisions to the Institute of Internal Auditors International Professional Practice Framework and the latest version of Internal Auditor's methodology, which was updated in April 2017. The GAC also confirmed the independence of Internal Audit.
Visits	During two visits to Internal Audit in 2017, the GAC received updates on a variety of issues impacting the Internal Audit function, including: resourcing; bench strength; succession planning; quality assurance; strategic priorities; changes to the function's structure and opinion approach in anticipation of ring-fencing; and the 2018 Audit Plan.
Chief Audit Executive	The Chief Audit Executive continued to report to the Chairman of the GAC, with a secondary reporting line to the Chief Executive for administrative purposes. The GAC assessed the annual performance (including risk performance) of the Chief Audit Executive.
Annual Evaluation	The annual review of the effectiveness of Internal Audit was undertaken internally in 2017. Feedback on Internal Audit was provided by GAC members and attendees (including the external auditors), chairmen of subsidiary audit committees, key members of franchise and function risk committees and other key members of management. The evaluation concluded that Internal Audit had operated effectively during the year. Certain recommendations were made to aid continuous improvement within the function including continuing to bolster succession planning and bench strength, increasing connectivity between Internal Audit teams and sharing best practice. These recommendations will be implemented during 2018 and progress will be tracked by the GAC.
Relationship with regulators	
Regulatory Relationships	Received regular reports on the status of RBS's relationships with its key regulators. The GAC Chairman also attended continuous assessment meetings with the PRA and FCA, a trilateral meeting with the PRA, a meeting with the FRC as well as two meetings with UK Financial Investments Limited during 2017.
External audit	
External Audit Reports	Jonathan Bourne has been EY's lead audit partner for RBS since EY assumed the role of external auditor in March 2016. Jonathan Bourne attended each meeting of the GAC throughout 2017 and reported to the GAC each quarter on their audit work and related conclusions, including the appropriateness of judgements made by management and their compliance with international financial reporting standards.
Audit Plan and fees	Received updates in relation to the external auditor's 2017 plan and approved the 2017 audit fees including the fee for the 2017 interim results. The GAC was authorised by shareholders at the last Annual General Meeting to fix the remuneration of the external auditors.
Annual Evaluation	Conducted an internal evaluation to assess the independence and objectivity of the External Auditor and the effectiveness of the audit process during 2017. Questionnaires were issued to the GAC members, attendees, the Finance Officers of the Franchises and Functions and key members of the Finance team. The evaluation assessed in particular the external auditor's mindset and culture, skills, character and knowledge, quality control and judgement. The evaluation highlighted that the objectivity, independence and integrity of the lead audit partner and the audit team is highly rated by both the GAC and management and concluded that the external auditor was operating effectively. A small number of recommendations for continuous improvement were identified including enhancements to reporting; adding value by analysis and suggested management actions; and the pre-planning of audits which will be reviewed by the external auditor. Following the evaluation the GAC recommended that the Board seek the reappointment of EY as external auditor at the next annual general meeting.
CASS Opinions	The external auditor presented the results of its assurance procedures on compliance with the FCA's Client Asset Rules for RBS' regulated legal entities for the year ended 31 December 2016. The GAC also considered the CASS Audit plan for 2018, the findings of which will be reported to the GAC once the audit is complete.
External Audit Report to the PRA	The GAC considered EY's 2016 report to the PRA under supervisory statement SS1/16 which set out the PRA's expectation for auditors to provide written reports to the PRA concerning the audits of major banks and building societies, as set out in chapter 8 of the Auditors Part of the PRA rulebook. The report responded to specific questions posed by the PRA relating broadly to credit impairment, hedge accounting, trading/valuation, forecasting and conduct. GAC also discussed the questions received from the PRA in relation to the report required for 2017.
Independence of the previous external auditor	As RBS's previous external auditor, Deloitte LLP (Deloitte) have an ongoing role to consent to the release of their prior period audit opinions for US reporting purposes, the GAC considered the processes and procedures whereby Deloitte were able to re-establish their independence in order to do so.

Report of the Group Audit Committee

Key area	Matters considered and action taken by the Committee
Audit and non-audit services	
Non-audit service policy	<p>In order to comply with the Sarbanes-Oxley Act of 2002 and the EU Audit Regulation, RBS has a policy in place in relation to the engagement of the external auditors to perform audit and non-audit services (the policy). The GAC reviews the policy at least annually to ensure it remains fit for purpose. In accordance with the policy, all audit services and permitted non-audit services must be approved before the engagement commences.</p> <p>Under the policy certain services are classed as Audit-Related Services and these may be approved by the Deputy Chief Financial Officer, on behalf of the GAC, up to a limit of £100,000 each financial quarter. Engagements for Audit-Related Services in excess of this quarterly limit require the approval of the GAC Chairman. All Audit-Related Services are reported to the GAC quarterly. The GAC has also delegated authority to the Deputy Chief Financial Officer to approve the provision of services by the external auditor to non-consolidated subsidiaries of RBS within an annual cap and to approve engagements with the external auditor where RBS has limited or no influence in the selection process. All such engagements are reported to the GAC each quarter.</p> <p>For all other permitted non-audit service engagements, where the fee is below £5,000 approval by the Deputy Chief Financial Officer is required. Where the fee is above £5,000 but below £100,000 approval by the GAC Chairman is required. For engagements where the fee is expected to exceed £100,000 a competitive tender process must be held and approval of the full GAC is required. In addition all engagements must be approved by the Deputy Chief Financial Officer and by Supply Chain Services. All such ad hoc approvals of non-audit services are ratified by the GAC each quarter.</p> <p>During 2017, the external auditors were approved under the policy to undertake the following significant engagements:</p> <ul style="list-style-type: none"> • to carry out (i) a review of RBS's OFAC compliance policies and procedures and their implementation for RBS's global business lines; and (ii) and appropriate risk focussed sampling of U.S. dollar payments, as required in connection with the 2013 Cease and Desist Order issued to RBS by the by Board of Governors of the Federal Reserve; • the annual client money (CASS) audit as required by the FCA; • the annual audit of the bank's LIBOR submissions as agreed with the US Commodity Futures Trading Commission and the FCA; • the audit of note issuance in Scotland and Northern Ireland and in respect of notes in circulation as requested by the Bank of England; • work in respect of reporting for RBS NV in respect of COREP and FINREP returns performed over and above normal regulatory reporting; • reporting to the PRA on matters related to the audit; • the sustainability audit; and • overseas regulatory reporting. <p>The decision to approve the engagement of the external auditor for the services noted above was due to factors including synergies and efficiencies relating to the audit work, their existing knowledge of RBS which allowed work to commence quickly and with minimal disruption and the benefits in maintaining consistency between similar engagements. In each case the GAC was satisfied that the engagement did not impact the external auditor's independence. The total value of non-audit services fees during the year was 15.1% of the audit fee.</p> <p>The policy also includes certain safeguards in relation to engagements with RBS's previous external auditor, Deloitte who have an ongoing role to consent to the release of their prior period audit opinions for US reporting purposes and may therefore require to re-establish their independence. During 2017 Deloitte were approved under the policy to carry out the following significant engagements:</p> <ul style="list-style-type: none"> • setting of a framework for documentation review to be undertake in connection with an attestation made to the National Futures Association in relation to record keeping and reporting; • provision of financial advice in relation to the disposal of a business in which RBS held a shareholding;

Report of the Group Audit Committee

Key area	Matters considered and action taken by the Committee
Audit and non-audit services continued	<ul style="list-style-type: none">• an independent review of UBI DAC compliance with the Code of Conduct Mortgage Arrears requested by the Central Bank of Ireland;• provision of resource support to help support RBS's Technology teams with understanding and implementing an end to end technology delivery framework and embed these new ways of working within Technology teams;• review of the financial position of a customer to allow Senior Lenders, including RBS, to work with the customer on a medium term restructuring solution;• support to the businesses and Finance Central SOX team in documenting the end to end processes underlying statutory financial reporting, confirming the associated risk and mitigating suite of SOX controls ;• to build an iOS application for an Entrepreneurial Spark concept• quality assurance services for RBS's customer due diligence remediation programme;• development of an initial proposition and development roadmap for a new digital platform that will enable us to launch, test and refine innovative offerings for both customers and non-customers;• development of a risk assessment process, control framework and review framework in relation to new corporate tax offences under the Criminal Finances Act;• as the skilled person to continue to support the Bank's ring-fencing programme under ICB; and• to support the Bank in implementing new technologies to create excellent customer experiences, contribute to a strong cost:income ratio and simplify business processes. <p>Further details of the non-audit services that are prohibited and permitted under the policy can be found on rbs.com. Information on fees paid in respect of audit and non-audit services carried out by the External Auditor can be found in Note 5 on the consolidated accounts.</p>

Brendan Nelson
Chairman of the Group Audit Committee

Report of the Board Risk Committee

Letter from Baroness Noakes
Chairman of the Board Risk Committee

“A key part of RBS becoming a simpler, safer and customer focused bank is excellent risk management”

A key part of RBS becoming a simpler, safer and customer focused bank is excellent risk management. The Board Risk Committee (BRC) plays an important role in overseeing how well RBS manages its risks. The purpose of this report is to describe how the BRC discharged this responsibility during 2017.

2017 has been another busy year for the BRC and our detailed report, which follows, sets out the detail of what we have done. I would like to focus on two key areas, both of which are driven by regulatory requirements.

Ring-fencing and Resolution

RBS, in common with other large banks, is required to deliver both ring-fencing and key parts of its resolution plans by the beginning of 2019.

The separation of our core UK and European banking business from activities that are required to be outside the ring-fence involves many complex activities including: legal restructuring of the RBS group; detailed analysis and transfer arrangements for individual customers and products; and changes to the way in which we manage the business.

In parallel with this RBS needs to have plans acceptable to the regulators which allow RBS to be dealt with effectively in the event of financial failure. An important part of this is Operational Continuity in Resolution (OCIR) which is aimed at ensuring that the ring-fence bank has all the systems and resources it needs to operate. This in turn requires much more formality and structure around the way that individual parts of RBS trade with each other through inter-group agreements and these agreements are a key part of how we deliver ring-fencing as well.

The BRC has responsibility for overseeing the delivery of these programmes and the management of the associated execution and delivery risks on behalf of the Board. We reviewed the ring-fencing programme at every meeting and receive reports from an integrated assurance programme. In H2 2017, the BRC supported the incorporation of OCIR requirements within the ring-fencing programme in recognition of the interdependencies. We will monitor closely the delivery of the residual elements of RBS's Resolution Planning separately.

Capital and Liquidity

Capital and liquidity are important areas for risk management in any bank and the regulatory requirements are intensifying, particularly in the context of ring-fencing.

The Committee devoted considerable time this year to stress testing. The 2017 Bank of England exercise incorporated a requirement to undertake two stress scenarios (an Annual Cyclical Scenario (ACS) and a Biennial Exploratory Scenario (BES)) followed by a further two IFRS 9 exercises on non-credit card and credit card exposures. The BRC reviewed the various components and stages of these exercises and recommended that the Board approve them.

We also conducted detailed reviews of the Internal Capital Adequacy Assessment Process (ICAAP) and Internal Liquidity Adequacy Assessment Process (ILAAP) returns for the Group. In preparation for ring-fencing, the Committee also oversaw the preparation of an ICAAP for the future ring-fenced bank and both an ICAAP and ILAAP for RBS's future NatWest Markets subsidiary which will sit outside the ring-fence.

Other Work

Our detailed report sets out what we have done in other areas during the year. The more material areas have been:

- **Risk appetite:** we continued the work of earlier years to oversee the extension and refinement of RBS's comprehensive risk appetite framework, including its cascade to our key franchises and preparation for ring-fencing.
- **Control environment:** Strengthening the control environment has been a key part of the RBS's transformation programme. Significant progress was made in almost all parts of RBS but not enough to get the overall control environment to where it needs to be.
- **Transformation programme:** we continued to oversee the complex programme of bank-wide initiatives. This includes the delivery of a number of key regulatory requirements. In recognition of the improvements made to the effectiveness of the programme, we were able to reduce our detailed involvement compared with prior years.

Key Priorities for 2018

Successful delivery of ring-fencing and OCIR will continue to be a key focus area in 2018 given the regulatory deadline of 1 January 2019. Our focus will shift from legal compliance to ensuring that we have the right risk management and oversight processes to underpin the new structures. I expect that we will continue to focus on the control environment – in particular the parts of the business which still need to improve long term sustainability.

I would like to end by extending my gratitude to my fellow Committee members and to the bank's senior leadership team for their support and dedication to the business of the Committee during 2017.

Baroness Noakes
Chairman of the Board Risk Committee
22 February 2018

Report of the Board Risk Committee

Report of the Board Risk Committee

The role and responsibilities of the Board Risk Committee

The Board Risk Committee assumes responsibility on behalf of the Board to provide oversight of current and potential risk exposures and future risk strategy, including the determination of risk appetite and tolerance, and to promote a culture of risk awareness within RBS. A large part of the Board Risk Committee's work is the review of reports and regulatory submissions on behalf of the Board and recommending them for approval. Where this is the case, the Report below is annotated with an asterisk (*).

The Committee's responsibilities are set out in more detail in its terms of reference which are reviewed annually by the Committee and approved by the Board. These are available on RBS's website: rbs.com.

Membership

The Board Risk Committee is comprised of independent non-executive directors. Details of the skills and experience of each of the Committee members are set out in their biographies on pages 51 to 55.

	Attended/ scheduled
Baroness Noakes (Chairman)	9/9
Frank Dangeard	9/9
Morten Friis	9/9
Penny Hughes	9/9
Brendan Nelson	9/9

Brendan Nelson is chairman of the Group Audit Committee of which Baroness Noakes and Morten Friis are also members. Penny Hughes is chairman of the Sustainable Banking Committee. This common membership across Committees helps to ensure effective governance across the committees.

Committee meetings are also attended by the RBS Chairman, relevant executives, (including the Chief Executive, Chief Financial Officer, Chief Risk Officer, Chief Conduct & Regulatory Affairs Officer, Chief Legal Officer and General Counsel and Chief Audit Executive), and the lead partner of the External Auditor. External advice is sought by the Committee, where appropriate.

Meetings and visits

Nine scheduled meetings and six ad hoc meetings were held in 2017. The ad hoc meetings were required to consider: the results of various phases of internal and external stress tests; review of ICAAP and ILAAPs and reverse stress testing results; and the processes supporting the formal documentation required for the Ring-fencing Transfer Scheme.

In 2017, members of the Committee undertook a programme of visits to various businesses and control functions including bi-annual visits to Risk, Conduct and Restructuring function in conjunction with members of the Group Audit Committee. The purpose and scope of this programme is discussed in detail in the Report of the Group Audit Committee on page 67.

The Committee also held in-depth sessions on risk reporting and held a teach-in on both capital and IFRS 9 requirements. A 'no formal agenda' session was held with members of the BRC to enable open discussion about the key risks and threats to the organisation independently of the issue management and procedural matters which necessarily form a material component of the BRC agenda.

Performance Evaluation

The annual review of the effectiveness of the Board and its senior Committees, including the Board Risk Committee, was conducted internally in 2017. The Committee has considered and discussed the outcomes of this evaluation and accepts the findings. Overall the review concluded that the Board Risk Committee continued to operate effectively.

However, certain recommendations for enhancing the operation of the Committee were identified, including: increased legal entity focus; devolving greater oversight to executive fora to reduce the pressure on Committee time; and further enhancement in the quality of information presented to the Committee to ensure it is concise, with key matters of judgement clearly highlighted. Recognising that RBS has now addressed several legacy issues, it was agreed that the Committee should look to re-focus to be more forward looking, and dedicate less time to remediation and operational issues.

The outcomes of the evaluation have been reported to the Board and the Committee will track progress on its 2018 priorities during the year.

Allocation of Board Risk Committee agenda time:

Current risk profile and issues	22%
Change agenda and large projects	10%
Process, policies and risk appetite	13%
Regulatory returns and stress testing	14%
Accountability and Remuneration	6%
Governance & Procedural	7%
Risk, conduct and regulatory affairs focus sessions	7%
Franchise and function focus sessions	21%
Total	100%

Report of the Board Risk Committee

Matters considered by the Committee in 2017

Key area	Matters considered and action taken by the BRC
Risk Profile	
Reporting	<ul style="list-style-type: none"> The Committee provided oversight of RBS's risk profile relative to RBS's strategy and risk appetite through the review of key emerging and identified top risks impacting RBS's businesses and operations as presented in the Risk & Conduct Management Quarterly Report, and supplemented by short form reports at all other meetings. Received verbal updates from the Chief Risk Officer at each meeting highlighting the most current and material risks impacting RBS. A focused session on enhancement of risk reporting was held in October 2017 which resulted in a number of recommendations on content and presentation in the Risk & Conduct Management Quarterly Report. The Committee will monitor how the changes are being implemented through 2018. Received updates from Executive Risk Forum (ERF) and Technical ERF and discussed any emerging risks and issues escalated, in particular those areas where BRC had devolved detailed oversight to those fora.
External developments	<ul style="list-style-type: none"> Received reports from the Chief Risk Officer at each meeting highlighting external developments with the potential to affect the bank's ability to meet its strategic objectives or continue its operations. Particular focus was placed on political developments and stability, including Brexit preparedness and the potential impact of the UK and certain EU elections; prospective EU capital requirements; UK economic resilience - inflation, interest rates; unemployment and the level of consumer indebtedness; the UK base rate increase; and global sanctions. BRC also received a report on new and emerging threats including established risks such as competition but also risks posed as a result of digitisation.
General Counsel's report	<ul style="list-style-type: none"> The General Counsel reported to the Committee at each meeting on current and emerging key legal developments and significant litigation risks affecting the bank. RBS's plans to comply with the General Data Protection Regulation were kept under review.
Regulatory Affairs and Developments	<ul style="list-style-type: none"> Introduced a new report during 2017 covering material regulatory interactions, communications and developments to ensure a stronger focus on the areas of key regulatory interest. Reviewed the governance and assurance supporting material regulatory representations and attestations and considered RBS's strategic plans against the key themes in the FCA Risk Outlook and Business Plan. A Board Oversight Committee (BOC) has been established to oversee required enhancements to the governance and risk management practices in UBI DAC and, where appropriate, the BRC will work in conjunction with the BOC to understand implications for RBS processes.
Control Environment	<ul style="list-style-type: none"> Received bi-annual reports on the control environment of the franchises and functions and monitored the route and achievability of being within appetite by end of 2017. Sought management's assurance that appropriate measures were in place to ensure that the businesses could continue to operate safely, where control weaknesses had been identified. Particular focus has been placed on areas where the control environment requires enhancement. The BRC has devolved detailed review and challenge of management plans to remediate and strengthen the conduct and control environment across the NatWest Markets franchise to Technical ERF. We received reports on those discussions and actions being taken, paying particular attention to the robustness of issue closure and downgrade; interdependencies; and sustainability. Technical ERF is also overseeing in detail, management's plans to return the control environment within UBIDAC to a within risk appetite position, ensuring identified best practices are applied as adopted and learned through Nat West Markets remediation. BRC will receive regular updates on those discussions through 2018. The Committee is also monitoring closely the programme to deliver required improvements to customer due diligence processes as well as remediation work. We will review progress on a quarterly basis in 2018 given the programme's criticality to attaining a satisfactory control environment Bank-wide.
Business and subsidiary risk committees	<ul style="list-style-type: none"> Received quarterly reports from the Chairman of the US Risk Committee to the point of its retirement in May 2017. The US Risk Committee was established to provide oversight of the risk management framework of RBS's combined US operations. Following closure of its Connecticut Branch, alternative governance processes, commensurate with the scale of RBS's residual US activity were established. The BRC retains oversight of key regulatory submissions. Received quarterly reports from the chairmen of franchise risk committees and those of certain principal subsidiaries outlining risk profile relative to risk appetite and any control weaknesses and remediation plans. In 2018, this reporting mechanism will be extended to all material regulated subsidiaries.

Report of the Board Risk Committee

Key area	Matters considered and action taken by the BRC
Major Programmes	
Transformation	<ul style="list-style-type: none"> Kept the execution risk of the bank-wide transformation programme under review receiving regular updates from the programme team on progress, including independent opinions from Risk, Conduct and Restructuring function and Internal Audit. BRC encouraged the development of a reporting dashboard to track outcomes more effectively. Reviewed management's lessons learned from oversight of the programme in 2016 and actions being taken to address findings. Transitioned reporting to quarterly, reflective of the progress made to clearly report and track deliverables; the improving status of the programme; and the increased alignment between management, Risk, Conduct and Restructuring function and Internal Audit. Where underlying programmes were reported to be losing traction, BRC took specific reports on delivery. Specifically, BRC received reports on the progress of RBS to achieve Merchant compliant position under the Payment Card Industry Data Security Standard (PCI DSS) and considered challenges to delivery of the Future Clearing Model programme.
Williams & Glyn	<ul style="list-style-type: none"> Following the announcement of the European Commission's decision to approve HMT's alternative remedy package in September 2017, the BRC considered implementation plans to establish the required schemes, including critical path dependencies/progress towards operational readiness. Reviewed plans to reintegrate the business previously described as Williams & Glyn into RBS's retail business including controls and safeguards to ensure appropriate oversight of the portfolio and the timing of transition.
Ring-fencing	<ul style="list-style-type: none"> Developed a programme of detailed quarterly reporting on the ring-fencing implementation programme, supplemented by shorter updates at intervening meetings given the considerable volume of activity and criticality of the deliverable. Considered the key execution risks in the programme and oversaw key regulatory deliverables. Reviewed the Ring Fence Transfer Scheme documentation and Skilled Person Report, including the required management representation letter and regulatory attestation. The Skilled Person also attended relevant meetings to update on its findings. Latterly, the BRC supported the integration of Operational Continuity in Resolution delivery within the programme given the interdependencies with ring-fencing activity. Throughout, the Committee sought to ensure the programme remained focussed on the delivery of ring-fencing over discretionary strategic deliverables. Received opinions from Risk, Conduct and Restructuring function and Internal Audit on progress. Oversaw the appointment of KPMG as independent third party assurance provider and received the outputs of the work undertaken. An integrated assurance approach was adopted in the period, the scope of which was reviewed by the BRC to ensure effective assurance activity across Risk, Conduct and Restructuring function, Internal Audit and KPMG.
Recovery and Resolution Planning	<ul style="list-style-type: none"> The Committee increased its oversight of Resolution Planning to quarterly and requested that this be classified as a major programme within risk reporting. This was reflective of the requirement to ensure adequate legal entity focus; pan-bank engagement; regulatory scrutiny and interdependency of elements with the ring-fencing deliverables. Latterly, the BRC supported management's decision to transfer OCIR elements to the ring-fencing programme so as to increase the pace of delivery and demonstrate congruence with ring-fencing. The Committee reviewed outputs of a third party benchmarking review of RBS's progress as compared to peers and will monitor actions being taken in response. A re-baselined plan will be reviewed in early 2018. Reviewed the draft 2017 Recovery Plan in June 2017.*

Report of the Board Risk Committee

Key area	Matters considered and action taken by the BRC
Enterprise Wide Risk	
Risk appetite	<ul style="list-style-type: none"> • Reviewed the risk appetite governance framework; provided feedback on the mechanism for managing and escalating breaches of risk appetite and providing oversight of the cascade of risk appetite.* • Considered an annual refresh of the Risk Appetite Framework and received an update on the guidance and support that would be provided to the business throughout 2017 to ensure that the Framework was consistently embedded across the organisation. • Following work undertaken in 2016 to transition to a position where the Board/BRC played a greater role in the approval of risk appetite for RBS's most significant risks, it was agreed that this would take place on a phased basis. The BRC reviewed qualitative risk appetite statements and certain quantitative risk appetite measures relating to Market Risk and Credit Risk, being those measures where the Board would wish to be informed if those limits were exceeded (Board Risk Measures).* • Considered a report on the approach to risk appetite under structural reform (reflecting the future legal entity status of the Group). The BRC reviewed the proposed cascade of strategic risk appetite limits for the legal entities within and outwith the future ring-fenced structure. It was noted that process and limits would continue to be refined in 2018.* • Reviewed escalated breaches of risk appetite and action being taken in response.* • Reviewed the annual refresh of risk appetite for strategic risks and made suggestions for refinements.* • Reviewed the cascade of risk appetite for strategic and material risks to franchises and functions and received a report on the alignment of risk appetite, 'top to bottom' across the organisation. • Considered various detailed risk appetite statements and associated metrics for material risks.
Risk Culture	<ul style="list-style-type: none"> • Reviewed work being undertaken across RBS to improve risk culture including the status of the various ongoing bank-wide risk culture initiatives. Considered the outputs of a PwC review of progress in strengthening and embedding risk culture and discussed the actions identified that would have the greatest impact on risk culture. • Reviewed management's proposed framework to measure risk culture maturity against target state and considered the outcome of the assessment of progress against agreed performance criteria.
Client Pricing for Assets and Liabilities	<ul style="list-style-type: none"> • Undertook an annual review of the client pricing process against regulatory requirements to ensure that the pricing of liabilities and assets takes into account the bank's business model and risk strategy.
Three Lines of Defence	<ul style="list-style-type: none"> • Received an update on the work being undertaken to improve the effectiveness of the three lines of defence model within RBS, including actions being taken to improve understanding of roles and accountabilities under each of the lines of defence.
RDAR	<ul style="list-style-type: none"> • Monitored progress towards full compliance with the Basel Principles on Effective Risk Data Aggregation and Reporting (RDAR) and undertook an annual review of the RDAR framework.*
Risk Assurance	<ul style="list-style-type: none"> • Received quarterly reports from the Risk Assurance team, on issues highlighted by reviews conducted in each of the franchises.

Report of the Board Risk Committee

Key area	Matters considered and action taken by the BRC
Operational, Credit and Market Risk	
Credit, Market and Operational risk MI	<ul style="list-style-type: none"> Reviewed the bank's risk profile relative to credit, market and operational risk, and examined detailed management information (MI) within the quarterly Risk Management Report in this regard.
Operational Risk	<ul style="list-style-type: none"> Change capacity - Discussed the change risk profile of the bank and the prioritisation and impact of mandatory change programmes and considered opinion as to whether RBS had the required resource, processes and systems to deliver its change portfolio within agreed timescales. Reporting on change capacity has now been incorporated within routine quarterly risk reporting. Risk and Control Assessments - monitored management's progress to complete and refresh these assessments which are intended to provide an end to end perspective of the risk and control profile across the businesses. Considered scope of the exercise and impact of the outputs on risk profile. Undertook a review of the adequacy and effectiveness of the Risk Policy Framework and considered work being undertaken to reduce the volume of exceptions to policy and remediation in areas of non-compliance. Reviewed the statutory Annual Risk and Control Disclosure regarding the internal control system in RBS prior to its review by the Group Audit Committee.* Received bi-annual reports on Resilience and Security which considered in particular, Cyber Risk; internal and external fraud and records management. Considered the statement of risk appetite for operational risk together with a new suite of metrics.
Credit Risk	<ul style="list-style-type: none"> Oversaw the Executive Credit Group (ECG) receiving a summary of the decisions made by the ECG in the period. Reviewed the most material credit decisions made in 2017 and examined trends in the market. The BRC requested more data on declined requests and explanation of risk/return relative to each decision. Reviewed a revised governance framework for large credit exposure decisions, designed to enhance the level of Committee and Board oversight.* Reviewed a suite of Credit Risk Board Risk Appetite Measures.* Undertook a deep dive on the mortgage portfolio with a focus on drivers of growth and controls and received a report on Non-Performing Loans and Provision Coverage.
Market Risk	<ul style="list-style-type: none"> Held a teach-in on the impact of the Fundamental Review of the Trading Book and the impact of the new regulation. Reviewed a suite of Market Risk Board Risk Appetite Measures.*

Report of the Board Risk Committee

Key area	Matters considered and action taken by the BRC
Conduct and Financial Crime	
Financial Crime	<ul style="list-style-type: none"> Reviewed the annual Group Money Laundering Reporting Officer's Annual Report.* Received regular updates on financial crime risk, with a particular focus on the customer due diligence remediation programme, including scope, accountability, the timescale to return to appetite and impact on bank-wide control environment. Considered the Financial Crime risk appetite statement and associated limits and measures.
Conduct risk	<ul style="list-style-type: none"> Assessed progress to meet the requirements of the European Deposit Guarantee Scheme and approved the required compliance statements for submission to the PRA.* Received a report on how RBS surveillance processes and controls operated, in particular how these benchmarked to peers, and considered required enhancements. Received reports on Conduct Risk Appetite and performance, including action being taken to improve bank-wide conduct risk profile. Reviewed a revised statement of risk appetite and metrics which concentrated on customer outcomes as the Committee had previously requested. While a Board Oversight Committee (BOC) had been established to oversee required enhancements to the governance and risk management practices in UBI DAC, where appropriate, the BRC will work in conjunction with the BOC to understand the implications for RBS processes. Reviewed reports relating to the 2015 US Cease & Desist Order. Received an annual report on oversight of operational compliance of RBS and NatWest with FCA Client Asset Rules (CASS) and compliance with CASS resolution pack rules.*
Capital and Liquidity Risk	
Stress Testing	<ul style="list-style-type: none"> Considered the 2017 Bank of England Stress Tests, comprising, for the first time, two stress scenarios – the Annual Cyclical Scenario (ACS) and the Biennial Exploratory Scenario (BES). The Committee reviewed the scenario expansion and expansion of market risk factors and considered key assumptions and judgements and reviewed the outputs and management actions.* Reviewed the Bank of England IFRS 9 stress tests on non-credit card and credit card exercises including the assurance provided by Internal Audit and confirmation that management had undertaken robust review.* Reviewed the 2017 budget and stress test results (including IFRS 9) and 2017 ICAAP Stress Test Scenarios together with opinions from Risk and Internal Audit.* Considered 2018 budget and stress test results including Risk and Internal Audit opinions.* Reviewed reverse stress testing results. Oversaw enhancements to the bank's stress testing capability, in particular the remediation actions taken in response to the PRA review of stress testing capability. Work being undertaken to strengthen and validate models and improve supporting governance was a key focus.
ICAAP and ILAAP	<ul style="list-style-type: none"> Reviewed the RBS Group and pro forma NatWest Markets Plc ILAAP and ICAAP, with particular focus on assumptions and areas of judgement and considered associated Risk and Internal Audit opinions.* Reviewed the NatWest Markets ILAAP and ICAAP, and accompanying Internal Audit Report.* These are the first such regulatory submissions and the documents will continue to be refined and tailored during 2018.
Other capital and liquidity coverage	<ul style="list-style-type: none"> Reviewed the risk profile of the Treasury Function in a focus session held to understand better its position relative to risk appetite, emerging trends, threats and regulatory developments over the following year. Considered the bank's usage of the Bank of England Term Funding Scheme, noting that the Monetary Policy Committee decision to close the drawdown period on 28 February 2018 had no material impact on the bank's funding and liquidity plans. Considered conduct liquidity stress scenario analysis in detail. Undertook a teach-in on capital with a focus on legal entities (including the operation of external and internal MREL), future RWA developments and capital headwinds (Basel 3 amendments, PRA mortgage floors, IFRS 16). Reviewed pension strategy and oversaw interactions with the Pension Trustees.

Baroness Noakes
Chairman of the Board Risk Committee

Report of the Sustainable Banking Committee

Letter from Penny Hughes Chairman of the Sustainable Banking Committee

“We remain committed to building a sustainable bank that is great for our stakeholders.”

Dear Shareholder,

I am pleased to report on the progress made by the Sustainable Banking Committee (SBC) during another busy year for RBS.

The Committee has retained its forward looking, strategic outlook focusing on its five priority areas: culture; customers; people; brand & communications; and environmental, social and ethical (ESE) issues.

The Sustainable Banking Committee plays an important role on behalf of the Board in considering the long term challenges RBS will face, and how we can be proactive in tackling those as well as meeting our ambition for customers. With this remit, the areas the Committee focused its efforts on during 2017 were:

- technology and open banking;
- building a healthy culture;
- challenging management on progress towards reaching number one for customer service, trust and advocacy; and
- converting doing the right thing into good customer outcomes.

We have made good progress this year and below are some of the highlights of our achievements:

- an enhanced stakeholder engagement programme;
- a dedicated session on Personal & Business Banking's plan to improve Net Promoter Scores and reduce complaints;
- continuing the integration of sustainable banking into our core businesses and enhancing disclosure of integrated reporting elements in the Strategic Report;
- supporting and challenging management to make tangible progress on culture;
- development of a sustainable banking dashboard to provide the Committee with a consolidated view on RBS's performance in respect of key priorities such as the customer, culture and our reputation, to monitor progress against becoming a truly sustainable bank;
- supporting management in setting more ambitious environmental targets given the excellent progress RBS made in respect of previous targets set on carbon, paper and water;
- encouraging management to consider and understand external benchmarks, surveys and ratings and the insights those provide in terms of RBS's reputation and experience for customers;
- a focus on people, with the Committee holding a spotlight session on the wellbeing agenda, being engaged on our inclusion strategy and the employee value proposition; and
- being consulted on the Modern Slavery Act statement prior to it being published for the first time last year.

In August 2017 we were delighted to welcome Yasmin Jetha as a member of the Committee. Yasmin brings a fresh perspective and enthusiasm for the work that we do. In January 2018 we then welcomed Dr Lena Wilson as a member and with her strong public sector and commercial background is a valuable addition to the Committee.

The efforts to build a responsible and sustainable business are recognised through independent and external measures. Some examples include:

Culture

- Our own measurement surveys correlate with the progress being recognised by the Banking Standards Board culture assessment. We need to maintain momentum and be diligent in identifying and taking action in weaker areas.

Customers

- With clearer customer segmentation in place, good progress is being made in meeting the needs and expectations of NatWest and RBS Premier customers and those customers looking to buy a home. The significant trend to online is supported by our leading mobile app and digital banking propositions for business and commercial customers.

People

- It is pleasing that RBS is recognised for being an attractive employer and has been rated a Top Global Stonewall Employer. The Committee recognises the importance of making RBS a great place to work.

Brand & Communications

- The Committee recognises the importance of the brand strategy. It is pleasing to see the progress made in key metrics, with brand reputation of NatWest and Royal Bank of Scotland reaching a 5 year high in July 2017.

ESE Issues

- While we saw a drop in our Dow Jones Sustainability Index rating this year we have retained our place in the FTSE4GOOD index and achieved a leadership category listing in the Carbon Disclosure Project Index (A-) for the second year running.

My thanks go to the Committee members and attendees for their contribution and support throughout the year. I am also delighted that the proactive work being done by our Sustainable Banking team has been recognised externally, with the award of Sustainability Team of the Year at the Ethical Corporate Responsible Business Awards.

As you will have seen earlier in the report, I intend to stand down as a director of RBS in the coming months. I have thoroughly enjoyed my time as Chairman of SBC and have been pleased by the progress and positive changes that are underway as we remain committed to building a sustainable bank that is focused on delivering for a diversity of stakeholders. I look forward to handing over the role of Committee Chairman to Mike Rogers who has been an engaged and valuable member of SBC since 2016.

Penny Hughes
Chairman of the Sustainable Banking Committee
22 February 2018

Report of the Sustainable Banking Committee

Report of the Sustainable Banking Committee

Meetings

The Sustainable Banking Committee held six scheduled Committee meetings in 2017 which were attended by the Chairman, senior representatives from the customer-facing franchises as well as Human Resources, Sustainability, Risk, Conduct & Restructuring, Communications & Marketing, and the Chief Economist.

Stakeholder engagement

The Committee runs a proactive engagement programme and in 2017 met with twenty external stakeholders. The purpose is to listen and understand where RBS could do more.

In 2017 we held four such external engagement sessions covering the following topics:

- how digital tools and programmes can enhance financial capability and the opportunity for RBS to take a leadership role in this area;
- housing affordability and the role RBS could play in helping to address the housing crisis;
- how RBS could develop its approach and strategies to manage climate change risk; and
- the risks and opportunities that technological disruption brings.

We enhanced our engagement programme in 2017 gaining first hand insight into digital and FinTech centred transformation and its impact on customer behaviour. This was complemented by an additional session with management on open banking. This is an increasing area of interest and focus for RBS and it is important that SBC has a detailed understanding of the opportunities and issues this presents.

The Committee also recognises the importance of engaging with a wide range of stakeholders so members visited Business Banking and Mortgages during 2017, providing valuable frontline colleague and customer insight. We also hosted a lunch with representatives from our Employee Led Networks. This allowed the Committee to hear first hand what it feels like to work for RBS. The themes from this session were reported to the Board to provide insight into the issues facing our employees.

Following the sessions opportunities for follow up, further engagement and challenge to management are identified. In December, we welcomed back a number of our past stakeholders to share the progress made and to continue engagement.

Membership

During 2017 The Sustainable Banking Committee consisted of five independent non-executive directors. The Chairman and members of the SBC, together with their attendance at scheduled meetings in 2017, are shown below.

	Attended/ scheduled
Penny Hughes (Chairman)	6/6
Alison Davis	6/6
Robert Gillespie	6/6
Mike Rogers	6/6
Yasmin Jetha(1)	3/3

Notes:

(1) Appointed to the Committee with effect from 3 August 2017.

Performance evaluation

The annual review of the effectiveness of the Board and its senior Committees, including the SBC, was conducted internally in 2017. The SBC has considered and discussed the outcomes of this evaluation and accepts the findings. Overall the review concluded that the SBC continued to operate effectively.

The feedback from both members and attendees was very positive, although there was some room for improvement in the information received by the SBC. It was suggested that the scope of SBC could be reviewed to ensure its role is clearly defined and understood as its remit has evolved over the last year.

The outcomes of the evaluation have been reported to the Board and the Committee will track progress during the year.

Role and responsibilities of the Sustainable Banking Committee

Authority is delegated to the SBC by the Board and the SBC reports and makes recommendations to the Board as required. The terms of reference of the SBC are available on rbs.com and these are reviewed annually and approved by the Board. A regular report on the activities of the SBC in fulfilling its responsibilities is provided to the Board.

The principal responsibilities of the SBC are shown below:

Culture and People

- to receive a regular culture measurement report to monitor progress of embedding the Board approved culture;
- to understand areas of the business where there is an opportunity to improve, supporting and challenging management on their plans;
- to receive updates on what RBS is doing in areas such as wellbeing and inclusion, which form part of how it feels to work here;

Customer

- to oversee customer centricity priorities and how RBS is supporting and engaging with key customer segments;
- to oversee progress being made to achieve the long term target of being number one for customer service, trust and advocacy in each of our chosen businesses;
- to receive updates on complaints including understanding how management is addressing the root causes and how that impacts the customer experience;

Brand & Communications

- to oversee the brand strategy in embedding the bank of brands approach focusing on building equity in our customer brands;
- to oversee actions being taken by management to manage RBS's reputation with reference to how RBS is viewed by our customers, consumers and related interest groups;

ESE Issues

- to consider RBS's environmental strategy and progress against its environmental targets;
- to understand what RBS is doing for financial capability and how we operate in our communities; and
- our wider sustainable banking strategy.

Directors' Remuneration Report

Annual statement from Robert Gillespie
Chairman of the Group Performance and Remuneration
Committee

*“the new policy
creates a simpler
way of aligning the
interests of
executives with
shareholders”*

Dear Shareholder,

This is my first report as Chairman of the Committee and I would like to start by thanking my predecessor, Sandy Crombie, for all his hard work. Sandy joined the Committee in 2009 and served as Chairman from 2014 until the end of 2017, helping to oversee a great number of positive changes in remuneration practices at RBS. He was also instrumental in introducing a new directors' remuneration policy at the 2017 AGM.

I would also like to thank shareholders for their feedback during the development of the policy and for the high level of support received at the AGM. It is right that RBS should continue to be at the forefront of pay reforms and I believe the new policy creates a simpler way of aligning the interests of executives with shareholders. It continues our restrained approach to executive pay and is in line with the growing consensus for companies to develop more tailored remuneration arrangements.

We have moved to a long-term incentive structure with much lower maximum potential awards and where the performance of our executives is assessed on what they reasonably should be expected to achieve, while operating within our risk appetite. This helps to create more predictable outcomes and encourages safe and secure growth.

The policy also supports our cultural aim of making sure that remuneration encourages the right behaviours. Executives are required to build up larger shareholdings and retain them for longer. This creates stronger alignment with the experience of shareholders both during and after employment.

Implementation of policy for executive directors in 2018

No changes are being made at this time to the fixed pay arrangements for executive directors. Variable pay continues to be delivered entirely in shares as long-term incentive (LTI) awards with no annual bonus. Members of the Executive Committee are on a similar remuneration construct.

The first LTI awards under the new policy will be granted in early 2018, following an assessment of performance over 2017. The assessment determined that overall performance had been strong, particularly in relation to financial and people & culture measures, but a modest downwards adjustment was considered appropriate as the desired risk and customer performance had not been achieved in full. Details of the assessment against the objectives and the award levels can be found in the report.

A further assessment will be undertaken after three years to ensure that sustainable performance has been delivered prior to vesting. Subject to this assessment, the shares will vest in equal amounts over years three to seven from the date of grant, followed by an additional 12 month retention period post vesting.

Financial performance and pay decisions for 2017

It is clear we have a strong underlying business capable of generating profits and sustainable returns for shareholders. Income has risen, costs have fallen and our capital strength has improved further during the year. A number of legacy issues were settled in 2017 including the rights issue litigation and the Federal Housing Finance Agency settlement relating to RMBS. In addition, approval was obtained for the alternative remedies package for the business previously described as Williams & Glyn. Efforts continue to be made to resolve the outstanding RMBS litigation though the timetable for resolution is outside of the control of management.

For executive directors, performance has been assessed for the long-term incentive plan granted in 2015 following the end of the performance period. The vesting reflects improvements in the Economic Profit, CET1 ratio and people measures, with adjustments in areas where performance did not meet targets over the three year period, such as total shareholder return.

In terms of other pay decisions, the bonus pool for 2017 is £342m, which is £1m lower than 2016, reflecting our transition to simpler and more stable pay structures. The average bonus amounts remain relatively modest with 68% of all bonuses awarded amounting to £5,000 or less. Immediate cash bonuses continue to be limited to £2,000. Since 2010, the bonus pool has reduced by around 75% as a result of decisions taken by the Committee and the move towards a smaller bank with a culture focused on service excellence rather than sales.

Broader pay policy

The Committee also oversees the broader employee pay policy. We continue to make good progress in ensuring that employees are paid fairly and are supported by simple and transparent pay structures. Over the last two years we have removed variable pay for frontline and clerical employees with increases to their fixed pay instead, which provides greater certainty. As a result, 26,500 employees are compensated solely by fixed pay and benefits. Our rates of pay exceed the Living Wage and changes have been introduced so that people performing similar roles are paid more consistently.

We believe that having an engaged and inclusive workforce is a key part of a successful business. I am greatly encouraged by the latest employee engagement score which has risen significantly during 2017 and is now above the Global Financial Services norm. We are confident that we pay our employees fairly. We keep our HR policies and processes under review to ensure we do so. Gender Pay Gap information is also being included for the first time as part of the Strategic Report section, along with the steps we are taking to address the position.

Looking ahead

Arrangements will be put in place in 2018 to provide additional oversight of remuneration across key RBS entities post ring-fencing. In addition, the government's proposed governance and executive pay reforms are due to be finalised in the coming months. We welcome the proposals and are currently considering the most effective mechanisms to supplement our existing channels for the employee voice to be heard at Board level.

We remain strong supporters of reforms aimed at improving the effectiveness and transparency of pay structures. I look forward to working with the Committee in considering how we can continue to develop remuneration practices at RBS.

Robert Gillespie
Chairman of the Group Performance and Remuneration
Committee
22 February 2018

Directors' Remuneration Report

Summary of the remuneration policy for executive directors approved at the 2017 AGM

This page provides a summary of the key design features of the approved policy followed by an outline of how the policy will be implemented for executive directors in 2018.

Change in maximum remuneration opportunity under the new policy

Directors' Remuneration Report

Policy implementation – 2018 remuneration arrangements

The salary, benefits, pension and fixed share allowance arrangements remain unchanged from 2017. The LTI award to be granted in 2018 is the first award under the new policy, with a significantly lower maximum award level and a pre-grant assessment based on performance during 2017. A further assessment will also take place three years after grant to consider if sustainable performance has been delivered or if anything has come to light that would impact the vesting level or lead to a cancellation of the award.

	Salary	Standard benefits	Pension	Fixed share allowance	2018 LTI award (after pre-grant assessment set out below)
Ross McEwan	£1,000,000	£26,250	£350,000	£1,000,000	£1,575,000
Ewen Stevenson	£800,000	£26,250	£280,000	£800,000	£1,440,000

Pre-grant performance assessment for 2018 LTI awards

A summary of the assessment is set out below and further details can be found in the annual report on remuneration. The Committee assessed performance against pre-set objectives for 2017, across the core areas of Finance, Risk & Operations, Customers and People & Culture. The Committee considered whether the executive directors had achieved what would reasonably have been expected over the period and then applied its judgement without reference to formulaic targets and weightings.

Financial	Risk & Operations	Customers	People & Culture
<p>Strong financial performance with all of the pre-grant objectives met for 2017.</p> <p>Cost savings of £810m were achieved against a target of £750m, the core franchises achieved adjusted RoTE that met the target of at least 11% and the CET1 ratio was 15.9% against the target of 13%.</p>	<p>Continued improvements in risk profile and culture. There was an increase in the number of franchises and functions achieving the desired control rating of 2, although this hadn't been reached across every area.</p> <p>Work is well underway in readiness for ring-fencing and the required legal entity changes. The programme remains on track with the critical path still delivering to plan.</p>	<p>NPS performance during 2017 was on-target in 4 of our 6 chosen customer segments. While progress had been made, there was still some room for improvement on NPS scores in certain segments.</p> <p>Customer Trust performance was ahead of target in 2 out of the 5 chosen segments with improvements in 2 further segments.</p>	<p>Employee engagement and leadership scores increased significantly in 2017, with RBS above the Global Financial Services norm. Employee engagement was up 7 points on 2016 and was our highest score to date.</p> <p>Improvements were also made in the assessment of culture under the Banking Standards Board survey together with satisfactory progress towards our target of >30% women in 'senior roles' by 2020.</p>

After considering all the factors above, and taking into account input provided by the Board Risk Committee and the Sustainable Banking Committee, the Committee determined that strong overall performance had been achieved in 2017. All financial objectives had been met or exceeded along with significant improvement across people & culture measures. However, while progress had been made across all areas, the Committee concluded that a modest reduction would be appropriate to recognise that the desired risk and customer performance had not been achieved in full. As a result, the Committee determined that a 10% reduction should be applied under the pre-grant assessment for the Chief Executive and the Chief Financial Officer.

Timing of remuneration payments

The percentage vesting boxes in the diagram above show when the share awards are released following the end of the applicable vesting and retention periods.

Directors' Remuneration Policy

Key features of the remuneration policy for executive directors

The Directors' Remuneration Policy was approved by shareholders at the AGM on 11 May 2017. The policy will apply until the 2020 AGM unless changes are required which mandate a revised policy be submitted to shareholders for approval. The table below summarises the key features of the policy for executive directors. In the event of any conflict the approved policy, which can be found under the Board and Governance section of rbs.com, takes precedence over the information set out below.

Element of pay	Operation	Maximum potential value
<p>Salary</p> <p>To provide a competitive level of fixed cash remuneration and aid recruitment and retention of high performing individuals.</p>	<p>Paid monthly in cash and reviewed annually.</p> <p>The rates for 2018 are unchanged:</p> <ul style="list-style-type: none"> Chief Executive - £1,000,000 Chief Financial Officer - £800,000 	<p>Future salary increases will not normally be greater than the average salary increase for RBS employees over the period. Other than in exceptional circumstances, the salary will not increase by more than 15% over the course of this policy.</p>
<p>Fixed share allowance</p> <p>To provide fixed pay that reflects the skills and experience required and responsibilities for the role.</p>	<p>A fixed allowance paid entirely in shares. The shares vest immediately subject to any deductions for tax and are released in equal tranches over a three year retention period.</p>	<p>An award of shares with an annual value of up to 100% of salary at the time of award.</p>
<p>Benefits</p> <p>To provide a range of flexible and market competitive benefits that are valued and assist individuals in carrying out their duties effectively.</p>	<p>Executive directors can select from a range of standard benefits including: company car; private medical cover; life assurance; and critical illness insurance. Executive directors are also entitled to travel assistance in connection with company business including the use of a car and driver. RBS will meet the cost of any tax due on the benefit. Further benefits including relocation costs may be offered in line with market practice. RBS may also put in place certain security arrangements for executive directors.</p>	<p>Set level of funding for standard benefits (currently £26,250) which is subject to review.</p> <p>The total value of benefits provided is disclosed each year in the annual report on remuneration.</p>
<p>Pension</p> <p>To encourage planning for retirement and long-term savings.</p>	<p>Provision of a monthly cash pension allowance based on a percentage of salary. Opportunity to use the cash to participate in a defined contribution pension scheme.</p>	<p>35% of salary for current executive directors. 25% of salary for new executive directors.</p>
<p>Variable pay award (long-term incentive)</p> <p>To support a culture where individuals are rewarded for the delivery of sustained performance, taking into account RBS's strategic objectives.</p> <p>Delivery in shares with the ability to apply malus adjustments and clawback further supports longer-term alignment with shareholders' interests.</p>	<p>LTI awards are subject to:</p> <ul style="list-style-type: none"> a one year pre-grant performance period; a pre-vest performance assessment at the end of a three year period, with vesting taking place from years three to seven after grant; malus prior to vesting and clawback which applies for seven (and potentially up to ten) years from the date of award; and a 12 month post-vesting retention period. <p>Performance will be assessed in the areas of Finance, Risk & Operations, Customers and People & Culture to determine whether the executive has achieved what would reasonably have been expected in the circumstances. Risk & Control and Stakeholder Perception underpins will also apply which may lead to downwards adjustment.</p>	<p>The maximum award for current directors is:</p> <p>Chief Executive - 175% of salary. Chief Financial Officer - 200% of salary.</p> <p>Prior performance will be taken into account when determining the value of the award at the time of grant.</p> <p>The vesting level of the award can vary between 0% and 100% dependent on the delivery of sustained performance.</p>
<p>Shareholding requirements</p> <p>To ensure executive directors build and continue to hold a significant shareholding over the long term.</p>	<p>Unvested shares from LTI awards will count on a net of tax basis towards meeting the shareholding requirement once the pre-vest performance assessment has taken place. Directors can dispose of up to 25% of the net of tax shares received until the shareholding requirement is met.</p>	<p>Chief Executive - 400% of salary. Chief Financial Officer - 250% of salary.</p>

Directors' Remuneration Policy

Remuneration for the Chairman and non-executive directors

Element of pay	Operation	Maximum potential value
<p>Fees To reflect the required skills, experience and time commitment.</p>	<p>Fees are paid monthly in cash and reviewed regularly. Additional fees may be paid for new Board Committees provided these are not greater than fees payable for the existing Board Committees.</p> <p>No variable pay is provided so that the Chairman and non-executive directors can maintain appropriate independence.</p>	<p>The rates for the year ahead are set out in the annual report on remuneration.</p> <p>Other than in exceptional circumstances, fees will not increase by more than 15% over the course of the policy.</p>
<p>Benefits To provide a level of benefits in line with market practice.</p>	<p>Reimbursement of reasonable out-of-pocket expenses. The Chairman and non-executive directors are entitled to travel assistance in connection with company business including the use of a car and driver. RBS will meet the cost of any tax due on the benefit. Other benefits may be offered in line with market practice. The Chairman receives private medical cover.</p>	<p>The value of the private medical cover provided to the Chairman and any other benefits will be in line with market rates and disclosed in the annual report on remuneration.</p>

Other policy elements

Provision	Operation
Recruitment policy	The policy on the recruitment of new directors aims to be competitive and to structure pay in line with the framework applicable to current directors, based on the elements of pay detailed in the policy table, recognising that some adjustment to quantum within that framework may be necessary to secure the preferred candidate. A buy-out policy exists to replace awards forfeited or payments foregone which is in line with regulatory requirements. The Committee will minimise buy-outs wherever possible and ensure they are no more generous than, and on substantially similar terms to, the original awards or payments they are replacing.
Notice and termination provisions	<p>Executive directors RBS or the executive director is required to give 12 months' notice to the other party to terminate the executive director's employment. There is discretion for RBS to make a payment in lieu of notice (based on salary only) which is released in monthly instalments. The executive director must take all reasonable steps to find alternative work and any remaining instalments will be reduced as appropriate to offset income from any such work.</p> <p>Chairman and non-executive directors The Chairman and the non-executive directors do not have service contracts, they have letters of appointment. They do not have notice periods and no compensation would be paid in the event of termination of appointment, other than standard payments payable for the period served up to the termination date.</p> <p>On an annual basis, all directors stand for election or re-election by shareholders at the company's AGM. Non-executive directors appointed prior to 2017 do not have a set term as the letter of appointment operates on a rolling basis. From 2017 onwards, new non-executive directors have been appointed for an initial term of three years, commencing from the first election by shareholders. At the end of this period, further terms may be agreed, subject to an overall maximum tenure of nine years. The non-executive directors with terms of appointment that will currently expire unless otherwise renewed at the end of three years are: Mark Seligman (2020 AGM), Yasmin Jetha (2021 AGM) and Dr Lena Wilson (2021 AGM).</p>
Legacy arrangements	RBS can continue to honour any previous commitments or arrangements entered into with current or former directors that may have different terms, including terms agreed prior to appointment as an executive director.
Treatment of outstanding employee share plan awards on termination	<p>Share awards will be treated in accordance with the relevant plan rules as approved by shareholders. In line with the remuneration policy approved by shareholders at the 2017 AGM, LTI awards made in 2018 onwards will involve a significant reduction in maximum opportunity and will not be subject to pro rating for time in good leaver circumstances, for the reasons set out below.</p> <p>RBS is unusual in having no annual bonus, and bonus awards would typically not be subject to pro rating for time. In addition, the impact of regulatory requirements effectively constrains the granting of LTI awards in the year of joining. The combination of these factors means that pro rating of time for good leavers results in executives potentially receiving no variable pay award either for the year of joining or in the final year of employment. This is not consistent with our aim of driving shareholder alignment within our pay construct. Removal of pro rating therefore helps to ensure that executive directors are motivated and retain an appropriate long-term focus up to the point of departure. It also creates higher levels of shareholding for up to eight years post departure meaning executives can be held accountable for, and are financially exposed to, the long-term consequences of their actions.</p> <p>Individuals will qualify for good leaver treatment if they leave due to ill-health, injury, disability, death, retirement (as agreed with RBS), redundancy, the employing company ceasing to be a member of RBS, transfer of the employing business, or any other reason if and to the extent the Committee decides in any particular case.</p>

Directors' Remuneration Report

Wider employee considerations

The group-wide remuneration policy applies to all employees. Consistent with our executive remuneration principles, the aim is to deliver a simple and transparent pay policy which promotes the long-term success of RBS. The policy supports a culture where employees are rewarded for delivering sustained performance in line with our risk appetite and for demonstrating the right conduct and behaviours. Further details on the group-wide policy can be found on page 102 to 103.

We are committed to building a motivated and inclusive workforce that is engaged and passionate about achieving our ambition. A summary is set out below on some of the initiatives that have taken place to: simplify pay; ensure fair pay; take employees' views into account; and deliver a great place to work.

Simplifying pay

Providing a simple pay structure supports employees in doing the right thing for customers, allowing them to concentrate on providing excellent customer service.

Steps we have taken to simplify pay since 2015 include:

- the removal of incentives for frontline employees in UK PBB and Ulster Bank Republic of Ireland.
- the removal of discretionary bonus for all Clerical employees in the UK and Republic of Ireland in 2017 and extending this to equivalent roles in India and Poland from 1 January 2018.
- the removal of discretionary bonus for the vast majority of Appointed employees in the UK and the Republic of Ireland from 1 January 2018.
- in all the above cases, an appropriate adjustment has been made to fixed pay instead.
- reducing the number of salary ranges by around 50%.
- removing the long-term incentive element of pay for employees below Executive Committee level.

Fair pay

RBS will only achieve its ambitions if employees believe the pay they receive is appropriate for the work they do.

Steps we have taken to ensure fairness include:

- setting rates of pay that exceed the Living Wage Foundation Benchmarks.
- ensuring that people doing similar roles are paid consistently.
- implementing a more transparent approach by moving more employees to published salary ranges.
- investing in pay levels in recent years, focusing mostly on our junior employees, while not increasing fixed pay for our executive directors.

We are confident that we pay our employees fairly. We keep our HR policies and processes under review to ensure we do so. Our Gender Pay Gap information has been published and can be found in the 'our colleagues' section of the Strategic Report.

Great place to work

RBS provides a range of resources and supporting tools to make sure individuals are capable and motivated to perform at their best.

Some of the elements of great place to work include:

- **inclusion** - employee led groups play a key role in influencing our inclusion strategy. Over 70% of employees have been trained to tackle unconscious bias and the inclusion score from our employee opinion survey is significantly above the Global Financial Services norm.
- **flexible working** - supporting a positive attitude to flexible working patterns to reflect personal preferences where this can be accommodated.
- **wellbeing** - support for good physical, mental and financial health.
- **excellent training** - support with learning, professional development and further qualifications.
- **good leadership** - equipping managers to help their teams flourish - including our Determined to lead programme which won the Princess Royal training award in 2017.
- **RBSselect** - employees can choose from a range of flexible benefits to help with financial planning and lifestyle choices.
- **share ownership** - opportunity in the UK and Republic of Ireland to participate in employee share plans, with Sharesave 2017 seeing a 26% increase in participation.
- **volunteering** - employees are provided with time off to work with charities and local communities.

Further details on our employee initiatives and successes can be found in the 'our colleagues' section of the Strategic Report.

Views of employees

Our main listening tool is the biannual employee opinion survey which collects views on a range of topics including pay, engagement, wellbeing, inclusion and leadership.

The 2017 results showed improvement in the majority of categories. The number of employees who believe they are paid fairly for the work they do increased significantly during the year and is above the Global Financial Services norm.

We also have a number of other mechanisms through which we communicate with employees such as:

- regular engagement with employee representatives including Unite in Great Britain and Offshore, the Financial Services Union in Ulster Bank and our European Employee Council.
- question and answer sessions throughout the year to allow employees to hear from, and provide feedback to, members of the Executive Committee and other senior staff.
- in November 2017, the Chief Executive held his first live streaming question and answer session with employees across RBS and over 150 questions were submitted.
- visits by Board members to business areas to hear directly from employees.
- support for employee-led networks which helps raise awareness and influence strategy in a number of areas.

Proposed reforms to the UK Corporate Governance Code build on the theme of ensuring the employee voice is heard at Board level. We are supportive of the proposals and are currently considering the most appropriate options to enhance our existing channels for employee engagement.

Directors' Remuneration Report

How risk is reflected in our remuneration process

RBS's approach to remuneration and related policies promotes effective risk management through a clear distinction between fixed remuneration, which reflects the role undertaken by an individual, and variable remuneration, which is directly linked and reflective of performance and can be risk-adjusted. Fixed pay is set at an appropriate level to avoid incentives that are adverse to sound risk management.

Focus on risk is achieved through clear risk input into objectives, performance reviews, the determination of variable pay pools and incentive plan design as well as the application of malus and clawback. The Committee is supported in this by the Board Risk Committee (BRC) and the RBS Risk, Conduct and Restructuring function.

A robust process is used to assess risk performance. A range of measures are considered, specifically the overall Risk Profile; Credit, Regulatory and Conduct Risk; Operational Risk; Enterprise Risk; and Market Risk. Consideration is also given to overall Risk Culture. RBS's remuneration arrangements are in accordance with regulatory requirements and the steps we take to ensure appropriate and thorough risk adjustment are also fully disclosed and discussed with the PRA and the FCA.

Variable pay determination

For the 2017 performance year, RBS operated a robust multi-step process which is a control function led assessment to determine performance and therefore the appropriate bonus pool by franchise and function. At multiple points throughout the process, reference is made against Group-wide business performance (from both affordability and appropriateness perspectives) and the need to distinguish between go-forward franchises and resolution activities.

The process considers a balanced scorecard of performance assessments at the level of each franchise or support function. The assessments are made across financial, customer and people measures. Risk and conduct assessments at the same franchise or functional level are then undertaken to ensure that performance achieved without appropriate consideration of risk culture and risk and conduct controls is not inappropriately rewarded.

BRC reviews any material risk and conduct events and, if appropriate, an underpin may be applied to the individual business and function bonus pools or to the overall bonus pool. BRC may recommend a reduction of a bonus pool if it considers that risk and conduct performance is unacceptable or that the impact of poor risk management has yet to be fully reflected in the respective inputs.

Following further review against overall performance and conduct, the Chief Executive will make a final recommendation to the Committee, informed by all the previous steps in the process and his strategic view of the business. The Committee will then make an independent decision on the final bonus pool taking all of these earlier steps into account.

The assessment process for LTI awards to executive directors is founded on the balanced scorecard approach used for the multi-step bonus pool process, reflecting a consistent risk management performance assessment.

Accountability review process and malus/clawback

The accountability review process was introduced in 2012 to identify any material risk management, control and general policy breach failures and ensure accountability for those events. This allows RBS to respond in instances where new information would change the variable pay decisions made in previous years and/or the decisions to be made in the current year.

Under the accountability review process RBS can apply:

- Malus - to reduce (to zero if appropriate) the amount of any unvested variable pay awards prior to payment;
- Clawback - to recover awards that have already vested; and
- In-year reductions - to adjust variable pay that would have otherwise been awarded for the current year.

Any variable pay awarded to Material Risk Takers from 1 January 2015 onwards is subject to clawback for seven years from the date of grant. For awards made in respect of the 2016 performance year onwards, this period has been extended to ten years for executive directors and other Senior Managers under the Senior Managers Regime where there are outstanding internal or regulatory investigations at the end of the normal seven year clawback period.

Circumstances in which RBS may apply malus, clawback or in-year reduction include:

- the individual being culpable, responsible or ultimately accountable for conduct which results in significant financial losses for RBS;
- the individual failing to meet appropriate standards of fitness and propriety;
- reasonable evidence of an individual's misbehaviour or material error;
- RBS or the individual's relevant business unit suffering a material failure of risk management; and
- for malus and in-year reduction only, circumstances where there has been a material downturn in financial performance.

The above list of circumstances is not exhaustive and RBS may consider any further circumstances that it feels appropriate.

During 2017 a number of issues and events were considered under the accountability review framework. The outcomes covered a range of actions including: reduction and forfeiture of unvested awards through malus; dismissal with forfeiture of unvested awards; and suspension of awards pending further investigation. In addition, reductions have also been applied to current year variable pay awards.

Annual report on remuneration

Annual report on remuneration

The sections audited by the company's auditors, Ernst and Young LLP, are as indicated.

Total remuneration paid to executive directors for 2017 (audited)

	Ross McEwan		Ewen Stevenson	
	2017 £000	2016 £000	2017 £000	2016 £000
Salary	1,000	1,000	800	800
Fixed share allowance (1)	1,000	1,000	800	800
Benefits (2)	113	127	26	26
Pension (3)	350	350	280	280
Total fixed remuneration	2,463	2,477	1,906	1,906
Annual bonus	n/a	n/a	n/a	n/a
Long-term incentive award (4)	1,024	1,225	1,418	—
Total remuneration	3,487	3,702	3,324	1,906

Notes:

- (1) The value of the fixed share allowance is based on 100% of salary and, as part of fixed remuneration, it is not subject to any performance conditions.
- (2) Includes standard benefit funding of £26,250 per annum with the remainder for Ross McEwan in 2017 being travel assistance in connection with company business (£67,006), relocation expenses (£17,065) consisting of a flight allowance and assistance with tax return preparation, and home security arrangements. The 2016 benefits figure for Ross McEwan has been amended to include a value for tax return preparation and home security arrangements during that year.
- (3) The executive directors receive a monthly cash allowance to help fund pension arrangements but do not participate in the company's defined benefit pension schemes. The executive directors can choose to participate in the company's defined contribution pension arrangements.
- (4) The 2017 value relates to an LTI award granted in 2015. Performance has been assessed over the three year period to 31 December 2017 as set out below together with an estimate of the vesting value. The award will vest in two equal tranches in March 2019 and March 2020. The value for 2016 has been amended from the estimated value of £1,030,000 provided in the 2016 report to reflect the actual value on the vesting date in March 2017.

2015 LTI – final assessment of performance measures (audited)

An assessment of performance of each relevant element was provided by internal control functions and PwC assessed relative Total Shareholder Return (TSR) performance against a peer group of comparator banks.

Performance Measures (and weightings)	Performance for minimum vesting	Vesting at minimum	Performance for maximum (100%) vesting	Actual Performance	Vesting outcome	Weighted Vesting %
Economic Profit (25%)	(£500 million)	25%	£500 million	£613 million	100%	25%
Relative TSR (25%)	TSR at median	20%	TSR at upper quartile	Below median	0%	0%
Safe & Secure Bank (25%) CET1 ratio - 12.5% Cost:income ratio - 12.5%	Vesting between 0% - 100% <i>can be qualified by Committee discretion</i> CET1 ratio target: 13% (or above) Cost:income ratio target (go-forward bank basis): 56% (or below)			CET1 ratio: 15.9% Cost:income ratio: 55%	100%	25%
Customers & People (25%) Split across advocacy, trust and employee engagement Net Promoter Score (NPS) – 6.25% Net Trust Score (NTS) – 6.25% Engagement Index (EI) – 12.5%	Vesting between 0% - 100% <i>can be qualified by Committee discretion</i> NPS target: Gap to number 1 of 6.0 NTS target: NatWest 55, RBS 42 EI target: within 2 points of Global Financial Services (GFS) norm			NPS Gap to number 1 of 15.5 NTS: NatWest 59 RBS 22 EI: 1 point above GFS norm	0% 70% 100%	68% 17%
Initial vesting outcome						67%
Final vesting outcome post application of underpin						60%

Economic Profit was based on the go-forward basis and defined as operating profit after tax and preference share charges less tangible net asset value multiplied by the cost of equity. The companies in the relative TSR group for this award were: Barclays, Lloyds Banking Group, HSBC, Standard Chartered, BBVA, BNP Paribas, Crédit Agricole, Credit Suisse Group, Deutsche Bank, Santander, Société Générale, UBS, Unicredito. For the Trust metric of the Customers & People section, the NatWest target was met while the RBS target had been missed. The 70% vesting for this element was calculated in line with the weightings of the brands, split 70%/30% for NatWest/RBS, based on the relative revenues of the respective brands.

In making its final judgement, the Committee considered the overall context of performance, noting positive progress on Economic Profit which had exceeded the stretch target and the strong CET1 ratio and took into account input received from the Board Risk Committee. Significant improvement had also been achieved in employee engagement scores which again had exceeded target. However, the Committee also noted that the NPS, Trust for the RBS brand and relative TSR targets had been missed. Taking all circumstances into account, the Committee determined it would be appropriate to apply the underpin and reduce the final vesting outcome from 67% to 60%.

Annual report on remuneration

2015 LTI vesting amounts included in the total remuneration table (audited)

The executive directors were granted an LTI award in March 2015. The performance conditions ended on 31 December 2017 and have been assessed as set out on the previous page. The average share price over the last three months of the financial year has been used to estimate the value. While the performance conditions have been assessed, the shares will not vest until March 2019 and March 2020.

Performance category	% vesting	Ross McEwan			Ewen Stevenson		
		Maximum shares (1)	Shares due to vest	Estimated value (2)	Maximum shares (1)	Shares due to vest	Estimated value (2)
Economic Profit	100%	154,624	154,624		214,121	214,121	
Relative TSR	0%	154,624	—		214,121	—	
Safe & Secure Bank	100%	154,624	154,624		214,121	214,121	
Customers & People	68%	154,624	105,145		214,121	145,602	
Maximum shares for performance assessment		618,496			856,484		
Initial outcome following assessment (67% vesting)			414,393			573,844	
Final outcome post application of underpin (60% vesting)			371,098	£1,024,230		513,890	£1,418,336

Notes:

- (1) The maximum number of shares is calculated in line with the underlying award structure. Each performance category could vest up to 100% of the maximum number of shares subject to the approved policy and the regulatory cap. For the 2015 award, the number of shares capped at grant was 417,486 for Ross McEwan and 578,128 shares for Ewen Stevenson. In both cases the vesting outcomes fall within the respective cap.
- (2) Based on a RBS share price of £2.76, the average over the three month period from October to December 2017.

2016 and 2017 LTI awards to executive directors – current assessment (audited)

The table represents an early indication of potential vesting outcomes only based on the position at 31 December 2017. Details of the final performance assessment at the end of the three year period and any use of discretion will be disclosed in the remuneration report for the relevant year. The Committee may consider the proximity of legacy items to the executive directors when assessing the vesting level.

Performance measure	Weighting	Performance for minimum vesting	Vesting at minimum	Performance for maximum vesting	Vesting at maximum	2016 LTI award current assessment	2017 LTI award current assessment
Economic Profit	25%	Minimum economic profit targets	25%	Performance ahead of the Strategic Plan	100%	Currently tracking behind target	Currently favourable to target
Relative TSR	25%	TSR at median of comparator group	20%	TSR at upper quartile of comparator group	100%	Below median performance for vesting	Currently upper quartile performance for vesting
Safe & Secure Bank	25%	Target ranges set for: CET1 ratio and Cost:income ratio	Vesting between 0% – 100% qualified by Committee discretion taking into account the margin by which targets have been missed or exceeded and any other relevant factors			CET1 ratio is in range for vesting.	CET1 ratio is in range for vesting.
Customers & People	25%	Target ranges set for: Net Promoter Score, Net Trust Score and Employee Engagement				Cost:income ratio currently tracking behind target	Cost:income ratio currently in range for vesting
						Customer measures currently behind target with People measure in range for vesting	Customers & People measures broadly tracking in range for vesting

LTI awards granted during 2017 (audited)

	Grant date	Face value of award (£000s)	Number of shares awarded (1)	% vesting at minimum and maximum	Performance Requirements (2)
Ross McEwan	7 March 2017	2,870	1,188,800	Between 0% - 100% with minimum vesting as set out above	Conditional share awards subject to performance conditions, as set out above, measured over the three year period from 1 January 2017 to 31 December 2019
Ewen Stevenson	7 March 2017	2,305	954,768		

Notes:

- (1) The number of shares awarded was calculated in line with the regulatory cap that limits variable pay to the level of fixed pay and for this award equated to approximately 287% of salary. The award price of £2.4142 was calculated based on the average share price over five business days prior to the grant date.
- (2) Subject to the achievement of performance conditions, the awards are eligible to vest in four tranches with 50% vesting in 2021 and the remaining 50% split over 2022 to 2024. Malus provisions will apply up until vesting and clawback provisions will also apply for a period of seven years from the date of grant, extended to ten years if events are under investigation at the end of the seven year period.

Annual report on remuneration

Performance assessment framework for LTI awards granted from 2018 onwards

For each of the core performance areas, the Committee will consider whether the executive director has achieved what would reasonably have been expected over the relevant period. The Committee will follow a robust process to review performance against pre-set objectives relevant to RBS's strategic aims, but will apply its judgement without reference to formulaic targets and weightings. Performance will be assessed taking into account circumstances applying over the period. Risk & Control and Stakeholder Perception underpins will also apply under which the Committee, with input from the Board Risk Committee and Sustainable Banking Committee, can consider if there are any other factors that would lead to a downwards adjustment (for example if the achievements are not considered sustainable, or were achieved through excessive risk taking).

The majority of the performance variation will normally take place under the pre-grant assessment, with a further pre-vest assessment to check whether, taking all circumstances into account, a threshold level of sustainable performance has been delivered. Overall, the achievement of reasonable or 'target' performance expectations will deliver full, or nearly full, payout of the LTI awards, as long as executives deliver good, sustainable performance. This approach reflects the significantly reduced level of awards compared to the previous policy, creating more predictable outcomes and encouraging safe and secure growth within risk appetite. Each year, the performance factors will be determined in light of RBS's priorities for that year.

Pre-grant assessment for LTI awards to be made in 2018

Core area	Objectives for 2017	Pre-grant assessment in January 2018
Financial	Achieve a cost reduction of at least £750 million. Reasonable performance against budget for the core franchises with adjusted RoTE of at least 11%. CET1 ratio of 13% or more.	Strong financial performance with all targets exceeded for 2017. Year on year cost savings of £810 million were achieved, adjusted RoTE was above the target and the CET1 ratio was 15.9%.
Risk & Operations	RBS blended risk profile of 2; Franchise/ Function control environment rated within appetite at 2, or minimum 3 tracking to 2 within 12 months.	Continued improvements in risk profile with an increase in the number of franchises and functions rated at 2. While progress had been made, the ultimate desired control rating hadn't been reached across every franchise and function.
	Risk Culture to be rated at 3 (Proactive) on a blended basis, with strong tone from the top. Strong oversight of ring-fencing, ensuring timely remediation of issues and maintain delivery as planned.	Risk Culture was assessed overall as Proactive with a small number of exceptions. Work is well underway in readiness for ring-fencing and the required legal entity changes. The programme remains in line with plan for delivery.
Customers	Increase or maintain number 1 for Net Promoter Scores and increase Trust Scores in our chosen segments.	NPS performance during 2017 was on-target in 4 out of 6 customer segments. While progress had been made, there was still room for improvement on NPS scores and on closing the gap to number 1 in certain segments. Trust was ahead of target in 2 out of the 5 segments with improvements in 2 further segments.
People & Culture	Improvement in employee engagement and leadership scores.	Engagement score increased 7 points and the leadership score increased 5 points since 2016, with both above the Global Financial Services norm. The employee opinion survey showed the best results for 10 years.
	Year on year improvement from the Banking Standards Board (BSB) assessment.	Scores from the BSB survey improved on all items compared to 2016, demonstrating an improved culture throughout the business.
	Progress towards target of >30% women in 'senior roles' by 2020	Satisfactory progress had been made. The target population (top three leadership layers) had increased to 37%, representing an 8% increase since targets were introduced at the end of 2014.

Outcome of the assessment

The Committee also received advice from the Board Risk Committee and the Sustainable Banking Committee in making its final assessment. After considering all the factors above, the Committee determined that good performance and progress towards our long-term goals had been achieved in 2017. Performance had been very strong in relation to financial and people & culture measures but, on balance, a 10% reduction was considered appropriate as risk and customer performance was not fully at the desired level. The resulting award levels are set out below.

	Maximum LTI award level	2018 LTI award level after pre-grant assessment
Chief Executive	£1,750,000	£1,575,000
Chief Financial Officer	£1,600,000	£1,440,000

Annual report on remuneration

Pre-vest assessment for 2018 LTI awards

In addition to the pre-grant assessment detailed on the previous page, a further assessment of performance will take place three years after grant, in 2021, prior to vesting. It is intended to be a look-back at the performance year for which the LTI award was granted to consider whether anything has come to light that would impact the vesting level. The over-arching principle is that delivery of a threshold level of sustainable performance will result in no further adjustment prior to vesting. Once the vested amount has been approved, malus and clawback provisions will continue to apply.

The pre-vest assessment allows the Committee to make a balanced assessment of performance in the round rather than relying on formulaic adjustments. It is to provide comfort that sustainable performance has been delivered since the award, and that nothing new has come to light which might call into question the original award. Adjustments will also be made in the event of underperformance or required risk adjustment.

Factors considered in assessing pre-vest performance

Four core questions will be considered as part of the pre-vest assessment under the themes of Finance; Customers; People; and Risk & Control. When assessing the performance of the year for which the award was made, “knowing what we know now” and taking into account all circumstances, has RBS:

- (1) Remained safe and secure, taking into account our financial results and capital position?
- (2) Been a good bank for customers taking into account our customer and advocacy performance?
- (3) Operated in an environment in which risk is seen as part of the way we work and think?
- (4) Operated in a way that reflects our stated values?

In addition, the Committee will consider the potential application of Risk & Control and Stakeholder Perception underpins following advice from the Board Risk Committee and Sustainable Banking Committee. This provides scope to consider significant risk, stakeholder or reputational matters not already captured in the performance assessment.

In determining the final vesting level of the award, the Committee will consider both individual and collective performance which means that there may be different vesting levels by participant. If a threshold level of sustainable performance has been delivered then no further assessment is required and the award vests in full.

Objectives for Performance Year 2018 (for the pre-grant assessment of LTI awards to be made in 2019)

The table below forms the basis of the pre-grant assessment for LTI awards to be made in early 2019. Further details on the 2018 objectives and targets and the assessment of performance against these will be set out in the 2018 Directors' Remuneration Report.

Core area	Description of 2018 Objectives	Measures for assessing pre-grant performance for 2019 LTI awards
Financial & Business Delivery	Run a safe and secure bank	Achieve planned reduction in operating expenses
		Reasonable performance against budget and RoTE target
		Achieve CET1 ratio target
	Implement ring-fencing	Delivery of ring-fencing requirements to satisfy the 1 January 2019 implementation, ensuring timely remediation of issues throughout.
Risk & Control	Improve governance and control environment	Franchise and function control environment to meet the required rating within appetite
	Material progress towards our desired risk culture	Achieve the desired Risk Culture rating with strong tone from the top
Customer & Stakeholder	Achieve planned progress towards becoming number 1 for customer service, trust and advocacy by 2020 in chosen customer segments and brands	Net Promoter Score to evidence progress towards or maintaining the number 1 position in our chosen segments and brands
People & Culture	Build up and strengthen a healthy culture	Provide clarity, build capability and motivate our people
		Year on year improvement in scores from employee engagement and leadership indices
		Culture measured against position in Culture index
		Progress towards 2020 target of number of women in 'senior roles' (at least 30% for each franchise and function)
		Progress towards 2025 target of number of Black Asian Minority Ethnic (BAME) UK employees in the top four layers of RBS (at least 14% for each franchise and function)

Annual report on remuneration

Payments for loss of office (audited)

No payments for loss of office were made to directors during 2017.

Payments to past directors (audited)

There are no payments to past directors to disclose for 2017.

Total remuneration paid to the Chairman and non-executive directors for 2017 (audited)

The US Risk Committee was stood down in May 2017. The Board established a Technology and Innovation Committee with effect from 1 September 2017. This demonstrates the importance the Board places on overseeing and monitoring RBS's strategic direction in relation to technology and innovation. Fees for non-executive directors sitting on the NatWest Markets Working Group, which considers transitional arrangements in preparation for the establishment of the NatWest Markets Board, were brought into line with the other main Board Committees. A Board Oversight Committee was established in September 2017 in order to provide oversight of required enhancements to the governance and risk management practices within Ulster Bank Ireland DAC reporting to the Board, as appropriate. Fees were payable for this Committee with effect from 1 October 2017.

The total fees paid during 2017 are set out below.

Chairman (composite fee)	Fees		Benefits		Total	
	2017 £000	2016 £000	2017 £000	2016 £000	2017 £000	2016 £000
Howard Davies (1)	750	750	11	8	761	758

Non-executive directors (2)	Board £000	Noms & Gov £000	GAC £000	RemCo £000	BRC £000	SBC £000	TIC £000	NWM £000	GRG BOC £000	UBI DAC BOC £000	Other £000	Fees		Benefits		Total	
												2017 £000	2016 £000	2017 £000	2016 £000	2017 £000	2016 £000
Sandy Crombie (3)	77	15	30	60					15	4	30	231	223	30	38	261	261
Frank Dangeard	77				30		10	18				135	58	3	4	138	62
Alison Davis (4)	77	10		30		30	20					167	147	30	21	197	168
Morten Friis (3)	77		30		30						11	148	159	42	39	190	198
Robert Gillespie	77	15		30		30		30	15			197	210	11	10	208	220

Mark Seligman (4)(5)	59	5									4	68	—	4	—	72	—

Notes:

- (1) The benefits column for Howard Davies includes private medical cover.
- (2) In line with market practice, non-executive directors are reimbursed expenses incurred in connection with travel and attendance at Board meetings. HMRC has confirmed that it deems these expenses as taxable where the Board meetings take place at the company's main offices in London and Edinburgh. The value in the benefits column above, including restated amounts for 2016, is the value of the assistance provided together with the associated tax liability which RBS settles on behalf of the non-executive directors.
- (3) Under the 'Other' column, Sandy Crombie received fees as the Senior Independent Director. Morten Friis and Baroness Noakes received fees in respect of the US Risk Committee until it was stood down on 11 May 2017.
- (4) Alison Davis stepped down from the Nominations and Governance Committee and Penny Hughes, Baroness Noakes and Mark Seligman were appointed to the Nominations and Governance Committee during the year.
- (5) Mark Seligman joined the Board on 1 April 2017 and Yasmin Jetha joined the Board on 21 June 2017. John Hughes joined the Board on 21 June 2017 but stepped down with effect from 1 September 2017 due to health reasons. Mr Hughes made a voluntary decision to repay the fees that he received for this period.

Key to table:

Noms & Gov	Group Nominations and Governance Committee
GAC	Group Audit Committee
RemCo	Group Performance and Remuneration Committee
BRC	Board Risk Committee
SBC	Sustainable Banking Committee
TIC	Technology and Innovation Committee
NWM	NatWest Markets Working Group
GRG BOC	Board Oversight Committee for the GRG business areas
UBI DAC BOC	Board Oversight Committee for the Ulster Bank Ireland business

Annual report on remuneration

Implementation of remuneration policy in 2018

Details of remuneration to be awarded in 2018 to executive directors are set out below. The salary, benefits, pension and fixed share allowance arrangements are unchanged from 2017. The LTI award is due to be granted in March 2018 following the pre-grant assessment of performance over 2017. Details of the assessment are set out on page 93. Subject to a further pre-vest assessment of performance at the end of three years, the award will vest in equal amounts between years three to seven from the date of grant. LTI awards are also subject to malus during the vesting period and clawback provisions for a period of seven years from the date of grant, extended to ten years if events are under investigation at the end of the normal seven-year clawback period.

Executive directors' remuneration to be awarded in 2018

	Salary	Standard benefits	Pension 35% of salary	Fixed share allowance 100% of salary (1)	LTI award following pre-grant assessment
Chief Executive	£1,000,000	£26,250 (2)	£350,000	£1,000,000	£1,575,000
Chief Financial Officer	£800,000	£26,250	£280,000	£800,000	£1,440,000

Notes:

(1) Fixed share allowance will be payable broadly in arrears, currently in two instalments per year, and the shares will be released in equal tranches over a three year period.

(2) Amount shown relates to standard benefit funding. Executive directors are also entitled to benefits in line with the stated policy including assistance with travel and security arrangements and the Chief Executive is entitled to a flight allowance and assistance with tax return preparation as part of his relocation arrangements. The value of benefits will be disclosed each year in the total remuneration table.

Chairman and non-executive directors' fees for 2018

The level of fees for attendance at Board and Board Committee meetings remains unchanged from 2017. A summary of the annual fees payable for 2018 is set out below.

Chairman (composite fee)		£750,000
Non-executive director basic fee		£80,000
Senior Independent Director		£30,000
Board Risk Committee		
Group Audit Committee		
Group Performance and Remuneration Committee	Member	£30,000
Sustainable Banking Committee	Chairman	£60,000
Technology and Innovation Committee		
NatWest Markets Working Group		
GRG Board Oversight Committee	Member	£15,000
	Chairman	£30,000
Ulster Bank Ireland DAC Board Oversight Committee	Member	£15,000
Group Nominations and Governance Committee	Member	£15,000

Other directorships

Agreement from the Board must be sought before directors accept any additional roles outside of RBS. Procedures are in place to make sure that regulatory limits on the number of directorships held are complied with. The Board would also consider whether it was appropriate for executive directors to retain any remuneration receivable in respect of any external directorships, taking into account the nature of the appointment.

Neither of the executive directors holds a non-executive director role at any other company at this time. Details of the directorships held by other directors can be found in the biographies section of the corporate governance report.

Annual report on remuneration

Directors' interests in RBS shares and shareholding requirements

The shareholding requirement is to hold shares to the value of 400% of salary for the Chief Executive and 250% of salary for the Chief Financial Officer. Unvested shares from LTI awards will count on a net of tax basis towards meeting the shareholding requirement once the pre-vest performance assessment has taken place, at the end of the three year period. Once the respective retention periods have passed, directors are permitted to dispose of up to 25% of the shares received until the shareholding requirement is met. As set out below, the executive directors exceeded the shareholding requirement as at 31 December 2017. There are no shareholding requirements for non-executive directors.

Shareholding requirements for executive directors

Notes:

- (1) Ross McEwan holds 201,189 shares from his 2015 and 2016 fixed share allowances that are included in the total shares beneficially owned below but these have been excluded from the shareholding requirements calculation as he will transfer these shares to charity at the end of the retention period.
 (2) Value of shares held is based on the share price of £2.78 as at 31 December 2017. During the year ended 31 December 2017, the share price ranged from £2.15 to £2.86.

Share interests held by directors (audited)

	Shares owned at 31 December 2017 (or date of cessation if earlier)	Unvested long-term incentive awards (subject to performance conditions)
Ross McEwan	2,052,193	2,793,493
Ewen Stevenson	1,103,940	2,485,320
Howard Davies	41,000	
Sandy Crombie	20,000	
Frank Dangeard	-	
Alison Davis	20,000	
Morten Friis	20,000	
Robert Gillespie	25,000	
John Hughes	-	
Penny Hughes	562	
Yasmin Jetha	-	
Brendan Nelson	12,001	
Baroness Noakes	41,000	
Mike Rogers	-	
Mark Seligman	20,000	

The interests shown above include shares held by persons closely associated with the directors. As at 22 February 2018, there were no changes to the directors' interests in shares shown above. John Hughes stepped down from the Board on 1 September 2017 and did not hold any RBS shares at the date of cessation. Sandy Crombie stepped down from the Board with effect from 1 January 2018. Dr Lena Wilson joined the Board with effect from 1 January 2018 and as at 22 February 2018 she did not hold any RBS shares.

Annual report on remuneration

Total Shareholder Return (TSR) performance

The graph below shows the performance of RBS over the past nine years in terms of TSR compared with that of the companies comprising the FTSE 100 Index. This index has been selected because it represents a cross-section of leading UK companies. The TSR for FTSE UK banks for the same period has been added for comparison. *Source: Datastream*

Chief Executive pay over same period

	2009	2010	2011	2012	2013 (1)	2014	2015	2016	2017
Total remuneration (£000s)	1,647	3,687	1,646	1,646	393 (RM) 1,235 (SH)	1,878	3,492	3,702	3,487
Annual bonus against maximum opportunity	0%	85%	0%	0%	0%	n/a	n/a	n/a	n/a
LTI vesting rates against maximum opportunity	0%	0%	0%	0%	0%	73%	62%	56%	89%

Notes:

- (1) 2013 remuneration includes Stephen Hester (SH) as Chief Executive for the period to 30 September and Ross McEwan (RM) for the period from 1 October to 31 December.
- (2) Figures have been amended where appropriate to reflect any restatement of prior year amounts, for example, to reflect the actual rather than estimated value of LTI vestings as part of the total remuneration figure and any revisions to the value of benefits provided.
- (3) The maximum opportunity is set according to the approved policy and, for LTI awards granted in 2015 and onwards, the regulatory cap.

Change in Chief Executive pay compared with employees

The table below shows the percentage change in remuneration for the Chief Executive between 2016 and 2017 compared with the percentage change in the average remuneration of RBS employees based in the UK. In each case, remuneration is based on salary, benefits and annual bonus. The Chief Executive also receives a fixed share allowance as part of his fixed pay and this remains unchanged over the period.

	Salary 2016 to 2017 change	Benefits 2016 to 2017 change	Annual Bonus 2016 to 2017 change
Chief Executive (1)	0%	0%	n/a
UK employees (2)	3.91%	3.32%	10.69%

Notes:

- (1) Executive directors are not eligible for an annual bonus. Standard benefit funding for executive directors remained unchanged between 2016 and 2017. The benefits for the Chief Executive excludes other benefits such as travel assistance in connection with company business and relocation benefits, the value of which is disclosed each year in the total remuneration table.
- (2) The data represents full year average salary costs of the UK based employee population, which covers the majority of RBS employees and is considered to be the most representative comparator group. The increase in the average annual bonus is driven in part by the one time impact of the removal of LTI eligibility for employees below the Executive Committee in 2017, with these employees now eligible for an annual discretionary bonus award only.

Annual report on remuneration

Relative importance of spend on pay

The table below shows a comparison of remuneration expenditure against other distributions and charges.

	2017 £m	2016 £m	change
Remuneration paid to all employees (1)	4,217	4,670	(10%)
Distributions to holders of ordinary shares	—	—	—
Distributions to holders of preference shares and paid-in equity (2)	628	1,697	(63%)
Taxation and other charges recognised in the income statement:			
- Social security, Bank levy and Corporation tax	1,100	747	47%
- Irrecoverable VAT and other indirect taxes incurred by RBS (3)	533	697	(24%)

Notes:

(1) Remuneration paid to all employees represents total staff expenses per Note 3 to the Financial Statements, exclusive of social security and other staff costs.

(2) Includes final payment relating to the Dividend Access Share of £1,193 million in 2016.

(3) Input VAT and other indirect taxes not recoverable by RBS due to it being partially exempt.

The items above have been included as they reflect the key stakeholders for RBS and the major categories of distributions and charges made by RBS.

Consideration of matters relating to directors' remuneration

Membership of the Group Performance and Remuneration Committee

All members of the Committee are independent non-executive directors. The Committee held seven scheduled meetings in 2017 and a further three ad hoc meetings.

	Attended/ scheduled
Alison Davis	7/7
Robert Gillespie	7/7
Mike Rogers	6/7
Former member	
Sandy Crombie (Chairman)	7/7

Mike Rogers was unable to attend one of the meetings due to personal reasons. Sandy Crombie stepped down from the Committee and the Board with effect from 1 January 2018. At the same time, Robert Gillespie assumed the role of Chairman of the Committee and Mark Seligman became a member of the Committee.

The role and responsibilities of the Committee

The Committee is responsible for:

- approving the remuneration policy for all employees and reviewing the effectiveness of its implementation;
- reviewing performance and making recommendations to the Board on remuneration arrangements for executive directors;
- approving remuneration arrangements for members and formal attendees of the Executive Committee (including control function heads) and employees with total annual compensation which exceeds an amount determined by the Committee, currently £1 million; and
- setting the remuneration framework and principles for employees identified as Material Risk Takers falling within the scope of UK regulatory requirements.

In mitigating potential conflicts of interest, directors are not involved in decisions regarding their own remuneration and remuneration advisers are appointed by the Committee rather than management. The terms of reference of the Committee are reviewed annually and available on rbs.com.

Summary of the principal activity of the Committee in 2017

In addition to its usual business activities, in 2017 the Committee was actively involved in developing the new directors' remuneration policy with key stakeholders. Set out below is a summary of the Committee's other key considerations throughout the year.

First half of 2017

- 2016 performance reviews and remuneration arrangements for executive directors, Executive Committee members and attendees, and high earners.
- Executive Committee members' 2017 objectives.
- Development of the future pay construct for Executive Committee members.
- Approval of variable pay allocations and the 2016 Directors' Remuneration Report.
- Review of the vesting levels for LTI awards granted in 2014 and the interim assessment of 2015/16 LTI awards.
- Updates on changes in regulation and the regulatory attestation process.
- Review of domestic and international peer group pay and remuneration disclosures.
- Progress update on the Committee's performance evaluation.
- Review of pay outcomes for 2016.

Second half of 2017

- Half-year and year end performance reviews for executive directors, Executive Committee members and attendees.
- Executive Committee members' annual common objectives for 2018.
- Simplification of the pay construct for individuals below Executive Committee level.
- Review of retirement and leaver policies.
- Annual review of external advisers to the Committee.
- Remuneration governance across legal entities, international locations and the impact of ring-fencing.
- External stakeholder engagement plan.
- Approval of the 2017 employee Sharesave offer.
- Review of draft Directors' Remuneration Report for 2017.
- Risk / remuneration process review.
- The annual evaluation of the Committee's performance.

Annual report on remuneration

Performance evaluation process

The Committee has considered the findings of the annual review of the effectiveness of the Committee. This year the evaluation process was conducted internally by the Deputy Secretary and overseen by the Company Secretary.

The feedback was very positive with most issues being rated either excellent or good. Positive comments were received on the Committee's composition and how effective the Committee had been on focusing on 'big picture' issues as well as external themes and developments. The new executive director pay construct was seen as a good example of the Committee being forward thinking and innovative.

While the quality of information was generally considered to be good, some responses indicated there was scope for better comparative data and context. A number of Committee members and attendees suggested that, while the right things were on the agenda and meetings were well run, further consideration should be given to the number of meetings during the year.

The overall conclusion was that the Committee operated effectively during 2017 and fulfilled its remit as set out in its terms of reference. Actions were agreed as part of the evaluation and progress will be tracked and reported to the Committee biannually.

Advisers to the Committee

PricewaterhouseCoopers LLP (PwC) was appointed as the Committee's remuneration advisers on 14 September 2010. A formal review of potential advisers was undertaken in 2017. This considered the ability of the providers to offer high quality advice and strategic thinking, the strength and depth of the personnel and the associated level of fees. Following the review, the Committee agreed to retain the services of PwC. The Committee will continue to review the performance of its advisers each year. PwC is a signatory to the voluntary code of conduct in relation to remuneration consulting in the UK.

As well as receiving advice from PwC in 2017, the Committee took account at meetings of the views of the Chairman; the Chief Executive; the Chief Financial Officer; the Chief HR Officer; the Director of Reward, Pension & Benefits; the Company Secretary; and the Chief Risk Officer. The Committee also received input from the Board Risk Committee, the Group Audit Committee and the Sustainable Banking Committee.

PwC also provides professional services in the ordinary course of business including assurance, advisory, tax and legal advice to RBS subsidiaries. There are processes in place to ensure the advice received by the Committee is independent of any support provided to management.

The fees paid to PwC for advising the Committee in relation to directors' remuneration were charged on a time/cost basis until September 2017. A fixed fee structure has operated from October 2017 onwards to cover standard services with any exceptional items charged on a time/cost basis. The fees for 2017 in relation to directors' remuneration amounted to £170,476 excluding VAT (2016 - £214,706).

Statement of shareholder voting

The tables below set out the voting by shareholders on the resolutions to approve the Annual Report on Remuneration and the Directors' Remuneration Policy at the AGM on 11 May 2017.

Annual Report on Remuneration – 2017 AGM

For	Against	Total votes cast	Withheld
43,612,488,456 (99.60%)	173,420,916 (0.40%)	43,785,909,372	14,256,744

Directors' Remuneration Policy – 2017 AGM

For	Against	Total votes cast	Withheld
42,143,861,332 (96.33%)	1,603,968,780 (3.67%)	43,747,830,112	40,411,396

Shareholder dilution

The company meets its employee share plan obligations through a combination of new issue shares and market purchase shares. In line with the Investment Association's Principles of Remuneration, RBS's employee share plans contain monitored limits that govern the number of shares that may be issued to satisfy share plan awards.

Robert Gillespie
Chairman of the Group Performance and Remuneration Committee
22 February 2018

Other Remuneration Disclosures

This section contains a number of voluntary disclosures on remuneration as well as disclosures which are required in accordance with Article 450 of the Capital Requirements Regulation. This section should be read in conjunction with both the Directors' Remuneration Report and the Annual Report on Remuneration (pages 84 to 100).

Remuneration of the eight highest paid senior executives below Board (1)

	Executive 1 £000	Executive 2 £000	Executive 3 £000	Executive 4 £000	Executive 5 £000	Executive 6 £000	Executive 7 £000	Executive 8 £000
Fixed pay (cash)	650	700	738	800	800	600	450	381
Fixed allowances	650	700	738	800	800	600	225	166
Annual bonus	—	—	—	—	—	—	—	—
Long-term incentive awards (vested value)	638	437	346	109	109	365	—	73
Total remuneration (2)	1,938	1,837	1,822	1,709	1,709	1,565	675	620

Notes:

(1) Remuneration earned in 2017 for eight members of the Executive Committee.

(2) Disclosure includes prior year long-term incentive awards which vested during 2017. The amounts shown reflect the value of vested awards using the share price on the day the awards vested.

All staff total remuneration

the average salary for all employees is £32,785

12,445 employees earn between £50,000 and £100,000

5,025 employees earn between £100,000 and £250,000

934 employees earn total remuneration over £250,000

Total remuneration by band for all employees earning >€1 million

	Number of employees 2017
€1.0m - €1.5m	50
€1.5m - €2.0m	18
€2.0m - €2.5m	9
€2.5m - €3.0m	2
€3.0m - €3.5m	1
€3.5m - €4.0m	1
€4.0m - €4.5m	1
€4.5m - €5.0m	0
€5.0m - €6.0m	1
Total	83

Notes:

(1) Total remuneration in the table above includes fixed pay, pension and benefit funding and variable pay.

(2) Executive directors are not included. The table is based on an exchange rate where applicable of €1.141 to £1 as at 31 December 2017.

Employees that earned total remuneration of over €1 million in 2017 represent just 0.1% of our employees. This number reduces to 68 employees if we exclude pension and benefit funding.

These employees include those who manage major businesses and functions with responsibility for significant assets, earnings or areas of strategic activity and can be grouped as follows:

- The Chief Executives responsible for each area and their direct reports.
- Employees managing large businesses within a franchise.
- Income generators responsible for high levels of income including those involved in managing trading activity and supporting clients with more complex financial transactions, including financial restructuring.
- Those responsible for managing our balance sheet and liquidity and funding positions across the business.
- Employees who managed the successful disposal of assets in Capital Resolution, reducing RBS's capital requirements.

Other Remuneration Disclosures

Our remuneration policy for all employees

The remuneration policy supports the business strategy and is designed to promote the long-term success of RBS. It aims to reward employees for delivering good performance provided this is achieved in a manner consistent with our values and within acceptable risk parameters. The remuneration policy applies the same principles to all employees, including Material Risk Takers (MRTs), with some minor adjustments to the policy where necessary to comply with local regulatory requirements. The key elements of the policy are set out below.

Element of pay	Objective	Operation
Base salary	To provide a competitive level of fixed cash remuneration.	Base salaries are reviewed annually and should reflect the talents, skills and competencies that the individual brings to the business.
Role-based allowance	To provide fixed pay that reflects the skills and experience required for the role.	<p>Role-based allowances are a fixed allowance which form an element of the employee's overall fixed remuneration for regulatory requirements and are based on the role the individual performs.</p> <p>The allowances are pre-determined, permanent, and can only be adjusted or cancelled if an employee relinquishes the role or responsibilities which made them eligible for the allowance. They are not intended to be adjusted other than where there is a change of role.</p> <p>They are delivered in cash and/or shares depending on the level of the allowance and the seniority of the recipient. Shares are subject to an appropriate retention period, not less than six months.</p>
Benefits and pension	To provide a range of flexible and competitive benefits.	<p>In most jurisdictions, employee benefits or a cash equivalent are provided from a flexible benefits account.</p> <p>Pension forms part of fixed remuneration and RBS does not as a rule award discretionary pension benefits.</p>
Annual bonus	To support a culture where employees recognise the importance of serving customers well and are rewarded for superior performance.	<p>The annual bonus pool is based on a balanced scorecard of measures including Financial, Customers, People and Risk & Conduct measures. Allocation from the pool depends on performance of the franchise or function and the individual.</p> <p>Individual performance assessment is supported by a structured performance management framework. This is designed to assess performance against longer term business requirements across a range of financial and non-financial metrics as well as an evaluation of adherence to internal controls and risk management.</p> <p>The performance measures are set in line with the business strategy and typically include: financial measures such as return on equity; cost:income ratio; expenses and headcount (dependent on the franchise / function); net promoter score and/or customer satisfaction to assess customer advocacy; and internal survey results to assess progress in employee engagement.</p> <p>Risk and conduct performance is also taken into account. Control functions are assessed independently of the business units that they oversee.</p> <p>For awards made in respect of the 2017 performance year, immediate cash awards continue to be limited to a maximum of £2,000. In line with regulatory requirements, a significant proportion of annual bonus awards for our more senior employees is deferred and includes partial delivery in shares.</p> <p>The deferral period varies from three years for standard MRTs, rising to five years for individuals identified as Risk Manager MRTs and seven years for Senior Managers under the UK's Senior Managers Regime. All awards are subject to malus and clawback provisions. For MRTs, a minimum of 50% of any annual bonus is delivered in shares and a twelve month retention period will apply post vesting in line with regulatory requirements.</p>

Other Remuneration Disclosures

Element of pay	Objective	Operation
Long-term incentive awards	To support a culture where good performance against a full range of measures will be rewarded. To encourage the creation of value over the long term and to align rewards with the returns to shareholders.	<p>RBS provides certain employees in senior roles with long-term incentive awards. For awards made in respect of the 2017 performance year, the population receiving long-term incentive awards will be limited to executive directors and members of the RBS Executive Committee.</p> <p>Awards will be subject to pre-grant and pre-vest performance assessments that consider progress against Financial, Risk & Operations, Customers and People & Culture measures, aligned with RBS's strategic aims. Vesting will take place over a three to seven year period following grant.</p> <p>The number of shares that vest under the award may vary between 0% -100% depending on the performance achieved. Awards are subject to malus and clawback provisions and a twelve month retention period applies post vesting.</p>
Shareholding requirements	To promote long-term alignment between senior executives and shareholders.	Executive directors and members of the Executive Committee are required to build up and hold a shareholding equivalent to a percentage of salary. There is a restriction on the number of shares that individuals can sell until the requirement is met.
Other share plans	To offer employees in certain jurisdictions the opportunity to acquire shares.	Employees in certain countries are eligible to contribute to share plans which are not subject to performance conditions.

Criteria for identifying MRTs

The European Banking Authority has issued criteria for identifying MRT roles, those staff whose professional activities have a material influence over RBS's performance or risk profile. The criteria are both qualitative (based on the nature of the role) and quantitative (for example those who exceed the stipulated total remuneration threshold based on the previous year's total remuneration).

The qualitative criteria can be summarised as: staff within the management body; senior management; other staff with key functional or managerial responsibilities; staff, individually or as part of a Committee, with authority to approve new business products or to commit to credit risk exposures and market risk transactions above certain levels. The quantitative criteria are: individuals earning €500,000 or more in the previous year; individuals in the top 0.3% of earners in the previous year; individuals who earned more than the lowest paid identified staff per the qualitative criteria, subject to specific exceptions in the criteria. In addition to the qualitative and quantitative criteria, RBS has applied its own minimum standards to identify roles that are considered to have a material influence over its risk profile.

Personal hedging strategies

In accordance with UK regulatory requirements and internal dealing rules that apply to employees, the conditions attached to discretionary share-based awards prohibit the use of any personal hedging strategies to lessen the impact of a reduction in value of such awards. These conditions are explicitly acknowledged and accepted by employees when any share-based awards are granted.

Other Remuneration Disclosures

Remuneration of MRTs

The quantitative disclosures below are made in accordance with Article 450 of the EU Capital Requirements Regulation in relation to 637 employees who have been identified as MRTs.

1. Number of MRTs by business area

Number of beneficiaries	Senior management	Other MRTs	Total
Board Executive Directors	2	0	2
Board Non-Executive Directors	0	12	12
NatWest Markets	1	248	249
Personal & Business Banking	1	71	72
Commercial & Private Banking	1	91	92
Corporate Functions	2	96	98
Internal Control Functions	1	73	74
All Other Business Areas	2	36	38
Total	10	627	637

2. Aggregate remuneration expenditure

Aggregate remuneration expenditure in respect of 2017 performance was as follows:

	Senior management	Other MRTs	Total
	£m	£m	£m
Number of beneficiaries	10	627	637
Board Executive Directors	7.3	—	7.3
Board Non-Executive Directors	—	2.7	2.7
NatWest Markets	3.4	166.7	170.1
Personal & Business Banking	2.5	21.3	23.8
Commercial & Private Banking	3.1	34.2	37.3
Corporate Functions	2.7	37.8	40.5
Internal Control Functions	1.7	23.4	25.1
All Other Business Areas	5.9	20.0	25.9
Total	26.5	306.1	332.6

3. Amounts and form of fixed and variable remuneration

Fixed remuneration consisted of salaries, allowances, pension and benefit funding.

Fixed remuneration

	Senior management	Other MRTs	Total
	£m	£m	£m
Number of beneficiaries	10	627	637
Board Executive Directors	4.3	—	4.3
Board Non-Executive Directors	—	2.7	2.7
NatWest Markets	1.9	101.1	103.0
Personal & Business Banking	1.4	15.7	17.2
Commercial & Private Banking	1.8	22.0	23.7
Corporate Functions	1.6	25.6	27.2
Internal Control Functions	1.7	17.3	18.9
All Other Business Areas	3.5	12.9	16.3
Total	16.1	197.2	213.3

Variable remuneration awarded for 2017 performance

Variable remuneration consisted of a combination of annual bonus and long-term incentive awards, deferred over a three to seven year period in accordance with regulatory requirements. Under the RBS bonus deferral structure, immediate cash awards are limited to £2,000 per employee.

Long-term incentive awards vest subject to the extent to which performance conditions are met and can result in zero payment.

Annual bonus

	Senior management	Other MRTs	Total

Other Remuneration Disclosures

4. Outstanding deferred remuneration through 2017

The table below includes deferred remuneration awarded or paid out in 2017 in respect of prior performance years. Deferred remuneration reduced during the year relates to long-term incentives lapsed when performance conditions are not met, long-term incentives and deferred awards forfeited on leaving and malus adjustments of prior year deferred awards and long-term incentives.

Category of deferred remuneration

	Senior Management £m	Other MRTs £m	Total £m
Unvested from prior year	36.5	159.3	195.8
Awarded during year	16.2	122.5	138.7
Paid out	7.1	97.8	104.9
Reduced from prior years	3.9	16.5	20.4
Unvested at year end	41.7	167.5	209.2

5. Guaranteed Awards (including 'Sign-on' awards) and Severance Payments

RBS does not offer 'Sign-on awards'. Guaranteed awards may only be granted to new hires in exceptional circumstances in compensation for awards foregone in their previous company and are limited to the first year of service. No new hire guarantees were made in respect of the 2017 performance year.

Severance payments and / or arrangements can be made to employees who leave RBS in certain situations, including redundancy. Such payments are determined by a pre-determined formula set out within the relevant social plans, policies, agreements or local laws. Where local laws permit, there is a cap on the maximum amount that can be awarded.

No severance payments were made during the financial year in excess of contractual payments, local policies, standards or statutory amounts, other than two exceptions. One payment of £45,500 was made to a former employee in Corporate Functions as a payment in lieu of contractual pension entitlements and one payment of £3,600 was made to a former employee in Commercial & Private Banking as a small variation of standard terms. Where required, remuneration is constrained within the limit of variable to fixed remuneration in accordance with EBA rules.

6. Ratio between fixed and variable remuneration

The variable component of total remuneration for MRTs at RBS shall not exceed 100% of the fixed component. Based on the information disclosed below, the average ratio between fixed and variable remuneration for 2017 is approximately 1 to 0.56. The majority of MRTs are based in the UK.

Ratio of fixed to variable	Senior Management	Other MRTs	Total
Number of beneficiaries	9	515	524
	ratio	ratio	ratio
Board Executive Directors	1 to 0.7	—	1 to 0.7
Board Non-Executive Directors	—	1 to 0	1 to 0
NatWest Markets	1 to 0.79	1 to 0.65	1 to 0.65
Personal & Business Banking	1 to 0.73	1 to 0.35	1 to 0.38
Commercial & Private Banking	1 to 0.74	1 to 0.56	1 to 0.57
Corporate Functions	1 to 0.74	1 to 0.48	1 to 0.49
Internal Control Functions	1 to 0	1 to 0.36	1 to 0.33
All Other Business Areas	1 to 0.69	1 to 0.55	1 to 0.58
Consolidated	1 to 0.65	1 to 0.55	1 to 0.56

7. Discount Rate 2017

Under CRD IV regulations, a notional discount is available which allows variable pay to be awarded at a level that would otherwise exceed the 1:1 ratio, provided that at least 25% of variable pay is delivered 'in instruments' (shares) and deferred over five years. The discount rate was not used for remuneration awarded in respect of the 2017 performance year.

Compliance report

Statement of compliance

RBS is committed to high standards of corporate governance, business integrity and professionalism in all its activities.

Throughout the year ended 31 December 2017, RBS has complied with all of the provisions of the UK Corporate Governance Code issued by the Financial Reporting Council dated April 2016 (the "Code") except in relation to provision (D.2.2) that the Group Performance and Remuneration Committee should have delegated responsibility for setting remuneration for the Chairman and executive directors. RBS considers that this is a matter which should rightly be reserved for the Board and this is an approach RBS has adopted for a number of years. Remuneration for the executive directors is first considered by the Group Performance and Remuneration Committee which then makes recommendations to the Board for consideration. This approach allows all non-executive directors, and not just those who are members of the Group Performance and Remuneration Committee, to participate in decisions on the executive directors' and the Chairman's remuneration and also allows the executive directors to input to the decision on the Chairman's remuneration. The Board believes this approach is very much in line with the spirit of the Code and no director is involved in decisions regarding his or her own remuneration. We do not anticipate any changes to our approach on this aspect of the Code. Information on how RBS has applied the main principles of the Code can be found in the Corporate governance report on pages 50 to 105. A copy of the Code can be found at www.frc.org.uk.

RBS has also implemented the recommendations arising from the Walker Review and complied in all material respects with the Financial Reporting Council Guidance on Audit Committees issued in September 2012 and April 2016.

Under the US Sarbanes-Oxley Act of 2002, specific standards of corporate governance and business and financial disclosures and controls apply to companies with securities registered in the US. RBS complies with all applicable sections of the US Sarbanes-Oxley Act of 2002, subject to a number of exceptions available to foreign private issuers.

Internal control

The Board of Directors is responsible for the system of internal controls that is designed to maintain effective and efficient operations, compliant with applicable laws and regulations. The system of internal controls is designed to manage, or mitigate, risk to an acceptable residual level rather than eliminate it entirely. Systems of internal control can only provide reasonable and not absolute assurance against material misstatement, fraud or loss.

Ongoing processes for the identification, evaluation and management of the principal risks faced by RBS operated throughout the period from 1 January 2017 to 22 February 2018, the date the directors approved the Annual Report & Accounts.

These processes include the semi-annual Control Environment Certification process which requires senior members of the executive and management to assess the adequacy and effectiveness of their internal control frameworks and certify that their business or function is compliant with the requirements of Sarbanes-Oxley Section 404 and the UK Corporate Governance Code Section C2. The policies that govern these processes – and reports on internal controls arising from them – are reviewed by the Board and meet the requirements of the Financial Reporting Council's Guidance On Risk Management Internal Control & Related Financial & Business Reporting issued in September 2014.

RBS operates a three lines of defence model, which provides a framework for responsibilities and accountabilities across the organisation. As part of its second line of defence role, the Risk function oversees and challenges the firm-wide management of risk and the efficacy of the related controls. In addition, the Risk function is responsible for developing material risk policies and strategic frameworks for the business to use.

The effectiveness of RBS's internal controls is reviewed regularly by the Board, the Group Audit Committee and the Board Risk Committee. Internal Audit undertakes independent assurance activities and provides reports to the Board and executive management on the quality and effectiveness of governance, risk management and internal controls to monitor, manage and mitigate risks in achieving the bank's objectives. In addition, the Board receives a risk management report at each scheduled Board meeting. Executive management committees in each of the RBS businesses also receive regular reports on significant risks facing their business and how they are being controlled. Details of the bank's approach to risk management are given in the Capital & Risk Management section.

In recent years, RBS has made progress in strengthening its control environment. Throughout 2017, there was a sustained focus on consolidating progress and driving further improvements across each of the franchises and functions. In particular, this resulted in measurable improvement in the Personal & Business Banking (PBB) franchise and the Chief Administration Office (CAO) among others. Work also continued to develop and enhance both the risk appetite framework and the operational risk management framework in support of a robust and holistic control approach. In parallel with this, further progress was made in embedding a consistent end-to-end risk and control assessment process. While more work is required, and the journey of improvement will continue, significant steps forward have been made in terms of developing, enhancing and embedding a strong and dynamic risk culture across RBS.

The remediation of known control issues remained an important focus of the Group Audit Committee and the Board Risk Committee during 2017. For further information on their oversight of remediation of the most significant issues, please refer to the Report of the Group Audit Committee and the Report of the Board Risk Committee.

Compliance report

The Group Audit Committee has received confirmation that management has taken, or is taking, action to remedy significant failings or weaknesses identified through RBS's control framework. The Group Audit Committee and the Board Risk Committee will continue to focus on such remediation activity, particularly in view of the transformation agenda.

While not being part of the bank's system of internal control, the bank's independent auditors present to the Group Audit Committee reports that include details of any significant internal control deficiencies they have identified. Further, the system of internal controls is also subject to regulatory oversight in the UK and overseas. Additional details of regulatory oversight are given in the Capital & Risk Management section.

Internal control over financial reporting

RBS is required to comply with Section 404 of the US Sarbanes-Oxley Act of 2002 and assess the effectiveness of internal control over financial reporting as of 31 December 2017.

RBS has assessed the effectiveness of its internal control over financial reporting as of 31 December 2017 based on the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in the 2013 publication of 'Internal Control - Integrated Framework'.

Based on its assessment, management has concluded that, as of 31 December 2017, RBS's internal control over financial reporting is effective.

RBS's auditors have audited the effectiveness of RBS's internal control over financial reporting and have given an unqualified opinion.

Management's report on RBS's internal control over financial reporting will be filed with the Securities and Exchange Commission as part of the 2017 Annual Report on Form 20-F.

Disclosure controls and procedures

As required by US regulations, management (including the Chief Executive and Chief Financial Officer) have conducted an evaluation of the effectiveness and design of RBS's disclosure controls and procedures (as defined in the Exchange Act rules) as at 31 December 2017. Based on this evaluation, management (including the Chief Executive and Chief Financial Officer) concluded that RBS's disclosure controls and procedures were effective as of the end of the period covered by this annual report.

Changes in internal control

There was no change in RBS's internal control over financial reporting that occurred during the period covered by this report that has materially affected, or is reasonably likely to materially affect, RBS's internal control over financial reporting.

The New York Stock Exchange

As a foreign private issuer with American Depository Shares representing ordinary shares, preference shares and debt securities listed on the New York Stock Exchange (the "NYSE"), RBS is not required to comply with all of the NYSE standards applicable to US domestic companies (the "NYSE Standards") provided that it follows home country practice in lieu of the NYSE Standards and discloses any significant ways in which its corporate governance practices differ from the NYSE Standards. RBS is also required to provide an Annual Written Affirmation to the NYSE of its compliance with the mandatory applicable NYSE Standards.

The Group Audit Committee fully complies with the mandatory provisions of the NYSE Standards (including by reference to the rules of the Exchange Act) that relate to the composition, responsibilities and operation of audit committees. In April 2017 RBS submitted its required annual written affirmation to the NYSE confirming its full compliance with those and other applicable provisions. More detailed information about the Group Audit Committee and its work during 2017 is set out in the Group Audit Committee report on pages 65 to 72.

RBS has reviewed its corporate governance arrangements and is satisfied that these are consistent with the NYSE Standards, subject to the following departures: (i) NYSE Standards require the majority of the Board to be independent. The NYSE Standards contain different tests from the Code for determining whether a director is independent. RBS follows the Code's requirements in determining the independence of its directors and currently has 9 independent non-executive directors, one of whom is the senior independent director (ii) The NYSE Standards require non-management directors to hold regular sessions without management present and that independent directors meet at least once a year. The Code requires the Chairman to hold meetings with non-executive directors without the executives present and non-executive directors are to meet without the Chairman present at least once a year to appraise the Chairman's performance and RBS complies with the requirements of the Code. (iii) The NYSE Standards require that the nominating/corporate governance committee of a listed company be composed entirely of independent directors.

Compliance report

The Chairman of the Board is also the Chairman of the Group Nominations and Governance Committee, which is permitted under the Code (since the Chairman was considered independent on appointment). The terms of reference of the Group Nominations and Governance Committee differ in certain limited respects from the requirements set out in the NYSE Standards, including because the Group Nominations and Governance Committee does not have responsibility for overseeing the evaluation of management (iv) The NYSE standards require that the compensation committee of a listed company be composed of entirely of independent directors. Although the members of the Group Performance and Remuneration Committee are deemed independent in compliance with the provisions of the Code, the Board has not assessed the independence of the members of the Group Performance and Remuneration Committee and the Group Performance and Remuneration Committee has not assessed the independence of any compensation consultant, legal counsel or other adviser, in each case, in accordance with the independence tests prescribed by the NYSE Standards.

The NYSE Standards require that the compensation committee must have direct responsibility to review and approve the Chief Executive's remuneration.

As stated at the start of this Compliance Report, in the case of RBS, the Board, rather than the Group Performance and Remuneration Committee, reserves the authority to make the final determination of the remuneration of the Chief Executive (v) The NYSE Standards require listed companies to adopt and disclose corporate governance guidelines. Throughout the year ended 31 December 2017, RBS has complied with all of the provisions of the Code (subject to the exception described above) and the Code does not require RBS to disclose the full range of corporate governance guidelines with which it complies (vi) The NYSE Standards require listed companies to adopt and disclose a code of business conduct and ethics for directors, officers and employees, and promptly disclose any waivers of the code for directors or executive officers. RBS has adopted a code of conduct which is supplemented by a number of key policies and guidance dealing with matters including , among others, anti-bribery and corruption, anti-money laundering, sanctions, confidentiality, inside information, health, safety and environment, conflicts of interest, market conduct and management records. This code of conduct applies to all officers and employees and is fully aligned to the PRA and FCA Conduct Rules which apply to all directors. The Code of Conduct is available to view on RBS's website at rbs.com.

This Compliance report forms part of the Corporate governance report and the Report of the directors.

Report of the directors

The directors present their report together with the audited accounts for the year ended 31 December 2017.

Group structure

The company is a holding company owning the entire issued ordinary share capital of The Royal Bank of Scotland plc, the principal direct operating subsidiary undertaking of the company. Details of the principal subsidiary undertakings of the company are shown in Note 7 on page 340. A full list of subsidiary undertakings of the company is shown in Note 15 on pages 344 to 356.

Following placing and open offers in December 2008 and in April 2009, HM Treasury (HMT) owned approximately 70.3% of the enlarged ordinary share capital of the company. In December 2009, the company issued a further £25.5 billion of new capital to HMT in the form of B shares. HMT sold 630 million of its holding of the company's ordinary shares in August 2015. In October 2015 HMT converted its entire holding of 51 billion B shares into 5.1 billion new ordinary shares of £1 each in the company.

At 31 December 2017, HMT's holding in the company's ordinary shares was 70.5%.

RBS Group ring-fencing

The UK ring-fencing legislation requiring the separation of essential banking services from investment banking services will take effect from 1 January 2019.

To comply with these requirements it is RBS's intention to place the majority of the UK and Western European banking business in ring-fenced banking entities under an intermediate holding company. NatWest Markets Plc (NatWest Markets) will be a separate non ring-fenced bank and The Royal Bank of Scotland International (Holdings) Limited (RBSI Holdings) will also be placed outside the ring-fence, both as direct subsidiaries of RBSG.

The final ring-fenced legal structure and the actions to be taken to achieve it, remain subject to, amongst other factors, additional regulatory, Board and other approvals as well as employee information and consultation procedures. All such actions and their respective timings may be subject to change, or additional actions may be required, including as a result of external and internal factors including further regulatory, corporate or other developments.

On 1 January 2017, RBS made a number of key changes to the legal hierarchy of its subsidiaries to support the move towards a ring-fenced structure. As part of continuing preparation to deliver a fully compliant ring-fencing structure by 1 January 2019, it plans to undertake a further series of actions as follows:

November 2017

On 21 November 2017, The Royal Bank of Scotland plc (RBS plc) applied to the Court of Session in Edinburgh (the Court) to initiate a "Ring-Fencing Transfer Scheme" (RFTS) under the Financial Services and Markets Act 2000, including:

- Transfer its UK retail & commercial banking business to Adam & Company PLC (Adam);
- Transfer its covered bonds in issue and Mentor business to National Westminster Bank Plc (NatWest); and
- Transfer branches and other properties to either NatWest or Adam.

The RFTS is expected to take effect over the weekend of 28-30 April 2018. At the same time, RBS plc will be renamed "NatWest Markets Plc", Adam will be renamed "The Royal Bank of Scotland plc" and assume banknote-issuing responsibility.

May 2018

In May 2018, RBS intends to commence, in the Court, a second RFTS to transfer certain derivatives from NatWest to NatWest Markets Plc (former RBS plc). If approved by the Court, the transfers are expected to be implemented in August 2018.

July 2018

In July 2018, RBS plans to restructure the NatWest Markets Plc (former RBS plc) capital structure via a Court approved capital reduction. As part of this restructure, the shares in NatWest Holdings Limited, which owns the ring-fenced sub-group, will be distributed to RBSG. This will separate the ring-fenced sub-group from the non-ring-fenced entities, as required by the ring-fencing legislation.

January 2019

Once the RFTS, other restructuring and the ring-fencing legislation is in force:

Ring-fenced activities

- RBS plc (former Adam) will manage the RBS branded banking business in its UK branch network;
- NatWest will continue to manage NatWest branded banking business and its branch network in the UK and Western Europe;
- NatWest will operate as the shared service provider to the rest of the Group and will act as the market-facing arm for the ring-fenced banking group's payments and hedging activities;
- Adam will continue to be a trading name of RBS plc (former Adam) and will continue to operate its private banking and wealth management activities;
- Coutts & Company will continue its private banking and wealth management activities; and
- Ulster Bank Limited and Ulster Bank Ireland DAC will continue to operate in Northern Ireland and the Republic of Ireland respectively.

Report of the directors

Non-ring-fenced activities

- NatWest Markets Plc (former RBS plc) will continue to undertake RBS's trading and investment banking activities; and
- RBS International Limited (RBSI), along with Isle of Man Bank, will continue to serve the markets and customers it serves today. In addition, RBSI becomes the focal point for funds banking activity through its recently opened London branch.

Segmental reporting

Segmental reorganisation and business transfers

RBS continues to deliver on its plan to build a strong, simple and fair bank for both customers and shareholders. To support this, and in preparation for the UK ring-fencing regime, the previously reported operating segments were realigned in Q4 2017 and a number of business transfers completed.

Segmental reorganisation

The previously reported operating segments are now realigned and comparatives have been re-presented as follows:

- The former Williams & Glyn reportable operating segment has been integrated into the UK PBB reportable segment;
- The former Capital Resolution reportable operating segment has been integrated into the NatWest Markets reportable segment, with the exception of the costs in relation to the RMBS claims, which have been transferred to the Central & Other items reportable segment; and
- The RBSI reportable operating segment is no longer presented within the CPB franchise.

Business transfers

On 1 October 2017 the following changes were made to RBS's businesses, which impacts its financial reporting but where comparatives have not been re-presented:

- Shipping and other activities, which were formerly in Capital Resolution, were transferred from the NatWest Markets reportable segment to the Commercial Banking reportable segment.
- UK PBB Collective Investment Funds (CIFL) business was transferred to the Private Banking reportable segment in order to better serve customers.
- The RBS International (RBSI) reportable operating segment was aligned to the legal entity The Royal Bank of Scotland International (Holdings) Limited. This predominantly involved transfers from Private Banking, and Services and Functions within Central items & other in preparation for the implementation of the UK ring-fencing regime.
- Commercial Banking whole business securitisations and relevant financial institutions (RFI) were transferred to NatWest Markets during December 2017. RFIs are prohibited from being within the ring-fence due to their nature and exposure to global financial markets. The move is in preparation for the implementation of the UK ring-fencing regime.

Reportable operating segments

Following the changes detailed the reportable operating segments are as follows:

Personal & Business Banking (PBB) comprises two reportable segments: UK Personal & Business Banking (UK PBB) and Ulster Bank RoI. UK PBB serves individuals and mass affluent customers in the UK together with small businesses (generally up to £2 million turnover). UK PBB includes Ulster Bank customers in Northern Ireland. Ulster Bank RoI serves individuals and businesses in the Republic of Ireland (RoI).

Commercial & Private Banking (CPB) comprises two reportable segments: Commercial Banking and Private Banking. Commercial Banking serves commercial and corporate customers in the UK and Western Europe. Private Banking serves UK connected high net worth individuals.

RBS International (RBSI) serves retail, commercial, corporate and financial institution customers in Jersey, Guernsey, Isle of Man and Gibraltar and financial institution customers in Luxembourg and London.

NatWest Markets offers corporate and institutional customers global market access, providing them with trading, risk management and financing solutions through its trading and sales operations in London, Singapore and Stamford and sales offices in Dublin, Hong Kong and Tokyo.

Central items & other includes corporate functions, such as RBS treasury, finance, risk management, compliance, legal, communications and human resources. Central functions manages RBS capital resources and RBS-wide regulatory projects and provides services to the reportable segments. Balances in relation to legacy litigation issues and the international private banking business are included in the relevant periods.

Allocation of central balance sheet items

RBS allocates all central costs relating to Services and Functions to the business using appropriate drivers, these are reported as indirect costs in the segmental income statements. Assets (and risk-weighted assets) held centrally, mainly relating to RBS Treasury, are allocated to the business using appropriate drivers.

Results and dividends

The profit attributable to the ordinary shareholders of the Group for the year ended 31 December 2017 amounted to £752 million compared with a loss of £6,955 million for the year ended 31 December 2016, as set out in the consolidated income statement on page 244.

The company did not pay a dividend on ordinary shares in 2015, 2016 or 2017.

In the context of prior macro-prudential policy discussions, the Board decided to partially neutralise any impact on Core Tier 1 capital of coupon and dividend payments in respect of 2016 and 2017 Group hybrid capital instruments through equity issuances of c.£300 million. Consequently, approximately £300 million was raised each year in 2016 and 2017 through the issue of new ordinary shares and the Board has decided a further £300 million of new equity will be issued during the course of 2018 to again partially neutralise the CET1 impact of coupon and dividend payments.

Business review

Activities

RBS is engaged principally in providing a wide range of banking and other financial services. Further details of the organisational structure and business overview of RBS, including the products and services provided by each of its operating segments and the markets in which they operate are contained in the Business review on pages 117 to 148. Details of the strategy for delivering the company's objectives can be found in the Strategic report.

Risk factors

RBS's future performance and results could be materially different from expected results depending on the outcome of certain potential risks and uncertainties. Full details of these and other risk factors are set out on pages 372 to 402.

The reported results of RBS are also sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. Details of RBS's critical accounting policies and key sources of accounting judgments are included in Accounting policies on pages 251 to 263.

RBS's approach to risk management, including its financial risk management objectives and policies and information on RBS's exposure to market, credit, liquidity and funding risk, is discussed in the Capital and risk management section.

Financial performance

A review of RBS's performance during the year ended 31 December 2017, including details of each operating segment, and RBS's financial position as at that date is contained in the Business review on pages 117 to 148!Syntax Error, #.

RBS Holdings N.V. (formerly ABN AMRO Holding N.V.)

In 2017 NatWest Markets announced its plan to repurpose the existing licence in the Netherlands. This proposed approach should minimise disruption to the business and allow it to continue to serve customers in the event of any loss of EU passporting, as a result of the UK's departure from the EU. NatWest Markets and RBS N.V are working together to ensure the banking licence is maintained and the entity is made operationally ready. In parallel, work continues to decrease the RBS N.V. legacy assets and liabilities further.

Business divestments

Following the change of terms in respect of the business previously described as Williams & Glyn and agreed with the European Commission in September 2017, RBS will make a £425 million contribution to a Capability and Innovation Fund to be established to support competition in UK SME banking. The agreed alternative remedy package also requires a £350 million Incentivised Switching Scheme which will provide funding for eligible challenger bodies to help them incentivise SME customers to switch their accounts and loans from RBS. Should the uptake within the Incentivised Switching Scheme not be sufficient, RBS may be required to make a further contribution, capped at £50 million.

HMT is establishing an Independent Body to administer the Capability and Innovation fund and oversee and control the incentivised switching scheme. Once established the Independent Body, HMT and RBS will enter into the Framework Agreement Deed and fund the remedies.

Employees

Our colleagues

As at 31 December 2017, RBS employed 71,200 people (full-time equivalent basis, including temporary workers) throughout the world. Details of related costs are included in Note 3 on the consolidated accounts. The Board has considered ring-fencing preparations during the year and in advance of the legislation taking effect on 1 January 2019.

Engaging our colleagues is critical to delivering on our strategy and ambition as a bank. Further details on our approach can be found on page 33 and 34 of the strategic report.

Building a healthy culture

Building a healthy culture that embodies Our Values is one of RBS's core priorities.

Our Values guide the way RBS identify the right people to serve our customers well, and how RBS manage, engage and reward colleagues. They are at the heart of both Our Standards (the bank wide behavioural framework) and Our Code (the bank wide Code of Conduct).

Engaging our colleagues

RBS know that building an engaged, healthy and inclusive workforce is crucial to achieving our ambition. Every year RBS asks colleagues to share their thoughts on what it's like to work here via our annual colleague survey.

The 2017 results were the most positive we've seen in recent times. Key measures of engagement, leadership and our culture have improved significantly, and RBS are now above the global financial services norm in the majority of our survey categories.

Rewarding our colleagues

RBS's approach to performance management provides clarity for our colleagues about how their contribution links to our ambition. It recognises behaviour that supports our values and holds individuals to account for behaviour and performance that does not.

RBS have a focus on paying the right wage to colleagues and the RBS rates of pay continue to exceed the Living Wage Foundation Benchmarks.

Developing our colleagues

RBS continued to deliver 'Determined to Lead', which is the core management system for the bank. It provides consistent tools to lead and engage colleagues. This programme has continued in 2017 with over 3,000 leaders participating.

In 2017 we launched the next stage in Service Excellence training, our customer service programme and had over 16,000 colleagues complete Level one.

Report of the directors

Professionalising colleagues is important to RBS. We continue to work closely with the Chartered Banker Institute (CBI) and Chartered Banker Professional Standards Board (CB:PSB) to offer RBS colleagues professional qualifications. In 2017 over 3,000 of colleagues completed their CBI qualification and 94% achieved the CB:PSB Foundation Standard.

RBS also offer a wide range of additional learning opportunities.

Youth Employment

In 2017, we welcomed 471 people across the RBS Graduate and Apprenticeship schemes as well as around 150 Summer Interns.

Health and wellbeing of our colleagues

Wellbeing is a strong foundation for making RBS a great place to work. For the third year running RBS participated in the Global Challenge (formerly GCC) and with 34,000 colleagues taking part we won the Global Challenge 1st Most Active Organisation Financial Industry. Building on this success, we embraced the rapid acceleration of digital wellbeing and are one of the few large organisations to pilot a digital wellbeing platform.

During 2017 RBS has continued to support Time to Change (removing the stigma of mental health) and actively encouraged open dialogue across the bank to support Mental Health in the Workplace. RBS were successful in running bankwide major online campaigns to support Mental Health Awareness Week and World Mental Health Day.

As RBS continue to support our colleagues through change we have fully utilised the services of our Employee Assistance Programme.

Employee consultation

RBS recognise employee representatives such as trade unions and work councils in a number of businesses and countries. There has been ongoing engagement and discussion with those bodies given the scale of change taking place across RBS. Management have continued to meet regularly with our European Employee Council to discuss developments and update on the progress of our strategic plans.

Inclusion

Building a more inclusive RBS is essential for our customers and colleagues. Our inclusion policy standard applies to all colleagues globally.

During 2017, RBS continued to roll out unconscious bias learning to all colleagues (over 70,000 trained, to date) to create a solid platform for the wider inclusion agenda.

RBS continue to work towards our goal of having at least 30% senior women in our top three leadership layers across each Franchise and Function by 2020 and to be fully gender balanced (50/50) by 2030. We have a positive action approach in place, tailored by business, according to the specific challenges they face.

The RBS disability plan for training, career development and promotion of disabled persons employed by the company will support us becoming a disability smart organisation, with upper quartile performance, by 2018.

We continue to focus on building an ethnically diverse RBS. We will introduce explicit targets for BAME representation at senior levels in 2018.

Our LGBTQ agenda continues to deliver a better experience for our LGBTQ colleagues and customers. RBS have processes in place to support updating gender and title on customers' banking records and to support colleagues undergoing gender transition.

RBS have been recognised for our work on Equality, Diversity and Inclusion by retaining our Platinum ranking from Opportunity Now (gender), retaining our Gold ranking for Race for Opportunity (race); retaining a position in the Times Top 50 Employers for Women; becoming a Top Global Employer in Stonewall's Global Equality Index (LGBT), Silver Status from The Business Disability Forum and being rated a Top 10 Employer by Working Families. In 2017 we were proud to be named 'Diverse Company of the Year' at the National Diversity Awards and winning Workplace Adjustments Innovation of the Year at the Disability Smart Awards. RBS continue to support our c.20,000 strong employee-led networks.

Sustainability

The Sustainable Banking Committee's role is to support the Board in overseeing, supporting and challenging actions being taken by management to run RBS as a sustainable business.

For more information on our approach and progress please read the RBS Strategic Report. Further information is available on [rbs.com/sustainability](https://www.rbs.com/sustainability).

Greenhouse gas emissions

Disclosures relating to greenhouse gas emissions are included in the Strategic Report. These form part of the metrics and targets of the RBS climate change strategy. This is reported in accordance with the recommendations from the Financial Stability Boards Task Force on Climate-related Financial Disclosures (TCFD) on page 403. The RBS climate change strategy is driven by a range of external and internal drivers with oversight of climate related risks and opportunities through the Sustainable Banking Committee.

Going concern

RBS's business activities and financial position, the factors likely to affect its future development and performance and its objectives and policies in managing the financial risks to which it is exposed and its capital are discussed in the Business review. The risk factors which could materially affect RBS's future results are set out on pages 372 to 402. RBS's regulatory capital resources and significant developments in 2017 and anticipated future developments are detailed in the Capital, liquidity and funding section on pages 161 to 176. This section also describes RBS's funding and liquidity profile, including changes in key metrics and the build up of liquidity reserves.

Report of the directors

Having reviewed RBS's forecasts, projections and other relevant evidence, the directors have a reasonable expectation that RBS and the company will continue in operational existence for the foreseeable future. Accordingly, the financial statements of RBS and of the company have been prepared on a going concern basis.

Viability statement

Under the revised UK Corporate Governance Code the directors are required to confirm that they have carried out a robust assessment of the RBS's principal risks and make a longer term viability statement. This is set out in the Strategic Report on page 49.

BBA disclosure code

RBS's 2017 financial statements have been prepared in compliance with the principles set out in the Code for Financial Reporting Disclosure published by the British Bankers' Association in 2010. The Code sets out five disclosure principles together with supporting guidance. The principles are that RBS and other major UK banks will provide high quality, meaningful and decision-useful disclosures; review and enhance their financial instrument disclosures for key areas of interest to market participants; assess the applicability and relevance of good practice recommendations to their disclosures acknowledging the importance of such guidance; seek to enhance the comparability of financial statement disclosures across the UK banking sector; and clearly differentiate in their annual reports between information that is audited and information that is unaudited.

Enhanced Disclosure Task Force (EDTF)

The EDTF established by the Financial Stability Board, published its report 'Enhancing the Risk Disclosures of Banks' in October 2012. All EDTF recommendations are reflected in the 2017 Annual Report and Accounts and Pillar 3 Report.

Corporate governance

The company is committed to high standards of corporate governance. Details are given in the Corporate governance report on pages 57 to 105. The Corporate governance report and compliance report (pages 106 to 108) form part of this Report of the directors.

Share capital

Details of the ordinary and preference share capital at 31 December 2017 and movements during the year are shown in Note 25 on the consolidated accounts.

During 2017, the company allotted and issued a total of 119 million new ordinary shares of £1 each for the purposes of ensuring 2017 coupon payments on discretionary hybrid capital securities were partly neutralised from a Core Tier 1 capital perspective.

The shares were allotted to UBS AG at the subscription prices determined by reference to the average market prices during the sale periods set out below.

Number of shares sold	Subscription price	Sale period	Gross proceeds	Share price on allotment
33,376,695	239.6882	24/2/17 - 24/4/17	£80 million	249.3p
29,000,000	259.0457	28/4/17 - 30/6/17	£75 million	247.2p
56,634,740	256.0266	04/8/17 - 27/9/17	£145 million	270.8p

In the three years to 31 December 2017, the percentage increase in issued share capital due to non-pre-emptive issuance (excluding employee share schemes) for cash was 2.94%.

In addition the company issued 22 million new ordinary shares in connection with employee share schemes in 2017.

In October 2015, HMT converted its entire holding of 51 billion B shares into 5.1 billion new ordinary shares of £1 each.

In March 2016, the company paid a final dividend of £1.2 billion in respect of the Dividend Access Share (DAS) held by HMT, effecting the immediate retirement of the DAS which was redesignated as a single B share and subsequently cancelled.

Authority to repurchase shares

At the Annual General Meeting in 2017 shareholders authorised the company to make market purchases of up to 1,184,237,107 ordinary shares. The directors have not exercised this authority to date. Shareholders will be asked to renew this authorisation at the Annual General Meeting in 2018.

Additional information

Where not provided elsewhere in the Report of the directors, the following additional information is required to be disclosed by Part 6 of Schedule 7 to the Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008.

The rights and obligations attached to the company's ordinary shares and preference shares are set out in the company's Articles of Association, copies of which can be obtained from Companies House in the UK or can be found at rbs.com/about/board-and-governance.

On a show of hands at a general meeting of the company every holder of ordinary shares and cumulative preference shares present in person or by proxy and entitled to vote shall have one vote. On a poll, every holder of ordinary shares or cumulative preference shares present in person or by proxy and entitled to vote shall have four votes for every share held. The notices of Annual General Meetings and General Meetings specify the deadlines for exercising voting rights and appointing a proxy or proxies to vote in relation to resolutions to be passed at the meeting.

The cumulative preference shares represent less than 0.008% of the total voting rights of the company, the remainder being represented by the ordinary shares.

Report of the directors

There are no restrictions on the transfer of ordinary shares in the company other than certain restrictions which may from time to time be imposed by laws and regulations (for example, insider trading laws).

Pursuant to the Listing Rules of the FCA, certain employees of the company require the approval of the company to deal in the company's shares.

The rules governing the powers of directors, including in relation to issuing or buying back shares and their appointment are set out in the company's Articles of Association. It will be proposed at the 2018 Annual General Meeting that the directors be granted authorities to allot shares under the Companies Act 2006. The company's Articles of Association may only be amended by a special resolution at a general meeting of shareholders.

The rights and obligations of holders of non-cumulative preference shares are set out in Note 25 on the consolidated accounts.

The company is not aware of any agreements between shareholders that may result in restrictions on the transfer of securities and/or voting rights. There are no persons holding securities carrying special rights with regard to control of the company. A number of the company's employee share plans include restrictions on transfers of shares while shares are subject to the plans or the terms under which the shares were awarded.

Under the rules of certain employee share plans, eligible employees are entitled to acquire shares in the company, and shares are held in trust for participants by The Royal Bank of Scotland plc as Trustees. Voting rights are exercised by the Trustees on receipt of participants' instructions. If a participant does not submit an instruction to the Trustee no vote is registered.

The Royal Bank of Scotland Group plc 2001 Employee Share Trust and The Royal Bank of Scotland Group plc 2007 US Employee Share Trust hold shares on behalf of RBS's employee share plans. The voting rights are exercisable by the Trustees, however, in accordance with investor protection guidelines, the Trustees abstain from voting. The Trustees would take independent advice before accepting any offer in respect of their shareholdings for the company in a takeover bid situation.

Awards granted under the company's employee share plans may be met through a combination of newly issued shares and shares acquired in the market by the company's employee benefit trusts.

A change of control of the company following a takeover bid may cause a number of agreements to which the company is party to take effect, alter or terminate. All of the company's employee share plans contain provisions relating to a change of control. Outstanding awards and options may vest and become exercisable on change of control, subject where appropriate to the satisfaction of any performance conditions at that time and pro-rating of awards. In the context of the company as a whole, these agreements are not considered to be significant.

Directors

The names and brief biographical details of the current directors are shown on pages 51 to 56.

Howard Davies, Frank Dangeard, Alison Davis, Morten Friis, Robert Gillespie, Penny Hughes, Ross McEwan, Brendan Nelson, Baroness Noakes, Mike Rogers and Ewen Stevenson all served throughout the year and to the date of signing of the financial statements.

Mark Seligman was appointed on 1 April 2017. Yasmin Jetha was appointed 21 June 2017 and Dr Lena Wilson was appointed on 1 January 2018.

All directors of the company are required to stand for election or re-election annually by shareholders at the Annual General Meeting and, in accordance with the UK Listing Rules, the election or re-election of independent directors requires approval by all shareholders and also by independent shareholders.

Directors' interests

The interests of the directors in the shares of the company at 31 December 2017 are shown on page 97. None of the directors held an interest in the loan capital of the company or in the shares or loan capital of any of the subsidiary undertakings of the company, during the period from 1 January 2017 to 22 February 2018.

Directors' indemnities

In terms of section 236 of the Companies Act 2006 (the "Companies Act"), Qualifying Third Party Indemnity Provisions have been issued by the company to its directors, members of the RBS Executive Committee, individuals authorised by the PRA/FCA and certain directors and/or officers of RBS subsidiaries.

In terms of section 236 of the Companies Act, Qualifying Pension Scheme Indemnity Provisions have been issued to all trustees of RBS pension schemes.

Post balance sheet events

Other than the matter disclosed on page 347, there have been no significant events between the year end and the date of approval of these accounts which would require a change to or disclosure in the accounts.

Controlling shareholder

In accordance with the UK Listing Rules, the company has entered into an agreement with HM Treasury (the 'Controlling Shareholder') which is intended to ensure that the Controlling Shareholder complies with the independence provisions set out in the UK Listing Rules. The company has complied with the independence provisions in the relationship agreement and as far as the company is aware the independence and procurement provisions in the relationship agreement have been complied with in the period by the controlling shareholder.

Report of the directors

Shareholdings

The table below shows shareholders that have notified RBS that they hold more than 3% of the total voting rights of the company at 31 December 2017.

Solicitor For The Affairs of Her Majesty's Treasury as Nominee for Her Majesty's Treasury	Number of shares (millions)	% of share class held	% of total voting rights held
Ordinary shares	8,434	70.5	70.5

As at 22 February 2018, there were no changes to the shareholdings shown in the table above.

Listing Rule 9.8.4

In accordance with the UK Financial Conduct Authority's Listing Rules the information to be included in the Annual Report and Accounts under LR 9.8.4, is set out in this Directors' report with the exception of details of contracts of significance under LR 9.8.4. (10) and (11) given in Additional Information on pages 370 and 371.

Political donations

At the Annual General Meeting in 2017, shareholders gave authority under Part 14 of the Companies Act, for a period of one year, for the company (and its subsidiaries) to make political donations and incur political expenditure up to a maximum aggregate sum of £100,000. This authorisation was taken as a precaution only, as the company has a longstanding policy of not making political donations or incurring political expenditure within the ordinary meaning of those words. During 2017, RBS made no political donations, nor incurred any political expenditure in the UK or EU and it is not proposed that RBS's longstanding policy of not making contributions to any political party be changed. Shareholders will be asked to renew this authorisation at the Annual General Meeting in 2018.

Directors' disclosure to auditors

Each of the directors at the date of approval of this report confirms that:

(a) so far as the director is aware, there is no relevant audit information of which the company's auditors are unaware; and

(b) the director has taken all the steps that he/she ought to have taken as a director to make himself/herself aware of any relevant audit information and to establish that the company's auditors are aware of that information.

This confirmation is given and should be interpreted in accordance with the provisions of section 418 of the Companies Act.

Auditors

EY LLP are the auditors. The auditors, EY LLP, have indicated their willingness to continue in office. A resolution to re-appoint EY LLP as the company's auditors will be proposed at the forthcoming Annual General Meeting.

By order of the Board

Aileen Taylor
Company Secretary
22 February 2018

The Royal Bank of Scotland Group plc
is registered in Scotland No. SC45551

Statement of directors' responsibilities

This statement should be read in conjunction with the responsibilities of the auditor set out in their report on pages 230 to 243.

The directors are responsible for the preparation of the Annual Report and Accounts. The directors are required by Article 4 of the IAS Regulation (European Commission Regulation No 1606/2002) to prepare Group accounts, and as permitted by the Companies Act 2006 have elected to prepare company accounts, for each financial year in accordance with International Financial Reporting Standards as adopted by the European Union. They are responsible for preparing accounts that present fairly the financial position, financial performance and cash flows of the Group and the company. In preparing those accounts, the directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent; and
- state whether applicable accounting standards have been followed, subject to any material departures disclosed and explained in the accounts.

The directors are responsible for keeping proper accounting records which disclose with reasonable accuracy at any time the financial position of the Group and to enable them to ensure that the Annual Report and Accounts complies with the Companies Act 2006. They are also responsible for safeguarding the assets of the Group and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

The directors confirm that to the best of their knowledge:

- the financial statements, prepared in accordance with International Financial Reporting Standards as adopted by the European Union, give a true and fair view of the assets, liabilities, financial position and profit or loss of the company and the undertakings included in the consolidation taken as a whole; and
- the Strategic Report and Directors' report (incorporating the Business review) include a fair review of the development and performance of the business and the position of the company and the undertakings included in the consolidation taken as a whole, together with a description of the principal risks and uncertainties that they face.

In addition, the directors are of the opinion that the Annual Report and Accounts, taken as a whole, is fair, balanced and understandable and provides the information necessary for shareholders to assess the company's position and performance, business model and strategy.

Presentation of information

In the Report and Accounts, and unless specified otherwise, the term 'company' or 'RBSG' means The Royal Bank of Scotland Group plc, 'RBS', 'RBS Group' or the 'Group' means the company and its subsidiaries, 'the Royal Bank' or 'RBS plc' means The Royal Bank of Scotland plc and 'NatWest' means National Westminster Bank Plc.

Segmental reporting

RBS continues to deliver on its plan to build a strong, simple and fair bank for both customers and shareholders. To support this, and in preparation for the UK ring-fencing regime, the previously reported operating segments were realigned in Q4 2017 and a number of business transfers completed, for full details see the Report of the directors.

Reportable operating segments

Following the Q4 2017 changes the reportable operating segments are as follows, for full business descriptions see page 110 of the Report of the directors and Note 37 on the accounts:

Franchise	Reportable operating segment
Personal & Business Banking (PBB)	UK Personal & Business Banking (UK PBB) Ulster Bank Rol
Commercial & Private Banking (CPB)	Commercial Banking Private Banking
Other reportable segments	RBS International (RBSI) NatWest Markets Central items & other

Allocation of central balance sheet items

RBS allocates all central costs relating to Services and Functions to the business using appropriate drivers, these are reported as indirect costs in the segmental income statements. Assets (and risk-weighted assets) held centrally, mainly relating to RBS Treasury, are allocated to the business using appropriate drivers.

Key operating indicators

RBS prepares its financial statements in accordance with IFRS as issued by the IASB and as adopted by the European Union, which constitutes a body of generally accepted accounting principles ('GAAP'). This document contains a number of adjusted or alternative performance measures, also known as non-GAAP financial measures. These measures exclude certain items which management believe are not representative of the underlying performance of the business and which distort period-on-period comparison. These measures include:

- 'Adjusted' measures of financial performance, principally operating performance before: own credit adjustments; gain or loss on redemption of own debt; strategic disposals, restructuring costs, litigation and conduct costs. and write down of goodwill;

- Performance, funding and credit metrics such as 'return on tangible equity', 'adjusted return on tangible equity' and related RWA equivalents incorporating the effect of capital deductions (RWAs), total assets excluding derivatives (funded assets) and net interest margin (NIM) adjusted for items designated at fair value through profit or loss (non-statutory NIM), cost:income ratio, loan:deposit ratio and REIL/impairment provision ratios. These are internal metrics used to measure business performance;
- Personal & Business Banking (PBB) franchise, combining the reportable segments of UK Personal & Business Banking (UK PBB) and Ulster Bank Rol, Commercial & Private Banking (CPB) franchise, combining the reportable segments of Commercial Banking and Private Banking; and
- Cost savings progress and 2017 target calculated using operating expenses excluding litigation and conduct costs, restructuring costs, write down of goodwill, the impairment of other intangible assets, the operating costs of the business previously described as Williams & Glyn and the VAT recoveries.

RBS Group ring-fencing

The UK ring-fencing legislation requiring the separation of essential banking services from investment banking services will take effect from 1 January 2019.

To comply with these requirements it is RBS's intention to place the majority of the UK and Western European banking business in ring-fenced banking entities under an intermediate holding company. NatWest Markets Plc (NatWest Markets) will be a separate non ring-fenced bank and The Royal Bank of Scotland International (Holdings) Limited (RBSI Holdings) will also be placed outside the ring-fence, both as direct subsidiaries of RBSG.

On 1 January 2017, RBS made a number of key changes to the legal hierarchy of its subsidiaries to support the move towards a ring-fenced structure. As part of continuing preparation to deliver a fully compliant ring-fencing structure by 1 January 2019, it plans to undertake a further series of actions. For further details of these actions see the Report of the directors.

Business divestments

Citizens

RBS sold the final tranche of its interest in Citizens Financial Group, Inc. during the second half of 2015. Consequently, Citizens was classified as a disposal group at 31 December 2014 and presented as a discontinued operation until October 2015. From 3 August 2015 until the final tranche was sold in October 2015, Citizens was an associated undertaking.

Business review

Summary consolidated income statement for the year ended 31 December 2017

	2017 £m	2016 £m	2015 £m
Net interest income	8,987	8,708	8,767
Non-interest income	4,146	3,882	4,156
Total income	13,133	12,590	12,923
Operating expenses	(10,401)	(16,194)	(16,353)

Notes:

- (1) RBS's CET 1 target is 13% but for the purposes of computing segmental return on equity (ROE), to better reflect the differential drivers of capital usage, segmental operating profit after tax and adjusted for preference dividends is divided by average notional equity allocated at different rates of 14% (Ulster Bank Rol - 11% prior to 2017), 11% (Commercial Banking), 14% (Private Banking - 15% prior to 2017), 16% (RBS International - 12% prior to November 2017) and 15% for all other segments, of the monthly average of segmental risk-weighted assets incorporating the effect of capital deductions (RWAs). Return on equity is calculated using profit for the period attributable to ordinary shareholders.
- (2) Excluding own credit adjustments, (loss)/gain on redemption of own debt, strategic disposals, restructuring costs, litigation and conduct costs and write down of goodwill.
- (3) Operating lease depreciation included in income (year ended December 2017 - £142 million; Q4 2017 - £35 million; year ended 31 December 2016 - £152 million, Q3 2017 - £35 million and Q4 2016 - £37 million).

Interest receivable (1,2)	11,034	11,258	11,925
Interest payable (1,2)	(2,047)	(2,550)	(3,158)
Net interest income	8,987	8,708	8,767

Yields, spreads and margins of the banking business

	%	%	%
Gross yield on interest-earning assets of the banking business (3)	2.57	2.80	2.88
Cost of interest-bearing liabilities of the banking business	(0.69)	(0.94)	(1.11)
Interest spread of the banking business (4)	1.88	1.86	1.77
Benefit from interest-free funds	0.25	0.32	0.35
Net interest margin of the banking business (2,5,6)	2.13	2.18	2.12

Notes:

- (1) Negative interest on loans and advances is classed as interest payable and on customer deposits is classed as interest receivable.
- (2) Interest receivable and interest payable on trading assets and liabilities are included in income from trading activities.
- (3) Gross yield is the interest earned on average interest-earning assets of the banking book.
- (4) Interest spread is the difference between the gross yield and the interest rate paid on average interest-bearing liabilities of the banking business.
- (5) For the purpose of net interest margin calculations, there was no increase in interest receivable (2016 - nil; 2015 - nil) and no increase in interest payable (2016 - nil; 2015 - £15 million) in respect of interest on financial assets and liabilities designated as at fair value through profit or loss. Related interest-earning assets and interest-bearing liabilities have been adjusted where applicable.
- (6) Net interest margin is net interest income of the banking business as a percentage of interest-earning assets (IEA) of the banking business.

2017 compared with 2016

Net interest income of £8,987 million increased by £279 million compared with 2016. The movement was principally driven by higher mortgage volumes in UK PBB, up £185 million or 3.7%, and deposit re-pricing benefits in Commercial Banking, up £143 million or 6.7%, partially offset by planned balance sheet reductions in NatWest Markets.

The net interest margin (NIM) was 2.13% for 2017, 5 basis points lower than 2016 reflecting increased liquidity, mix impacts and competitive pressures on margin.

UK PBB NIM of 2.86% was 11 basis points lower than 2016 reflecting lower mortgage margins, asset mix and reduced current account hedge yield, partially offset by savings re-pricing benefits from actions taken in 2016 and following the Q4 2017 base rate increase.

Ulster Bank RoI NIM increased by 5 basis points to 1.67% driven by a combination of improved deposit and loan margins, one-off income adjustments and successful deleveraging measures in 2016 which have reduced the concentration of low yielding loans.

Commercial Banking NIM decreased by 2 basis points as active re-pricing of assets and deposits has been more than offset by asset margin pressure in a low rate environment.

Private Banking NIM decreased by 19 basis points to 2.47% reflecting the competitive market and low rate environment, partially offset by higher funding benefits on deposits following the Q4 2017 base rate increase.

RBSI NIM remained stable at 1.36% as active re-pricing of deposits has been offset by the low rate environment.

Structural hedges of £129 billion generated a benefit of £1.3 billion through net interest income for the year.

2016 compared with 2015

Net interest income of £8,708 million reduced by £59 million compared with 2015 principally driven by a £126 million reduction in legacy NatWest Markets business, in line with the planned shrinkage of the balance sheet.

NIM was 2.18% for 2016, 6 basis points higher than 2015 as the benefit associated with reductions in low yielding 'non-core' assets has been partially offset by modest asset margin pressure and mix impacts across PBB, CPB and RBSI.

Average interest earning assets across the combined PBB, CPB and RBSI increased by 10% on 2015, compared with a 3% decline for RBS total, and represented 88% of total average interest earning assets (2015 - 77%). NIM across PBB, CPB and RBSI was 2.34%, 13 basis points lower than 2015.

UK PBB NIM decreased by 16 basis points to 2.97% reflecting the impact of the overall portfolio mix being increasingly weighted towards secured lending and mortgage customers switching from standard variable rate (SVR) to lower rate products. During the second half of 2016 SVR balances stabilised at approximately 12% of mortgage balances. Ulster Bank RoI NIM increased by 5 basis points to 1.62% driven by a continued reduction in the cost of deposits and a reduced volume of low yielding liquid assets, partly offset by reduced income on free funds.

Commercial Banking NIM fell by 12 basis points to 1.76% driven by asset margin pressure in a competitive market and low rate environment. Private Banking NIM reduced by 9 basis points to 2.66% principally driven by asset margin pressure. RBSI NIM fell by 12 basis points to 1.36% reflecting asset and liability margin pressures, partially offset by mitigating pricing actions.

Structural hedges of £123 billion generated a benefit of £1.3 billion through net interest income for the year. Around 73% of these hedges are part of a five year rolling hedge programme (with around 27% as part of a ten year hedge) that will progressively roll-off over the coming years.

Business review

Analysis of results *continued*

Non-interest income

	2017 £m	2016 £m	2015 £m
Fees and commissions receivable	3,338	3,340	3,742
Fees and commissions payable	(883)	(805)	(809)
Own credit adjustments	(69)	180	309
Income from trading activities	703	820	806
Loss on redemption of own debt	(7)	(126)	(263)
Strategic disposals	347	164	(157)
Other operating income	717	309	528
Total non-interest income	4,146	3,882	4,156

2017 compared with 2016

Non-interest income of £4,146 million increased by £264 million, or 6.8%, compared with 2016, primarily reflecting a £185 million debt sale gain in UK PBB and a £183 million increase in strategic disposals gains, partially offset by an own credit adjustment loss of £69 million compared with a gain of £180 million in 2016.

Net fees and commissions decreased by £80 million, or 3.2%, compared with 2016 reflecting a £48 million reduction in UK PBB, driven by increased cash back payments as the Reward proposition continued to grow with customer accounts 26% higher than 2016, and lower income in NatWest Markets.

Income from trading activities decreased by £117 million, or 14.3%, compared with 2016 primarily reflecting lower income in NatWest Markets, down £247 million, or 29.8%, driven by increased losses in the legacy business. A gain of £2 million for volatile items under IFRS in 2017 compared with a charge of £510 million in 2016. This movement was broadly offset by FX losses of £183 million in 2017, compared with FX gains of £446 million in 2016, following the strengthening of sterling against the US dollar.

Other operating income increased by £408 million primarily reflecting increased NatWest Markets income and the debt sale gain in UK PBB.

2016 compared with 2015

Non-interest income was £3,882 million, a reduction of £274 million, or 6.6%, compared with 2015. The legacy NatWest Markets business non-interest income reduced by £775 million reflecting planned asset disposal, including £572 million of disposal losses compared with £367 million in 2015, and a funding valuation adjustment of £170 million. In addition, we recognised a charge of £510 million for volatile items under IFRS compared with a £15 million gain in 2015. Partially offsetting, we reported a strategic disposal gain of £164 million, compared with a loss of £157 million in 2015, a loss on redemption of own debt of £126 million, compared with £263 million in 2015, an FX gain of £349 million following the significant weakening of sterling against the dollar and a £97 million foreign exchange reserve recycling gain.

Net fees and commissions decreased by £398 million, or 13.6%, compared with 2015 reflecting the planned asset run-down in the legacy NatWest Markets business, £168 million, a reduction in NatWest Markets core business, £175 million, and a £33 million reduction in UK PBB, driven by lower credit card interchange fees and increased cash back payments following the launch of the Rewards account.

Income from trading activities increased by £14 million to £820 million as an £86 million increase in NatWest Markets income has been partially offset by an increased charge for volatile items under IFRS.

Other operating income reduced by £219 million principally reflecting planned asset disposals in the legacy NatWest Markets business.

Write down of other intangible assets	16	117	75
Operating expenses	10,401	16,194	16,353
Cost:income ratio	79.0%	129.0%	126.9%
Cost:income ratio - adjusted	58.2%	66.0%	71.4%
Staff costs as a percentage of total income	29.9%	35.6%	37.9%

2017 compared with 2016

Total operating expenses of £10,104 million were £5,793 million, or 35.8%, lower than 2016 reflecting a £4,583 million reduction in litigation and conduct costs, a £669 million, or 8.1%, reduction in adjusted operating expenses and a £541 million reduction in restructuring costs.

Excluding VAT recoveries, adjusted operating expenses have reduced by £810 million for the year, ahead of our £750 million targeted reduction, with approximately 45% of the total cost reduction delivered across PBB, CPB, RBSI and the NatWest Markets core business, adjusting for transfers.

Staff costs of £3,923 million were £559 million, or 12.5%, lower than 2016 underpinned by a 6,600, or 8.5%, reduction in FTEs.

Restructuring costs of £1,565 million included: a £303 million charge relating to the reduction in our property portfolio; a £319 million charge in NatWest Markets principally relating to the run-down and closure of the legacy business; £221 million relating to the business previously described as Williams & Glyn; £194 million in respect of implementing ring-fencing requirements; and a £73 million net settlement relating to the RBS Netherlands pension scheme.

Litigation and conduct costs of £1,285 million included: additional charges in respect of settlement with Federal Housing Finance Agency (FHFA) and the California State Attorney General and additional RMBS related provisions in the US; a further provision in relation to settling the 2008 rights issue shareholder litigation; an additional £175 million PPI provision; and a £169 million provision in Ulster Bank Rol for customer remediation and project costs relating to tracker mortgages and other legacy business issues.

2016 compared with 2015

Operating expenses of £16,194 million were £159 million, or 1%, lower than 2015 reflecting a £1,136 million, or 12%, reduction in adjusted operating expenses and a £825 million, or 28%, reduction in restructuring costs. In addition, 2015 included a £498 million write down of goodwill relating to Private Banking. Partially offsetting the above, litigation and conduct costs increased by £2,300 million.

Adjusted operating expenses reduced by £1,136 million, or 12%, compared with 2015 to £8,220 million. Excluding expenses associated with the business previously described as Williams & Glyn, write down of intangibles and a £227 million VAT recovery, adjusted expenses reduced by £985⁽¹⁾ million, or 11%, in excess of our £800 million target. RBS has achieved a cumulative cost reduction of £3.1 billion across 2014 - 2016.

Staff costs of £4,482 million were £414 million, or 8%, lower than 2015 underpinned by a 13,700, or 15%, reduction in FTEs.

Restructuring costs were £2,106 million for 2016, compared with £2,931 million in 2015, and included a £750 million provision in respect of the 17 February 2017 update on RBS's remaining State Aid obligation regarding the business previously described as Williams & Glyn. In addition, £706 million of the remaining restructuring costs relate to the business previously described as Williams & Glyn, including £146 million of termination costs associated with the decision to discontinue the programme to create a cloned banking platform.

Litigation and conduct costs of £5,868 million included; a £3,107 million provision in relation to various investigations and litigation matters relating to RBS's issuance and underwriting of residential mortgage-backed securities (RMBS), £601 million of additional PPI provisions, a £400 million provision in respect of the FCA review of RBS's treatment of SMEs, an additional £169 million charge in respect of the settlement with the National Credit Union Administration Board to resolve two outstanding RMBS lawsuits in the United States relating to residential mortgage backed securities, a £172 million provision in Ulster Bank Rol, principally in respect of remediation and programme costs associated with an industry wide examination of tracker mortgages, and a provision in respect of the UK 2008 rights issue shareholder litigation.

Business review

Analysis of results *continued* Impairment losses

	2017 £m	2016 £m	2015 £m
New impairment losses/(releases)	649	587	(552)
Less: recoveries of amounts previously written-off	(156)	(109)	(175)
Losses/(releases) to income statement	493	478	(727)
Comprising:			
Loan impairment losses/(releases)	530	537	(853)
Securities	(37)	(59)	126
Losses/(releases) to income statement	493	478	(727)

2017 compared with 2016

A net impairment loss of £493 million, 15 basis points of gross customer loans, compared with £478 million in 2016.

UK PBB reported a net impairment charge of £235 million, or 14 basis points of gross customer loans, reflecting continued benign credit conditions.

Ulster Bank Rol reported a net impairment loss of €68 million compared with a €138 million release in 2016. The charge for the year included a provision relating to a change in the non performing loan strategy to allow for further portfolio sales whilst 2016 included gains arising from the impact of asset disposals.

Commercial Banking net impairment losses of £362 million were £156 million higher than 2016, reflecting a small number of single name impairments.

NatWest Markets net impairment release of £174 million compared with a net impairment loss of £253 million in 2016 and mainly comprised releases relating to the legacy business.

REIL reduced by £1,406 million during 2017 to £8,904 million principally reflecting reductions in NatWest Markets, as legacy portfolios are run-down, and reductions across UK PBB and Ulster Bank Rol. REIL represented 2.7% of gross customer loans, compared with 3.1% in 2016.

Tax

	2017 £m	2016 £m	2015 £m
Tax charge	(824)	(1,166)	(23)
UK corporation tax rate	19.25%	20.00%	20.25%

2017 compared with 2016

The tax charge for the year ended 31 December 2017 is higher than the UK statutory tax rate reflecting the impact of the banking surcharge, non-deductible bank levy and conduct charges for which no tax relief has been recognised, a reduction in the carrying value and impact of UK tax rate changes on deferred tax balances. These factors have been offset partially by the release of tax provisions that reflect the reduction of exposures in countries where RBS is ceasing operations.

2016 compared with 2015

A net impairment loss of £478 million, 15 basis points of gross customer loans, compared with a net impairment release of £727 million in 2015.

UK PBB reported a net impairment loss of £125 million compared with £8 million in 2015.

Commercial Banking net impairment losses of £206 million were £137 million higher than 2015 and comprised a small number of single name impairments.

Ulster Bank Rol reported a net impairment release of €138 million compared with €194 million in 2015. The 2016 impairment release included a write back associated with the sale of a portfolio of loans. REIL reduced by €0.6 billion driven by the portfolio sale, partially offset by a widening of the definition of loans which are considered to be impaired.

REIL reduced by £1,847 million during 2016 to £10,310 million reflecting Capital Resolution run-down and a portfolio sale in Ulster Bank Rol partially offset by an increase in the shipping portfolio, foreign exchange movements and the implementation of a revised mortgage methodology in Ulster Bank Rol.

REIL represented 3.1% of gross customer loans compared with 3.9% at 31 December 2015. Provision coverage was 43% compared with 59% at 31 December 2015, with the reduction largely driven by Ulster Bank Rol and the legacy NatWest Markets business.

2016 compared with 2015

The tax charge for the year ended 31 December 2016 reflects the impact of the banking surcharge, non-deductible bank levy and conduct charges for which no tax relief has been recognised, a reduction in the carrying value and impact of UK tax rate changes on deferred tax balances, and the release of tax provisions that reflect the reduction of exposures in countries where RBS is ceasing operations.

Commentary on consolidated balance sheet

2017 compared with 2016

Total assets of £738.1 billion as at 31 December 2017 were down £60.6 billion, 7.6%, compared with 31 December 2016. This was primarily driven by decreases in derivative assets, partly offset by increased central bank deposits and loan growth in UK PBB and Commercial Banking.

Cash and balances at central banks increased by £24.1 billion, 32.5%, to £98.3 billion. This was primarily due to increased deposits received from the Bank of England Term Funding Scheme (TFS).

Loans and advances to banks increased by £0.2 billion, 0.7%, to £30.3 billion. Excluding reverse repurchase agreements and stock borrowing ('reverse repos'), which were up £1.1 billion, 8.5%, to £14.0 billion, bank placings declined £1.0 billion, 5.8%, to £16.3 billion.

Loans and advances to customers decreased by £2.0 billion, 0.6%, to £349.9 billion. Within this, reverse repos were down £2.2 billion, 7.6%, to £26.7 billion. Customer lending increased by £0.2 billion, 0.1%, to £323.2 billion. This reflected increases across the retail and commercial business, in particular in UK PBB mortgage lending offset by the run-down of the NatWest Markets legacy business.

Debt securities were up £6.4 billion, 8.8%, to £78.9 billion, mainly due to increased holdings in UK and European government securities in RBS Treasury.

Equity shares decreased by £0.2 billion, 28.6%, to £0.5 billion, primarily due to the sale of RBS's holding in EuroClear.

Settlement balances decreased by £3.0 billion, 54.5%, to £2.5 billion, primarily as a result of the run-down in the NatWest legacy business.

Movements in the value of derivative assets, down £86.2 billion, 34.9%, to £160.8 billion, and liabilities, down £82.0 billion, 34.7% to £154.5 billion, due to maturities, derivative mitigation activities, buyouts in NatWest Markets and mark-to-market movement as US dollar weakened against the Euro and Sterling.

Deposits by banks increased by £8.3 billion, 21.8%, to £46.9 billion, with increases in inter-bank deposits, up £6.2 billion, 18.6%, to £39.5 billion, primarily driven by amounts received under the TFS, offset by reductions in the cash collateral held against derivatives. Repurchase agreements and stock lending ('repos'), increased by £2.2 billion, 42.3%, to £7.4 billion, primarily driven by increased process efficiencies and increased trading activity partially offset by netting benefits in RBS Treasury and NatWest Markets.

Customer accounts increased £17.0 billion, 4.5%, to £398.0 billion. Within this, repos increased £3.9 billion to £31.0 billion. Excluding repos, customer deposits were up £13.1 billion, 3.7%, to £367.0 billion, primarily reflecting growth in UK PBB, Ulster Bank RoI and RBSI offset by run-down in the NatWest Markets legacy business.

Debt securities in issue increased by £3.4 billion, 12.5%, to £30.6 billion reflecting new covered bond issuances offset by maturities in RBS Treasury along with mark-to-market and foreign exchange movements.

Short positions increased by £6.4 billion, 29.0%, to £28.5 billion as a result of the increase in debt securities held.

Provisions for liabilities and charges decreased by £5.1 billion, 39.6%, to £7.8 billion, reflecting settlements being reached in various litigation cases, most notably in relation to US residential mortgage-backed securities claims.

Subordinated liabilities decreased by £6.7 billion, 34.5% to £12.7 billion, primarily as a result of the net decrease in dated and undated loan capital with redemptions of £4.2 billion and £1.5 billion respectively, reflecting on-going liability management activities.

Owners' equity decreased by £0.3 billion, 0.6%, to £48.3 billion, primarily driven by dividends paid and preference share redemptions offset by the £1.4 billion profit for the year.

Business review

Cash flow

	2017 £m	2016 £m	2015 £m
Net cash flows from operating activities	38,741	(3,650)	918
Net cash flows from investing activities	(6,482)	(4,359)	(4,866)
Net cash flows from financing activities	(8,208)	(5,107)	(940)
Effects of exchange rate changes on cash and cash equivalents	(16)	8,094	576
Net increase/(decrease) in cash and cash equivalents	24,035	(5,022)	(4,312)

2017

The major factors contributing to the net cash inflow from operating activities of £38,741 million were an increase of £42,147 million in operating assets and liabilities, operating profit before tax of £2,239 million, other provisions charged net of releases of £1,930 million, depreciation and amortisation of £808 million and interest on subordinated liabilities of £572 million. These were partially offset by provisions utilised of £6,476 million, loans and advances written-off net of recoveries of £1,054 million and contributions to defined benefit pension schemes of £627 million.

Net cash outflows from investing activities of £6,482 million related to the net outflows from purchase and sale of securities of £5,556 million, the purchase of property, plant and equipment of £1,132 million and £199 million outflows from disposals, offset by net cash inflows from the sale of property, plant and equipment of £405 million.

Net cash outflows from financing activities of £8,208 million relate primarily to the redemption of subordinated liabilities of £5,747 million, redemption of debt preference shares of £748 million, redemption of paid-in equity of £720 million, interest paid on subordinated liabilities of £717 million and dividends paid of £612 million.

2016

The major factors contributing to the net cash outflow from operating activities of £3,650 million were the elimination of foreign exchange differences £6,518 million, contribution to defined benefit schemes of £4,786 million, loans and advances written-off net of recoveries of £3,586 million, operating loss before tax of £4,082 million and other provisions utilised of £2,699 million. These were partially offset by inflows from an increase of £8,413 million in operating assets and liabilities, other provisions charged net of releases of £7,216 million, interest on subordinated liabilities of £845 million and depreciation and amortisation of £778 million.

Net cash outflows from investing activities of £4,359 million related to the net outflows from purchase and sale of securities of £3,008 million, the purchase of property, plant and equipment of £912 million and £886 million outflows from disposals, offset by net cash inflows from the sale of property, plant and equipment of £447 million.

Net cash outflows from financing activities of £5,107 million relate primarily to the redemption of subordinated liabilities of £3,606 million, redemption of equity preference shares of £1,160 million, the final payment to retire the Dividend Access Share of £1,193 million and interest paid on subordinated liabilities of £813 million. These outflows were partly offset by the inflow from the issuance of Additional Tier 1 capital notes of £2,046 million.

2015

The major factors contributing to the net cash inflow from operating activities of £918 million were the increase of £8,589 million in operating assets and liabilities, other provisions charged net of releases of £4,566 million, write down of goodwill and other intangible assets £1,332 million and depreciation and amortisation of £1,180 million. These were partially offset by loans and advances written-off net of recoveries of £8,789 million, other provisions utilised of £2,202 million, elimination of foreign exchange differences of £1,501 million, profit on sale of subsidiaries and associates of £1,135 million, cash contribution to defined benefit pension schemes of £1,060 million, decrease in income accruals of £1,075 million and the operating loss before tax of £937 million.

Net cash outflows from investing activities of £4,866 million related to the net outflows from purchase of securities of £5,906 million and the purchase of property, plant and equipment of £783 million, offset by inflows of £391 million from disposals, primarily Citizens and net cash inflows from the sale of property, plant and equipment of £1,432 million.

Net cash outflows from financing activities of £940 million relate primarily to the redemption of subordinated liabilities of £3,047 million, redemption of preference shares of £1,214 million and interest paid on subordinated liabilities of £975 million partly offset by the proceeds of non-controlling interests issued of £2,537 million and the issue of Additional Tier 1 capital notes of £2,012 million.

Notes:

(1) None of the convertible securities had a dilutive effect in the years 2013 to 2017.

(2) Return on average total assets represents loss attributable to ordinary shareholders as a percentage of average total assets.

(3) Return on average total equity represents loss attributable to equity owners expressed as a percentage of average shareholder funds.

(4) Return on average ordinary shareholders' equity represents loss attributable to ordinary shareholders expressed as a percentage of average ordinary shareholders' equity.

(5) 2017, 2016, 2015 and 2014 are calculated on a PRA transitional basis; 2013 is calculated on a Basel 2.5 basis.

(6) For this purpose, earnings consist of income before tax and non-controlling interests, plus fixed charges less the unremitted income of associated undertakings (share of profits less dividends received). Fixed charges consist of total interest expense, including or excluding interest on deposits and debt securities in issue, as appropriate, and the proportion of rental expense deemed representative of the interest factor (one third of total rental expenses).

UK Personal & Business Banking *continued*

Serving our customers

UK PBB continues to invest in our digital channel offering and now has 5.5 million customers regularly using our mobile app, 20% higher than December 2016, representing 68% digital penetration of our active current account customers.

Digital sales volumes increased by 11% in 2017, while the number of digital service transactions rose by 7% in the year as the number of branch transactions fell by 9%, demonstrating the changing behaviour of our customers. Further enhancements were made during 2017, along with the introduction of a 'TechXpert' in every branch to support customers in the use of digital banking tools. NatWest was awarded Best Banking App at the British Bank Awards in 2017 and we continue to receive very positive customer feedback.

Given the change in customer behaviour and expectations over the past few years, we recently announced further branch closures. We recognise that branch interactions are still important for some customers and we have a significant branch network, which we continue to upgrade and improve, as well as our investment in mobile branches and Community Bankers in addition to access to Post Office services to meet these customer requirements.

UK PBB continued to deliver strong support to personal customers with mortgage balance growth of 7.0% compared with 2016. We continued to drive improvements in our customer mortgage experience, including being the first bank to launch a paperless mortgage journey, with NatWest Intermediary Solutions named Best Overall Lender at the 2017 Mortgage Advice Bureau Awards. Personal unsecured loans also saw balance growth of 7% compared with 2016 supported by an improved customer experience, with increased mobile functionality and simplified application processing resulting in digital loan sales growth of 20% compared with 2016 and 50% of sales transacted via this channel. Our overall personal unsecured risk appetite remains consistent with 2016, with new business quality stable on 2016.

The Reward proposition continued to grow with more than 1,450,000 customer accounts, 26% higher than December 2016. We repositioned the Reward account proposition from 26 June 2017, including the introduction of minimum customer criteria, supporting improved returns in the second half of 2017.

Our free Financial Health Check continues to provide personal and business customers with advice on their financial position and what options are open to them, including adoption of digital banking. More than 1,300,000 Financial Health Checks have been completed in 2017.

Our business banking segment continues to deliver customer improvements with an enhanced digital offering, with 80% of accounts opened during the last quarter of 2017 using this channel, and a simplified new lending process for loans up to £50,000, delivering same day loan approval and supporting ongoing productivity improvements. Following a successful pilot the FreeAgent accounting software rollout was extended in Q4 2017, with more than 8,300 customers now registered users.

Our business banking risk appetite remains consistent with 2016 with new business quality broadly stable on 2016.

2017 compared with 2016

Operating profit was £2,413 million compared with £1,726 million in 2016. The increase was driven by higher income, lower adjusted operating expenses and lower litigation and conduct charges, partially offset by higher restructuring costs, largely relating to the reduction in our property portfolio and costs associated with the business previously described as Williams & Glyn, and higher impairments. Return on equity increased to 23.7% from 16.2% in 2016.

Total income of £6,477 million was £350 million, or 5.7%, higher than 2016, principally reflecting strong balance growth, savings re-pricing benefits and a £185 million debt sale gain. Net interest margin declined by 11 basis points to 2.86% driven by lower mortgage margins, asset mix and reduced current account hedge yield, partially offset by savings re-pricing benefits from actions taken in 2016 and following the Q4 2017 base rate increase.

Adjusted operating expenses decreased by £240 million, or 7.1%, to £3,158 million compared with 2016 driven by a £59 million, or 7.1%, reduction in staff costs, with headcount down 8.3%, and a £181 million reduction in operational costs following process and productivity improvements in service operations and re-integration benefits in respect of the business previously described as Williams & Glyn⁽¹⁾. Adjusted cost:income ratio improved to 48.8% in 2017 compared with 55.5% in 2016.

The net impairment charge of £235 million, or 14 basis points of gross customer loans, reflected continued benign credit conditions. 2017 had lower recoveries partly as a result of the debt sales undertaken, compared with 2016. Defaults remained at very low levels across all portfolios compared to historic trends, although slightly higher than in 2016.

Net loans and advances increased by £9.0 billion, or 5.9%, to £161.7 billion as UK PBB continued to deliver support for both personal and business banking customers. Gross new mortgage lending in 2017 was £31.0 billion with market share of new mortgages at approximately 12%, resulting in stock share of approximately 10% at 31 December 2017 compared with 9.7% at 31 December 2016. Positive momentum continued across business banking lending, with net balances up 3.0% compared with 31 December 2016, adjusting for transfers⁽³⁾.

Customer deposits increased by £10.6 billion, or 6.2%, to £180.6 billion, driven by strong personal current account and business deposit growth.

UK PBB includes commercial income from the business previously described as Williams & Glyn of approximately £417 million, gross loans and advances of £8.3 billion and deposits of £14.3 billion. An estimated £70 million of the commercial income, £1.7 billion of gross loans and advances and £1.8 billion of deposits relates to mid-corporate customers not subject to the European Commission alternative remedies package. 120,000 of the remaining approximately 220,000 customers will be subject to the remedies package.

UK Personal & Business Banking *continued*

2016 compared with 2015

Operating profit was £1,726 million, compared with £1,461 million in 2015, and included a £634 million litigation and conduct charge, principally in respect of additional PPI provisions.

Adjusted operating profit of £2,604 million was £24 million, or 1%, lower than 2015 principally reflecting higher impairment losses, partially offset by Net interest income.

Total income of £6,127 million increased by £94 million, or 2%, compared with 2015, despite the lower rate environment depressing earnings on current accounts and the impact of regulatory changes impacting interchange fees. Net interest income was robust, increasing by £135 million, or 3%, reflecting continued strong asset growth combined with the active repricing of our deposit book. This more than offset the impact of lower current account hedge returns and lower mortgage margins. Net interest margin declined by 16 basis points to 2.97% reflecting the change in the overall portfolio mix and reduced mortgage margins. During the second half of 2016 mortgage SVR balances stabilised at approximately 12%, broadly in line with historical levels.

Non-interest income reduced by £41 million, or 3%, principally reflecting lower credit card interchange fees, following regulatory changes introduced in 2015. In addition, cash back payments on the Reward account have impacted fee income, however, we have seen increased levels of customer engagement. Partially offsetting, we recognised a £19 million debt sale gain in 2016.

Adjusted operating expenses remained the same. Direct staff costs were £118 million, or 12%, lower driven by an 17% reduction in headcount reflecting the continued movement to digital channels, exiting of business lines with returns below required levels and some centralisation of administrative activities. This was partially offset by additional investment costs of £102 million, including one-off intangible asset write-downs of £56 million in 2016, together with a £21 million increase in regulatory charges and increase in costs related to the business previously described as Williams & Glyn.

The net impairment charge of £125 million reflects continued benign credit conditions and compared with a £8 million charge in 2015, with the increase principally reflecting reduced portfolio provision releases. The default driven charge was 13% lower, excluding the business previously described as Williams & Glyn⁽¹⁾, than 2015 with REIL 25% lower and provision coverage remaining strong at 65%.

Net loans and advances of £152.7 billion increased by £12.9 billion, or 9%, compared with 2015 principally driven by mortgage growth of 11%. We continue to see positive momentum across business and personal unsecured lending, up by 6%, excluding transfers⁽¹⁾, and 9% respectively.

We continue to build on our strong mortgage market position with gross balances increasing by 11% to £128.0 billion compared with 3% growth for the overall mortgage market. Gross new lending in 2016 was £31.9 billion, representing a market share of approximately 13% compared with a stock share of approximately 9.7% at 31 December 2016, up from 8.9% in 2015.

New business margins were stable over 2016 whilst margins on existing customers remortgaging have improved. Gross new business banking lending to small and medium-sized enterprises of £1.6 billion was up 43% compared with 2015. Personal loan gross new lending of £2.7 billion was up 25% supported by the launch of functionality for a customer to apply via the mobile app combined with improvements to customer experience. We have continued to take a cautionary risk approach to personal unsecured lending. As a result, personal unsecured cards and overdrafts balances have decreased by £0.3 billion, or 5%, compared with 2015, and margins have widened. Deposit balances performed strongly, increasing by £8.1 billion, or 5%, to £170.0 billion driven by 11% growth in personal current account balances. Personal savings balances increased 2% despite repricing activity.

RWAs decreased by £0.9 billion, or 3%, to £33.0 billion due to asset mix benefits and overall improved credit quality, largely reflecting the current benign credit conditions, partly offset by increased lending.

Notes:

- (1) The business previously described as Williams & Glyn was integrated in to the reportable operating segment UK PBB in Q4 2017 and prior year comparatives re-presented.
- (2) UK PBB Collective Investment Funds (CIFL) business was transferred to Private Banking on 1 October 2017. CIFL Business transfer included total income of £33 million and total expenses of £9 million. Comparatives were not re-presented.
- (3) Transfers include £0.4 billion loans and advances transferred from Commercial Banking to UK PBB during 2017 to better align Business banking customers. Comparatives were not re-presented.

Ulster Bank Rol *continued*

Serving our customers

Gross new lending increased 3.4% on prior year primarily reflecting higher commercial lending. The bank's mortgage lending exceeded €1 billion in 2017 supported by successful home mover advertising campaigns and an improved customer proposition.

Ulster Bank Rol has continued its journey to become number one in the market for customer trust and advocacy. Investment in the digital platform has focused on providing enhancements that make it easier for customers to bank with us. Ulster Bank Rol was amongst the first banks in Ireland to introduce Apple Pay and Android Pay and now over 70% of our customers are actively using our digital proposition, increased from 58% of our active customer base in 2016.

In August, Ulster Bank Rol was the first in Ireland to launch Open Banking. Using market-leading technology, Ulster Bank Rol gives approved third parties limited access to a customer's account balance and transaction history, if the customer approves access.

The bank has proactively helped to protect customers from fraud and scams. Community Protection Advisers have run over 70 sessions across the country helping people understand how they can keep themselves safe online and outlining how to identify scams.

2017 compared with 2016

An operating loss of €151 million compared with a €24 million profit in 2016 primarily reflecting a €206 million increase in impairment losses, largely relating to a change in the non performing loan strategy to allow for further portfolio sales. Adjusted return on equity was 3.6% compared with 8.4% in 2016.

Adjusted income of €693 million was €8 million, or 1.1%, lower than 2016 primarily reflecting a €53 million reduction in income on free funds, partially offset by one off items, higher lending income and reduced funding costs. Net interest margin of 1.67% was 5 basis points higher than 2016 reflecting a combination of improved deposit and loan margins, one-off income adjustments and successful deleveraging measures in 2016 which have reduced the concentration of low yielding loans.

Adjusted operating expenses of €516 million were 7.7% lower than 2016 primarily due to continued progress in the delivery of cost saving initiatives, as evidenced by a 12.9% reduction in headcount, and lower pension costs. Adjusted cost:income ratio of 74.3% compared with 79.8% in 2016.

A litigation and conduct provision of €192 million related to customer remediation and project costs associated with legacy business issues.

A net impairment loss of €68 million compared with a €138 million release in 2016. The movement was driven by a provision relating to a change in the non performing loan strategy to allow for further portfolio sales, gains associated with asset disposals in 2016 and refinements to the mortgage provision models in 2017. REILs were €3.7 billion, 9.8% lower than 2016 reflecting credit quality improvements.

Ulster Bank Rol gross new lending was €2.6 billion in 2017, up 3.4% compared with 2016.

RWAs of €20.2 billion reduced by €0.9 billion, or 4.3%, compared with 2016.

2016 compared with 2015

Operating profit decreased by €338 million to €24 million compared with 2015 primarily due to an increase in litigation and conduct costs of €229 million and a €56 million reduction in net impairment releases. Adjusted operating profit of €280 million was €85 million, or 23%, lower than prior year as a reduction in adjusted operating expenses was more than offset by the non recurrence of one-off income benefits in 2015 and lower impairment releases.

Net interest income was stable year on year. Net interest margin increased by 5 basis points to 1.62%, compared with 2015, driven by a continued reduction in the cost of deposits and a reduced volume of low yielding liquid assets, partly offset by reduced income on free funds.

Non interest income decreased by €52 million, or 20%, principally reflecting a one-off €33 million gain realised on the closure of a foreign exchange exposure in 2015 and a €13 million interim adjustment to the pricing of FX transactions between Ulster Bank Rol and NatWest Markets in 2016, pending completion of a detailed pricing review.

Ulster Bank RoI *continued*

Adjusted operating expenses reduced by €28 million, or 5%, to €559 million reflecting a combination of progress made on cost saving initiatives, the non recurrence of one off costs in 2015 and one off accrual releases in 2016.

A realignment of costs within direct expenses contributed to an increase in staff costs in 2016 with an offsetting reduction in other costs. This reflects the reallocation of 660 staff from UK PBB to align with current management responsibilities following the separation of the Northern Ireland and Republic of Ireland businesses. Excluding the reallocation from UK PBB and staff supporting the tracker mortgage examination and asset disposal programmes, headcount decreased by 9% year on year.

Litigation and conduct costs of €211 million principally reflects a provision for remediation and programme costs associated with an industry wide examination of tracker mortgages. Restructuring costs increased by €27 million to €48 million, primarily driven by costs associated with asset disposal activity.

A net impairment release of €138 million comprised write-backs associated with asset disposals and benefited from improved macroeconomic conditions.

The sale of a portfolio of loans contributed to a €0.6 billion, or 13%, reduction in risk elements in lending in 2016 to €4.1 billion. This was partially offset by a widening of the definition of loans which are considered to be impaired to include multiple forbearance arrangements and probationary mortgages. The provision coverage ratio reduced from 55% in 2015 to 34% in 2016 largely reflecting a further de-risking of the balance sheet following recent asset sales of largely non-performing loans.

Whilst gross new lending increased 31% in 2016, net loans and advances to customers decreased €0.6 billion, or 3%, as new lending was offset by asset disposals and repayments. The low yielding tracker mortgage portfolio declined by €1.0 billion, or 9%, to €10.8 billion at 31 December 2016 supported by repayments and asset disposals.

RWAs reduced by €5.3 billion or 20% during 2016 to €21.1 billion driven by the sale of a portfolio of loans combined with adjustments to the mortgage modelling approach and an improvement in the macro economic environment. RWAs on the tracker mortgage portfolio reduced by €3.3 billion, or 31%, during 2016 to €7.4 billion.

Loan:deposit ratio decreased 10 percentage points to 117% in 2016 supported by a €1.0 billion growth in deposits and reduced net loans following recent asset sales.

Business review

Commercial Banking *continued*

Serving our customers

Commercial Banking's customer focused strategy is progressing well, with our Commercial NPS standing at +21, significantly ahead of our major UK bank competitors.

We continue to improve customer experience by becoming easier to do business with through operational investment, process simplification and digitisation. Account Opening improvements have reduced the end-to-end process by approximately seven days and customers can now take advantage of pre-approved loans of up to £50,000 through a self-service application process.

Our existing Bankline platform is used by 90% of our active customer base with over 400,000 payments processed every day. We continue to upgrade our new best-in-class Bankline, and have migrated around 25% of customers to the improved platform

In supporting UK business growth, we have opened our 12th Business Accelerator hub in London with our award winning Entrepreneurial Spark partnership, supporting over 3,800 companies to date. For the ninth year running, Lombard won the Business Moneyfacts Best Leasing and Asset Finance Provider Award (2009 to 2017).

Commercial Banking is helping our customers achieve their goals through the continued expansion of our innovative digital offering. We continue to scale ESME, our digital 24/7 online lending platform for SMEs, which has consistently high NPS scores over 70; we are building out a platform to help customers better understand contracts; and we are deploying Artificial Intelligence, such as embedding the new chatbot 'Cora' into Bankline.

2017 compared with 2016

Operating profit of £1,108 million compared with £742 million in 2016, primarily reflecting a reduction in litigation and conduct costs. Adjusted operating profit of £1,308 million was £35 million, or 2.7%, higher than 2016 reflecting lower adjusted operating expenses and higher income, partially offset by higher impairments. Adjusted return on equity remained broadly stable at 8.2%.

Total income increased by £69 million, or 2.0%, to £3,484 million primarily reflecting increased volumes in targeted segments and re-pricing benefits on deposits. Net interest margin decreased by 2 basis points as active re-pricing of assets and deposits has been more than offset by wider asset margin pressure in a low rate environment.

Adjusted operating expenses of £1,814 million were £122 million, or 6.3%, lower than 2016, reflecting operating model simplification and productivity improvements, including a 16.4% reduction in front office headcount, and a £25 million intangible asset write-down in 2016. Adjusted cost:income ratio improved to 50.0% compared with 54.8% in 2016.

Net impairment losses of £362 million were £156 million higher than 2016, reflecting a small number of single name impairments.

Adjusting for transfers⁽¹⁾, net loans and advances decreased by £4.9 billion to £97.0 billion, compared with 2016, as growth in targeted segments has been more than offset by active capital management of the lending book.

Adjusting for transfers⁽¹⁾, RWAs decreased by £8.2 billion, or 10.4%, to £71.8 billion compared with 2016 reflecting active capital management of the lending book, achieving £12.5 billion of gross RWA reductions.

2016 compared with 2015

Operating profit was £742 million compared with £1,264 million in 2015 and included a £423 million litigation and conduct charge, principally relating to a provision in respect of the FCA review of RBS's treatment of SMEs. Adjusted operating profit of £1,273 million was £111 million, or 8%, lower than 2015, mainly reflecting increased impairments, partially offset by increased income.

Total income increased by £161 million to £3,415 million. Excluding the impact of transfers⁽²⁾, income increased by £21 million, or 1%, reflecting higher asset and deposit volumes. Net interest margin fell by 12 basis points to 1.76% driven by asset margin pressure in a competitive market and low rate environment.

Adjusted operating expenses of £1,936 million were £135 million higher than 2015. Excluding business transfers, adjusted operating expenses increased by £51 million reflecting a £25 million intangible asset write-down and increased investment spend.

Net impairment losses increased by £137 million to £206 million primarily reflecting a single name charge taken in respect of the oil and gas portfolio.

Net loans and advances of £100.1 billion increased by £8.8 billion, or 10%, compared with 2015 reflecting increased borrowing across a number of sectors.

RWAs were £78.5 billion, an increase of £6.2 billion compared with 2015 reflecting asset growth partially offset by reduced RWA intensity.

Note:

(1) Shipping and other activities which were formerly in Capital Resolution, were transferred from NatWest Markets on 1 October 2017, including net loans and advances to customers of £2.6 billion and RWAs of £2.1 billion. Commercial Banking transferred whole business securitisations and relevant financial institution's (RFI) to NatWest Markets during December 2017, including net loans and advances to customers of £0.8 billion and RWAs of £0.6 billion. Comparatives were not re-presented for these transfers.

(2) The business transfers included impact on total income of £218 million (2015 - £79 million) and operating expenses of £109 million (2015 - £25 million).

Notes:

(1) Excluding restructuring costs and litigation and conduct costs and write down of goodwill.

(2) Return on equity is based on segmental operating profit after tax adjusted for preference dividends divided by average notional equity based on 14% (15% prior to Q1 2017) of the monthly average of segmental RWAs, assuming 28% tax rate.

(3) Comprises assets under management, assets under custody and investment cash.

(4) Provision coverage represents loan impairment provisions as a percentage of risk elements in lending.

Private Banking continued Serving our customers

Private Banking continues to focus on delivering the best customer experience, with pro-active customer contact levels up 5% in the year. Our proposition has been extended to meet wider customer needs with the launch of new products, including the offset and 10-year tracker mortgages. The customer-centric strategy is improving returns and enhancing service levels, and we were awarded Best Private Bank in the UK at the Global Private Banking Awards 2017. Coutts was also awarded the Best Benefits or Loyalty Programme of the year for our Silk Card proposition and Best Debit Card Programme of the Year for our multi-currency debit card at the Card and Payments Awards 2018.

Private Banking has delivered top quartile investment performance on the majority of discretionary portfolios and UK multi-asset funds over the one, three and five year performance periods. Coutts won Gold Awards at the Portfolio Adviser Wealth Manager Awards 2018 for our Absolute Return portfolios and Cautious portfolios.

Investing in digital has seen the launch of Coutts Invest, a cost-effective, online investment solution, and delivery of an enhanced mobile experience for clients. Coutts won the Service Innovation Award at the Private Asset Manager Awards for the second consecutive year for client security innovations such as CouttsID and Behavioural Biometrics.

2017 compared with 2016

Operating profit increased by £32 million, or 28.8%, to £143 million compared with 2016 and return on equity increased from 5.6% to 6.4%. Adjusted operating profit of £227 million was £78 million, or 52.3%, higher than 2016 primarily reflecting lower adjusted operating expenses and higher income. Adjusted return on equity increased to 11.3% from 7.8% in 2016.

Adjusting for transfers⁽¹⁾, total income increased by £12 million to £678 million due to increased lending volumes and an £8 million gain on a property sale, partially offset by ongoing margin pressure. Net interest margin fell 19 basis points to 2.47% reflecting the competitive market and low rate environment.

Adjusted operating expenses of £445 million decreased by £66 million, or 12.9%, compared with 2016 largely reflecting management actions to reduce costs, including an 11.8% reduction in front office headcount. Adjusted cost:income ratio improved to 65.6% compared with 77.8% in 2016.

Net loans and advances of £13.5 billion were £1.3 billion, or 10.7%, higher than 2016 principally driven by growth in mortgages.

Adjusting for transfers⁽¹⁾, assets under management were £2.4 billion, or 14.4%, higher than 2016 at £21.5 billion, reflecting both organic growth and favourable market conditions.

RWAs of £9.1 billion were £0.5 billion, or 5.8%, higher than 2016 primarily due to increased mortgage lending.

2016 compared with 2015

An operating profit of £111 million compared with an operating loss of £470 million in 2015 which included a goodwill impairment of £498 million. Adjusted operating profit of £149 million was £36 million, or 32%, higher than 2015 reflecting increased income, lower adjusted operating expenses and lower impairments.

Total income increased by £13 million to £657 million primarily reflecting higher asset volumes. Net interest margin fell by 9 basis points to 2.66% reflecting asset margin pressures.

Adjusted operating expenses of £511 million were £7 million, or 1%, lower than 2015 driven by reductions in the direct cost base, with employee numbers down 10%, partially offset by increased infrastructure costs absorbed following the sale of the international business.

Net loans and advances of £12.2 billion increased by £1.0 billion compared with 2015 driven by mortgages. Assets under management of £17.0 billion were £3.1 billion higher compared with 2015 reflecting underlying growth and equity index inflation. In addition, investment cash balances were included in assets under management for the first time in Q3 2016, excluding this, growth was £2.0 billion.

Note:

(1) The UK PBB Collective Investment Funds (CIFL) business was transferred from UK PBB on 1 October 2017, including total income in Q4 2017 of £11 million and assets under management of £3.3 billion. Private Banking transferred Coutts Crown Dependencies (CCD) to RBS International during Q4 2017, including total income of £2 million and assets under management of £1.2 billion. Comparatives were not re-presented for these transfers.

RBS International continued

Serving our customers

RBS International continues to focus on meeting more of our retail, commercial, corporate and financial institution customers' needs. We are nearing the final stages of our transition to becoming a non ring-fenced bank, and during 2017 we opened new wholesale branches in Luxembourg and London, supporting our financial institution customers in these important funds banking jurisdictions.

Across our personal banking propositions we continue to maintain our position as market leader in the Isle of Man and top three market positions in Guernsey and Jersey. To better meet our personal customers' savings needs, we delivered a new suite of fixed term deposits. At the same time we have supported over 1,900 customers buy new homes, exceeding £480 million of new mortgages

Outside of our home jurisdictions, we have taken action to meet more of the international needs of our customers. Our mobile app now averages over one million log-ins per month, and has been upgraded to open access to international customers, assisting in our 14% increase in users.

For our commercial, corporate and financial institution customers, we invested into the next generation of our agile eQ multi-currency electronic banking platform, which brings enhanced payment functionality and product suite. To meet our non-personal customers savings needs, we delivered a new Notice Account at the beginning of August 2017, and our customers responded by depositing over £1 billion into the account.

2017 compared with 2016

Operating profit of £167 million decreased by £23 million, or 12.1%, compared with 2016 and return on equity decreased to 11.2% from 13.8%, reflecting increased operational costs associated with the creation of a bank outside the ring-fence, partially offset by higher income. Adjusted return on equity decreased to 12.6% from 14.2% in 2016 and adjusted cost:income ratio of 51.9% increased from 45.2% in 2016.

Total income increased by £15 million, or 4.0%, to £389 million driven by increased average lending balances in 2017 and re-pricing benefits on the deposit book.

Net loans and advances were broadly stable compared with 2016 and customer deposits increased by £3.8 billion to £29.0 billion primarily reflecting increased short term placements in the Funds sector.

RWAs of £5.1 billion reduced by £4.4 billion, or 46.3%, compared with 2016, reflecting the benefit of receiving the Advanced Internal Rating Based Waiver on the wholesale corporate book in November 2017, in advance of becoming a bank outside the ring-fence.

From 1st Jan 2018 RBS International will include the funds and trustee depositary business transferred from Commercial Banking, which generated around £150 million of income and £60 million of costs in 2017.

2016 compared with 2015

Operating profit decreased by £17 million to £190 million principally reflecting increased impairment losses and operating expenses. Adjusted operating profit of £195 million was £16 million lower than 2015.

Total income increased by £7 million to £374 million primarily reflecting higher asset volumes. Net interest margin fell by 12 basis points to 1.36% reflecting asset margin pressures.

Adjusted operating expenses of £169 million were £13 million, or 8%, higher than 2015, reflecting a number of one-off charges.

A net impairment loss of £10 million was reported in 2016.

Net loans and advances of £8.8 billion increased by £1.5 billion compared with 2015 reflecting balance draw-downs in the corporate lending portfolio, mainly within the Funds sector.

Customer deposits of £25.2 billion grew by £3.9 billion compared with 2015 principally reflecting the transfer of the Luxembourg branch into RBSI from Capital Resolution during Q2 2016.

RWAs were £9.5 billion, an increase of £1.2 billion compared with 2015 reflecting asset growth.

NatWest Markets continued

Serving our customers

NatWest Markets has put customers at the centre of the way it does business. Since 2015 NatWest Markets has focused on the core products and markets where it has a strong track record, longstanding relationships and market leading positions. NatWest Markets is making strong progress with its multi-year transformation to build a business focused on delivering sustainable returns.

Following the closure of the former Capital Resolution business in 2017, NatWest Markets now includes legacy run-off assets alongside its core businesses. The business continues to focus on customer service and trust in its core markets and technology is enhancing the way NatWest Markets provides financial solutions to its customers. This is demonstrated by a number of industry awards and rankings:

- No.1 for Gilts by Market Share – EMEA FIs (Source: Greenwich Associates, European Fixed Income 2017 – Government Bonds)
- No.1 for FX Service Quality – UK Corporates (Source: Greenwich Associates, European FX 2017)
- Best bank for FX Prime Brokerage services (Source: FX Week Best Bank Awards 2017)
- Best bank for FX Post-Trade Services (Source: FX Week Best Bank Awards 2017)
- Top 2 for all European issuers in the Private Placement market (Source: Dealogic Private Placement Report, Full Year 2017)
- Top 3 for GBP Denominated DCM in EMEA (Source: Dealogic EMEA Review, Full Year 2017)

2017 compared with 2016

An operating loss of £977 million compared with £1,865 million in 2016. The core business operating profit increased by £427 million to £41 million reflecting lower litigation and conduct costs, lower adjusted costs and higher income, partially offset by increased restructuring costs reflecting back office restructuring activity. Adjusted operating loss of £264 million, compared with £1,231 million in 2016, reflecting lower adjusted costs and a net impairment release of £174 million in 2017, compared with a charge of £253 million in 2016.

Total income of £1,050 million compared with £1,212 million in 2016. In the core business, adjusted income increased by £144 million, or 9.5%, to £1,665 million, principally driven by Rates as the business navigated markets well despite a lower level of customer activity than in 2016, which benefited from favourable market conditions following the EU referendum.

Adjusted operating expenses of £1,528 million were £556 million, or 26.7%, lower than 2016. In the legacy business, adjusted operating expenses decreased significantly reflecting a 77.7% reduction in headcount as the business moved towards closure. In the core business, adjusted operating expenses reduced as the business continues to drive cost reductions. NatWest Markets adjusted costs, excluding costs associated with the legacy business, were £1,268 million compared to £1,320 million in 2016.

RWAs decreased by £15.3 billion, adjusting for transfers⁽¹⁾, to £52.9 billion primarily reflecting reductions in the legacy business. In the core business RWAs decreased by £3.1 billion to £32.3 billion reflecting lower counterparty credit risk through mitigation activities and business initiatives. At the end of 2017 the legacy business within NatWest Markets had RWAs of £14.0 billion, excluding RBS's stake in Alawwal Bank, a reduction of £10.9 billion, adjusting for transfers⁽¹⁾, over the course of the year.

Funded assets fell to £118.7 billion, a reduction of £7.3 billion, adjusting for transfers⁽¹⁾, mainly reflecting disposal activity.

2016 compared with 2015

An operating loss of £1,865 million compared with an operating loss of £2,445 million in 2015. The adjusted operating loss was £1,231 million compared with a loss of £467 million in 2015, primarily driven by lower adjusted income and increased impairments partially offset by lower adjusted expenses.

Total income decreased by £854 million to £1,212 million. Adjusted income in the Core business increased by £114 million, or 8.1%, to £1,521 million. The increase was driven by Rates and Currencies, reflecting sustained customer activity throughout the year and favourable market conditions following the EU referendum and subsequent central bank actions. Income in the legacy business decreased due to the disposal losses of £572 million, £205 million higher than 2015, including £259 million in respect of the shipping portfolio. In addition, the Legacy business also incurred a funding valuation adjustment charge of £170 million in 2016.

Operating expenses decreased from £5,241 million to £2,824 million in 2016, driven by lower restructuring costs and lower adjusted expenses, primarily reflecting a 1,000 reduction in headcount in the Legacy business.

Funded assets decreased by £28.2 billion compared with 2015 to £128.5 billion, mainly reflecting disposal activity.

RWAs decreased by £12.4 billion compared with 2015 to £69.7 billion reflecting disposal activity partially offset by business movements and the impact of the weakening of sterling.

Note:

(1) Shipping and other activities which were formerly in Capital Resolution, were transferred to Commercial Banking on 1 October 2017, including total funded assets of £3.3 billion, net loans and advances to customers of £2.6 billion, and RWAs of £2.1 billion. Whole business securitisations and relevant financial institutions (RFI) were transferred from Commercial Banking during December 2017, including net loans and advances to customers of £0.8 billion, and RWAs of £0.6 billion. Comparatives were not re-presented for these transfers.

Business review

Central items & other

	2017 £m	2016 £m	2015 £m
Central items not allocated	(483)	(5,006)	(2,982)

Funding and operating costs have been allocated to operating segments based on direct service usage, the requirement for market funding and other appropriate drivers where services span more than one segment.

Residual unallocated items relate to volatile corporate items that do not naturally reside within a segment.

2017 compared with 2016

Central items not allocated represented a charge of £483 million in 2017, compared with a £5,006 million charge in 2016, and included litigation and conduct costs of £589 million, compared with £4,088 million in 2016. Treasury funding costs were a charge of £58 million, compared with a charge of £94 million in 2016. Restructuring costs in the year included £94 million relating to the former Williams & Glyn business, compared with £1,399 million in 2016. In addition to a VAT recovery of £86 million, compared with £227 million in 2016, a £156 million gain on the sale of Vocalink and a £135 million gain in relation to the sale of EuroClear⁽¹⁾.

2016 compared with 2015

Central items not allocated represented a charge of £5,006 million in 2016, compared with a £2,982 million charge in 2015, and included restructuring costs of £1,482 million and litigation and conduct costs of £4,088 million. Restructuring costs included a £750 million provision in respect of the 17 February 2017 update on RBS's remaining State Aid obligation regarding the business previously described as Williams & Glyn. Treasury funding costs were a charge of £94 million, compared with a gain of £169 million in 2015, and included a £510 million charge for volatile items under IFRS, due to reductions in long term interest rates, and a £349 million foreign exchange gain, principally associated with the weakening of sterling against the US dollar. In addition, there was a £126 million loss on redemption of own debt in 2016. These were partially offset by a VAT recovery of £227 million and a £246 million gain on the sale of the stake in VISA Europe.

Note:

(1) The total gain in relation to the sale of Euroclear was £161 million, of which £135 million central items and £26 million NatWest Markets.

Risk management framework (unaudited)

Introduction

RBS operates an integrated risk management framework, centred around the embedding of a strong risk culture, which is designed to achieve the correct balance between prudential and conduct obligations. Each element of the risk management framework functions both individually and as part of a larger continuum. The framework ensures the tools and capability are in place to facilitate risk management and decision-making across the organisation.

RBS’s strategy is informed and shaped by an understanding of the risk landscape, including a range of significant risks and uncertainties in the external economic, political and regulatory environment. Identifying these risks and understanding how they affect RBS informs risk appetite and risk management practice.

Risk appetite, which is supported by a robust set of principles, policies and practices, defines our levels of tolerance for a variety of risks.

It is a key element of RBS’s risk management framework and culture, providing a structured approach to risk-taking within agreed boundaries.

Effective governance, underpinned by our three lines of defence model is essential to ensure the right decisions are being made by the right people at the right time. Governance includes regular and transparent risk reporting as well as discussion and decision-making at senior management committees, which informs management strategies across the organisation.

RBS aims to have the right tools in place to support effective risk management. Having the appropriate capability, people and infrastructure is central. This is supported by a strong emphasis on systems, training and development to ensure threats are anticipated and managed appropriately within the boundaries determined by the agreed risk appetite.

Measurement, evaluation and transparency are also fundamental elements of the framework, providing robust analysis of the materiality and likelihood of specific threats as well as supporting understanding and communication of the financial and non-financial risks RBS is exposed to.

RBS has a strong focus on defining the control environment to ensure the effective operation of policies and processes embedded in the customer-facing businesses, thus facilitating the management of the risks they take in the course of their day-to-day activities.

Risk management framework (unaudited) continued

RBS also has a strong focus on continually improving the way risk is managed, particularly in terms of how threats are anticipated or responded to, but also in terms of simplifying or enhancing existing controls, policies and practice.

Essential to this is the ability to scan both the medium- and long-term horizon for risks. Stress testing is used to quantify, evaluate and understand the potential impact that changes to risks may have on the financial strength of RBS, including its capital position. In turn, the results of stress tests can be used to inform and shape strategy.

Given the evolving external landscape, including the structural reform required by the UK's ring-fencing requirements, in 2017 there was an emphasis on enhancing both the risk culture and risk appetite elements of the framework – as well as the interconnectivity between framework components.

All RBS employees share ownership of the way risk is managed. The businesses, the control and support functions, and Internal Audit work together to make sure business activities and policies are consistent with risk appetite; following the three lines of defence model. RBS constantly monitors its risk profile against its defined risk appetite and limits, taking action when required to balance risk and return.

Risk culture

A strong risk culture is essential if RBS is to achieve its ambition to build a truly customer-focused bank. RBS's risk culture target is to make risk simply part of the way that employees work and think.

Such a culture must be built on strong risk practices and appropriate risk behaviours must be embedded throughout the organisation.

To achieve this, RBS is focusing on leaders as role models and taking action to build clarity, continuing to develop capability and motivate employees to reach the required standards of risk culture behaviour, including:

- Taking personal accountability and proactively managing risk.
- Respecting risk management and the part it plays in daily work.
- Understanding clearly the risks associated with individual roles.
- Aligning decision-making to RBS's risk appetite.
- Considering risk in all actions and decisions.
- Escalating risks and issues early.
- Taking action to mitigate risks.
- Learning from mistakes and near-misses.
- Challenging others' attitudes, ideas and actions.
- Reporting and communicating risks transparently.

To embed and strengthen the required risk culture, a number of RBS-wide activities were undertaken in 2017. These included ethical scenario training, mandatory Group Policy Learning, and Managing Our Performance meetings designed to enhance risk culture at a team and individual employee level.

To support a consistent tone from the top, senior management regularly communicate the importance of the required risk behaviours, linking them to the achievement of good customer outcomes.

RBS's target risk culture behaviours have now been embedded into Our Standards. These are clearly aligned to the core values of "serving customers", "working together", "doing the right thing" and "thinking long term". They act as a clear starting point for a strong and effective risk culture because Our Standards are used for performance management, recruitment and selection and development.

Risk culture behaviour assessment is incorporated into performance assessment and compensation processes for enhanced governance staff. In Q1 2017, an objective aligned to RBS's risk culture target was set for the Executive Committee. Activity against that objective over the year was integral to performance reviews.

A risk culture measurement and reporting framework has been developed, enabling RBS to benchmark both internally and externally. The purpose of the framework is to assess progress in embedding RBS's target risk culture where risk is simply part of the way we work and think. In 2017, external validation indicated that good progress had been made against that objective demonstrating that the continued focus and actions are moving RBS towards its target risk culture.

Risk-based key performance indicators

RBS-wide remuneration policy ensures that the remuneration arrangements for all employees reflect the principles and standards prescribed by the PRA rulebook and the FCA handbook.

Training

Enabling employees to have the capabilities and confidence to manage risk is core to RBS's learning strategy.

RBS offers a wide range of risk learning, both technical and behavioural, across the risk disciplines. This training can be mandatory, role-specific or for personal development.

Mandatory learning for all staff is focused on keeping employees, customers and RBS safe. This is easily accessed online and is assigned to each person according to their role and business area. The system allows monitoring at all levels to ensure completion.

Code of Conduct

Aligned to RBS's values is the Code of Conduct (Our Code). The code provides guidance on expected behaviour and sets out the standards of conduct that support the values. It explains the effect of decisions that are taken and describes the principles that must be followed.

Business review Capital and risk management

Risk management framework (unaudited) continued

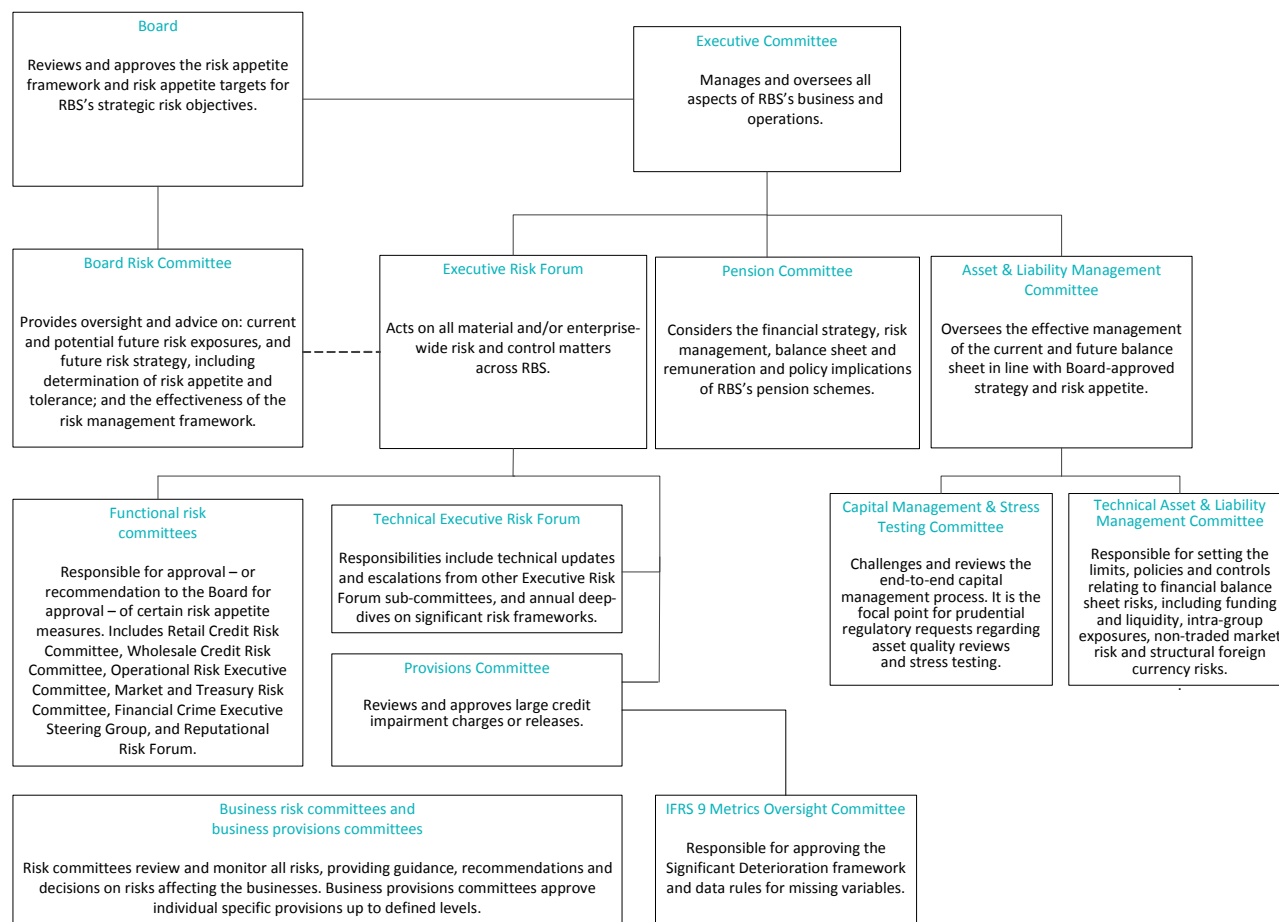

These principles cover conduct-related issues as well as wider business activities. They focus on desired outcomes, with practical guidelines to align the values with commercial strategy and actions. The embedding of these principles facilitates sound decision-making and a clear focus on good customer outcomes. They are also consistent with the people management and remuneration processes and support a positive and strong risk culture through appropriate remuneration structures.

A simple decision-making guide – the “YES check” – has been included in the Code of Conduct. It is a simple set of five questions, designed to ensure RBS values guide day-to-day decisions:

- Does what I am doing keep our customers and RBS safe and secure?
- Would customers and colleagues say I am acting with integrity?
- Am I happy with how this would be perceived on the outside?

Risk governance Committee structure

The diagram illustrates the risk committee structure in 2017 and the main purposes of each committee.

Note:

- (1) The IFRS 9 Metrics Oversight Committee has delegated authority from the RBS Provisions Committee to approve the Significant Deterioration framework, the data rules for missing variables, materiality decisions relating to the expected credit loss calculation, adjustments relating to the expected credit loss calculation if necessary, and changes in expected credit loss provision calculation methodology.

- Is what I am doing meeting the standards of conduct required?
- In five years' time would others see this as a good way to work?

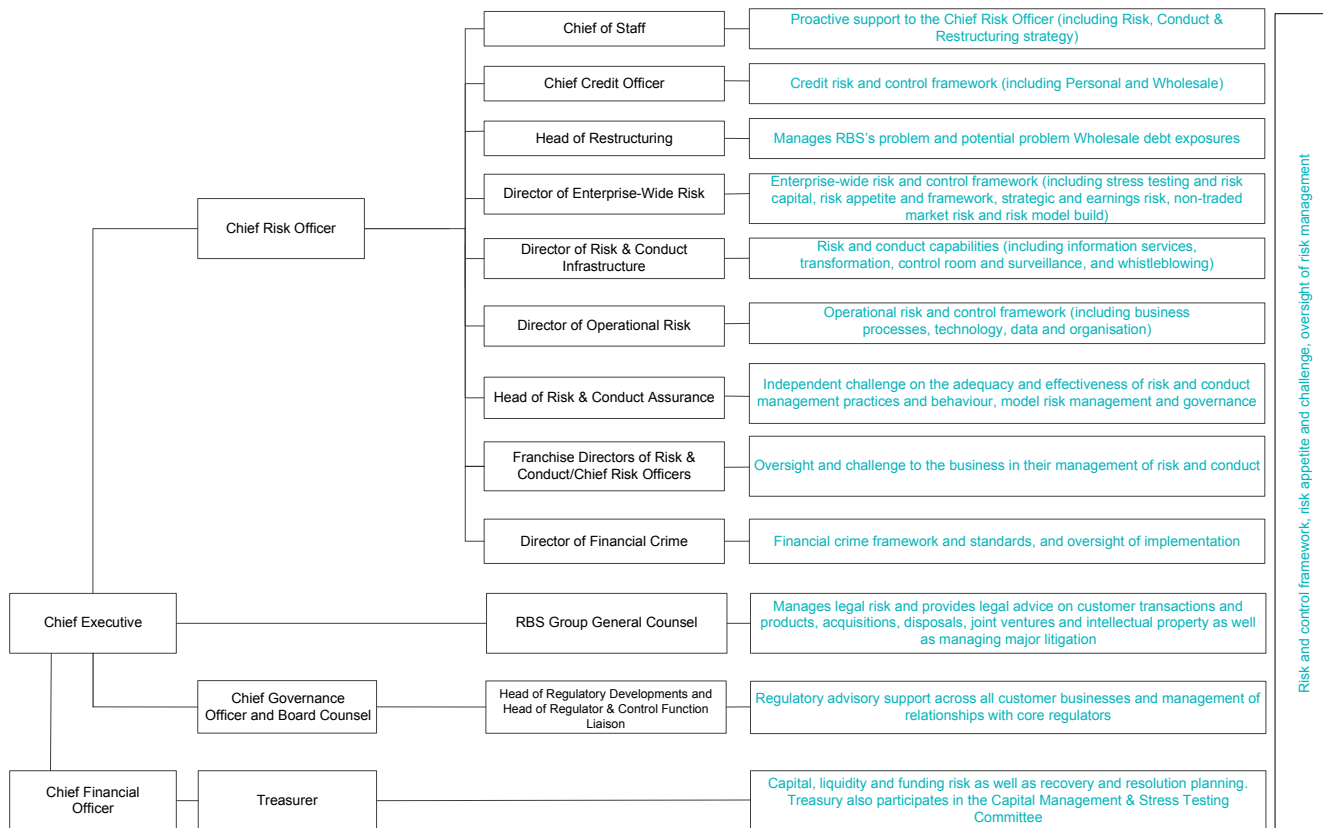

Each of the five questions is a prompt to think about how the situation fits with RBS Group's values. It ensures that employees can think through decisions that do not have a clear answer, and guides their judgements.

If conduct falls short of RBS's required standards, the accountability review process is used to assess how this should be reflected in pay outcomes for those individuals concerned. RBS's approach to remuneration and related policies promotes effective risk management through a clear distinction between fixed remuneration – which reflects the role undertaken by an individual – and variable remuneration, which is directly linked to, and reflects performance and can be risk-adjusted. The Group Performance & Remuneration Committee considers risk performance and conduct when determining overall bonus pools. Such pay decisions aim to reinforce the need for all employees to demonstrate acceptable risk management practice.

Business review Capital and risk management

Risk management framework (unaudited) continued Risk management structure

The diagram illustrates RBS's risk management structure in 2017 and key risk management responsibilities.

Notes:

(1) RBS risk management framework

In 2017, the Chief Risk Officer (CRO) led Risk, Conduct & Restructuring. The CRO reported directly to the Chief Executive and had a dotted reporting line to the Board Risk Committee, as well as a right of access, to the chairman of the Board Risk Committee.

Risk, Conduct & Restructuring was a function independent of the franchises, structured by risk discipline to facilitate the effective management of risk.

Risk, Conduct & Restructuring was organised into eight functional areas: Chief of Staff; Credit Risk; Restructuring; Enterprise-Wide Risk; Risk & Conduct Infrastructure; Operational Risk; Risk & Conduct Assurance; and Financial Crime. There were also Directors of Risk & Conduct/Chief Risk Officers for each of the franchises and for Services. Risk committees in the customer businesses and key functional risk committees oversaw risk exposures arising from management and business activities and focused on ensuring that they were adequately monitored and controlled.

(2) Regulatory Affairs

In 2017, Regulatory Affairs was responsible for providing leadership of RBS's relationships with its regulators. Regulatory Affairs is part of Corporate Governance & Regulatory Affairs. Remediation & Complaints reports to the Services Chief Operating Officer.

Risk management framework (unaudited) continued

Three lines of defence

RBS uses the three lines of defence model to articulate accountabilities and responsibilities for managing risk across the organisation. The three lines of defence model is adopted across the industry to support the embedding of effective risk management and is expressed through a set of principles as outlined below:

First line of defence – Management and supervision

The first line of defence includes customer franchises, Technology and Services as well as support and control functions such as Human Resources, Communications & Marketing and Finance. Responsibilities include:

- Owning, managing and supervising, within a defined risk appetite, the risks which exist in business areas and support functions.
- Ensuring appropriate controls are in place to mitigate risk, balancing control, customer service and competitive advantage.
- Ensuring that the culture of the business supports balanced risk decisions and compliance with policy, laws and regulations.
- Ensuring the business has effective mechanisms for identifying, reporting and managing risk and controls.

Second line of defence – Oversight and control

The second line of defence includes Risk, Conduct & Restructuring, RBS Legal, and the financial control element of RBS's Finance function. Responsibilities include:

- Working with the businesses and functions to develop risk and control policies, limits and tools for the business to use in order to discharge its responsibilities.
- Overseeing and challenging the management of risks and controls.
- Leading the articulation, design and development of risk culture and appetite.
- Analysing the aggregate risk profile and ensuring that risks are being managed within risk appetite.
- Providing expert advice to the business on risk management.
- Providing senior executives with relevant management information and reports, and escalating concerns where appropriate.

Third line of defence – Internal Audit

Responsibilities include:

- Providing assurance to the Group Audit Committee that the main business risks have been identified and effective controls are in place to manage these risks.
- Engaging with management to provide perspectives, insights and challenge in order to influence the building of a sustainable bank.
- Providing independent assurance to the Financial Conduct Authority, Prudential Regulation Authority, Central Bank of Ireland and other key jurisdictional regulators on specific risks and controls.

Risk appetite

Risk capacity defines the maximum level of risk RBS can assume before breaching constraints determined by regulatory capital and liquidity needs, the operational environment, and from a conduct perspective. Articulating risk capacity helps determine where risk appetite should be set, ensuring there is a buffer between internal risk appetite and RBS's ultimate capacity to absorb losses.

Risk appetite defines the level and types of risk RBS is willing to accept, within risk capacity, in order to achieve strategic objectives and business plans. It links the goals and priorities to risk management in a way that guides and empowers staff to serve customers well and achieve financial targets.

Risk appetite framework

The risk appetite framework bolsters effective risk management by promoting sound risk-taking through a structured approach, within agreed boundaries. It also ensures emerging risks and risk-taking activities that would be out of appetite are identified, assessed, escalated and addressed in a timely manner.

To facilitate this, a detailed annual review of the framework is carried out. The review includes:

- Assessing the adequacy of the framework when compared to internal and external expectations.
- Ensuring the framework remains effective as a strong control environment for risk appetite.
- Assessing the level of embedding of risk appetite across the organisation.

The Board approves the risk appetite framework annually.

Risk management framework (unaudited) continued Establishing risk appetite

The effective communication of risk appetite is essential in embedding appropriate risk-taking into RBS's culture.

Risk appetite is communicated across RBS through risk appetite statements. The risk appetite statements provide clarity on the scale and type of activities that can be undertaken in a manner that is easily conveyed to staff.

Risk appetite statements consist of qualitative statements of appetite supported by risk limits and triggers that operate as a defence against excessive risk-taking. They are established at RBS-wide level for all strategic risks and material risks, and at legal entity, franchise, and function level for all other risks.

The annual process of establishing risk appetite statements is completed alongside the business and financial planning process. This ensures plans and risk appetite are appropriately aligned.

The Board sets risk appetite for our most material risks to help ensure RBS is well placed to meet its priorities and long-term targets even under challenging economic environments. It is the basis on which RBS remains safe and sound while implementing its strategic business objectives.

RBS's risk profile is frequently reviewed and monitored to ensure it remains within appetite and that management focus is concentrated on all strategic risks, material risks and emerging risk issues. Effective processes are in place for reporting risk profile relative to risk appetite to the Board and senior management.

Risk control frameworks and limits

Risk control frameworks and their associated limits are an integral part of the risk appetite framework and a key part of embedding risk appetite in day-to-day risk management decisions. The risk control frameworks manage risk by expressing a clear tolerance for material risk types that is aligned to business activities.

The RBS policy framework directly supports the qualitative aspects of risk appetite, helping to rebuild and maintain stakeholder confidence in RBS's risk control and governance. Its integrated approach is designed to ensure that appropriate controls, aligned to risk appetite, are set for each of the strategic and material risks it faces, with an effective assurance process put in place to monitor and report on performance.

Risk identification and measurement

Risk identification and measurement within the risk management process comprise:

- Regular assessment of the overall risk profile, incorporating market developments and trends, as well as external and internal factors.
- Monitoring of the risks associated with lending and credit exposures.
- Assessment of trading and non-trading portfolios.
- Review of potential risks in new business activities and processes.
- Analysis of potential risks in any complex and unusual business transactions.

RBS has developed a risk directory which contains details of the financial and non-financial risks that it faces each day. It provides a common risk language to ensure consistent terminology is used across RBS. The risk directory is subject to annual review. This ensures that the directory continues to provide a comprehensive and meaningful list of the inherent risks within the businesses.

Risk treatment and mitigation

Risk treatment and mitigation is an important aspect of ensuring that risk profile remains within risk appetite. Risk mitigation strategies are discussed and agreed with the businesses.

When evaluating possible strategies, costs and benefits, residual risks (risks that are retained) and secondary risks (those caused by the risk mitigation actions) are considered. Monitoring and review processes are in place to track results.

Information about regulatory developments and discussions is communicated to each customer-facing business and function. This helps identify and execute any required mitigating changes to strategy or to business models.

Early identification and effective management of changes in legislation and regulation are critical to the successful mitigation of conduct and regulatory risk. The effects of all changes are managed to ensure timely compliance readiness. Changes assessed as having a high or medium-high impact are managed closely.

Risk management framework (unaudited) continued

Top and emerging risks that may affect future results and performance are reviewed and monitored. Action is taken to mitigate potential risks as and when required. In depth analysis is carried out, including the stress testing of exposures relative to the risk.

The Board Risk Committee, Asset & Liability Management Committee and Executive Risk Forum provide governance and oversight.

Risk and conduct assurance

Risk & Conduct Assurance is an independent second line of defence function which provides assurance to both internal and external stakeholders including the Board, senior management, risk functions, franchises, Internal Audit and regulators.

The function has three main elements – assurance, model risk and risk culture. Risk & Conduct Assurance teams perform quality assurance on targeted credit, market, financial crime and conduct risk activities. They also review selected key controls and manage model risk governance and validation activities. In addition, the Head of Risk & Conduct Assurance oversees the delivery of work to embed and strengthen RBS's desired risk culture.

The Head of Risk & Conduct Assurance also oversees the three lines of defence model, including relevant principles. For further information refer to page 154.

Assurance

Qualitative reviews are carried out to assess various risk aspects as appropriate, including: the quality of risk portfolios, the accuracy of the Basel Model Inputs and related probability of default/loss given default classifications, the quality of risk management practices, policy compliance and adherence to risk appetite. This can include testing the bank's credit portfolios and market risk exposures to assist in early identification of emerging risks, as well as undertaking targeted reviews to examine specific concerns raised either by these teams or by their stakeholders.

The adequacy and effectiveness of selected key controls owned and operated by the Risk function are also tested (with a particular focus on credit risk and market risk controls). The team's remit includes selected controls within the scope of Section 404 of the US Sarbanes-Oxley Act 2002 as well as selected controls supporting risk data aggregation and reporting.

Assurance is carried out on Anti-Money Laundering, Sanctions, and Anti-Bribery & Corruption processes and controls. This helps inform whether or not the financial crime control environment is adequate and effective and whether financial crime risk is appropriately identified, managed and mitigated. Assurance of conduct policies is predominantly focused on the Risk, Conduct & Restructuring-owned conduct policies. Targeted work is also carried out to assist RBS in meeting its promises to customers as well as its regulatory requirements.

The Risk & Conduct Assurance Committee ensures a consistent and fair approach to all aspects of the team's assurance review activities. The committee also monitors and validates the ongoing programme of reviews and tracks the remediation of the more material review actions.

Model risk

Model risk is the risk that a model is specified incorrectly (not achieving the objective for which it is designed), implemented incorrectly (an error in translating the model specification into the version actually used), or being used incorrectly (correctly specified but applied inappropriately).

RBS uses a variety of models as part of its risk management process and activities. Key examples include the use of model outputs to support risk assessments in the credit approval process, ongoing credit risk management, monitoring and reporting, as well as the calculation of risk-weighted assets. Other examples include the use of models to measure market risk exposures and calculate associated capital requirements, as well as for the valuation of positions. The models used for stress-testing purposes also play a key role in ensuring RBS holds sufficient capital, even in stressed market scenarios.

Model Risk Governance

Model Risk Governance is responsible for setting policy and providing a governance framework for all of RBS's models and related processes. It is also responsible for defining and monitoring model risk appetite in conjunction with model owners and model users, monitoring the model risk profile and reporting on the model population as well as escalating issues to senior management, through the Model Risk Forum, and the respective franchise and function risk committees.

Model Risk Management

Model Risk Management performs independent model validation for material models. It works with individual businesses and functions to monitor adherence to model risk standards, ensuring that models are developed and implemented appropriately and that their operational environment is fit for purpose.

Model Risk Management performs reviews of relevant risk and pricing models in two instances: (i) for new models or amendments to existing models and (ii) as part of its ongoing programme to assess the performance of these models.

Model Risk Management reviews may test and challenge the logic and conceptual soundness of the methodology, or the assumptions underlying a model. Reviews may also test whether or not all appropriate risks have been sufficiently captured as well as checking the accuracy and robustness of calculations. Based on the review and findings from Model Risk Management, RBS's model or risk committees consider whether a model can be approved for use. Models used for regulatory reporting may additionally require regulatory approval before implementation.

Risk management framework (unaudited) continued

Model Risk Management reassesses the appropriateness of approved risk models on a periodic basis. Each periodic review begins with an initial assessment. Based on the initial assessment, an internal model governance committee will decide to re-ratify a model or to carry out additional work. In the initial assessment, Model Risk Management assesses factors such as a change in the size or composition of the portfolio, market changes, the performance of – or any amendments to – the model and the status of any outstanding issues or scheduled activities carried over from previous reviews.

Model Risk Management also monitors the performance of RBS's portfolio of models to ensure that they appropriately capture underlying business rationale.

For more specific information relating to market risk models and pricing models, refer to page 218.

Stress testing: capital management

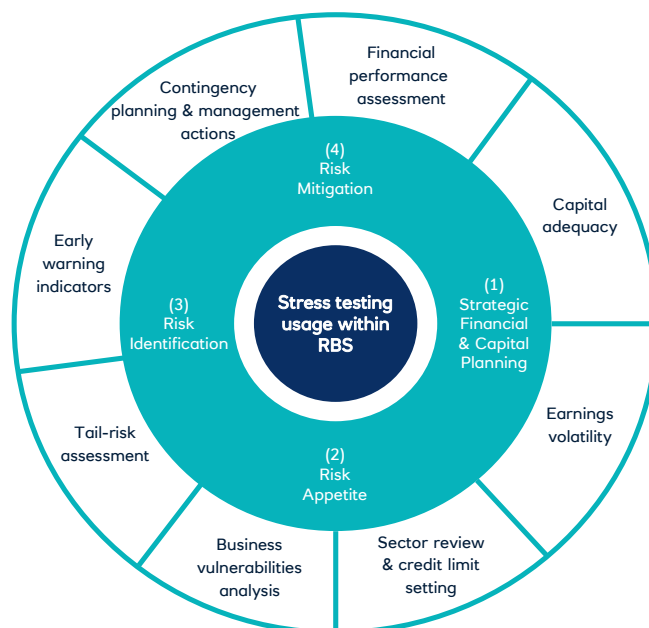

Stress testing is a key risk management tool and a fundamental component of RBS's approach to capital management. It is used to quantify, evaluate and understand the potential impact of specified changes to risk factors on the financial strength of RBS, including its capital position. Stress testing includes:

- Scenario testing, which examines the impact of a hypothetical future state to define changes in risk factors; and
- Sensitivity testing, which examines the impact of an incremental change to one or more risk factors.

The process for stress testing consists of four broad stages:

Define scenarios ↓	<ul style="list-style-type: none"> • Identify RBS-specific vulnerabilities and risks. • Define and calibrate scenarios to examine risks and vulnerabilities. • Formal governance process to agree scenarios.
Assess impact ↓	<ul style="list-style-type: none"> • Translate scenarios into risk drivers. • Assess impact to positions, income and costs. • Impact assessment captures input from across RBS.
Calculate results and assess implications ↓	<ul style="list-style-type: none"> • Aggregate impacts into overall results. • Results form part of risk management process. • Scenario results are used to inform RBS's business and capital plans.
Develop and agree management actions	<ul style="list-style-type: none"> • Scenario results are analysed by subject matter experts and appropriate management actions are then developed. • Scenario results and management actions are reviewed and agreed by senior management through executive committees including Executive Risk Forum, Board Risk Committee and the Board.

Stress testing is used widely across RBS. Key areas are summarised in the diagram below:

Specific areas that involve capital management include:

- 1) **Strategic financial and capital planning:** through assessing the impact of sensitivities and scenarios on the capital plan and capital ratios.
- 2) **Risk appetite:** through gaining a better understanding of the drivers of – and the underlying risks associated with – risk appetite.
- 3) **Risk identification:** through a better understanding of the risks that could potentially impact RBS's financial strength and capital position.
- 4) **Risk mitigation:** through identifying actions that can be taken to mitigate risks, or could be taken, in the event of adverse changes to the business or economic environment. Risk mitigation is substantially supplemented through RBS's recovery plan.

Regular reverse stress testing is also carried out. This examines circumstances that can lead to specific, defined outcomes such as business failure. Reverse stress testing allows RBS to examine potential vulnerabilities in its business model more fully.

Risk management framework (unaudited) continued

Capital sufficiency: going concern forward-looking view

Going concern capital requirements are examined on a forward-looking basis – including as part of the annual budgeting process – by assessing the resilience of capital adequacy and leverage ratios under hypothetical future states. A range of future states are examined. In particular, capital requirements are assessed:

- Based on a forecast of future business performance given expectations of economic and market conditions over the forecast period.
- Based on a forecast of future business performance under adverse economic and market conditions over the forecast period. A range of scenarios of different severity may be examined.

The examination of capital requirements under normal economic and market conditions enables RBS to demonstrate how its projected business performance allows it to meet all internal and regulatory capital requirements as they arise over the plan horizon. For example, RBS will assess its ability to issue loss-absorbing debt instruments in sufficient quantity to meet regulatory timelines. The cost of issuance will be factored into business performance metrics.

The examination of capital requirements under adverse economic and market conditions is assessed through stress testing.

The results of stress tests are not only used widely across RBS but also by the regulators to set specific capital buffers. RBS takes part in a number of stress tests run by regulatory authorities to test industry-wide vulnerabilities under crystallising global and domestic systemic risks. In 2017, RBS took part in the Bank of England stress test. Details of the stress test are set out on page 160.

Internal assessment of capital adequacy

An internal assessment of material risks is carried out annually to enable an evaluation of the amount, type and distribution of capital required to cover these risks. This is referred to as the Internal Capital Adequacy Assessment Process (ICAAP). The ICAAP consists of a point-in-time assessment of RBS's exposures and risks at the end of the financial year together with a forward-looking stress capital assessment. The ICAAP is approved by the Board and submitted to the PRA.

The ICAAP is used to form a view of capital adequacy separately to the minimum regulatory requirements. The ICAAP is used by the PRA to make an assessment of RBS-specific capital requirements through the Pillar 2 framework.

Capital allocation

RBS has mechanisms to allocate capital across its legal entities and businesses which aim to optimise the utilisation of capital resources taking into account applicable regulatory requirements, strategic and business objectives and risk appetite.

The framework for allocating capital is approved by the Asset & Liability Management Committee.

Governance

Capital management is subject to substantial review and governance. Formal approval of capital management policies is either by the Asset & Liability Management Committee or by the Board on the recommendation of the Board Risk Committee.

The Board approves the capital plans, including those for key legal entities and businesses as well as the results of the stress tests relating to those capital plans.

Stress testing: liquidity

Liquidity risk monitoring and contingency planning

In implementing the liquidity risk management framework, a suite of tools is used to monitor, limit and stress test the risks on the balance sheet. Limit frameworks are in place to control the level of liquidity risk, asset and liability mismatches and funding concentrations.

Liquidity risks are reviewed at significant legal entity and business levels daily, with performance reported to the Asset & Liability Management Committee at least monthly. Liquidity Condition Indicators are monitored daily which ensures any build-up of stress is detected early and the response escalated appropriately through recovery planning.

Internal assessment of liquidity

Under the liquidity risk management framework, RBS maintains the Individual Liquidity Adequacy Assessment Process (ILAAP). This includes assessment of net stressed liquidity outflows. RBS considers a range of extreme but plausible stress scenarios on its liquidity position over various time horizons, as outlined below.

Type	Description
Idiosyncratic scenario	The market perceives RBS to be suffering from a severe stress event, which results in an immediate assumption of increased credit risk or concerns over solvency.
Market-wide scenario	A market stress event affecting all participants in a market through contagion, counterparty failure and other market risks. RBS is affected under this scenario but no more severely than any other participants with equivalent exposure.
Combined scenario	This scenario models the combined impact of an idiosyncratic and market stress occurring at once. The combined scenario reflects the contingency that a severe name-specific event occurs at RBS in conjunction with a broader market stress, causing wider damage to the market and financial sector and severely affecting funding markets and assets.

RBS uses the most severe combination of these to set the internal stress testing scenario. The results of this enable RBS to set its internal liquidity risk appetite, which complements the regulatory liquidity coverage ratio requirement.

Risk management framework (unaudited) continued

Stress testing: recovery and resolution planning

The RBS Group maintains a recovery plan that sets out credible recovery options that could be implemented in the event of a severe stress to restore its business to a stable and sustainable condition, focusing on addressing the capital and liquidity position of the RBS Group and its constituent legal entities.

The recovery plan sets out a range of triggers that activate the implementation of the recovery plan and sets out the operational plan for implementation of appropriate recovery options.

The recovery plan is a key component of risk management including the framework for managing capital.

The recovery plan is prepared and updated annually and approved by the Board. Following Board approval it is also submitted to the PRA each year. The recovery plan is assessed for appropriateness on an ongoing basis, and is maintained in line with regulatory requirements.

Two significant legal entities, RBS Securities Inc. and The Royal Bank of Scotland International Limited, maintained separate recovery plans to address specific risks. These plans were aligned to the 2017 RBS recovery plan to ensure they operated consistently in the event of a stress scenario.

Resolution would be implemented if the RBS Group was assessed by the UK authorities to have failed and the appropriate regulator placed the RBS Group into resolution. The process of resolution is owned and implemented by the Bank of England (as UK Resolution Authority).

The RBS Group is working with UK and global regulators to ensure that it is compliant with the principles of resolution planning. This includes, but is not limited to, establishing appropriate loss-absorbing capacity and ability to maintain operational continuity in resolution, across all of RBS Group's main legal entities, including NatWest Bank Plc. Reflecting the degree of change required to ensure RBS Group is resolvable, a multi-year programme in place to develop resolution capability and meet regulatory requirements.

Stress testing: market risk

Non-traded market risk

Non-traded exposures are reported to the PRA on a quarterly basis as part of the Stress Testing Data Framework. The return provides the regulator with an overview of RBS's banking book interest rate exposure, providing detailed product information analysed by interest rate driver and other characteristics – including accounting classification, currency and, counterparty type.

Scenario analysis based on hypothetical adverse scenarios is performed on non-traded exposures as part of the industry-wide Bank of England and European Banking Authority stress exercises. In addition, RBS produces its own internal scenario analysis as part of the financial planning cycles.

Non-traded market risk exposures are capitalised through the ICAAP. The process covers the following risk types: gap risk, basis risk, credit spread risk, pipeline risk, structural foreign exchange risk, prepayment risk and accounting volatility risk. The ICAAP is completed with a combination of value and earnings measures. The total non-traded market risk capital requirement is determined by adding the different charges for each sub risk type. The ICAAP methodology captures at least ten years of historical volatility, produced with 99% confidence level. Methodologies are reviewed by RBS Model Risk and the results are approved by the Capital Management & Stress Testing Committee.

Traded market risk

RBS undertakes daily market risk stress testing to identify vulnerabilities and potential losses in excess of, or not captured in, value-at-risk. The calculated stresses measure the impact of changes in risk factors on the fair values of the trading and available-for-sale portfolios.

RBS conducts historical, macroeconomic and vulnerability-based stress testing. Historical stress testing is a measure that is used for internal management. Using the historical simulation framework employed for value-at-risk, the current portfolio is stressed using historical data since 1 January 2005. This methodology simulates the impact of the 99.9 percentile loss that would be incurred by historical risk factor movements over the period, assuming variable holding periods specific to the risk factors and the businesses.

Historical stress tests form part of the market risk limit framework and their results are reported daily to senior management. Macroeconomic stress tests are carried out periodically as part of the bank-wide, cross-risk capital planning process. The scenario narratives are translated into risk factor shocks using historical events and insights by economists, risk managers and the first line.

Market risk stress results are combined with those for other risks into the capital plan presented to the Board. The cross-risk capital planning process is conducted once a year, with a planning horizon of five years. The scenario narratives cover both regulatory scenarios and macroeconomic scenarios identified by RBS.

Vulnerability-based stress testing begins with the analysis of a portfolio and expresses its key vulnerabilities in terms of plausible, vulnerability scenarios under which the portfolio would suffer material losses. These scenarios can be historical, macroeconomic or forward-looking/hypothetical. Vulnerability-based stress testing is used for internal management information and is not subject to limits. However, the results for relevant scenarios are reported to senior management.

Business review Capital and risk management

Risk management framework (unaudited) continued

Regulatory stress testing

In 2017, the Group participated in a regulatory stress test conducted by the Bank of England. The scenario is hypothetical in nature and does not represent a forecast of the Group's future business or profitability. The results of the regulatory stress tests are carefully assessed by the Group and form part of the wider risk management of the Group.

	Bank of England stress test
Scenario 	<ul style="list-style-type: none"> Designed to assess the resilience of major UK banks to tail risk events. The severity of the test is related to policymakers' assessments of risk levels across markets and regions. The 2017 stress test examined the impact over five years of deep simultaneous recessions in the UK and global economies, large falls in asset prices and a separate stress of misconduct costs. The economic scenario in the test is more severe than the global financial crisis.
Results 	<ul style="list-style-type: none"> Under the 2017 Bank of England stress test, CET1 ratio reached a low point of 6.4%, below the hurdle rate of 6.7%. Post the impact of management actions and the conversion of AT1 capital, the Group's low point CET1 ratio increased from 6.4% to 7.0%, meeting the hurdle rate but remained below the Systemic Reference Point of 7.4%. Tier 1 leverage ratio was projected to be 3.7% under stress, above the 3.25% leverage hurdle rate. Post the impact of management actions and conversion of AT1 capital, the Tier 1 leverage ratio would have been 4.0%. The stress was based on an end of 2016 balance sheet starting position. Since then, RBS has taken a number of actions to improve its capital position stress resilience, including the on-going run-down of Capital Resolution RWAs, the continued reduction in certain credit portfolios and the resolution of various litigation cases and regulatory investigations. In light of the steps that RBS has already taken to strengthen its capital position during 2017, the regulator did not require RBS to submit a revised capital plan.
What does this mean?	<ul style="list-style-type: none"> The 2017 Bank of England stress test results demonstrate that good progress has been made in transforming the balance sheet to being safe and sustainable. The reduction in the CET1 ratio from the start point to the minimum stressed ratio before the impact of 'strategic' management actions or AT1 conversion has improved from 1,000 basis points last year to 700 basis points this year (pre-strategic management actions).

Capital, liquidity and funding risk

Definitions (unaudited)

Capital consists of reserves and instruments issued that are available that have a degree of permanency and are capable of absorbing losses. A number of strict conditions set by regulators must be satisfied to be eligible to count as capital.

Capital adequacy risk is the risk that there is or will be insufficient capital and other loss absorbing debt instruments to operate effectively including meeting minimum regulatory requirements, operating within Board approved risk appetite and supporting its strategic goals.

Liquidity consists of assets that can be readily converted to cash within a short timeframe at a reliable value. Liquidity risk is the risk of being unable to meet financial obligations as and when they fall due.

Funding consists of on-balance sheet liabilities that are used to provide cash to finance assets. Funding risk is the risk of not maintaining a diversified, stable and cost-effective funding base.

Liquidity and funding risks arise in a number of ways, including through the maturity transformation role that banks perform. The risks are dependent on factors such as:

- Maturity profile;
- Composition of sources and uses of funding;
- The quality and size of the liquidity portfolio;
- Wholesale market conditions; and
- Depositor and investor behaviour.

Sources (unaudited)

Capital

The determination of what instruments and financial resources are eligible to be counted as capital is laid down by applicable regulation. Capital is categorised under two tiers (Tier 1 and Tier 2) according to the ability to absorb losses, degree of permanency and the ranking of absorbing losses on either a going or gone concern basis. There are three broad categories of capital across these two tiers:

- **CET1 capital.** CET1 capital must be perpetual and capable of unrestricted and immediate use to cover risks or losses as soon as these occur. This includes ordinary shares issued and retained earnings.
- **AT1 capital.** This is the second type of loss absorbing capital and must be capable of absorbing losses on a going concern basis. These instruments are either written down or converted into CET1 capital when a pre-specified CET1 ratio is reached.
- **Tier 2 capital.** Tier 2 capital is the Group's supplementary capital and provides loss absorption on a gone concern basis. Tier 2 capital absorbs losses after Tier 1 capital. It typically consists of subordinated debt securities with a minimum maturity of five years.

Minimum requirement for own funds and eligible liabilities (MREL)

In addition to capital, other specific loss absorbing instruments – including senior notes issued by the Group – may be used to cover certain gone concern capital requirements which, in the EU, is referred to as MREL. Gone concern refers to the situation in which resources must be available to enable an orderly resolution, in the event that the Bank of England (BoE) deems that the Group has failed.

Liquidity

RBS maintains a prudent approach to the definition of liquidity resources. Liquidity resources are divided into primary and secondary liquidity as follows:

- Primary liquid assets include cash and balances at central banks, treasury bills and other high quality government and US agency bonds.
- Secondary liquid assets are eligible as collateral for local central bank liquidity facilities. These assets include own-issued securitisations or whole loans that are retained on balance sheet and pre-positioned with a central bank so that they may be converted into additional sources of liquidity at very short notice.

Funding

RBS's primary funding sources are as follows:

Type	Description
Customer deposits	Licensed deposit-taking entities operating as PBB, CPB and RBSI franchises.
Wholesale markets	Short-term (less than 1 year) unsecured money markets and secured repo market funding.
Term debt	Issuance of long-term (more than 1 year) unsecured and secured debt securities.
Central bank funding facilities	The use of such facilities can be both part of a wider strategic objective to support initiatives to help stimulate economic growth or as part of the broader liquidity management and funding strategy.

For further details on capital constituents and the regulatory framework covering capital, liquidity and funding requirements, please refer to the RBS Pillar 3 Report 2017 on pages 4 and 8. For MREL refer to page 161.

Key developments in 2017 (unaudited)

- RBS continued to strengthen and de-risk its capital position; CET1 ratio remains ahead of the 13% target and increased by 250 basis points in the year end to 15.9% (40 basis points in Q4 2017), despite absorbing significant litigation and conduct costs, restructuring costs and disposal losses. IFRS 9 adoption on 1 January 2018 favourably impacts CET1 by 30 basis points. RWAs reduced by £27.3 billion to £200.9 billion reflecting the rundown of NatWest Markets legacy assets and reductions across other businesses. In addition, RBS was not required to submit a revised capital plan following the 2017 Bank of England (BOE) stress testing exercise.

Business review Capital and risk management

Capital, liquidity and funding risk *continued*

- CRR leverage ratio increased to 5.3% (2016 – 5.1%). UK leverage ratio improved to 6.1% (2016 – 5.6%) reflecting higher central bank balances which are excluded from the UK framework.
- During the year the BOE published indicative data on the minimum amount of loss-absorbing resources for the larger UK banks comprising MREL plus buffers. RBS is expected to require loss-absorbing resources of 24.0% of RWAs by 1 January 2020, rising to 27.8% by 1 January 2022. Total loss absorbing capital, based on RBS's interpretation of the rules and including the benefit of legacy securities, was 27.1% of RWAs at 31 December 2017.
- The liquidity portfolio increased by £22 billion in 2017 to £186 billion, mainly within primary liquidity which is now £124 billion (2016 – £95 billion). This build up in liquidity is driven by TFS participation, increased deposits in the franchises and Treasury issuance, offset by funding maturities and calls of securities.
- The rise in primary liquidity resulted in higher liquidity coverage ratio (LCR) and stressed outflow coverage (SOC) of 152% (2016 – 123%) and 168% (2016 – 139%) respectively. The increase in LCR reflected preparations for the settlement of litigation, the rise in the minimum regulatory requirement from 90% to 100% on 1 January 2018 and preparations for ring-fencing.
- The net stable funding ratio rose to 132% (2016 – 121%), above the minimum target of 100%. The increase in NSFR was primarily driven by increased available stable funding.
- The regulatory agenda continues to rapidly evolve in the UK, Europe and internationally. RBS manages its capital, liquidity and funding to meet both current and future regulatory requirements whilst ensuring that we continue to serve customers well.

Capital management *(unaudited)*

Capital management ensures that there is sufficient capital and other loss absorbing instruments to operate effectively including meeting minimum regulatory requirements, operating within Board approved risk appetite, maintaining its credit rating and supporting its strategic goals.

Capital management is critical in supporting the businesses and is enacted through an end to end framework across businesses and the legal entities.

Capital planning is integrated into the Group's wider annual budgeting process and is assessed and updated at least monthly. Regular returns are submitted to the PRA which include a two year rolling forward view. Other elements of capital management, including risk appetite and stress testing, are set out on pages 154 and 157.

Produce capital plans

Assess capital adequacy

Inform capital actions

- Capital plans are produced for the Group, its key operating entities and its businesses over a five year planning horizon under expected and stress conditions. Stressed capital plans are produced to support internal stress testing through the ICAAP or for regulatory purposes.
- Shorter term forecasts are developed frequently in response to actual performance, changes in internal and external business environment and to manage risks and opportunities.
- Capital plans are developed to maintain capital of sufficient quantity and quality to support the Group's business and strategic plans over the planning horizon within approved risk appetite, as determined via stress testing, and minimum regulatory requirements.
- Capital resources and capital requirements are assessed across a defined planning horizon.
- Impact assessment captures input from across the Group including from businesses.
- Capital planning informs potential capital actions including managing capital through buy backs, redemptions or through new issuance to external investors or via internal transactions.
- Decisions on capital actions will be influenced by strategic and regulatory requirements, the cost and prevailing market conditions.
- As part of capital planning, the Group will monitor its portfolio of external capital securities and assess the optimal blend and most cost effective means of financing.

Capital planning is one of the tools that the Group uses to monitor and manage capital risk on a going and gone concern basis, including the risk of excessive leverage.

Liquidity and funding management follows a similar process to that outlined above for capital.

Liquidity portfolio management *(unaudited)*

The size of the portfolio is determined by referencing RBS's liquidity risk appetite. RBS retains a prudent approach to setting the composition of the liquidity portfolio, which is subject to internal policies and limits over quality of counterparty, maturity mix and currency mix.

Capital, liquidity and funding risk *continued*

RBS categorises its liquidity portfolio, including its locally managed liquidity portfolios, into primary and secondary liquid assets. The majority of the portfolio is centrally managed by RBS Treasury, for which the RBS Treasurer is responsible. This portfolio is held in the PRA regulated UK Domestic Liquidity Subgroup (UK DoLSub) comprising RBS's five licensed deposit taking UK banks: The Royal Bank of Scotland plc, National Westminster Bank Plc, Ulster Bank Limited, Coutts & Co and Adam & Company PLC.

Two of RBS's significant operating subsidiaries, RBS N.V. and Ulster Bank Ireland DAC, hold locally managed portfolios that comply with local regulations that may differ from PRA rules.

The liquidity value of the portfolio is determined by taking current market prices and applying a discount or haircut, to give a liquidity value that represents the amount of cash that can be generated by the asset.

Separate from the liquidity portfolio, RBS holds high quality assets to meet payment systems collateral requirements; these are managed by RBS Treasury.

Ring-fencing implications

As a result of the legal entity restructuring in response to the UK government's ring-fencing legislation, the current Royal Bank of Scotland plc (expected to be renamed NatWest Markets plc at the time of the RFTS during the first half of 2018) will separately hold and manage its own liquidity portfolio outside of the ring-fenced group. It will cease to form part of the UK DoLSub at a point in time in the second half of 2018 (subject to regulatory agreement). RBS International will begin to hold its own liquidity portfolio and RBS N.V. and UBI DAC will continue to hold separate liquidity to meet local regulatory requirements.

Treasury has commenced the transfer of the existing liquidity portfolio from RBS plc into National Westminster Bank Plc (where the majority of the UK DoLSub liquidity portfolio will be held post ring-fencing) to ensure appropriate levels of liquidity are held in both RBS plc and the UK DoLSub.

The size of the liquidity portfolio to be held by the future NatWest Markets plc should not be considered comparable to that held by the current RBS plc.

For further information, please refer to RBS Group ring-fencing on page 109.

Funding risk management *(unaudited)*

RBS manages funding risk through a comprehensive framework which measures and monitors the funding risk on the balance sheet.

The asset and liability types broadly match. Customer deposits provide more funding than customer loans utilise; repurchase agreements are largely covered by reverse repurchase agreements; interbank lending and funding largely nets off and derivative assets are broadly netted against derivative liabilities.

Business review Capital and risk management

Capital, liquidity and funding risk continued

Minimum requirements (unaudited)

Capital adequacy ratios

The Group is subject to minimum requirements in relation to the amount of capital it must hold in relation to its RWAs. The table below summarises the minimum ratios of capital to RWAs that the Group is expected to have to meet once CRR is fully implemented by 1 January 2019. These ratios apply at the consolidated group level. Different minimum capital requirements may apply to individual legal entities or sub-groups.

Minimum requirements	Type	CET1	Total Tier 1	Total capital
System wide	Pillar 1 minimum requirements	4.5%	6.0%	8.0%
	Capital conservation buffer	2.5%	2.5%	2.5%
	UK countercyclical capital buffer ⁽¹⁾	1.0%	1.0%	1.0%
	G-SIB buffer ⁽²⁾	1.0%	1.0%	1.0%
Bank specific	Pillar 2A ⁽⁴⁾	2.1%	2.9%	3.8%
Total (excluding PRA buffer) ⁽⁵⁾		11.1%	13.4%	16.3%

Notes:

- (1) The countercyclical capital buffer (CCyB) applied to UK designated assets is set by the Financial Policy Committee (FPC). The UK CCyB may be set between 0% and 2.5% and is linked to the state of the UK economy. The Bank of England's Financial Policy Committee (FPC) increased the UK CCyB from 0.0% to 0.5%, with effect from June 2018; subsequently in November 2017 the FPC announced a further increase to 1.0% effective November 2018. The estimated own funds impact for the Group, based on the CCyB rate of 1.0% and 31 December 2017 exposures, was £1,343 million. Foreign exposures may be subject to different CCyBs depending on the CCyB rate set in the jurisdiction of the foreign exposure.
- (2) Globally systemically important banks (G-SIBs), as designated by the Financial Stability Board (FSB), are subject to an additional capital buffer of between 1% and 3.5%. Based on the most recent determination of the FSB, the Group is subject to an additional capital requirement of 1.0%.
- (3) The Group will be subject to a systemic risk buffer (SRB) of between 0% and 3%. The SRB will apply from 1 January 2019 and will apply at the ring-fenced bank sub-group level rather than at the consolidated group level. The SRB may require the Group to hold a minimum amount of capital at the consolidated group level beyond the levels set out in the table above.
- (4) From 1 January 2015, RBS has been required to meet at least 56% of its Pillar 2A capital requirement with CET1 capital and with balance with Additional Tier 1 and/or Tier 2 capital. Additional capital requirements under Pillar 2A may be specified by the PRA as a ratio or as an absolute value. The table sets out an implied ratio to cover the full value of Pillar 2A requirements. The PRA has recently determined that the Pillar 2A capital requirement for 2018 remains unchanged.
- (5) The Group may be subject to a PRA buffer requirement as set by the PRA. The PRA buffer consists of two components:
 - A risk management and governance buffer that is set as a scalar of the Pillar 1 and Pillar 2A requirements. The scalar could range between 10% and 40%.
 - A buffer relating to the results of the BoE concurrent stress testing results. The PRA requires that the level of this buffer is not publicly disclosed.
- (6) The capital conservation buffer, the countercyclical capital buffer, the G-SIB buffer and systemic risk buffer (where applicable) make up the combined buffer. If the Group fails to meet the combined buffer requirement, it is subject to restrictions on distributions on CET1 instruments, discretionary coupons on AT1 instruments and on payment of variable remuneration or discretionary pension benefits. These restrictions are calculated by reference to the Group's Maximum Distributable Amount (MDA). The MDA trigger is below the PRA buffer and MDA restrictions are not automatically triggered if the Group fails to meet its PRA buffer. The MDA is calculated as the amount of interim or year-end profits not yet incorporated into CET1 capital multiplied by a factor ranging from 0 to 0.6 depending on the size of the CET1 shortfall against the combined buffer.

Leverage ratios

The table below summarises the minimum ratios of capital to leverage exposure under the PRA UK leverage framework that the Group must meet. In November 2016, the European Commission published a package of legislative proposals (CRR 2) for the adoption of a legally binding 3% of Tier 1 capital minimum leverage ratio with consideration of a leverage buffer ratio for G-SIBs once a final international agreement had been reached. Different minimum requirements may apply to individual legal entities or sub-groups.

Type	CET1	Total Tier 1
Minimum ratio	2.4375%	3.25%
UK countercyclical leverage ratio buffer	0.00%	0.00%
Additional leverage ratio buffer	0.35%	0.35%
Total	2.7875%	3.60%

Notes:

- (1) The countercyclical leverage ratio buffer is set at 35% of the Group's CCyB. As noted above this buffer may be set between 0% and 2.5% and the Financial Policy Committee (FPC) increased the rate from 0.0% to 0.5% effective June 2018; subsequently in November 2017 the FPC announced a further increase to 1% effective November 2018. The applicable ratio for foreign exposures may be different. On 3 October 2017 the PRA, via revised policy statement (PS21/17), increased the Tier 1 leverage ratio requirement for UK banks by 25 basis points to 3.25% (CET1 requirement of 2.4375%). The PRA minimum leverage ratio requirement is supplemented with a G-SIB additional leverage ratio buffer, currently 0.175% under transitional arrangements (31 December 2016 – 0.13125%) increasing to 0.35% at the end point, and countercyclical capital buffer of 0.0%.

Liquidity and funding ratios

The table below summarises the minimum requirements for key liquidity and funding metrics, under the relevant legislative framework.

Type	From 1 January 2017	From 1 January 2018
Liquidity coverage ratio (LCR) ⁽¹⁾	90%	100%
Net stable funding ratio (NSFR) ⁽²⁾	N/A	100%

Notes:

- (1) On 1 October 2015 the LCR became the PRA's primary regulatory liquidity standard. It is a Pillar 1 metric to which the PRA apply Pillar 2 add-ons. The minimum ratio above excludes Pillar 2 add-ons.
- (2) BCBS issued its final recommendations for the implementation of the net stable funding ratio in October 2014, proposing an implementation date of 1 January 2018 by which time banks are expected to meet and maintain a ratio of 100%. In November 2016, the European Commission (EC) included a net stable funding ratio of 100% as part of the CRR 2 package of legislative proposals. The timing of a binding NSFR coming into force in the European Union and United Kingdom remains subject to uncertainty. In the meantime, RBS uses the definitions from the BCBS guidelines, and its own interpretations, to calculate the NSFR. RBS's ratio may not be comparable with those of other financial institutions.

Business review Capital and risk management

Capital, liquidity and funding risk continued

Measurement

Capital and leverage: Key metrics (unaudited)

Capital, RWAs and capital adequacy ratios, on the basis of end-point Capital Requirements Regulation (CRR) and transitional rules, calculated in accordance with PRA definitions, are set out below.

	2017		2016	
	End-point CRR basis (1) £bn	PRA transitional basis £bn	End-point CRR basis (1) £bn	PRA transitional basis £bn
Capital				
CET1	32.0	32.0	30.6	30.6
Tier1	36.0	39.6	34.7	40.4
Total	42.8	47.9	43.8	52.3
RWAs				
Credit risk				
- non-counterparty	144.7	144.7	162.2	162.2
- counterparty	15.4	15.4	22.9	22.9
Market risk	17.0	17.0	17.4	17.4
Operational risk	23.8	23.8	25.7	25.7
Total RWAs	200.9	200.9	228.2	228.2
Capital adequacy ratios	%	%	%	%
CET1	15.9	15.9	13.4	13.4
Tier 1	17.9	19.7	15.2	17.7
Total	21.3	23.9	19.2	22.9

	2017		2016	
Tier 1 capital (£bn)	36.0	39.6	34.7	40.4
CRR leverage exposure (£bn)	679.1	679.1	683.3	683.3
CRR leverage ratio (%)	5.3%	5.8%	5.1%	5.9%
Average Tier 1 capital (£bn) (2)	36.4	40.0	38.0	43.7
Average leverage exposure (£bn) (2)	692.5	692.5	712.1	712.1
Average leverage ratio (%) (2)	5.3%	5.8%	5.3%	6.1%
UK leverage ratio	6.1%	6.7%	5.6%	6.6%

Notes:

- (1) CRR as implemented by the Prudential Regulation Authority in the UK, with effect from 1 January 2014. All regulatory adjustments and deductions to CET1 have been applied in full for both bases with the exception of unrealised gains on available-for-sale securities which has been included from 2015 under the PRA transitional basis.
- (2) Based on 3 month average of month end leverage exposure and Tier 1 Capital.

Measures in relation to end-point CRR basis, including RWAs, are based on the current interpretation, expectations, and understanding, of the CRR requirements, as well as further regulatory clarity and implementation guidance from the UK and EU authorities (end-point CRR basis).

Capital base:

Own funds are based on shareholders' equity. The adjustment arising from the application of the prudent valuation requirements to all assets measured at fair value, has been included in full. Additional valuation adjustments relating to unearned credit spreads on exposures under the advanced internal ratings approach has been included in the determination of the expected loss amount deducted from CET1. Where the deductions from AT1 capital exceed AT1 capital, the excess is deducted from CET1 capital. Based on our current interpretations of the Commission Delegated Regulation issued in December 2013 on credit risk adjustments, RBS's standardised latent provision has been reclassified to specific provision and is not included in Tier 2 capital.

RWAs:

Current securitisation positions are shown as risk-weighted at 1,250%. RWA uplifts include the impact of credit valuation adjustments and asset valuation correlation on large financial sector entities. RWAs reflect implementation of the full internal model method suite, and include methodology changes that took effect immediately on CRR implementation. Counterparties which meet the eligibility criteria under CRR are exempt from the credit valuation adjustments volatility charges

Liquidity key metrics (unaudited)

The table below sets out the key liquidity and related metrics monitored by RBS.

	2017	2016
Liquidity portfolio	£186bn	£164bn
Liquidity coverage ratio (1)	152%	123%
Stressed outflow coverage (2)	168%	139%
Net stable funding ratio (3)	132%	121%
Loan:deposit ratio	88%	91%

Notes:

- (1) On 1 October 2015 the LCR became the PRA's primary regulatory liquidity standard. It is a Pillar 1 metric to which the PRA apply Pillar 2 add-ons. The published LCR excludes Pillar 2 add-ons. RBS calculates the LCR using its own interpretations of the EU LCR Delegated Act, which may change over time and may not be fully comparable with those of other financial institutions.
- (2) RBS's stressed outflow coverage (SOC) is measured by reference to the liquidity portfolio as a percentage of stressed contractual and behavioural outflows over three months under the worst of three severe stress scenarios of a market-wide stress, an idiosyncratic stress and a combination of both in RBS's ILAAP. This assessment is performed in accordance with PRA guidance.
- (3) BCBS issued its final recommendations for the implementation of the net stable funding ratio in October 2014, proposing an implementation date of 1 January 2018 by which time banks are expected to meet and maintain a ratio of 100%. In November 2016, the European Commission (EC) included a net stable funding ratio of 100% as part of the CRR 2 package of legislative proposals. The timing of a binding NSFR coming into force in the European Union and United Kingdom remains subject to uncertainty. In the meantime, RBS uses the definitions from the BCBS guidelines, and its own interpretations, to calculate the NSFR. RBS's ratio may not be comparable with those of other financial institutions.

RBS opcos	14.4	14.7	—	—	14.8	15.0	—	—
	23.7	23.9	—	8.3	21.7	21.8	—	5.0
Total	74.5	75.2	48.1	54.5	77.9	78.8	53.6	57.0
RWAs				200.9				228.2
Leverage exposure				679.1				683.3
LAC as a ratio of RWAs				27.1%				24.9%
LAC as a ratio of leverage exposure				8.0%				8.3%

Notes:

- (1) Par value reflects the nominal value of securities issued.
- (2) Regulatory capital instruments issued from operating companies are included in the transitional LAC calculation, to the extent they meet the MREL criteria.
- (3) LAC value reflects RBS's interpretation of the Bank of England's policy statement on the minimum requirements for own funds and eligible liabilities (MREL), published in November 2016. MREL policy and requirements remain subject to further potential development, as such RBS estimated position remains subject to potential change. Liabilities excluded from LAC include instruments with less than one year remaining to maturity, structured debt, operating company senior debt, and other instruments that do not meet the MREL criteria. Includes Tier 1 and Tier 2 securities prior to incentive to redeem.
- (4) Corresponding shareholders' equity was £48.3 billion (2016 - £48.6 billion).
- (5) Regulatory amounts reported for AT1, Tier 1 and Tier 2 instruments are before grandfathering restrictions imposed by CRR.

Roll-off profile (unaudited)

The following table illustrates the roll-off profile and weighted average spreads of RBS's major wholesale funding programmes.

Senior debt roll-off profile (1)	As at and for year ended 31 December		Roll-off profile				
	2017	H1 2018	H2 2018	2019	2020	2021 & 2022	2023 & later
RBSG							
- amount (£m)	9,208	59	25	1,289	3	7	7,825
- weighted average rate spread (bps)	202	172	171	205	162	224	201
RBS plc							
- amount (£m)	14,624	5,105	1,651	2,521	2,863	1,117	1,367
- weighted average rate spread (bps)	116	188	244	84	24	202	201
RBS N.V.							
- amount (£m)	24	22	—	—	2	—	—
- weighted average rate spread (bps)	114	125	—	—	5	—	—
Securitisation							
- amount (£m)	396	—	—	—	—	—	396
- weighted average rate spread (bps)	1,080	—	—	—	—	—	1,080
Covered bonds							
- amount (£m)	6,307	923	—	—	3,169	—	2,215
- weighted average rate spread (bps)	125	137	—	—	99	—	157
Total notes issued (£m)	30,559	6,109	1,676	3,810	6,037	1,124	11,803
Weighted average spread	156	231	141	117	211	42	85
Subordinated debt instruments roll-off profile (2)							
RBSG (£m)	6,850	92	265	915	—	1,625	3,953
RBS plc (£m)	2,652	1,888	111	37	101	288	227
NatWest Plc (£m)	1,143	694	—	—	—	449	—
RBS N.V. (£m)	881	142	—	214	11	—	514
UBI DAC (£m)	76	—	—	—	—	—	76
Total (£m)	11,602	2,816	376	1,166	112	2,362	4,770

Notes:

(1) Based on final contractual instrument maturity.

(2) Based on first call date of instrument, however this does not indicate RBS's strategy on capital and funding management. The table above does not include debt accounted Tier 1 instruments although those instruments form part of the total subordinated debt balance.

(3) The weighted average spread reflects the average net funding cost to RBS and is calculated on an indicative basis.

(4) The roll-off table is based on sterling-equivalent balance sheet values.

Risk-weighted assets (unaudited)

The table below analyses the movement in credit risk RWAs on the end-point CRR basis during the year, by key drivers.

	Credit risk RWAs		Market	Operational	Total £bn
	Non-counterparty £bn	Counterparty £bn			
At January 2017	162.2	22.9	17.4	25.7	228.2

Capital, liquidity and funding risk continued

RWAs by segment (unaudited)

The chart below illustrates the concentration of risk-weighted assets by segment.

The table below analyses the movement in end-point CRR RWAs by segment during the year.

	UK PBB £bn	Ulster Bank Rol £bn	Commercial Banking £bn	Private Banking £bn	RBSI £bn	NatWest Markets £bn	Central items & other £bn	Total £bn
Total RWAs								
At January 1 2017*	42.3	18.1	78.5	8.6	9.5	69.7	1.5	228.2
Foreign exchange movement	—	0.5	(0.4)	—	—	(1.3)	—	(1.2)
Business movements	0.6	—	(3.9)	0.5	—	(16.4)	(0.5)	(19.7)
Risk parameter changes (1)	0.1	(0.6)	(2.4)	—	—	0.6	—	(2.3)
Methodology changes	—	—	—	—	(4.4)	0.1	—	(4.3)
Model updates	—	—	—	—	—	0.2	—	0.2
At 31 December 2017	43.0	18.0	71.8	9.1	5.1	52.9	1.0	200.9
Credit risk								
- non-counterparty	33.7	16.9	65.4	8.1	4.4	16.1	0.1	144.7
- counterparty	—	0.1	—	—	—	15.3	—	15.4
Market risk	—	0.1	—	—	—	16.2	0.7	17.0
Operational risk	9.3	0.9	6.4	1.0	0.7	5.3	0.2	23.8
Total RWAs	43.0	18.0	71.8	9.1	5.1	52.9	1.0	200.9

* Re-presented to reflect segment reorganisation.

Notes:

(1) Risk parameter changes relate to changes in credit quality metrics of customers and counterparties such as probability of default (PD) and loss given default (LGD) as well as IRB model changes relating to counterparty credit risk (in line with EBA Pillar 3 Guidelines).

Key points (unaudited)

- RWAs decreased by £27.3 billion during the year with reductions across all risk types but primarily in non-counterparty credit risk (£17.5 billion) driven by reduced asset size and limit reductions in both NatWest Markets and Commercial Banking.
- The decrease in NatWest Markets primarily reflects reductions in the legacy business as it moved towards closure and lower counterparty credit risk resulting from mitigation activities.
- There has been a reduction in net lending in Commercial Banking as a result of growth in targeted segments being more than offset by active management of the lending book.
- During the year RBSI received regulatory approval to adopt the advanced internal ratings based approach on the wholesale corporate book, which led to an RWA reduction of £4.4 billion.
- In both UK PBB and Private Banking there has been growth in mortgage lending which has increased RWAs.
- Risk metric improvements in Ulster Bank Rol have been offset by foreign currency movements.

Total funding including repos	432,213	56,002	488,215	417,122	49,066	466,188

Notes:

(1) Includes £19.0 billion (2016 - £5.0 billion) relating to TFS participation and £1.8 billion (2016 - £1.3 billion) relating to RBS's participation in central bank financing operations under the European Central Bank's Targeted Long Term Refinancing Operations.

(2) Cash collateral includes £9,113 million (2016 - £10,002 million) from financial institutions.

Key points

- During 2017, RBS issued new debt securities of £12.2 billion including:
 - £3.6 billion of MREL-eligible senior debt by RBSG plc, bring the total issuance in 2016 and 2017 to £7.8 billion;
 - £2.4 billion of covered bonds by RBS plc, the first such issuance for RBS since 2012; and
 - £1.1 billion of senior unsecured notes issued by RBS plc to support the future standalone operations of NatWest Markets plc.
 - Other issuance of £5.1 billion, including MTNs, commercial paper and CDs, and securitisations.
- In 2017, subordinated debt securities of £5.7 billion and senior unsecured debt securities of £9.0 billion were redeemed or matured through the year.
- Total wholesale funding increased by £2.8 billion in the year to £82.8 billion, driven by increased TFS participation of £14.0 billion in 2017, as well as issuance activity, offset by calls and maturities of subordinated debt and debt securities in issue. Short-term wholesale funding, excluding derivative collateral, increased by £3.9 billion during 2017 to £17.8 billion driven largely by issuance activity and new bank deposits.
- Repos at 31 December 2017 increased by £6.1 billion to £38.4 billion driven largely by strong demand in the market for high quality securities.
- Total reverse repos at 31 December 2017 were £1.1 billion lower at £40.7 billion (2016 - £41.8 billion). Fair value of securities received as collateral for reverse repos was £40.7 billion (2016 - £41.8 billion), of which £30.6 billion (2016 - £30.5 billion) had been rehypothecated for RBS's own transactions, in line with normal market practice.

	323,184	367,034	88	43,850	323,023	353,872	91	30,849

* Re-presented to reflect the segmental reorganisation.

Notes:

- (1) Excludes reverse repo agreements and net of impairment provisions.
(2) Excludes repo agreements.
(3) Calculated as customer deposits less loans and advances to customers.
(4) nm = not meaningful.

Key points

- The loan:deposit ratio was 88%, down from 91% at the end of 2016 driven by deposit growth, primarily in UK PBB and RBS International.
- Underlying loan growth in UK PBB, with smaller increases in Ulster Bank RoI and Private Banking, was offset by active management of the lending book in Commercial Banking and reductions in NatWest Markets.

The table below shows RBS's principal funding sources.

Behavioural analysis (unaudited)

The contractual maturity of balance sheet assets and liabilities reflects the maturity transformation role banks perform, lending long-term but mainly obtaining funding through short-term liabilities such as customer deposits. In practice, the behavioural profiles of many liabilities show greater stability and longer maturity than the contractual maturity. This is particularly true of many types of retail and corporate deposits which, despite being repayable on demand or at short notice, have demonstrated very stable characteristics even in periods of acute stress.

In its analysis to assess and manage asset and liability maturity gaps, RBS determines the expected customer behaviour through qualitative and quantitative techniques. These incorporate observed customer behaviours over long periods of time. This analysis is subject to governance through RBS ALCo Technical committee down to a segment level.

The net behavioural funding surplus/(gap) and contractual maturity analysis is set out below.

2017	Loans to customers				Contractual maturity Customer accounts				Net surplus/(gap)				Behavioural maturity Net surplus/(gap)

Key points (unaudited)

- The net funding surplus has increased by £13 billion during 2017 to £44 billion, largely driven by deposit growth (mainly in UK PBB and RBSI International). NatWest Markets lending reduction exceeded deposit reduction, resulting in a lower funding gap in 2017.
- Customer deposits and customer loans are broadly matched from a behavioural perspective.
- The net funding surplus in 2017 is concentrated in the longer-dated buckets, reflecting the stable characteristics of customer deposits and lending that is behaviourally shorter dated.

Contractual maturity

This table shows the residual maturity of financial instruments, based on contractual date of maturity. Held-for-trading (HFT) assets and liabilities have been excluded from the maturity analysis due to their short-term nature and are shown in total in the table below. Hedging derivatives are included in the relevant maturity bands.

	Other than held-for-trading									Total

Capital, liquidity and funding risk continued

Encumbrance

RBS evaluates the extent to which assets can be financed in a secured form (encumbrance), but certain asset types lend themselves more readily to encumbrance. The typical characteristics that support encumbrance are an ability to pledge those assets to another counterparty or entity through operation of law without necessarily requiring prior notification, homogeneity, predictable and measurable cash flows, and a consistent and uniform underwriting and collection process. Retail assets including residential mortgages, credit card receivables and personal loans display many of these features.

RBS categorises its assets into three broad groups, those that are:

- Already encumbered and used to support funding currently in place through own-asset securitisations, covered bonds and securities repurchase agreements.
- Pre-positioned with central banks as part of funding schemes and those encumbered under such schemes.
- Not currently encumbered. In this category, RBS has in place an enablement programme which seeks to identify assets capable of being encumbered and to identify the actions to facilitate such encumbrance whilst not affecting customer relationships or servicing.

Notes:

- (1) Covered bonds and securitisations include securitisations, conduits and covered bonds.
- (2) Repos and other secured deposits, cash, coin and nostro balance held with the Bank of England as collateral against deposits and notes in circulation are included here rather than within those positioned at the central bank as they are part of normal banking operations.
- (3) Total assets encumbered as a result of transactions with counterparties other than central banks are those that have been pledged to provide security and are therefore not available to secure funding or to meet other collateral needs.
- (4) Assets pre-positioned at the central banks include loans provided as security as part of funding schemes and those encumbered under such schemes.
- (5) Readily available for encumbrance: including assets that have been enabled for use with central banks but not pre-positioned; cash and high quality debt securities that form part of RBS's liquidity portfolio and unencumbered debt securities.
- (6) Other assets that are capable of being encumbered are those assets on the balance sheet that are available for funding and collateral purposes but are not readily realisable in their current form. These assets include loans that could be prepositioned with central banks but have not been subject to internal and external documentation review and diligence work.
- (7) Cannot be used includes:
 - (a) Derivatives, reverse repurchase agreements and trading related settlement balances.
 - (b) Non-financial assets such as intangibles, prepayments and deferred tax.
 - (c) Loans that cannot be pre-positioned with central banks based on criteria set by the central banks, including those relating to date of origination and level of documentation.
 - (d) Non-recourse invoice financing balances and certain shipping loans whose terms and structure prohibit their use as collateral.
- (8) In accordance with market practice, RBS employs securities recognised on the balance sheet, and securities received under reverse repo transactions as collateral for repos.

Business review Capital and risk management

Credit risk: management basis

The following disclosures in this section are audited:

- Forbearance.
- Impairment provisioning and write-offs.
- Portfolio overview by geographical area.
- LTV distribution for mortgage lending.
- Commercial real estate LTV distribution.

Definition

Credit risk is the risk of financial loss due to the failure of a customer or counterparty to meet its obligation to settle outstanding amounts.

Sources of credit risk (unaudited)

The principal sources of credit risk for RBS are lending, off-balance sheet products, derivatives and securities financing, and debt securities. RBS is also exposed to settlement risk through foreign exchange, trade finance and payments activities.

Credit risk management function (unaudited)

Risk governance

The credit risk management function is led by the Chief Credit Officer (CCO). The function's activities include:

- Approving credit limits for customers.
- Defining concentration risk and implementing the credit risk control framework.
- Oversight of the first line of defence to ensure that credit risk remains within the risk appetite set by the Board.
- Developing and monitoring compliance with credit risk policies.
- Conducting RBS-wide assessments of provision adequacy.

The CCO has overall responsibility for the credit risk function and chairs the Wholesale Credit Risk Committee as well as the Retail Credit Risk Committee. These committees have authority for risk appetite (within the appetite set by the Board), strategy, frameworks and policy as well as oversight of RBS's credit profile. The RBS Provisions Committee has authority over provisions adequacy and approves proposals from business provisions committees in accordance with approval thresholds. The RBS Provisions Committee is chaired either by the CCO or the Head of Provisions & Restructuring Credit.

Controls

Credit policy standards are in place for both the Wholesale and Personal portfolios. They are expressed as a set of mandatory controls.

Risk appetite (unaudited)

RBS's approach to lending is governed by comprehensive credit risk appetite frameworks. The frameworks are closely monitored and actions are taken to adapt lending criteria as appropriate. Credit risk appetite aligns to the strategic risk appetite set by the Board, which includes capital adequacy, earnings volatility, funding and liquidity, and stakeholder confidence. The credit risk appetite frameworks have been designed to reflect factors (e.g. strategic and emerging risks) that influence the ability to operate within risk appetite. Tools such as stress testing and economic capital are used to measure credit risk volatility and develop links between the credit risk appetite frameworks and risk appetite limits. The frameworks are supported by a suite of policies and transaction acceptance standards that set out the risk parameters within which franchises must operate.

For Wholesale the four formal frameworks used, and their basis for classification, are detailed in the following table.

Framework	Basis for classification	
	Size	Other
Single name concentration	Net exposure or loss given default for a given probability of default	
Sector	Exposure ⁽¹⁾	Risk – based on economic capital and other qualitative factors
Country	Exposure ⁽¹⁾	
Product and asset class	Exposure – net/gross dependent on type of risk and limit definition.	Risk – based on heightened risk characteristics

Note:

(1) Potential exposure as defined on the following page.

The Personal credit risk framework sets limits that measure and control the quality of both existing and new business for each relevant franchise or business segment. The actual performance of each portfolio is tracked relative to these limits and management action is taken where necessary. The limits apply to a range of credit risk-related measures including expected loss at a portfolio level, expected loss in a given stress scenario, projected credit default rates and the LTV ratio of the Personal mortgage portfolios.

Risk identification and measurement (unaudited)

Credit stewardship

Risks are identified through relationship management and credit stewardship of portfolios or customers. Credit risk stewardship takes place throughout the customer relationship, beginning with the initial approval. It includes the application of credit assessment standards, credit risk mitigation and collateral, ensuring that credit documentation is complete and appropriate, carrying out regular portfolio or customer reviews and problem debt identification and management.

Risk measurement

RBS uses current exposure and potential exposure as its measures of credit risk exposure. Unless otherwise stated, current exposure and potential exposure are reported:

- Net of collateral – cash and gold collateral for all product types as well as financial collateral for derivative and securities financing products.
- Net of provisions – credit valuation adjustments for derivative and securities financing products; individual, collective and latent provisions across all other product types.

Exposures backed by guarantees are allocated to the guarantor rather than the direct obligor. This does not affect the current or potential exposure amount, but does affect allocations to obligors, sectors, country and product and asset classes.

Business review Capital and risk management

Credit risk: management basis continued

The following table summarises the differences between current exposure and potential exposure across product types:

Product	Current exposure	Potential exposure ^(1,2)
Lending	Drawn balances	Legally-committed limits
Derivatives and securities financing	Measured using the mark-to-market value after the effect of enforceable netting agreements and net of legally enforceable financial collateral. ⁽³⁾	Measured using scaled credit limit utilisation, which takes into account mark-to-market movements, any collateral held and expected market movements over a specified horizon. ⁽³⁾
Contingent obligations	Issued amount of the guarantee or letter of credit	Legally-committed amount
Leases	Net present value plus residual value	
Banking book debt securities	Purchase value less subsequent amortisation	
Trading book bonds	Not reported as credit risk	
Equity securities		
Settlement risk		
Suretyships		
Intra-group credit exposures		

Notes:

(1) Potential exposure includes all drawn exposure and all legally-committed undrawn exposure.

(2) Potential exposure cannot be less than current exposure.

(3) Current exposure and potential exposure for exchange-traded derivatives are defined as exposure at default.

Risk models (unaudited)

The output of credit risk models is used in the credit approval process – as well as for ongoing assessment, monitoring and reporting – to inform risk appetite decisions. These models are divided into different categories. Where the calculation method is on an individual counterparty or account level, the models used will be probability of default (PD), loss given default (LGD), or exposure at default (EAD). The economic capital model is used for credit risk appetite setting.

Asset quality

Credit grades are assigned at legal entity level for Wholesale customers.

All credit grades map to both an internal asset quality scale, used for external financial reporting, and a master grading scale for Wholesale exposures, which is used for internal management reporting across portfolios. Accordingly, measures of risk exposure may be aggregated and reported at differing levels of detail depending on stakeholder or business requirements. Performing loans are defined as AQ1-AQ9 (where the PD is less than 100%) and non-performing loans as AQ10 (where the PD is 100%).

Risk mitigation (unaudited)

Risk mitigation techniques, as set out in the appropriate credit policies, are used in the management of credit portfolios across RBS. These techniques mitigate credit concentrations in relation to an individual customer, a borrower group or a collection of related borrowers. Where possible, customer credit balances are netted against obligations. Mitigation tools can include structuring a security interest in a physical or financial asset, the use of credit derivatives including credit default swaps, credit-linked debt instruments and securitisation structures, and the use of guarantees and similar instruments (for example, credit insurance) from related and third parties. To mitigate credit risk arising from Personal mortgage lending, collateral is taken in the form of residential property.

The key sectors where RBS provides asset-backed lending are commercial real estate, shipping and residential mortgages. Valuation methodologies are detailed below.

Commercial real estate valuations – RBS has a panel of chartered surveying firms that cover the spectrum of geography and property sectors in which RBS takes collateral. Suitable valuers for particular assets are contracted through a single service agreement to ensure consistency of quality and advice. Valuations are commissioned when an asset is taken as security; a material increase in a facility is requested; or a default event is anticipated or has occurred. In the UK, an independent third-party market indexation is applied to update external valuations once they are more than a year old.

Shipping valuations – Vessel valuations are obtained using several different independent sources. Valuations are usually undertaken on a desktop basis, assuming a willing buyer and willing seller. Most vessels are valued on a charter-free basis, but in certain circumstances the valuations take account of longer term committed charter income. Valuations are normally performed on a quarterly basis. From time to time, particularly for facilities showing increased signs of financial stress, a more formal valuation or specialist advice will be obtained.

Residential mortgages

RBS takes collateral in the form of residential property to mitigate the credit risk arising from mortgages. RBS values residential property during the loan underwriting process by either appraising properties individually or valuing them collectively using statistically valid models. RBS updates residential property values quarterly using the relevant residential property index namely:

Region	Index used
UK	Halifax quarterly regional house price index
Northern Ireland	UK House Price Index (published by the Land Registry)
Republic of Ireland	Central Statistics Office residential property price index

Credit risk: management basis *continued*

Counterparty credit risk

RBS mitigates counterparty credit risk arising from both derivatives transactions and repurchase agreements through the use of market standard documentation, enabling netting, and through collateralisation.

Amounts owed by RBS to a counterparty are netted against amounts the counterparty owes RBS, in accordance with relevant regulatory and internal policies. This is only done if a netting agreement is in place.

Risk assessment and monitoring *(unaudited)*

Practices for credit stewardship – including credit assessment, approval and monitoring as well as the identification and management of problem debts – differ between the Wholesale and Personal portfolios.

Wholesale customers – including corporates, banks and other financial institutions – are grouped by industry sectors and geography as well as by product/asset class and are managed on an individual basis.

A credit assessment is carried out before credit facilities are made available to customers. The assessment process is dependent on the complexity of the transaction.

For lower risk transactions below specific thresholds, credit decisions can be approved through self-sanctioning within the business. This is facilitated through an auto-decisioning system, which utilises scorecards, strategies and policy rules to provide a recommended credit decision. Such credit decisions must be within the approval authority of the relevant business sanctioner.

For all other transactions credit is only granted to customers following joint approval by an approver from the business and the credit risk function. Credit risk management is organised in terms of the complexity of the assessment rather than aligned to franchises. The joint business and credit approvers act within a delegated approval authority under the Wholesale Credit Authorities Framework approved by the Executive Risk Forum. The level of delegated authority held by approvers is dependent on their experience and expertise. Only a small number of senior executives hold the highest authority provided under the Wholesale Credit Authorities Framework. Both business and credit approvers are accountable for the quality of each decision taken but the credit risk approver holds ultimate sanctioning authority.

Transaction Acceptance Standards provide detailed transactional lending and risk acceptance metrics and structuring guidance. Transaction Acceptance Standards are one of the tools used to manage risk appetite at the customer/transaction level and are supplementary to the Credit Policy.

Where the customer is part of a group, the credit assessment considers aggregated credit risk limits for the customer group as well as the nature of the relationship with the broader group (for example parental support) and its impact on credit risk.

Credit relationships are reviewed, and credit grades (PD and LGD) re-approved, annually. The review process assesses borrower performance, including reconfirmation or adjustment of risk parameter estimates; the adequacy of security; compliance with terms and conditions; and refinancing risk.

Personal customers are served through a lending approach that entails making a large number of small-value loans. To ensure that these lending decisions are made consistently, RBS analyses credit information, including the historical debt servicing behaviour of customers with respect to both RBS and their other lenders. RBS then sets its lending rules accordingly, developing different rules for different products.

The process is then largely automated, with customers receiving a credit score that reflects a comparison of their credit profile with the rule set. However, for relatively high-value, complex personal loans, including some residential mortgage lending, specialist credit managers make the final lending decisions.

Underwriting standards are monitored on an ongoing basis to ensure they remain adequate in the current market environment and are not weakened to sustain growth.

A key aspect of credit risk stewardship is ensuring that, when signs of customer stress are identified, appropriate debt management actions are applied.

Problem debt management

Wholesale (unaudited)

Early problem identification

Each segment has defined early warning indicators to identify customers experiencing financial difficulty, and to increase monitoring if needed. Early warning indicators may be internal, such as a customer's bank account activity, or external, such as a publicly-listed customer's share price. If early warning indicators show a customer is experiencing potential or actual difficulty, or if relationship managers or credit officers identify other signs of financial difficulty they may decide to classify the customer within the Risk of Credit Loss framework.

Risk of Credit Loss framework

The framework focuses on Wholesale customers whose credit profiles have deteriorated since origination. Expert judgement is applied by experienced credit risk officers to classify cases into categories that reflect progressively deteriorating credit risk to the bank. There are two classifications which apply to non-defaulted customers within the framework – Heightened Monitoring and Risk of Credit Loss. The framework also applies to those customers that have met the bank's default criteria (AQ10 exposures).

Heightened Monitoring customers are performing customers who have met certain characteristics, which have led to material credit deterioration. Collectively, characteristics reflect circumstances that may affect the customer's ability to meet repayment obligations. Characteristics include trading issues, covenant breaches, material PD downgrades and past due facilities.

Credit risk: management basis *continued*

Sector specific characteristics also exist. Heightened Monitoring customers require pre-emptive actions (outside the customer's normal trading patterns) to return or maintain their facilities within the bank's current risk appetite prior to maturity.

Risk of Credit Loss customers are performing customers who have met the criteria for Heightened Monitoring and also pose a risk of credit loss to the bank in the next 12 months, should mitigating action not be taken or not be successful.

Once classified as either Heightened Monitoring or Risk of Credit Loss, a number of mandatory actions are taken in accordance with policies. This includes a review of the customer's credit grade, facility and security documentation and the valuation of security. Depending on the severity of the financial difficulty and the size of the exposure, the customer relationship strategy is reassessed by credit officers, by specialist credit risk or relationship management units in the relevant business or by Restructuring.

Agreed customer management strategies are regularly monitored by both the business and credit teams. The largest Risk of Credit Loss exposures in RBS and in each business are regularly reviewed by a Risk of Credit Loss Committee. The committee members are experienced credit, business and Restructuring specialists. The purpose of the committee is to review and challenge the strategies undertaken for those customers who pose the largest risk of credit loss to the bank.

Appropriate corrective action is taken when circumstances emerge that may affect the customer's ability to service its debt (see Heightened Monitoring characteristics). Corrective actions may include granting a customer various types of concessions. Any decision to approve a concession will be a function of specific country and sector appetite, the credit quality of the customer, the market environment and the loan structure and security. All customers granted forbearance are classified Heightened Monitoring as a minimum.

Other potential outcomes of the relationship review are to: take the customer off the Risk of Credit Loss framework; offer additional lending and continue monitoring; transfer the relationship to Restructuring if appropriate; or exit the relationship altogether.

The Risk of Credit Loss framework does not apply to problem debt management for Business Banking customers in UK PBB. These customers are, where necessary, managed by specialised problem debt management teams, depending on the size of exposure or the Business Banking recoveries team where a loan has been impaired.

Restructuring

For the Wholesale problem debt portfolio, customer relationships are managed by the Restructuring team (this excludes customers managed by PBB).

The purpose of Restructuring is to protect the bank's capital. Where practicable, Restructuring does this by working with corporate and commercial customers to support their turnaround and recovery strategies and enable them to return to mainstream banking. Restructuring will always aim to recover capital in a fair and efficient manner.

Specialists in Restructuring work with customers experiencing financial difficulties and showing signs of financial stress. Throughout Restructuring's involvement the mainstream relationship manager will remain an integral part of the customer relationship, unless an exit strategy is deemed appropriate. The objective is to find a mutually acceptable solution, including restructuring of existing facilities, repayment or refinancing.

Where a solvent outcome is not possible, insolvency may be considered as a last resort. However, helping the customer return to financial health and restoring a normal banking relationship is always the preferred outcome.

Personal (unaudited)

Personal customers experiencing financial difficulty are managed by the Collections function. If the Collections function is unable to provide appropriate support after discussing suitable options with the customer, management of that customer moves into Recoveries. If at any point in the Collections and Recoveries process, the customer is identified as being potentially vulnerable, the customer will be separated from the regular strategy and supported by a specialist team to ensure the customer receives appropriate support for their circumstances.

Collections

The Collections function takes over management of a customer when the customer exceeds an agreed limit or misses a regular monthly payment. Once in Collections the customer will be supported by skilled debt management staff who will endeavour to provide the customer with solutions based on current circumstances and, where appropriate, any known future changes to their financial position. Solutions include short-term account restructuring, refinance loans and forbearance which can include interest suspension and breathing space. In the event that an affordable/sustainable agreement with a customer cannot be reached, the debt will transition into Recoveries.

In the Republic of Ireland, the relationship may pass to a specialist support team prior to any transfer to recoveries, depending on the outcome of customer financial assessment.

Recoveries

The Recoveries function will issue a notice of intention to default to the customer and, subsequently, a formal demand, while also registering the account with the credit reference agencies where appropriate. Following this, the customer's debt may then be placed with a third-party debt collection agency, or alternatively a solicitor, in order to agree an affordable repayment plan with the customer.

Credit risk: management basis continued

Forbearance

Forbearance across RBS takes place when a concession is made on the contractual terms of a loan/debt in response to a customer's financial difficulties. Concessions granted where there is no evidence of financial difficulty, or where any changes to terms and conditions are within current risk appetite, or reflect improving credit market conditions for the customer, are not considered forbearance.

The aim of forbearance is to support and restore the customer to financial health while minimising risk. To ensure that forbearance is appropriate for the needs and financial profile of the customer, RBS applies minimum standards when assessing, recording, monitoring and reporting forbearance.

Loans/debt may be forborne more than once, generally where a temporary concession has been granted and circumstances warrant another temporary or permanent revision of the loan's terms.

In the Personal portfolio, loans are considered forborne until they meet the exit criteria set out by the European Banking Authority. These include being classified as performing for two years since the last forbearance event, making regular repayments and the debtor being less than 30 days past due. Exit criteria are not currently applied for Wholesale portfolios.

Types of forbearance

The type of forbearance offered is tailored to the customer's individual circumstances.

In the Wholesale portfolio, forbearance may involve covenant waivers, amendment to margin, payment concessions and loan rescheduling (including extensions in contractual maturity), capitalisation of arrears, and debt forgiveness or debt for equity swap.

In the Personal portfolio forbearance may involve payment concessions and loan rescheduling (including extensions in contractual maturity), capitalisation of arrears and, in the Republic of Ireland only, temporary interest-only conversions. Forbearance is granted principally to customers with mortgages and less frequently to customers with unsecured loans. This includes instances where forbearance may be taken for customers with highly flexible mortgages.

Monitoring of forbearance

In the Wholesale portfolio, all customers are assigned a PD and related facilities an LGD. These are re-assessed prior to finalising any forbearance arrangement in light of the loan's amended terms. The ultimate outcome of a forbearance strategy is unknown at the time of execution. It is highly dependent on the cooperation of the borrower and the continued existence of a viable business or repayment outcome. Where forbearance is no longer viable, RBS will consider other options such as the enforcement of security, insolvency proceedings or both, albeit these are options of last resort.

For Personal portfolios, forborne loans are separated into a distinct population and reported on a regular basis until they exit the forborne population.

Provisioning for Wholesale forbearance

Provisions for forborne loans are assessed in accordance with normal provisioning policies (refer to impairment loss provision methodology). The customer's financial position and prospects as well as the likely effect of the forbearance, including any concessions granted, and revised PD or LGD gradings, are considered in order to establish whether an impairment provision is required.

Wholesale loans granted forbearance are individually assessed in most cases and are not therefore segregated into a separate risk pool.

Forbearance may result in the value of the outstanding debt exceeding the present value of the estimated future cash flows. This may result in the recognition of an impairment loss or a write-off.

In the case of non-performing forborne loans, the loan impairment provision assessment almost invariably takes place prior to forbearance being granted. The amount of the loan impairment provision may change once the terms of the forbearance are known, resulting in an additional provision charge or a release of the provision in the period the forbearance is granted.

For performing loans, credit metrics are an integral part of the latent provision methodology, and an extended emergence period for forborne loans is applied.

The transfer of wholesale loans from impaired to performing status follows assessment by relationship managers and credit. When no further losses are anticipated and the customer is expected to meet the loan's revised terms, any provision is written off or released and the balance of the loan returned to performing status. This course of action is not dependent on a specified time period and follows the credit risk manager's assessment.

Provisioning for personal forbearance

The methodology used for provisioning in respect of Personal forborne loans will differ depending on whether the loans are performing or non-performing and which business is managing them due to local market conditions.

Granting forbearance will only change the arrears status of the loan in specific circumstances, which can include capitalisation of principal and interest in arrears, where the loan may be returned to the performing book if the customer has demonstrated an ability to meet regular payments and is deemed likely to continue to do so.

The loan would remain in forbearance for the defined probation period and be subject to performance criteria including making regular repayments and be less than 30 days past due.

Additionally for some forbearance types a loan may be transferred to the performing book if a customer makes payments that reduce loan arrears below 90 days (Ulster Bank RoI and UK PBB collections function).

For the latent calculation, an extended emergence period is applied to account for the impact of forbearance within the portfolio. Additionally for portfolios with material forbearance, forbore loans form a separate risk pool and use a different PD model. The separate risk pool applies for the duration of the forbearance arrangement and with exit from forbearance segmentation dependent on meeting applicable probationary periods and performance criteria:

- UK PBB (excluding NI): The separate risk pool comprises all forbore loans. The provisioning calculation uses the higher of the observed default rates or PD.
- Ulster Bank RoI: forbore and previously forbore mortgages form separate risk pools. The PD model used is calibrated separately for forbore loans, using information on the historic performance of loans subject to similar arrangements.

For non-performing loans, there is no difference in treatment with the exception of Ulster Bank RoI, where forbore loans which result in an economic loss to the group form a separate risk pool and are subjected to specific provisioning treatments.

Impairment, provisioning and write-offs

In the overall assessment of credit risk, impairment, provisioning and write-offs are used as key indicators of credit quality.

Impairment

A financial asset is impaired if there is objective evidence that the amount, or timing, of future cash flows has been adversely affected. Refer to accounting policies on pages 255 and 256 for details of the quantification of impairment losses.

Days-past-due measures are typically used to identify evidence of impairment. In both the Wholesale and Personal portfolios, a period of 90 days past due is used. In sovereign portfolios, the period used is 180 days past due. Indicators of impairment include the borrower's financial condition; a forbearance event; a loan restructuring; the probability of bankruptcy; or evidence of diminished cash flows.

Provisioning

The amount of an impairment loss is measured as the difference between the asset carrying amount and the present value of the estimated future cash flows discounted at the financial asset's original effective interest rate. The current net realisable value of the collateral will be taken into account in determining the need for a provision. This includes cash flows from foreclosure (less costs of obtaining and selling the collateral), whether or not foreclosure is probable. Impairment provisions are not recognised where amounts due are expected to be settled in full on the realisation of collateral.

RBS uses one of the following three methods to quantify the provision required: individual, where the quantification method is on a case-by-case assessment of future cash flows; collective, a quantitative review of the relevant portfolio; and latent, where PD, LGD, drawn balance and emergence period are considered in the calculation.

Sensitivity of impairments to assumptions

Key assumptions relating to impairment levels are economic conditions, the interest rate environment, the ease and timing of enforcing loan agreements in varying legal jurisdictions and the level of customer co-operation.

In addition, for secured lending, key assumptions relate to the valuation of the security and collateral held, as well as the timing and cost of asset disposals based on underlying market depth and liquidity. Assessments are made by relationship managers on a case-by-case basis for individually-assessed provisions and are validated by credit teams. Impairments less than £1 million are approved by credit officers under their delegated authority. For individual impairments greater than £1 million, oversight is provided by the RBS Provisions Committee.

Available-for-sale portfolios

Available-for-sale portfolios are also regularly reviewed for evidence of impairment, including: default or delinquency in interest or principal payments; significant financial difficulty of the issuer or obligor; and increased likelihood that the issuer will enter bankruptcy or other financial reorganisation.

Determining whether evidence of impairment exists requires the exercise of management judgement. It should be noted that the following factors are not, of themselves, evidence of impairment, but may be evidence of impairment when considered with other factors:

- Disappearance of an active market because an entity's financial instruments are no longer publicly traded.
- A downgrade of an entity's credit rating.
- A decline in the fair value of a financial asset below its cost or amortised cost.

Write-offs

Impaired loans and receivables are written-off when there is no longer any realistic prospect of recovery of part, or the entire loan. For loans that are individually assessed for impairment, the timing of write-off is determined on a case-by-case basis. Such loans are reviewed regularly and write-offs may be prompted by bankruptcy, insolvency, forbearance and similar events. For details of the typical time frames, from initial impairment to write off, for collectively assessed portfolios refer to the accounting policies section on pages 255 and 256.

Amounts recovered after a loan has been written-off are credited to the loan impairment charge for the period in which they are received.

Notes:

- (1) Includes SME customers managed in the Business Banking segment of UK PBB who are assigned a sector under RBS's sector concentration framework.
- (2) Includes exposure to central governments, central banks and sub-sovereigns such as local authorities.
- (3) Excludes Private Banking, Lombard and Invoice Finance exposures which are not material in context of the Risk of Credit Loss portfolio.
- (4) Audited.
- (5) Wholesale forbearance stock represents loans that have been subject to a forbearance event in the two years up to the reporting date. Personal forbearance is aligned to European Banking Authority requirements.
- (6) Completed during the year.
- (7) Provision (including latent).

Business review Capital and risk management

Credit risk: management basis continued

Key points (unaudited)

- Measured against RBS's asset quality scale, as at 31 December 2017, 72% of total current exposure was rated in the AQ1-AQ4 bands, equating to an indicative investment grade rating of BBB- or above (2016 – 70%). Across the Personal lending exposure, 67% was in the AQ1-AQ4 category (67% as at 31 December 2016). The loan-to-value (LTV) ratio of the mortgage portfolio was 57% (2016 – 58%).
- The increase in current exposure in the Personal portfolio mainly resulted from growth in UK mortgage lending and was within risk appetite. For further information, refer to page 185.
- The UK unsecured lending portfolio remained broadly stable in size.
- The increase in current exposure across the Wholesale portfolio reflected increases in the Sovereign sector resulting from liquidity management activities. This was offset by decreases in the Banks and other FIs portfolio, which reflected receipt of higher collateral against traded products and by decreases in Transport – particularly Shipping – in line with the exit strategy for this sector.
- Credit quality, measured against RBS's asset quality scales marginally improved across the Wholesale and Personal portfolios, reflecting resilient market conditions during the period.
- The level of Wholesale and Personal provisions decreased. This reflected progress in reducing defaulted facilities. The Personal portfolio also benefited from house price improvements.
- Exposure classified as Risk of Credit Loss decreased over 2017. This decrease was driven by the Shipping sector as a result of the reclassification of customers to Heightened Monitoring and portfolio disposals (refer to page 190 for further information).
- Wholesale forbearance decreased significantly over 2017. This was driven by lower levels of new forbearance in the Commercial Real Estate and Shipping sectors. Additionally a number of Shipping facilities which were previously forborne were exited during 2017. (Refer to page 190 for further information).
- Loans totalling £1.4 billion were granted approval for forbearance in 2017 but had not yet reached legal completion at 31 December 2017 (2016 – £1.4 billion). These exposures are referred to as "in process" and are not included in the tables on the previous page. 71% (£1.0 billion) of these "in process" exposures related to non-performing customers and 29% (£0.4 billion) related to performing loans. The principal types of arrangements offered were payment concessions and loan rescheduling.
- £1.1 billion of wholesale forbearance related to payment concessions and £0.5 billion to non-payment concessions. Previously reported forbearance types are classified as non-payment (covenant concessions, release of security) and payment (payment concessions and loan rescheduling, forgiveness of all or part of the outstanding debt, variation in margin, standstill agreements).

Portfolio overview – geography

The table below summarises both current and potential exposure, by geographic region.

	Wholesale (1)					Wholesale (1)					Total %	Potential exposure £m
	Personal £m	Banks and other FIs £m	Sovereigns (2) £m	Other wholesale £m	Current exposure £m	Personal %	Banks and other FIs %	Sovereigns (2) %	Other wholesale %

Notes:

(1) Includes SME customers managed in UK PBB Business Banking who are assigned a sector under RBS's sector concentration framework.

(2) Includes exposures to central governments, central banks and sub-sovereigns such as local authorities.

(3) RoW: Rest of world, which also includes supranationals such as the World Bank and exposure relating to ocean-going vessels which cannot be meaningfully assigned to specific countries from a country risk perspective.

Key points (unaudited)

- The growth in the portfolio is mainly driven by an increase in UK exposures, which is in line with strategy and within risk appetite.
- Sovereign exposure in the UK and Western Europe (predominantly Germany) increased and reflects liquidity management transactions.
- Exposure to the US and RoW decreased as RBS continued to focus on its core markets. The movement includes RBS exiting from the Shipping sector.

* Re-presented to reflect the segmental reorganisation.

Notes:

- (1) Excludes loans guaranteed by a company and commercial real estate lending to personal customers.
(2) Weighted by current exposure gross of provisions.

Key points (unaudited)

- The overall credit risk profile of the Personal portfolio, and its performance against credit risk appetite, remained stable during 2017.
- The increase in Personal portfolio lending was primarily driven by growth in mortgages; mainly in UK PBB.
- New mortgage lending was broadly inline with the levels seen in 2016. The portfolio was closely monitored against an agreed set of risk appetite parameters, which included loan-to-value, loan-to-income, buy-to-let, new-build concentrations and credit quality. This ensured that the portfolio remained appropriate for market conditions. Underwriting standards were maintained during the period.
- Most of the mortgage growth was in the owner-occupied portfolio. In line with market trends, new mortgages in the buy-to-let portfolio decreased as tax and regulatory changes in the UK affected borrower activity.
- The mortgage portfolio loan-to-value ratio remained largely stable. The improvement in Ulster Bank Rol reflected house price recovery.
- Overall the proportion of mortgages by value on interest-only and mixed terms (capital and interest only) reduced, reflecting a move to repayment mortgages and repayment of legacy mortgages. There was a marginal increase in interest only mortgages in Private Banking which reflected increased lending to high net worth individuals.
- 43% of mortgage lending was in London and the South East (2016 – 44%). New business in this region reduced as a result of lower demand for both buy-to-let and owner-occupied properties. Average weighted loan-to-value for this region was 51% (2016 – 55%).
- Total provision and forbearance against mortgages continued to decrease. This reflected the relatively low-interest-rate environment in the UK and house price growth as well as a focus on the ability of customers to repay in a sustainable manner over the term of the facility.
- Unsecured lending balances remained broadly stable despite an upward trend in the wider UK market. Growth in the unsecured loan portfolio was offset by declines in the cards and overdrafts portfolios. The reduction in the cards portfolio reflected RBS's decision to abstain from the 0% credit card balance transfer market.
- The total provision for unsecured lending reduced, reflecting the exit from defaulted debt.

Commercial real estate (CRE) (unaudited)

The CRE portfolio comprises exposures to entities involved in the development of, or investment in, commercial and residential properties (including house builders but excluding housing associations, construction and building materials).

The sector is reviewed regularly at senior executive committees. Reviews include portfolio credit quality, capital consumption and control frameworks.

CRE exposure by sub-sector on a current exposure basis (unaudited)

Business review Capital and risk management

Credit risk: management basis continued

Key points (unaudited)

- The majority of the CRE exposure is managed by Commercial & Private Banking. The reduction in exposure over the period is the result of the successful implementation of distribution and capital market activity, in line with business strategy.
- The commercial real estate market performed far better in 2017 than had been expected by most at the start of the year. Investment activity was 20% up on 2016 and just 10% short of the record level reached in 2015. A notable factor was the influx of capital from China, estimated at over £10 billion, equating for approximately 15% of the total market.
- Much of this capital was targeted at the London office market, helping to support values despite the ongoing risks associated with exiting the European Union. The industrial market was the standout performer, supported by growing demand for logistics capacity. At the other end of the scale, the retail sector continued to feel the effect of online sales growth, with secondary shopping centres particularly at risk from falling tenant demand.
- As a result of wider ongoing economic uncertainty, tightened underwriting standards were maintained, with further tightening of appetite in certain asset classes and sub-sectors throughout the year.
- The core strategy for CRE in the Republic of Ireland is in line with the wider Ulster Bank RoI strategy to support the Irish economy with some controlled growth of the balance sheet over the upcoming years, within risk appetite.

Risk of Credit Loss	108	50
Provision (including latent)	334	544

Shipping on a current exposure basis (unaudited)

Exposure to the shipping sector is summarised below.

	2017 £m	2016 £m
AQ1-AQ4	1,159	1,504
AQ5-AQ8	869	2,158
AQ9	—	24
AQ10	483	867
Total	<u>2,511</u>	<u>4,553</u>
Forbearance flow	—	723
Risk of Credit Loss	23	362
Provision	168	394

Key points (unaudited)

- The majority of the Shipping portfolio relates to loans or finance leases secured by ocean-going vessels. The remaining exposure relates principally to Ports, Shipbuilding and Inland Water Transport sub sectors. In line with RBS's exit strategy for this portfolio the reduction in exposure during 2017 was largely driven by asset sales and debt repayment on the ship finance product; with other exposure remaining largely stable.
- The key component of the AQ1-AQ4 exposure banding is a portfolio of long-dated finance leases, financing ships to investment-grade oil majors and shipping companies.
- The most significant movement in exposure during 2017 was in the AQ5-AQ8 banding where the bulk of the ship finance debt portfolio lies. The reduction in exposure was mainly as a result of asset disposals resulting from the exit strategy.
- Continued progress in managing down the defaulted portfolio resulted in lower AQ10 exposure, with very few new transfers into the category during 2017.
- The weakness in the dry bulk and container shipping markets generated a high level of forbearance activity in 2016. However, a recovery in those markets – particularly in dry bulk – during 2017 limited the flow into forbearance. Fewer forbearance concessions were granted and these related to smaller exposures. The market recovery – as well as clients, in general, continuing to support their shipping investments in terms of maintaining debt service and security cover covenants – allowed RBS to remove a number of transactions from risk of loss status during the year.

Notes:

(1) The exposures in regulatory trading book businesses are subject to market risk and are hence excluded from current exposure.

(2) Amounts reclassified to balance sheet lines.

(3) Primarily includes:

- Reverse repos: reflects netting of collateral and cash legs.

- Loans and advances: cash collateral pledged with counterparties in relation to net derivative liability positions.

- Derivatives: impact of master netting arrangements.

(4) Primarily includes cash management pooling arrangements not allowed under IFRS for loans and advances.

- Settlement balances: exposure not included in current exposure measure

(5) Primarily includes cash in ATMs and branches; Other assets (see note below); and Settlement balances (not within the scope of current exposure).

(6) Balance sheet position shows reverse repurchase and stock borrowing position; current exposure position shows net reverse repurchase/stock borrowing and repurchase/stock lending position.

(7) Balance sheet position includes intangible assets, property, plant and equipment, deferred tax, prepayments and accrued income and assets of disposal groups.

Business review Capital and risk management

Credit risk: balance sheet analysis

Current and Potential Exposures presented in Credit risk: management basis are used by Group Credit Risk Management for risk management and monitoring. However, they exclude certain exposures, primarily trading securities and take account of legal netting agreements that provide a right of legal set-off but do not meet the offset criteria in IFRS. The tables that follow are therefore provided to supplement the disclosures in the Credit risk: management basis section, to reconcile to the balance sheet. The tables in this section include balances relating to disposal groups, reflecting the total credit risk and losses faced by RBS. All the disclosures in this section are audited.

Notes:

- Relates to offset arrangements that comply with IFRS criteria and transactions cleared through and novated to central clearing houses, primarily London Clearing House and US Government Securities Clearing Corporation. During 2016 and 2017, changes in the legal contracts with LCH and CME led to many derivatives cleared through that counterparty being settled to market each day rather than being collateralised as previously. This led to the derecognition of the associated assets and liabilities.
- The carrying value on the balance sheet represents the exposure to credit risk by class of financial instrument.
- The amount by which credit risk exposure is reduced through arrangements, such as master netting agreements and cash management pooling, which give RBS a legal right to set off the financial asset against a financial liability due to the same counterparty.
- RBS holds collateral in respect of individual loans and advances to banks and customers. This collateral includes mortgages over property (both personal and commercial); charges over business assets such as plant, inventories and trade debtors; and guarantees of lending from parties other than the borrower. RBS obtains collateral in the form of securities in reverse repurchase agreements. Cash and securities are received as collateral in respect of derivative transactions.
- Includes cash collateral pledged by counterparties based on daily mark-to-market movements of net derivative positions with the counterparty.
- Represent the fair value of securities received from counterparties, mainly relating to reverse repo transactions as part of netting arrangements.
- Property valuations are capped at the loan value and reflect the application of haircuts in line with regulatory rules to indexed valuations. Commercial collateral includes ships and plant and equipment collateral.
- Comprises credit derivatives (bought protection) and guarantees against exposures.

Key points

- The majority of the £237.8 billion net exposure comprises cash and balances at central banks, unsecured commercial and personal bank lending and sovereign debt securities.
- Net exposure increased by £9.9 billion reflecting higher cash placements with UK and Eurozone central banks and higher debt securities

Credit risk: balance sheet analysis [continued](#)

Asset quality

The asset quality analysis presented below is based on internal asset quality ratings which have ranges for the probability of default. Customers are assigned credit grades, based on various credit grading models that reflect the key drivers of default for the customer type. All credit grades across RBS map to both an asset quality scale, used for external financial reporting, and a master grading scale for wholesale exposures used for internal management reporting across portfolios. Debt securities are analysed by external ratings and are therefore excluded from the following table and are set out on pages 201 to 202.

The table that follows details the relationship between internal asset quality (AQ) bands and external ratings published by Standard & Poor's (S&P), for illustrative purposes only. This relationship is established by observing S&P's default study statistics, notably the one year default rates for each S&P rating grade. A degree of judgement is required to relate the probability of default ranges associated with the master grading scale to these default rates given that, for example, the S&P published default rates do not increase uniformly by grade and the historical default rate is nil for the highest rating categories.

Internal asset quality band	Probability of default range	Indicative S&P rating
AQ1	0% - 0.034%	AAA to AA
AQ2	0.034% - 0.048%	AA to AA-
AQ3	0.048% - 0.095%	A+ to A
AQ4	0.095% - 0.381%	BBB+ to BBB-
AQ5	0.381% - 1.076%	BB+ to BB
AQ6	1.076% - 2.153%	BB- to B+
AQ7	2.153% - 6.089%	B+ to B
AQ8	6.089% - 17.222%	B- to CCC+
AQ9	17.222% - 100%	CCC to C
AQ10	100%	D

The mapping to the S&P ratings is used by RBS as one of several benchmarks for its wholesale portfolios, depending on customer type and the purpose of the benchmark. The mapping is based on all issuer types rated by S&P. It should therefore be considered illustrative and does not, for instance, indicate that exposures reported against S&P ratings either have been or would be assigned those ratings if assessed by S&P. In addition, the relationship is not relevant for retail portfolios, smaller corporate exposures or specialist corporate segments given that S&P does not typically assign ratings to such entities.

Loans, REIL and impairment provisions

Risk elements in lending (REIL) comprises impaired loans and accruing loans past due 90 days or more as to principal or interest. Impaired loans are all loans (including loans subject to forbearance) for which an impairment provision has been established; for collectively assessed loans, impairment loss provisions are not allocated to individual loans and the entire portfolio is included in impaired loans. Accruing loans past due 90 days or more comprise loans past due 90 days where no impairment loss is expected.

Loans and related credit metrics

* Re-presented to reflect the segmental reorganisation.

Key points

- UK PBB: mortgage growth of £8.8 billion was the principal driver of the gross lending increase in 2017. Impairment losses and write-offs were higher as debt flow into default continues to increase, particularly for loans arising from business written between Q4 2015 and mid 2016.
- Commercial Banking: customer lending decreased by £2.7 billion as a result of active capital management offset by growth in targeted segments. The increase in impairment loss was largely driven by a small number of single name impairments, principally in the second half of 2017.
- Private Banking: lending growth of £1.3 billion primarily on mortgages.
- NatWest Markets: customer lending decreased by £8.0 billion primarily due to disposal activity.
- Central items & other: Short term bank placings declined £0.8 billion.
- REIL were 2.7% of gross lending, down from 3.1% in 2016. This reflected the relatively low-interest-rate environment in the UK and house price growth for personal lending, along with disposal activity of legacy assets within NatWest Markets.
- Provisions coverage of REIL was stable at 43%, but within that write offs, repayments and disposals in REIL were £1.2 billion and £2.7 billion compared with £3.7 billion and £3.3 billion a year ago.
- Total provision fell by £0.6 billion to £3.8 billion principally in legacy NatWest Markets. Commercial Banking provisions increased by £236 million in Q4 2017 reflecting transfer of legacy assets, including Shipping.
- Amounts written off were significantly lower at £1.2 billion compared to £3.7 billion in 2016, primarily in commercial real estate which had £1.3 billion lower write offs in 2017, principally in Ulster Bank Rol.

Past due analysis

The table below shows loans and advances to customers that were past due at the balance sheet date but are not considered impaired.

	2017 £m	2016 £m
Past due 1-29 days	3,535	3,852
Past due 30-59 days	902	753
Past due 60-89 days	456	512
Past due 90 days or more	1,481	1,445
Total	6,374	6,562

Past due analysis by sector

Personal	3,731	3,577
Property and construction	667	1,020
Financial institution	24	94
Other corporate	1,952	1,871
Total	6,374	6,562

Risk elements in lending

The table below analyses REIL between UK and overseas, based on the location of the lending office.

	2017		2016	
	Impaired loans £m	Accruing past due £m	Impaired loans £m	Accruing past due £m
- UK	4,450	1,087	5,557	1,122
- overseas	2,973	394	3,308	323
Total	7,423	1,481	8,865	1,445

Notes:

(1) REIL are stated without giving effect to any security held that could reduce the eventual loss should it occur or to any provisions marked.

(2) For details on impairment methodology refer to Credit risk on page 182 and Accounting policy 15 Impairment of financial assets on pages 255 and 256.

Risk elements in lending

Key points

- HFT assets and short positions: UK government securities, as well as European and Japanese government bonds, increased in 2017 driven by client flow trading and market making activity in NatWest Markets. US government securities were down, both assets and short positions, compared with 2016 due to lower client demand towards the end of 2017.
- AFS assets: The increase in 2017, largely within UK government securities, was due to the liquidity portfolio management, as gilts offered higher capital adjustment returns relative to central bank cash balances.

Notes:

- (1) Residential mortgage-backed securities (RMBS) and commercial mortgaged-backed securities (CMBS) are securities that represent an interest in a portfolio of residential and commercial mortgages respectively. Repayments made on the underlying mortgages are used to make payments to holders of the mortgage-backed securities (MBS). The risk of the MBS will vary primarily depending on the quality and geographic region in which the underlying mortgage assets are located and the credit enhancement of the securitisation structure. Several tranches of notes are issued, each secured against the same portfolio of mortgages, but providing differing levels of seniority to match the risk appetite of investors. The most junior (or equity) notes will suffer early capital and interest losses experienced by the referenced mortgage collateral, with each more senior note benefiting from the protection provided by the subordinated notes below. Additional credit enhancements may be provided to the holder of senior MBS notes. The main categories of mortgages that serve as collateral to RMBS held by RBS are set out below and described in the Glossary on page 414. The US market has more established definitions of differing underlying mortgage quality and these are used as the basis for RBS's RMBS categorisation.
- (2) Comprises HFT £256 million (2016 - £282 million), AFS nil (2016 - £99 million) and LAR nil (2016 - nil).
- (3) Comprises HFT £14 million (2016 - £25 million), AFS nil (2016 - nil) and LAR £18 million (2016 - £48 million).

Equity shares

The table below analyses holdings of equity shares for eurozone countries and other countries with balances of more than £50 million by country, issuer and IAS 39 classification. The HFT positions are used mainly for economic hedging of debt issuances and equity derivatives. The AFS balances are individually small holdings in unlisted companies, mainly acquired through debt for equity transactions in Restructuring.

Countries	HFT				AFS/DFV (1)				Total £m	AFS reserves £m

Net exposure						6,395	4,232		12,516	7,722

Asset quality of uncollateralised derivative assets

	2017 £m	2016 £m
AQ1 - AQ4	5,173	9,775
AQ5 - AQ8	1,216	2,724
AQ9	3	4
AQ10	3	13
Net exposure	6,395	12,516

Notes:

- (1) Transactions with certain counterparties with whom RBS has netting arrangements but collateral is not posted on a daily basis; certain transactions with specific terms that may not fall within netting and collateral arrangements; derivative positions in certain jurisdictions for example China where the collateral agreements are not deemed to be legally enforceable.
- (2) Transactions with securitisation vehicles and funds where collateral posting is contingent on RBS's external rating.
- (3) Predominantly large corporate with whom RBS may have netting arrangements in place, but operational capability does not support collateral posting.
- (4) Sovereigns and supranational entities with one way collateral agreements in their favour.
- (5) The notional amount of interest rate derivatives include £7,400 billion (2016 - £9,724 billion) in respect of contracts cleared through central clearing counterparties. The associated derivatives assets and liabilities including variation margin reflect IFRS offset of £17 billion (2016 - £51 billion) and £17 billion (2016 - £51 billion) respectively.

Key points

- Interest rate derivative fair values decreased, reflecting the upward shift in yields of US dollar, sterling and euro during 2017, as well as trade compression and novations to clearing houses.
- The decrease in foreign exchange derivative fair values reflected US dollar depreciation against major currencies in 2017.
- Derivative notionals decreased by 27%, mainly due to trade compression cycle participation, maturities and buyouts, as well as the effect of foreign exchange. This was offset by new business.
- Net asset and liability exposures both decreased in line with the overall reduction in fair values. The corporate sector reductions largely reflected disposal activity in legacy NatWest Markets. The other financial sector reduction was partially due to timing of collateral posting.

Business review Capital and risk management

Credit risk: balance sheet analysis continued

Valuation reserves

When valuing financial instruments in the trading book, adjustments are made to mid-market valuations to cover bid-offer spread, liquidity and credit risk. The following table shows credit valuation adjustments (CVA) and other valuation reserves. CVA represents an estimate of the adjustment to fair value that a market participant would make to incorporate the risk inherent in derivative exposures. For details of CVA methodology, refer to Note 9 on the consolidated accounts: Financial instruments - valuation.

	2017 £m	2016 £m
Funding valuation adjustments (FVA)	440	936
Credit valuation adjustments (CVA)	346	618
Bid-offer reserves	285	334
Product and deal specific	1,033	643
Valuation reserves	2,104	2,531

The table below analyses CVA relating to counterparties by rating and sector.

	2017 £m	2016 £m
Ratings		
AAA	4	4
AA to AA+	11	22
A to AA-	34	52
BBB- to A-	203	388
Non-investment grade and unrated	94	152
	346	618
Counterparty		
Banks	8	22
Other financial institutions	31	70
Corporate	200	337
Government	107	189
	346	618

Key points

- Both FVA and CVA were lower due to trade novations and market movements in 2017.
- Reduced funding levels and an increase in the level of funding costs included within the discount rate applied to derivative cash flows also contributed to the FVA reduction.
- Credit spread tightening also contributed to the CVA reduction.
- The product and deal specific reserves increased primarily on a limited number of uncollateralised derivatives after the pricing impact of a significant novation in the second half of 2017 was incorporated into transactions of a similar nature.

Derivatives: settlement basis and central counterparties

Market risk

RBS is exposed to non-traded market risk as a result of its banking activities and to traded market risk through its trading activities. It manages its non-traded and traded market risk exposures separately. Each type of market risk is discussed separately. The non-traded market risk section begins below. The traded market risk section begins on page 214.

Pension-related activities also give rise to market risk. Refer to page 220 for more information on risk related to pensions.

Non-traded market risk

The following disclosures in this section are audited:

- Internal banking book VaR.
- Foreign exchange risk.
- Equity risk.

Definition

Non-traded market risk is the risk to the value of assets or liabilities outside the trading book, or the risk to income, that arises from changes in market prices such as interest rates, foreign exchange rates and equity prices, or from changes in managed rates.

Key developments in 2017 (unaudited)

- During 2017, revised non-traded market risk appetite metrics were approved by the Board and cascaded to the franchises.
- Political events during the year, notably elections in the UK, France and the Netherlands, resulted in periods of market volatility. UK and European interest rates remained at low levels, although the Bank of England and the US Federal Reserve began raising interest rates. These events did not affect non-traded market risk management strategy during the year.
- Non-traded market risk VaR peaked at £83.1 million in H1 2017, mainly driven by an increase in bonds held within Treasury's liquidity portfolio, which was aimed at investing surplus cash, rather than meeting increased liquidity requirements. The appreciation of foreign currency bonds within this portfolio, primarily US and German sovereign debt, also contributed. The target allocation between cash and bonds, which is determined by the cash requirement of the liquid asset buffer, was reached in H1 2017 and remained largely unchanged during H2 2017.
- Positive sensitivity to higher interest rates increased by £275 million year on year in a 100-basis-point upward rate shift, partly due to higher deposit volumes and changes in assumptions relating to deposit margin retention in a higher rate environment. Adverse sensitivity to lower rates also increased, by £193 million in a 100-basis-point downward shift, affected by the higher level of interest rates in the central forecast.
- RBS continued to invest in structural hedges in 2017, with an average notional of £129 billion, managed directly by Treasury. The disclosure now also shows the smaller structural hedging programmes in Private Banking, RBS International, UBI DAC and Ulster Bank Limited totalling an average of £20 billion in 2017.

Sources of risk (unaudited)

The majority of RBS's non-traded market risk exposure arises from retail and commercial banking activities from assets and liabilities that are not classified as held-for-trading.

Non-traded market risk is largely managed in line with the following key categories: interest rate risk; credit spread risk; foreign exchange risk; equity risk; and accounting volatility risk.

Interest rate risk

Non-traded interest rate risk (NTIRR) arises from the provision to customers of a range of banking products that have differing interest rate characteristics. When aggregated, these products form portfolios of assets and liabilities with varying degrees of sensitivity to changes in market interest rates. Mismatches in these characteristics can give rise to volatility in net interest income as interest rates vary.

NTIRR comprises three primary risk factors: gap risk, basis risk and option risk. For more information, refer to page 207.

Credit spread risk

Credit spread risk arises from the potential adverse economic impact of a move in the spread between bond yields and swap rates, where the bond portfolios are accounted at fair value through equity.

Foreign exchange risk

Non-traded foreign exchange risk exposures arise from two main sources:

- **Structural foreign exchange risk** – arising from the capital deployed in foreign subsidiaries, branches and joint arrangements and related currency funding where it differs from sterling.
- **Non-trading book foreign exchange risk** – arising from customer transactions and profits and losses that are in a currency other than the functional currency of the transacting operation.

Equity risk

Non-traded equity risk is the potential variation in income and reserves arising from changes in the values of equity positions. Equity exposures may arise through strategic acquisitions, venture capital investments and certain restructuring arrangements.

Accounting volatility risk

Accounting volatility risk arises when an exposure is accounted for at amortised cost but economically hedged by a derivative that is accounted for at fair value. Although this is not an economic risk, the difference in accounting between the exposure and the hedge creates volatility in the income statement.

Non-traded market risk *continued*

Risk governance *(unaudited)*

Responsibility for identifying, measuring, monitoring and controlling the market risk arising from non-trading activities lies with the relevant business, with second-line-of-defence oversight provided by the Non-Traded Market Risk function, which reports into the Director of Enterprise Wide Risk.

Risk positions are reported monthly to the Executive Risk Forum (ERF) and quarterly to the Board Risk Committee, as well as to the Asset and Liability Committee (ALCo) (monthly in the case of interest rate, credit spread and accounting volatility risks and quarterly in the case of foreign exchange and equity risks).

Market risk policy statements set out the governance and risk management framework through effective identification, measurement, reporting, mitigation, monitoring and control.

Risk appetite *(unaudited)*

RBS's qualitative appetite is set out in the non-traded market risk appetite statement.

Its quantitative appetite is expressed in terms of exposure limits. These limits comprise both Board risk measures (which are approved by the RBS Board on the recommendation of the Board Risk Committee) and key risk measures (which are approved by the ALCo).

These limits are cascaded further down the organisation as required, as approved by the Technical Executive Risk Forum in the case of the Board risk measures and by the ALCo in the case of the key risk measures.

The limit framework at RBS level comprises value-at-risk (VaR), stressed value-at-risk (SVaR), sensitivity and stress limits, and earnings-at-risk limits.

The limits are reviewed to reflect changes in risk appetite, business plans, portfolio composition and the market and economic environments.

To ensure approved limits are not breached and that RBS remains within its risk appetite, triggers at RBS and lower levels have been set such that if exposures exceed a specified level, action plans are developed by the front office, Market Risk and Finance.

For further information on risk appetite, refer to page 154.

Risk controls and assurance *(unaudited)*

For information on risk controls and assurance, refer to page 156.

Risk assessment, monitoring and mitigation *(unaudited)*

Interest rate risk

Non-traded interest rate risk (NTIRR) factors are grouped into the following categories:

- Gap risk – which arises from the timing of rate changes in non-trading book instruments. The extent of gap risk depends on whether changes to the term structure of interest rates occur consistently across the yield curve (parallel risk) or differentially by period (non-parallel risk).
- Basis risk – which captures the impact of relative changes in interest rates for financial instruments that have similar tenors but are priced using different interest rate indices, or on the same interest rate indices but with different tenors.
- Option risk – which arises from option derivative positions or from optional elements embedded in assets, liabilities and/or off-balance sheet items, where RBS or its customer can alter the level and timing of their cash flows. Option risk can be further characterised into automatic option risk and behavioural option risk. One example of behavioural option risk is pipeline risk. This is the risk of loss arising from personal customers owning an option to draw down a loan (typically a mortgage loan) at a committed rate. Changes in interest rates can result in greater or fewer customers than anticipated taking up the committed offer. The risk depends on customer behaviour as the option will not automatically be exercised.

Due to the long-term nature of many retail and commercial portfolios and their varied interest rate repricing characteristics and maturities, it is likely that net interest income will vary from period to period, even if interest rates remain the same. New business originated in any period will alter RBS's interest rate sensitivity if the resulting portfolio differs from portfolios originated in prior periods, depending on the extent to which exposure has been hedged.

In order to manage exposures within these limits, RBS aggregates its interest rate positions and hedges them externally using cash and derivatives, primarily interest rate swaps.

This task is primarily carried out by RBS Treasury, to which all businesses except NatWest Markets transfer most of their NTIRR. The main exposures and limit utilisations are reported to the ALCo and the ERF monthly and to the Board Risk Committee quarterly.

Credit spread risk

The bond portfolios primarily comprise high-quality securities that are maintained as a liquidity buffer to ensure RBS can continue to meet its obligations in the event that access to wholesale funding markets is restricted.

Additionally other high-quality bond portfolios are held for collateral purposes and to support payment systems.

Credit spread risk is monitored daily through sensitivities and VaR measures. The dealing authorities in place for the bond portfolios further mitigate the risk by imposing constraints by duration, asset class and credit rating. Exposures and limit utilisations are reported to senior management on a daily basis as well as to the ERF monthly and the Board Risk Committee quarterly.

Business review Capital and risk management

Non-traded market risk *continued*

Foreign exchange risk

The only material non-traded open currency positions are the structural foreign exchange exposures arising from investments in foreign subsidiaries, branches and associates and their related currency funding. These exposures are assessed and managed by RBS Treasury to predefined risk appetite levels under delegated authority from the ALCo. Treasury seeks to limit the potential volatility impact on RBS's Common Equity Tier 1 (CET1) ratio from exchange rate movements by maintaining a structural open currency position. Gains or losses arising from the retranslation of net investments in overseas operations are recognised in equity reserves and reduce the sensitivity of capital ratios to foreign exchange rate movements primarily arising from the retranslation of non-sterling-denominated RWAs. Sensitivity is minimised where, for a given currency, the ratio of the structural open position to RWAs equals the CET1 ratio.

The sensitivity of this ratio to exchange rates is monitored monthly and reported to the ALCo at least quarterly. Foreign exchange exposures arising from customer transactions are sold down by businesses on a regular basis in line with RBS policy.

Risk measurement

The market risk exposures that arise as a result of RBS's retail and commercial banking activities are measured using a combination of value-based metrics (VaR and sensitivities) and earnings-based metrics, as explained in greater detail for each of the key non-traded risk exposure types disclosed in this section.

The following table presents 1-day internal banking book VaR at a 99% confidence level, analysed by type of risk.

	2017				2016			
	Average £m	Maximum £m	Minimum £m	Period end £m	Average £m	Maximum £m	Minimum £m	Period end £m
Interest rate	9.1	15.3	5.6	5.6	9.6	19.3	4.7	18.0
Euro	3.3	4.3	2.3	3.3	3.0	3.8	2.1	3.8
Sterling	6.3	13.8	1.8	2.8	10.2	23.7	4.8	20.6
US dollar	5.5	8.8	2.1	7.7	2.9	4.7	1.6	2.1
Other	1.0	1.1	0.8	0.8	1.7	2.4	1.1	1.1
Credit spread	60.6	82.4	47.4	49.7	57.2	66.6	41.6	62.9
Structural foreign exchange rate	12.4	17.2	9.3	15.4	13.4	19.6	10.5	10.5
Pipeline risk	0.9	1.7	0.2	1.0	0.6	1.2	0.2	0.5
Diversification (1)	(19.2)			(17.3)	(23.7)			(20.2)
Total	63.8	83.1	54.4	54.4	57.1	71.7	41.5	71.7

Note:

(1) RBS benefits from diversification across various financial instrument types, currencies and markets. The extent of the diversification benefit depends on the correlation between the assets and risk factors in the portfolio at a particular time. The diversification factor is the sum of the VaR on individual risk types less the total portfolio VaR.

Key points

- On an average basis, total non-traded VaR increased during 2017, chiefly due to the increase in bonds held within Treasury's liquidity portfolio, which was aimed at investing surplus cash, whilst the duration and quality of the assets remained largely unchanged. The increased investment in bonds increased the valuation sensitivity to movements between bond and swap rates as the bond portfolios are hedged with interest rate swaps.
- On a period-end basis, total non-traded VaR decreased, driven by credit spread VaR, which fell due to refinements in the source of the market data used for the VaR model. One of the largest loss dates dropped out of the historical time series for VaR during Q3 2017, which also contributed to the decline.
- The increase in structural foreign exchange rate VaR towards the end of the year reflected higher euro-denominated investments in subsidiaries, which are expected to decline following a dividend paid by UBI DAC in January 2018.
- The year-on-year decline in sterling interest rate VaR, on both a period-end and average basis, partly reflects the impact of charges to equity recognised at year-end 2016 on RBS's structural hedge benchmark. The charges to equity related mainly to increased provisions against prospective RMBS fines. The equity structural hedge was reduced in 2016 and 2017. For more information on structural hedging, refer to the following page.

Business review Capital and risk management

Non-traded market risk *continued*

Structural hedging *(unaudited)*

RBS has the benefit of a significant pool of stable, non and low interest-bearing liabilities, principally comprising equity and money transmission accounts. These balances are usually hedged, either by investing directly in longer-term fixed-rate assets or by the use of interest rate swaps, in order to provide a consistent and predictable revenue stream.

After hedging the net interest rate exposure of the bank externally, RBS Treasury allocates income to products or equity in structural hedges by reference to the relevant interest rate swap curve. Over time, the hedging programme has built up a portfolio of interest rate swaps that provide a basis for stable income attribution. The programme aims to track a time series of medium-term swap rates, but the yield will be affected by changes in product volumes and RBS's capital composition.

The table below presents the incremental income allocation (above 3-month LIBOR), the average notional and the overall yield (including 3-month LIBOR) associated with the product and equity hedges managed by Treasury.

	2017			2016		
	Incremental income £m	Average notional £bn	Overall yield %	Incremental income £m	Average notional £bn	Overall yield %
Equity structural hedging	628	28	2.48%	633	33	2.41%
Product structural hedging	680	101	1.02%	635	90	1.20%
Total	1,308	129	1.34%	1,268	123	1.47%

The table below presents the incremental income associated with product structural hedges at segment level. These relate to the main banking businesses except Private Banking, RBS International, UBI DAC and Ulster Bank Limited.

<i>Net interest income - impact of product structural hedging (unaudited)</i>	2017 £m	2016* £m
UK Personal & Business Banking	440	390
Commercial Banking	235	235
Other	5	10
Total	680	635

* Re-presented to reflect the segmental reorganisation.

Key points *(unaudited)*

- The overall yield (including 3-month LIBOR) fell compared to 31 December 2016, reflecting the lower volume of equity hedges, new product hedges and maturing hedges reinvested at lower market rates.
- The fall in the average notional of the equity hedge reflects the reduction in RBS's equity base.
- The increase in the average notional of the product hedge reflected growth in current account and deposit balances and increased hedging to reduce earnings sensitivity.
- As at 31 December 2017, the 10-year and 5-year swap rates were 1.21% and 0.98%, respectively. The market rate matching the amortising structure of the total structural hedge was 0.92%.

In addition to the hedges presented in the table above, other parts of the Group also maintain structural hedges. Hedges are transacted with Treasury and generally have an amortised five-year profile. In aggregate, Private Banking, RBS International, UBI DAC and Ulster Bank Limited maintained structural hedges against Treasury relating to equity and products, with an average notional of £20 billion for 2017. This resulted in £147 million incremental income allocation (above 3-month LIBOR) to the businesses in 2017, with an overall yield of 0.83%. A significant proportion of the hedge is euro-denominated.

Non-traded market risk *continued*

Interest rate risk *(unaudited)*

NTIRR can be measured from either an economic value-based or earnings-based perspective, or a combination of the two. Value-based approaches measure the change in value of the balance sheet assets and liabilities over a longer timeframe, including all cash flows. Earnings-based approaches measure the potential short-term (generally one-year) impact on the income statement of changes in interest rates.

RBS uses both approaches to quantify its interest rate risk: VaR as its value-based approach and sensitivity of net interest income (NII) as its earnings-based approach.

These two approaches provide different yet complementary views of the impact of interest rate risk on the balance sheet at a point in time. The scenarios employed in the NII sensitivity approach incorporate business assumptions and simulated modifications in customer behaviour as interest rates change. In contrast, the VaR approach assumes static underlying positions and therefore does not provide a dynamic measurement of interest rate risk. In addition, while the NII sensitivity calculations are measured to a 12-month horizon and thus provide a shorter-term view of the risks on the balance sheet, the VaR approach can identify risks not captured in the sensitivity analysis, in particular the impact of duration and repricing risk on earnings beyond 12 months.

Value-at-risk *(unaudited)*

VaR is a statistical estimate of the potential change in the market value of a portfolio (and, thus, the impact on the income statement) over a specified time horizon at a given confidence level.

RBS's standard VaR metrics - which assume a time horizon of one trading day and a confidence level of 99% - are based on interest rate repricing gaps at the reporting date. Daily rate moves are modelled using observations over the last 500 business days. These incorporate customer products plus associated funding and hedging transactions as well as non-financial assets and liabilities such as property, plant and equipment, capital and reserves. Behavioural assumptions are applied as appropriate.

The non-traded interest rate risk VaR metrics for RBS's retail and commercial banking activities are included within the banking book VaR table above. The VaR captures the risk resulting from mismatches in the repricing dates of assets and liabilities.

It includes any mismatch between structural hedges and stable non and low interest-bearing liabilities such as equity and money transmission accounts as regards their interest rate repricing behavioural profile.

Sensitivity of net interest income *(unaudited)*

Earnings sensitivity to rate movements is derived from a central forecast over a 12-month period. A simplified scenario is shown based on the period-end balance sheet assuming that non-interest rate variables remain constant. Market-implied forward rates are used to generate a base-case earnings forecast, which is then subjected to interest rate shocks. The variance between the central forecast and the shock gives an indication of underlying sensitivity to interest rate movements.

The sensitivity of net interest income table below shows the expected impact, over the next 12 months, to an immediate upward or downward change of 25 and 100 basis points to all interest rates. All yield curves are expected to move in parallel with the exception that interest rates are assumed to floor at zero per cent or, for euro rates, at the current negative rate.

The main driver of earnings sensitivity relates to interest rate pass-through assumptions on customer products. The scenario also captures the impact of the reinvestment of maturing structural hedges at higher or lower rates than the base-case earnings sensitivity and mismatches in the repricing dates of loans and deposits.

However, reported sensitivities should not be considered predictive of future performance. They do not capture potential management action in response to sudden changes in the interest rate environment. Actions that could reduce the net interest income sensitivity and mitigate adverse impacts are changes in pricing strategies on both customer loans and deposits as well as hedging. Management action may also be targeted at stabilising total income taking into account non-interest income in addition to net interest income.

Business review Capital and risk management

Non-traded market risk *continued*

	Euro £m	Sterling £m	US dollar £m	Other £m	Total £m
2017					
+ 25 basis point shift in yield curves	13	151	14	—	178
– 25 basis point shift in yield curves	(8)	(218)	(13)	(4)	(243)
+ 100 basis point shift in yield curves	53	664	58	—	775
– 100 basis point shift in yield curves	(11)	(504)	(49)	(7)	(571)
2016					
+ 25 basis point shift in yield curves	4	79	11	2	96
– 25 basis point shift in yield curves	(1)	(222)	(11)	(2)	(236)
+ 100 basis point shift in yield curves	9	436	42	13	500
– 100 basis point shift in yield curves	(2)	(337)	(30)	(9)	(378)

Note:

(1) In the 25 and 100 basis point downward shifts in yield curves, interest rates are floored at zero per cent, or at current negative rates.

The table above focused solely on the projected sensitivity of net interest income over the next 12 months. In the case of multi-year forward projections, the negative impact of a downward change in rates or, conversely, the benefit of an immediate upward change in interest rates to current market rates would be greater. This is because, over time a greater proportion of maturing structural hedges will be reinvested at prevailing rates which may be higher or lower. Also, in the absence of dynamic assumptions relating to further management actions, the variance to the base-case income forecast arising from margin compression or expansion on managed rate products will continue to accrue.

The tables below show the net interest earnings sensitivity on a one-year, two-year and three-year forward-looking basis to a parallel upward or downward shift in interest rates of 25 basis points. The projection is a simplified sensitivity in which the balance sheet is assumed to be constant, with no change in customer behaviour or margin management strategy as a result of changes to the rates on offer.

The benefit of structural hedges increases (or decreases) as greater volumes of maturing hedges are reinvested at higher (or lower) rates over the three-year period.

Change in net interest earnings – 25 basis point upward shift in yield curves

	Year 1 £m	Year 2 (2) £m	Year 3 (2) £m
2017			
Structural hedges	33	100	171
Managed margin (1)	153	170	178
Other	(8)	—	—
Total	178	270	349

Change in net interest earnings – 25 basis point downward shift in yield curves

	Year 1 £m	Year 2 (2) £m	Year 3 (2) £m
2017			
Structural hedges	(33)	(99)	(171)
Managed margin (1)	(220)	(137)	(121)
Other	10	—	—
Total	(243)	(236)	(292)

Notes:

(1) Primarily current accounts and savings accounts.

(2) The projections for Years 2 and 3 consider only the main drivers of earnings sensitivity, namely structural hedging and margin management.

Key points *(unaudited)*

- Earnings sensitivity to 25 and 100 basis-point upward shifts in yield curves increased year on year, partly due to higher deposit volumes. Additionally, more benefit from higher rates was assumed to result from margin management in 2017 than in 2016.
- Sensitivity to a 100 basis-point downward shift in yield curves rose year on year, partly affected by the higher level of future interest rates in the central forecast. Interest rates fall further in a 100 basis-point downward shift in yield curves before they hit an assumed zero per cent floor; as customer deposit rates are less affected by the scenario, profit margins compress.

Business review Capital and risk management

Non-traded market risk continued

Sensitivity of available-for-sale and cash flow hedging reserves to interest rate movements (unaudited)

While the projected sensitivity of net interest income is favourable to an upward shift in the yield curve and adversely sensitive to a downward shift in the yield curve, the market valuation sensitivity of derivatives hedging retail and commercial structural interest rate exposures is adversely sensitive to an upward shift in the yield curve and favourable to a downward shift in the yield curve. Many of the derivatives are documented in cash flow hedge accounting relationships because they reduce the sensitivity of expected future cash flows to unexpected changes in interest rates. If the derivative hedges are maintained to maturity, the immediate impact on the portfolio value would lessen over time as derivative cash flows are settled (amongst other potential factors).

The information shown below comprises simplified scenarios in which all rates across the yield curve have instantaneously shifted upwards or downwards by 25 basis points and 100 basis points and taxation effects have not been estimated. In this analysis, interest rates have not been floored at zero. Note that a movement in the AFS reserve would have an impact on CET1 capital but a movement in the cash flow hedge reserve would not be expected to do so. Volatility in both reserves affects tangible net asset value.

	Available-for-sale reserve £m	Cashflow hedge reserve £m	Total £m
2017			
+ 25 basis points	(41)	(443)	(484)
- 25 basis points	42	448	490
+ 100 basis points	(164)	(1,744)	(1,908)
- 100 basis points	167	1,819	1,986
2016			
+ 25 basis points	(36)	(417)	(453)
- 25 basis points	35	422	457
+ 100 basis points	(150)	(1,641)	(1,791)
- 100 basis points	135	1,714	1,849

Key point (unaudited)

- The sensitivity of the available-for-sale reserve and the cash flow hedge reserve to upward and downward shifts in yield curves remain relatively stable year on year. The increase in sensitivity of the available-for-sale reserve reflected the increase in bonds held within Treasury's liquidity portfolios.

Foreign exchange risk

The table below shows structural foreign currency exposures.

	Net investments in foreign operations £m	Non-controlling interests (NCI) £m	Net investments in foreign operations excluding NCI (1) £m	Net investment hedges £m	Structural foreign currency exposures pre-economic hedges £m	Economic hedges (2) £m	Residual structural foreign currency exposures £m
2017							
US dollar	766	—	766	(14)	752	(752)	—
Euro	7,160	61	7,099	(342)	6,757	(2,224)	4,533
Other non-sterling	2,493	645	1,848	(930)	918	(453)	465
Total	10,419	706	9,713	(1,286)	8,427	(3,429)	4,998
2016							
US dollar	(595)	—	(595)	(28)	(623)	—	(623)
Euro	6,085	(4)	6,089	(582)	5,507	(2,289)	3,218
Other non-sterling	3,366	761	2,605	(1,491)	1,114	(625)	489
Total	8,856	757	8,099	(2,101)	5,998	(2,914)	3,084

Notes:

(1) Non-controlling interests (NCI) represents the structural foreign exchange exposure not attributable to owners' equity.

(2) Economic hedges mainly represent US dollar and euro preference shares in issue that are treated as equity under IFRS and do not qualify as hedges for accounting purposes. They provide an offset to structural foreign exchange exposures to the extent that there are net assets in overseas operations available.

Business review Capital and risk management

Non-traded market risk *continued*

Key points *(unaudited)*

- The increase in net investments in foreign operations mainly reflected investment taken to support RBS's business in the US. Net investments in euro-denominated operations also increased in 2017. However, a dividend paid by UBI DAC in January 2018 has reduced net investments in euro operations by approximately £1.3 billion.
- The reduction in net investment hedges mainly reflected the reduction in hedges of other non-sterling investments in foreign operations. Hedges are reduced as a result of the reduction in net investments in other non-sterling foreign operations due to disposals, dividends or other capital repatriations.
- Changes in foreign currency exchange rates affect equity in proportion to structural foreign currency exposure. For example, a 5% strengthening or weakening in foreign currencies against sterling would respectively result in a gain or loss of £0.4 billion in equity (2016 – a 5% strengthening or weakening in foreign currencies against sterling would respectively have resulted in a gain or loss of £0.3 billion).

Equity risk

Equity positions are carried at fair value on the balance sheet based on available market prices where possible. In the event that market prices are not available, fair value is based on appropriate valuation techniques or management estimates.

The table below shows the balance sheet carrying value of non-traded book equity positions.

	2017 £m	2016 £m
Exchange-traded equity	41	33
Private equity	243	357
Other	136	146
	420	536

The exposures may take the form of (i) equity shares listed on a recognised exchange, (ii) private equity shares defined as unlisted equity shares with no observable market parameters or (iii) other unlisted equity shares.

	2017 £m	2016 £m
Net realised gains arising from disposals	82	295
Unrealised gains included in Tier 1 or Tier 2 capital	60	53

Note:

(1) Includes gains or losses on available-for-sale instruments only.

Key point

- The reduction in equity shareholdings mainly reflected disposals of equity stakes in private equity and other equity investments.

Calculation of regulatory capital *(unaudited)*

Non-traded market risk exposures are capitalised through the Internal Capital Adequacy Assessment Process (ICAAP). This process covers the following risk types: gap risk, basis risk, credit spread risk, pipeline risk, structural foreign exchange risk, prepayment risk and accounting volatility risk. ICAAP is performed using a combination of value-based and earnings-based measures.

The total non-traded market risk capital requirement is determined by adding the different charges for each sub risk type. The ICAAP methodology captures at least ten years of historical volatility and is produced to a 99% confidence level. Methodologies are reviewed by Model Risk Management and results are approved by the Capital Management and Stress Testing Committee.

Traded market risk

The following disclosures in this section are audited:

- Internal VaR

Definition

Within trading books, traded market risk is the risk arising from changes in fair value on positions, assets, liabilities or commitments as a result of fluctuations in market prices.

Key developments in 2017 (unaudited)

- During H1 2017, revised traded market risk appetite metrics were approved by the Board and cascaded to the franchises. In Q4 2017, the limits for NatWest Markets were revised to accommodate trading book positions from the legacy portfolio which has now been re-integrated into NatWest Markets.
- Political events during the year, including elections in the UK, France and the Netherlands, resulted in periods of market volatility. European interest rates remained at historically low levels, although the Bank of England and US Federal Reserve began raising interest rates.
- Traded VaR increased on an average basis compared to 2016, but remained within risk appetite. This was partly because the level of risk was reduced in H1 2016 as a result of concerns over the stability of the financial sector, leading to a lower average risk profile for that year. The risk profile subsequently returned to a more normalised level. Refinements to the VaR methodology used for certain credit products also contributed to the increase.

Sources of risk (unaudited)

The primary objective of RBS's trading activities is to provide a range of financing, risk management and investment services to its customers – including major corporations and financial institutions around the world. From a market risk perspective, the trading activities are focused on the following markets: rates; currencies; securitised products; and traded credit.

RBS undertakes transactions in financial instruments including debt securities, loans, deposits and equities, as well as securities financing and derivatives.

Following the reintegration of legacy portfolios, traded market risk now almost entirely resides in the NatWest Markets franchise.

The key categories of traded market risk are:

- Interest rate risk – which is the risk that a position's fair value will change due to a change in the absolute level of interest rates, in the spread between two rates, in the shape of the yield curve or in any other interest rate relationship.
- Credit spread risk – which is the risk that the value of a position will change due to changes in the real or market-perceived ability of a borrower to pay related cash flows or obligations.
- Foreign currency price risk – which is the risk that the fair value of a position will change due to the change in foreign currency rates, including gold.
- Equity price risk – which is the risk that the fair value of a position will change due to the change in equity prices.
- Commodity price risk – which is the risk that the fair value of a position will change due to the change in commodity prices.

Trading activities may also give rise to counterparty credit risk.

For information on the management of this risk, refer to the Credit risk section on page 179.

Risk governance (unaudited)

Responsibility for identifying, measuring, monitoring and controlling the market risk arising from trading activities lies with the relevant trading business, with second-line-of-defence oversight provided by the Traded Market Risk function.

Traded market risk positions are reported monthly to the Executive Risk Forum (ERF) and quarterly to the Board Risk Committee.

Market risk policy statements set out the governance and risk management framework through effective identification, measurement, reporting, mitigation, monitoring and control.

Risk appetite (unaudited)

RBS's qualitative appetite for traded market risk is set out in the traded market risk appetite statement.

Its quantitative appetite is expressed in terms of exposure limits in the form of Board risk measures (approved by the RBS Board on the recommendation of the Board Risk Committee) and key risk measures (approved by the Technical Executive Risk Forum).

These limits are cascaded further down the organisation as required, as approved by the Technical Executive Risk Forum.

The limit framework at RBS level comprises value-at-risk (VaR) and stressed value-at-risk (SVaR). More details on these are provided on the following pages.

The limit framework at trading unit level also comprises additional metrics that are specific to the market risk exposures within its scope. These additional metrics aim to control various risk dimensions such as product type, exposure size, aged inventory, currency and tenor.

For each trading business, a document known as a dealing authority compiles details of all applicable limits and trading restrictions.

The limits are reviewed to reflect changes in risk appetite, business plans, portfolio composition and the market and economic environments.

To ensure approved limits are not breached and that RBS remains within its risk appetite, triggers at RBS and lower levels have been set such that if exposures exceed a specified level, action plans are developed by the front office and Traded Market Risk.

For further information on risk appetite, refer to page 154.

Traded market risk continued

Risk controls and assurance (unaudited)

For information on risk controls and assurance, refer to page 156.

Risk identification and assessment (unaudited)

Identification and assessment of traded market risk is achieved through gathering, analysing, monitoring and reporting market risk information at desk, business, franchise and RBS-wide levels. Industry expertise, continued system developments and techniques such as stress testing are also used to enhance the effectiveness of the identification and assessment of all material market risks.

This is complemented by the New Product Approval process, in which the market risk team participates to assess and quantify the market risk associated with all proposed new products.

Risk monitoring (unaudited)

Traded market risk exposures are monitored against limits and analysed daily by market risk reporting and control functions. A daily report that summarises market risk exposures against the limits at RBS, franchise, business and desk levels is sent to senior management and market risk managers across the function.

The Market Risk function also prepares daily risk reports that detail exposures against a more granular set of limits and triggers.

Limit reporting is supplemented with regulatory capital and stress testing information as well as ad hoc reporting.

A risk review of trading businesses is undertaken weekly with senior risk and front office staff. This includes a review of profit and loss drivers, notable position concentrations and other positions of concern.

Businesses' profit and loss performance is monitored automatically through loss triggers which, if breached, require a remedial action plan to be agreed between the Market Risk function and the front office. The loss triggers are set using both a fall-from-peak approach and an absolute loss level.

In addition, as noted under Risk governance above, regular updates on traded market risk positions are provided to the ERF and Board Risk Committee.

Risk measurement

RBS uses a comprehensive set of methodologies and techniques to measure traded market risk, namely VaR, SVaR and the incremental risk charge. Risks that are not adequately captured by VaR or SVaR are captured by the Risks not in VaR (RNIV) framework to ensure that RBS is adequately capitalised for market risk. In addition, stress testing is used to identify any vulnerabilities and potential losses in excess of VaR and SVaR.

The key inputs into these measurement methods are market data and risk factor sensitivities. Sensitivities refer to the changes in trade or portfolio value that result from small changes in market parameters that are subject to the market risk limit framework. Revaluation ladders are used in place of sensitivities to capture the impact of large moves in risk factors or the joint impact of two risk factors.

These methods have been designed to capture correlation effects and allow RBS to form an aggregated view of its traded market risk across risk types, markets and business lines while also taking into account the characteristics of each risk type.

Value-at-risk (unaudited)

For internal risk management purposes, VaR assumes a time horizon of one trading day and a confidence level of 99%.

The internal VaR model – which captures all trading book positions including those products approved by the regulator – is based on a historical simulation, utilising market data from the previous 500 days on an equally weighted basis.

The model also captures the potential impact of the following key risk factors: interest rate risk; credit spread risk; foreign currency price risk; equity price risk; and commodity price risk. These are defined under Sources of risk.

When simulating potential movements in risk factors, a combination of absolute, relative and rescaled returns is used, depending on the risk factor.

The performance and adequacy of the VaR model are tested on a regular basis through the following processes:

- Back-testing – Internal and regulatory back-testing is conducted on a daily basis. (For information on internal back-testing, refer to page 217.)
- Ongoing model validation – VaR model performance is assessed both regularly and on an ad-hoc basis if market conditions or book constitution change significantly.
- Model Risk Management review – As part of the model lifecycle, all risk models (including the VaR model) are independently reviewed to ensure that the model is still fit for purpose given current market conditions and book constitution (refer to page 156).

Business review Capital and risk management

Traded market risk continued

1-Day 99% traded internal VaR (unaudited)

Traded VaR (1-day99%)

The table below analyses 1-day 99% internal VaR for RBS's trading portfolios, segregated by type of market risk exposure.

	2017				2016			
	Average £m	Maximum £m	Minimum £m	Period end £m	Average £m	Maximum £m	Minimum £m	Period end £m
Interest rate	14.1	24.5	8.8	15.3	12.5	22.3	7.8	16.9
Credit spread	12.1	19.4	8.8	16.7	9.5	13.7	5.8	9.7
Currency	4.9	10.0	2.3	3.5	4.6	14.3	1.0	5.4
Equity	1.2	2.1	0.4	0.4	0.5	2.1	0.2	1.9
Commodity	0.4	1.3	—	0.2	0.7	2.4	0.2	0.3
Diversification (1)	(12.8)			(15.3)	(10.8)			(10.4)
Total	19.9	29.5	13.2	20.8	17.0	29.3	9.9	23.8

Note:

(1) RBS benefits from diversification as it reduces risk by allocating positions across various financial instrument types, currencies and markets. The extent of the diversification benefit depends on the correlation between the assets and risk factors in the portfolio at a particular time. The diversification factor is the sum of the VaR on individual risk types less the total portfolio VaR.

Key points

- Traded VaR fluctuated throughout 2017, reflecting political developments, market events, customer flows and other macroeconomic factors.
- On an average basis, total traded VaR increased in 2017 compared to 2016, but remained within risk appetite. This was partly because the level of risk was reduced in H1 2016 as a result of concerns over the stability of the financial sector, leading to a lower average risk profile for that year. The risk profile subsequently returned to a more normalised level. Refinements applied to the VaR methodology used for certain credit products during 2017 also contributed to the increase.
- On a period-end basis, total traded VaR was in the middle of the range for the year.

Business review Capital and risk management

Traded market risk continued

VaR back-testing (unaudited)

The main approach employed to assess the ongoing performance of the VaR model is back-testing, which counts the number of days when a loss exceeds the corresponding daily VaR estimate, measured at a 99% confidence level.

Two types of profit and loss (P&L) are used in back-testing comparisons: Actual P&L and Hypothetical (Hypo) P&L.

The Actual P&L for a particular business day is the firm's actual P&L for that day in respect of the trading activities, including any intraday activities, adjusted by stripping out fees and commissions, brokerage, and additions to and releases from reserves that are not directly related to market risk.

The Hypo P&L reflects the firm's Actual P&L excluding any intra-day activities.

A portfolio is said to produce a back-testing exception when the Actual or Hypo P&L exceeds the VaR level on a given day. Such an event may be caused by a large market movement or may highlight issues such as missing risk factors or inappropriate time series. Any such issues identified are analysed and addressed through taking appropriate remediation or development action. Both Actual and Hypo back-testing exceptions are monitored.

The table below shows internal back-testing exceptions for a period of 250 days for 1-day 99% traded internal VaR vs. Actual and Hypo P&L for major NatWest Markets businesses.

Description	Back-testing exceptions (from 16 January 2017)	
	Actual	Hypo
Rates	—	—
Credit	2	2
Currencies	—	1
Securitised products	1	1

Key points (unaudited)

- Statistically RBS would expect to see back-testing exceptions 1% of the time over the 250-day period.
- The number of exceptions observed in 2017 for major businesses in NatWest Markets was broadly in line with this expectation.

Traded market risk continued

Stressed VaR (SVaR) (unaudited)

As with VaR, the SVaR methodology produces estimates of the potential change in the market value of a portfolio, over a specified time horizon, at a given confidence level. SVaR is a VaR-based measure using historical data from a one-year period of stressed market conditions.

The risk system simulates 99% VaR on the current portfolio for each 250-day period from 2005 to the current VaR date, moving forward one day at a time. The SVaR is the worst VaR outcome of the simulated results.

This is in contrast with VaR, which is based on a rolling 500-day historical data set. A time horizon of ten trading days is assumed with a confidence level of 99%.

The internal traded SVaR model captures all trading book positions.

10-day 99% trading internal SVaR (unaudited)

	Period-end 2017 £m	Period-end 2016 £m
RBS	172	161

Key point (unaudited)

- Traded SVaR fluctuated throughout 2017, reflecting political developments, market events, customer flows and other macroeconomic factors. On a period-end basis, traded SVaR in 2017 remained at a similar level to 2016.

Risks not in VaR (RNIVs) (unaudited)

The RNIV framework is used to identify and quantify market risks that are inadequately captured by the internal VaR and SVaR models.

RNIV calculations form an integral part of ongoing model and data improvement efforts to capture all market risks in scope for model approval in VaR and SVaR.

Stress testing (unaudited)

For information on stress testing, refer to page 159.

Incremental risk charge (IRC) (unaudited)

The IRC model quantifies the impact of rating migration and default events on the market value of instruments with embedded credit risk (in particular, bonds and credit default swaps) that are held in the trading book. It further captures basis risk between different instruments, maturities and reference entities.

Model validation (unaudited)

RBS uses a variety of models to manage and measure market risk. These include pricing models (used for valuation of positions) and risk models (for risk measurement and capital calculation purposes). They are developed and signed off in NatWest Markets, with material models subject to independent review by Model Risk Management.

For general information on the independent model validation carried out by Model Risk Management, which applies also to market risk models (including VaR models), refer to page 156. Additional details relating to pricing and market risk models are presented below.

Pricing models

Pricing models are developed by a dedicated front office quantitative team, in conjunction with the trading desk. They are used for the valuation of positions for which prices are not directly observable and for the risk management of the portfolio.

Any pricing models that are used as the basis for valuing books and records are subject to approval and oversight by asset-level modelled product review committees.

These committees comprise representatives of the major stakeholders in the valuation process - trading, finance, market risk, model development and model review functions. Model approval by such a committee requires review and approval by these stakeholders, including independent model review by Model Risk Management.

The review process includes the following steps:

- The committees prioritise models for review by Model Risk Management, considering the materiality of the risk booked against the model and an assessment of the degree of model risk, that is the valuation uncertainty arising from the choice of modelling assumptions.
- Model Risk Management quantifies the model risk, which may include comparing front office model outputs with those of alternative models independently developed by Model Risk Management.
- The sensitivities derived from the pricing models are validated.
- The conclusions of the review are used to inform risk limits and by Finance to inform model reserves.

Risk models

All model changes are approved through model governance committees at franchise level. Changes to existing models are subject to Model Risk Management review and RBS follows regulatory guidance for assessing the materiality of extensions and changes to the internal model approach for market risk.

Model Risk Management's independent oversight provides additional assurance that RBS holds appropriate capital for the market risk to which it is exposed.

In addition to Model Risk Management's independent oversight, the model testing team monitors the model performance for market risk through back-testing, which is discussed in more detail on page 217, and other processes.

Derivatives	154.5	1.5	153.0	236.5	1.9	234.6	Interest rate, credit spreads
Subordinated liabilities	12.7	12.7	—	19.4	19.4	—	Interest rate
Other liabilities	15.0	15.0	—	20.9	20.9	—	
Total liabilities	689.0	449.5	239.5	749.3	423.5	325.8	

Notes:

- (1) Non-trading businesses are entities that primarily have exposures that are not classified as trading book. For these exposures, with the exception of pension-related activities, the main measurement methods are sensitivity analysis of net interest income, internal non-traded VaR and fair value calculations. For more information refer to pages 206 to 213.
- (2) Trading businesses are entities that primarily have exposures that are classified as trading book under regulatory rules. For these exposures, the main methods used by RBS to measure market risk are detailed under traded market risk measurement on pages 214 to 219.
- (3) Foreign exchange risk affects all non-sterling denominated exposures on the balance sheet across trading and non-trading businesses, and therefore has not been listed in the above tables.

Pension risk (unaudited)

Definition

Pension obligation risk is the risk to RBS caused by its contractual or other liabilities to, or with respect to, a pension scheme (whether established for its employees or those of a related company or otherwise). It is also the risk that RBS will make payments or other contributions to, or with respect to, a pension scheme because of a moral obligation or because RBS considers that it needs to do so for some other reason.

Sources of pension risk

RBS has exposure to pension risk through its defined benefit schemes worldwide. The five largest schemes, which represent around 98% of RBS's pension liabilities are: the Main Section of The Royal Bank of Scotland Group Pension Fund (the Main scheme), the AA Section of The Royal Bank of Scotland Group Pension Fund, the Ulster Bank Pension Scheme, the Ulster Bank Pension Scheme (Republic of Ireland), and the Royal Bank of Scotland International Pension Trust. The Main scheme is the principal source of pension risk. Further detail on RBS's pension obligations can be found in Note 4 on the consolidated accounts.

Pension scheme liabilities vary with changes in long-term interest rates and inflation as well as with pensionable salaries, the longevity of scheme members and legislation. Pension scheme assets vary with changes in interest rates, inflation expectations, credit spreads, exchange rates, and equity and property prices. RBS is exposed to the risk that the schemes' assets, together with future returns and additional future contributions, are insufficient to meet liabilities as they fall due. In such circumstances, RBS could be obliged (or might choose) to make additional contributions to the schemes, or be required to hold additional capital to mitigate this risk.

Prior to 6 April 1997, individuals who contracted out of the UK State Second Pension were entitled to a Guaranteed Minimum Pension (GMP). Men accrued GMP at different rates to women. The Government intends that GMP should be equalised but until the mechanism is defined, pension funds are uncertain of their obligations. In the meantime, no allowance is made for GMP equalisation in the IAS 19 defined benefit obligations and risk disclosures.

Key developments in 2017

A memorandum of understanding between Ulster Bank Ireland DAC and Ulster Bank Pension Trustees Limited was agreed. A contribution of €200 million was paid to the pension scheme and the investment strategy amended to include more hedging assets.

Throughout 2017, various pension risk stress-testing initiatives were undertaken, focused both on internally-defined scenarios and on scenarios to meet integrated Bank of England stress-testing requirements. For more information on stress testing, refer to the following page.

Pension risk management function

Risk governance

The Main scheme operates under a trust deed. The corporate trustee, RBS Pension Trustee Limited, is a wholly owned subsidiary of National Westminster Bank Plc. The trustee board comprises six directors selected by RBS and four directors representing members. The trustee is supported by RBS Investment Executive Ltd (RIEL), which specialises in pension investment strategy.

The Pension Committee, which is chaired by the RBS Chief Financial Officer, acts as a sub-committee of the Executive Committee and formulates RBS's view of pension risk. The Pension Committee considers mechanisms that could potentially be used for managing risk within the funds as well as financial strategy. The Pension Committee is a key component of RBS's approach to managing pension risk and it reviews and monitors risk management, asset strategy and financing issues on behalf of RBS. The Pension Committee also serves as a formal link between RBS, RIEL and the trustee.

For further information on Risk governance, refer to page 152.

Risk appetite

Investment policy for the schemes is defined by the trustee with input from RIEL where appropriate and other specialist advisers employed by the trustee. While the trustee is responsible for the management of the scheme assets, it consults with RBS on material changes to the Main scheme's risk appetite and investment policy.

RBS maintains an independent view of the risk inherent in pension funds, with an associated risk appetite, and has defined metrics against which risk is measured. In addition to the scrutiny provided by the Pension Committee, RBS undertakes regular pension risk monitoring and reporting to the Board and the Board Risk Committee on the material pension schemes that RBS has an obligation to support.

Risk controls

A pension risk management framework is in place to provide formal controls for pension risk reporting, modelling, governance and stress testing. A pension risk policy – which sits within the RBS policy framework – is also in place and is subject to associated framework controls.

Risk identification and measurement

Pension risk reports are submitted to the Executive Risk Forum and the Board Risk Committee four times a year in the Risk & Conduct Management Quarterly Report. This includes an assessment of the overall deficit or surplus position, estimated capital requirements, and an assessment of the associated assets and liabilities.

Business review Capital and risk management

Pension risk (unaudited) continued

RBS also undertakes stress tests and scenario analyses on its material defined benefit pension schemes each year as part of its risk measurement framework. These stress tests are also used to satisfy the requests of regulatory bodies such as the Bank of England. The stress testing framework includes pension risk capital calculations for the purposes of the Internal Capital Adequacy Assessment Process as well as additional stress tests for a number of internal management purposes.

Pension stress tests take the form of both stochastic and deterministic stresses over time horizons ranging from instantaneous to seven years in duration. They are designed to examine the behaviour of the pension schemes' assets and liabilities under a range of financial and demographic shocks. The results of the stress tests and their consequential impact on RBS's balance sheet, income statement and capital position are incorporated into the overall RBS-wide stress test results.

RBS Group plc is the parent of several entities that participate in the Main scheme, and which could be required to fund any deficit that arises. The table below shows the sensitivity of the Main scheme's assets and liabilities (measured according to IAS 19 'Employee Benefits'). It includes changes in interest rates and equity values at the year-end, taking account of the current asset allocation and hedging arrangements.

	Increase in value of assets £m	Increase in value of liabilities £m	Increase in net pension assets/ obligations £m
2017			
Fall in nominal swap yields of 0.25% at all durations with no change in credit spreads or real swap yields	1,199	750	449
Fall in real swap yields of 0.25% at all durations with no change in credit spreads or nominal swap yields	1,289	1,329	(40)
Fall in AA credit spreads of 0.25% at all durations with no change in nominal or real swap yields or other credit spreads	7	2,055	(2,048)
Fall in equity values of 10% (1)	(909)	—	(909)
2016			
Fall in nominal swap yields of 0.25% at all durations with no change in credit spreads or real swap yields	1,048	502	546
Fall in real swap yields of 0.25% at all durations with no change in credit spreads or nominal swap yields	1,485	1,552	(67)
Fall in AA credit spreads of 0.25% at all durations with no change in nominal or real swap yields or other credit spreads	9	2,074	(2,065)
Fall in equity values of 10% (1)	(905)	—	(905)

Note:

(1) Includes both quoted and private equity.

The chart below shows the pension liability cash flow profile, allowing for expected indexation of future payments. The majority of expected cash flows (84%) are anticipated within the next 40 years. The profile will vary depending on the assumptions made regarding inflation expectations and mortality.

Pension risk (unaudited) continued

Risk mitigation

The trustee has taken measures to mitigate inflation and interest rate risks, both by investing in suitable financial assets and by entering into inflation and interest rate swaps. The Main scheme also uses derivatives to manage the allocation of the portfolio to different asset classes and to manage risk within asset classes.

The assets of the Main scheme, which represented around 90% of RBS's pension plan assets at 31 December 2017, are invested in a diversified portfolio. This includes quoted and private equity, government and corporate fixed interest and index-linked bonds, property and other alternative assets.

Future developments

The UK ring-fencing regime will require significant changes to the structure of RBS's existing defined benefit pension schemes.

From 2026 it will not be possible for any of the entities inside the ring-fence (or their wholly-owned subsidiaries) to participate in the same defined benefit pension scheme as entities outside the ring-fence.

RBS is developing a strategy to meet these requirements. This will require the agreement of the pension scheme trustee. RBS's intention is for the Main scheme to be supported by entities within the ring-fence. This could result in the pension scheme trustee concluding that the employer covenant (the ability of participating employers to support the scheme) has been weakened as a result of the entities outside the ring-fence no longer participating in the pension scheme, and as a result requesting additional contributions. Discussions with respect to the above issues are ongoing with the trustee.

The last triennial valuation of the Main scheme had an effective date of 31 December 2015. This valuation was concluded with the acceleration of the nominal value of all committed contributions in respect of past service (£4.2 billion), which was paid in the first quarter of 2016.

The next triennial valuation will have an effective date of 31 December 2018. The expectation is that this will result in additional contributions being agreed with the trustee. Under current legislation, such agreement would need to be reached no later than 31 March 2020.

The aggregate contributions RBS commits to will therefore depend not only on the size of any deficit arising from the triennial valuation (on assumptions that must be agreed with the trustee), but also on the extent to which RBS needs to provide additional mitigation for any perceived weakening in the covenant as a result of ring-fence restructuring. The assumptions to be agreed with the trustee will include the discount rate (the rate at which future cash flows are discounted to arrive at a present value of the total pension scheme liabilities) as well as a range of other assumptions such as recent changes to life expectancy projections.

The trustee estimates that, as at 30 June 2017, the Main scheme had a surplus of £1.7 billion on the technical provisions assumptions agreed for the 31 December 2015 triennial valuation (the methodology for deriving these assumptions is shown in Note 4 on the consolidated accounts). A 25 basis point (0.25%) reduction in the technical provisions discount rate reduces the surplus position by around £2.4 billion.

This sensitivity to the discount rate assumption is greater than the sensitivity of the IAS 19 obligation of £2.0 billion to a 25 basis point change in the discount rate, shown in Note 4 on the consolidated accounts, as a result of two factors:

- The technical provisions liability is greater than the IAS 19 obligation, meaning a proportionate change would have a larger absolute impact.
- Different assumptions are used for technical provisions (for example longevity).

Conduct risk (unaudited)

Definition

Conduct risk is the risk that the behaviour of RBS and its staff towards customers, or in the markets in which it operates, leads to unfair or inappropriate customer outcomes resulting in reputational damage, financial loss or both. The damage or loss may be the result of a failure to comply with (or adequately plan for changes to) relevant official sector policy, laws, regulations, or major industry standards, or of failing to meet the expectations of customers or regulators.

Sources of conduct risk

Conduct risk exists across all stages of RBS's relationships with its customers – from the development of its business strategies, to post-sales processes – and arises from a variety of activities. These include product design, marketing and sales, complaint handling, staff training, and handling of confidential insider information. Conduct risk also arises if RBS does not take effective action to prevent fraud, bribery and money laundering. As set out in Note 31 on the consolidated accounts, RBS and certain members of staff are party to legal proceedings and are subject to investigation and other regulatory action in the UK, the US and other jurisdictions.

Key developments in 2017

Parts of the Conduct & Regulatory Affairs function were merged with the Risk function with effect from 1 January 2017. Regulatory Affairs moved to Corporate Governance & Secretariat while Remediation and Complaints moved to Services' Chief Operating Office. The change was designed to take advantage of synergies across the risk, conduct and regulatory agendas.

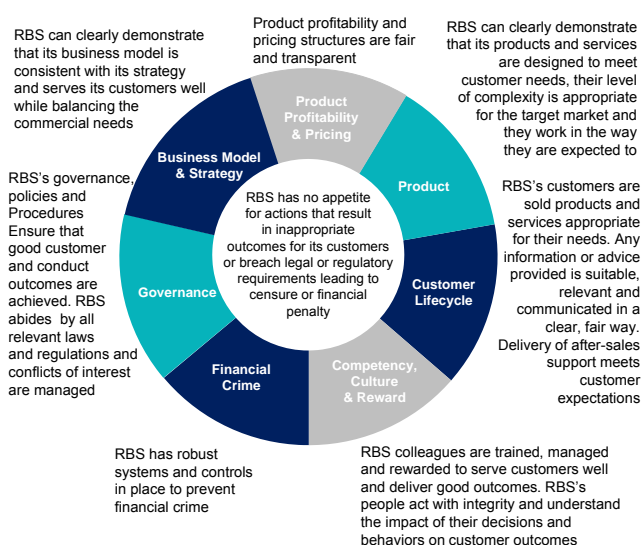

RBS continued to remediate historical conduct issues, while also focusing its customer-facing businesses and support functions around the needs of its customers including the delivery of a number of regulatory change programmes. Conduct and litigation costs were £1.1 billion in 2017 compared with £5.9 billion in 2016.

- The remediation of PPI continued, with the FCA confirming August 2019 as the deadline for PPI mis-selling claims.
- The FCA is reviewing the business models of UK retail banks, building societies and credit unions, to understand how recent changes are affecting competition and conduct in the sector.
- Following an enforcement notice from the Central Bank of Ireland in respect of tracker mortgages, a significant remediation programme was established.
- Work progressed to meet the requirements of the revised Markets in Financial Instruments Directive and Regulation (MiFID II/MiFIR) in advance of their introduction in early 2018.
- Work also progressed on the conduct-related aspects of the UK's ring-fencing requirements.
- Changes were implemented to support compliance with the second Payment Services Directive in advance of its introduction in early 2018.

- RBS updated its policies to reflect changes required in relation to the 4th Money Laundering directive, which came into force in H1 2017 to combat terrorist and criminal financing.
- The Criminal Finances Act 2017 came into force in H2 2017, introducing a new corporate offence of failure to prevent the facilitation of tax evasion. Policies and procedures in place to prevent such activity were reviewed and enhanced.

Conduct risk management function

The management of conduct risk is based on seven key elements, ensuring that conduct risk exposures are understood and managed in accordance with agreed risk appetite.

Risk governance

RBS defines appropriate standards of conduct and drives adherence to those standards through its framework for managing conduct risk. The Board and its senior committees receive updates on conduct risk exposures and action plans through regular reporting.

Key elements of the governance structure are set out below:

- The Risk, Conduct & Restructuring Executive Committee considers emerging material risks and issues, and implements Board and Executive Committee risk management policy decisions.
- The Financial Crime Risk Executive Committee (accountable to the Executive Risk Forum) ensures that the customer-facing businesses and the Services function fulfil strategic objectives by identifying and managing their financial crime risks effectively.

Controls

Under the policy framework, there are 18 conduct policies. These are designed to provide both high-level direction and stipulate RBS-wide requirements. The policies provide the necessary clarity to staff on their conduct obligations and ensure RBS meets its regulatory obligations.

Conduct risk (unaudited) continued

Risk assessments are used to identify material conduct risks and inform key controls across all business areas. The risk assessment process is designed to confirm risks are effectively managed and prioritised. The process also ensures controls are tested.

Scenario analysis is used to assess the impact of extreme but plausible conduct risks including financial crime. The scenarios assess the exposures that could significantly affect RBS's financial performance or reputation and are an important component in the operational risk framework and capital model.

Risk appetite

The conduct risk appetite framework was established in 2015 and has been embedded across RBS.

The conduct risk appetite framework and the Conduct Performance Assessment, which forms part of it, facilitate a consistent approach across RBS for assessing conduct risk.

The conduct risk appetite statements, in line with RBS-wide risk appetite, articulate the levels of risk which franchises and functions must not exceed. Where businesses are operating outside conduct appetite, the problems are addressed through agreed risk mitigation plans.

The Conduct Performance Assessment was run in Q1 and Q3 2017, reporting on risk exposures and the operating effectiveness of controls across the businesses. During Q4 2017, the Conduct Performance Assessment was discontinued, in advance of the roll-out of a new approach in early 2018, providing a real-time quantitative view, supported by qualitative assessment.

Risk monitoring and measurement

The Board and senior RBS committees receive updates on conduct risk exposures and action plans through regular reporting. The reporting is intended to be focused, forward-looking and action-oriented.

The most material conduct matters are reported to the appropriate committees, including the Board, the Group Audit Committee and Board Risk Committee.

An annual Money Laundering Reporting Officer's Report is submitted to the Board and shared with the FCA. This covers RBS's Anti-Money Laundering (AML) framework and the operation and effectiveness of the systems and controls in place to comply with AML laws and regulations. In addition, it covers the systems and controls in place to prevent the financing of terrorism and to ensure compliance with sanctions.

The Group Audit Committee is provided with a whistleblowing report twice a year. The report comments on the operational effectiveness of our whistleblowing framework, internally branded as 'Speak Up', and any trends emerging from completed investigations. It details cases by internal reporting categories based on the RBS definition of whistleblowing included in the Speak Up policy.

The Speak Up policy encompasses both the legislative definition contained within the Public Interest Disclosure Act 1998 and the regulatory definition within FCA and PRA regulations and guidance. It extends these to include conduct or behaviour which does not meet the expected standards documented in Our Code.

Each business in RBS has enhanced its use of management information by linking it to the relevant Conduct risk appetite statements. This is required to help ensure appropriate customer outcomes are delivered and that the management information is compliant with the Basel Committee on Banking Supervision's principles for effective risk data aggregation and risk reporting.

Risk mitigation

Information is communicated to each customer-facing business and function about regulatory developments and discussions with regulators. This helps identify and execute any required changes to strategy or to business models.

Early identification and effective management of changes in legislation and regulation are critical to the successful mitigation of conduct risk. The effects of all changes are managed to ensure timely compliance readiness. Changes assessed as having a high or medium-high impact are managed closely.

Mandatory learning, across RBS, helps to ensure colleagues have the information necessary to carry out their duties in a way that complies with expected standards.

Operational risk (unaudited)

Definition

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or external events. It arises from day-to-day operations and is relevant to every aspect of the business.

Operational risk may directly affect customers, lead to financial loss or damage RBS's reputation (for example, cyber attacks, a major IT systems failure or fraudulent activity). There can also be a link between operational risk failures and conduct risk issues.

Sources of operational risk

Operational risk may arise from a failure to manage operations, systems, transactions and assets appropriately. This can take the form of human error, an inability to deliver change adequately or on time, the non-availability of technology services, or the loss of customer data. Fraud and theft are sources of operational risk, as is the impact of natural and man-made disasters. It can also arise from a failure to account for changes in law or regulations or to take appropriate measures to protect assets.

Key developments in 2017

RBS continued to work to embed its enhanced operational risk framework, improving links between risk appetite and risk exposure and building a more robust control environment.

The year also saw a continued focus on the risks arising from the execution of major projects, including: the Transformation portfolio; the restructuring of NatWest Markets; preparations for the implementation of the corporate structural reform agenda – for example the Independent Commission on Banking's ring-fencing proposals, recovery and resolution planning, as well as Brexit; the planned activities to meet the European Commission state aid obligations; and, the effect on RBS's control environment due to cost reduction measures. These projects are essential in order for RBS to achieve its strategic objectives. Risk, Conduct & Restructuring ensured the associated risks to these projects were assessed and understood with mitigating activity in place wherever possible.

There was also a strong focus on RBS's risk and control assessment methodology. Following on from work carried out in 2016, the aim of this consistent, bank-wide methodology was to enhance understanding of the risk profile for the most critical products and services. In 2017, coverage was significantly extended across RBS, with outputs used to inform Group-wide reporting.

The external fraud threat remained high with data used by organised crime gangs to deceive customers through social engineering, and the continued evolution of financial malware. In 2017, there was an increase in fraud perpetrated by scams. RBS has a bank-wide response plan to address the increased threat, which focuses on profiling capabilities and educating customers about fraud protection as well as continued work to drive and support industry best practice. This aligned with fraud prevention programmes across RBS, with the objective of mitigating the effects of external fraud on customers and RBS itself. The plan was successfully implemented and key strategic initiatives enhanced RBS's fraud prevention and detection capabilities, enabling it to limit the effects of fraudulent activity on its customers. As a result, RBS recorded a year-on-year decrease in the number of its customers falling victim to fraud in 2017.

RBS continued to support an industry-led education initiative – Take Five to Stop Fraud – which offers advice to help the public protect themselves from preventable financial fraud. The initiative is led by Financial Fraud Action UK Ltd and is being delivered in conjunction with the Home Office, law enforcement and other banks.

The information and cyber security risk facing RBS continued to change in line with the constantly evolving threats. Internal security improvement programmes progressed across RBS, developing new and strengthening existing controls in order to protect the Group and its customers. RBS continuously developed and used proactive threat management and intelligence processes to understand, manage and mitigate credible threats.

RBS decommissioned a number of internet-facing websites to reduce the attack surface visible to hackers and fraudsters. Improvements were also made to prevent data leakage, secure externally bound email, as well as enhance malware defences and management of user access to key systems. Internal training programmes continued to ensure all employees are fully aware of the threats facing RBS and remain vigilant to unauthorised attempts by internal or external parties to access systems and data.

Operational risk management function

Risk governance

A strong operational risk management function is vital to support RBS's ambitions to serve its customers better. Improved management of operational risk against a defined appetite directly supports the strategic risk objective of improving stakeholder confidence and is vital for stability and reputational integrity.

The operational risk function, which is the second line of defence, is tasked with delivering a robust operational risk management framework and culture across RBS. The Director of Operational Risk reports to the Chief Risk Officer.

Operational risk (unaudited) continued

Operational risk is responsible for the design, development, delivery and continuous improvement of the operational risk management framework. The Operational Risk Policy is incorporated into the RBS Policy Framework and provides direction for the consistent identification, assessment, management, monitoring and reporting of operational risk. Through a network of oversight teams, the function seeks to ensure the integrity of the framework, and manages overall operational risk profile against risk appetite.

The Operational Risk Executive Committee (OREC), which is a sub-committee of the Executive Risk Forum (ERF), acts on all operational risk matters. OREC's duties include reviewing operational risk exposure against risk appetite; identifying and assessing both current and emerging material operational risks; reviewing and monitoring the operational risk profile; and reviewing and approving material operational risk policy management framework changes.

Risk appetite

The operational risk appetite framework supports effective management of key operational risks. It expresses the level and types of operational risk RBS is willing to accept in order to achieve its strategic objectives and business plans.

RBS's operational risk appetite is expressed through a set of qualitative risk appetite statements and quantitative measures which are defined at an aggregate, RBS-wide and individual business level. Appetite covers RBS's most material operational risks, defined by a materiality assessment, which in turn considers past, current and future risk exposures. Appetite exposures for all material risks are regularly reported to business risk committees, the OREC, ERF and Board Risk Committee.

The aggregation of operational risk appetite allows RBS to monitor and report on its material risk exposures against predetermined limits. This drives management intervention and action at defined points, such as the breach of an early warning trigger.

Above these sit an RBS-level operational risk appetite statement which encompasses the full range of operational risks. This drives the strategic risk measurement of stakeholder confidence and is reviewed annually by the ERF. The statement is supported by three simple measures: (i) the relationship between operational risk losses and RBS's gross income; (ii) metrics covering control environment performance; and (iii) the requirement for the material RBS-wide operational risks to be managed within risk appetite.

Risk controls

The Control Environment Certification (CEC) process is a half yearly self-assessment by the CEOs of RBS's customer-facing franchises and business units, as well as the heads of the Group's support and control functions. It gives an assessment on the adequacy and effectiveness of the internal control environment in a consistent and comparable manner, highlighting areas where targeted effort is needed to meet the standards required in order to create a safer and more secure bank for customers. It covers material risks and the key controls that underpin them, including financial, operational and compliance controls, as well as supporting risk management frameworks.

The CEC outcomes, including forward-looking assessments for the next two half-yearly cycles and the progress made to improve the control environment, are reported to the Board, the Group Audit Committee and the Board Risk Committee. They are also shared with external auditors.

The CEC process helps to ensure compliance with the RBS Policy Framework, Sarbanes-Oxley 404 requirements concerning internal control over financial reporting (as referenced in the Compliance report on page 106), and certain requirements of the UK Corporate Governance Code.

Risk identification and measurement

Across all business areas, risk and control assessments are used to identify and assess material operational and conduct risks and key controls. To support identification of risk concentrations, all risks and controls are mapped to the risk directory. Risk assessments are refreshed at least annually to ensure they remain relevant and capture any emerging risks.

The process is designed to confirm that risks are effectively managed and prioritised in line with the stated risk appetite. Controls are tested at the appropriate frequency to verify that they remain fit-for-purpose and operate effectively.

During 2017, work continued to increase the coverage of the enhanced end-to-end risk and control assessment methodology. This approach, which strengthens understanding of the risk profile of key products and services, is used to identify and quantify the most material operational risks. Subject matter experts and key stakeholders are engaged from across RBS to underpin management action in line with RBS's financial and non-financial appetite statement. The results of the risk and control assessments support RBS's on-going journey to build on, and enhance, its control environment.

Monitoring and reporting are part of RBS's operational risk management processes, which aim to ensure that risks are identified, considered by senior executives, and managed effectively. The most material operational risks and their position relevant to risk appetite are regularly reviewed at the OREC, along with any emerging risks and the actions taken to mitigate them. These are also reported to the Board Risk Committee and the ERF. Exposures specific to each business are communicated through regular risk and control reports discussed at business risk committees.

Business review Capital and risk management

Operational risk (unaudited) continued

RBS uses the standardised approach to calculate its operational risk capital requirement. This is based on multiplying three years' average historical gross income by coefficients set by the regulator based on type of income.

As part of the wider Internal Capital Adequacy Assessment Process an operational risk economic capital model is used as a key capital benchmark. The model uses loss data and scenario analysis inputs from the operational risk framework, plus external loss data and certain other factors to provide a risk-sensitive view of RBS's operational risk capital requirement.

Scenario analysis is used to assess how extreme but plausible operational risks will affect RBS. It provides a forward-looking basis for evaluating and managing operational risk exposures.

Refer to the Capital, liquidity and funding risk section for operational risk capital requirement figures.

Event and loss data management

The operational risk event and loss data management process ensures RBS captures and records operational risk loss events that meet defined criteria.

Loss data is used for regulatory and industry reporting and is included in capital modelling when calculating economic capital for operational risk.

The most serious events are escalated in a simple, standardised process to all senior management, by way of a 'Group Notifiable Event Process'.

All losses and recoveries associated with an operational risk event are reported against their financial accounting date. A single event can result in multiple losses (or recoveries) that may take time to crystallise. Losses and recoveries with a financial accounting date in 2017 may relate to events that occurred, or were identified in, prior years.

Percentage and value of events

At 31 December 2017, events aligned to the 'clients, products and business practices' event category accounted for 84% of RBS's operational risk losses (compared to 98% in 2016). The reduction reflects that the level of losses attributable to conduct-related events has significantly reduced compared to prior years. The reduction in conduct-related events also explains the increase in the proportion of events in the 'execution, delivery and process management' category.

	Value of events				Volume of events (1)	
	£m		Proportion		Proportion	
	2017	2016	2017	2016	2017	2016
Fraud	49	48	6%	1%	83%	78%
Clients, products and business practices (2)	614	5,411	84%	98%	7%	11%
Execution, delivery and process management	65	40	9%	1%	7%	8%
Employment practices and workplace safety	4	5	1%	—	3%	3%
Technology and infrastructure failures	—	1	—	—	—	—
	732	5,505	100%	100%	100%	100%

Notes:

- (1) The calculation in the above table is based on the volume and value of events where the associated loss is more than or equal to £10,000.
 (2) 2016 has been restated from £6,282 million as a loss captured in 2016 has now been determined as a non-qualifying operational risk event.

Risk mitigation

Risks are mitigated through the application of key preventative and detective controls. This is an integral step in the risk assessment methodology, which determines residual risk exposure. Control owners are accountable for the design, execution, performance and maintenance of key controls.

These key controls are regularly assessed for adequacy and tested for effectiveness. The control testing results are monitored and, where a material change in performance is identified, it results in a re-evaluation of the associated risk.

RBS purchases insurance to provide the business with financial protection against specific losses and to comply with statutory or contractual requirements.

Business risk (unaudited)

Definition

Business risk is the risk that RBS makes inappropriate business or strategic choices or that RBS is not able to execute its chosen strategy in line with its budget.

Sources of risk

Business risk arises as a result of RBS's exposure to the macro-environment, to the competitive environment, and to technological changes. In addition, internal factors such as volatility in sales volumes, and input costs, and other operational risks such as RBS's ability to assess the business operating environment, or to execute its chosen strategy, contribute to business risk.

Key developments in 2017

RBS continued to reduce its business risk profile by implementing its strategic plan to shift the business mix towards the UK and retail and commercial banking segments, with higher risk activities in NatWest Markets curtailed.

RBS also continued with its simplification and cost reduction programmes during 2017.

As negotiations on the prospective withdrawal of the UK from the European Union have progressed, RBS has been closely monitoring and assessing the operating environment and its effect on business risk.

In July 2017, RBS reached a settlement with the Federal Housing Finance Agency, paying US\$5.5 billion to resolve claims in relation to the issuance and underwriting of residential mortgage-backed securities in the US. This was an important step forward in resolving one of the most significant legacy matters facing RBS.

In September 2017, RBS received final approval from the European Commission for its alternative remedies package, designed to promote competition for banking services to the SME marketplace. This approval allows RBS to resolve its final State Aid divestment obligation and brings clarity for customers and staff.

Governance

The Board has ultimate responsibility for business risk and for approving strategic plans, initiatives and changes to strategic direction.

RBS's strategic planning process is managed by Strategy and Corporate Development. The Risk and Finance functions are key contributors to strategic planning.

Responsibility for the day-to-day management of business risk lies primarily with the franchises, with oversight by the Finance function. The franchises are responsible for delivery of their business plans and the management of such factors as pricing, sales volumes, marketing expenditure and other factors that can introduce volatility into earnings.

Risk identification

Business risk is identified and managed at the product and transaction level. Estimated revenue, costs and capital are key considerations in the design of any new product or in any new investment decision.

Business risk is reported, assessed and challenged at every governance level within the organisation. Each franchise monitors its financial performance relative to plans and reports this on a regular basis to the finance directors of each franchise.

Risk mitigation

RBS operates a monthly rolling forecasting process to identify projected changes in, or risks to, key financial metrics, and ensures appropriate actions are taken.

Reputational risk (unaudited)

Definition

Reputational risk is the risk to RBS's public image from a failure to meet stakeholders' expectations in relation to performance, conduct or business profile. Stakeholders include customers, investors, employees, suppliers, government, regulators, special interest and consumer groups, media and the general public.

Sources of risk

Reputational risk can arise from the conduct of employees; activities of customers and the sectors and countries in which they operate; provision of products and transactions; as well as operations and infrastructure.

Governance

Reputational risk has Board-level oversight reinforced by a Reputational Risk Policy. The Board Risk Committee and Sustainable Banking Committee are responsible for overseeing how RBS manages its reputation. The Board's oversight of reputational issues is supported by the senior RBS-wide Reputational Risk Forum (RRF) which opines on cases and issues that represent a material reputational risk to the whole organisation. The RRF, which has delegated authority from the Executive Risk Forum (ERF), also acts as a central forum to review sector or theme-specific reputational risk acceptance positions, including environmental, social and ethical risk positions, for example, in the Defence and Gambling sectors.

Risk appetite

RBS manages and articulates its appetite for reputational risk through the implementation of a qualitative reputational risk appetite statement and a committee-based governance framework. This has improved the identification, assessment and management of customers, transactions, products and issues that present a material reputational risk, resulting in a greater awareness and focus on the importance of this risk. Moreover, RBS has seen a rise in the number of cases being referred to franchise and group-wide reputational risk fora as a result of increased awareness of the framework as well as training on reputational risk.

Risk mitigation

Reputational risk is mitigated through the policy and governance framework, with ongoing staff training to ensure early identification, assessment and escalation of material issues. Lessons learned from committee meetings have also improved the way cases and issues are debated and decisions made.

The most material threats to RBS's reputation continued to originate from historical and more recent conduct issues. As a result, RBS has been the subject of investigations and reviews by a number of its regulators, some of which have resulted in fines and public censure. Refer to the Litigation, investigations and reviews section of Note 31 on the consolidated accounts on page 313.

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

Opinion

We have audited the financial statements (see table below) of The Royal Bank of Scotland Group plc (the Parent Company) and its subsidiaries (together, the 'Group') for the year ended 31 December 2017. In our opinion:

- the financial statements give a true and fair view of the state of the Group's and of the Parent Company's affairs as at 31 December 2017 and of the Group's profit for the year then ended;
- the financial statements have been properly prepared in accordance with International Financial Reporting Standards (IFRSs) as adopted by the European Union;
- the Parent Company financial statements have been properly prepared in accordance with IFRSs as adopted by the European Union and as applied in accordance with the provisions of the Companies Act 2006; and
- the financial statements have been prepared in accordance with the requirements of the Companies Act 2006 and, as regards the Group financial statements, Article 4 of the IAS Regulation.

We have audited the financial statements of The Royal Bank of Scotland Group plc which comprise:

Group	Parent Company
<ul style="list-style-type: none">• Consolidated balance sheet as at 31 December 2017;• Consolidated income statement for the year then ended;• Consolidated statement of comprehensive income for the year then ended;• Consolidated statement of changes in equity for the year then ended;• Consolidated cash flow statement for the year then ended;• Accounting Policies on pages 251 to 263;• Related notes 1 to 41 to the financial statements;• Information identified as 'audited' in the Annual report on remuneration on pages 83 to 105; and• Capital and risk management section of the Business review except information identified as 'unaudited' on pages 149 to 228.	<ul style="list-style-type: none">• Balance sheet as at 31 December 2017;• Statement of changes in equity for the year then ended;• Cash flow statement for the year then ended; and• Related notes 1 to 15 to the financial statements.

The financial reporting framework that has been applied in their preparation is applicable law and IFRSs as adopted by the European Union and, as regards the Parent Company financial statements, as applied in accordance with the provisions of the Companies Act 2006.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (UK) (ISAs (UK)) and applicable law. Our responsibilities under those standards are further described in the Auditor's responsibilities for the audit of the financial statements section of our report below. We are independent of the Group and Company in accordance with the ethical requirements that are relevant to our audit of the financial statements in the UK, including the Financial Reporting Council's Ethical Standard as applied to listed public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Use of our report

This report is made solely to the company's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's members as a body, for our audit work, for this report, or for the opinions we have formed.

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

Conclusions relating to principal risks, going concern and viability statement

In relation to the ISAs(UK) which require us to report to you whether we have anything material to add or draw attention to, we have nothing to report in respect of the following information in the annual report:

- the disclosures in the Annual Report and Accounts (set out on pages 372 to 402) that describe the principal risks and explain how they are being managed or mitigated;
- the directors' confirmation (set out on page 49) in the Annual Report and Accounts that they have carried out a robust assessment of the principal risks facing the entity, including those that would threaten its business model, future performance, solvency or liquidity;
- the directors' statement (set out on page 112) in the financial statements about whether they considered it appropriate to adopt the going concern basis of accounting in preparing them, and their identification of any material uncertainties to the entity's ability to continue to do so over a period of at least twelve months from the date of approval of the financial statements;
- whether the directors' statement in relation to going concern required under the Listing Rules in accordance with Listing Rule 9.8.6R(3) is materially inconsistent with our knowledge obtained in the audit; or
- the viability statement (set out on page 49) in the annual report as to how they have assessed the prospects of the entity, over what period they have done so and why they consider that period to be appropriate, and their statement as to whether they have a reasonable expectation that the entity will be able to continue in operation and meet its liabilities as they fall due over the period of their assessment, including any related disclosures drawing attention to any necessary qualifications or assumptions.

Separate opinion in relation to IFRSs as issued by the IASB

As explained in the accounting policies, in addition to complying with its legal obligation to apply IFRSs as adopted by the European Union, the Group has applied IFRSs as issued by the International Accounting Standards Board (IASB). In our opinion the Group financial statements comply with IFRSs as issued by the IASB.

Overview of our audit approach

Key Audit Matters	<ul style="list-style-type: none">• Provisions for conduct, litigation and regulatory matters, customer remediation and claims.• Future profitability estimates impacting the recognition of deferred tax, impairment in goodwill and, in the parent company accounts, investments in subsidiaries.• Impairment of loans and advances.• Valuation of financial instruments with higher risk characteristics including related income from trading activities.• Hedge effectiveness testing including the impact on non-interest income.• Provision for restructuring costs.• Pension valuation and obligations.• IT access management.
Audit scope	<ul style="list-style-type: none">• The significant components of our audit cover the reportable segments identified in the financial statements together with the central functions of the Group based in the UK and overseas and include Finance, the Services function and Treasury.• We performed an audit of the complete financial information of four components and audit procedures on specific balances for a further three components.• The components where we performed full or specific audit procedures accounted for 93% or more of Group total income, equity and total assets.
Materiality	<ul style="list-style-type: none">• Overall Group materiality has been set at £300 million which represents 0.6% of total equity.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period and include the most significant assessed risks of material misstatement (whether or not due to fraud) that we identified. These matters included those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit; and directing the efforts of the engagement team. These matters were addressed in the context of our audit of the financial statements as a whole, and in our opinion thereon, and we do not provide a separate opinion on these matters.

Risk	Our response to the risk
Provisions for conduct, litigation and regulatory matters, customer remediation and claims	
<p>The continued litigious environment and the heightened regulatory scrutiny gives rise to a high level of judgement in determining appropriate provisions and disclosures. At the year end, the Group has reported £7.8 billion (2016: £12.8 billion) of provisions for liabilities and charges, including £5.8 billion (2016: £11.0 billion) for conduct and litigation claims, including RMBS, PPI and the FCA review of RBS's treatment of SMEs as detailed in Note 20 of the financial statements on page 299.</p>	<p>We tested the design and operating effectiveness of the Group's key controls over the identification, estimation, monitoring and disclosure of provisions considering the potential for management override of controls. The controls tested included those designed and operated by management to identify and monitor claims, assess the completeness and accuracy of data used to estimate provisions.</p>
<p>Management judgement is needed to determine whether an obligation exists and a provision should be recorded at 31 December 2017 in accordance with the accounting criteria set under IAS 37. This includes determining if:</p>	<p>We examined the relevant regulatory correspondence to assess developments in key cases, the Group's complaint handling reports and litigation reports to identify potentially material cases. For cases where a provision was not recognised, we considered whether the outcome was probable and reliably estimable in accordance with the accounting criteria.</p>
<ul style="list-style-type: none"> • It is probable that an economic outflow such as a payment will occur; and • The amount of the payment (or other economic outflow) can be estimated reliably. 	<p>For the significant provisions made, we understood, assessed and challenged the provisioning methodology. We tested the underlying data and assumptions used in the determination of the provisions recorded, including expected claim rates, legal costs, and the timing of settlement. We also considered peer bank settlements in similar cases.</p>
<p>The measurement of the provision is based on the best estimate of the expenditure required to settle the present obligation.</p>	<p>We sent external confirmations to the Group's external counsel for significant matters and corroborated management's conclusion by independently obtaining the underlying information used in estimating the provisions.</p>
<p>The most significant areas of judgement are:</p>	<p>Where appropriate, we involved our conduct risk specialists. For key cases, we considered the regulatory developments and management's interaction with the Regulators and concluded on the reasonableness of the assumptions used by management also by comparing the results of our independently performed benchmarking and sensitivity analysis. We also verified historical data and whether they supported current estimates.</p>
<ul style="list-style-type: none"> • Completeness of provisions recognised: judgement is in the determination of whether an outflow in respect of identified material conduct matters are probable or can be estimated reliably; • Measurement of provisions recognised: appropriateness of assumptions and judgements used in the estimation of material provisions; and • Adequacy of disclosures of provision for liabilities and charges and contingent liabilities. 	<p>In addition, we attended key management meetings and reviewed the minutes of legal and conduct provision committee meetings to conclude on the effectiveness of management's review controls and the appropriateness of the conclusions reached</p>
	<p>We tested the disclosure provided on conduct, litigation and regulatory provisions to determine whether it complied with accounting standards. Given the inherent estimation uncertainty and the judgmental nature of these provisions, we evaluated the appropriateness of the disclosure made in the financial statements.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that the Group's provisions for conduct, litigation and regulatory matters, customer remediation and claims are within a reasonable range and recognised in accordance with IFRS. We did not identify any material unrecorded provisions.

We highlighted the following matters:

- In assessing and evaluating the total US RMBS provision of £3.2 billion, management and the Board considered other industry settlements and claims. It is a reasonable reflection of the Group's current position given the prevailing uncertainty as to the outcome of the remaining discussions with the US Department of Justice and other parties. The risk of future material additional charges is appropriately disclosed in the financial statements.
- The PPI provision remains sensitive to key assumptions, the most significant of which is future complaint volumes. Management's estimate was within our range of outcomes based on reasonable alternative assumptions.
- The provision related to the FCA review of the Group's treatment of SMEs is sensitive to a number of assumptions. Management's estimate is within an acceptable range based on the current information available to us.

Risk	Our response to the risk
<p data-bbox="143 795 734 862">Future profitability estimates impacting the recognition of deferred tax and the impairment of goodwill and, in the parent company accounts, investments in subsidiaries.</p> <p data-bbox="143 862 734 1097">The recognition and carrying value of deferred tax assets, goodwill and, in the parent company accounts, investments in subsidiaries are based on estimates of future profitability which require significant management judgement. At year end the Group had reported Goodwill of £5.6 billion (2016: £5.6 billion) and deferred tax assets of £1.7 billion (2016: £1.8 billion). The parent company has reported investments in subsidiaries of £47.6 billion (2016: £44.6 billion).</p> <p data-bbox="143 1120 734 1209">In testing for impairment, the Group estimates the value in use of its cash generating units based on the business forecasts:</p> <ul data-bbox="143 1209 734 1500" style="list-style-type: none"> • Revenue and cost forecasts impacted by the Group's transformation programme and reorganisation, business and strategic changes underway and the changing competitive environment; • Key assumptions used in the recoverability and valuation assessments (discount rates, growth rates, macroeconomic assumptions, etc.); and • Assumptions regarding the economic consequences of Brexit and other political developments over an extended period. <p data-bbox="143 1500 734 1590">The recognition of deferred tax assets considers the future profit forecasts of the legal entities as well as interpretation of recent changes to tax rates and laws.</p>	<p data-bbox="734 862 1423 1008">We tested the design and operating effectiveness of the Group's key controls around the preparation and review of the forecasts. We tested the controls over the value in use model including the significant assumptions, inputs, calculations, methodologies and judgements.</p> <p data-bbox="734 1019 1423 1411">With the support of our valuation specialists, we tested whether key macroeconomic assumptions used in the Group's forecasting process were reasonable. We evaluated how the discount rates and long term growth rates used by management compared to peer practice, external market data and corroborative calculations. We considered the Group's cost reduction programme and the extent to which annual cost reductions had been met. We assessed the achievability of future cost reduction plans including considering how these compared to peer banks and the external commentary. We also considered the results of the independent review of the forecasts undertaken by the Risk function and management's challenge of the carrying values and key assumptions in relevant executive committees of the Group.</p> <p data-bbox="734 1422 1423 1545">We tested how previous management forecasts compared to actual results to evaluate the accuracy of the forecasting process. We also assessed how these forecasts impacted the carrying value of deferred tax, goodwill and investments.</p> <p data-bbox="734 1556 1423 1747">We evaluated how management considered alternative assumptions and performed sensitivity analysis on the assumptions used. We considered how key events, such as Banking Structural Reform and Brexit impacted management's estimates. We performed our own scenario analysis for certain assumptions we considered could have a significant impact on the results of the impairment tests.</p> <p data-bbox="734 1758 1423 1881">With the support of our taxation specialists, we assessed the estimate of future taxable profits to calculate the level of deferred tax assets recognised on the balance sheet including the time horizon used for recoverability of losses and other temporary differences.</p> <p data-bbox="734 1892 1423 2085">In addition, we attended and observed management meetings where key judgements were discussed, including those used in the value in use model and the carrying value of deferred tax assets. We also reviewed Board and Executive Committee minutes to assess the effectiveness of management's review process and the appropriateness of the conclusions reached.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that the carrying values of deferred tax assets, goodwill and, in the parent company accounts, investments in subsidiaries are reasonable and the related disclosures are in compliance with IFRS. We highlighted the following:

- Results of our sensitivity analysis of the value in use and headroom to changes in the key assumptions in the forecasts including the long term growth rate, discount rate and factors impacting the underlying level of profitability both at a Group level and for individual segments;
- Sensitivity of the goodwill and the investment in subsidiaries to the Group's forecast cost reduction and the impact of the amount and timing of actual cost reductions achieved; and
- Inherent uncertainty of the five year forecasts and the difficulty predicting revenue and costs over this period, particularly with respect to the impact of Banking Structural Reform, the economic consequences of Brexit and other political developments, and disruptions in the business model over an extended period.

Risk

Impairment of loans and advances

A significant degree of judgement is required to determine the timing and amount of impairment to recognise with respect to loans and advances. At year end the Group reported total gross loans and advances of £384.0 billion (2016: £386.5 billion) and impairment provisions of £3.8 billion (2016: £4.5 billion).

We have focused on the following significant judgements and estimates which could give rise to material misstatement or management bias:

- Completeness and timing of recognition of loss events in accordance with criteria set out in IAS 39;
- For individually assessed provisions, the measurement of the provision may be dependent on the valuation of collateral, estimates of exit values and the timing of cash flows;
- For modelled provisions measurement is primarily dependent upon key assumptions relating to probability of default, ability to repossess collateral and recovery rates; and
- Completeness and valuation of post model adjustments.

Our response to the risk

We tested the design and operating effectiveness of key controls focusing on the following:

- Identification of loss events, including early warning and default warning indicators;
- Annual credit reviews;
- Assessment and approval of individual impairment provisions;
- Governance including model validation and the assessment of the suitability of models, appropriateness of assumptions, consideration of post model adjustments and approval of provisions; and
- Completeness and accuracy of data input into models and provision calculators.

In addition, we periodically attended and observed risk committee and provision committee meetings.

For modelled provisions we tested data inputs and agreed a sample of data used in the models and calculators to source systems. We used our credit risk specialists to test the assumptions and calculations. We evaluated the methodology to establish model parameters and assessed the appropriateness of the models used. We performed code reviews for a sample of models and calculators.

Where possible, assumptions were benchmarked against Pillar 3, EBA stress tests and our internally developed ranges.

Where post model adjustments were made as a result of limitations in existing models, we confirmed the extent of the model shortcoming, recalculated and assessed the appropriateness of the adjustment. Based on current economic and market circumstances, we considered the need for sector or systemic overlay adjustments.

In Ulster Bank RoI we specifically focused on key data inputs and model parameters, including probabilities of modelled outcome and collateral haircuts, and reviewed management's back testing of key assumptions.

Risk	Our response to the risk
Impairment of loans and advances (continued)	<p>To test the completeness of the identification of loans with loss events we selected a sample of performing loans and independently assessed whether any IAS 39 loss indicators were present.</p> <p>For loans individually assessed for impairment we based our sample on factors including high risk sectors such as shipping, construction, oil and gas and commercial real estate. With input from our valuation specialists we formed an independent view of collateral or exit values, cash flow assumptions and exit strategies. We re-performed the discounted cash flow calculations and compared our measurement outcome to that prepared by management and investigated any differences arising.</p> <p>We assessed the appropriateness and presentation of disclosures against relevant accounting standards.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that credit impairment provisions were reasonable and in compliance with IFRS. We highlighted the following:

- Our testing of controls did not identify significant deficiencies.
- Our testing of models and model assumptions did not highlight material differences. For individually assessed impairments, in a few instances we reported judgemental differences in respect of the extent of the impairment identified, however none of these differences were considered material.
- Overall, we were satisfied with the completeness of the identification of loss events.

Note 11 of the financial statements (page 291)

Risk	Our response to the risk
<p>Valuation of financial instruments with higher risk characteristics including related income from trading activities</p> <p>The valuation of financial instruments with higher risk characteristics involves both significant judgment and risk of inappropriate revenue recognition through mis-marking. The judgement in estimating fair value of these instruments can involve complex valuation models and significant fair value adjustments both of which may be reliant on data inputs where there is limited market observability. At year end the Group reported level 3 assets £3.3 billion (2016: £4.5 billion) and level 3 liabilities £2.2 billion (2016: £3.0 billion).</p> <p>The potential risk of inappropriate recognition of revenue is most likely to arise through the valuation of these instruments given the level of management judgement involved.</p> <p>The key judgements and estimates are:</p> <ul style="list-style-type: none"> • Complex model-dependent valuations, which are aligned with material pricing models as defined by the RBS Modelled Product Review Committee. These include interest-rate swaps linked to pre-payment behaviour and interest rate and foreign exchange options with exotic features such as those having multiple call dates or with a variable notional; 	<p>We performed trade life-cycle product walkthroughs to confirm our understanding of RBS's process and controls in the area of revenue recognition relating to financial instruments with higher risk characteristics.</p> <p>We tested the design and operating effectiveness of the Group's controls over financial instrument valuations, including independent price verification, model approval/review, collateral management, and income statement analysis and reporting.</p> <p>We performed further procedures as set out below for each risk characteristic with involvement from our financial instrument valuation and modelling specialists. These procedures were performed at multiple points in the year to validate the appropriateness of revenue recognition.</p> <p>Our testing on complex model-dependent valuations involved the specialist review of detailed model documentation and use of internally developed EY challenger models to analyse and challenge judgements and assumptions applied within each relevant model.</p>

Risk	Our response to the risk
<p>Valuation of financial instruments with higher risk characteristics including related income from trading activities (continued)</p>	
<ul style="list-style-type: none"> • Pricing inputs and calibrations for illiquid instruments, which are largely aligned with material positions defined as level 3 within the Group's IFRS 7 fair value hierarchy disclosure. These include rarely traded debt securities, and derivative instruments whose valuation is dependent upon the correlation between certain interest rates or uncertainty surrounding the discount rate associated with complex collateral arrangements; • Fair value adjustments made to uncollateralised derivatives to reflect funding risk, counterparty credit risk and other product and deal specific considerations. These include RBS's Funding Valuation Adjustments (FVA), Credit Valuation Adjustments (CVA) relating to derivative counterparties whose credit spread is less readily able to be determined, and material product and deal specific adjustments on long dated uncollateralised derivative portfolios; and • The manipulation of revenue recognition is most likely to arise through the inappropriate valuation of these instruments given the level of management judgement involved. 	<p>Our re-pricing of instruments valued using illiquid pricing inputs covered material products associated with this risk and the results were compared to the valuations recorded by management. For a sample of derivatives, our valuation testing used independent models and data. For cash positions analytical procedures were performed to validate the population of identified illiquid positions and, prices of comparable positions and other data points were used to independently value these.</p> <p>Our testing of fair value adjustments for counterparty credit, funding risk and other product and deal specific considerations on uncollateralised derivatives involved: (i) comparing valuation judgements applied by management to our knowledge of current industry practice through benchmarking exercises (ii) re-valuing a sample of counterparty level FVA and CVA calculations using independent models, (iii) testing funding spreads to third party data and analysis of recent trade activity to verify the drivers of differences between book value and trade value, (iv) independent challenge of illiquid CVA inputs and (v) testing assumptions of material product and deal specific adjustments, including analysis of recent trade activity.</p> <p>Where differences between our independent valuation and management's valuation were outside our thresholds, we performed additional testing over each variance to support our assessment of the appropriateness of the fair value. This work included our own analysis of: (i) recent trade activity, involving trade exits to back-test key valuation judgements, (ii) collateral disputes and material differences with counterparty valuations, (iii) income statement attribution, particularly unexplained income statement in the year for the relevant instruments and (iv) associated valuation adjustments e.g. model fair value adjustments to reflect the associated uncertainty given lack of market data.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that the fair value of financial instruments with higher risk characteristics and the recognition of related income is reasonable and in accordance with IFRS.

We highlighted the following to the Group Audit Committee:

- Our independent valuation of a sample of derivatives were either within our threshold or, where initially outside, were corroborated by other data, for example, trade exit activity, valuation adjustments for model or data limitations, or benchmarking to peer practice. Valuations of hard-to-price cash positions were within our thresholds; and
- The Group's recognition of fair value adjustments on uncollateralised derivatives is within a reasonable range of outcomes based upon our testing procedures which included revaluation exercises, benchmarking to peer practice and experience from recent trade activity.

Note 9 of the financial statements (page 279)

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

Risk	Our response to the risk
Hedge effectiveness testing including the impact on non-interest income	
<p>The Group undertakes fair value and cash flow hedge accounting programs to mitigate income statement volatility arising from the Group's activities.</p> <p>Hedge effectiveness testing for both of these programs is identified as a risk area because the application of accounting rules and execution of hedge effectiveness testing lead to significant adjustments to the balance sheet and income statement which are inherently complex and involve some management judgement. These adjustments impact non-interest income and there is an incentive to manipulate the hedge effectiveness results, to avoid undesirable income statement volatility. Any hedge ineffectiveness remains in the income statement.</p> <p>While the majority of the Group process for hedge accounting is automated a risk arises that management design an effectiveness testing methodology that does not comply with IAS 39 requirements or manually override otherwise automated results to influence the income statement impact.</p>	<p>We tested the design and operating effectiveness of key controls including the performance, review and approval of monthly hedge effectiveness testing performed by management.</p> <p>We challenged the assumptions applied in testing hedge effectiveness in accordance with IAS 39.</p> <p>With the support of our hedge accounting specialists we independently re-performed a sample of hedge effectiveness tests. This included testing hedge relationships and manual adjustments made to the effectiveness assessment.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that the Group has appropriately applied hedge accounting in accordance with IFRS. We highlighted that hedge ineffectiveness is correctly recorded in the income statement and we concurred with management's assessment that there are no hedge relationships that should have been discontinued. We concluded on the effectiveness of controls in place over hedge accounting as at year end.

Risk	Our response to the risk
Provision for restructuring costs	
<p>Transformation programmes as well as organisational changes lead to impairment, restructuring provisions and other severance payments. The timing and amount of restructuring costs recognised depend on management judgement to determine when the accounting criteria have been met to support recognition in the current period. At year end, the Group recorded total restructuring provisions of £482 million (2016: £450 million).</p> <p>Management judgement is needed to determine whether an obligation exists and a provision should be recorded at 31 December 2017 in accordance with the accounting criteria set under IAS 37. This includes determining if:</p> <ul style="list-style-type: none"> • There is a legal or constructive obligation as a result of a past event; • It is probable that an economic outflow such as a payment will occur; and • The amount of the payment (or other economic outflow) can be estimated reliably. <p>The most significant areas of judgement when recognising these costs are:</p> <ul style="list-style-type: none"> • Determining whether a constructive obligation has been met. For example, has the Group indicated to other parties that it will accept certain responsibilities; and • Judgement involved in the measurement of the provision based on estimated costs. 	<p>We tested the design and operating effectiveness of the Group's key controls around the recognition and measurement of these restructuring costs. This included the review and approval of provisions recorded by finance and the estimate of the costs to record.</p> <p>We enquired of management involved in transactions to verify a proper understanding of the transactions and its impacts, both on accounting and disclosures.</p> <p>We obtained a breakdown of the direct and indirect restructuring costs recorded during the year. We selected a sample of provisions and restructuring costs and assessed them for compliance with IAS 37 by considering the criteria which outline when a constructive obligation has been met in order to recognise a provision. For staff costs, this included determining whether the plans had been communicated with employees.</p> <p>For premises and equipment, this included determining whether the unavoidable costs to execute the planned exit exceed the benefit.</p> <p>We assessed the measurement of the provision by testing the underlying data and assumptions used in estimating the amount recorded. We also assessed any impact to goodwill and intangibles.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that the restructuring costs are appropriately recorded and in compliance with IFRS. We highlighted the following:

- Timing of the recognition of certain restructuring provisions and the control in place to estimate the amount of the provision and consider the relevant accounting judgements.

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

- Our assessment of IAS 37 criteria that resulted in differences that were not material being recorded by management.

Risk	Our response to the risk
<p data-bbox="143 416 644 445">Pension valuation and retirement benefit obligations</p> <p data-bbox="143 450 722 591">The Group operates a number of defined benefit schemes which in total are significant in the context of the overall balance sheet. At year end the Group reported a net pension asset of £263 million (2016: £87 million net pension liability).</p> <p data-bbox="143 622 671 763">The valuations of the retirement benefit liabilities are calculated with reference to a number of actuarial assumptions and inputs including discount rate, rate of inflation and mortality rates. The net pension asset is sensitive to changes in the assumptions.</p>	<p data-bbox="735 450 1394 562">We tested the design and operating effectiveness of key controls over the completeness and accuracy of data extracted and supplied to the Group's actuaries, which is used to calculate the pension schemes' surplus or deficit.</p> <p data-bbox="735 598 1390 710">We also tested the controls associated with the actuarial assumptions setting process and the measurement of the fair value of the schemes' assets. We concluded that the key controls were designed, implemented and operated effectively.</p> <p data-bbox="735 745 1406 1151">With the support of our actuarial specialists, we understood the judgements made in determining the assumptions used by management to value the retirement benefit liabilities and we challenged and verified whether these assumptions met the requirements of the applicable accounting standards, the specific circumstances of the schemes and their participants, and were in line with market practice.. Our audit procedures included an assessment of the methodology adopted by the actuaries in determining the assumptions, a comparison of life expectancy assumptions with relevant mortality tables, benchmarking inflation and discount rates against external market data, considering changes in historical assumptions and evaluating the independence, qualifications and results of work performed by management's actuaries involved in the valuation process.</p> <p data-bbox="735 1187 1406 1388">We tested the fair value measurement of scheme assets by independently calculating a fair value for a sample of the assets held. Our sample included cash, equity instruments, derivative financial instruments and other assets. We also tested the existence of the sampled pension assets by obtaining written confirmation from the relevant pension asset custodian and by examining the relevant legal documentation.</p> <p data-bbox="735 1424 1406 1536">We also tested the actuaries' calculation of the pension liabilities by independently rolling forward the prior year figures allowing for the ageing of members, accrual of benefits over the year and changes in financial and demographic assumptions over the period.</p> <p data-bbox="735 1572 1406 1626">We read and tested the disclosures made in the financial statements, including the sensitivities to the key assumptions.</p>

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

Key observations communicated to the Group Audit Committee

We are satisfied that the valuation and disclosure of the retirement benefit obligations recorded at 31 December 2017 is reasonable and in accordance with requirements of the relevant accounting standards.

We described and discussed results of our internal benchmarking of key actuarial assumptions including the discount rate, inflation, mortality and pension payments. We concluded that assumptions tested are within a reasonable range. We also presented the results of our independent valuation of a sample of pension assets.

In determining the accounting for the pension schemes, we understood management's assessment of the impact of IFRIC 14 on the amount of the surplus recognised in the financial statements and verified its compliance with the applicable accounting standards.

Accounting policies (page 251)

Note 4 of the financial statements (page 269)

Risk	Our response to the risk
IT systems and controls	
<p>Our audit procedures have a focus on IT systems and controls due to the pervasive nature and complexity of the IT environment, the large volume of transactions processed in numerous locations daily and the reliance on automated and IT dependent manual controls. Our areas of audit focus included user access management, developer access to the production environment and changes to the IT environment. These are key to ensuring IT dependent and application based controls are operating effectively.</p>	<p>We tested the design and operating effectiveness of the Group's IT access controls over the information systems that are critical to financial reporting. We tested IT general controls (logical access, changes management and aspects of IT operational controls). This included testing that requests for access to systems were appropriately reviewed and authorised. We tested the Group's periodic review of access rights. We inspected requests of changes to systems for appropriate approval and authorisation. We considered the control environment relating to various interfaces, configuration and other application layer controls identified as key to our audit.</p> <p>Where deficiencies were identified, we tested compensating controls or performed alternate procedures. In addition, we understood where relevant, changes were made to the IT landscape during the audit period and tested those changes that had a significant impact on financial reporting.</p>

Key observations communicated to the Group Audit Committee

We are satisfied that IT controls relevant to financial reporting operated effectively at year-end.

We noticed that a number of user access related deficiencies were identified. Compensating controls were tested or alternate procedures were performed.

Report of the Group Audit Committee (page 65)

Accounting policies (page 251)

An overview of the scope of our audit

Tailoring the scope

Our assessment of audit risk, our evaluation of materiality and our allocation of performance materiality determine our audit scope for each component of the Group. Taken together, this enables us to form an opinion on the financial statements. We take into account the size and risk profile of the component and its activities, the organisation of the Group and effectiveness of group-wide controls, changes in the business environment and other factors such as recent internal audit results when assessing the level of work to be performed at each component.

Our audit of the significant components covers the reportable segments identified in the financial statements, together with the central functions of the Group based in the UK and overseas, and includes Finance, the Services function and Treasury. In assessing the risk of material misstatement to the Group financial statements, and to ensure that we had adequate quantitative coverage of significant accounts in the financial statements, we selected seven components covering entities within the UK and 10 other countries, which represent the principal business units within the Group.

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

Of the seven components selected, we performed an audit of the complete financial information of four components ('full scope components') which were selected based on their size or risk characteristics. For the remaining three components ('specific scope components'), we performed audit procedures on specific accounts within that component that we considered had the potential for the greatest impact on the accounts and disclosures in the financial statements either because of the size of these accounts or their risk profile.

Component	Scope	Key locations
UK Personal & Business Banking	Full	United Kingdom
Ulster Bank ROI	Specific	Republic of Ireland
Commercial Banking	Full	United Kingdom
Private Banking	Specific	United Kingdom
RBS International	Specific	Channel Islands
NatWest Markets	Full	United Kingdom, United States and Singapore
Central items and other (including Global Financial Services, Services and Treasury)	Full	United Kingdom, India and Poland

The table below illustrates the coverage obtained from the work performed by our audit teams. As the Group has historically made losses, we considered total assets, total equity and the absolute value of the amounts in the income statement (meaning the magnitude of the amounts without regard to their positive or negative value) to verify we had appropriate overall coverage on the income statement.

	Full scope ⁽¹⁾	Specific scope ⁽²⁾	Other procedures ⁽³⁾	Total
Total assets	93%	6%	1%	100%
Total equity	57%	40%	3%	100%
Absolute value of the income statement	90%	3%	7%	100%

The audit scope of Specific scope components may not have included testing of all significant accounts within the component; however the testing will have contributed to the total coverage of significant accounts tested for the overall Group.

Changes from the prior year

In Q4 2017, RBS completed a segmental reorganisation, which included:

- Williams & Glyn, previously a specific scope component, was integrated into UK Personal and Business Banking (UK PBB).
- Capital Resolution, previously a full scope component, with the exception of the Retail Mortgaged Backed Securities (RMBS) litigation costs, was integrated into NatWest Markets (NWM).
- Capital Resolution RMBS litigation related costs was included, at a reportable operating segment level, within Central items & other.

Involvement with component teams

In establishing our overall approach to the Group audit, we determined the type of work that needed to be undertaken in each of the components by us, as the primary audit engagement team, or by component auditors in the United Kingdom or from other EY global network firms operating under our instruction. Of the four full scope components, audit procedures were performed on one of these directly by the primary audit engagement team. Of the three specific scope components, where work was performed by component auditors, we determined the appropriate level of involvement to enable us to determine that sufficient audit evidence had been obtained as a basis for our opinion on the Group as a whole.

The primary audit engagement team interacted regularly with the component audit teams where appropriate throughout the course of the audit, which included holding planning meetings, maintaining regular communications on the status of the audits, reviewing key working papers and taking responsibility for the scope and direction of the audit process. The primary audit engagement team also participated in meetings with key management personnel in the components and, for certain overseas locations, implemented a programme of planned visits. These visits involved discussing the audit approach with the component team and any issues arising from their work, as well as meeting with local management. This, together with the additional procedures performed at Group level, gave us appropriate evidence for our opinion on the Group financial statements.

Our application of materiality

We apply the concept of materiality in planning and performing the audit, in evaluating the effect of identified misstatements on the audit and in forming our audit opinion.

Notes:

- (1) Full scope: audit procedures on all significant accounts.
- (2) Specific scope: audit procedures on selected accounts.
- (3) Other procedures: considered in analytical procedures.

Materiality

The magnitude of omission or misstatement that, individually or in the aggregate, could reasonably be expected to influence the economic decisions of the users of the financial statements. Materiality provides a basis for determining the nature and extent of our audit procedures.

We determined materiality for the Group and parent company to be £300 million (2016 materiality: £270 million), which is 0.6% of the total equity of the Group and 0.6% of the parent company. We considered that equity represented a relevant measure used by investors, regulators and other stakeholders when assessing the performance of the Group and parent company. Our materiality was based on the equity of the Group given the significant losses and volatility of results in recent years. During the course of our audit, we reassessed initial materiality and increased it from our initial level of £270 million in light of the fact that many legacy items are now reflected in equity.

Performance materiality

The application of materiality at the individual account or balance level is set at an amount to reduce to an appropriately low level the probability that the aggregate of uncorrected and corrected misstatements exceed materiality.

On the basis of our risk assessments, together with our assessment of the Group's overall control environment, our judgement was that performance materiality was 50% of our planning materiality, namely £150 million (2016: £135 million). We have set performance materiality at this percentage (which is at the lowest end of the range of our audit methodology) based on various considerations including the past history of misstatements, our ability to assess the likelihood of misstatements, the effectiveness of the control environment and other factors affecting the entity and its financial reporting.

Audit work of component teams for the purpose of obtaining audit coverage over significant financial statement accounts is undertaken based on a percentage of total performance materiality. The performance materiality set for each component team is based on the relative scale and risk of the component to the Group as a whole and our assessment of the risk of misstatement at that component. In the current year, the range of performance materiality allocated by the primary audit engagement team to components was between £60 million and £115 million.

Reporting threshold

An amount below which identified misstatements are considered to be clearly trivial.

We agreed with the Group Audit Committee that we would report to them all corrected and uncorrected audit misstatements in excess of £15 million, which is set at 5% of planning materiality, as well as misstatements below that threshold that, in our view, warranted reporting on qualitative grounds.

We evaluate any uncorrected misstatements against both the quantitative and qualitative measures of materiality discussed above and in light of other relevant qualitative considerations in forming our opinion.

Accounting developments effective 1 January 2018 – IFRS 9 Financial Instruments

IFRS 9 replaces the current financial instruments standard IAS 39 effective 1 January 2018. It represents a fundamental change to the way financial instruments are classified, measured and assessed for credit impairment. The Group has established a Group-wide programme to implement the necessary changes as a result of this standard and disclosed the impact of transition on equity. Our audit work on this accounting change has been performed throughout 2017, for the purpose of the transition disclosure included in the 2017 financial statements, and continues through 2018. Our procedures on the impact disclosed included:

- Assessing the key interpretations made by management for compliance with IFRS 9
- Classification and measurement:
 - Testing the intent of holding the instruments and their contractual characteristics in order to assess their classification
- Credit impairment:
 - Testing the assumptions and judgements used in the impairment models to calculate expected credit losses, including the incorporation of economic forecasts
 - Testing the data used to run the models
 - Testing the IT applications used in the credit impairment process

We also tested the design and operating effectiveness of key controls over the completeness and accuracy of the transition disclosure included in the financial statements.

Other information

The other information comprises the information included in the Annual Report and Accounts, including the Strategic Report (set out on pages 1 to 49, Governance (set out on pages 50 to 116), Business review (set out on pages 117 to 148), Capital and risk management (set out on pages 149 to 228), Additional information (set out on pages 357 to 371, Risk Factors (set out on pages 372 to 403, Shareholder information (set out on pages 404 to 407), Abbreviations and acronyms (set out on page 408), Glossary of terms (set out on pages 409 to 415), Index (set out on pages 416 to 418), and Important addresses (set out on page 419) other than the financial statements and our auditor's report thereon. The directors are responsible for the other information.

Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in this report, we do not express any form of assurance conclusion thereon.

Independent auditor's report to the members of The Royal Bank of Scotland Group plc

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of the other information, we are required to report that fact.

We have nothing to report in this regard.

In this context, we also have nothing to report in regard to our responsibility to specifically address the following items in the other information and to report as uncorrected material misstatements of the other information where we conclude that those items meet the following conditions:

- **Fair, balanced and understandable (set out on page 116)** – the statement given by the directors that they consider the annual report and financial statements taken as a whole are fair, balanced and understandable and provides the information necessary for shareholders to assess the Group's performance, business model and strategy, is materially inconsistent with our knowledge obtained in the audit; or
- **Group Audit Committee reporting (set out on page 65)** – the section describing the work of the Group Audit Committee does not appropriately address matters communicated by us to the audit; or
- **Directors' statement of compliance with the UK Corporate Governance Code (set out on page 106)** – the parts of the directors' statement required under the Listing Rules relating to the company's compliance with the UK Corporate Governance Code containing provisions specified for review by the auditor in accordance with Listing Rule 9.8.10R(2) do not properly disclose a departure from a relevant provision of the UK Corporate Governance Code.

Opinions on other matters prescribed by the Companies Act 2006

In our opinion, based on the work undertaken in the course of the audit:

- the part of the directors' remuneration report to be audited has been properly prepared in accordance with the Companies Act 2006.
- the information given in the strategic report and the directors' report for the financial year for which the financial statements are prepared is consistent with the financial statements; and
- the strategic report and the directors' report have been prepared in accordance with applicable legal requirements.

Matters on which we are required to report by exception

In the light of the knowledge and understanding of the Group and the parent company and its environment obtained in the course of the audit, we have not identified material misstatements in the strategic report or the directors' report.

We have nothing to report in respect of the following matters in relation to which the Companies Act 2006 requires us to report to you if, in our opinion:

- adequate accounting records have not been kept by the parent company, or returns adequate for our audit have not been received from branches not visited by us; or
- the parent company financial statements and the part of the Directors' Remuneration Report to be audited are not in agreement with the accounting records and returns; or
- certain disclosures of directors' remuneration specified by law are not made; or
- we have not received all the information and explanations we require for our audit

Responsibilities of directors

As explained more fully in the directors' responsibilities statement (set out on page 116), the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view, and for the implementation of such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Group and parent company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the Group or the parent company or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (UK) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

Explanation as to what extent the audit was considered capable of detecting irregularities, including fraud

The objectives of our audit, in respect to fraud, are; to identify and assess the risks of material misstatement of the financial statements due to fraud; to obtain sufficient appropriate audit evidence regarding the assessed risks of material misstatement due to fraud, through designing and implementing appropriate responses; and to respond appropriately to fraud or suspected fraud identified during the audit. However, the primary responsibility for the prevention and detection of fraud rests with both those charged with governance of the entity and management.

Our approach was as follows:

- We obtained an understanding of the legal and regulatory frameworks that are applicable to the Group and have a direct impact on the preparation of the financial statements. We determined that the most significant are:
 - Companies Act 2006
 - Financial Reporting Council (FRC) and the UK Corporate Governance Code
 - Sarbanes Oxley Act (SOX)
 - Tax Legislation (governed by HM Revenue and Customs)
 - Financial Conduct Authority (FCA) rules
 - CRDIV (Basel III) and Prudential Regulatory Authority (PRA) rules
- We understood how the Group is complying with those frameworks by reviewing the RBS Policy Framework, holding discussions with the Group's general counsel, external counsel compliance group, regulatory group, internal audit, amongst others. We inquired as to any known instances of non-compliance or suspected non-compliance with laws and regulations. We also reviewed the Group's Complaints Management Policy and Whistleblowing Policy.
- We assessed the susceptibility of the group's financial statements to material misstatement, including how fraud might occur by holding discussions with senior management, including the Chief Executive Officer, Chief Financial Officer, Chief Risk Officer, Head of Internal Audit and Group Audit Committee Chairman. We also reviewed the Group's fraud-related policies and mandates of different governance forums assessing fraud.
- As part of our audit procedures, we were aware of the risk of fraud, especially in the areas of estimation and those we assessed as having the risk of management override.
- Based on this understanding we designed our audit procedures to identify non-compliance with such laws and regulations. Our procedures involved inquiring of key management, reviewing the key policies and reports on the aforementioned regulatory frameworks as well as reviewing the correspondence exchanged with the Regulators.
- We communicated with the component teams to assess if there were any specific considerations for these areas which were then incorporated in the Group-wide approach.
- We tested the design and operating effectiveness of the Group's key controls by walking through key processes and testing controls.

A further description of our responsibilities for the audit of the financial statements is located on the Financial Reporting Council's website at <https://www.frc.org.uk/auditorsresponsibilities>. This description forms part of our auditor's report.

Other matters we are required to address

- Following the recommendation of the Group Audit Committee we were appointed by the Group at its annual general meeting on 4 May 2016 to audit the financial statements of the Group for the period ending 31 December 2016 and subsequent financial periods. The period of total uninterrupted engagement including previous renewals and reappointments is 2 years, covering periods from our appointment through 31 December 2017.
- The non-audit services prohibited by the FRC's Ethical Standard were not provided to the Group or the parent company and we remain independent of the Group and the parent company in conducting the audit
- The audit opinion is consistent with the additional report to the Group Audit Committee

Jonathan Bourne (Senior Statutory Auditor)
for and on behalf of Ernst & Young LLP, Statutory Auditor
London

	49,093	49,404	54,147

Notes:

- (1) In October 2015, all B shares were converted into ordinary shares of £1 each.
- (2) During 2017, non-cumulative US dollar preference shares were redeemed at their original issue price of US\$1.1 billion. The nominal value of £0.3 million has been credited to the capital redemption reserve; share premium increased by £0.7 billion in respect of the premium received on issue, with a corresponding decrease in retained earnings. During 2016, non-cumulative US dollar preference shares were redeemed at their original issue price of US\$1.5 billion (2015 - \$1.9 billion). The nominal value of £0.3 million (2015 - £1.0 million) was transferred from share capital to capital redemption reserve and ordinary owners equity was reduced by £0.4 billion (2015 - £0.2 billion) in respect of the movement in exchange rates since issue.
- (3) Paid-in equity reclassified to liabilities as a result of the call of US\$564 million and CAD321 million EMTN notes in August 2017 (redeemed in October 2017), the call of RBS Capital Trust D in March 2017 (redeemed in June 2017), the call of RBS Capital Trust C in May 2016 (redeemed in July 2016), the call of RBS Capital Trust IV in January 2015 (redeemed in March 2015).
- (4) AT1 capital notes totalling £2.0 billion issued in August 2016 (2015 - £2.0 billion).
- (5) On 15 June 2017, the Court of Session approved a reduction of RBSG plc capital so that the amounts which stood to the credit of share premium, account and capital redemption reserve were transferred to retained earnings.
- (6) 2015 Net of tax - £6 million charge.
- (7) 2015 Net of tax - £16 million credit.
- (8) No tax impact.
- (9) Includes £2,491 million relating to the secondary offering of Citizens in March 2015.

The accompanying notes on pages 264 to 333, the accounting policies on pages 251 to 263 and the audited sections of the Business review: Capital and risk management on pages 149 to 228 form an integral part of these financial statements.

The accompanying notes on pages 264 to 333, the accounting policies on pages 251 to 263 and the audited sections of the Business review: Capital and risk management on pages 149 to 228 form an integral part of these financial statements.

Accounting policies

1. Presentation of accounts

The accounts, set out on pages 244 to 356 including these accounting policies on pages 251 to 263 and the audited sections of the Financial review: Capital and risk management on pages 149 to 228, are prepared on a going concern basis (see the Report of the directors, page 109) and in accordance with International Financial Reporting Standards issued by the International Accounting Standards Board (IASB) and interpretations issued by the IFRS Interpretations Committee of the IASB as adopted by the European Union (EU) (together IFRS). The EU has not adopted the complete text of IAS 39 'Financial Instruments: Recognition and Measurement'; it has relaxed some of the standard's hedging requirements. The Group has not taken advantage of this relaxation: its financial statements are prepared in accordance with IFRS as issued by the IASB.

The company is incorporated in the UK and registered in Scotland. Its accounts are presented in accordance with the Companies Act 2006. With the exception of investment property and certain financial instruments as described in Accounting policies 9, 14, 16 and 23, the accounts are presented on an historical cost basis.

The Group adopted two revisions to IFRSs effective 1 January 2017:

In January 2016, the IASB amended IAS 7 'Cash Flow Statements' to require disclosure of the movements in financing liabilities. This is shown in Note 35.

In January 2016, the IASB amended IAS 12 'Income taxes' to clarify the recognition of deferred tax assets in respect of unrealised losses.

Neither of these amendments has had a material effect on the Group's financial statements.

2. Basis of consolidation

The consolidated accounts incorporate the financial statements of the company and entities (including certain structured entities) that are controlled by the Group. The Group controls another entity (a subsidiary) when it is exposed, or has rights, to variable returns from its involvement with that entity and has the ability to affect those returns through its power over the other entity; power generally arises from holding a majority of voting rights. On acquisition of a subsidiary, its identifiable assets, liabilities and contingent liabilities are included in the consolidated accounts at their fair value. A subsidiary is included in the consolidated financial statements from the date it is controlled by the Group until the date the Group ceases to control it through a sale or a significant change in circumstances. Changes in the Group's interest in a subsidiary that do not result in the Group ceasing to control that subsidiary are accounted for as equity transactions.

All intergroup balances, transactions, income and expenses are eliminated on consolidation. The consolidated accounts are prepared under uniform accounting policies.

3. Revenue recognition

Interest income on financial assets that are classified as loans and receivables, available-for-sale or held-to-maturity and interest expense on financial liabilities other than those measured at fair value are determined using the effective interest method. The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows. Negative effective interest accruing to financial assets is presented in interest payable.

Financial assets and financial liabilities held-for-trading or designated as at fair value through profit or loss are recorded at fair value. Changes in fair value are recognised in profit or loss.

Fees in respect of services are recognised as the right to consideration accrues through the provision of the service to the customer. The arrangements are generally contractual and the cost of providing the service is incurred as the service is rendered. The price is usually fixed and always determinable. The application of this policy to significant fee types is outlined below.

Payment services - this comprises income received for payment services including cheques cashed, direct debits, Clearing House Automated Payments (the UK electronic settlement system) and BACS payments (the automated clearing house that processes direct debits and direct credits). These are generally charged on a per transaction basis. The income is earned when the payment or transaction occurs. Charges for payment services are usually debited to the customer's account monthly or quarterly in arrears. Income is accrued at period end for services provided but not yet charged.

Credit and debit card fees - fees from card business include:

- Interchange received: as issuer, the Group receives a fee (interchange) each time a cardholder purchases goods and services. The Group also receives interchange fees from other card issuers for providing cash advances through its branch and automated teller machine networks. These fees are accrued once the transaction has taken place.
- Periodic fees payable by a credit card or debit card holder are deferred and taken to profit or loss over the period of the service.

Lending (credit facilities) - commitment and utilisation fees are determined as a percentage of the outstanding facility. If it is unlikely that a specific lending arrangement will be entered into, such fees are taken to profit or loss over the life of the facility otherwise they are deferred and included in the effective interest rate on the loan.

Accounting policies

Brokerage fees - in respect of securities, foreign exchange, futures or options transactions entered into on behalf of a customer are recognised as income on execution of a significant act.

Trade finance - income from the provision of trade finance is recognised over the term of the finance unless specifically related to a significant act, in which case income is recognised when the act is executed.

Investment management - fees charged for managing investments are recognised as revenue as the services are provided. Incremental costs that are directly attributable to securing an investment management contract are deferred and charged as expense as the related revenue is recognised.

4. Assets held for sale and discontinued operations

A non-current asset (or disposal group) is classified as held for sale if the Group will recover its carrying amount principally through a sale transaction rather than through continuing use. A non-current asset (or disposal group) classified as held for sale is measured at the lower of its carrying amount and fair value less costs to sell. If the asset (or disposal group) is acquired as part of a business combination it is initially measured at fair value less costs to sell. Assets and liabilities of disposal groups classified as held for sale and non-current assets classified as held for sale are shown separately on the face of the balance sheet.

The results of discontinued operations, comprising the post-tax profit or loss of discontinued operations and the post-tax gain or loss recognised either on measurement to fair value less costs to sell or on disposal of the discontinued operation, are shown as a single amount on the face of the income statement; an analysis of this amount is presented in Note 18 on the accounts.

A discontinued operation is a cash generating unit or a group of cash generating units that either has been disposed of, or is classified as held for sale, and (a) represents a separate major line of business or geographical area of operations, (b) is part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations or (c) is a subsidiary acquired exclusively with a view to resale.

5. Employee benefits

Short-term employee benefits, such as salaries, paid absences, and other benefits are accounted for on an accruals basis over the period in which the employees provide the related services. Employees may receive variable compensation satisfied by cash, by debt instruments issued by the Group or by RBSG shares. The treatment of share-based compensation is set out in Accounting policy 25. Variable compensation that is settled in cash or debt instruments is charged to profit or loss over the period from the start of the year to which the variable compensation relates to the expected settlement date taking account of forfeiture and clawback criteria.

Contributions to defined contribution pension schemes are recognised in profit or loss when payable.

For defined benefit schemes, the defined benefit obligation is measured on an actuarial basis using the projected unit credit method and discounted at a rate determined by reference to market yields at the end of the reporting period on high quality corporate bonds of equivalent term and currency to the scheme liabilities. Scheme assets are measured at their fair value. The difference between scheme assets and scheme liabilities, the net defined benefit asset or liability, is recognised in the balance sheet. A defined benefit asset is limited to the present value of any economic benefits available to the Group in the form of refunds from the plan or reduced contributions to it.

The charge to profit or loss for pension costs (recorded in operating expenses) comprises:

- the current service cost
- interest, computed at the rate used to discount scheme liabilities, on the net defined benefit liability or asset
- past service cost resulting from a scheme amendment or curtailment
- gains or losses on settlement.

A curtailment occurs when the Group significantly reduces the number of employees covered by a plan. A plan amendment occurs when the Group introduces, or withdraws, a defined benefit plan or changes the benefits payable under an existing defined benefit plan. Past service cost may be either positive (when benefits are introduced or changed so that the present value of the defined benefit obligation increases) or negative (when benefits are withdrawn or changed so that the present value of the defined benefit obligation decreases). A settlement is a transaction that eliminates all further obligation for part or all of the benefits.

Actuarial gains and losses (i.e. gains or and losses on re-measuring the net defined benefit asset or liability) are recognised in other comprehensive income in full in the period in which they arise.

6. Intangible assets and goodwill

Intangible assets acquired by the Group are stated at cost less accumulated amortisation and impairment losses. Amortisation is charged to profit or loss over the assets' estimated economic lives using methods that best reflect the pattern of economic benefits and is included in Depreciation and amortisation. These estimated useful economic lives are:

Computer software	3 to 12 years
Other acquired intangibles	5 to 10 years

Expenditure on internally generated goodwill and brands is written-off as incurred. Direct costs relating to the development of internal-use computer software are capitalised once technical feasibility and economic viability have been established. These costs include payroll, the costs of materials and services, and directly attributable overheads. Capitalisation of costs ceases when the software is capable of operating as intended.

Accounting policies

During and after development, accumulated costs are reviewed for impairment against the benefits that the software is expected to generate. Costs incurred prior to the establishment of technical feasibility and economic viability are expensed as incurred as are all training costs and general overheads. The costs of licences to use computer software that are expected to generate economic benefits beyond one year are also capitalised.

Intangible assets include goodwill arising on the acquisition of subsidiaries and joint ventures. Goodwill on the acquisition of a subsidiary is the excess of the fair value of the consideration transferred, the fair value of any existing interest in the subsidiary and the amount of any non-controlling interest measured either at fair value or at its share of the subsidiary's net assets over net fair value of the subsidiary's identifiable assets, liabilities and contingent liabilities.

Goodwill arises on the acquisition of a joint venture when the cost of investment exceeds the Group's share of the net fair value of the joint venture's identifiable assets and liabilities. Goodwill is measured at initial cost less any subsequent impairment losses. Goodwill arising on the acquisition of associates is included within their carrying amounts. The gain or loss on the disposal of a subsidiary, associate or joint venture includes the carrying value of any related goodwill.

7. Property, plant and equipment

Items of property, plant and equipment (except investment property - see Accounting policy 9) are stated at cost less accumulated depreciation and impairment losses. Where an item of property, plant and equipment comprises major components having different useful lives, these are accounted for separately.

Depreciation is charged to profit or loss on a straight-line basis so as to write-off the depreciable amount of property, plant and equipment (including assets owned and let on operating leases) over their estimated useful lives. The depreciable amount is the cost of an asset less its residual value. Freehold land is not depreciated. The estimated useful lives of the Group's property, plant and equipment are:

Freehold buildings	50 years
Long leasehold property (leases with more than 50 years to run)	50 years
Short leaseholds	unexpired period of the lease
Property adaptation costs	10 to 15 years
Computer equipment	up to 5 years
Other equipment	4 to 15 years

The residual value and useful life of property, plant and equipment are reviewed at each balance sheet date and updated for any changes to previous estimates.

8. Impairment of intangible assets and property, plant and equipment

At each balance sheet date, the Group assesses whether there is any indication that its intangible assets, or property, plant and equipment are impaired. If any such indication exists, the Group estimates the recoverable amount of the asset and the impairment loss if any. Goodwill is tested for impairment annually or more frequently if events or changes in circumstances indicate that it might be impaired.

If an asset does not generate cash flows that are independent from those of other assets or groups of assets, the recoverable amount is determined for the cash-generating unit to which the asset belongs. A cash-generating unit is the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets. For the purposes of impairment testing, goodwill acquired in a business combination is allocated to each of the Group's cash-generating units or groups of cash-generating units expected to benefit from the combination. The recoverable amount of an asset or cash-generating unit is the higher of its fair value less cost to sell and its value in use. Value in use is the present value of future cash flows from the asset or cash-generating unit discounted at a rate that reflects market interest rates adjusted for risks specific to the asset or cash-generating unit that have not been taken into account in estimating future cash flows. If the recoverable amount of an intangible or tangible asset is less than its carrying value, an impairment loss is recognised immediately in profit or loss and the carrying value of the asset reduced by the amount of the loss.

A reversal of an impairment loss on intangible assets (excluding goodwill) or property, plant and equipment can be recognised when an increase in service potential arises provided the increased carrying value is not greater than it would have been had no impairment loss been recognised. Impairment losses on goodwill are not reversed.

9. Investment property

Investment property comprises freehold and leasehold properties that are held to earn rentals or for capital appreciation or both. Investment property is not depreciated but is stated at fair value. Fair value is based on current prices for similar properties in the same location and condition. Any gain or loss arising from a change in fair value is recognised in profit or loss. Rental income from investment property is recognised on a straight-line basis over the term of the lease in Other operating income. Lease incentives granted are recognised as an integral part of the total rental income.

10. Foreign currencies

The Group's consolidated financial statements are presented in sterling which is the functional currency of the company.

Group entities record transactions in foreign currencies in their functional currency, the currency of the primary economic environment in which they operate, at the foreign exchange rate ruling at the date of the transaction.

Accounting policies

Monetary assets and liabilities denominated in foreign currencies are translated into the relevant functional currency at the foreign exchange rates ruling at the balance sheet date. Foreign exchange differences arising on the settlement of foreign currency transactions and from the translation of monetary assets and liabilities are reported in income from trading activities except for differences arising on cash flow hedges and hedges of net investments in foreign operations (see Accounting policy 23). Non-monetary items denominated in foreign currencies that are stated at fair value are translated into the relevant functional currency at the foreign exchange rates ruling at the dates the values are determined. Translation differences arising on non-monetary items measured at fair value are recognised in profit or loss except for differences arising on available-for-sale non-monetary financial assets, for example equity shares, which are recognised in other comprehensive income unless the asset is the hedged item in a fair value hedge.

Assets and liabilities of foreign operations, including goodwill and fair value adjustments arising on acquisition, are translated into sterling at foreign exchange rates ruling at the balance sheet date. Income and expenses of foreign operations are translated into sterling at average exchange rates unless these do not approximate to the foreign exchange rates ruling at the dates of the transactions. Foreign exchange differences arising on the translation of a foreign operation are recognised in other comprehensive income. The amount accumulated in equity is reclassified from equity to profit or loss on disposal of a foreign operation.

11. Leases

As lessor

Contracts with customers to lease assets are classified as finance leases if they transfer substantially all the risks and rewards of ownership of the asset to the customer; all other contracts with customers to lease assets are classified as operating leases.

Finance lease receivables are included in the balance sheet, within Loans and advances to customers, at the amount of the net investment in the lease being the minimum lease payments and any unguaranteed residual value discounted at the interest rate implicit in the lease. Finance lease income is allocated to accounting periods so as to give a constant periodic rate of return before tax on the net investment and included in Interest receivable. Unguaranteed residual values are subject to regular review; if there is a reduction in their value, income allocation is revised and any reduction in respect of amounts accrued is recognised immediately.

Rental income from operating leases is recognised in income on a straight-line basis over the lease term unless another systematic basis better represents the time pattern of the asset's use. Operating lease assets are included within Property, plant and equipment and depreciated over their useful lives (see Accounting policy 7). Operating lease rentals receivable are included in Other operating income.

As lessee

The Group's contracts to lease assets are principally operating leases. Operating lease rental expense is included in Premises and equipment costs and recognised as an expense on a straight-line basis over the lease term unless another systematic basis better represents the benefit to the Group.

12. Provisions

The Group recognises a provision for a present obligation resulting from a past event when it is more likely than not that it will be required to transfer economic benefits to settle the obligation and the amount of the obligation can be estimated reliably.

Provision is made for restructuring costs, including the costs of redundancy, when the Group has a constructive obligation to restructure. An obligation exists when the Group has a detailed formal plan for the restructuring and has raised a valid expectation in those affected by starting to implement the plan or by announcing its main features.

If the Group has a contract that is onerous, it recognises the present obligation under the contract as a provision. An onerous contract is one where the unavoidable costs of meeting the Group's contractual obligations exceed the expected economic benefits. When the Group vacates a leasehold property, a provision is recognised for the costs under the lease less any expected economic benefits (such as rental income).

Contingent liabilities are possible obligations arising from past events, whose existence will be confirmed only by uncertain future events, or present obligations arising from past events that are not recognised because either an outflow of economic benefits is not probable or the amount of the obligation cannot be reliably measured. Contingent liabilities are not recognised but information about them is disclosed unless the possibility of any outflow of economic benefits in settlement is remote.

13. Tax

Income tax expense or income, comprising current tax and deferred tax, is recorded in the income statement except income tax on items recognised outside profit or loss which is credited or charged to other comprehensive income or to equity as appropriate.

Current tax is income tax payable or recoverable in respect of the taxable profit or loss for the year arising in profit or loss, other comprehensive income or equity. Provision is made for current tax at rates enacted or substantively enacted at the balance sheet date.

Deferred tax is the tax expected to be payable or recoverable in respect of temporary differences between the carrying amount of an asset or liability for accounting purposes and its carrying amount for tax purposes. Deferred tax liabilities are generally recognised for all taxable temporary differences and deferred tax assets are recognised.

Accounting policies

Deferred tax is not recognised on temporary differences that arise from initial recognition of an asset or a liability in a transaction (other than a business combination) that at the time of the transaction affects neither accounting nor taxable profit or loss. Deferred tax is calculated using tax rates expected to apply in the periods when the assets will be realised or the liabilities settled, based on tax rates and laws enacted, or substantively enacted, at the balance sheet date.

Deferred tax assets and liabilities are offset where the Group has a legally enforceable right to offset and where they relate to income taxes levied by the same taxation authority either on an individual Group company or on Group companies in the same tax group that intend, in future periods, to settle current tax liabilities and assets on a net basis or on a gross basis simultaneously.

14. Financial assets

On initial recognition, financial assets are classified into held-to-maturity investments; held-for-trading; designated as at fair value through profit or loss; loans and receivables; or available-for-sale financial assets. Normal purchases of financial assets classified as loans and receivables are recognised on the settlement date; all other normal transactions in financial assets are recognised on the trade date.

Held-to-maturity investments - a financial asset may be classified as a held-to-maturity investment only if it has fixed or determinable payments, a fixed maturity and the Group has the positive intention and ability to hold to maturity. Held-to-maturity investments are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 3) less any impairment losses.

Held-for-trading - a financial asset is classified as held-for-trading if it is acquired principally for sale in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship). Held-for-trading financial assets are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Income from trading activities includes gains and losses on held-for-trading financial assets as they arise.

Designated as at fair value through profit or loss - financial assets may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both, that the Group manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract. Financial assets that the Group designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Gains and losses are recognised in profit or loss as they arise.

Loans and receivables - non-derivative financial assets with fixed or determinable repayments that are not quoted in an active market are classified as loans and receivables, except those that are classified as available-for-sale or as held-for-trading, or designated as at fair value through profit or loss. Loans and receivables are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at amortised cost using the effective interest method (see Accounting policy 3) less any impairment losses.

Available-for-sale financial assets - financial assets that are not classified as held-to-maturity; held-for-trading; designated as at fair value through profit or loss; or loans and receivables are classified as available-for-sale. Financial assets can be designated as available-for-sale on initial recognition. Available-for-sale financial assets are initially recognised at fair value plus directly related transaction costs. They are subsequently measured at fair value. Unquoted equity investments whose fair value cannot be measured reliably are carried at cost and classified as available-for-sale financial assets. Impairment losses and exchange differences resulting from retranslating the amortised cost of foreign currency monetary available-for-sale financial assets are recognised in profit or loss together with interest calculated using the effective interest method (see Accounting policy 3) as are gains and losses attributable to the hedged risk on available-for-sale financial assets that are hedged items in fair value hedges (see Accounting policy 23). Other changes in the fair value of available-for-sale financial assets and any related tax are reported in other comprehensive income until disposal, when the cumulative gain or loss is reclassified from equity to profit or loss.

Reclassifications - held-for-trading and available-for-sale financial assets that meet the definition of loans and receivables (non-derivative financial assets with fixed or determinable payments that are not quoted in an active market) may be reclassified to loans and receivables if the Group has the intention and ability to hold the financial asset for the foreseeable future or until maturity. The Group typically regards the foreseeable future for this purpose as twelve months from the date of reclassification. Additionally, held-for-trading financial assets that do not meet the definition of loans and receivables may, in rare circumstances, be transferred to available-for-sale financial assets or to held-to-maturity investments. Reclassifications are made at fair value. This fair value becomes the asset's new cost or amortised cost as appropriate. Gains and losses recognised up to the date of reclassification are not reversed.

Fair value - the Group's approach to determining the fair value of financial instruments measured at fair value is set out in the section of Critical accounting policies and key sources of estimation uncertainty entitled Fair value - financial instruments. Further details are given in Note 9 on the accounts.

15. Impairment of financial assets

The Group assesses at each balance sheet date whether there is any objective evidence that a financial asset or group of financial assets classified as held-to-maturity, as available-for-sale or as loans and receivables is impaired.

Accounting policies

A financial asset or group of financial assets is impaired and an impairment loss incurred if there is objective evidence that an event or events since initial recognition of the asset have adversely affected the amount or timing of future cash flows from the asset.

Financial assets carried at amortised cost - if there is objective evidence that an impairment loss on a financial asset or group of financial assets classified as loans and receivables or as held-to-maturity investments has been incurred, the Group measures the amount of the loss as the difference between the carrying amount of the asset or group of assets and the present value of estimated future cash flows from the asset or group of assets discounted at the effective interest rate of the instrument at initial recognition. For collateralised loans and receivables, estimated future cash flows include cash flows that may result from foreclosure less the costs of obtaining and selling the collateral, whether or not foreclosure is probable.

Where, in the course of the orderly realisation of a loan, it is exchanged for equity shares or property, the exchange is accounted for as the sale of the loan and the acquisition of equity securities or investment property. Where the Group's interest in equity shares following the exchange is such that the Group controls an entity, that entity is consolidated.

Impairment losses are assessed individually for financial assets that are individually significant and individually or collectively for assets that are not individually significant. In making collective impairment assessments, financial assets are grouped into portfolios on the basis of similar risk characteristics. Future cash flows from these portfolios are estimated on the basis of the contractual cash flows and historical loss experience for assets with similar credit risk characteristics. Historical loss experience is adjusted, on the basis of observable data, to reflect current conditions not affecting the period of historical experience. Impairment losses are recognised in profit or loss and the carrying amount of the financial asset or group of financial assets reduced by establishing an allowance for impairment losses. If, in a subsequent period, the amount of the impairment loss reduces and the reduction can be ascribed to an event after the impairment was recognised, the previously recognised loss is reversed by adjusting the allowance. Once an impairment loss has been recognised on a financial asset or group of financial assets, interest income is recognised on the carrying amount using the rate of interest at which estimated future cash flows were discounted in measuring impairment.

Impaired loans and receivables are written off, i.e. the impairment provision is applied in writing down the loan's carrying value partially or in full, when the Group concludes that there is no longer any realistic prospect of recovery of part or all of the loan. For loans that are individually assessed for impairment, the timing of write off is determined on a case-by-case basis. Such loans are reviewed regularly and write off will be prompted by bankruptcy, insolvency, renegotiation and similar events.

The typical time frames from initial impairment to write off for the Group's collectively-assessed portfolios are:

- Retail mortgages: write off usually occurs within five years, or when an account is closed if earlier.
- Credit cards: the irrecoverable amount is written off after 12 months; three years later any remaining amounts outstanding are written off.
- Overdrafts and other unsecured loans: write off occurs within six years.
- Business and commercial loans: write offs of commercial loans are determined in the light of individual circumstances; the period does not exceed five years. Business loans are generally written off within five years.

Amounts recovered after a loan has been written off are credited to the loan impairment charge for the period in which they are received.

Financial assets carried at fair value - when a decline in the fair value of a financial asset classified as available-for-sale has been recognised directly in other comprehensive income and there is objective evidence that it is impaired, the cumulative loss is reclassified from equity to profit or loss. The loss is measured as the difference between the amortised cost (including any hedge accounting adjustments) of the financial asset and its current fair value. Impairment losses on available-for-sale equity instruments are not reversed through profit or loss, but those on available-for-sale debt instruments are reversed, if there is an increase in fair value that is objectively related to a subsequent event.

16. Financial liabilities

Financial liabilities are recognised initially at fair value and classified into held-for-trading; designated as at fair value through profit or loss; or amortised cost. Issues of financial liabilities measured at amortised cost are recognised on settlement date; all other normal transactions in financial liabilities are recognised on trade date.

Held-for-trading - a financial liability is classified as held-for-trading if it is incurred principally for repurchase in the near term, or forms part of a portfolio of financial instruments that are managed together and for which there is evidence of short-term profit taking, or it is a derivative (not in a qualifying hedge relationship). Held-for-trading financial liabilities are recognised at fair value with transaction costs being recognised in profit or loss. Subsequently they are measured at fair value. Gains and losses are recognised in profit or loss as they arise.

Designated as at fair value through profit or loss - financial liabilities may be designated as at fair value through profit or loss only if such designation (a) eliminates or significantly reduces a measurement or recognition inconsistency; or (b) applies to a group of financial assets, financial liabilities or both that the Group manages and evaluates on a fair value basis; or (c) relates to an instrument that contains an embedded derivative which is not evidently closely related to the host contract.

Accounting policies

Financial liabilities that the Group designates on initial recognition as being at fair value through profit or loss are recognised at fair value, with transaction costs being recognised in profit or loss, and are subsequently measured at fair value. Income from trading activities includes gains and losses on held-for-trading financial liabilities as they arise.

Financial liabilities designated as at fair value through profit or loss principally comprise structured liabilities issued by the Group: designation significantly reduces the measurement inconsistency between these liabilities and the related derivatives carried at fair value.

Amortised cost - all other financial liabilities are measured at amortised cost using the effective interest method (see Accounting policy 3).

Fair value - the Group's approach to determining the fair value of financial instruments measured at fair value is set out in the section of Critical accounting policies and key sources of estimation uncertainty entitled Fair value - financial instruments; further details are given in Note 9 on the accounts.

17. Financial guarantee contracts

Under a financial guarantee contract, the Group, in return for a fee, undertakes to meet a customer's obligations under the terms of a debt instrument if the customer fails to do so. A financial guarantee is recognised as a liability; initially at fair value and, if not designated as at fair value through profit or loss, subsequently at the higher of its initial value less cumulative amortisation and any provision under the contract measured in accordance with Accounting policy 12. Amortisation is calculated so as to recognise fees receivable in profit or loss over the period of the guarantee.

18. Loan commitments

Provision is made for loan commitments, other than those classified as held-for-trading, if it is probable that the facility will be drawn and the resulting loan will be recognised at an amount less than the cash advanced. Syndicated loan commitments in excess of the level of lending under the commitment approved for retention by the Group are classified as held-for-trading and measured at fair value.

19. Derecognition

A financial asset is derecognised when the contractual right to receive cash flows from the asset has expired or when it has been transferred and the transfer qualifies for derecognition. A transfer requires that the Group either (a) transfers the contractual rights to receive the asset's cash flows; or (b) retains the right to the asset's cash flows but assumes a contractual obligation to pay those cash flows to a third party. After a transfer, the Group assesses the extent to which it has retained the risks and rewards of ownership of the transferred asset. The asset remains on the balance sheet if substantially all the risks and rewards have been retained. It is derecognised if substantially all the risks and rewards have been transferred.

If substantially all the risks and rewards have been neither retained nor transferred, the Group assesses whether or not it has retained control of the asset. If the Group has retained control of the asset, it continues to recognise the asset to the extent of its continuing involvement; if the Group has not retained control of the asset, it is derecognised.

A financial liability is removed from the balance sheet when the obligation is discharged, or is cancelled, or expires. On the redemption or settlement of debt securities (including subordinated liabilities) issued by the Group, the Group derecognises the debt instrument and records a gain or loss being the difference between the debt's carrying amount and the cost of redemption or settlement. The same treatment applies where the debt is exchanged for a new debt issue that has terms substantially different from those of the existing debt. The assessment of whether the terms of the new debt instrument are substantially different takes into account qualitative and quantitative characteristics including a comparison of the present value of the cash flows under the new terms with the present value of the remaining cash flows of the original debt issue discounted at the effective interest rate of the original debt issue.

20. Sale and repurchase transactions

Securities subject to a sale and repurchase agreement under which substantially all the risks and rewards of ownership are retained by the Group continue to be shown on the balance sheet and the sale proceeds recorded as a financial liability. Securities acquired in a reverse sale and repurchase transaction under which the Group is not exposed to substantially all the risks and rewards of ownership are not recognised on the balance sheet and the consideration paid is recorded as a financial asset.

Securities borrowing and lending transactions are usually secured by cash or securities advanced by the borrower. Borrowed securities are not recognised on the balance sheet or lent securities derecognised.

Cash collateral given or received is treated as a loan or deposit; collateral in the form of securities is not recognised. However, where securities borrowed are transferred to third parties, a liability for the obligation to return the securities to the stock lending counterparty is recorded.

21. Netting

Financial assets and financial liabilities are offset and the net amount presented in the balance sheet when, and only when, the Group currently has a legally enforceable right to set off the recognised amounts and it intends either to settle on a net basis or to realise the asset and settle the liability simultaneously. The Group is party to a number of arrangements, including master netting agreements, that give it the right to offset financial assets and financial liabilities, but where it does not intend to settle the amounts net or simultaneously, the assets and liabilities concerned are presented gross.

Accounting policies

22. Capital instruments

The Group classifies a financial instrument that it issues as a liability if it is a contractual obligation to deliver cash or another financial asset, or to exchange financial assets or financial liabilities on potentially unfavourable terms and as equity if it evidences a residual interest in the assets of the Group after the deduction of liabilities. The components of a compound financial instrument issued by the Group are classified and accounted for separately as financial assets, financial liabilities or equity as appropriate.

Incremental costs and related tax that are directly attributable to an equity transaction are deducted from equity.

The consideration for any ordinary shares of the company purchased by the Group (treasury shares) is deducted from equity. On the cancellation of treasury shares their nominal value is removed from equity and any excess of consideration over nominal value is treated in accordance with the capital maintenance provisions of the Companies Act. On the sale or reissue of treasury shares the consideration received and related tax are credited to equity, net of any directly attributable incremental costs.

23. Derivatives and hedging

Derivative financial instruments are initially recognised, and subsequently measured, at fair value. The Group's approach to determining the fair value of financial instruments is set out in the section of Critical accounting policies and key sources of estimation uncertainty entitled Fair value - financial instruments; further details are given in Note 9 on the accounts.

A derivative embedded in a contract is accounted for as a stand-alone derivative if its economic characteristics are not closely related to the economic characteristics of the host contract; unless the entire contract is measured at fair value with changes in fair value recognised in profit or loss.

Gains and losses arising from changes in the fair value of derivatives that are not the hedging instrument in a qualifying hedge are recognised as they arise in profit or loss. Gains and losses are recorded in Income from trading activities except for gains and losses on those derivatives that are managed together with financial instruments designated at fair value; these gains and losses are included in Other operating income. The Group enters into three types of hedge relationship: hedges of changes in the fair value of a recognised asset or liability or unrecognised firm commitment (fair value hedges); hedges of the variability in cash flows from a recognised asset or liability or a highly probable forecast transaction (cash flow hedges); and hedges of the net investment in a foreign operation.

Hedge relationships are formally designated and documented at inception. The documentation identifies the hedged item and the hedging instrument and details the risk that is being hedged and the way in which effectiveness will be assessed at inception and during the period of the hedge. If the hedge is not highly effective in offsetting changes in fair values or cash flows attributable to the hedged risk, consistent with the documented risk management strategy, hedge accounting is discontinued.

Hedge accounting is also discontinued if the Group revokes the designation of a hedge relationship.

Fair value hedge - in a fair value hedge, the gain or loss on the hedging instrument is recognised in profit or loss. The gain or loss on the hedged item attributable to the hedged risk is recognised in profit or loss and, where the hedged item is measured at amortised cost, adjusts the carrying amount of the hedged item. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; or if the hedging instrument expires or is sold, terminated or exercised; or if hedge designation is revoked. If the hedged item is one for which the effective interest rate method is used, any cumulative adjustment is amortised to profit or loss over the life of the hedged item using a recalculated effective interest rate.

Cash flow hedge - in a cash flow hedge, the effective portion of the gain or loss on the hedging instrument is recognised in other comprehensive income and the ineffective portion in profit or loss. When the forecast transaction results in the recognition of a financial asset or financial liability, the cumulative gain or loss is reclassified from equity to profit or loss in the same periods in which the hedged forecast cash flows affect profit or loss. Otherwise the cumulative gain or loss is removed from equity and recognised in profit or loss at the same time as the hedged transaction. Hedge accounting is discontinued if the hedge no longer meets the criteria for hedge accounting; if the hedging instrument expires or is sold, terminated or exercised; if the forecast transaction is no longer expected to occur; or if hedge designation is revoked. On the discontinuance of hedge accounting (except where a forecast transaction is no longer expected to occur), the cumulative unrealised gain or loss is reclassified from equity to profit or loss when the hedged cash flows occur or, if the forecast transaction results in the recognition of a financial asset or financial liability, when the hedged forecast cash flows affect profit or loss. Where a forecast transaction is no longer expected to occur, the cumulative unrealised gain or loss is reclassified from equity to profit or loss immediately.

Hedge of net investment in a foreign operation - in the hedge of a net investment in a foreign operation, the portion of foreign exchange differences arising on the hedging instrument determined to be an effective hedge is recognised in other comprehensive income. Any ineffective portion is recognised in profit or loss. Non-derivative financial liabilities as well as derivatives may be the hedging instrument in a net investment hedge. On disposal or partial disposal of a foreign operation, the amount accumulated in equity is reclassified from equity to profit or loss.

24. Associates and joint ventures

An associate is an entity over which the Group has significant influence. A joint venture is one which it controls jointly with other parties. Investments in associates and interests in joint ventures are recognised using the equity method. They are stated initially at cost, including attributable goodwill, and subsequently adjusted for post-acquisition changes in the Group's share of net assets.

Accounting policies

25. Share-based compensation

The Group operates a number of share-based compensation schemes under which it awards RBSG shares and share options to its employees. Such awards are generally subject to vesting conditions: conditions that vary the amount of cash or shares to which an employee is entitled. Vesting conditions include service conditions (requiring the employee to complete a specified period of service) and performance conditions (requiring the employee to complete a specified period of service and specified performance targets to be met). Other conditions to which an award is subject are non-vesting conditions (such as a requirement to save throughout the vesting period). The cost of employee services received in exchange for an award of shares or share options granted is measured by reference to the fair value of the shares or share options on the date the award is granted and takes into account non-vesting conditions and market performance conditions (conditions related to the market price of RBSG shares): an award is treated as vesting irrespective of whether any market performance condition or non-vesting condition is met. The fair value of options granted is estimated using valuation techniques which incorporate exercise price, term, risk-free interest rates, the current share price and its expected volatility. The cost is expensed on a straight-line basis over the vesting period (the period during which all the specified vesting conditions must be satisfied) with a corresponding increase in equity in an equity-settled award, or a corresponding liability in a cash-settled award. The cost is adjusted for vesting conditions (other than market performance conditions) so as to reflect the number of shares or share options that actually vest.

If an award is modified, the original cost continues to be recognised as if there had been no modification. Where modification increases the fair value of the award, this increase is recognised as an expense over the modified vesting period. A new award of shares or share options is treated as the modification of a cancelled award if, on the date the new award is granted, the Group identifies them as replacing the cancelled award. The cancellation of an award through failure to meet non-vesting conditions triggers an immediate expense for any unrecognised element of the cost of an award.

26. Cash and cash equivalents

In the cash flow statement, cash and cash equivalents comprises cash and deposits with banks with an original maturity of less than three months together with short-term highly liquid investments that are readily convertible to known amounts of cash and subject to insignificant risk of change in value.

Critical accounting policies and key sources of estimation uncertainty

The reported results of the Group are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. UK company law and IFRS require the directors, in preparing the Group's financial statements, to select suitable accounting policies, apply them consistently and make judgements and estimates that are reasonable and prudent. In the absence of an applicable standard or interpretation, IAS 8 'Accounting Policies, Changes in Accounting Estimates and Errors', requires management to develop and apply an accounting policy that results in relevant and reliable information in the light of the requirements and guidance in IFRS dealing with similar and related issues and the IASB's 'Conceptual Framework for Financial Reporting'. The judgements and assumptions involved in the Group's accounting policies that are considered by the Board to be the most important to the portrayal of its financial condition are discussed below. The use of estimates, assumptions or models that differ from those adopted by the Group would affect its reported results.

(i) Goodwill

The Group capitalises goodwill arising on the acquisition of businesses, as discussed in Accounting policy 6. The carrying value of goodwill as at 31 December 2017 was £5,558 million (2016 - £5,558 million).

Goodwill is the excess of the cost of an acquired business over the fair value of its net assets. Goodwill is not amortised but is tested for impairment annually or more frequently if events or changes in circumstances indicate that it might be impaired.

Impairment testing in accordance with Accounting policy 8 inherently involves a number of judgmental areas: the preparation of cash flow forecasts for periods that are beyond the normal requirements of management reporting; the assessment of the discount rate appropriate to the business; estimation of the fair value of cash-generating units; and the valuation of their separable assets. The sensitivity of the assessment to changes in assumptions is discussed in Note 15 on the accounts.

(ii) Provisions for liabilities

As set out in Note 20 on the accounts, at 31 December 2017 the Group recognised provisions for liabilities in respect of Payment Protection Insurance, £1,053 million (2016 - £1,253 million), other customer redress, £870 million (2016 - £1,105 million), residential mortgage backed securities, £3,243 million (2016 - £6,752 million), litigation and other regulatory proceedings, £641 million (2016 - £1,918 million) and property and other £1,950 million (2016 - £1,808 million).

Accounting policies

Provisions are liabilities of uncertain timing or amount, and are recognised when there is a present obligation as a result of a past event, the outflow of economic benefit is probable and the outflow can be estimated reliably. Judgement is involved in determining whether an obligation exists, and in estimating the probability, timing and amount of any outflows. Where the Group can look to another party such as an insurer to pay some or all of the expenditure required to settle a provision, any reimbursement is recognised when, and only when, it is virtually certain that it will be received.

Payment Protection Insurance - the Group has established a provision for redress payable in respect of the mis-selling of Payment Protection Insurance policies. The provision is management's best estimate of the anticipated costs of redress and related administration expenses. The determination of appropriate assumptions to underpin the provision requires significant judgement by management. The principal assumptions underlying the provision together with sensitivities to changes in those assumptions are given in Note 20 on the accounts.

Provisions for litigation - the Group and members of the Group are party to legal proceedings in the United Kingdom, the United States and other jurisdictions, arising out of their normal business operations. The measurement and recognition of liabilities in respect of litigation involves a high degree of management judgement. Before the existence of a present obligation as the result of a past event can be confirmed, numerous facts may need to be established, involving extensive and time-consuming discovery, and novel or unsettled legal questions addressed. Once it is determined there is an obligation, assessing the probability of economic outflows and estimating the amount of any liability can be very difficult. In many proceedings, it is not possible to determine whether any loss is probable or to estimate the amount of any loss. Furthermore, for an individual matter, there can be a wide range of possible outcomes and often it is not practicable to quantify a range of such outcomes. The Group's outstanding litigation is periodically assessed in consultation with external professional advisers, where appropriate, to determine the likelihood of the Group incurring a liability. A detailed description of the Group's material legal proceedings and a discussion of the nature of the associated uncertainties are given in Note 31 on the accounts.

Tax contingencies - determining the Group's income tax charge and its provisions for income taxes necessarily involves a significant degree of estimation and judgement. The tax treatment of some transactions is uncertain and tax computations are yet to be agreed with the tax authorities in a number of jurisdictions. The Group recognises anticipated tax liabilities based on all available evidence and, where appropriate, in the light of external advice. Any difference between the final outcome and the amounts provided will affect current and deferred income tax assets and liabilities in the period when the matter is resolved.

(iii) Deferred tax

The Group makes provision for deferred tax on temporary differences where tax recognition occurs at a different time from accounting recognition. Deferred tax assets of £1,740 million were recognised as at 31 December 2017 (2016 - £1,803 million).

The Group has recognised deferred tax assets in respect of losses, principally in the UK, and temporary differences. Deferred tax assets are recognised in respect of unused tax losses and other temporary differences to the extent that it is probable that there will be future taxable profits against which the losses and other temporary differences can be utilised. The Group has considered their carrying value as at 31 December 2017 and concluded that, based on management's estimates, sufficient taxable profits will be generated in future years to recover recognised deferred tax assets. These estimates are based on forecast performance and take into account Brexit, the Group's plans to implement the UK ring-fencing regime and the resultant transfers between members of the Group.

Deferred tax assets of £6,356 million (2016 - £7,940 million) have not been recognised in respect of tax losses and other temporary differences where the availability of future taxable profits is uncertain. Further details about the Group's deferred tax assets are given in Note 22 on the accounts.

(iv) Loan impairment provisions

The Group's loan impairment provisions are established to recognise incurred impairment losses in its portfolio of loans classified as loans and receivables and carried at amortised cost in accordance with Accounting policy 16. At 31 December 2017, customer loan impairment provisions amounted to £3,814 million (2016 - £4,455 million).

A loan is impaired when there is objective evidence that events since the loan was granted have affected expected cash flows from the loan. Such objective evidence, indicative that a borrower's financial condition has deteriorated, can include for loans that are individually assessed: the non-payment of interest or principal; debt renegotiation; probable bankruptcy or liquidation; significant reduction in the value of any security; breach of limits or covenants; and deteriorating trading performance and, for collectively assessed portfolios: the borrowers' payment status and observable data about relevant macroeconomic measures.

The impairment loss is the difference between the carrying value of the loan and the present value of estimated future cash flows at the loan's original effective interest rate.

There are two components to the Group's loan impairment provisions: individual and collective.

Accounting policies

Individual component - all impaired loans that exceed specific thresholds are individually assessed for impairment. Individually assessed loans principally comprise the Group's portfolio of commercial loans to medium and large businesses. Impairment losses are recognised as the difference between the carrying value of the loan and the discounted value of management's best estimate of future cash repayments and proceeds from any security held. These estimates take into account the customer's debt capacity and financial flexibility; the level and quality of its earnings; the amount and sources of cash flows; the industry in which the counterparty operates; and the realisable value of any security held. Estimating the quantum and timing of future recoveries involves significant judgement. The size of receipts will depend on the future performance of the borrower and the value of security, both of which will be affected by future economic conditions; additionally, collateral may not be readily marketable. The actual amount of future cash flows and the date they are received may differ from these estimates and consequently actual losses incurred may differ from those recognised in these financial statements.

Collective component - this is made up of two elements: loan impairment provisions for impaired loans that are below individual assessment thresholds (collectively assessed provisions) and for loan losses that have been incurred but have not been separately identified at the balance sheet date (latent loss provisions). Collectively assessed provisions are established on a portfolio basis using a present value methodology taking into account the level of arrears, security, past loss experience, credit scores and defaults based on portfolio trends. The most significant factors in establishing these provisions are the expected loss rates and the related average life. These portfolios include mortgages, credit card receivables and other personal lending. The future credit quality of these portfolios is subject to uncertainties that could cause actual credit losses to differ materially from reported loan impairment provisions. These uncertainties include the economic environment, notably interest rates and their effect on customer spending, the unemployment level, payment behaviour and bankruptcy trends. Latent loss provisions are held against estimated impairment losses in the performing portfolio that have yet to be identified as at the balance sheet date. To assess the latent loss within its portfolios, the Group has developed methodologies to estimate the time that an asset can remain impaired within a performing portfolio before it is identified and reported as such.

(v) Fair value - financial instruments

In accordance with Accounting policies 14, 16 and 23, financial instruments classified as held-for-trading or designated as at fair value through profit or loss and financial assets classified as available-for-sale are recognised in the financial statements at fair value. All derivatives are measured at fair value.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. A fair value measurement takes into account the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date.

It also uses the assumptions that market participants would use when pricing the asset or liability. In determining fair value the Group maximises the use of relevant observable inputs and minimises the use of unobservable inputs.

Where the Group manages a group of financial assets and financial liabilities on the basis of its net exposure to either market risks or credit risk, it measures the fair value of a group of financial assets and financial liabilities on the basis of the price that it would receive to sell a net long position (i.e. an asset) for a particular risk exposure or to transfer a net short position (i.e. a liability) for a particular risk exposure in an orderly transaction at the measurement date under current market conditions.

Credit valuation adjustments are made when valuing derivative financial assets to incorporate counterparty credit risk. Adjustments are also made when valuing financial liabilities measured at fair value to reflect the Group's own credit standing.

Where the market for a financial instrument is not active, fair value is established using a valuation technique. These valuation techniques involve a degree of estimation, the extent of which depends on the instrument's complexity and the availability of market-based data. Further details about the Group's valuation methodologies and the sensitivity to reasonably possible alternative assumptions of the fair value of financial instruments valued using techniques where at least one significant input is unobservable are given in Note 9 on the accounts.

Accounting developments

International Financial Reporting Standards

A number of IFRSs and amendments to IFRS were in issue at 31 December 2017 that would affect the Group from 1 January 2018 or later.

Effective 1 January 2018 - IFRS 9

In July 2014, the IASB published IFRS 9 'Financial Instruments' with an effective date of 1 January 2018. IFRS 9 replaces the current financial instruments standard IAS 39, setting out new accounting requirements in a number of areas.

The principle features of IFRS 9 are as follows:

Recognition and derecognition

The sections in IAS 39 setting out the criteria for the recognition and derecognition of financial instruments have been included unamended in IFRS 9.

Classification and measurement

Financial assets - There are three classifications for financial assets in IFRS 9.

- **Amortised cost** - Financial assets with terms that give rise to interest and principal cash flows only and which are held in a business model whose objective is to hold financial assets to collect their cash flow are measured at amortised cost.

Accounting policies

- **Fair value through other comprehensive income** - Financial assets with terms that give rise to interest and principal cash flows only and which are held in a business model whose objective is achieved by holding financial assets to collect their cash flow and selling them are measured at fair value through other comprehensive income.
- **Fair value through profit and loss** - Other financial assets are measured at fair value through profit and loss.

At initial recognition, any financial asset may be irrevocably designated as measured at fair value through profit or loss if such designation eliminates a measurement or recognition inconsistency.

The measurement basis of the majority of the Group's financial assets is unchanged on application of IFRS 9.

Financial liabilities – Since early adopting in 2017 the IFRS 9 accounting for fair value attributable to own credit risk there are no further material changes on accounting for financial liabilities on adoption of IFRS 9.

Hedge accounting

IFRS 9's hedge accounting requirements are designed to align the accounting more closely to the risk management framework; permit a greater variety of hedging instruments; and remove or simplify some of the rule-based requirements in IAS 39. The elements of hedge accounting: fair value, cash flow and net investment hedges are retained. The Group accounting policy choice is continue with the IAS 39 hedge accounting framework.

Credit impairment

IFRS 9's credit impairment requirements apply to financial assets measured at amortised cost, to those measured at fair value through other comprehensive income, to lease receivables and to certain loan commitments and financial guarantee contracts. On initial recognition a loss allowance is established at an amount equal to 12-month expected credit losses (ECL) that is the portion of life-time expected losses resulting from default events that are possible within the next 12 months. Where a significant increase in credit risk since initial recognition is identified, the loss allowance increases so as to recognise all expected default events over the expected life of the asset. The Group expects that financial assets where there is objective evidence of impairment under IAS 39 will be credit impaired under IFRS 9, and carry loss allowances based on all expected default events.

The assessment of credit risk and the estimation of ECL are required to be unbiased and probability-weighted: determined by evaluating at the balance sheet date for each customer or loan portfolio a range of possible outcomes using reasonable and supportable information about past events, current conditions and forecasts of future events and economic conditions. The estimation of ECL also takes into account the time value of money. Recognition and measurement of credit impairments under IFRS 9 are more forward-looking than under IAS 39.

A Group-wide programme implemented the necessary changes in the modelling of credit loss parameters, and the underlying credit management and financial processes.

The result is an increase in overall credit impairment provisions when compared with the current basis of measurement under IAS 39.

Transition

The classification and measurement and impairment requirements will be applied retrospectively by adjusting the opening balance sheet at the date of initial application, with no requirement to restate comparative periods. Hedge accounting will be applied prospectively from that date.

In summary, on 1 January 2018, the impact on shareholders' equity was a £71 million post tax reduction in equity, comprising:

- Reclassification of financial instruments – £561 million pre tax increase in equity
- Change in impairment methodology – £616 million pre tax reduction.
- Net tax impact – £16 million decrease.

There will be no restatement of accounts prior to 2018.

The Group has opted to early adopt the IFRS 9 amendment on negative compensation with effect from 1 January 2018; this is expected to be endorsed for use in the EU in early 2018.

Effective 1 January 2018 – other standards

IFRS 15 'Revenue from Contracts with Customers' was issued in May 2014. It will replace IAS 11 'Construction Contracts', IAS 18 'Revenue' and several Interpretations. Contracts are bundled or unbundled into distinct performance obligations with revenue recognised as the obligations are met. A restatement is not expected on initial application of this standard.

IFRS 2 'Share-based payment' was amended in June 2016 to clarify the accounting for net settlement of tax in respect of share-based payments and the calculation of the cost of modified awards and those with vesting conditions that are not market conditions. IFRIC Interpretation 22 'Foreign Currency Transaction and Advance Consideration' was issued in December 2016 clarifying the date of a foreign exchange transaction to be used on initial recognition of a related asset or other item.

IAS 40 'Investment Property' was amended in December 2016 to clarify that transfers into or out of the investment property classification may only occur on a change of use or the property ceasing to meet the definition of an investment property.

On adoption, none of these standards are expected to have a material effect on the Group's results.

Accounting policies

Effective after 2018

IFRS 16 'Leases' was issued in January 2016 to replace IAS 17 'Leases'. There are no substantial changes to the accounting for leases by lessors nor for finance leases; operating leases will be brought on balance sheet through the recognition of assets representing the contractual rights of use, and liabilities will be recognised for the contractual payments that exist. The effective date is 1 January 2019.

The Group is currently working on the implementation of the new requirements and currently anticipates that the property lease portfolio will have the most significant implementation impact as property represents 87% of the operating lease commitments per Note 31. A preliminary estimate (excluding the impacts of tax) of the opening balance sheet adjustment as a result of the property portfolio using a modified retrospective approach to transition would be to create a Right of Use asset of c£1.4bn, also impacting RWAs and an estimated decrease (excluding the impacts of tax) in retaining earnings of some c£0.3bn. As permitted by the standard, the Group intends to apply IFRS 16 on a retrospective basis but to take advantage of the option not to restate. The Group will continue to work on the implementation throughout 2018 and therefore this estimate of the impact is subject to change. Changes could arise from the addition of non property leases, further development of calibration of models and processes, methodology and approach refinement, and sensitivity analysis performed on key assumptions such as discount factors and lease term.

IFRS 17 'Insurance contracts' was issued in May 2017 to replace IFRS 4 and to establish a comprehensive standard for inceptors of insurance policies. The effective date is 1 January 2021.

IFRIC Interpretation 23 'Uncertainty over income tax treatments' was issued in June 2017 to clarify how to apply judgement in assessing the tax position of the reporting entity. The effective date is 1 January 2019.

In October 2017, the IASB amended IAS 28 'Investments in associates and joint ventures' to require long term, non-equity interests in these investments to be tested for impairment first in accordance with IFRS 9 and then in accordance with IAS 28. The effective date of the amendment is 1 January 2019.

In February 2018 the IASB amended IAS 'Employee Benefits' to clarify the need to update assumptions whenever there is a plan amendment, curtailment or settlement during the reporting period. The effective date is 1 January 2019.

The Group is assessing the effect of adopting these standards on its financial statements.

Notes on the consolidated accounts

1 Net interest income

	2017 £m	2016 £m	2015 £m
Loans and advances to customers	10,409	10,706	11,268
Loans and advances to banks	277	246	340
Debt securities	348	306	317
Interest receivable (1)	11,034	11,258	11,925
Customer accounts: demand deposits	99	433	619
Customer accounts: savings deposits	445	432	446
Customer accounts: other time deposits	179	190	315
Balances with banks	175	97	45
Debt securities in issue	554	557	759
Subordinated liabilities	572	845	869
Internal funding of trading businesses	23	(4)	105
Interest payable (1)	2,047	2,550	3,158
Net interest income	8,987	8,708	8,767

2 Non-interest income

	2017 £m	2016 £m	2015 £m
Fees and commissions receivable			
Payment services	829	856	923
Credit and debit card fees	665	645	738
Lending (credit facilities)	1,060	1,044	1,076
Brokerage	148	154	262
Investment management	249	250	305
Trade finance	173	196	242
Other	214	195	196
	3,338	3,340	3,742
Fees and commissions payable			
Banking	(883)	(805)	(809)
Income from trading activities			
Foreign exchange	525	989	809
Interest rate	(50)	(480)	35
Credit	197	336	(80)
Changes in fair value of own debt and derivative liabilities attributable to own credit			
- debt securities in issue	(81)	87	252
- derivative liabilities	12	67	2
Equities and other	31	(25)	42
	634	974	1,060
Loss on redemption of own debt	(7)	(126)	(263)
Other operating income			
Operating lease and other rental income	276	287	276
Changes in the fair value of own debt designated as at fair value through profit or loss attributable to own credit risk (2)			
- debt securities in issue	—	41	84
- subordinated liabilities	—	(15)	(29)
Other changes in the fair value of financial assets and liabilities designated as at fair value through profit or loss and related derivatives	99	(13)	375
Changes in the fair value of investment properties	(14)	(11)	2
Profit/(loss) on sale of securities	226	71	(4)
Profit on sale of property, plant and equipment	75	18	91
Profit/(loss) on sale of subsidiaries and associates	245	273	(102)
Loss on disposal or settlement of loans and receivables	(35)	(277)	(558)
Share of profits of associated entities	104	59	140
Other income (3)	88	66	151
Non-interest income	1,064	499	426

Notes:

(1) Negative interest on loans and advances is classed as interest payable and on customer deposits is classed as interest receivable.

(2) Measured as the change in fair value from movements in the year in the credit risk premium payable by RBS. Ahead of adopting IFRS9 Financial Instruments from 1 January 2018, RBS has adopted the provisions in respect of the presentation of gains and losses on financial liabilities designated as at fair value through profit or loss from 1 January 2017.

(3) Includes income from activities other than banking.

Notes on the consolidated accounts

3 Operating expenses

	2017 £m	2016 £m	2015 £m
Salaries	2,765	3,097	3,177
Variable compensation	298	281	314
Temporary and contract costs	415	674	638
Social security costs	318	388	344
Share-based compensation	17	32	36
Pension costs			
- defined benefit schemes (see Note 4)	309	267	523
- loss/(gain) on curtailments or settlements (see Note 4)	66	1	(65)
- defined contribution schemes	92	89	74
Severance	255	229	511
Other	141	66	174
Staff costs	4,676	5,124	5,726
Premises and equipment	1,565	1,388	1,827
UK bank levy	215	190	230
Other administrative expenses (1)	3,108	8,555	6,058
Property, plant and equipment depreciation and write down (see Note 16)	586	574	950
Intangible assets amortisation (see Note 15)	222	204	230
Depreciation and amortisation	808	778	1,180
Write down of goodwill and other intangible assets (see Note 15)	29	159	1,332
Operating expenses	10,401	16,194	16,353

Restructuring and divestment costs

Included in operating expenses are the following restructuring and divestment costs:

	2017 £m	2016 £m	2015 £m
Staff costs	753	642	830
Premises, equipment, depreciation and amortisation	471	164	746
Other administrative expenses (2)	341	1,300	1,355
Total	1,565	2,106	2,931

Notes:

(1) Includes litigation and conduct costs, net of amounts recovered. Further details are provided in Note 20.

(2) Includes other administrative expenses, write down of goodwill and other intangible assets.

Notes on the consolidated accounts

3 Operating expenses continued

The average number of persons employed, rounded to the nearest hundred, in continuing operations during the year, excluding temporary staff, was 73,400 (2016 - 82,400; 2015 - 88,800); on the same basis there were no people employed in discontinued operations (2016 - nil; 2015 - 10,100). The average number of temporary employees during 2017 was 5,000 (2016 - 6,700; 2015 - 7,800). The number of persons employed in continuing operations at 31 December, excluding temporary staff, by reportable segment, was as follows:

	2017	2016*	2015*
UK Personal & Business Banking	21,900	25,100	29,900
Ulster Bank Rol	2,600	3,000	2,500
Personal & Business Banking	24,500	28,100	32,400
Commercial Banking	4,500	5,600	5,700
Private Banking	1,500	1,700	1,900
Commercial & Private Banking	6,000	7,300	7,600
RBS International	1,600	800	700
NatWest Markets	5,300	1,500	2,500
Central items & other	32,300	39,300	44,600
Total	69,700	77,000	87,800
UK	51,200	57,300	64,100
USA	500	700	1,100
Europe	4,200	5,200	6,200
Rest of the World	13,800	13,800	16,400
Total	69,700	77,000	87,800

There were no people employed in discontinued operations at 31 December 2017 (2016 - nil; 2015 - nil).

* Re-presented to reflect segment reorganisation.

Share-based payments

As described in the Remuneration report on page 103, the Group grants share-based awards to employees principally on the following bases:

Award plan	Eligible employees	Nature of award	Vesting conditions (1)	Settlement
Sharesave	UK, Republic of Ireland, Channel Islands, Gibraltar and Isle of Man	Option to buy shares under employee savings plan	Continuing employment or leavers in certain circumstances	2018 to 2022
Deferred performance awards	All	Awards of ordinary shares	Continuing employment or leavers in certain circumstances	2018 to 2024
Long-term incentives (2)	Senior employees	Awards of conditional shares or share options	Continuing employment or leavers in certain circumstances and/or achievement of performance conditions	2018 to 2024

Notes:

(1) All awards have vesting conditions and therefore some may not vest.

(2) Long-term incentives include the Executive Share Option Plan, the Long-Term Incentive Plan and the Employee Share Plan.

Notes on the consolidated accounts

3 Operating expenses continued

The fair value of options granted in 2017 was determined using a pricing model that included: expected volatility of shares determined at the grant date based on historical volatility over a period of up to five years; expected option lives that equal the vesting period; no dividends on equity shares; and risk-free interest rates determined from UK gilts with terms matching the expected lives of the options.

The strike price of options and the fair value on granting awards of fully paid shares is the average market price over the five trading days (three trading days for Sharesave) preceding grant date.

Sharesave

	2017		2016		2015	
	Average exercise price £	Shares under option (million)	Average exercise price £	Shares under option (million)	Average exercise price £	Shares under option (million)
At 1 January	2.46	56	2.87	56	2.85	51
Granted	2.27	21	1.68	17	2.91	12
Exercised	2.46	(3)	2.37	—	2.38	(2)
Cancelled	2.49	(14)	3.02	(17)	2.98	(5)
At 31 December	2.38	60	2.46	56	2.87	56

Options are exercisable within six months of vesting; 3.7 million options were exercisable at 31 December 2017 (2016 – 8.1 million; 2015 - 1.0 million). The weighted average share price at the date of exercise of options was £2.77 (2016 - £1.78; 2015 - £3.54). At 31 December 2017, exercise prices ranged from £1.68 to £4.34 (2016 - £1.68 to £4.34; 2015 - £2.33 to £18.93) and the remaining average contractual life was 2.9 years (2016 - 2.9 years; 2015 – 2.9 years). The fair value of options granted in 2017 was £21 million (2016 - £18 million; 2015 - £12 million).

Deferred performance awards

	38	41	89	115	58

Notes:

- (1) The tables above relate to continuing businesses only.
- (2) Cash awards are limited to £2,000 for all employees.
- (3) Excludes other performance related compensation.
- (4) Adjusted operating profit before variable compensation expense.

Notes on the consolidated accounts

4 Pensions

Defined contribution schemes

The Group sponsors a number of defined contribution pension schemes in different territories, which new employees are offered the opportunity to join.

Defined benefit schemes

The Group sponsors a number of pension schemes in the UK and overseas, including the Main section of The Royal Bank of Scotland Group Pension Fund (the "Main scheme") which operates under UK trust law and is managed and administered on behalf of its members in accordance with the terms of the trust deed, the scheme rules and UK legislation.

Pension fund trustees are appointed to operate each fund and ensure benefits are paid in accordance with the scheme rules and national law. The trustees are the legal owner of a scheme's assets, and have a duty to act in the best interests of all scheme members.

The schemes generally provide a pension of one-sixtieth of final pensionable salary for each year of service prior to retirement up to a maximum of 40 years and are contributory for current members. These have been closed to new entrants some ten years ago, although current members continue to build up additional pension benefits, currently subject to 2% maximum annual salary inflation, while they remain employed by the Group.

The Main scheme corporate trustee is RBS Pension Trustee Limited (the Trustee), a wholly owned subsidiary of National Westminster Bank Plc, Principal Employer of the Main scheme. The Board of the Trustee comprises four member trustee directors selected from eligible active staff, deferred and pensioner members who apply and six appointed by the Group. Under UK legislation a defined benefit pension scheme is required to meet the statutory funding objective of having sufficient and appropriate assets to cover its liabilities (the pensions that have been promised to members).

Similar governance principles apply to the Group's other pension schemes.

Investment strategy

The assets of the Main scheme, which represent 90% of plan assets at 31 December 2017 (2016 - 89%), are invested in a diversified portfolio of quoted and private equity, government and corporate fixed-interest and index-linked bonds, and other assets including real estate and infrastructure.

The Main scheme employs derivative instruments to achieve a desired asset class exposure and to reduce the scheme's interest rate, inflation and currency risk. This means that the net funding position is considerably less sensitive to changes in market conditions than the value of the assets or liabilities in isolation.

Major classes of plan assets as a percentage of total plan assets

	Main scheme	
	2017	2016
	%	%
Quoted assets		
Quoted equities		
- Consumer industry	6.7	4.6
- Manufacturing industry	1.8	1.8
- Energy and utilities	3.6	2.7
- Financial institutions	7.8	8.3
- Technology and telecommunications	1.9	2.3
- Other	0.1	0.8
Private equity	4.0	3.4
Index-linked bonds	30.6	31.4
Government fixed interest bonds	9.2	5.9
Corporate fixed interest bonds	15.8	17.9
Unquoted assets		
Corporate and other bonds	1.0	1.8
Hedge funds	—	0.2
Real estate	5.2	5.2
Derivatives	8.1	10.2
Cash and other assets	4.2	3.4
Equity exposure of equity futures	(3.6)	(1.8)
Cash exposure of equity futures	3.6	1.9
	100.0	100.0

Notes on the consolidated accounts

4 Pensions *continued*

The Main scheme's holdings of derivative instruments are summarised in the table below:

	2017			2016		
	Notional amounts £bn	Fair value Assets £m	Liabilities £m	Notional amounts £bn	Fair value Assets £m	Liabilities £m
Inflation rate swaps	11	310	555	12	299	549
Interest rate swaps	44	8,161	4,779	41	9,440	5,442
Currency forwards	12	160	34	15	191	136
Equity and bond call options	2	428	—	2	799	1
Equity and bond put options	3	3	1	2	—	2
Other	4	327	444	4	1,719	1,816

The investment strategy of other schemes is similar to that of the Main scheme, adjusted to take account of the nature of liabilities, risk appetite of the trustees, size of the scheme and any local regulatory constraints.

Swaps are used to manage interest rate and inflation risk of the liabilities, as well as being used to manage other risks within the Main scheme. They have been executed at prevailing market rates and within standard market bid/offer spreads with a number of counterparty banks, including The Royal Bank of Scotland plc.

At 31 December 2017, the gross notional value of the swaps was £57 billion (2016 - £56 billion) and had a net positive fair value of £3,045 million (2016 - £3,629 million).

Collateral is required on all swap transactions. The counterparty banks had delivered a net amount of £3,436 million of collateral at 31 December 2017 (2016 - £3,991 million).

The schemes do not invest directly in the Group but can have exposure to the Group within their investment programmes through indirect exposure to ordinary shares of the Group through index tracking investments, swaps contracts (before allowing for collateral posted against the mark value of the swaps) and cash deposits placed with National Westminster Bank Plc. The trustees of the respective schemes are responsible for ensuring that indirect investments in the Group do not exceed the 5% regulatory limit.

Amounts in the Financial statements

The Group recognises the net pension scheme surplus or deficit as a net asset or liability. In doing so, the funded status is adjusted to reflect any schemes with a surplus that the Group may not be able to access, as well as any minimum funding requirement to pay in additional contributions. This is most relevant to the Main scheme, where the current surplus is not recognised.

	All schemes	
	2017 £m	2016 £m
Amounts recognised on the balance sheet		
Fund assets at fair value	49,746	49,229
Present value of fund liabilities	42,378	43,990
Funded status	7,368	5,239
Asset ceiling/minimum funding	7,105	5,326
	263	(87)

Net pension asset/(liability) comprises

	2017 £m	2016 £m
Net assets of schemes in surplus (included in Prepayments, accrued income and other assets, Note 17)	392	276

Notes:

- (1) In recognising the net surplus or deficit of a pension scheme, the funded status of each scheme is adjusted to reflect any minimum funding requirement imposed on the sponsor and any ceiling on the amount that the sponsor has an unconditional right to recover from a scheme.
- (2) The Group expects to make contributions to the Main scheme of £190 million in 2018.

Notes on the consolidated accounts

4 Pensions continued

Funding and contributions by the Group

In the UK, the Trustees of defined benefit pension schemes are required to perform funding valuations every three years. The Trustees and the Company, with the support of the Scheme Actuary, agree the assumptions used to value the liabilities and a Schedule of Contributions required to eliminate any funding deficit. The funding assumptions incorporate a margin for prudence over and above the expected cost of providing the benefits promised to members, taking into account the sponsor's covenant and the investment strategy of the scheme. Similar arrangements apply in the other territories where the Group sponsors defined benefit pension schemes. The last funding valuation of the Main scheme was at 31 December 2015 and next funding valuation is due at 31 December 2018, to be agreed by 31 March 2020.

The triennial funding valuation of the Main scheme as at 31 December 2015 determined the funding level to be 84%, pension liabilities to be £37 billion and the deficit to be £5.8 billion, subsequently reduced by a £4.2 billion cash payment in March 2016. Investment returns over the next 10 year period were forecast to absorb the £1.6 billion balance of the deficit. The average cost of the future service of current members is 35% of basic salary before contributions from those members; it includes the expenses of running the scheme.

Assumptions

Placing a value on the Group's defined benefit pension schemes' liabilities requires the Group's management to make a number of assumptions, with the support of independent actuaries who provide advice and guidance to the Group. The ultimate cost of the defined benefit obligations to the Group will depend upon actual future events and the assumptions made are unlikely to be exactly borne out in practice, meaning the final cost may be higher or lower than expected.

The most significant assumptions used for the Main scheme are shown below:

	Principal IAS 19 actuarial assumptions		Principal assumptions of 2015 triennial valuation
	2017	2016	
	%	%	2015
Discount rate	2.6	2.7	Fixed interest swap yield curve plus 1.5% per annum at all durations
Inflation assumption (RPI)	3.1	3.2	Retail price index RPI swap yield curve
Rate of increase in salaries	1.8	1.8	
Rate of increase in deferred pensions	3.0	3.2	
Rate of increase in pensions in payment	2.9	3.0	(RPI floor 0%, cap 5%): Limited price indexation (LPI) (0,5) swap yield curve
Proportion of pension converted to a cash lump sum at retirement	21	21	21%
Longevity at age 60 for current pensioners (years)			
Males	27.2	27.4	28.4
Females	28.7	29.1	30.2
Longevity at age 60 for future pensioners currently aged 40 (years)			
Males	28.6	29.0	29.9
Females	30.4	31.2	32.4

Discount rate

The Group discounts its defined benefit pension obligations at discount rates determined by reference to the yield on 'high quality' corporate bonds.

The sterling yield curve (applied to 96% of the Group's defined benefit obligations) is constructed by reference to yields on 'AA' corporate bonds from which a single discount rate is derived based on a cash flow profile similar in structure and duration to the pension obligations. The weighted average duration of the Main scheme's defined benefit obligation at 31 December 2017 is 21 years (2016 – 20.9 years).

Significant judgement is required when setting the criteria for bonds to be included in the population from which the yield curve is derived.

The criteria include issue size, quality of pricing and the exclusion of outliers. Judgement is also required in determining the shape of the yield curve at long durations: a constant credit spread relative to gilts is assumed.

Notes on the consolidated accounts

4 Pensions continued

The table below shows how the present value of the defined benefit obligation would change if the key assumptions used were changed. The sensitivity analysis presented below may not be representative of the actual change in the defined benefit obligation as it is unlikely that the changes in assumptions would occur in isolation of one another as some of the assumptions may be correlated.

	Main scheme (decrease)/increase in obligation at 31 December	
	2017 £m	2016 £m
0.25% increase in the discount rate	(1,964)	(1,978)
0.25% increase in inflation	1,329	1,552
0.25% additional rate of increase in pensions in payment	1,328	1,339
Longevity increase of one year	1,478	1,522

The defined benefit obligation is attributable to the different classes of scheme members in the following proportions (Main scheme):

Membership category	2017 %	2016 %
Active members	16.2	18.1
Deferred members	47.3	45.9
Pensioners and dependants	36.5	36.0
	<u>100.0</u>	<u>100.0</u>

The experience history of Group schemes is shown below:

Notes on the consolidated accounts

5 Auditor's remuneration

Amounts paid to the Group's auditors for statutory audit and other services are set out below. All audit-related and other services are approved by the Group Audit Committee and are subject to strict controls to ensure the external auditor's independence is unaffected by the provision of other services. The Group Audit Committee recognises that for certain assignments the auditors are best placed to perform the work economically; for other work the Group selects the supplier best placed to meet its requirements. The Group's auditors are permitted to tender for such work in competition with other firms where the work is permissible under audit independence rules.

On 24 March 2016 Deloitte LLP (Deloitte) resigned as the Group's auditors and at the Annual General Meeting on 4 May 2016 the shareholders approved the appointment of Ernst & Young LLP (EY) as the Group's auditor for the audit of the 2016 annual accounts. EY remain the Group's auditors for the audit of the 2017 annual accounts.

Amounts paid to the Group's auditors for statutory audit and other services are set out below:

	2017 £m	2016 (1) £m
EY		
Fees payable for the audit of the Group's annual accounts	4.0	4.0
- the audit of the company's subsidiaries	22.9	20.7
- audit-related assurance services (2)	4.3	4.0
Total audit and audit-related assurance services fees	31.2	28.7
Other assurance services	1.7	3.4
Corporate finance services (3)	0.2	0.2
Total other services	1.9	3.6
	2017 £m	2016 (4) £m
Deloitte		
Fees payable to the auditor and its associates for other services to the Group	—	—
- the audit of the company's subsidiaries	—	0.2
- audit-related assurance services (5)	—	0.5
Total audit and audit-related assurance services fees	—	0.7
Other assurance services	—	0.1
Corporate finance services (6)	—	1.3
Total other services	—	1.4
Fees payable to the auditor and its associates in respect of audits of associated pension schemes	—	0.1
Total	—	2.2

Notes:

(1) Includes fees for the period EY were principal Group auditor (2016 - 1 January 2016 – 31 December 2016; Deloitte 2016 to effective resignation on 24 March 2016.)

(2) Comprises fees of £1.1 million (2016 - £1.1 million) in relation to reviews of interim financial information, £2.5 million (2016 - £2.2 million) in respect of reports to the Group's regulators in the UK and overseas, £0.7 million (2016 - £0.7 million) in relation to non-statutory audit opinions.

(3) Comprises fees of £0.2 million (2016 - £0.2 million) in respect of work performed by the auditors as reporting accountants on debt and equity issuances undertaken by the Group.

(4) Includes fees for the period Deloitte were principal Group auditor (2016 1 January 2016 to effective resignation on 24 March 2016)

(5) Comprises no fees (2016 - nil) in relation to revenues of interim financial information, no fees (2016 - £10 million) in respect of reports to the Group's regulators in the UK and overseas, no fees (2016 - £0.2 million) in respect of internal controls assurance, and no fees in relation to non-statutory audit opinions.

(6) Comprises no fees (2016 £1.4 million) in respect of work performed by the auditors as reporting accountants as debt and equity issuances undertaken by the Group, including securitisations, no fees (2016 - £0.1 million), and no fees (2016 - nil) in relation to working capital report in correction with a circular to shareholders.

Notes on the consolidated accounts

6 Tax

	2017 £m	2016 £m	2015 £m
Current tax:			
Charge for the year	(1,018)	(1,126)	(249)
Over provision in respect of prior years	227	186	220
	(791)	(940)	(29)
Deferred tax:			
Credit for the year	108	246	—
Reduction in the carrying value of deferred tax assets	(30)	(317)	—
(Under)/over provision in respect of prior years	(111)	(155)	6
Tax charge for the year	(824)	(1,166)	(23)

The actual tax charge differs from the expected tax charge computed by applying the standard rate of UK corporation tax of 19.25% (2016 – 20.00%; 2015 – 20.25%) as follows:

	2017 £m	2016 £m	2015 £m
Expected tax (charge)/credit	(431)	816	547
Losses and temporary differences in year where no deferred tax asset recognised	(303)	(742)	(1,086)
Foreign profits taxed at other rates	104	340	510
UK tax rate change impact (1)	(7)	6	94
Non-deductible goodwill impairment	—	—	(124)
Items not allowed for tax:			
- losses on disposals and write-downs	(69)	(45)	(23)
- UK bank levy	(45)	(41)	(50)
- regulatory and legal actions	(56)	(952)	(232)
- other disallowable items	(110)	(141)	(199)
Non-taxable items	134	136	173
Taxable foreign exchange movements	27	(57)	19
Losses brought forward and utilised	11	10	122
Reduction in carrying value of deferred tax asset in respect of:			
- UK losses	(30)	(317)	—
Banking surcharge	(165)	(210)	—
Adjustments in respect of prior years (2)	116	31	226
Actual tax charge	(824)	(1,166)	(23)

Notes:

- (1) In recent years, the UK government has steadily reduced the rate of UK corporation tax, with the latest enacted rates standing at 20% with effect from 1 April 2015, 19% from 1 April 2017 and 17% from 1 April 2020. The Finance (No 2) Act 2015 restricts the rate at which tax losses are given credit in future periods to the main rate of UK corporation tax, excluding the Banking Surcharge 8% rate introduced by this Act. Deferred tax assets and liabilities at 31 December 2017 take into account the reduced rates in respect of tax losses and non-banking temporary differences and where appropriate, the banking surcharge inclusive rate in respect of other banking temporary differences.
- (2) Prior year tax adjustments incorporate refinements to tax computations made on submission and agreement with the tax authorities. Current taxation balances include provisions in respect of uncertain tax positions, in particular in relation to restructuring and other costs where the taxation treatment remains subject to agreement with the relevant tax authorities.

Notes on the consolidated accounts

7 Earnings per ordinary share

Earnings per ordinary share have been calculated based on the following:

	2017 £m	2016 £m	2015 £m
Earnings			
Profit/(loss) attributable to ordinary shareholders	752	(6,955)	(1,979)
Loss from discontinued operations attributable to ordinary shareholders	—	—	(1,207)
Profit/(loss) from continuing operations attributable to ordinary shareholders	<u>752</u>	<u>(6,955)</u>	<u>(3,186)</u>
Weighted average number of shares (millions) (1)			
Weighted average number of ordinary shares outstanding during the year	11,867	11,692	11,516
Effect of dilutive share options and convertible securities	69	51	60
Diluted weighted average number of ordinary shares outstanding during the year	<u>11,936</u>	<u>11,743</u>	<u>11,576</u>

Note:

(1) All periods include the effect of 51 billion B shares that were converted to 5.1 billion ordinary shares in October 2015 (see Note 25).

There were no basic earnings/(loss) per ordinary share from discontinued operations (2016 - nil; 2015 - 10.5p). There were no diluted earnings per ordinary share from discontinued operations (2016 - nil; 2015 - 10.4p).

An agreement on 25 June 2014 between RBS and Her Majesty's Treasury (HMT) set out the terms for the retirement of the Dividend Access Share (DAS).

On 22 March 2016 the DAS was retired on payment the final dividend of £1,193 million to HMT; the DAS was re-designated as a single B share which was then cancelled.

Earnings per share for periods ended after 25 June 2014 and prior to the retirement of the DAS reflect DAS dividends recognised before the end of a reporting period; this amounted to nil (2016 - £1,193; 2015- nil).

8 Financial instruments - classification

The following tables analyse financial assets and liabilities in accordance with the categories of financial instruments in IAS 39. Assets and liabilities outside the scope of IAS 39 are shown within other assets and other liabilities.

Loans and deposits on the balance sheet include cash collateral given or taken against the derivative portfolio. Where offset is available but not recognised under IFRS, this is reflected in the cash collateral column.

Notes on the consolidated accounts

9 Financial instruments - valuation

Valuation of financial instruments carried at fair value

Control environment

RBS's control environment for the determination of the fair value of financial instruments includes formalised protocols for the review and validation of fair values independent of the businesses entering into the transactions. There are specific controls to ensure consistent pricing policies and procedures, incorporating disciplined price verification. RBS ensures that appropriate attention is given to bespoke transactions, structured products, illiquid products and other instruments which are difficult to price.

Independent price verification (IPV)

IPV is a key element of the control environment. Valuations are first performed by the business which entered into the transaction. Such valuations may be directly from available prices, or may be derived using a model and variable model inputs. These valuations are reviewed, and if necessary amended, by a team independent of those trading the financial instruments, in the light of available pricing evidence.

IPV differences are classified according to the quality of independent market observables into IPV quality bands linked to the fair value hierarchy principles, as laid out in IFRS 13 'Fair Value Measurement'. These differences are classified into fair value levels 1, 2 and 3 (with the valuation uncertainty risk increasing as the levels rise from 1 to 3) and then further classified into high, medium, low and indicative depending on the quality of the independent data available to validate the prices. Valuations are revised if they are outside agreed thresholds.

Governance framework

IPV takes place at least each month end date, for all fair value positions. The IPV control includes formalised reporting and escalation of any valuation differences in breach of established thresholds. The Pricing Unit determines IPV policy, monitors adherence to that policy and performs additional independent reviews of highly subjective valuation issues.

The Modelled Product Review Committee sets the policy for model documentation, testing and review, and prioritises models with significant exposure being reviewed by the RBS Pricing Model Risk team. The NatWest Markets Valuation Committee is made up of valuation specialists and senior business representatives from various functions and oversee pricing, reserving and valuations issues. This committee meets monthly to review and ratify any methodology changes. The Executive Valuation Committee meets quarterly to address key material and subjective valuation issues, to review items escalated by the NatWest Markets Valuation Committee and to discuss other relevant matters including prudential valuation.

Valuation hierarchy

Initial classification of a financial instrument is carried out by the Product Control team following the principles in IFRS 13. They base their judgment on information gathered during the IPV process for instruments which include the sourcing of independent prices and model inputs. The quality and completeness of the information gathered in the IPV process gives an indication as to the liquidity and valuation uncertainty of an instrument.

These initial classifications are reviewed and challenged by the Pricing Unit and are also subject to senior management review. Particular attention is paid to instruments crossing from one level to another, new instrument classes or products, instruments that are generating significant profit and loss and instruments where valuation uncertainty is high.

Valuation techniques

RBS derives fair value of its instruments differently depending on whether the instrument is a non-modelled or a modelled product.

Non-modelled products

Non-modelled products are valued directly from a price input typically on a position basis and include cash, equities and most debt securities.

Modelled products

Modelled products valued using a pricing model range in complexity from comparatively vanilla products such as interest rate swaps and options (e.g. interest rate caps and floors) through to more complex derivatives. The valuation of modelled products requires an appropriate model and inputs into this model. Sometimes models are also used to derive inputs (e.g. to construct volatility surfaces). RBS uses a number of modelling methodologies.

Inputs to valuation models

Values between and beyond available data points are obtained by interpolation and extrapolation. When utilising valuation techniques, the fair value can be significantly affected by the choice of valuation model and by underlying assumptions concerning factors such as the amounts and timing of cash flows, discount rates and credit risk. The principal inputs to these valuation techniques are as follows:

- Bond prices - quoted prices are generally available for government bonds, certain corporate securities and some mortgage-related products.
- Credit spreads - where available, these are derived from prices of credit default swaps or other credit based instruments, such as debt securities. For others, credit spreads are obtained from pricing services. For counterparty credit spreads, adjustments are made to market prices (or parameters) when the creditworthiness of the counterparty differs from that of the assumed counterparty in the market price (or parameters).

Notes on the consolidated accounts

9 Financial instruments - valuation *continued*

- Interest rates - these are principally benchmark interest rates such as the London Interbank Offered Rate (LIBOR), Overnight Index Swaps (OIS) rate and other quoted interest rates in the swap, bond and futures markets.
- Foreign currency exchange rates - there are observable prices both for spot and forward contracts and futures in the world's major currencies.
- Equity and equity index prices - quoted prices are generally readily available for equity shares listed on the world's major stock exchanges and for major indices on such shares.
- Commodity prices - many commodities are actively traded in spot and forward contracts and futures on exchanges in London, New York and other commercial centres.
- Price volatilities and correlations - volatility is a measure of the tendency of a price to change with time. Correlation measures the degree which two or more prices or other variables are observed to move together.
- Prepayment rates - the fair value of a financial instrument that can be prepaid by the issuer or borrower differs from that of an instrument that cannot be prepaid. In valuing prepayable instruments that are not quoted in active markets, RBS considers the value of the prepayment option.
- Recovery rates/loss given default - these are used as an input to valuation models and reserves for asset-backed securities and other credit products as an indicator of severity of losses on default. Recovery rates are primarily sourced from market data providers or inferred from observable credit spreads.

Consensus pricing

RBS uses consensus prices for the IPV of some instruments. The consensus service encompasses the equity, interest rate, currency, commodity, credit, property, fund and bond markets, providing comprehensive matrices of vanilla prices and a wide selection of exotic products. NatWest Markets contributes to consensus pricing services where there is a significant interest either from a positional point of view or to test models for future business use. Data sourced from consensus pricing services are used for a combination of control processes including direct price testing, evidence of observability and model testing. In practice this means that RBS submits prices for all material positions for which a service is available. Data from consensus services are subject to the same level of quality review as other inputs used for IPV process.

In order to determine a reliable fair value, where appropriate, management applies valuation adjustments to the pricing information gathered from the above sources. The sources of independent data are reviewed for quality and are applied in the IPV processes using a formalised input quality hierarchy. These adjustments reflect RBS's assessment of factors that market participants would consider in setting a price.

Furthermore, on an ongoing basis, RBS assesses the appropriateness of any model used. To the extent that the price determined by internal models does not represent the fair value of the instrument, for instance in highly stressed market conditions, RBS makes adjustments to the model valuation to calibrate to other available pricing sources.

Where unobservable inputs are used, RBS may determine a range of possible valuations derived from differing stress scenarios to determine the sensitivity associated with the valuation. When establishing the fair value of a financial instrument using a valuation technique, RBS considers adjustments to the modelled price which market participants would make when pricing that instrument. Such adjustments include the credit quality of the counterparty and adjustments to compensate for model limitations.

Valuation reserves

When valuing financial instruments in the trading book, adjustments are made to mid-market valuations to cover bid-offer spread, liquidity and credit risk. A breakdown of valuation adjustments is provided in Capital and risk management: Balance sheet analysis - derivatives on page 204.

Credit valuation adjustments (CVA)

CVA represent an estimate of the adjustment to fair value that a market participant would make to incorporate the counterparty credit risk inherent in derivative exposures. CVA is actively managed by a credit and market risk hedging process, and therefore movements in CVA are partially offset by trading revenue on the hedges.

The CVA is calculated on a portfolio basis reflecting an estimate of the amount a third party would charge to assume the credit risk.

Where a positive exposure exists to a counterparty that is considered to be close to default, the CVA is calculated by applying expected losses to the current level of exposure. Otherwise, expected losses are applied to estimated potential future positive exposures which are modelled to reflect the volatility of the market factors which drive the exposures and the correlation between those factors.

Expected losses are determined from market implied probabilities of default and internally assessed recovery levels. The probability of default is calculated with reference to observable credit spreads and observable recovery levels. For counterparties where observable data do not exist, the probability of default is determined from the credit spreads and recovery levels of similarly rated entities.

Collateral held under a credit support agreement is factored into the CVA calculation. In such cases where RBS holds collateral against counterparty exposures, CVA is held to the extent that residual risk remains.

Bid-offer, liquidity and other reserves

Fair value positions are adjusted to bid (long positions) or offer (short positions) levels, by marking individual cash positions directly to bid or offer or by taking bid-offer reserves calculated on a portfolio basis for derivatives exposures. The bid-offer approach is based on current market spreads and standard market bucketing of risk.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

Bid-offer adjustments for each risk factor (including delta (the degree to which the price of an instrument changes in response to a change in the price of the underlying), vega (the degree to which the price of an instrument changes in response to the volatility in the price of the underlying), correlation (the degree to which prices of different instruments move together) are determined by aggregating similar risk exposures arising on different products. Additional basis bid-offer reserves are taken where these are charged in the market.

Bid-offer spreads vary by maturity and risk type to reflect different spreads in the market. For positions where there is no observable quote, the bid-offer spreads are widened in comparison to proxies to reflect reduced liquidity or observability. Bid-offer methodologies may also incorporate liquidity triggers whereby wider spreads are applied to risks above pre-defined thresholds.

As permitted by IFRS 13, netting is applied on a portfolio basis to reflect the value at which RBS believes it could exit the portfolio, rather than the sum of exit costs for each of the portfolio's individual trades. This is applied where the asset and liability positions are managed as a portfolio for risk and reporting purposes.

Vanilla risk on exotic products is typically reserved as part of the overall portfolio based calculation e.g. delta and vega risk on exotic products are included within the delta and vega bid-offer calculations.

Product related risks such as correlation risk, attract specific bid-offer reserves. Additional reserves are provided for exotic products to ensure overall reserves match market close-out costs. These market close-out costs inherently incorporate risk decay and cross-effects (taking into account how changes in one risk factor may affect other inputs rather than treating all risk factors independently) that are unlikely to be adequately reflected in a static hedge based on vanilla instruments. Where there is limited bid-offer information for a product, the pricing approach and risk management strategy are taken into account when assessing the reserve.

Reserves are also held in relation to fair value funding costs that are not within the scope of FVA, potential losses arising from receivables where there is a counterparty dispute and certain uncollateralised derivatives after the pricing impact of a significant novation in 2017 was incorporated into transactions of a similar nature.

The discount rates applied to derivative cash flows in determining fair value reflect any underlying collateral agreements. Collateralised derivatives are generally discounted at the relevant OIS-related rates at an individual trade level. Reserves are held to the extent that the discount rates applied do not reflect all of the terms of the collateral agreements.

Funding valuation adjustment (FVA)

FVA represents an estimate of the adjustment to fair value that a market participant would make to incorporate funding costs and benefits that arise in relation to uncollateralised derivative exposures.

Funding levels are applied to estimated potential future exposures, the modelling of which is consistent with the approach used in the calculation of CVA. The counterparty contingent nature of the exposures is reflected in the calculation.

Amounts deferred on initial recognition

On initial recognition of financial assets and liabilities valued using valuation techniques incorporating information other than observable market data, any difference between the transaction price and that derived from the valuation technique is deferred. Such amounts are recognised in profit or loss over the life of the transaction; when market data becomes observable; or when the transaction matures or is closed out as appropriate. At 31 December 2017, net gains of £56 million (2016 - £72 million) were carried forward. During the year, net gains of £64 million (2016 - £27 million) were deferred and £80 million (2016 - £48 million) were recognised in the income statement.

Own credit

RBS takes into account the effect of its own credit standing when valuing financial liabilities recorded at fair value in accordance with IFRS. Own credit spread adjustments are made when valuing issued debt held at fair value, including issued structured notes, and derivatives. An own credit adjustment is applied to positions where it is believed that counterparties would consider RBS's creditworthiness when pricing trades.

For issued debt this adjustment is based on debt issuance spreads above average inter-bank rates (at a range of tenors). Secondary senior debt issuance spreads are used in the calculation of the own credit adjustment applied to senior debt.

The fair value of RBS's derivative financial liabilities is also adjusted to reflect RBS's own credit risk through debit valuation adjustments (DVA). Expected gains are applied to estimated potential future negative exposures, the modelling of which is consistent with the approach used in the calculation of CVA. Expected gains are determined from market implied probabilities of default and recovery levels. FVA is considered the primary adjustment applied to derivative liabilities. The extent to which DVA and FVA overlap is eliminated from DVA.

The own credit adjustment does not alter cash flows, is not used for performance management, is disregarded for regulatory capital reporting processes and will reverse over time provided the liability is not repaid at a premium or a discount.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

The own credit adjustments (OCA) recorded on held-for-trading (HFT) and designated as at fair value through profit or loss (DFV) debt securities in issue, subordinated liabilities and derivative liabilities are set out below. The cumulative adjustments below represent reductions/(increases) to the balance sheet liability amounts.

	Debt Securities in issue (3)		Subordinated liabilities DFV £m	Derivatives £m	Total £m
	HFT £m	DFV £m			
Cumulative own credit adjustment (2)					
2017	(47)	(37)	116	—	32
2016	(34)	(6)	196	81	237
Carrying values of underlying liabilities	£bn	£bn	£bn		
2017	1.1	3.4	0.9		
2016	1.6	4.6	1.0		

Notes:

- (1) The OCA does not alter cash flows and is not used for performance management.
- (2) Includes wholesale and retail note issuances.
- (3) The reserve movement between periods will not equate to the reported profit or loss or other comprehensive income related to own credit. RBS has early adopted the provisions within IFRS 9 Financial Instruments in respect of the presentation of gains and losses on financial liabilities designated at fair value through profit and loss from 1 January 2017. The balance sheet reserve is stated by converting underlying currency balances at spot rates for each period, whereas the income statement includes intra-period foreign exchange sell-offs.
- (4) The cumulative adjustment for debt securities in issue is opposite to that for subordinated liabilities: debt securities in issue were issued relatively recently at wider than current spreads, whilst many of the subordinated liabilities were issued before the financial crisis at significantly tighter spreads.

Key points

- The cumulative OCA decrease during the year was mainly due to the tightening of RBS issuance spreads. The OCA on senior debt is determined by reference to secondary debt issuance spreads, which tightened by 52 basis points at the five year level to 10 basis points at 31 December 2017 (31 December 2016 – 62 basis points).
- RBS subordinated debt spreads at the five year level tightened to 169 basis points at 31 December 2017 (31 December 2016 – 281 basis points).
- RBS five year CDS credit spreads tightened to 75 basis points at 31 December 2017 (31 December 2016 – 125 basis points).
- DVA in respect of derivative liabilities has reduced to nil following the tightening in spreads in 2017, such that adjustments overlap with FVA and are thus eliminated from DVA.

Financial instruments: carried at fair value - valuation hierarchy

The following tables show financial instruments carried at fair value on the Group's balance sheet by valuation hierarchy – level 1, level 2 and level 3 and related level 3 sensitivities.

2017	Level 1	Level 2	Level 3	Total	Level 3 sensitivity (5)

Notes:

(1) Level 1: valued using unadjusted quoted prices in active markets, for identical financial instruments. Examples include G10 government securities, listed equity shares, certain exchange-traded derivatives and certain US agency securities.

Level 2: valued using techniques based significantly on observable market data. Instruments in this category are valued using:

- (a) quoted prices for similar instruments or identical instruments in markets which are not considered to be active; or
 (b) valuation techniques where all the inputs that have a significant effect on the valuations are directly or indirectly based on observable market data.

Level 2 instruments include non-G10 government securities, most government agency securities, investment-grade corporate bonds, certain mortgage products, including CLOs, most bank loans, repos and reverse repos, less liquid listed equities, state and municipal obligations, most notes issued, and certain money market securities and loan commitments and most OTC derivatives.

Level 3: instruments valued using a valuation technique where at least one input which could have a significant effect on the instrument's valuation, is not based on observable market data. Level 3 instruments primarily include cash instruments which trade infrequently, certain syndicated and commercial mortgage loans, certain emerging markets instruments, unlisted equity shares, certain residual interests in securitisations, asset-backed products and less liquid debt securities, certain structured debt securities in issue, and OTC derivatives where valuation depends upon unobservable inputs such as certain credit and exotic derivatives. No gain or loss is recognised on the initial recognition of a financial instrument valued using a technique incorporating significant unobservable data.

- (2) Transfers between levels are deemed to have occurred at the beginning of the quarter in which the instruments were transferred. There were no significant transfers between level 1 and level 2.
 (3) For an analysis of debt securities (by issuer, measurement classification and analysis of asset backed securities) and derivatives (by type of contract) refer to Capital and risk management - Credit risk.
 (4) The determination of an instrument's level cannot be made at a global product level as a single product type can be in more than one level. For example, a single name corporate credit default swap could be in level 2 or level 3 depending on whether the reference counterparty's obligations are liquid or illiquid.
 (5) Sensitivity represents the favourable and unfavourable effect on the income statement or the statement of comprehensive income due to reasonably possible changes to valuations using reasonably possible alternative inputs in RBS's valuation techniques or models. Level 3 sensitivities are calculated on a trade or low level portfolio basis and hence these aggregated figures do not reflect the correlation between some of the sensitivities. In particular, for some portfolios, the sensitivities may be negatively correlated where a downward movement in one asset would produce an upward movement in another, but due to the additive presentation above, this correlation cannot be shown.

Notes on the consolidated accounts

9 Financial instruments: valuation techniques

The table below shows a breakdown of valuation techniques and the ranges for those unobservable inputs used in valuation models and techniques that have a material impact on the valuation of level 3 financial instruments.

Financial instruments	Level 3 (£bn)		Valuation technique	Unobservable inputs	Range	
	Assets	Liabilities			Low	High
Loans and advances	0.2		Price-based	Price	0%	100.53%
Debt securities	1.2		Price-based	Price	0	369.81 GBP
			Price-based	Price	99.94%	101.84%
Equity shares	0.2		Price-based	Price	0.164	585,066 GBP
			Valuation	Discount factor	9%	13%
			Valuation	Fund NAV	80%	120%
Customer accounts		0.2	DCF based on recoveries	Correlation	(29%)	86.05%
				Interest rate delta	(0.38%)	2.61%
Debt securities in issue		0.3	Price-based	Price	56.77 JPY	148.68 EUR
			Valuation	Fund NAV	0.202	977.24 GBP
Derivatives	1.7	1.7				
Credit	0.2	0.1	DCF based on recoveries	Credit spreads	0.1 bps	500 bps
			Option pricing model	Correlation	(50%)	80%
				Volatility	38%	80%
				Upfront points	0%	99%
				Recovery rate	10%	40%
Interest and foreign exchange contracts	1.4	1.5	Option pricing model	Correlation	(75%)	100%
				Volatility	0%	292%
Equity	0.1	0.1	Option pricing model	Correlation	(57%)	95%
				Forward	146%	189%
				Volatility	7%	11%

Notes:

- (1) The table above excludes unobservable inputs where the impact on valuation is not significant. Movements in the underlying input may have a favourable or unfavourable impact on the valuation depending on the particular terms of the contract and the exposure. For example, an increase in the credit spread of a bond would be favourable for the issuer but unfavourable for the note holder. Whilst RBS indicates where it considers that there are significant relationships between the inputs, there inter-relationships will be affected by macro economic factors including interest rates, foreign exchange rates or equity index levels.
- (2) Credit spreads and discount margins: credit spreads and margins express the return required over a benchmark rate or index to compensate for the credit risk associated with a cash instrument. A higher credit spread would indicate that the underlying instrument has more credit risk associated with it. Consequently, investors require a higher yield to compensate for the higher risk. The discount rate comprises credit spread or margin plus the benchmark rate; it is used to value future cash flows.
- (3) Price and yield: There may be a range of prices used to value an instrument that may be a direct comparison of one instrument or portfolio with another or, movements in a more liquid instrument may be used to indicate the movement in the value of a less liquid instrument. The comparison may also be indirect in that adjustments are made to the price to reflect differences between the pricing source and the instrument being valued, for example different maturity, credit quality, seniority or expected pay-outs. Similarly to price, an instrument's yield may be compared with other instruments' yields either directly or indirectly.
- (4) Recovery rate: reflects market expectations about the return of principal for a debt instrument or other obligations after a credit event or on liquidation. Recovery rates tend to move conversely to credit spreads.
- (5) Valuation: for private equity investments, risk may be measured by beta, estimated by looking at past prices of similar stocks and from valuation statements where valuations are usually derived from earnings measures such as EBITDA or net asset value.
- (6) Correlation: measures the degree by which two prices or other variables are observed to move together. If they move in the same direction there is positive correlation; if they move in opposite directions there is negative correlation. Correlations typically include relationships between: default probabilities of assets in a basket (a group of separate assets), exchange rates, interest rates and other financial variables.
- (7) Volatility: a measure of the tendency of a price to change with time.
- (8) Interest rate delta: these ranges represent the low/high marks on the relevant discounting curve.
- (9) Upfront points: where CDS contracts are standardised, the inherent spread of the trade may exceed the standard premium paid or received under the contract. Upfront points will compensate for the difference between the standard premium and the actual premium at the start of the contract.
- (10) RBS does not have any material liabilities measured at fair value that are issued with an inseparable third party credit enhancement.

Notes on the consolidated accounts

9 Financial instruments - valuation continued

The Level 3 sensitivities on the previous page are calculated at a trade or low level portfolio basis. They are not calculated on an overall portfolio basis and therefore do not reflect the likely potential uncertainty on the portfolio as a whole. The figures are aggregated and do not reflect the correlated nature of some of the sensitivities. In particular, for some of the portfolios the sensitivities may be negatively correlated where a downwards movement in one asset would produce an upwards movement in another, but due to the additive presentation of the above figures this correlation cannot be displayed. The actual potential downside sensitivity of the total portfolio may be less than the non-correlated sum of the additive figures as shown in the above table.

Areas of judgment

Whilst the business has simplified, the diverse range of products historically traded by RBS results in a wide range of instruments that are classified into Level 3 of the hierarchy. Whilst the majority of these instruments naturally fall into a particular level, for some products an element of judgment is required. The majority of RBS financial instruments carried at fair value are classified as Level 2: inputs are observable either directly (i.e. as a price) or indirectly (i.e. derived from prices).

Active and inactive markets

A key input in the decision making process for the allocation of assets to a particular level is market activity. In general, the degree of valuation uncertainty depends on the degree of liquidity of an input.

Where markets are liquid, little judgment is required. However, when the information regarding the liquidity in a particular market is not clear, a judgment may need to be made. This can be more difficult as assessing the liquidity of a market is not always straightforward. For an equity traded on an exchange, daily volumes of trading can be seen, but for an over-the-counter (OTC) derivative assessing the liquidity of the market with no central exchange is more difficult.

A key related matter is where a market moves from liquid to illiquid or vice versa. Where this change is considered to be temporary, the classification is not changed. For example, if there is little market trading in a product on a reporting date but at the previous reporting date and during the intervening period the market has been considered to be liquid, the instrument will continue to be classified in the same level in the hierarchy. This is to provide consistency so that transfers between levels are driven by genuine changes in market liquidity and do not reflect short term or seasonal effects. Material movements between levels are reviewed quarterly.

The breadth and depth of the IPV data allows for a rules based quality assessment to be made of market activity, liquidity and pricing uncertainty, which assists with the process of allocation to an appropriate level. Where suitable independent pricing information is not readily available, the quality assessment will result in the instrument being assessed as Level 3.

Modelled products

For modelled products the market convention is to quote these trades through the model inputs or parameters as opposed to a cash price equivalent. A mark-to-market is derived from the use of the independent market inputs calculated using RBS's model.

The decision to classify a modelled instrument as Level 2 or 3 will be dependent upon the product/model combination, the currency, the maturity, the observability and quality of input parameters and other factors. All these must be assessed to classify the asset.

If an input fails the observability or quality tests then the instrument is considered to be in Level 3 unless the input can be shown to have an insignificant effect on the overall valuation of the product.

The majority of derivative instruments for example vanilla interest rate swaps, foreign exchange swaps and liquid single name credit derivatives are classified as Level 2 as they are vanilla products valued using observable inputs. The valuation uncertainty on these is considered to be low and both input and output testing may be available.

Non-modelled products

Non-modelled products are generally quoted on a price basis and can therefore be considered for each of the three levels. This is determined by the market activity, liquidity and valuation uncertainty of the instruments which is in turn measured from the availability of independent data used by the IPV process to allocate positions to IPV quality levels.

The availability and quality of independent pricing information are considered during the classification process. An assessment is made regarding the quality of the independent information. For example, where consensus prices are used for non-modelled products, a key assessment of the quality of a price is the depth of the number of prices used to provide the consensus price. If the depth of contributors falls below a set hurdle rate, the instrument is considered to be Level 3. This hurdle rate is that used in the IPV process to determine the IPV quality rating. However, where an instrument is generally considered to be illiquid, but regular quotes from market participants exist, these instruments may be classified as Level 2 depending on frequency of quotes, other available pricing and whether the quotes are used as part of the IPV process or not.

For some instruments with a wide number of available price sources, there may be differing quality of available information and there may be a wide range of prices from different sources. In these situations the highest quality source is used to determine the classification of the asset. For example, a tradable quote would be considered a better source than a consensus price.

Notes on the consolidated accounts

9

Financial instruments: level 3 portfolios and sensitively methodologies

Reasonably plausible alternative assumptions of unobservable inputs are determined based on a specified target level of certainty of 90%. The assessments recognise different favourable and unfavourable valuation movements where appropriate. Each unobservable input within a product is considered separately and sensitivity is reported on an additive basis.

Alternative assumptions are determined with reference to all available evidence including consideration of the following: quality of independent pricing information taking into account consistency between different sources, variation over time, perceived tradability or otherwise of available quotes; consensus service dispersion ranges; volume of trading activity and market bias (e.g. one-way inventory); day 1 profit or loss arising on new trades; number and nature of market participants; market conditions; modelling consistency in the market; size and nature of risk; length of holding of position; and market intelligence.

Other considerations

Whilst certain inputs used to calculate CVA, FVA and own credit adjustments are not based on observable market data, the uncertainty of the inputs is not considered to have a significant effect on the net valuation of the related derivative portfolios and issued debt. The classification of the derivative portfolios and issued debt is not determined by the observability of these inputs and any related sensitivity does not form part of the Level 3 sensitivities presented.

Level 3

The following table shows the movement in level 3 assets and liabilities in the year.

	2017				2016			
	FVTPL assets (2)	AFS assets	Total assets	Total liabilities	FVTPL assets (2)	AFS assets	Total assets	Total liabilities
	£m	£m	£m	£m	£m	£m	£m	£m
At 1 January	4,111	426	4,537	2,997	3,152	765	3,917	2,716
Amount recorded in the income statement (1)	(654)	82	(572)	(341)	(124)	5	(119)	(70)
Amount recorded in the statement of comprehensive income	—	2	2	—	—	71	71	—
Level 3 transfers in	719	275	994	530	2,135	29	2,164	1,408
Level 3 transfers out	(1,015)	(3)	(1,018)	(672)	(1,020)	(113)	(1,133)	(1,052)
Issuances	371	—	371	—	3	—	3	35
Purchases	1,789	19	1,808	412	1,298	42	1,340	600

Foreign exchange and other adjustments	(16)	(2)	(18)	5	49	9	58	57
At 31 December	2,790	498	3,288	2,185	4,111	426	4,537	2,997
Amounts recorded in the income statement in respect of balances held at year end								
- unrealised	(84)	4	(80)	595	29	11	40	13
- realised	276	—	276	(100)	282	(4)	278	(34)

Notes:

(1) There were £240 million net losses on HFT instruments (2016 - £45 million) recorded in income from trading activities in continuing operations. Net gains on other instruments of £9 million (2016 - £4 million losses) were recorded in other operating income and interest income as appropriate in continuing operations. There were no losses in discontinued operations.

(2) Fair value through profit or loss comprises held-for-trading predominantly and designated at fair value through profit and loss.

9

Financial instruments: fair value of financial instruments not carried at fair value [continued](#)

The fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Quoted market values are used where available; otherwise, fair values have been estimated based on discounted expected future cash flows and other valuation techniques. These techniques involve uncertainties and require assumptions and judgments covering prepayments, credit risk and discount rates. Furthermore there is a wide range of potential valuation techniques. Changes in these assumptions would significantly affect estimated fair values. The fair values reported would not necessarily be realised in an immediate sale or settlement.

The assumptions and methodologies underlying the calculation of fair values of financial instruments at the balance sheet date are as follows:

Short-term financial instruments

For certain short-term financial instruments: cash and balances at central banks, items in the course of collection from other banks, settlement balances, items in the course of transmission to other banks, customer demand deposits and notes in circulation, carrying value is a reasonable approximation of fair value.

Loans and advances to banks and customers

In estimating the fair value of loans and advances to banks and customers measured at amortised cost, RBS's loans are segregated into appropriate portfolios reflecting the characteristics of the constituent loans. Two principal methods are used to estimate fair value:

- (a) Contractual cash flows are discounted using a market discount rate that incorporates the current spread for the borrower or where this is not observable, the spread for borrowers of a similar credit standing. This method is used for portfolios where counterparties have external ratings: institutional and corporate lending in NatWest Markets.
- (b) Expected cash flows (unadjusted for credit losses) are discounted at the current offer rate for the same or similar products. This approach is adopted for lending portfolios in UK PBB, Ulster Bank RoI, Commercial Banking (SME loans) and Private Banking in order to reflect the homogeneous nature of these portfolios.

For certain portfolios where there are very few or no recent transactions, such as Ulster Bank RoI's portfolio of lifetime tracker mortgages, a bespoke approach is used.

Debt securities

The majority of debt securities are valued using quoted prices in active markets, or using quoted prices for similar assets in active markets. Fair values of the rest are determined using discounted cash flow valuation techniques.

Deposits by banks and customer accounts

Fair values of deposits are estimated using discounted cash flow valuation techniques.

Debt securities in issue and subordinated liabilities

Fair values are determined using quoted prices for similar liabilities where available or by reference to valuation techniques, adjusting for own credit spreads where appropriate.

10 Financial instruments - maturity analysis

Remaining maturity

The following table shows the residual maturity of financial instruments, based on contractual date of maturity.

	2017			2016

10 Financial instruments – maturity analysis *continued* Assets and liabilities by contractual cash flow maturity

The tables below show the contractual undiscounted cash flows receivable and payable, up to a period of 20 years, including future receipts and payments of interest of financial assets and liabilities by contractual maturity. The balances in the following tables do not agree directly with the consolidated balance sheet, as the tables include all cash flows relating to principal and future coupon payments, presented on an undiscounted basis. The tables have been prepared on the following basis:

Financial assets have been reflected in the time band of the latest date on which they could be repaid, unless earlier repayment can be demanded by RBS. Financial liabilities are included at the earliest date on which the counterparty can require repayment, regardless of whether or not such early repayment results in a penalty. If the repayment of a financial instrument is triggered by, or is subject to, specific criteria such as market price hurdles being reached, the asset is included in the time band that contains the latest date on which it can be repaid, regardless of early repayment.

The liability is included in the time band that contains the earliest possible date on which the conditions could be fulfilled, without considering the probability of the conditions being met.

For example, if a structured note is automatically prepaid when an equity index exceeds a certain level, the cash outflow will be included in the less than three months period, whatever the level of the index at the year end. The settlement date of debt securities in issue, issued by certain securitisation vehicles consolidated by RBS, depends on when cash flows are received from the securitised assets. Where these assets are prepayable, the timing of the cash outflow relating to securities assumes that each asset will be prepaid at the earliest possible date. As the repayments of assets and liabilities are linked, the repayment of assets in securitisations is shown on the earliest date that the asset can be prepaid, as this is the basis used for liabilities.

The principal amounts of financial assets and liabilities that are repayable after 20 years or where the counterparty has no right to repayment of the principal are excluded from the table, as are interest payments after 20 years.

Held-for-trading assets of £243.9 billion (2016 - £328.9 billion) and liabilities of £232.9 billion (2016 - £317.0 billion) have been excluded from the following tables.

2017	0-3 months £m	3-12 months £m	1-3 years £m	3-5 years £m	5-10 years £m	10-20 years £m

Commitments (2)	134,324	—	—	—	—	—
	142,191	—	—	—	—	—

Notes:

(1) RBS is only called upon to satisfy a guarantee when the guaranteed party fails to meet its obligations. RBS expects most guarantees it provides to expire unused.

(2) RBS has given commitments to provide funds to customers under undrawn formal facilities, credit lines and other commitments to lend subject to certain conditions being met by the counterparty. RBS does not expect all facilities to be drawn, and some may lapse before drawdown.

11 Financial assets - impairments

The following table shows the movement in the provision for impairment losses on loans and advances.

	Individually assessed £m	Collectively assessed £m	Latent £m	2017 £m	2016 £m

Loans and advances to customers (1)	7,423	3,424	3,999	8,865	4,055	4,810

Note:

(1) Impairment provisions individually assessed on balances of £3,418 million (2016 - £4,186 million).

	Carrying value	
	2017 £m	2016 £m
Available-for-sale securities		
Debt securities	2	33
Equity shares	20	23
Loans and receivables		
Debt securities	1	2
	23	58

Financial and non-financial assets recognised on the balance sheet, obtained during the year by taking possession of collateral or calling on other credit enhancements, were £30 million (2016 - £30 million).

In general, RBS seeks to dispose of property and other assets not readily convertible into cash, obtained by taking possession of collateral, as rapidly as the market for the individual asset permits.

12 Derivatives

Companies within RBS transact derivatives as principal either as a trading activity or to manage balance sheet foreign exchange, interest rate and credit risk.

RBS enters into fair value hedges, cash flow hedges and hedges of net investments in foreign operations. The majority of RBS's interest rate hedges relate to the management of RBS's non-trading interest rate risk. RBS manages this risk within approved limits. Residual risk positions are hedged with derivatives principally interest rate swaps. Suitable larger financial instruments are fair value hedged; the remaining exposure, where possible, is hedged by derivatives documented as cash flow hedges and qualifying for hedge accounting. The majority of RBS's fair value hedges involve interest rate swaps hedging the interest rate risk in recognised financial assets and financial liabilities. Cash flow hedges relate to exposures to the variability in future interest payments and receipts on forecast transactions and on recognised financial assets and financial liabilities. RBS hedges its net investments in foreign operations with currency borrowings and forward foreign exchange contracts.

For cash flow hedge relationships of interest rate risk, the hedged items are actual and forecast variable interest rate cash flows arising from financial assets and financial liabilities with interest rates linked to LIBOR, EURIBOR or the Bank of England Official Bank Rate. The financial assets are customer loans and the financial liabilities are customer deposits and LIBOR linked medium-term notes and other issued securities. At 31 December 2017 variable rate financial assets of £91 billion (2016 - £81 billion) and variable rate financial liabilities of £69 billion (2016 - £55 billion) were hedged in such cash flow hedge relationships.

For cash flow hedging relationships, the initial and ongoing effectiveness is assessed by comparing movements in the fair value of the expected highly probable forecast interest cash flows with movements in the fair value of the expected changes in cash flows from the hedging interest rate swap. Hedge effectiveness is measured on a cumulative basis over a time period management feels appropriate. The method of calculating hedge ineffectiveness is the hypothetical derivative method.

For fair value hedge relationships of interest rate risk, the hedged items are typically large corporate fixed-rate loans, government securities, fixed rate finance leases, fixed rate medium-term notes or preference shares classified as debt. At 31 December 2017, fixed rate financial assets of £36 billion (2016 - £29 billion) and fixed rate financial liabilities of £22 billion (2016 - £23 billion) were hedged by interest rate swaps in fair value hedge relationships.

The initial and ongoing effectiveness of fair value hedge relationships is assessed on a cumulative basis by comparing movements in the fair value of the hedged item attributable to the hedged risk with changes in the fair value of the hedging interest rate swap over a time period management feels is appropriate.

Notes on the consolidated accounts

15 Intangible assets continued

The Group's goodwill acquired in business combinations is reviewed annually at 31 December for impairment. Impairment testing involves the comparison of the carrying value of each cash-generating unit (CGU) with its recoverable amount. The carrying values of the segments reflect the equity allocations made by management which are consistent with the Group's capital targets. Recoverable amount is the higher of fair value and value in use. Value in use is the present value of expected future cash flows from the CGU. Fair value is the price that would be received to sell an asset in an orderly transaction between market participants.

Impairment testing inherently involves a number of judgmental areas: the preparation of cash flow forecasts for periods that are beyond the normal requirements of management reporting; the assessment of the discount rate appropriate to the business; estimation of the fair value of CGUs; and the valuation of the separable assets of each business whose goodwill is being reviewed.

The carrying value of goodwill and the amount by which it is exceeded by the recoverable amount are set out below by reportable segment, along with the key assumptions applied in calculating the recoverable amount and sensitivities to changes in those assumptions. The recoverable amount of UK Personal & Business Banking, Commercial Banking and RBS International were £21.6 billion (2016 - £23.9 billion), £13.7 billion (2016 - £14.1 billion) and £3.3 billion (2016 - £2.7 billion) respectively.

	Goodwill £bn	Assumptions		Recoverable amount exceeded carrying value £bn	Consequential impact of 1% adverse movement in		Consequential impact of 5% adverse movement		Break even discount rate %

Investment property valuations principally employ present value techniques that discount expected cash flows. Expected cash flows reflect rental income, occupancy and residual market values; valuations are sensitive to changes in these factors. The fair value measurement of non-specialised properties in locations where the market for such properties is active and transparent are categorised as level 2 - 2% (2016 - 2%); otherwise investment property fair value measurements are categorised as level 3 - 98% (2016 - 98%). A 5% change in the most sensitive assumption, residual values, is £40 million.

Valuations were carried out by qualified surveyors who are members of the Royal Institution of Chartered Surveyors, or an equivalent overseas body; property with a fair value of £201 million (2016 - £222 million) was valued by independent valuers.

Rental income from investment properties was £84 million (2016 - £79 million). Direct operating expenses of investment properties in continuing operations were £9 million (2016 - £16 million).

RBS sold the final tranche of its interest in Citizens Financial Group, Inc (Citizens) during October 2015. Consequently, Citizens was classified as a disposal group at 31 December 2014 and presented as a discontinued operation until October 2015. From 3 August 2015 until the final tranche was sold in October 2015, Citizens was an associated undertaking.

The gain on disposal in 2015 in relation to Citizens comprised £248 million on the derecognition of assets and liabilities, and £989 million in respect of reserves reclassified in accordance with IFRS.

There was no profit from discontinued operations attributable to non-controlling interests (2016 - nil; 2015 - £334 million).

(b) Operating cash flows attributable to discontinued operations

Included within the Group's cash flows are the following amounts attributable to discontinued operations:

	2017 £m	2016 £m	2015 £m
Net cash flows from operating activities	—	—	(57)
Net cash flows from investing activities	—	—	(6)
Net cash flows from financing activities	—	—	10

At 31 December 2017	1,053	870	3,243	641	1,950	7,757

Notes:

(1) To reflect the increased volume of complaints following the FCA's introduction of an August 2019 PPI timebar as outlined in FCA announcement CP17/3 and the introduction of new Plevin (unfair commission) complaint handling rules, RBS increased its provision for PPI by £175m in 2017 (2016 - £601 million, 2015 - £600 million, 2014 - £650 million) bringing the cumulative charge to £5.1 billion, of which £3.7 billion (74%) in redress and £0.4 billion in administrative expenses had been paid by 31 December 2017. Of the £5.1 billion cumulative charge, £4.6 billion relates to redress and £0.5 billion to administrative expenses.

The principal assumptions underlying RBS's provision in respect of PPI sales are: assessment of the total number of complaints that RBS will receive before 29 August 2019; the proportion of these that will result in redress; and the average cost of such redress. The number of complaints has been estimated from an analysis of RBS's portfolio of PPI policies sold by vintage and by product. Estimates of the percentage of policyholders that will lodge complaints (the take up rate) and of the number of these that will be upheld (the uphold rate) have been established based on recent experience, guidance in FCA policy statements and the expected rate of responses from proactive customer contact. The average redress assumption is based on recent experience and FCA calculation rules. The table below shows the sensitivity of the provision to changes in the principal assumptions (all other assumptions remaining the same).

Assumptions	Actual to date	Future expected	Sensitivity	
			Change in assumption %	Consequential change in provision £m
Customer initiated complaints (1)	2,386k	429k	+/- 5	+/- 30
Uphold rate (2)	90%	94%	+/- 1	+/- 6
Average redress (3)	£1,681	£1,476	+/- 5	+/- 30
Processing costs per claim (4)	£160	£142	+/- £20	+/- 3

Notes:

- Claims received directly by RBS to date, including those received via CMCs and Plevin (commission) only. Excluding those for proactive mailings and where no PPI policy exists.
- Average uphold rate per customer initiated claims received directly by RBS to end of timebar for both PPI (mis-sale) and Plevin (commission), excluding those for which no PPI policy exists.
- Average redress for PPI (mis-sale) and Plevin (commission) pay-outs.
- Processing costs per claim on a valid complaints basis, includes direct staff costs and associated overhead - excluding FOS fees.

Notes on the consolidated accounts

20 Provisions for liabilities and charges *continued*

Interest that will be payable on successful complaints has been included in the provision as has the estimated cost to RBS of administering the redress process. There are uncertainties as to the eventual cost of redress which will depend on actual complaint volumes, take up and uphold rates and average redress costs. Assumptions related to these are inherently uncertain and the ultimate financial impact may be different from the amount provided. We continue to monitor the position closely and refresh the underlying assumptions.

Background information in relation to PPI claims is given in Note 31.

- (2) In the US, RBS is subject to civil litigation and various investigations relating to its issuance and underwriting of US mortgage-backed securities (RMBS). An additional charge of US\$650 million (£492 million) was taken in Q4 2017 in connection with these matters, resulting in a year to date charge of US\$971 million (£714 million). Detailed descriptions of RBS's legal proceedings and discussion of the associated uncertainties are given in Note 31.

In July 2017, RBS reached a settlement with the Federal Housing Finance Agency (FHFA) as conservator of Fannie Mae and Freddie Mac, to resolve claims by FHFA in relation to RBS's issuance and underwriting of approximately US\$32 billion (£25 billion) of RMBS in the US. As part of the settlement, FHFA's outstanding litigation against RBS relating to those securities was withdrawn.

Under the settlement, RBS paid FHFA US\$5.5 billion (£4.2 billion), of which US\$754 million (£581 million) was reimbursed to RBS under indemnification agreements with third parties. The cost to RBS (net of the indemnity mentioned above) of US\$4.75 billion (£3.65 billion) was largely covered by then-existing provisions but an incremental charge of US\$196 million (£151 million) was recorded in Q2 2017 in relation to the settlement.

- (3) RBS is party to certain legal proceedings and regulatory investigations and continues to co-operate with a number of regulators. All such matters are periodically reassessed with the assistance of external professional advisers, where appropriate, to determine the likelihood of RBS incurring a liability and to evaluate the extent to which a reliable estimate of any liability can be made. Details of these investigations and a discussion of the nature of the associated uncertainties are given in Note 31.
- (4) RBS recognised a £750 million provision in 2016 as a consequence of the announcement that HM Treasury is seeking a revised package of remedies that would conclude its remaining State Aid commitments. An additional charge of £50 million was taken in Q2 2017 following further revisions to the package, taking the total provision to £800 million.
- (5) The majority of property provisions relate to vacant leasehold property and comprise the present value of the shortfall between rentals payable and rentals receivable from sub-letting. In addition to the £800 million provision taken as an estimate of the cost of completing RBS's State Aid divestment commitments as referred to in (4), other provisions include restructuring provisions of £482 million principally in relation to termination benefits.

Overseas tax losses carried forward		
- Ulster Bank Ireland DAC	259	249
	<u>939</u>	<u>1,050</u>

Notes on the consolidated accounts

22 Deferred tax continued

UK tax losses

Under UK tax rules, tax losses can be carried forward indefinitely. In periods from 1 April 2015, the Finance Act 2015 limits the offset of losses carried forward by UK banks to 50% of profits. In periods from 1 April 2016, the Finance Act 2016 further limits the offset of losses carried forward by UK banks to 25% of profits. The main rate of UK Corporation Tax reduced from 20% to 19% from 1 April 2017 and will reduce to 17% from 1 April 2020. Under the Finance (No 2) Act 2015, tax losses arising prior to 1 January 2016 are given credit in future periods at the main rate of UK corporation tax, excluding the Banking Surcharge rate (8%) introduced by the Act. Deferred tax assets and liabilities at 31 December 2017 take into account the reduced rates in respect of tax losses and non-banking temporary differences and where appropriate, the banking surcharge inclusive rate in respect of other banking temporary differences.

The Royal Bank of Scotland plc – The Royal Bank of Scotland plc expects that the balance of recognised deferred tax asset at 31 December 2017 of £125 million in respect of tax losses amounting to c. £700 million will be substantially recovered by the end of 2022. Since 2012 RBS has reported mixed levels of taxable profits and losses because core banking profitability was offset by a series of restructuring plans as the group reshaped to meet commercial and regulatory demands. In total, £10,247 million of losses have not been recognised in the deferred tax balance at 31 December 2017; such losses will be available to offset 25% of future taxable profits in excess of those forecast in the closing deferred tax asset.

National Westminster Bank plc – A deferred tax asset of £541 million has been recognised in respect of total losses of £3,092 million. The losses arose principally as a result of significant impairment and conduct charges between 2009 and 2012 during challenging economic conditions in the UK banking sector. National Westminster Bank plc returned to tax profitability during 2015 and expects the deferred tax asset to be substantially consumed by future taxable profits by the end of 2024. A reduction in annual profits by £120 million would extend the recovery of the deferred tax asset by one year.

Overseas tax losses

Ulster Bank Ireland DAC – A deferred tax asset of £259 million has been recognised in respect of losses of £2,071 million of total tax losses of £8,596 million carried forward at 31 December 2017. The losses arose principally as a result of significant impairment charges between 2008 and 2013 during challenging economic conditions in the Republic of Ireland; subsequent movements reflect £: € exchange differences. Ulster Bank Ireland DAC returned to profitability during 2014 and expects the deferred tax asset to be substantially consumed by future taxable profits by the end of 2024.

Unrecognised deferred tax

Deferred tax assets of £6,356 million (2016 - £7,940 million; 2015 - £6,349 million) have not been recognised in respect of tax losses and other temporary differences carried forward of £30,049 million (2016 - £33,376 million; 2015 - £27,483 million) in jurisdictions where doubt exists over the availability of future taxable profits. Of these losses and other temporary differences, £4,335 million expire within five years and £7,208 million thereafter. The balance of tax losses and other temporary differences carried forward has no expiry date.

Deferred tax liabilities of £255 million (2016 - £258 million; 2015 - £256 million) have not been recognised in respect of retained earnings of overseas subsidiaries and held-over gains on the incorporation of overseas branches. Retained earnings of overseas subsidiaries are expected to be reinvested indefinitely or remitted to the UK free from further taxation. No taxation is expected to arise in the foreseeable future in respect of held-over gains. Dividends received from overseas are largely exempt from UK tax.

Notes on the consolidated accounts

23 Subordinated liabilities

	2017 £m	2016 £m
Dated loan capital	10,394	15,288
Undated loan capital	2,169	2,775
Preference shares	159	1,356

Shares issued	198	198,599
At 1 January 2017	11,823	11,823,163
Shares issued	142	141,402
At 31 December 2017	11,965	11,964,565

Ordinary shares

There is no authorised share capital under the company's constitution. At 31 December 2017, the directors had authority granted at the 2017 Annual General Meeting to issue up to £1,184 million nominal of ordinary shares other than by pre-emption to existing shareholders.

During 2017, the company allotted and issued the following new ordinary shares of £1 each:

Month	Number of shares	Subscription price per share	Gross proceeds
April	33.4m	239.688p	£80 million
June	29.0m	259.046p	£75 million
September	56.6m	256.027p	£145 million

In addition, the company issued 22 million ordinary shares of £1 each in connection with employee share plans. In October 2015, the company allotted and issued 5.1 billion new ordinary shares of £1 each to HM Treasury on conversion of 51 billion B shares.

The company did not pay an ordinary dividend in 2017 or 2016.

B shares and dividend access share

From December 2009, HM Treasury owned 51 billion B shares with a nominal value of £0.01 each and a dividend access share (DAS) with a nominal value of £0.01.

The B shares carried no voting rights at general meetings of ordinary shareholders and were convertible at any time at HM Treasury's option into ordinary shares at the rate of ten B shares for each ordinary share. In October 2015, all of the B shares were converted into ordinary shares of £1 each.

In March 2016, a final payment of £1,193 million was made to HM Treasury to retire the DAS. The terms for the removal of the DAS were provided by the 'DAS Retirement Agreement' between RBS and HM Treasury. In line with the terms of the DAS Retirement Agreement, upon the final payment, the DAS lost its preferential rights and became a single B share, which was subsequently cancelled.

Preference shares

Under IFRS certain of RBS's preference shares are classified as debt and are included in subordinated liabilities on the balance sheet.

Other securities

Certain of RBS's subordinated securities in the legal form of debt are classified as equity under IFRS.

Notes on the consolidated accounts

25 Share capital continued

These securities entitle the holders to interest which may be deferred at the sole discretion of the company. Repayment of the securities is at the sole discretion of the company on giving between 30 and 60 days notice.

Non-cumulative preference shares

Non-cumulative preference shares entitle the holders thereof (subject to the terms of issue) to receive periodic non-cumulative cash dividends at specified fixed rates for each Series payable out of distributable profits of the company.

The non-cumulative preference shares are redeemable at the option of the company, in whole or in part from time to time at the rates detailed in the table below plus dividends otherwise payable for the then current dividend period accrued to the date of redemption.

In December 2017, the company redeemed in whole the Series F, H, L and 1 non-cumulative preference shares of US\$0.01 and Series 1 non-cumulative convertible preference shares of £0.01. In September 2016, the company redeemed in whole the Series R and T, non-cumulative preference shares of US\$0.01.

In the context of macro-prudential policy discussions, the Board decided to partially neutralise any impact on CET1 capital of coupon and dividend payments from 2013 onwards. £300 million of new equity was issued during the course of 2017 and the Board has decided a further £300 million of new equity will be issued during the course of 2018 to again partially neutralise the CET1 impact of coupon and dividend payments.

Class of preference share	Number of shares in issue	Interest rate	Redemption date on or after	Redemption price per share	Debt/equity (1)
Non-cumulative preference shares of US\$0.01					
Series S	26.4 million	6.60%	30 June 2012	US\$25	Equity
Series U	10,130	floating	29 September 2017	US\$100,000	Equity
Non-cumulative preference shares of €0.01					
Series 1	1.25 million	5.50%	31 December 2009	€ 1,000	Equity
Series 2	784,989	5.25%	30 June 2010	€ 1,000	Equity
Series 3	9,429	LIBOR + 2.33%	29 September 2017	€ 50,000	Equity
Non-cumulative preference shares of £1					
Series 1	54,442	LIBOR + 2.33%	5 October 2012	£1,000	Equity

Note:

(1) Those preference shares where RBS has an obligation to pay dividends are classified as debt; those where distributions are discretionary are classified as equity. The conversion rights attaching to the convertible preference shares may result in RBS delivering a variable number of equity shares to preference shareholders; these convertible preference shares are treated as debt.

In the event that the non-cumulative convertible preference shares are not redeemed on or before the redemption date, the holder may convert them into ordinary shares in the company at the prevailing market price.

Under existing arrangements, no redemption or purchase of any non-cumulative preference shares may be made by the company without the prior consent of the Prudential Regulation Authority.

On a winding-up or liquidation of the company, the holders of the non-cumulative preference shares are entitled to receive, out of any surplus assets available for distribution to the company's shareholders (after payment of arrears of dividends on the cumulative preference shares up to the date of repayment) pari passu with the cumulative preference shares and all other shares of the company ranking pari passu with the non-cumulative preference shares as regards participation in the surplus assets of the company, a liquidation distribution per share equal to the applicable redemption price detailed in the table above, together with an amount equal to dividends for the then current dividend period accrued to the date of payment, before any distribution or payment may be made to holders of the ordinary shares as regards participation in the surplus assets of the company.

Except as described above, the holders of the non-cumulative preference shares have no right to participate in the surplus assets of the company.

Holders of the non-cumulative preference shares are not entitled to receive notice of or attend general meetings of the company except if any resolution is proposed for adoption by the shareholders of the company to vary or abrogate any of the rights attaching to the non-cumulative preference shares or proposing the winding-up or liquidation of the company. In any such case, they are entitled to receive notice of and to attend the general meeting of shareholders at which such resolution is to be proposed and are entitled to speak and vote on such resolution (but not on any other resolution). In addition, in the event that, prior to any general meeting of shareholders, the company has failed to pay in full the three most recent quarterly dividend payments due on the non-cumulative dollar preference shares (other than Series U), the two most recent semi-annual dividend payments due on the non-cumulative convertible dollar preference shares and the most recent dividend payments due on the non-cumulative euro preference shares, the non-cumulative sterling preference shares, the Series U non-cumulative dollar preference shares and the non-cumulative convertible sterling preference shares, the holders shall be entitled to receive notice of, attend, speak and vote at such meeting on all matters together with the holders of the ordinary shares. In these circumstances only, the rights of the holders of the non-cumulative preference shares so to vote shall continue until the company shall have resumed the payment in full of the dividends in arrears.

Notes on the consolidated accounts

26 Other equity

Paid-in equity - comprises equity instruments issued by the company other than those legally constituted as shares.

£93 million 5.6457% 2047 (redeemed June 2017) (5)	-	93
	4,058	4,582

Notes:

- (1) The coupons on these notes are non-cumulative and payable at the company's discretion. In the event the Group's CET1 ratio falls below 7% any outstanding notes will be converted into ordinary shares at a fixed price. While taking the legal form of debt these notes are classified as equity under IFRS.
- (2) Issued in August 2015. In the event of conversion, converted into ordinary shares at a price of \$3.606 nominal per £1 share.
- (3) Issued in August 2016. In the event of conversion, converted into ordinary shares at a price of \$2.284 nominal per £1 share.
- (4) Subordinated notes issued to limited partnerships that have in turn issued partnership preferred securities to RBS Capital Trust D that issued trust preferred securities to investors.
- (5) Preferred securities in issue - £93 million RBS Capital Trust D, fixed/floating rate non-cumulative trust preferred securities.

Merger reserve - the merger reserve comprises the premium on shares issued to acquire NatWest, less goodwill amortisation charged under previous GAAP, and the premium arising on shares issued to acquire Aonach Mor Limited, less amounts realised through subsequent share redemptions by Aonach Mor Limited. No share premium was recorded in the company financial statements through the operation of the merger relief provisions of the Companies Act.

Capital redemption reserve - under UK companies legislation, when shares are redeemed or purchased wholly or partly out of the company's profits, the amount by which the company's issued share capital is diminished must be transferred to the capital redemption reserve. The capital maintenance provisions of UK companies legislation apply to the capital redemption reserve as if it were part of the company's paid up share capital. On 15 June 2017, the Court of Session approved a reduction of RBSG plc capital so that the amounts which stood to the credit of the capital redemption reserve were transferred to retained earnings.

Own shares held - at 31 December 2017, 16 million ordinary shares of £1 each of the company (2016 - 39 million) were held by employee share trusts in respect of share awards and options granted to employees. During the year, the employee share trusts purchased 30 million ordinary shares and delivered 53 million ordinary shares in satisfaction of the exercise of options and the vesting of share awards under the employee share plans.

RBS optimises capital efficiency by maintaining reserves in subsidiaries, including regulated entities. Certain preference shares and subordinated debt are also included within regulatory capital. The remittance of reserves to the company or the redemption of shares or subordinated capital by regulated entities may be subject to maintaining the capital resources required by the relevant regulator.

UK law prescribes that only the reserves of the company are taken into account for the purpose of making distributions and in determining permissible applications of the share premium account.

Acting as a lessor, RBS provides asset finance to its customers. It purchases plant, equipment and intellectual property, renting them to customers under lease arrangements that, depending on their terms, qualify as either operating or finance leases.

Notes on the consolidated accounts

28 Structured entities

A structured entity (SE) is an entity that has been designed such that voting or similar rights are not the dominant factor in deciding who controls the entity, for example, when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. SEs are usually established for a specific, limited purpose. They do not carry out a business or trade and typically have no employees. They take a variety of legal forms - trusts, partnerships and companies - and fulfil many different functions. As well as being a key element of securitisations, SEs are also used in fund management activities in order to segregate custodial duties from the provision of fund management advice.

Consolidated structured entities Securitisations

In a securitisation, assets, or interests in a pool of assets, are transferred generally to an SE which then issues liabilities to third party investors. The majority of securitisations are supported through liquidity facilities or other credit enhancements.

RBS arranges securitisations to facilitate client transactions and undertakes own asset securitisations to sell or to fund portfolios of financial assets. RBS also acts as an underwriter and depositor in securitisation transactions in both client and proprietary transactions.

RBS involvement in client securitisations takes a number of forms. It may: sponsor or administer a securitisation programme; provide liquidity facilities or programme-wide credit enhancement; and purchase securities issued by the vehicle.

Own asset securitisations

In own-asset securitisations, the pool of assets held by the SE is either originated by RBS, or (in the case of whole loan programmes) purchased from third parties.

The table below analyses the asset categories for those own-asset securitisations where the transferred assets continue to be recorded on RBS balance sheet.

Asset type	2017				2016			
	Debt securities in issue				Debt securities in issue

	4,073	—	4,688	4,688	8,830	1,481	8,395	9,876
Cash deposits	518				965			
	4,591				9,795			

Note:

(1) Debt securities retained by RBS may be pledged with central banks.

Commercial paper conduits

RBS consolidates a number of asset-backed commercial paper (ABCP) conduits. A conduit is an SE that issues commercial paper and uses the proceeds to purchase or fund a pool of assets. The commercial paper is secured on the assets and is redeemed by further commercial paper issuance, repayment of assets or funding from liquidity facilities. Commercial paper is typically short-dated, usually up to three months. At 31 December 2017 assets held by the conduits were nil (2016 - £0.1 billion). At 31 December 2016 the conduits were funded entirely by RBS.

Covered bond programme

Certain loans and advances to customers have been assigned to bankruptcy remote limited liability partnerships to provide security for issues of debt securities by RBS. RBS retains all of the risks and rewards of these loans. The partnerships are consolidated, the loans retained on RBS's balance sheet and the related covered bonds included within debt securities in issue. At 31 December 2017, £8,915 million of mortgages provided security for debt securities in issue of £6,307 million (2016: mortgages - £8,621 million, bonds - £3,935 million).

Notes on the consolidated accounts

28 Structured entities *continued*

Unconsolidated structured entities

RBS's interests in unconsolidated structured entities are analysed below.

	2017			2016

Guarantees	229	5	234	55	6	61
Maximum exposure	8,460	838	9,298	8,508	1,921	10,425

Notes:

- (1) Income from interests in unconsolidated structured entities includes interest receivable, changes in fair value and other income less impairments.
- (2) A sponsored entity is a structured entity established by RBS where RBS provides liquidity and/or credit enhancements or provides ongoing services to the entity. RBS can act as sponsor for its own or for customers' transactions.
- (3) In 2017, no assets were transferred into sponsored structured entities (2016 - nil) which are not consolidated by RBS and for which RBS held no interest at 31 December 2017. Income arising from sponsored entities where we hold no interest at year end was £11 million (2016 - £18 million).

29 Asset transfers

Transfers that do not qualify for derecognition

Securities repurchase agreements and lending transactions

RBS enters into securities repurchase agreements and securities lending transactions under which it transfers securities in accordance with normal market practice.

Generally, the agreements require additional collateral to be provided if the value of the securities falls below a predetermined level.

Under standard terms for repurchase transactions in the UK and US markets, the recipient of collateral has an unrestricted right to sell or repledge it, subject to returning equivalent securities on settlement of the transaction.

Securities sold under repurchase transactions are not derecognised if RBS retains substantially all the risks and rewards of ownership. The fair value (and carrying value) of securities transferred under such repurchase transactions included on the balance sheet, are set out below. All of these securities could be sold or repledged by the holder.

	2017(1) £m	2016 £m
Assets subject to securities repurchase agreements or security lending transactions		
Debt securities	23,781	18,107

Note:

- (1) Associated liabilities were £23,692 million (2016 - £17,975 million).

Assets pledged as collateral

The Group pledges collateral with its counterparties in respect of derivative liabilities and bank and other borrowings.

	Assets pledged against liabilities				Liabilities secured by assets		
	Loans and advances to banks £m	Loans and advances to customers £m	Securities £m	Total £m	Deposits by banks £m	Derivatives £m	Total £m
2017	7,622	45,986	18,470	72,078	20,226	22,956	43,182
2016	7,360	29,654	20,152	57,166	5,514	26,443	31,957

Notes on the consolidated accounts

30 Capital resources

RBS's regulatory capital resources in accordance with PRA definitions were as follows:

	PRA transitional basis	
	2017	2016
	£m	£m
Shareholders' equity (excluding non-controlling interests)		
Shareholders' equity	48,330	48,609
Preference shares - equity	(2,565)	(2,565)
Other equity instruments	(4,058)	(4,582)
	41,707	41,462
Regulatory adjustments and deductions		
Own credit	(90)	(304)
Defined benefit pension fund adjustment	(287)	(208)
Cash flow hedging reserve	(227)	(1,030)
Deferred tax assets	(849)	(906)
Prudential valuation adjustments	(496)	(532)
Goodwill and other intangible assets	(6,543)	(6,480)
Expected losses less impairments	(1,286)	(1,371)
Other regulatory adjustments	28	(8)
	(9,750)	(10,839)
CET1 capital	31,957	30,623
Additional Tier 1 (AT1) capital		
Eligible AT1	4,041	4,041
Qualifying instruments and related share premium subject to phase out	3,416	5,416
Qualifying instruments issued by subsidiaries and held by third parties	140	339
AT1 capital	7,597	9,796
Tier 1 capital	39,554	40,419
Qualifying Tier 2 capital		
Qualifying instruments and related share premium	6,501	7,066
Qualifying instruments issued by subsidiaries and held by third parties	1,876	4,818
Tier 2 capital	8,377	11,884
Total regulatory capital	47,931	52,303

It is RBS policy to maintain a strong capital base, to expand it as appropriate and to utilise it efficiently throughout its activities to optimise the return to shareholders while maintaining a prudent relationship between the capital base and the underlying risks of the business. In carrying out this policy, RBS has regard to the supervisory requirements of the PRA. The PRA uses capital ratios as a measure of capital adequacy in the UK banking sector, comparing a bank's capital resources with its risk-weighted assets (the assets and off-balance sheet exposures are 'weighted' to reflect the inherent credit and other risks); by international agreement, the Pillar 1 capital ratios should be not less than 8% with a Common Equity Tier 1 component of not less than 4.5%. RBS has complied with the PRA's capital requirements throughout the year.

A number of subsidiaries and sub-groups within RBS, principally banking entities, are subject to various individual regulatory capital requirements in the UK and overseas. Furthermore, the payment of dividends by subsidiaries and the ability of members of RBS to lend money to other members of RBS may be subject to restrictions such as local regulatory or legal requirements, the availability of reserves and financial and operating performance.

Notes on the consolidated accounts

31 Memorandum items

Contingent liabilities and commitments

The amounts shown in the table below are intended only to provide an indication of the volume of business outstanding at 31 December 2017. Although RBS is exposed to credit risk in the event of a customer's failure to meet its obligations, the amounts shown do not, and are not intended to, provide any indication of RBS's expectation of future losses.

	Less than 1 year £m	More than 1 year but less than 3 years £m	More than 3 years but less than 5 years £m	Over 5 years £m	2017 £m	2016 £m
Guarantees and assets pledged as collateral security	1,354	493	481	5,390	7,718	7,867
Other contingent liabilities	609	1,115	180	1,487	3,391	4,179
Standby facilities, credit lines and other commitments	60,079	22,884	36,511	5,467	124,941	138,645
Contingent liabilities and commitments	62,042	24,492	37,172	12,344	136,050	150,691

Note:

(1) Includes liquidity facilities provided to RBS sponsored conduits.

Banking commitments and contingent obligations, which have been entered into on behalf of customers and for which there are corresponding obligations from customers, are not included in assets and liabilities. RBS's maximum exposure to credit loss, in the event of its obligation crystallising and all counterclaims, collateral or security proving valueless, is represented by the contractual nominal amount of these instruments included in the table above. These commitments and contingent obligations are subject to RBS's normal credit approval processes.

Guarantees - RBS gives guarantees on behalf of customers. A financial guarantee represents an irrevocable undertaking that RBS will meet a customer's specified obligations to third party if the customer fails to do so. The maximum amount that RBS could be required to pay under a guarantee is its principal amount as in the table above. RBS expects most guarantees to expire unused.

Other contingent liabilities - these include standby letters of credit, supporting customer debt issues and contingent liabilities relating to customer trading activities such as those arising from performance and customs bonds, warranties and indemnities.

Standby facilities and credit lines - under a loan commitment, RBS agrees to make funds available to a customer in the future. Loan commitments, which are usually for a specified term, may be unconditionally cancellable or may persist, provided all conditions in the loan facility are satisfied or waived. Commitments to lend include commercial standby facilities and credit lines, liquidity facilities to commercial paper conduits and unutilised overdraft facilities.

Other commitments - these include documentary credits, which are commercial letters of credit providing for payment by RBS to a named beneficiary against presentation of specified documents, forward asset purchases, forward deposits placed and undrawn note issuance and revolving underwriting facilities, and other short-term trade related transactions.

Contractual obligations for future expenditure not provided for in the accounts

The following table shows contractual obligations for future expenditure not provided for in the accounts at the year end.

	2017 £m	2016 £m
Operating leases		
Minimum rentals payable under non-cancellable leases (1)		
- within 1 year	206	246
- after 1 year but within 5 years	651	786
- after 5 years	1,422	1,775
	2,279	2,807
Capital expenditure on property, plant and equipment	18	21
Contracts to purchase goods or services (2)	682	598
	2,979	3,426

Notes:

(1) Predominantly property leases.

(2) Of which due within 1 year: £276 million (2016 - £231 million).

31 Memorandum items *continued*

Trustee and other fiduciary activities

In its capacity as trustee or other fiduciary role, the Group may hold or place assets on behalf of individuals, trusts, companies, pension schemes and others. The assets and their income are not included in the Group's financial statements. The Group earned fee income of £244 million (2016 - £251 million; 2015 - £321 million) from these activities.

The Financial Services Compensation Scheme

The Financial Services Compensation Scheme (FSCS), the UK's statutory fund of last resort for customers of authorised financial services firms, pays compensation if a firm is unable to meet its obligations. The FSCS funds compensation for customers by raising management expenses levies and compensation levies on the industry. In relation to protected deposits, each deposit-taking institution contributes towards these levies in proportion to their share of total protected deposits on 31 December of the year preceding the scheme year (which runs from 1 April to 31 March), subject to annual maxima set by the Prudential Regulation Authority. In addition, the FSCS has the power to raise levies on a firm that has ceased to participate in the scheme and is in the process of ceasing to be authorised for the costs that it would have been liable to pay had the FSCS made a levy in the financial year it ceased to be a participant in the scheme.

The FSCS has borrowed from HM Treasury to fund compensation costs associated with the failure of Bradford & Bingley, Heritable Bank, Kaupthing Singer & Friedlander, Landsbanki 'Icesave' and London Scottish Bank plc. The industry repaid the remaining balance on the non-Bradford and Bingley loans during the period. The Bradford and Bingley loan is interest bearing with the reference rate being the higher of 12 month LIBOR plus 111 basis points or the relevant gilt rate for the equivalent cost of borrowing from HMT. The FSCS and HM Treasury have agreed that the period of these loans will reflect the expected timetable for recoveries from the estate of Bradford & Bingley. The total interest element levied on the industry in the 2017/18 scheme year was £202 million (£337 million in the 2016/17 scheme year).

RBS Group has accrued £11.6 million for its share of estimated FSCS levies.

Litigation, investigations and reviews

The Royal Bank of Scotland Group plc (the 'company' or RBSG) and certain members of the Group are party to legal proceedings and the subject of investigation and other regulatory and governmental action ('Matters') in the United Kingdom (UK), the United States (US), the European Union (EU) and other jurisdictions.

RBS recognises a provision for a liability in relation to these Matters when it is probable that an outflow of economic benefits will be required to settle an obligation resulting from past events, and a reliable estimate can be made of the amount of the obligation.

While the outcome of these Matters is inherently uncertain, the directors believe that, based on the information available to them, appropriate provisions have been made in respect of the Matters as at 31 December 2017 (refer to Note 20).

In many proceedings and investigations, it is not possible to determine whether any loss is probable or to estimate reliably the amount of any loss, either as a direct consequence of the relevant proceedings and investigations or as a result of adverse impacts or restrictions on RBS's reputation, businesses and operations. Numerous legal and factual issues may need to be resolved, including through potentially lengthy discovery and document production exercises and determination of important factual matters, and by addressing novel or unsettled legal questions relevant to the proceedings in question, before a liability can reasonably be estimated for any claim. RBS cannot predict if, how, or when such claims will be resolved or what the eventual settlement, damages, fine, penalty or other relief, if any, may be, particularly for claims that are at an early stage in their development or where claimants seek substantial or indeterminate damages.

In respect of certain matters described below, we have established a provision and in certain of those matters, we have indicated that we have established a provision. RBS generally does not disclose information about the establishment or existence of a provision for a particular matter where disclosure of the information can be expected to prejudice seriously RBS's position in the matter.

There are situations where RBS may pursue an approach that in some instances leads to a settlement agreement. This may occur in order to avoid the expense, management distraction or reputational implications of continuing to contest liability, or in order to take account of the risks inherent in defending claims or investigations even for those matters for which RBS believes it has credible defences and should prevail on the merits. The uncertainties inherent in all such matters affect the amount and timing of any potential outflows for both matters with respect to which provisions have been established and other contingent liabilities.

The future outflow of resources in respect of any matter may ultimately prove to be substantially greater than or less than the aggregate provision that RBS has recognised. Where (and as far as) liability cannot be reasonably estimated, no provision has been recognised.

Other than those discussed below, no member of the Group is or has been involved in governmental, legal or regulatory proceedings (including those which are pending or threatened) that are expected to be material, individually or in aggregate. RBS expects that in future periods additional provisions, settlement amounts, and customer redress payments will be necessary, in amounts that are expected to be substantial in some instances.

Notes on the consolidated accounts

Litigation, investigations and reviews continued

For a discussion of certain risks associated with the Group's litigation, investigations and reviews, see the Risk Factor relating to legal, regulatory and governmental actions and investigations set out on page 372.

Litigation

UK 2008 rights issue shareholder litigation

Between March and July 2013, claims were issued in the High Court of Justice of England and Wales by sets of current and former shareholders, against RBSG (and in one of those claims, also against certain former individual officers and directors) alleging that untrue and misleading statements and/or improper omissions, in breach of the Financial Services and Markets Act 2000, were made in connection with the rights issue announced by RBS on 22 April 2008. These and other similar threatened claims were consolidated by the Court via a Group Litigation Order. Since then, further High Court claims have been issued against RBS under the Group Litigation Order. Prior to the settlement described below, the aggregate value of the shares subscribed for at 200 pence per share by all of the then claimant shareholders was approximately £4 billion.

In December 2016 RBS concluded full and final settlements with four of the five shareholder groups representing 78 per cent of the claims by value. Further full and final settlements, without any admission of liability, were reached and RBS has now concluded the action with over 98 per cent of the claimants.

The aggregate settlement figure available to claimants is £900 million, for which a previously established provision is in place, and is subject to validation of claims.

The Court directed that any claimant choosing not to enter the settlement should, by 28 July 2017, issue an application to restore the proceedings. No such application was made.

Residential mortgage-backed securities (RMBS) litigation in the US

RBS companies have been named as defendants in their various roles as issuer, depositor and/or underwriter in a number of claims in the US that relate to the securitisation and securities underwriting businesses. These cases include actions by individual purchasers of securities and a purported class action suit.

In general, plaintiffs in these actions claim that certain disclosures made in connection with the relevant offerings of RMBS contained materially false or misleading statements and/or omissions regarding the underwriting standards pursuant to which the mortgage loans underlying the securities were issued.

RBS Securities Inc. remains a defendant in a lawsuit relating to RMBS issued by Nomura Holding America Inc. (Nomura) and subsidiaries, filed by the US Federal Housing Finance Agency (FHFA) as conservator for the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac).

In May 2015, following a trial, the United States District Court for the Southern District of New York issued a written decision in favour of FHFA, finding, as relevant to RBS, that the offering documents for four Nomura-issued RMBS for which RBS Securities Inc. served as an underwriter contained materially misleading statements about the mortgage loans that backed the securitisations. Nomura and RBS appealed. On 28 September 2017, the court's judgment against Nomura and RBS Securities Inc. was affirmed by the United States Court of Appeals for the Second Circuit.

RBS Securities Inc. estimates that its net exposure under the court's judgment is approximately US\$318 million, which consists of the difference between the amount of the judgment against RBS Securities Inc. (US\$636 million) and the estimated market value of the four RMBS that FHFA would return to RBS Securities Inc. pursuant to the judgment, plus the costs and attorney's fees that will be due to FHFA if the judgment is upheld. The estimated net exposure in this matter is covered by an existing provision. The judgment is stayed pending defendants' request for review by the United States Supreme Court, though post-judgment interest on the judgment amount will accrue while that request and any further review is pending. RBS Securities Inc. intends to pursue a contractual claim for indemnification against Nomura with respect to any losses it suffers as a result of this matter.

RBS companies are also defendants in a purported RMBS class action entitled *New Jersey Carpenters Health Fund v. Novastar Mortgage Inc. et al.*, which remains pending in the United States District Court for the Southern District of New York. RBS has settled this matter for US\$55.3 million, which has been paid into escrow pending court approval of the settlement.

In addition to the above, the remaining RMBS lawsuits against RBS companies consist of cases filed by the Federal Home Loan Banks of Boston and Seattle and the Federal Deposit Insurance Corporation that together involve the issuance of less than US\$1 billion of RMBS issued primarily from 2005 to 2007.

As at 31 December 2017, the total aggregate of provisions in relation to certain of the RMBS litigation matters (described immediately above) and RMBS and other securitised products investigations (set out under 'Investigations and reviews' on page 319) was £3.2 billion (US\$4.4 billion). The duration and outcome of these investigations and litigation matters remain uncertain, including in respect of whether settlements for all or any of such matters may be reached.

RBS continues to caution that, in connection with RMBS litigation matters and RMBS investigations taken as a whole, further substantial provisions and costs may be recognised and, depending on the final outcomes, other adverse consequences may occur.

Notes on the consolidated accounts

Litigation, investigations and reviews continued London Interbank Offered Rate (LIBOR) and other rates litigation

Certain members of the Group have been named as defendants in a number of class actions and individual claims filed in the US with respect to the setting of LIBOR and certain other benchmark interest rates. The complaints are substantially similar and allege that certain members of the Group and other panel banks individually and collectively violated various federal laws, including the US commodities and antitrust laws, and state statutory and common law, as well as contracts, by manipulating LIBOR and prices of LIBOR-based derivatives in various markets through various means.

Most of the USD LIBOR-related actions in which RBS companies are defendants, including all purported class actions relating to USD LIBOR, were transferred to a coordinated proceeding in the United States District Court for the Southern District of New York.

In the coordinated proceeding, consolidated class action complaints were filed on behalf of (1) exchange-based purchaser plaintiffs, (2) over-the-counter purchaser plaintiffs, and (3) corporate debt purchaser plaintiffs. Over 35 other USD LIBOR-related actions naming RBS as a defendant, including purported class actions on behalf of lenders and mortgage borrowers, were also made part of the coordinated proceeding.

In a series of orders issued in 2013 and 2014, the district court overseeing the coordinated USD proceeding dismissed class plaintiffs' antitrust claims and claims under RICO (Racketeer Influenced and Corrupt Organizations Act), but declined to dismiss (a) certain Commodity Exchange Act claims on behalf of persons who transacted in Eurodollar futures contracts and options on futures contracts on the Chicago Mercantile Exchange (on the theory that defendants' alleged persistent suppression of USD LIBOR caused loss to plaintiffs), and (b) certain contract and unjust enrichment claims on behalf of over-the-counter purchaser plaintiffs who transacted directly with a defendant. On 23 May 2016, the district court's dismissal of plaintiffs' antitrust claims was vacated by the United States Court of Appeals for the Second Circuit, which held that plaintiffs have adequately pled antitrust injury and an antitrust conspiracy, but remanded to the lower court for further consideration on the question of whether plaintiffs possess the requisite antitrust standing to proceed with antitrust claims.

In a decision issued in December 2016, the district court held that it lacks personal jurisdiction over RBS with respect to certain claims asserted in the coordinated proceeding. Following that decision, RBS has been dismissed from each of the USD LIBOR-related class actions in the coordinated proceeding, subject to appeal, although certain non-class cases on behalf of particular plaintiffs remain pending.

On 10 July 2017, the US Federal Deposit Insurance Corporation (FDIC), on behalf of 39 failed US banks, served a claim in the High Court of Justice of England and Wales against RBS, other LIBOR panel banks and the British Bankers' Association, alleging collusion with respect to the setting of USD LIBOR.

The action alleges that the defendants breached English and European competition law as well as asserting common law claims of fraud under US law. The FDIC previously asserted many of the same US law USD LIBOR-related claims against RBS and others in a lawsuit pending in the United States District Court for the Southern District of New York, though most of the claims in that case have been dismissed as a result of a series of rulings by that court. RBS's defence to the High Court claim was filed on 24 November 2017.

Certain members of the Group have also been named as defendants in two class actions relating to JPY LIBOR and Euroyen TIBOR, both pending before the same judge in the United States District Court for the Southern District of New York. In the first case, relating to Euroyen TIBOR futures contracts, the court dismissed plaintiffs' antitrust claims in March 2014, but declined to dismiss their claims under the Commodity Exchange Act for price manipulation, which are proceeding in the discovery phase. In the second case, relating to other derivatives allegedly tied to JPY LIBOR and Euroyen TIBOR, the court dismissed the case on 10 March 2017 on the ground that the plaintiffs lack standing. Plaintiffs have commenced an appeal of that decision.

Certain members of the Group have also been named as defendants in class actions relating to (i) Euribor, (ii) Swiss Franc LIBOR (iii) Pound sterling LIBOR, (iv) the Singapore Interbank Offered Rate and Singapore Swap Offer Rate, and (v) the Australian Bank Bill Swap Reference Rate, all of which are pending before other judges in the United States District Court for the Southern District of New York. On 21 February 2017, the court in the action relating to Euribor dismissed all claims alleged against RBS for lack of personal jurisdiction. On 18 August 2017, the court in the action relating to the Singapore Interbank Offered Rate and Singapore Swap Offer Rate dismissed all claims against RBS for lack of personal jurisdiction; however, the court allowed the plaintiffs to replead their complaint, and defendants' renewed motion to dismiss the amended complaint is pending. On 25 September 2017, the court in the action relating to Swiss Franc LIBOR dismissed all claims against all defendants on various grounds; however, the court held that it has personal jurisdiction over RBS and allowed the plaintiffs to replead their complaint, and defendants' renewed motion to dismiss the amended complaint is pending. The other matters described in this paragraph (relating to Pound Sterling LIBOR and the Australian Bank Bill Swap Reference Rate) are subject to motions to dismiss that are currently pending.

Details of UK litigation claims in relation to the sale of interest rate hedging products (IRHPs) involving LIBOR-related allegations are set out under 'Interest rate hedging products litigation' on page 317. Details of LIBOR investigations involving RBS are set out under "Investigations and reviews" on page 320.

Notes on the consolidated accounts

Litigation, investigations and reviews continued ISDAFIX antitrust litigation

Beginning in September 2014, The Royal Bank of Scotland plc (RBS plc) and a number of other financial institutions were named as defendants in several purported class action complaints (subsequently consolidated into one complaint) in the United States District Court for the Southern District of New York alleging manipulation of USD ISDAFIX rates. In 2015, RBS plc reached an agreement to settle this matter for US\$50 million, and that settlement received preliminary approval from the Court in May 2016. The settlement amount has been paid into escrow pending the final court approval of the settlement.

FX antitrust litigation

In 2015, Group companies settled a consolidated antitrust class action (the 'consolidated action'), pending in the United States District Court for the Southern District of New York, asserting claims on behalf of persons who entered into (a) over-the-counter foreign exchange (FX) spot transactions, forwards, swaps, futures, options or other FX transactions the trading or settlement of which is related in any way to FX rates, or (b) exchange-traded FX instruments. Following the Court's preliminary approval of the settlement in December 2015, RBS paid the total settlement amount (US\$255 million) into escrow pending final court approval of the settlement.

On 24 March 2017, the court dismissed a second FX-related antitrust class action, holding that the alleged class of 'consumers and end-user businesses' lacked standing to pursue antitrust claims. The plaintiffs in that case have since filed an amended complaint. The defendants made a renewed motion to dismiss the complaint but the court denied that motion on 3 August 2017. As a result, the discovery phase has commenced. RBS and the other defendants are seeking reconsideration of the court's decision regarding standing or, in the alternative, permission to take an immediate appeal to the United States Court of Appeals for the Second Circuit.

A third FX-related class action, asserting Employee Retirement Income Security Act claims on behalf of employee benefit plans that engaged in FX transactions, including claims based on alleged non-collusive FX-related conduct, was dismissed in September 2016 on the ground that the plaintiffs failed to plead that the defendants had ERISA-based fiduciary duties to the plaintiffs. The plaintiffs' appeal of this dismissal remains pending.

Beginning in September 2016, several additional class action complaints were filed in the United States District Court for the Southern District of New York asserting claims on behalf of 'indirect purchasers' of FX instruments.

The plaintiffs define 'indirect purchasers' as persons who were indirectly affected by FX instruments that others entered into directly with defendant banks or on exchanges. The consolidated amended complaint for these matters alleges that certain RBS companies and other defendant banks caused damages to the 'indirect purchasers' by conspiring to restrain trade in the FX spot market. The plaintiffs have asserted claims under federal and state antitrust laws. RBS and the other defendants have filed a motion to dismiss, which remains pending.

On 12 July 2017, Alpari (US) LLC (Alpari) filed a class action complaint against RBS companies in the United States District Court for the Southern District of New York. The complaint alleges that RBS breached contracts with Alpari and other counterparties by rejecting FX orders placed over electronic trading platforms through the application of a function referred to as 'Last Look', and that the rejected orders were later filled at prices less favourable to putative class members. The complaint contains claims for breach of contract and unjust enrichment. RBS has filed a motion to compel arbitration of Alpari's claims or, in the alternative, to dismiss those claims for improper venue.

In September 2015, certain members of the Group, as well as a number of other financial institutions, were named as defendants in two class actions filed in Ontario and Quebec on behalf of persons in Canada who entered into foreign exchange transactions or who invested in funds that entered into foreign exchange transactions, alleging that the defendants violated the Canadian Competition Act by conspiring to manipulate the prices of currency trades. RBS settled the matters for approximately CAD 13 million. The settlement amount has been paid and the settlement has received final court approval.

Certain other foreign exchange transaction related claims have been or may be threatened against RBS in other jurisdictions. RBS cannot predict whether any of these claims will be pursued, but expects that several may.

US Treasury securities antitrust litigation

Beginning in July 2015, numerous class action antitrust complaints were filed in US federal courts against a number of primary dealers of US Treasury securities, including RBS Securities Inc.. The consolidated amended complaint for these matters, pending in the United States District Court for the Southern District of New York, alleges that RBS Securities Inc. and the other defendants rigged the US Treasury securities auction bidding process to deflate prices at which they bought such securities and colluded to increase the prices at which they sold such securities to plaintiffs.

The complaint asserts claims under the US antitrust laws on behalf of persons who transacted in US Treasury securities or derivatives based on such instruments, including futures and options. The defendants anticipate filing a motion to dismiss the operative complaint in this matter.

Swaps antitrust litigation

Beginning in November 2015, RBS plc and other members of the Group, as well as a number of other interest rate swap dealers, were named as defendants in a number of class action antitrust complaints filed in the United States District Court for the Southern District of New York and the United States District Court for the Northern District of Illinois. The complaints, filed on behalf of persons who entered into interest rate swaps with the defendants, allege that the defendants violated the US antitrust laws by restraining competition in the market for interest rate swaps through various means and thereby caused inflated bid-ask spreads for interest rate swaps, to the alleged detriment of the plaintiff class.

Notes on the consolidated accounts

Litigation, investigations and reviews continued

In addition, two complaints containing similar allegations of collusion were filed in United States District Court for the Southern District of New York on behalf of TeraExchange and Javelin, who allege that they would have successfully established exchange-like trading of interest rate swaps if the defendant dealers had not unlawfully conspired to prevent that from happening through boycotts and other means, in violation of the U.S. antitrust laws. In June 2016, all of these matters were transferred to the United States District Court for the Southern District of New York for coordinated or consolidated pretrial proceedings.

In July 2017, the Court overseeing the above matters dismissed all claims against RBS companies relating to the 2008 - 2012 time period, but declined to dismiss certain antitrust and unjust enrichment claims covering the 2013 - 2016 time period. Discovery is ongoing.

On 8 June 2017, TeraExchange filed another complaint against RBS and others in the United States District Court for the Southern District of New York, this time relating to credit default swaps instead of interest rate swaps. TeraExchange alleges it would have established exchange-like trading of credit default swap if the defendant dealers had not engaged in an unlawful antitrust conspiracy. RBS has filed a motion to dismiss the complaint in this matter.

Madoff

In December 2010, Irving Picard, as trustee for the bankruptcy estates of Bernard L. Madoff and Bernard L. Madoff Investment Securities LLC., filed a clawback claim against The Royal Bank of Scotland N.V. (RBS N.V.) in the New York bankruptcy court.

In the operative complaint, filed in August 2012, the trustee seeks to recover US\$75.8 million in redemptions that RBS N.V. allegedly received from certain Madoff feeder funds and US\$162.1 million that RBS N.V. allegedly received from its swap counterparties at a time when RBS N.V. allegedly 'knew or should have known of Madoff's possible fraud'. The trustee alleges that those transfers were preferences or fraudulent conveyances under the US bankruptcy code and New York law and he asserts the purported right to claw them back for the benefit of Madoff's estate.

RBS N.V. made a motion to dismiss in this case on the ground that many of the transfers at issue were extraterritorial to the United States and therefore not subject to the fraudulent conveyance statute upon which the trustee's claim is based, but the bankruptcy court denied that motion in November 2016. RBS N.V. sought leave to appeal, but this was denied on 3 October 2017. A further claim by the trustee against RBS N.V., for clawback of an additional US\$21.8 million, was filed in October 2011. With respect to that claim, the bankruptcy court granted RBS N.V.'s motion to dismiss on extraterritorial grounds, and the trustee has commenced an appeal of that decision.

Thornburg adversary proceeding

RBS Securities Inc. and certain other RBS companies, as well as several other financial institutions, are defendants in an adversary proceeding filed in the US bankruptcy court in Maryland by the trustee for TMST, Inc. (formerly known as Thornburg Mortgage, Inc.). The trustee seeks recovery of transfers made under certain restructuring agreements as, among other things, avoidable fraudulent and preferential conveyances and transfers. In September 2014, the Court largely denied the defendants' motion to dismiss this matter and, as a result, discovery is ongoing.

Interest rate hedging products litigation

RBS is dealing with a large number of active litigation claims in relation to the sale of interest rate hedging products (IRHPs). In general claimants allege that the relevant interest rate hedging products were mis-sold to them, with some also alleging RBS made misrepresentations in relation to LIBOR. Claims have been brought by customers who were considered under the UK Financial Conduct Authority (FCA) redress programme, as well as customers who were outside of the scope of that programme, which was closed to new entrants on 31 March 2015. RBS encouraged those customers that were eligible to seek redress under the FCA redress programme to participate in that programme. RBS remains exposed to potential claims from customers who were either ineligible to be considered for redress or who are dissatisfied with their redress offers.

Property Alliance Group (PAG) v The Royal Bank of Scotland plc was the leading case before the English High Court involving both IRHP mis-selling and LIBOR misconduct allegations. The amount claimed was £34.8 million and the trial ended in October 2016. In December 2016 the Court dismissed all of PAG's claims. PAG appealed that decision, and the appeal hearing closed on 8 February 2018. The judgment is awaited. The decision (subject to the appeal by PAG) may have significance to other similar LIBOR-related cases currently pending in the English courts, some of which involve substantial amounts.

The case of London Bridge Holdings Ltd and others v RBS plc remains stayed pending the outcome of the PAG appeal. The sum claimed in that case is £446.7 million.

In addition to claims alleging that IRHPs were mis-sold, RBS has received a number of claims involving allegations that it breached a legal duty of care in its conduct of the FCA redress programme. These claims have been brought by customers who are dissatisfied with redress offers made to them through the FCA redress programme. The claims followed a preliminary decision against another UK bank. RBS has since been successful in opposing an application by a customer to amend its pleadings to include similar claims against RBS, on the basis that the bank does not owe a legal duty of care to customers in carrying out the FCA review. An appeal of that decision was dismissed in July 2017 and permission to further appeal was refused by the UK Supreme Court in December 2017.

Notes on the consolidated accounts

Litigation, investigations and reviews continued

Tax dispute

HMRC issued a tax assessment in 2012 against RBS for approximately £86 million regarding a value-added-tax ('VAT') matter in relation to the trading of European Union Allowances ('EUAs') by an RBS joint venture subsidiary in 2009. RBS has commenced legal proceedings before the First-tier Tribunal (Tax), a specialist tax tribunal, challenging the assessment (the 'Tax Dispute'). In the event that the assessment is upheld, interest and costs would be payable, and a penalty of up to 100 per cent of the VAT held to have been legitimately denied by HMRC could also be levied. Separately, RBS is a named defendant in proceedings before the High Court brought in 2015 by ten companies (all in liquidation) (the 'Liquidated Companies') and their respective liquidators (together, 'the Claimants'). The Liquidated Companies previously traded in EUAs in 2009 and are alleged to be defaulting traders within (or otherwise connected to) the EUA supply chains forming the subject of the Tax Dispute.

The Claimants are claiming approximately £80 million plus interest and costs by alleging that RBS dishonestly assisted the directors of the Liquidated Companies in the breach of their statutory duties and/or knowingly participated in the carrying on of the business of the Liquidated Companies with intent to defraud creditors. The trial in that matter is currently scheduled to start in June 2018.

Weiss v. National Westminster Bank Plc (NatWest)

NatWest is defending a lawsuit filed by a number of US nationals (or their estates, survivors, or heirs) who were victims of terrorist attacks in Israel. The plaintiffs allege that NatWest is liable for damages arising from those attacks pursuant to the US Anti-Terrorism Act because NatWest previously maintained bank accounts and transferred funds for the Palestine Relief & Development Fund, an organisation which plaintiffs allege solicited funds for Hamas, the alleged perpetrator of the attacks.

In March 2013, the trial court (the United States District Court for the Eastern District of New York) granted summary judgment in favour of NatWest on the issue of scienter, but in September 2014, that summary judgment ruling was vacated by the United States Court of Appeals for the Second Circuit. The appeals court returned the case to the trial court for consideration of NatWest's other asserted grounds for summary judgment and, if necessary, for trial. In March 2016, the trial court denied a motion by NatWest to dismiss the case in which NatWest had argued that the court lacked personal jurisdiction over NatWest. NatWest has since asserted other grounds for summary judgment that the trial court has not previously ruled upon. On 5 October 2017, the United States District Court for the Eastern District of New York dismissed claims against NatWest with respect to two terrorist attacks, but denied NatWest's summary judgment motion with respect to claims arising from 16 other attacks. No trial date has been set.

Anti-Terrorism Act litigation against RBS N.V.

RBS N.V. and certain other financial institutions (HSBC, Barclays, Standard Chartered, Credit Suisse, Bank Saderat, and Commerzbank) are defendants in an action first commenced in the United States District Court for the Eastern District of New York in November 2014 by a number of US nationals (or their estates, survivors, or heirs), most of whom are or were US military personnel, who were killed or injured in more than 90 attacks in Iraq between 2004 and 2011.

The attacks were allegedly perpetrated by Hezbollah and certain Iraqi terror cells allegedly funded by the Islamic Republic of Iran. According to the plaintiffs' allegations, RBS N.V. and the other defendants are liable for damages arising from the attacks because they allegedly conspired with Iran and certain Iranian banks to assist Iran in transferring money to Hezbollah and the Iraqi terror cells, in violation of the US Anti-Terrorism Act, by agreeing to engage in 'stripping' of transactions initiated by the Iranian banks so that the Iranian nexus to the transactions would not be detected. Since commencing this matter, the plaintiffs have amended the complaint twice. The second amended complaint is subject to a motion to dismiss that defendants filed in September 2016.

In November 2016, additional plaintiffs commenced a second action in the United States District Court for the Southern District of Illinois against the same defendants (including RBS N.V.), as well as Deutsche Bank. The allegations were substantially similar to the allegations contained in the complaint described above. The plaintiffs were a number of US military personnel (or their estates, survivors, or heirs) who were killed or injured in 21 attacks in Iraq between 2006 and 2011. In April 2017, this case was transferred to the United States District Court for the Eastern District of New York. On 3 October 2017, the plaintiffs in this second case, instead of responding to defendants' motion to dismiss, voluntarily dismissed their claims without prejudice to re-filing at a later date.

On 9 November 2017, a third action was commenced by an additional group of plaintiffs in the United States District Court for the Southern District of New York, against the same defendants as the November 2016 action (including RBS N.V.), as well as RBS plc. The allegations are substantially similar to the allegations contained in the complaints described above and concern 55 attacks in Iraq between 2003 and 2011. The defendants anticipate filing a motion to dismiss the claims in this case.

Notes on the consolidated accounts

Litigation, investigations and reviews continued Investigations and reviews

RBS's businesses and financial condition can be affected by the actions of various governmental and regulatory authorities in the UK, the US, the EU and elsewhere. RBS has engaged, and will continue to engage, in discussions with relevant governmental and regulatory authorities, including in the UK, the US, the EU and elsewhere, on an ongoing and regular basis, and in response to informal and formal inquiries or investigations, regarding operational, systems and control evaluations and issues including those related to compliance with applicable laws and regulations, including consumer protection, business conduct, competition/anti-trust, anti-bribery, anti-money laundering and sanctions regimes.

The NatWest Markets segment in particular has been providing information regarding a variety of matters, including, for example, the setting of benchmark rates and related derivatives trading, conduct in the foreign exchange market, and various issues relating to the issuance, underwriting, and sales and trading of fixed-income securities, including structured products and government securities.

Any matters discussed or identified during such discussions and inquiries may result in, among other things, further inquiry or investigation, other action being taken by governmental and regulatory authorities, increased costs being incurred by RBS, remediation of systems and controls, public or private censure, restriction of RBS's business activities and/or fines. Any of the events or circumstances mentioned in this paragraph or below could have a material adverse effect on RBS, its business, authorisations and licences, reputation, results of operations or the price of securities issued by it.

RBS is co-operating fully with the investigations and reviews described below.

RMBS and other securitised products investigations

In the US, RBS is involved in reviews, investigations and proceedings (both formal and informal) by federal and state governmental law enforcement and other agencies and self-regulatory organisations, including the US Department of Justice (DOJ) and several state attorneys general, including those mentioned below, relating to, among other things, issuance, underwriting and trading in RMBS and other mortgage-backed securities and collateralised debt obligations (CDOs). These ongoing matters include, among others, active investigations by the DOJ, relating primarily to due diligence on and disclosure related to loans purchased for, or otherwise included in, securitisations and related disclosures.

As at 31 December 2017, the total aggregate of provisions in relation to certain of the RMBS investigations and RMBS litigation matters (set out under 'Litigation' on page 314) was £3.2 billion (US\$4.4 billion).

RBS continues to cooperate with the DOJ and with certain state attorneys general in their investigations of RMBS matters.

The duration, timing for resolution and outcome of these investigations and RMBS litigation matters remain uncertain, including in respect of whether settlements for all or any of such matters may be reached. Further substantial provisions and costs may be recognised and, depending on the final outcome, other adverse consequences may occur as described above and in the Risk Factor relating to legal, regulatory and governmental actions and investigations set out on page 372.

In December 2017, RBS Financial Products Inc. agreed to pay US\$125 million to settle the RMBS investigation of the California Attorney General. Payment has been made from a previously established provision. Ongoing investigations into the same or similar issues by certain other state attorneys general are at various stages. RBS is in advanced discussions with the New York Attorney General to resolve its investigation, although there is no certainty that any settlement will be reached.

On 26 October 2017, the United States Attorney for the District of Connecticut (USAO) announced that it had entered into a Non-Prosecution Agreement (NPA) with RBS Securities Inc. in connection with alleged misrepresentations to counterparties relating to secondary trading in various forms of asset-backed securities. The NPA, which recognises RBS Securities Inc.'s timely self-reporting and cooperation, required RBS Securities Inc. to pay a penalty of US\$35 million, reimburse customers at least US\$9.1 million, and continue to cooperate with the investigation.

These amounts were covered by provisions existing at the time of settlement. As part of the NPA, the USAO has agreed not to file criminal charges against RBS Securities Inc. relating to certain conduct and information described in the NPA if RBS Securities Inc. complies with the NPA during its one-year term. In March and December 2015, two former RBS Securities Inc. traders entered guilty pleas in the United States District Court for the District of Connecticut, each to one count of conspiracy to commit securities fraud while employed at RBS Securities Inc.

US mortgages - loan repurchase matters

RBS's NatWest Markets business in North America was a purchaser of non-agency residential mortgages in the secondary market, and an issuer and underwriter of non-agency RMBS.

In issuing RMBS, NatWest Markets in some circumstances made representations and warranties regarding the characteristics of the underlying loans. As a result, NatWest Markets may be, or may have been, contractually required to repurchase such loans or indemnify certain parties against losses for certain breaches of such representations and warranties. Depending on the extent to which such loan repurchase related claims are pursued against and not rebutted by NatWest Markets on timeliness or other grounds, the aggregate potential impact on RBS, if any, may be material.

Notes on the consolidated accounts

Litigation, investigations and reviews continued

LIBOR and other trading rates

From February 2013 to December 2016, RBS entered into settlements with various governmental authorities in relation to investigations into submissions, communications and procedures around the setting of LIBOR and other interest rates and interest rate trading, which, among other things, required RBS to pay significant penalties. As part of these resolutions, RBS made certain undertakings regarding benchmark interest rates, including the undertakings contained in its February 2013 resolution with the Commodity Futures Trading Commission (CFTC).

RBS continues to co-operate with investigations and requests for information by various other governmental and regulatory authorities, including in the UK, US and APAC.

On 3 February 2017, it was announced that RBS and the CFTC entered into a civil settlement resolving the CFTC's investigation of ISDAFIX and related trading activities. As part of the settlement, RBS has paid a penalty of US\$85 million and agreed to certain undertakings.

Foreign exchange related investigations

In November 2014, RBS plc reached a settlement with the FCA and the CFTC in relation to investigations into failings in RBSG's FX businesses within its NatWest Markets segment. RBS plc agreed to pay penalties of £217 million to the FCA and US\$290 million to the CFTC to resolve the investigations. The fines were paid in November 2014.

In May 2015, RBS plc announced that it had reached settlements with the DOJ and the Board of Governors of the Federal Reserve System (Federal Reserve) in relation to investigations into its FX business within its NatWest Markets segment. RBS plc paid a penalty of US\$274 million to the Federal Reserve and agreed to pay a penalty of US\$395 million to the DOJ to resolve the investigations.

As part of its plea agreement with the DOJ, RBS plc pled guilty in the United States District Court for the District of Connecticut to a one-count information charging an antitrust conspiracy. RBS plc admitted that it knowingly, through one of its euro/US dollar currency traders, joined and participated in a conspiracy to eliminate competition in the purchase and sale of the euro/US dollar currency pair exchanged in the FX spot market.

The charged conspiracy occurred between as early as December 2007 to at least April 2010. On 5 January 2017, the United States District Court for the District of Connecticut imposed a sentence on RBS plc consisting of the US\$395 million criminal fine previously agreed with the DOJ and a term of probation, which among other things, prohibits RBS plc from committing another crime in violation of US law or engaging in the FX trading practices that form the basis for the charged crime and requires RBS plc to implement a compliance program designed to prevent and detect the unlawful conduct at issue and to strengthen its compliance and internal controls as required by other regulators (including the FCA and the CFTC). A violation of the terms of probation could lead to the imposition of additional penalties. Subsequent to the sentencing, RBS plc paid the criminal fine, which had been covered by an existing provision.

RBS plc and RBS Securities Inc. have also entered into a cease and desist order with the Federal Reserve relating to FX and

other designated market activities (the FX Order). In the FX Order, which is publicly available and will remain in effect until terminated by the Federal Reserve, RBS plc and RBS Securities Inc. agreed to take certain remedial actions with respect to FX activities and certain other designated market activities, including the creation of an enhanced written internal controls and compliance program, an improved compliance risk management program, and an enhanced internal audit program. RBS plc and RBS Securities Inc. are obligated to implement and comply with these programs as approved by the Federal Reserve, and are also required to conduct, on an annual basis, a review of applicable compliance policies and procedures and a risk-focused sampling of key controls.

RBS is co-operating with investigations and responding to inquiries from other governmental and regulatory (including competition) authorities on similar issues relating to failings in its FX business within its NatWest Markets segment. The timing and amount of financial penalties with respect to any further settlements and related litigation risks and collateral consequences remain uncertain and may well be material.

FCA review of RBS's treatment of SMEs

In November 2013, a report by Lawrence Tomlinson, entrepreneur in residence at the UK Government's Department for Business Innovation and Skills, was published ('Tomlinson Report'). The Tomlinson Report was critical of RBS's treatment of SMEs.

The Tomlinson Report was passed to the PRA and FCA. Shortly thereafter, the FCA appointed an independent Skilled Person under section 166 of the Financial Services and Markets Act to review the allegations in the Tomlinson Report. The Skilled Person's review was focused on RBS's UK small and medium sized business customers with credit exposures of up to £20 million whose relationship was managed within RBS's Global Restructuring Group or within similar units within RBS's Corporate Banking Division that were focused on customers in financial difficulties. In the period 2008 to 2013 RBS was one of the leading providers of credit to the UK SME sector.

Separately, in November 2013, RBS instructed the law firm Clifford Chance to conduct an independent review of the principal allegation made in the Tomlinson Report: RBS was alleged to be culpable of systematic and institutional behaviour in artificially distressing otherwise viable businesses and, through that, putting businesses into insolvency. Clifford Chance published its report on 17 April 2014 and, while it made certain recommendations to enhance customer experience and transparency of pricing, it concluded that there was no evidence to support the principal allegation.

Notes on the consolidated accounts

Litigation, investigations and reviews continued

A separate independent review of the principal allegation, led by Mason Hayes & Curran, Solicitors, was conducted in the Republic of Ireland. The report was published in December 2014 and found no evidence to support the principal allegation.

The Skilled Person review focused on the allegations made in the Tomlinson Report and certain observations made by Sir Andrew Large in his 2013 Independent Lending Review, and was broader in scope than the reviews undertaken by Clifford Chance and Mason, Hayes & Curran which are referred to above. The Skilled Person delivered the draft findings from its review to the FCA in March 2016. RBS was then given the opportunity to consider and respond to those draft findings before the Skilled Person delivered its final report to the FCA during September 2016.

In November 2016, the FCA published an update on its review. In response, RBS announced redress steps for SME customers in the UK and the Republic of Ireland that were in GRG between 2008 and 2013. These steps were (i) an automatic refund of certain complex fees; and (ii) a new complaints process, overseen by an Independent Third Party. They were developed with the involvement of the FCA, which agreed that they were appropriate steps for RBS to take.

RBS estimates the costs associated with the complaints review process and the automatic refund of complex fees to be approximately £400 million, which was recognised as a provision in 2016. This includes operational costs together with the cost of refunded complex fees and the additional estimated redress costs arising from the complaints process. Of the £400 million provision, £150 million had been utilised by 31 December 2017.

On 23 October 2017, the FCA published an interim report incorporating a summary of the Skilled Person's report which stated that, further to the general investigation announced in November 2016, the FCA had decided to carry out a more focused investigation. The FCA published its final summary of the Skilled Person's report on 28 November 2017. The UK House of Commons Treasury Select Committee, seeking to rely on Parliamentary powers, published the full version of the Skilled Person's report on 20 February 2018.

Interest rate hedging products (IRHP) redress programme

From 2013, RBS and other banks undertook a redress exercise and past business review in relation to the sale of interest rate hedging products to some small and medium sized businesses classified as retail clients or private customers under FSA rules. This exercise was scrutinised by an independent reviewer, KPMG (appointed as a Skilled Person under section 166 of the Financial Services and Markets Act), and overseen by the FCA.

RBS provisions in relation to the above redress exercises total £1.47 billion for these matters, virtually all of which had been utilised at 31 December 2017.

Judicial Review of Skilled Person's role in IRHP review

RBS has been named as an interested party in a number of claims for judicial review of KPMG's decisions as Skilled Person in RBS's previously disclosed IRHP redress programme. This follows a similar claim from a customer of another UK bank, also against KPMG.

All of these claims were stayed pending the outcome of the other bank's case. The trial in that case was heard in January 2016.

The court decided in favour of KPMG, finding that (1) KPMG is not a body amenable to judicial review in respect of its role as Skilled Person in this matter; and (2) that there was no unfairness by the other bank in the procedure adopted.

The claimant has been granted permission to appeal that decision, and the appeal hearing is expected to take place on 23 and 24 May 2018.

The majority of the claims that name RBS as an interested party have been discontinued but there are still several cases which remain stayed pending the outcome of the appeal in the other bank's case. If the appeal court finds that a section 166-appointed Skilled Person is susceptible to judicial review, these remaining claims against RBS may then proceed to full hearing to assess the fairness of KPMG's role in the redress programme in those particular cases. If deemed unfair, this could have a consequential impact on the reasonableness of the methodology applied to reviewed and settled IRHP files generally. As there remains some uncertainty, it is not practicable reliably to estimate the impact of this matter, if any, on RBS which may be material.

Investment advice review

In February 2013, the FSA announced the results of a mystery shopping review it undertook into the investment advice offered by banks and building societies to retail clients. As a result of that review the FSA announced that firms involved were cooperative and agreed to take immediate action. RBS was one of the firms involved.

The action required included a review of the training provided to advisers, considering whether changes were necessary to both advice processes and controls for new business, and undertaking a past business review to identify any historic poor advice (and where breaches of regulatory requirements are identified, to put this right for customers).

Subsequent to the FSA announcing the results of its mystery shopping review, the FCA required RBS to carry out a past business review and customer contact exercise on a sample of historic customers that received investment advice on certain lump sum products through the UK Financial Planning channel of the UK Personal & Business Banking (UK PBB) segment of RBS, which includes RBS plc and NatWest, during the period from March 2012 until December 2012.

This review was conducted under section 166 of the Financial Services and Markets Act, under which a Skilled Person was appointed to carry out the exercise. Redress has been paid to certain customers in this sample group.

Notes on the consolidated accounts

Litigation, investigations and reviews continued

Following discussions with the FCA after issue of the draft section 166 report, RBS agreed with the FCA that it would carry out a wider review/remediation exercise relating to certain investment, insurance and pension sales from 1 January 2011 to 1 April 2015. The project regarding review/remediation of sales between 1 January 2011 and 1 April 2015 was due to finish at the end of 2017 but this deadline is being extended with completion anticipated by the end of Q1 2018. This is to allow completion of outstanding remediation activity that was impacted by customer responses, and to receive information from third party providers, in addition to concluding small cohorts of work that were postponed until the additional scope was agreed.

In addition, discussions are ongoing with FCA with regard to extending the scope of the review/remediation exercise to include the period from 1 January 2010 to 31 December 2010, with a formal decision expected during Q1 2018. It is not currently anticipated that any extension of scope will require an additional provision to be taken.

In addition, RBS agreed with the FCA that it would carry out a remediation exercise, for a specific customer segment who were sold a particular structured product, in response to concerns raised by the FCA with regard to (a) the target market for the product and (b) how the product may have been described to customers by certain advisers. Redress has been paid to certain customers who took out the structured product.

RBS provisions in relation to investment advice total £201 million to date for these matters, of which £102 million had been utilised as at 31 December 2017.

Packaged accounts

As a result of an uplift in packaged current account complaints, RBS proactively put in place dedicated resources in 2013 to investigate and resolve complaints on an individual basis. RBS has made gross provisions totalling £409 million to date for this matter.

The FCA conducted a thematic review of packaged bank accounts across the UK from October 2014 to April 2016, the results of which were published in October 2016. RBS continues to take into consideration and, where relevant, address the findings from this review.

FCA investigation into RBS plc's compliance with the Money Laundering Regulations 2007

On 21 July 2017, the FCA notified RBS that it was undertaking an investigation into RBS plc's compliance with the Money Laundering Regulations 2007 in relation to certain customers. Following amendment to the scope of the investigation, there are currently three areas under review: (1) compliance with Money Laundering Regulations in respect of Money Service Business customers; (2) compliance with the Terrorism Act 2000 in relation to sanctions screening; and (3) the Suspicious Transactions regime in relation to the events surrounding a particular customer. The investigations in all three areas are assessing both criminal and civil culpability. RBS is cooperating with the investigations.

Multilateral interchange fees

In September 2014, the Court of Justice upheld earlier decisions by the EU Commission and the General Court that MasterCard's multilateral interchange fee (MIF) arrangements for cross border

payment card transactions with MasterCard and Maestro branded consumer credit and debit cards in the EEA are in breach of competition law.

Separately, in April 2013, the EC announced it was opening a new investigation into interchange fees payable in respect of payments made in the EEA by MasterCard cardholders from non-EEA countries. On 3 August 2017, the EC announced it had also sent Visa a Supplementary Statement of Objections. The EC investigations are ongoing.

In June 2015, a regulation on interchange fees for card payments entered into force. The regulation requires the capping of both cross-border and domestic MIF rates for debit and credit consumer cards.

The regulation also sets out other reforms including to the Honour All Cards Rule which require merchants to accept all cards with the same level of MIF but not cards with different MIF levels.

In May 2015, the Competition & Markets Authority (CMA) announced that it had closed the investigations into domestic interchange fees on the grounds of administrative priorities.

Whilst there are no recent developments on the above to report, there remains uncertainty around the outcomes of the ongoing EC investigation, and the impact of the regulation, and they may have a material adverse effect on the structure and operation of four party card payment schemes in general and, therefore, on RBS's business in this sector.

Payment Protection Insurance (PPI)

Since 2011, RBS has been implementing the FCA's policy statement for the handling of complaints about the mis-selling of PPI (Policy Statement 10/12).

In August 2017, the FCA's new rules and guidance on PPI complaints handling (Policy Statement 17/3) came into force. The Policy Statement introduced new so called 'Plevin' rules, under which customers may be eligible for redress if the bank earned a high level of commission from the sale of PPI, but did not disclose this detail at the point of sale. The Policy Statement also introduced a two year PPI deadline, due to expire in August 2019, before which new PPI complaints must be made. RBS is implementing the Policy Statement.

RBS has made provisions totalling £5.1 billion to date for PPI claims, including an additional provision of £175 million in 2017. Of the £5.1 billion cumulative provision, £4.1 billion had been utilised by 31 December 2017.

Notes on the consolidated accounts

Litigation, investigations and reviews continued UK retail banking

In November 2014, the CMA announced its decision to proceed with a market investigation reference (MIR) into retail banking, which would cover personal current account (PCA) and SME banking. On 9 August 2016, the CMA published its final report. The CMA concluded that there are a number of competition concerns in the provision of PCAs, business current accounts and SME lending, particularly around low levels of customers searching and switching, resulting in banks not being put under enough competitive pressure, and new products and new banks not attracting customers quickly enough. The final report set out remedies to address these concerns. These included remedies making it easier for customers to compare products, ensure customers benefit from technological advantages around open banking, improve the current account switching service and provide PCA overdraft customers with greater control over their charges along with additional measures targeted at SME customers.

On 2 February 2017 the CMA published the Retail Banking Market Investigation Order 2017 (the 'Order'), which is the primary legal framework setting out the obligations for the implementation of the majority of remedies, including an implementation deadline for each.

Other remedies are to be delivered via undertakings signed by Bacs and recommendations to be taken forward by other regulators (including the FCA).

On 19 December 2017 the CMA published directions for RBS and four other banks, which set out revised implementation dates for the delivery of certain obligations relating to open banking under the Order. On 29 January 2018 the CMA published separate directions for RBS, which set out revised implementation dates for the delivery of certain obligations requiring PCA overdraft alerts to be sent to customers under the Order.

At this stage there remains uncertainty around the financial impact of the remedies once implemented, and so it is not practicable to estimate the potential impact on RBS, which may be material.

FCA Investment and Corporate Banking Market Study

In February 2015, the FCA launched a market study into investment and corporate banking. In October 2016 the FCA published its final report. It found that whilst many clients feel well served by primary capital market services there were some areas where improvements could be made to encourage competition, particularly for smaller clients. It set out a package of remedies, including prohibiting the use of restrictive contractual clauses and ending league table misrepresentation by asking league table providers to review their recognition criteria. The prohibition on restrictive contractual clauses took effect from 3 January 2018.

Some uncertainty remains around the financial impact of the remedies once implemented and so it is not practicable reliably to estimate the potential impact on RBS. However, at this stage, this impact is not expected to be material.

FCA Asset Management Market Study

In November 2015, the FCA announced that a market study would be undertaken into asset management. In November 2016, the FCA published the interim report which indicated that price competition is weak and expressed concerns around the lack of transparency on the objectives, and appropriate benchmarks, for reporting fund performance. On 28 June 2017, the FCA published the final report which was broadly in line with the interim report and sets out an extensive package of remedies which include providing further protection to investors and driving competitive pressure on asset managers.

Some uncertainty remains around the financial impact of the remedies once implemented and so it is not practicable reliably to estimate the potential impact on RBS. However, at this stage, this impact is not expected to be material.

FCA Mortgages Market Study

In December 2016, the FCA launched a market study into the provision of mortgages. The FCA is expected to publish an interim report in Spring 2018 with the final report expected in Q4 2018.

At this stage, as there is considerable uncertainty around the outcome of this market study, it is not practicable reliably to estimate the aggregate impact, if any, on RBS which may be material.

FCA Strategic Review of Retail Banking Models

On 11 May 2017 the FCA announced a two phase strategic review of retail banking models. The FCA will use the review to understand how these models operate, including how 'free if in credit' banking is paid for and the impact of changes such as increased use of digital channels and reduced branch usage.

Phase 1 will allow the FCA to enhance its understanding of existing models and how these impact competition and conduct. Phase 2 will evaluate the impacts of economic, technological, social and regulatory factors on these models. A project update is expected in Q2 2018 outlining the FCA's preliminary conclusions from Phase 1.

At this early stage, as there is considerable uncertainty around the outcome of this review, it is not practicable reliably to estimate the aggregate impact, if any, on RBS, which in due course may be material.

Notes on the consolidated accounts

Litigation, investigations and reviews continued Governance and risk management consent order

In July 2011, RBS agreed with the Board of Governors of the Federal Reserve System, the New York State Banking Department, the Connecticut Department of Banking, and the Illinois Department of Financial and Professional Regulation to enter into a consent Cease and Desist Order (Governance Order) (which is publicly available) to address deficiencies related to governance, risk management and compliance systems and controls in the US branches of RBS plc and RBS N.V. branches (the US Branches).

In the Governance Order, RBS agreed to create the following written plans or programmes:

Key points

- a plan to strengthen board and senior management oversight of the corporate governance, management, risk management, and operations of RBS's US operations on an enterprise-wide and business line basis;
- an enterprise-wide risk management programme for RBS's US operations;
- a plan to oversee compliance by RBS's US operations with all applicable US laws, rules, regulations, and supervisory guidance;
- a Bank Secrecy Act/anti-money laundering compliance programme for the US Branches on a consolidated basis;
- a plan to improve the US Branches' compliance with all applicable provisions of the Bank Secrecy Act and its rules and regulations as well as the requirements of Regulation K of the Federal Reserve;
- a customer due diligence programme designed to ensure reasonably the identification and timely, accurate, and complete reporting by the US Branches of all known or suspected violations of law or suspicious transactions to law enforcement and supervisory authorities, as required by applicable suspicious activity reporting laws and regulations; and
- a plan designed to enhance the US Branches' compliance with Office of Foreign Assets Control (OFAC) requirements.

The Governance Order identified specific items to be addressed, considered, and included in each proposed plan or programme. RBS also agreed in the Governance Order to adopt and implement the plans and programmes after approval by the regulators, to comply fully with the plans and programmes thereafter, and to submit to the regulators periodic written progress reports regarding compliance with the Governance Order.

RBS has created, submitted, and adopted plans and/or programmes to address each of the areas identified above. In connection with RBS's efforts to implement these plans and programmes, it has, among other things, made investments in technology, hired and trained additional personnel, and revised compliance, risk management, and other policies and procedures for RBS's US operations. RBS continues to test the effectiveness of the remediation efforts it has undertaken to ensure they are sustainable and meet regulators' expectations.

Furthermore, RBS continues to work closely with the regulators in its efforts to fulfil its obligations under the Governance Order, which will remain in effect until terminated by the regulators.

RBS may be subject to formal and informal supervisory actions and may be required by its US banking supervisors to take further actions and implement additional remedial measures with respect to these and additional matters. RBS's activities in the US may be subject to significant limitations and/or conditions.

US dollar processing consent order

In December 2013 RBS and RBS plc agreed a settlement with the Federal Reserve, the New York State Department of Financial Services (DFS), and the Office of Foreign Assets Control (OFAC) with respect to RBS plc's historical compliance with US economic sanction regulations outside the US. As part of the settlement, RBS and RBS plc entered into a consent Cease and Desist Order with the Federal Reserve (US Dollar Processing Order), which remains in effect until terminated by the Federal Reserve. The US Dollar Processing Order (which is publicly available) indicated, among other things, that RBS and RBS plc lacked adequate risk management and legal review policies and procedures to ensure that activities conducted outside the US comply with applicable OFAC regulations.

RBS agreed to create an OFAC compliance programme to ensure compliance with OFAC regulations by RBS's global business lines outside the US, and to adopt, implement, and comply with the programme. Prior to and in connection with the US Dollar Processing Order, RBS has made investments in technology, hired and trained personnel, and revised compliance, risk management, and other policies and procedures.

Under the US Dollar Processing Order (as part of the OFAC compliance programme) RBS was required to appoint an independent consultant to conduct an annual review of OFAC compliance policies and procedures and their implementation and an appropriate risk-focused sampling of US dollar payments. RBS appointed the independent consultant and their reports were submitted to the authorities in June 2015. The independent consultant review examined a significant number of sanctions alerts and no reportable issues were identified.

Pursuant to the US Dollar Processing Order, the authorities requested a second annual review to be conducted by an independent consultant. The second review was conducted by the independent consultant and reports were submitted to the authorities in September 2016. In line with the first review, and following examination of a significant number of sanctions alerts, the independent consultant did not identify any reportable issues. The authorities have requested a third annual review to be conducted and independent consultant reports are expected to be issued during Q1 2018. In addition, pursuant to requirements of the US Dollar Processing Order, RBS has provided the required written submissions, including quarterly updates, in a timely manner, and RBS continues to participate in a constructive dialogue with the authorities.

Notes on the consolidated accounts

Litigation, investigations and reviews continued US/Swiss tax programme

In August 2013, the DOJ announced a programme for Swiss banks (the Programme) which provides Swiss banks with an opportunity to obtain resolution, through non-prosecution agreements or non-target letters, of the DOJ's investigations of the role that Swiss banks played in concealing the assets of US tax payers in offshore accounts (US related accounts). In December 2013, Coutts & Co Ltd., a member of the Group incorporated in Switzerland, notified the DOJ that it intended to participate in the Programme.

As required by the Programme, Coutts & Co Ltd. subsequently conducted a review of its US related accounts and presented the results of the review to the DOJ. In December 2015, Coutts & Co Ltd. entered into a non-prosecution agreement (the NPA) in which Coutts & Co Ltd. paid a US\$78.5 million penalty and acknowledged responsibility for certain conduct set forth in a statement of facts accompanying the agreement. Under the NPA, which has a term of four years, Coutts & Co Ltd. is required, among other things, to provide certain information, cooperate with DOJ's investigations, and commit no U.S. federal offences. If Coutts & Co Ltd. abides by the NPA, the DOJ will not prosecute it for certain tax-related and monetary transaction offences in connection with US related accounts.

Enforcement proceedings and investigations in relation to Coutts & Co Ltd

The Swiss Financial Market Supervisory Authority (FINMA) has been taking enforcement proceedings against Coutts & Co Ltd, a member of RBS incorporated in Switzerland, with regard to certain client accounts held with Coutts & Co Ltd relating to allegations in connection with the Malaysian sovereign wealth fund 1MDB. On 2 February 2017, FINMA announced that Coutts & Co Ltd had breached money laundering regulations by failing to carry out adequate background checks into business relationships and transactions associated with 1MDB. FINMA accordingly required Coutts & Co Ltd to disgorge profits of CHF 6.5 million. FINMA is currently investigating three individuals in connection with 1MDB.

In addition, Coutts & Co Ltd is cooperating with investigations and enquiries from authorities in other jurisdictions in relation to the same subject matter. In this context, the Monetary Authority of Singapore (MAS)'s supervisory examination of Coutts & Co Ltd's Singapore branch revealed breaches of anti-money laundering requirements. MAS imposed on Coutts & Co Ltd financial penalties amounting to SGD 2.4 million in December 2016.

The outcomes of other proceedings, investigations and enquiries are uncertain but may include financial consequences and/or regulatory sanctions.

Regulator requests concerning certain historic Russian transactions

Media coverage in 2017 highlighted an alleged money laundering scheme involving Russian entities between 2010 and 2014. Allegedly certain European banks, including RBS and 16 other UK based financial institutions, and certain US banks, were involved in processing certain transactions associated with this scheme. RBS has responded to requests for information from the FCA, PRA and regulators in other jurisdictions.

Review and investigation of treatment of tracker mortgage customers in Ulster Bank Ireland DAC (formerly Ulster Bank Ireland Limited)

In December 2015, the Central Bank of Ireland (CBI) announced that it had written to a number of lenders requiring them to put in place a robust plan and framework to review the treatment of customers who have been sold mortgages with a tracker interest rate or with a tracker interest rate entitlement. The CBI stated that the intended purpose of the review was to identify any cases where customers' contractual rights under the terms of their mortgage agreements were not fully honoured, or where lenders did not fully comply with various regulatory requirements and standards regarding disclosure and transparency for customers. The CBI has required Ulster Bank Ireland DAC (UBI DAC), a member of RBS, incorporated in the Republic of Ireland, to participate in this review and UBI DAC is co-operating with the CBI in this regard. UBI DAC submitted its phase 2 report to the CBI on 31 March 2017, identifying impacted customers. The redress and compensation phase (phase 3) commenced in Q4 2017.

RBS has made provisions totalling €298 million (£248 million) to date for this matter, including an additional provision of €87 million (£76 million) in 2017. Of the €298 million (£248 million) cumulative provision, €75 million (£64 million) had been utilised by 31 December 2017.

Separately, in April 2016, the CBI notified UBI DAC that it was also commencing an investigation under its Administrative Sanctions Procedure into suspected breaches of the Consumer Protection Code 2006 during the period 4 August 2006 to 30 June 2008 in relation to certain customers who switched from tracker mortgages to fixed rate mortgages. This investigation is ongoing and UBI DAC continues to co-operate with the CBI.

As part of an internal review of the wider retail and commercial loan portfolios extending from the tracker mortgage examination programme, UBI DAC identified further legacy business issues. A programme is ongoing to identify and remediate impacted customers and a charge of €101 million (£89 million) has been recognised in 2017 based on expected remediation and project costs in relation to these items.

Bank of England	£0.6bn	£0.5bn	£0.5bn
De Nederlandsche Bank	€0.1bn	€0.4bn	€0.3bn

Notes on the consolidated accounts

37 Segmental analysis

(a) Reportable segments

The directors manage RBS primarily by class of business and present the segmental analysis on that basis. This includes the review of net interest income for each class of business - interest receivable and payable for all reportable segments is therefore presented net. Segments charge market prices for services rendered between each other; funding charges between segments are determined by RBS Treasury, having regard to commercial demands. The segment performance measure is operating profit/(loss).

Segmental reorganisation and business transfers

RBS continues to deliver on its plan to build a strong, simple and fair bank for both customers and shareholders. To support this, and in preparation for the UK ring-fencing regime, the previously reported operating segments were realigned in Q4 2017 and a number of business transfers completed.

Segmental reorganisation

The previously reported operating segments are now realigned and comparatives have been re-presented as follows:

- The former Williams & Glyn reportable operating segment has been integrated into the UK PBB reportable segment;
- The former Capital Resolution reportable operating segment has been integrated into the NatWest Markets reportable segment, with the exception of the costs in relation to the RMBS claims, which have been transferred to the Central & other items reportable segment;
- The RBSI reportable operating segment is no longer presented within the CPB franchise.

Business transfers

On 1 October 2017 the following changes were made to RBS's businesses, which impacts its financial reporting but where comparatives have not been re-presented:

- Shipping and other activities, which were formerly in Capital Resolution, were transferred from the NatWest Markets reportable segment to the Commercial Banking reportable segment.
- UK PBB Collective Investment Funds (CIFL) business was transferred to the Private Banking reportable segment in order to better serve customers.
- The RBS International (RBSI) reportable operating segment was aligned to the legal entity The Royal Bank of Scotland International (Holdings) Limited. This predominantly involved transfers from Private Banking, and Services and Functions within Central items & other in preparation for the implementation of the UK ring-fencing regime.
- Commercial Banking whole business securitisations and relevant financial institutions (RFI) were transferred to NatWest Markets during December 2017. RFIs are prohibited from being within the ring-fence due to their nature and exposure to global financial markets. The move is in preparation for the implementation of the UK ring-fencing regime.

Reportable operating segments

Following the changes detailed the reportable operating segments are as follows:

Personal & Business Banking (PBB) comprises two reportable segments: UK Personal & Business Banking (UK PBB) and Ulster Bank RoI. UK PBB serves individuals and mass affluent customers in the UK together with small businesses (generally up to £2 million turnover). UK PBB includes Ulster Bank customers in Northern Ireland. Ulster Bank RoI serves individuals and businesses in the Republic of Ireland (RoI).

Commercial & Private Banking (CPB) comprises two reportable segments: Commercial Banking and Private Banking. Commercial Banking serves commercial and corporate customers in the UK and Western Europe. Private Banking serves UK connected high net worth individuals.

RBS International (RBSI) serves retail, commercial, corporate and financial institution customers in Jersey, Guernsey, Isle of Man and Gibraltar and financial institution customers in Luxembourg and London.

NatWest Markets offers corporate and institutional customers global market access, providing them with trading, risk management and financing solutions through its trading and sales operations in London, Singapore and Stamford and sales offices in Dublin, Hong Kong and Tokyo.

Central items & other includes corporate functions, such as RBS treasury, finance, risk management, compliance, legal, communications and human resources. Central functions manages RBS capital resources and RBS-wide regulatory projects and provides services to the reportable segments. Balances in relation to legacy litigation issues and the international private banking business are included in Central items in the relevant periods.

Allocation of central balance sheet items

RBS allocates all central costs relating to Services and Functions to the business using appropriate drivers, these are reported as indirect costs in the segmental income statements. Assets (and risk-weighted assets) held centrally, mainly relating to RBS Treasury, are allocated to the business using appropriate drivers.

Notes on the consolidated accounts

38 Directors' and key management remuneration

	2017 £000	2016 £000
Directors' remuneration		
Non-executive directors emoluments	1,747	1,466
Chairman and executive directors emoluments	5,299	5,801
	7,046	7,267
Amounts receivable under long-term incentive plans and share option plans	1,225	993
	<u>8,271</u>	<u>8,260</u>

No directors accrued benefits under defined benefit schemes or money purchase schemes during 2017 and 2016.

The executive directors may participate in the company's long-term incentive plans, executive share option and sharesave schemes and details of their interests in the company's shares arising from their participation are given in the Directors' remuneration report. Details of the remuneration received by each director is also given in the Directors' remuneration report.

Compensation of key management

The aggregate remuneration of directors and other members of key management during the year was as follows:

	2017 £000	2016 £000
Short-term benefits	19,019	20,350
Post-employment benefits	434	471
Share-based payments	3,558	2,606
	<u>23,011</u>	<u>23,427</u>

Key management comprises members of the Executive Committee.

39 Transactions with directors and key management

(a) At 31 December 2017, amounts outstanding in relation to transaction, arrangements and agreements entered into by authorised institutions in the Group, as defined in UK legislation, were £24,376 in respect of loans to six persons who were directors of the company at any time during the financial period.

(b) For the purposes of IAS 24 'Related Party Disclosures', key management comprise directors of the company and members of the Executive Committee. The captions in the Group's primary financial statements include the following amounts attributable, in aggregate, to key management:

	2017 £000	2016 £000
Loans and advances to customers	3,942	4,127
Customer accounts	23,619	17,045

Key management have banking relationships with Group entities which are entered into in the normal course of business and on substantially the same terms, including interest rates and security, as for comparable transactions with other persons of a similar standing or, where applicable, with other employees. These transactions did not involve more than the normal risk of repayment or present other unfavourable features.

Notes on the consolidated accounts

40 Related parties

UK Government

On 1 December 2008, the UK Government through HM Treasury became the ultimate controlling party of The Royal Bank of Scotland Group plc. The UK Government's shareholding is managed by UK Financial Investments Limited, a company wholly owned by the UK Government. As a result, the UK Government and UK Government controlled bodies became related parties of the Group. During 2015, all of the B shares held by the UK Government were converted into ordinary shares of £1 each (see Note 25).

The Group enters into transactions with many of these bodies on an arm's length basis. Transactions include the payment of: taxes principally UK corporation tax (see Note 6) and value added tax; national insurance contributions; local authority rates; and regulatory fees and levies (including the bank levy (see Note 3) and FSCS levies (see Note 31) together with banking transactions such as loans and deposits undertaken in the normal course of banker-customer relationships.

Bank of England facilities

The Group may participate in a number of schemes operated by the Bank of England in the normal course of business.

Members of the Group that are UK authorised institutions are required to maintain non-interest bearing (cash ratio) deposits with the Bank of England amounting to 0.18% of their average eligible liabilities in excess of £600 million. They also have access to Bank of England reserve accounts: sterling current accounts that earn interest at the Bank of England Rate.

41 Post balance sheet events

There have been no other significant events between 31 December 2017 and the date of approval of these accounts which would require a change to or additional disclosure in the accounts.

Associates

Transactions with associates have given rise to the following:

	2017	2016
	£m	£m
Loans and advances	130	150
Customer deposits	111	64
Total income	28	30
Operating expenses	23	8

Other related parties

- In their roles as providers of finance, RBS companies provide development and other types of capital support to businesses. These investments are made in the normal course of business and on arm's length terms. In some instances, the investment may extend to ownership or control over 20% or more of the voting rights of the investee company. However, these investments are not considered to give rise to transactions of a materiality requiring disclosure under IAS 24.
- RBS recharges The Royal Bank of Scotland Group Pension Fund with the cost of administration services incurred by it. The amounts involved are not material to the Group.
- In accordance with IAS 24, transactions or balances between RBS entities that have been eliminated on consolidation are not reported.
- The captions in the primary financial statements of the parent company include amounts attributable to subsidiaries. These amounts have been disclosed in aggregate in the relevant notes to the financial statements.

Notes:

- (1) In October 2015, all B shares were converted into ordinary shares of £1 each.
- (2) During 2017, non-cumulative US dollar preference shares recorded as debt were redeemed at their original issue price of US\$1.1 billion. The nominal value of £0.3 million has been credited to the capital redemption reserve; share premium increased by £0.7 billion in respect of the premium received on issue, with a corresponding decrease in retained earnings. During 2016, non-cumulative US dollar preference shares were redeemed at their original issue price of US\$1.5 billion (2015 - \$1.9 billion). The nominal value of £0.3 million (2015 - £1.0 million) was transferred from share capital to capital redemption reserve and ordinary owners equity was reduced by £0.4 billion (2015 - £0.2 billion) in respect of the movement in exchange rates since issue.
- (3) AT1 capital notes totalling £2.0 billion issued in August 2016 (2015 - £2.0 billion).
- (4) Paid-in equity reclassified to liabilities as a result of the call of US\$564 million and CAD321 million EMTN notes in August 2017 (redeemed in October 2017).
- (5) On 15 June 2017, the Court of Session approved a reduction of RBSG plc capital so that the amounts which stood to the credit of share premium account and capital redemption reserve were transferred to retained earnings.

The accompanying notes on pages 337 to 356 form an integral part of these financial statements.

The accompanying notes on pages 337 to 356 form an integral part of these financial statements.

Parent company financial statements and notes

1 Presentation of accounts

The accounts are prepared on a going concern basis (refer to the Report of the directors, page 112) and in accordance with International Financial Reporting Standards issued by the International Accounting Standards Board (IASB) and interpretations issued by the IFRS Interpretations Committee of the IASB as adopted by the European Union (together IFRS). The company's financial statements are prepared in accordance with IFRS as issued by the IASB and are presented in accordance with the Companies Act 2006.

The company is incorporated in the UK and registered in Scotland. The accounts are prepared on the historical cost basis except that derivative financial instruments and certain issued securities are stated at fair value. Recognised financial assets and financial liabilities in fair value hedges are adjusted for changes in fair value in respect of the risk that is hedged.

The accounting policies that are applicable to the company are included in RBS accounting policies which are set out on pages 251 to 263 of the consolidated financial statements, except that it has no policy regarding 'Basis of consolidation' and that the company's investments in its subsidiaries are stated at cost less any impairment.

Critical accounting policies and sources of estimation uncertainty

The reported results of the company are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. The judgements and assumptions involved in the company's accounting policies that are considered by the Board to be the most important to the portrayal of its financial condition are those involved in assessing the impairment, if any, in its investments in subsidiaries. At each reporting date, the company assesses whether there is any indication that its investment in a subsidiary is impaired. If any such indication exists, the company undertakes an impairment test by comparing the carrying value of the investment in the subsidiary with its estimated recoverable amount. The recoverable amount of an investment in a subsidiary is the higher of its fair value less cost to sell and its value in use. Impairment testing inherently involves a number of judgments: the choice of appropriate discount and growth rates; and the estimation of fair value.

Accounting developments

International Financial Reporting Standards

A number of IFRSs and amendments to IFRS were in issue at 31 December 2017 that would affect the Company from 1 January 2018 or later.

Effective 1 January 2018 - IFRS 9

In July 2014, the IASB published IFRS 9 'Financial Instruments' with an effective date of 1 January 2018. IFRS 9 replaces the current financial instruments standard IAS 39, setting out new accounting requirements in a number of areas.

The principle features of IFRS 9 are disclosed in the RBS accounting policies. The impact on the company is as follows:

Transition

The classification and measurement and impairment requirements will be applied retrospectively by adjusting the opening balance sheet at the date of initial application, with no requirement to restate comparative periods.

In summary, on 1 January 2018, the estimated post tax increase in equity is not more than £0.2 billion. There will be no restatement of accounts prior to 2018.

The Group has opted to early adopt the IFRS 9 amendment on negative compensation with effect from 1 January 2018; this is expected to be endorsed for use in the EU in early 2018.

Parent company financial statements and notes

2 Profit dealt with in the accounts of the company

As permitted by section 408(3) of the Companies Act 2006, the primary financial statements of the company do not include an income statement or a statement of comprehensive income. Condensed information is set out below.

	2017 £m	2016 £m	2015 £m
Income statement			
Dividends received from subsidiaries	—	663	44
Net interest income from subsidiaries	918	942	964
Other net interest income, non-interest income and operating expenses	(9)	(915)	14
Write-back/(write-down) of investments in subsidiaries (see Note 7)	562	(6,106)	(2,827)
Operating profit/(loss) before tax	1,471	(5,416)	(1,805)

	612	2,162	3,387	1,550	13,898	2,221

For further information on the timing of cash flows to settle financial liabilities, refer to Note 10 on the consolidated accounts.

Parent company financial statements and notes

6 Debt securities

Debt securities comprise the partial repurchase of preferred securities issued by the trusts referred to in Note 26 on the consolidated accounts.

7 Investments in Group undertakings

Investments in Group undertakings are carried at cost less impairment. Movements during the year were as follows:

	2017 £m	2016 £m
At 1 January	44,608	52,129
Currency translation and other adjustments	—	31
Additions	2,461	—
Disposals	(72)	(1,446)
Write back/(impairment) of investments	562	(6,106)
At 31 December	<u>47,559</u>	<u>44,608</u>

In 2017 additions principally relate to the acquisition of the Royal Bank of Scotland International (Holdings) Limited from The Royal Bank of Scotland plc (RBS plc). The write-back in 2017 relates to the partial reversal of the company's investment in RFS Holdings B.V..

The majority of the impairment charge for 2016 relates to the company's investment in RBS plc. At 31 December 2017, the amount by which it exceeded its carrying value (based on its value in use) was £0.8 billion.

The key assumptions applied in assessing the carrying value of the company's investment in RBS plc are terminal growth rate of underlying business, the pre-tax discount rate, income and costs of future periods. The underlying sensitivities in connection to the Group's reportable segments are disclosed in Note 15 on the consolidated accounts. The following sensitivities reduce the available headroom of £0.8 billion (2016: £2.9 billion) and result in a deficit indicating potential impairment.

	Remaining headroom/ (potential impairment)	
	2017 £bn	2016 £bn
1% adverse movement Discount Rate	(4.8)	(3.4)
1% adverse movement Terminal Growth Rate	(1.4)	—
5% adverse movement in Costs	(0.8)	1.2
5% adverse movement in Income	(1.8)	0.4

The principal subsidiary undertakings of the company are shown below. Their capital consists of ordinary and preference shares which are unlisted with the exception of certain preference shares issued by NatWest.

The Royal Bank of Scotland plc and RFS Holdings B.V. are directly owned by the company, and all other subsidiary undertakings are owned either by the company, or directly, or indirectly through intermediate holding companies. All of these subsidiaries are included in RBS's consolidated financial statements and have an accounting reference date of 31 December.

	Nature of business	Country of incorporation and principal area of operation	Group interest
The Royal Bank of Scotland plc	Banking	Great Britain	100%
National Westminster Bank Plc (1)	Banking	Great Britain	100%
Coutts & Company (2)	Private banking	Great Britain	100%
RBS Securities Inc.	Broker dealer	US	100%
Ulster Bank Limited	Banking	Northern Ireland	100%
Ulster Bank Ireland Designated Activity Company	Banking	Republic of Ireland	100%
The Royal Bank of Scotland International Limited	Financial Institution	Jersey	100%

Notes:

(1) The company does not hold any of the preference shares in issue.

(2) Coutts & Company is incorporated with unlimited liability. Its registered office is 440 Strand, London WC2R 0QS.

For full information on all related undertakings, refer to Note 15 to the parent company financial statements.

At 31 December*	245	1,195	3,006

*Comprises loans and advances to banks

14 Directors' and key management remuneration

Directors' remuneration is disclosed in Note 38 on the consolidated accounts. The directors had no other reportable related party transactions or balances with the company.

Parent company financial statements and notes

15 Related undertakings

RBS legal entities and activities at 31 December 2017

In accordance with the Companies Act 2006, the company's related undertakings and the accounting treatment for each are listed below. All undertakings are wholly-owned by the company or subsidiaries of the company and are consolidated by reason of contractual control (Section 1162(2) CA 2006), unless otherwise indicated. Group interest refers to ordinary shares of equal values and voting rights unless further analysis is provided in the notes. Activities are classified in accordance with Annex I to the Capital Requirements Directive ("CRD IV") and the definitions in Article 4 of the Capital Requirements Regulation. All other requirements of the Capital Requirements (country-by-country) Reporting Regulations 2013 will be published on the RBS Group's website.

The following table details active related undertakings incorporated in the UK which are 100% owned by the Group and fully consolidated for accounting purposes.

Financial summary

The geographic analysis, including the average balance sheet and interest rates, changes in net interest income and average interest rates, yields, spreads and margins in this report have generally been compiled on the basis of location of office - UK and overseas - unless indicated otherwise. 'UK' in this context includes transactions conducted through the offices in the UK which service international banking transactions.

Analysis of loans and advances to customers

The following table analyses gross loans and advances to customers by remaining maturity, geographical area (location of office) and type of customer.

RBS provides credit facilities at variable rates to its corporate and retail customers. Variable rate credit extended to RBS's corporate and commercial customers includes bullet and instalment loans, finance lease agreements and overdrafts; interest is generally charged at a margin over a benchmark rate such as LIBOR or base rate. Interest on variable rate retail loans may also be based on LIBOR or base rate; other variable rate retail lending is charged at variable interest rates set by RBS such as its mortgage standard variable rate in the UK.

Additional information

	2017	2016	2015
	%	%	%
Yields, spreads and margins of the banking business			
Gross yield on interest-earning assets of the banking business (1)	2.57	2.80	2.88
Cost of interest-bearing liabilities of the banking business	(0.69)	(0.94)	(1.11)
Interest spread of the banking business (2)	1.88	1.86	1.77
Benefit from interest-free funds	0.25	0.32	0.35

- Eurodollar	1.26	0.69	0.32
- Euro	(0.33)	(0.26)	(0.02)

Notes:

- (1) Gross yield is the interest earned on average interest-earning assets of the banking book.
- (2) Interest spread is the difference between the gross yield and the interest rate paid on average interest-bearing liabilities of the banking business.
- (3) For the purpose of net interest margin calculations, there was no increase in interest receivable (2016 - nil; 2015 - nil) and no increase in interest payable (2016 - nil; 2015 - £15 million) in respect of interest on financial assets and liabilities designated as at fair value through profit or loss. Related interest-earning assets and interest-bearing liabilities have been adjusted where applicable.
- (4) Net interest margin is net interest income of the banking business as a percentage of interest-earning assets (IEA) of the banking business.
- (5) For the purpose of calculating gross yields and interest spread, interest receivable and interest payable have both been decreased by £182 million (2016 - £76 million) in respect of negative interest relating to financial assets and financial liabilities that attracted negative interest.
- (6) The analysis into UK and overseas has been compiled on the basis of location of office.

Notes:

- (1) Interest receivable and interest payable have both been decreased by £182 million (2016 – £76 million) in respect of negative interest relating to financial assets and financial liabilities that attracted negative interest.
- (2) There was no increase in interest receivable (2016 - nil; 2015 - nil) and no increase in interest payable (2016 - nil; 2015 - £15 million) in respect of interest on financial assets and liabilities designated as at fair value through profit or loss. Related interest-earning assets and interest-bearing liabilities have been adjusted where applicable.
- (3) Interest receivable includes £256 million (2016 - £290 million; 2015 - £400 million) in respect of loan fees forming part of the effective interest rate of loans and receivables.
- (4) Interest receivable and interest payable on trading assets and liabilities are included in income from trading activities.
- (5) Interest receivable includes amounts (unwind of discount) recognised on impaired loans and receivables. The average balances of such loans are included in average loans and advances to banks and loans and advances to customers.
- (6) The analysis into UK and overseas has been compiled on the basis of location of office.

Additional information

Analysis of change in net interest income - volume and rate analysis

Volume and rate variances have been calculated based on movements in average balances over the period and changes in interest rates on average interest-earning assets and average interest-bearing liabilities. Changes due to a combination of volume and rate are allocated pro rata to volume and rate movements.

	2017 over 2016			2016 over 2015

Additional information

Risk elements in lending

Risk elements in lending (REIL) comprises of impaired loans and accruing loans past due 90 days or more as to principal or interest.

Impaired loans are all loans (including loans subject to forbearance) for which an impairment provision has been established; for collectively assessed loans, impairment loss provisions are not allocated to individual loans and the entire portfolio is included in impaired loans.

Accruing loans past due 90 days or more comprises loans past due 90 days where no impairment loss is expected.

	2017 £m	2016 £m	2015 £m	2014 £m	2013 £m
Impaired loans (1)					
UK	4,450	5,557	6,095	11,562	17,480
Overseas	2,973	3,308	4,755	13,681	19,691
Total	7,423	8,865	10,850	25,243	37,171
Accruing loans which are contractually overdue 90 days or more as to principal or interest					
UK	1,087	1,122	1,262	1,536	1,962
Overseas	394	323	25	105	259
Total	1,481	1,445	1,287	1,641	2,221
Total REIL	8,904	10,310	12,137	26,884	39,392
Closing provisions for impairment as a % of total REIL	43%	43%	59%	65%	64%
REIL as a % of gross lending to customers excluding reverse repos	2.7%	3.1%	3.9%	7.6%	9.5%

Notes:

- (1) The write-off of impaired loans affects closing provisions for impairment as a % of total REIL (the coverage ratio). The coverage ratio reduces if the loan written-off carries a higher than average provision and increases if the loan written-off carries a lower than average provision.
- (2) Impaired loans at 31 December 2017 include £1,324 million (2016 - £2,496 million; 2015 - £2,300 million) of loans subject to forbearance granted during the year.

	2017 £m	2016 £m	2015 £m	2014 £m	2013 £m
Gross income not recognised but which would have been recognised under the original terms of impaired loans					
UK	227	243	311	404	571
Overseas	80	122	125	165	601
Total	307	365	436	569	1,172
Interest on impaired loans included in net interest income					
UK	61	75	98	146	196
Overseas	25	38	46	101	195
Total	86	113	144	247	391

Potential problem loans

Potential problem loans (PPL) are loans for which an impairment event has taken place but no impairment loss is expected. This category is used for advances which are not past due 90 days or revolving credit facilities where identification as 90 days overdue is not feasible.

	2017 £m	2016 £m	2015 £m	2014 £m	2013 £m
Potential problem loans	745	1,196	1,277	1,206	789

Both REIL and PPL are reported gross and take no account of the value of any security held which could reduce the eventual loss should it occur, nor of any provision marked. Therefore impaired assets which are highly collateralised, such as mortgages, will have a low coverage ratio of provisions held against the reported impaired balance.

Additional information

Forbearance

The table below shows loans granted forbearance during the year. These loans are unimpaired: either the loan was performing before and after the granting of forbearance or the loan was non-performing before but subsequently transferred to the performing book. Loans with impairment provisions subject to forbearance continue to be reported as impaired loans.

	2017 £m	2016 £m	2015 £m	2014 £m	2013 £m
Loans granted forbearance	1,480	2,257	3,760	6,091	7,901

Notes:

- (1) Wholesale loans subject to forbearance include only those arrangements above thresholds set individually by the segments, ranging from nil to £3 million.
(2) For 2017, wholesale loans subject to forbearance were £1,206 million (2016 - £1,807 million; 2015 - £2,258 million) and secured retail loans subject to forbearance were £274 million (2016 - £450 million; 2015 - £1,502 million). Unsecured retail loans subject to forbearance amounting to £31 million (2016 - £37 million; 2015 - £96 million) are not included.

Cross border exposures

Cross border exposures are loans and advances including finance leases and instalment credit receivables and other monetary assets, such as debt securities, including non-local currency claims of overseas offices on local residents. RBS monitors the geographical breakdown of these exposures based on the country of domicile of the borrower or guarantor of ultimate risk. Cross border exposures exclude exposures to local residents in local currencies.

The table below sets out cross border exposures greater than 0.5% of RBS's total assets. None of these countries have experienced repayment difficulties that have required restructuring of outstanding debt.

Commercial paper	—	—	1	—	0.4
Certificates of deposits	1	0.9	2	1	0.9
Total	91	0.5	179	125	0.3

Note:

(1) Excludes derivative cash collateral of £23 billion at 31 December 2017 (2016 - £32 billion; 2015 - £30 billion); and 2017 average of £26 billion (2016 - 34 billion; 2015 - £36 billion).

Balances are generally based on monthly data. Average interest rates during the year are computed by dividing total interest expense by the average amount borrowed. Weighted average interest rates at year end are for a single day and as such may reflect one-day market distortions, which may not be indicative of generally prevailing rates.

Other contractual cash obligations

The table below summarises other contractual cash obligations by payment date.

	0-3 months £m	3-12 months £m	1-3 years £m	3-5 years £m	5-10 years £m	10-20 years £m

Contractual obligations to purchase goods or services	81	221	570	570	—	—
	141	393	991	908	692	1,314

Undrawn formal facilities, credit lines and other commitments to lend were £121,229 million (2016 - £134,324 million; 2015 - £132,198 million). While RBS has given commitments to provide these funds, some facilities may be subject to certain conditions being met by the counterparty. RBS does not expect all facilities to be drawn, and some may lapse before drawdown.

Additional information

Material contracts

The company and its subsidiaries are party to various contracts in the ordinary course of business. Material contracts include the following:

B Share Acquisition and Contingent Capital Agreement

On 26 November 2009, the company and HM Treasury entered into the Acquisition and Contingent Capital Agreement pursuant to which HM Treasury subscribed for the initial B shares and the Dividend Access Share (the Acquisitions) and agreed the terms of HM Treasury's contingent subscription (the Contingent Subscription) for an additional £8 billion in aggregate in the form of further B shares (the Contingent B shares), to be issued on the same terms as the initial B shares. The Acquisitions were subject to the satisfaction of various conditions, including the company having obtained the approval of its shareholders in relation to the Acquisitions.

On 16 December 2013, the company announced that, having received approval from the PRA, it had terminated the £8 billion Contingent Subscription. RBS was able to cancel the Contingent Subscription as a result of the actions announced in the second half of 2013 to further strengthen its capital position.

On 9 October 2015, the company announced that on 8 October 2015, it had received a valid conversion notice from HM Treasury in respect of all outstanding B shares held by HM Treasury. The new ordinary shares issued on conversion of the B shares were admitted to the official list of the UK Listing Authority (UKLA), and to trading on the London Stock Exchange plc, on 14 October 2015. Following such conversion, HM Treasury no longer holds any B shares.

The company gave certain representations and warranties to HM Treasury on the date of the Acquisition and Contingent Capital Agreement, on the date the circular was posted to shareholders, on the first date on which all of the conditions precedent were satisfied, or waived, and on the date of the Acquisitions. The company also agreed to a number of undertakings.

The company agreed to reimburse HM Treasury for its expenses incurred in connection with the Acquisitions.

For as long as it is a substantial shareholder of the company (within the meaning of the UKLA's Listing Rules), HM Treasury has undertaken not to vote on related party transaction resolutions at general meetings and to direct that its affiliates do not so vote.

Revised State Aid Commitment Deed

As a result of the State Aid granted to the company, it was required to work with HM Treasury to submit a State Aid restructuring plan to the European Commission (EC), which was then approved by the EC under the State Aid rules on 14 December 2009. The company agreed a series of measures which supplemented the measures in the company's strategic plan.

RBS entered into a State Aid Commitment Deed with HM Treasury at the time of the initial EC decision and, following the EC's approval of amendments to the restructuring plan in April 2014, RBS entered into a revised State Aid Commitment Deed with HM Treasury. In September 2017, the revised State Aid Commitment Deed was amended by a Deed of Variation (as so amended, the "Revised State Aid Commitment Deed") following the EC's approval of an alternative remedies package (the "Alternative Remedies Package"). The Alternative Remedies Package will form the basis of a new agreement with HM Treasury to replace RBS's final outstanding divestment commitment under its State Aid obligations (to divest the business previously known as Williams & Glyn).

The Alternative Remedies Package is focused on the following two remedies to promote competition in the market for banking services to small and medium-sized enterprises ("SMEs"): (i) a £425 million fund that will grant funding for eligible bodies in the UK banking and financial technology sectors to develop and improve their capability to compete with RBS in the provision of banking services to SMEs and develop and improve the financial products and services available to SMEs (the "Capability and Innovation Fund"); and (ii) a £275 million scheme which will provide funding to eligible bodies to help them incentivise SME banking customers within the business previously known as Williams & Glyn to switch their business current accounts and loans to the eligible bodies (the "Incentivised Switching Scheme"). RBS has also agreed to set aside up to a further £75 million in funding to cover certain costs customers may incur as a result of switching under the Incentivised Switching Scheme. In addition, under the terms of the Alternative Remedies Package, should the uptake within the Incentivised Switching Scheme not be sufficient, RBS may be required to make a further contribution, capped at £50 million. An independent body (the "Independent Body") is being established to facilitate and oversee the delivery of the Alternative Remedies Package, including the distribution of the funds from the Capability and Innovation Fund and the implementation of the Incentivised Switching Scheme.

The Revised State Aid Commitment Deed provides that RBS will comply or procure compliance with certain measures and behavioural commitments. RBS agreed to do all acts and take all measures to ensure HM Treasury's compliance with its obligations under any EC decision approving State Aid to RBS, including under the Alternative Remedies Package.

The Revised State Aid Commitment Deed also provides that if the EC adopts a decision that the UK Government must recover any State Aid (a "Repayment Decision") and the recovery order of the Repayment Decision has not been annulled or suspended by the General Court or the European Court of Justice, then RBS must repay HM Treasury any aid ordered to be recovered under the Repayment Decision.

Additional information

The Revised State Aid Commitment Deed also provides for RBS's undertakings in respect of State Aid to be modified in certain limited circumstances. However, HM Treasury has undertaken that it will not, without the consent of RBS, agree modifications to RBS's undertakings with respect to State Aid which are significantly more onerous to RBS than those granted in order to obtain the State Aid approval. Further details are provided in the Risk Factors.

In the context of the Alternative Remedies Package, RBS has also agreed to enter into separate indemnification arrangements with each of the Independent Body and HM Treasury, up to an amount of £320 million collectively to cover liabilities that may be incurred in implementing the Alternative Remedies Package.

State Aid Costs Reimbursement Deed

Under the 2009 State Aid Costs Reimbursement Deed, RBS has agreed to reimburse HM Treasury for fees, costs and expenses associated with the State Aid and State Aid approval.

HMT and UKFI Relationship Deed

On 7 November 2014, in order to comply with an amendment to the UK Listing Rules, the company entered into a Relationship Deed with HM Treasury and UK Financial Investments Limited in relation to the company's obligations under the UK Listing Rules to put in place an agreement with any controlling shareholder (as defined for these purposes in the Listing Rules). The Relationship Deed covers the three independence provisions mandated by the Listing Rules: (i) that contracts between the company and HM Treasury (or any of its subsidiaries) will be arm's length and normal commercial arrangements, (ii) that neither HM Treasury nor any of its associates will take any action that would have the effect of preventing the company from complying with its obligations under the Listing Rules; and (iii) neither HM Treasury nor any of its associates will propose or procure the proposal of a shareholder resolution which is intended or appears to be intended to circumvent the proper application of the Listing Rules.

Additional information

Risk factors

Set out below are certain risk factors that could adversely affect the Group's future results, its financial condition and prospects and cause them to be materially different from what is expected. The factors discussed below and elsewhere in this report should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties facing the Group.

The Group is subject to a number of legal, regulatory and governmental actions and investigations. Unfavourable outcomes in such actions and investigations could have a material adverse effect on the Group's operations, operating results, reputation, financial position and future prospects

The Group's operations remain diverse and complex and it operates in legal and regulatory environments that expose it to potentially significant legal and regulatory actions, including litigation claims and proceedings and civil and criminal regulatory and governmental investigations, and other regulatory risk. The Group has settled a number of legal and regulatory actions over the past several years but continues to be, and may in the future be, involved in a number of legal and regulatory actions in the US, the UK, Europe and other jurisdictions.

The legal and regulatory actions specifically referred to below are, in the Group's view, the most significant legal and regulatory actions to which the Group is currently exposed. However, the Group is also subject to a number of additional claims, proceedings and investigations, the adverse resolution of which may also have a material adverse impact on the Group and which include ongoing reviews, investigations and proceedings (both formal and informal) by governmental law enforcement and other agencies and litigation proceedings (including class action litigation), relating to, among other matters, the offering of securities, including residential mortgage-backed securities (RMBS), conduct in the foreign exchange market, the setting of benchmark rates such as LIBOR and related derivatives trading, the issuance, underwriting, and sales and trading of fixed-income securities (including government securities), product mis-selling, customer mistreatment, anti-money laundering, sanctions, antitrust and various other compliance issues. See 'Litigation, investigations and reviews' of Note 31 on the consolidated accounts on pages 313 to 325 for details for these matters. The Group continues to cooperate with governmental and regulatory authorities in relation to ongoing informal and formal inquiries or investigations regarding these and other matters. Legal and regulatory actions are subject to many uncertainties, and their outcomes, including the timing, amount of fines or settlements or the form of any settlements, which may be material, are often difficult to predict, particularly in the early stages of a case or investigation. It is expected that the Group will continue to have a material exposure to legal and regulatory actions relating to legacy issues in the medium term.

RMBS

In the US, ongoing matters include certain matters relating to legacy RMBS activities including investigations by the US Department of Justice (DOJ) and several state attorneys general and various civil claims. A further provision of \$650 million (£492 million) was recorded by the Group in Q4 2017 in relation to RBS's various RMBS investigations and litigation matters, taking the total charge for the year to \$971 million (£714 million). The total aggregate provision at 31 December 2017 was \$4.4 billion (£3.2 billion).

The duration and outcome of the DOJ's investigations and other RMBS matters remain uncertain, including in respect of whether settlements for all or any such matters may be reached and any timing thereof. Further substantial provisions and costs may be recognised.

Global Restructuring Group

As announced on 8 November 2016, the Group has taken steps, including automatic refunds of certain complex fees and a complaints process, overseen by an independent third party for small and medium entity (SME) customers in the UK and the Republic of Ireland that were in its Global Restructuring Group (GRG) between 2008 and 2013. This complaints review process and the automatic refund of complex fees was developed with the involvement of the Financial Conduct Authority (FCA). The Group booked a provision of £400 million in Q4 2016, based on its estimates of the costs associated with the complaints review process and the automatic refund of complex fees for SME customers in GRG. On 23 October 2017, the FCA published an interim report incorporating a summary of the Skilled Person's report which stated that, further to the general investigation announced in November 2016, the FCA had decided to carry out a more focused investigation. The FCA published its final summary of the Skilled Person's report on 28 November 2017. The UK House of Commons Treasury Select Committee, seeking to rely on Parliamentary powers, published the full version of the Skilled Person's report on 20 February 2018. The FCA investigation is ongoing and fines or additional redress commitments may be accepted by or imposed upon the Group as a result of this or any subsequent investigation or enquiry, notwithstanding the steps the Group has already taken.

Payment protection insurance

To date, the Group has booked provisions totaling £5.1 billion with respect to payment protection insurance (PPI), including an additional provision of £175 million in 2017. Of the £5.1 billion cumulative provision, £4.0 billion had been utilised by 31 December 2017. In August 2017, the FCA's new rules and guidance on PPI complaints handling (Policy Statement (17/3)) came into force. The Policy Statement introduced new so called 'Plevin' rules, under which customers may be eligible for redress if the bank earned a high level of commission from the sale of PPI, but did not disclose this detail at the point of sale. The Policy Statement also introduced a two year PPI deadline, due to expire in August 2019, before which new PPI complaints must be made. RBS is implementing the Policy Statement. The number of claims received and the cost of the redress of such claims may materially exceed the Group's estimates and may entail additional material provisions and reputational harm.

Settlements, resolutions and outcomes in relation to ongoing legal or regulatory actions may result in material financial fines or penalties, non-monetary penalties, restrictions upon or revocation of regulatory permissions and licences and other collateral consequences and may prejudice both contractual and legal rights otherwise available to the Group. The costs of resolving these legal and regulatory actions could individually or in aggregate prove to be substantial and monetary penalties and other outcomes could be materially in excess of provisions, if any, made by the Group. New provisions or increases in existing provisions relating to existing or future legal or regulatory actions may be substantial and may have a material adverse effect on the Group's financial condition and results of operations as well as its reputation. The outcome of on-going claims against the Group may give rise to additional legal claims being asserted against the Group.

Additional information

Risk factors continued

Adverse outcomes or resolution of current or future legal or regulatory actions could result in restrictions or limitations on the Group's operations, adversely impact the implementation of Group's current transformation programme as well as its capital position and its ability to meet regulatory capital adequacy requirements. The remediation programmes or commitments which the Group has agreed to in connection with past settlements or investigations, could require significant financial costs and personnel investment for the Group and may result in changes in its operations or product offerings, and failure to comply with undertakings made by the Group to its regulators may result in additional measures or penalties being taken against the Group.

The Group has been, and will remain, in a period of major business transformation and structural change through to at least 2019 as it implements its own transformation programme and seeks to comply with UK ring-fencing and recovery and resolution requirements as well as the Alternative Remedies Package. Additional structural changes to the Group's operations will also be required as a result of Brexit. These various transformation and restructuring activities are required to occur concurrently, which carries significant execution and operational risks, and the Group may not be a viable, competitive and profitable bank as a result.

Since early 2015, the Group has been implementing a major restructuring and transformation programme, articulated around a strategy focused on the growth of its strategic operations in Personal & Business Banking (PBB) and Commercial & Private Banking (CPB) and the further restructuring of the NatWest Markets franchise, to focus mainly on UK and Western European corporate and financial institutions.

Part of the focus of this transformation programme is to downsize and simplify the Group, reduce underlying costs and strengthen its overall capital position. The transformation programme also aims to improve customer experience and employee engagement, update the Group's operational and technological capabilities, strengthen governance and control frameworks and better position the Group to operate in compliance with the UK ring-fencing regime by 1 January 2019. Together, these initiatives are referred to as the Group's 'transformation programme'.

This transformation programme including the restructuring of its NatWest Markets franchise, is being completed at the same time as the Group is going through a period of very significant structural reform to implement the requirements of the UK ring-fencing regime and the requirements of the bank recovery and resolution framework. Alongside changes to help make the Group resolvable (specifically, regulatory requirements to ensure operational continuity in resolution), ring-fencing also requires significant changes in how services are delivered between legal entities within the Group. It is complex and entails significant costs and operational, legal and execution risks.

See 'Implementation of the ring-fencing regime in the UK which began in 2015 and must be completed before 1 January 2019 will result in material structural changes to the Group's business. The steps required to implement the UK ring-fencing regime are complex and entail significant costs and operational, legal and execution risks, which risks may be exacerbated by the Group's other ongoing restructuring efforts.' The Group is concurrently seeking to implement the Alternative Remedies Package. See 'The cost of implementing the Alternative Remedies Package regarding the business previously described as Williams & Glyn could be more onerous than anticipated and any failure to comply with the terms of the Alternative Remedies Package could result in the imposition of additional measures or limitations on the Group's operations.'

Due to changes in the macro-economic and political and regulatory environment in which it operates, in particular as a result of the UK's exit from the EU (Brexit), the Group has been required to reconsider certain aspects of its current restructuring and transformation programme. In anticipation of Brexit the Group has announced that it will be re-purposing its Dutch subsidiary, The Royal Bank of Scotland N.V. ('RBS N.V.') for the NatWest Market franchise's European business and further structural changes to Group's Western European operations may also be required, including in response to proposed changes to the European prudential regulatory framework for banks and investment banks. These proposals may result in additional prudential or structural requirements being imposed on financial institutions based outside the EU wishing to provide financial services within the EU and may apply to the Group once the UK has formally exited the EU. The ability of the RBS Group to successfully re-purpose and utilise RBS N.V. as the platform for the NatWest Market franchise's European business following Brexit is subject to numerous uncertainties, including those relating to Brexit negotiations. See 'The Group is subject to political risks, including economic, regulatory and political uncertainty arising from the referendum on the UK's membership of the European Union which could adversely impact the Group's business, results of operations, financial condition and prospects.'

One proposal made by the European Commission would impose a requirement for any bank established outside the EU which has an asset base within the EU exceeding a certain size and has two or more institutions within the EU, to establish a single intermediate parent undertaking ('IPU') in the European Union, under which all EU entities within that group will operate. The Group is currently taking steps to plan for how these proposals, if adopted as currently proposed, may impact the Group and its current plans to implement the UK ring-fencing regime (which will come into force on 1 January 2019 ahead of any IPU being required). The impact of these proposals could be material given the expectation that banking entities both inside the ring-fence and outside of it would continue to carry out operations in the EU. This could result in organisational complexity, could require material additional capital requirements and could have adverse tax implications.

The scale and scope of the changes currently being implemented present material operational, people and financial risks to the Group.

Additional information

Risk factors continued

The Group's transformation programme and structural reform agenda comprise a large number of concurrent actions and initiatives, any of which could fail to be implemented due to operational or execution issues. Implementation of such actions and initiatives is expected to result in significant costs, which could be materially higher than currently contemplated, including due to material uncertainties and factors outside of the Group's control. Furthermore it requires the implementation and application of robust governance and controls frameworks and there is no guarantee that the Group will be successful in doing so. The planning and execution of the various restructuring and transformation activities is disruptive and will continue to divert management resources from the conduct of the Group's operations and development of its business. Any additional restructuring or transformation of the Group's activities would increase these risks and could result in further material restructuring or transformation costs, jeopardise the delivery and implementation of a number of other significant change projects, impact the Group's product offering or business model or adversely impact the Group's ability to deliver its strategy and meet its targets and guidance, each of which could have a material adverse impact on the Group's results of operations, financial condition and prospects.

There can be no certainty that the Group will be able to successfully complete its transformation programme and programmes for mandatory structural reform nor that the restructured Group will be a viable, competitive or profitable banking business.

The Group's ability to meet the targets and expectations which accompany the Group's transformation programme, including with respect to its cost reduction programme and its return to profitability and the timing thereof, are subject to various internal and external risks and are based on a number of key assumptions and judgments any of which may prove to be inaccurate.

As part of its transformation programme, a number of financial, capital, operational and diversity targets and expectations have been set by management for the Group, both for the short term and throughout the transformation and restructuring period. These include (but are not limited to) expectations relating to the Group's return to profitability and the timing thereof, one-off costs incurred in connection with material litigation and conduct matters and the timing thereof, expected growth rates in income, customer loans and advances and volumes and underlying drivers and trends, cost:income ratio targets, expectations with respect to reductions in operating costs, including remediation costs, expectations relating to restructuring or transformation costs and charges as well as impairment charges, disposal losses, CET1 ratio targets and expectations regarding funding plans and requirements, expectations with respect to reductions in risk-weighted assets and the timing thereof, expectations with respect to employee engagement and diversity and environmental targets.

The successful implementation of the Group's transformation programme and the Group's ability to meet associated targets and expectations, are subject to various internal and external factors and risks, including those described in this risk factor, the other risk factors included in this section and the disclosure included in the rest of this document.

These include, but are not limited to, market, regulatory, economic and political uncertainties, developments relating to litigation, governmental actions and investigations and regulatory matters, operational risks, risks relating to the Group's business model and strategy and delays or difficulties in implementing its transformation programme, including the restructuring and funding of its NatWest Markets franchise, the implementation of the UK ring-fencing regime, and compliance with the Group's Alternative Remedies Package obligations. A number of factors may impact the Group's ability to maintain its current CET1 ratio target at 13% throughout the restructuring period, including conduct related costs, pension or legacy charges, accounting impairments, including as a result of the implementation of IFRS 9, or limited organic capital generation through profits. In addition, the run-down of risk-weighted assets may be accompanied by the recognition of disposal losses which may be higher than anticipated, including due to a degraded economic environment.

The Group's ability to meet its cost:income ratio target and the planned reductions in its annual underlying costs (excluding restructuring and conduct-related charges) may also be impacted. In 2017, the Group's costs on an unadjusted basis take into account restructuring costs of £1,565 million, including costs relating to Williams & Glyn and property exit costs of £221 million and £293 million, respectively, as well as litigation and conduct costs of £1,285 million. Such costs may vary considerably from year to year and may impact the Group's ability to maintain its 2020 cost reduction targets, and the focus on meeting cost reduction targets may result in limited investment in other areas which could affect the Group's long-term product offering or competitive position.

More generally, the targets and expectations which accompany the Group's transformation programme are based on management plans, projections and models and are subject to a number of key assumptions and judgments any of which may prove to be inaccurate. Among others, the targets and expectations set as part of the Group's transformation programme assume that the Group will be successful in implementing its business model and strategy, in executing its transformation programme and reducing the complexity of its business and infrastructure at the same time that it will be implementing significant structural changes to comply with the regulatory environment and that it will implement and maintain a robust control environment and effective culture, including with respect to risk management.

In addition, the plans to deliver a UK ring-fencing compliant structure across franchises and functions may impact the Group's concurrent transformation programme, which could result in delays to the transformation programme portfolio deliveries which in turn could result in delayed benefits therefrom. See 'The Group has been, and will remain, in a period of major business transformation and structural change through to at least 2019 as it implements its own transformation programme and seeks to comply with UK ring-fencing and recovery and resolution requirements as well as the Alternative Remedies Package. Additional structural changes to the Group's operations will also be required as a result of Brexit. These various transformation and restructuring activities are required to occur concurrently, which carries significant execution and operational risks, and the Group may not be a viable, competitive and profitable bank as a result.'

Additional information

Risk factors continued

As a result, there can be no certainty that the implementation of the Group's transformation programme will prove to be a successful strategy, that the Group will meet its targets and expectations during the restructuring period or that the restructured Group will be a viable, competitive or profitable banking business.

Implementation of the ring-fencing regime in the UK which began in 2015 and must be completed before 1 January 2019 will result in material structural changes to the Group's business. The steps required to implement the UK ring-fencing regime are complex and entail significant costs and operational, legal and execution risks, which risks may be exacerbated by the Group's other ongoing restructuring efforts.

The requirement for large UK banks taking deposits to 'ring-fence' retail banking operations was introduced under the UK Financial Services (Banking Reform) Act 2013 (the 'Banking Reform Act 2013') and adopted through secondary legislation (the 'UK ring-fencing regime'). These reforms form part of a broader range of structural reforms of the banking industry seeking to improve the resilience and resolvability of banks and which range from structural reforms (including ring-fencing) to the implementation of a new recovery and resolution framework (which in the UK will incorporate elements of the ring-fencing regime). See 'The Group and its subsidiaries are subject to an evolving framework on recovery and resolution, the impact of which remains uncertain, and which may result in additional compliance challenges and costs.'

By the end of 2018, the Group intends to have placed the majority of its UK banking business in ring-fenced banking entities organised as a sub-group ('RFB') under an intermediate holding company named NatWest Holdings Limited, which will ultimately be a direct subsidiary of RBSG and will own National Westminster Bank Plc, Adam & Company PLC (to be renamed The Royal Bank of Scotland plc) and Ulster Bank Ireland DAC (Ulster Bank). As a result, National Westminster Bank Plc will no longer be a subsidiary of the current The Royal Bank of Scotland plc ('RBS plc'). The current RBS plc and the RBS International businesses will sit outside the RFB.

As part of this restructuring, the majority of existing personal, private, business and commercial customers of RBS plc is expected to be transferred to the RFB during the second quarter of 2018, specifically to Adam & Company PLC (to be renamed The Royal Bank of Scotland plc). Certain assets and liabilities (including the covered bond programme, certain hedging positions and parts of the liquid asset portfolio) will also be transferred to National Westminster Bank Plc. At the same time, RBS plc (which will sit outside the RFB) will be renamed NatWest Markets Plc to bring its legal name in line with the rebranding of the NatWest Markets franchise which was initiated in December 2016, and will continue to operate the NatWest Markets franchise as a direct subsidiary of RBSG. The transfer, as described above, will be effected principally by utilising a legal scheme entitled a 'Ring-Fencing Transfer Scheme' under Part VII of the Financial Services and Markets Act 2000. The implementation of such a scheme is subject to, amongst other considerations, regulatory approval and the sanction of the Court of Session in Scotland, Edinburgh (the 'Court'). A hearing to seek the Court's approval of the scheme is expected to be held on 22 March 2018.

The approval of the scheme by the Prudential Regulation Authority ('PRA') is expected to be confirmed shortly before that hearing date. If the scheme is duly approved by the Court at the hearing expected to be held on 22 March 2018, it is expected that the scheme will be implemented with effect from 30 April 2018 or any later date which the Group may agree with the PRA and the Financial Conduct Authority ('FCA'). It remains possible that the court process described above may result in amendments being required to be made to the Group's current plan and that this may result in delays in the implementation of the UK ring-fencing compliant structure, additional costs and/or changes to the Group's business.

In addition, during the second half of 2018, it is proposed that NatWest Holdings Limited, being the parent of the future ring-fenced sub-group (which together with other entities is intended to include National Westminster Bank Plc, Adam & Company PLC (to be renamed The Royal Bank of Scotland plc) and Ulster Bank Ireland DAC), will become a direct subsidiary of RBSG. This is expected to occur through a capital reduction of The Royal Bank of Scotland plc (to be renamed NatWest Markets Plc), which will be satisfied by the transfer of the shares in NatWest Holdings Limited currently held by of The Royal Bank of Scotland plc to RBSG, which will occur via a further and separate court process, which is subject to the relevant Court and regulatory approvals. It is possible that the court process described above may result in amendments being required to be made to the Group's current plan and that this may result in delays in the implementation of the UK ring-fencing compliant structure, additional costs and/or changes to the Group's business.

During the course of 2018, it is proposed that the Group will seek to implement a second, smaller ring-fencing transfer scheme as part of its strategy to implement its future ring-fencing compliant structure, which is proposed to transfer certain assets from National Westminster Bank Plc to The Royal Bank of Scotland plc (by then renamed to NatWest Markets Plc). Such a scheme would be subject to the same reviews and approvals as described above in connection with the first scheme.

As a result of the implementation of the changes described above, there will be a material impact on how the Group conducts its business and will require a significant legal and organisational restructuring of the Group and the transfer of large numbers of assets, liabilities, obligations, customers and employees between legal entities and the realignment of employees within the Group.

The Group's final ring-fenced legal structure and the actions being taken to achieve it, remain subject to, amongst other factors, additional regulatory, board and other approvals. In particular, transfers of assets and liabilities by way of a Ring-Fencing Transfer Scheme, as described above, must be reviewed and reported on by an Independent Skilled Person appointed by the Group with the prior approval of the PRA (having consulted with the FCA). The reports of the Skilled Person are made public and form part of the court process described above.

The implementation of these changes involves a number of risks related to both the revised Group structure and also the process of transition to such new structure.

Additional information

Risk factors continued

Those risks include the following:

- As a result of ring-fencing, certain customers will be moved to the RFB and certain customers will be required to deal with both the RFB and other Group entities outside the RFB to obtain the full range of products and services or to take any affirmative steps in connection with the reorganisation. The Group is unable to predict how some customers may react to these and other required changes.
- As part of the establishment of the RFB, the RFB will need to operate independently from the other Group entities outside the RFB and as a result, amendments will need to be made to the Group's existing corporate governance structure to ensure the RFB is independent from the other Group entities outside the RFB. This new structure, which will also require the approval of the PRA, may result in divergences between the various governance bodies within the Group and create operational challenges.
- In order to comply with the requirements of the UK ring-fencing regime, the Group will need to revise its operations infrastructure so as to comply with the shared services, independence and resolvability requirements set out in the UK ring-fencing legislation and rules, including in areas such as information technology (IT) infrastructure, human resources and critical service providers which may involve associated execution risk and may result in increased costs. Arrangements between the RFB and other Group entities outside the RFB will also need to be reviewed in light of these requirements and the requirement that all such transactions take place on an arm's-length basis. Any duplication of certain infrastructure or functions between the RFB and other Group entities outside the RFB that are required to comply with the UK ring-fencing legislation and rules and dis-synergies resulting therefrom may in turn result in additional costs and/or changes to the Group's business and operations
- The implementation of the UK ring-fencing regime will significantly impact the management of the Group's treasury operations, including internal and external funding arrangements. The changes required may adversely impact the assessment made by credit rating agencies, creditors and other stakeholders of the credit strength of the different entities on a standalone basis and may heighten the cost of capital and funding for the Group and its subsidiaries. The ability of bank entities outside the RFB to meet funding and capital prudential requirements may be dependent on obtaining an adequate credit rating. Once the UK ring-fencing regime is implemented, reliance on intragroup exemptions in relation to large exposures and liquidity will not be possible between the RFB and other Group entities and may result in risk-weighted assets inflation.
- From 2026 it will not be possible for the Group entities outside the RFB to participate in the same defined benefit pension scheme as RFB entities or their wholly-owned subsidiaries. As a result, it will be necessary to restructure the Group's defined benefit pension scheme (including The Royal Bank of Scotland Group Pension Fund ('Main scheme')). This restructuring will be such that either the RFB or other Group outside the RFB leave the current scheme. The costs of separation may be material and may trigger certain legal and regulatory obligations including possibly increased contributions. Such restructuring may also result in additional or increased cash contributions in the event the pension trustees determine that the employer covenant has been weakened as a result of such separation. See 'The Group is subject to pension risks and will be required to make additional contributions as a result of the restructuring of its pension schemes in relation to the implementation of the UK ring-fencing regime. In addition, the Group expects to make additional contributions to cover pension funding deficits if there are degraded economic conditions or if there is any devaluation in the asset portfolio held by the pension trustee.'
- The restructuring and planned transfers may also result in accounting consequences for the Group. Although a number of transfers will be made at book value between fully owned Group entities, certain transfers will be made at fair value which may result in a profit or loss being recognised by Group entities. In addition, transfers of assets that have related hedging arrangements may result in adverse operational, financial or accounting consequences if the transfer is not consistent with the unaffected continuation of such hedging arrangements.
- In addition, the proposed transfers may have tax costs, or may impact the tax attributes of the RFB or other Group entities outside the RFB and the ability to transfer tax losses.

The steps required to implement the UK ring-fencing regime within the Group to comply with the relevant rules and regulations are complex and require an extended period of time to plan, execute and implement and entail significant costs and operational, legal and execution risks, which risks may be exacerbated by the Group's other ongoing restructuring efforts. External or internal factors including new and developing legal requirements relating to the regulatory framework for the banking industry and the evolving regulatory and economic landscape resulting from Brexit, as well as further political developments or changes to the Group's current strategy, may require the Group to further restructure its operations (including certain operations in the UK and Western Europe) and may in turn require further changes to be made to the Group's ring-fencing plans (including the planned structure of the Group post implementation).

Additional information

Risk factors continued

The completion of ring-fencing will substantially reconfigure the way RBSG holds its businesses and the legal entities within the Group. There is no certainty that the Group will be able to complete the legal restructuring and migration of customers' assets and liabilities by the 1 January 2019 deadline or in accordance with future rules and the consequences of non-compliance are currently uncertain.

Conducting the Group's operations in accordance with the new rules may result in additional costs (transitional and recurring) following implementation and impact the Group's profitability. As a result, the implementation of the UK ring-fencing regime could have a material adverse effect on the Group's reputation, results of operations, financial condition and prospects.

The Group's operations are highly dependent on its IT systems. A failure of the Group's IT systems, including as a result of the lack of or untimely investments, could adversely affect its operations, competitive position and investor and customer confidence and expose the Group to regulatory sanctions.

The Group's operations are dependent on the ability to process a very large number of transactions efficiently and accurately while complying with applicable laws and regulations where it does business. The proper functioning of the Group's payment systems, financial and sanctions controls, risk management, credit analysis and reporting, accounting, customer service and other IT systems, as well as the communication networks between its branches and main data processing centres, are critical to the Group's operations.

The vulnerabilities of the Group's IT systems are in part due to their complexity, which is attributable to overlapping multiple dated systems that result from the Group's historical acquisitions and insufficient investment prior to 2013 to keep the IT applications and infrastructure up-to-date. Within a complex IT estate, the risk of disruption due to end-of-life hardware and software may create challenges in recovering from system breakdowns. In 2017, the Group made progress to remediate or replace out of date systems, reducing the overall risk of disruption. However, some risk remains, and will require continued focus and investment on an on-going basis to limit any IT failures which may adversely affect the Group's relationship with its customers and its reputation, and which may also lead to regulatory investigations and redress.

The Group's regulators in the UK, continue to actively monitor progress being made by banks in the UK to modernise, manage and secure their IT infrastructure and environment, in order to prevent future failures affecting customers. Any critical system failure, any prolonged loss of service availability or any material breach of data security could cause serious damage to the Group's ability to provide service to its customers, which could result in significant compensation costs or fines resulting from regulatory investigations and could breach regulations under which the Group operates.

In particular, failures or breaches resulting in the loss or publication of confidential customer data could cause long-term damage to the Group's reputation, business and brands, which could undermine its ability to attract and keep customers.

The Group is currently implementing a number of complex change initiatives, including its transformation programme, the UK ring-fencing regime and the restructuring of the NatWest Markets franchise. A failure to safely and timely implement one or several of these initiatives could lead to disruptions of the Group's IT infrastructure or loss or publication of confidential customer data and in turn could cause long-term damage to the Group's reputation, brands, results of operations and financial position.

In addition, recent or future regulatory changes, such as the EU General Data Protection Regulation and the CMA's Open Banking standard, increase the risks relating to the Group's ability to comply with rules that impact its IT infrastructure. Any non-compliance with such regulations could result in regulatory proceedings or the imposition of fines or penalties and consequently could have a material adverse effect on the Group's business, reputation, financial condition and future prospects.

The Group has made, and will continue to make, considerable investments in its IT systems and technology to further simplify, upgrade and improve its capabilities to make them more cost-effective and improve controls, procedures, strengthen cyber security defences, enhance the digital services provided to its bank customers and improve its competitive position, which is also designed to reduce the potential for system failures which adversely affect its relationship with its customers and reputation, which may lead to regulatory investigations and redress. However, the Group's current focus on cost-saving measures, as part of its transformation programme, may impact the resources available to implement further improvements to the Group IT infrastructure and technology or limit the resources available for investments in technological developments and/or innovation. Should such investment and rationalisation initiatives fail to achieve the expected results, or prove to be insufficient, it could have a material adverse impact on the Group's operations, its ability to retain or grow its customer business or its competitive position and could negatively impact the Group's financial position.

The Group is exposed to cyberattacks and a failure to prevent or defend against such attacks and provide, as appropriate, notification of them, could have a material adverse effect on the Group's operations, results of operations or reputation.

The Group is subject to regular cybersecurity attacks and related threats, which have targeted financial institutions, corporates, governments and other institutions across all industries. The Group is increasingly reliant on technology which is vulnerable to attacks, and these attacks continue to increase in frequency, sophistication and severity and could have a material adverse effect on the Group's operations, customers and reputation. The Group relies on the effectiveness of its internal policies, controls, procedures and capabilities to protect the confidentiality, integrity and availability of information held on its computer systems, networks and devices, and also on the computer systems, networks and devices of third parties with whom the Group interacts.

Additional information

Risk factors continued

The Group takes appropriate measures to prevent, detect and minimise attacks that could disrupt the delivery of critical business processes to its customers. Because financial institutions such as the Group operate with complex legacy infrastructure, they may be even more susceptible to attack due to the increased number of potential entry points and weaknesses. In addition, the increasing sophistication of cyber criminals may increase the risk of a security breach of the Group's systems and as security threats continue to evolve the Group's may be required to invest additional resources to modify the security of its systems, which could have a material adverse effect on the Group's results of operations.

Failure to protect the Group's operations from cyberattacks or to continuously review and update current processes and controls in response to new or existing threats could result in the loss of customer data or other sensitive information as well as instances of denial of service for the Group's customers and staff. The Group's systems, and those of third parties suppliers, are often subject to cyberattacks which have to date been immaterial to the Group's operations. In 2017, the Group experienced 11 distributed denial of service (DDOS) attacks against customer-facing websites, one of which caused minimal customer impacts for a short period of time. This represents a decrease from 26 attacks against the Group in 2016, but a recent surge of activity in the fourth quarter of 2017 points towards an increasing trend of such attacks into 2018. The Group's DDOS mitigation controls have recently been strengthened and will continue to be strengthened further in 2018. However, there can be no assurance that those and the Group's other strategies to defend against cyberattacks, including future DDOS attacks, will be successful and avoid the potential adverse effects of cyberattacks on the Group.

The Bank of England, the FCA and HM Treasury in the UK and regulators in the US and in Europe continue to recognise cybersecurity as a systemic risk to the financial sector and have highlighted the need for financial institutions to improve resilience to cyberattacks and provide timely notification of them, as appropriate. The Group expects greater regulatory engagement, supervision and enforcement on cybersecurity in the future. The Group continues to participate in initiatives led by the Bank of England and other regulators designed to share best practice and to test how major firms respond to significant cyberattacks. The outputs of this collaboration along with other regulatory and industry-led initiatives are continually incorporated into the Group's on-going IT priorities and improvement measures. However, the Group continues to expect to be targeted regularly in the future but there can be no certainty that the Group will not be materially impacted by a future attack.

Any failure in the Group's cybersecurity policies, procedures or controls, could lead to the Group suffering financial losses, reputational damage, a loss of customers, additional costs (including costs of notification of consumers, credit monitoring or card reissuance), regulatory investigations or sanctions being imposed and could have a material adverse effect on the Group's results of operations, financial condition or future prospects.

The Group is subject to political risks, including economic, regulatory and political uncertainty arising from the referendum on the UK's membership of the European Union which could adversely impact the Group's business, results of operations, financial condition and prospects.

In a referendum held in the UK on 23 June 2016 (the 'EU Referendum'), a majority voted for the UK to leave the European Union ('EU'). On 29 March 2017 the UK Government triggered the exit process contemplated under Article 50 of the Treaty on European Union. This provides for a maximum two year period of negotiation to determine the terms of Brexit and set the framework for the UK's new relationship with the EU. After this period its EU membership and all associated treaties will cease to apply, unless some form of transitional agreement encompassing those associated treaties is agreed or there is unanimous agreement by the European Council with the UK to extend the negotiation period defined under Article 50. There is no certainty that negotiations relating to the terms of the UK's relationship with the EU will be completed within the two-year period designated by Article 50. Such negotiations may well extend beyond 29 March 2019, into any transitional period, the terms and duration of which are currently uncertain. Furthermore, the government has introduced the European Union (Withdrawal) Bill (the 'Withdrawal Bill') to the UK Parliament, which aims to repeal the European Communities Act of 1972 and to transpose EU law relevant to the UK into national law upon the UK's exit from the EU. However, the precise terms of the Withdrawal Bill, if enacted by the UK Parliament, are uncertain and it remains unclear how the Withdrawal Bill will impact the legal and regulatory landscape in the UK after it becomes effective. In addition, it is possible (although of low likelihood) that a disorderly termination of the Article 50 process could occur, resulting in the UK leaving the EU before 29 March 2019. The consequences of such an early termination of the Article 50 process are uncertain and adverse impacts could crystallise rapidly should this occur.

This prevailing uncertainty relates to the timing of Brexit, as well as to the negotiation and form of the UK's relationships with the EU, with other multilateral organisations and with individual countries at the time of exit and beyond. The timing of, and process for, such negotiations and the resulting terms of the UK's future economic, trading and legal relationships with both the EU and other counterparties could impact the Group's financial condition, results of operations and prospects. The direct and indirect effects of Brexit are expected to affect many aspects of the Group's business and operating environment, including as described elsewhere in these risk factors, and may be material.

The longer term effects of Brexit on the Group's operating environment are difficult to predict, and subject to wider global macro-economic trends and events, but may significantly impact the Group and its customers and counterparties who are themselves dependent on trading with the EU or personnel from the EU and may result in periodic financial volatility and slower economic growth, in the UK in particular, but also in Republic of Ireland, Europe and potentially the global economy. Until the bilateral and multilateral trading and economic relationships between the UK, the EU, members of the World Trade Organisation and other key trading partners are agreed, implemented and settled, the longer-term effects of this uncertainty are likely to endure and their severity increase in the absence of such agreements.

Additional information

Risk factors continued

There is related uncertainty as to the respective legal and regulatory arrangements under which the Group and its subsidiaries will operate when the UK is no longer a member of the EU. The Group and its counterparties may no longer be able to rely on the EU passporting framework for financial services and could be required to apply for authorisation in multiple jurisdictions in the EU. The cost and timing of that authorisation process is uncertain. The Group has already announced plans to re-purpose its Dutch banking subsidiary, RBS N.V., to conduct the NatWest Market franchise's European business and further changes to the Group's business operations may be required. The Group is also monitoring proposed amendments to the prudential framework for non-EU banks operating within in the EU.

These and any other restructuring or commercial actions as well as new or amended rules, could have a significant impact on the Group's operations and/or legal entity structure, including attendant restructuring costs, capital requirements and tax implications and as a result adversely impact the Group's profitability, business model and product offering. These impacts would potentially be greater in the event of a disorderly termination of the Article 50 process and early Brexit. See 'The Group has been, and will remain, in a period of major business transformation and structural change through to at least 2019 as it implements its own transformation programme and seeks to comply with UK ring-fencing and recovery and resolution requirements as well as the Alternative Remedies Package. Additional structural changes to the Group's operations will also be required as a result of Brexit. These various transformation and restructuring activities are required to occur concurrently which carries significant execution and operational risks, and the Group may not be a viable, competitive and profitable bank as a result.'

The Group faces additional political uncertainty as to how the Scottish parliamentary process may impact the negotiations relating to Brexit. RBSG, RBS plc and one of the future post ring-fencing principal operating companies, Adam & Company PLC, are all headquartered and incorporated in Scotland. Any changes to Scotland's relationship with the UK or the EU (as an indirect result of Brexit or other developments) would impact the environment in which the Group and its subsidiaries operate, and may require further changes to be made to the Group's structure, independently or in conjunction with other mandatory or strategic structural and organisational changes and as a result could adversely impact the Group.

The Group is currently subject to increased political risks as a result of the UK Government's majority ownership stake in the Group. The UK Government in its November 2017 Autumn Budget indicated its intention to recommence the process for the privatisation of RBSG before the end of 2018-2019, although there can be no certainty as to the commencement of any sell-downs or the timing or extent thereof. (See 'HM Treasury (or UKFI on its behalf) may be able to exercise a significant degree of influence over the Group and any further offer or sale of its interests may affect the price of securities issued by the Group.')

Were there to be a change of UK government as a result of a general election, the Group may face new risks as a result of a change in government policy. In its 2017 manifesto, for example, the Labour Party announced its intention to launch a consultation on breaking up the Group to create new local public banks.

In addition to the political risks described above, the Group remains exposed to risks arising out of geopolitical events, such as the imposition of trade barriers, the implementation of exchange controls and other measures taken by sovereign governments that can hinder economic or financial activity levels. Furthermore, unfavourable domestic or international political, military or diplomatic events, armed conflict, pandemics and terrorist acts and threats, and the response to them by the UK and other governments could also adversely affect levels of economic activity and have an adverse effect upon the Group's business, financial condition and results of operations.

The Group is subject to pension risks and will be required to make additional contributions as a result of the restructuring of its pension schemes in relation to the implementation of the UK ring-fencing regime. In addition, the Group expects to make additional contributions to cover pension funding deficits if there are degraded economic conditions or if there is any devaluation in the asset portfolio held by the pension trustee.

The Group maintains a number of defined benefit pension schemes for certain former and current employees. The UK ring-fencing regime will require significant changes to the structure of the Group's existing defined benefit pension schemes because, from 2026 it will not be possible for Group entities outside the RFB to participate in the same defined benefit pension scheme as RFB entities or their wholly-owned subsidiaries. As a result, RFB cannot be liable for debts to pension schemes that might arise as a result of the failure of an entity that is not a RFB entity or wholly owned subsidiary thereof after 1 January 2026. The restructuring of the Group and its defined benefit pension scheme to implement the UK ring-fencing regime could also affect assessments of the Group's pension scheme deficits or result in the pension scheme trustees considering that the employer covenant has been weakened and result in further additional material contributions being required.

The Group is developing a strategy to meet these requirements. This will require the agreement of the pension scheme trustee. The Group's intention is for the Main scheme to be supported by the RFB. Discussions with the pension scheme trustee are ongoing and will be influenced by the Group's overall ring-fence strategy and its pension funding and investment strategies.

If agreement is not reached with the pension trustee, alternative options less favourable to the Group may need to be developed to meet the requirements of the pension regulations. The costs associated with the restructuring of the Group's existing defined benefit pension schemes could be material and could result in higher levels of additional contributions than those described above and currently agreed with the pension trustee which could have a material adverse effect on the Group's results of operations, financial position and prospects.

Pension risk also includes the risk that the assets of the Group's various defined benefit pension schemes do not fully match the timing and amount of the schemes' liabilities, as a result of which the Group is required or chooses to make additional contributions to address deficits that may emerge.

Additional information

Risk factors continued

Risk arises from the schemes because the value of the asset portfolios may be less than expected, or may have reduced in value relative to the pension liabilities it supports, and because there may be greater than expected increases in the estimated value of the schemes' liabilities and additional future contributions to the schemes may be required. Pension regulations may also change in a manner adverse to the Group.

The value of pension scheme liabilities varies with changes to long-term interest rates (including prolonged periods of low interest rates as is currently the case), inflation, monetary policy, pensionable salaries and the longevity of scheme members, as well as changes in applicable legislation.

In addition, as the Group expects to continue to materially reduce the scope of its operations as part of the implementation of its transformation programme and of the UK ring-fencing regime, pension liabilities will therefore increase relative to the size of the Group, which may impact the Group's results of operations and capital position.

Given economic and financial market difficulties and volatility, the low interest rate environment and the risk that such conditions may occur again over the near and medium term, some of the Group's pension schemes have experienced increased pension deficits.

The last triennial valuation of the Main scheme, had an effective date of 31 December 2015. This valuation was concluded with the acceleration of the nominal value of all committed contributions in respect of past service (£4.2 billion), which was paid in the first quarter of 2016.

The next triennial period valuation will take place in the fourth quarter of 2018 and the Main scheme pension trustee agreed that it would not seek a new valuation prior to that date, except where a material change arises. The 2018 triennial valuation is expected to result in a significant increase in the regular annual contributions in respect of the ongoing accrual of benefits. Notwithstanding the 2016 accelerated payment and any additional contributions that may be required beforehand as a result of a material change, the Group expects to have to agree to additional contributions, over and above the existing committed past service contributions, as a result of the next triennial valuation. Under current legislation, such agreement would need to be reached no later than the first quarter of 2020. The cost of such additional contributions could be material and any additional contributions that are committed to the Main scheme following new actuarial valuations would trigger the recognition of a significant additional liability on the Group's balance sheet and/or an increase in any pension surplus derecognised, which in turn could have a material adverse effect on the Group's results of operations, financial position and prospects.

Pension risk and changes to the Group's funding of its pension schemes may have a significant impact on the Group's regulatory capital position or its capital plan.

The Group's capital position is influenced by pension risk in several respects: Pillar 1 capital is impacted by the requirement that net pension assets are deducted from capital and that actuarial gains/losses impact reserves and, by extension, CET1 capital; Pillar 2A requirements result in the Group being required to carry a capital add-on to absorb stress on the pension fund; and finally, the risk of additional contributions to the Group's pension fund and investment risk associated with the pension fund is taken into account in the Group's capital plan and include additions to its capital management buffer to cater for certain pension related stress scenarios.

The Group believes that the accelerated payment to the Group's Main scheme pension fund made in the first quarter of 2016 improved the Group's capital planning and resilience through the period to 2019 and provided the Main scheme pension trustee with more flexibility over its investment strategy. This payment has resulted in a reduction in prevailing Pillar 2A add-on. However, subsequent contributions required in connection with the 2018 triennial valuation, or otherwise, may adversely impact the Group's capital position.

As the Group is unable to recognise any accounting surplus due to constraints under IFRIC14, any contributions made which increase the accounting surplus, or contributions committed to which would increase the accounting surplus when paid, would have a corresponding negative impact on the Group's capital position.

As a result, if any of these assumptions prove inaccurate, or if the Group does not hold adequate capital in its management buffer to cover market risk in the pension fund in a stressed scenario, the Group's capital position may significantly deteriorate and fall below the minimum capital requirements applicable to the Group or Group entities, and in turn result in increased regulatory supervision or sanctions, restrictions on discretionary distributions or loss of investor confidence, which could individually or in aggregate have a material adverse effect on the Group's results of operations, financial prospects or reputation.

The impact of the Group's pension obligations on its results and operations are also dependent on the regulatory environment in which it operates. There is a risk that changes in prudential regulation, pension regulation and accounting standards, or a lack of coordination between such sets of rules, may make it more challenging for the Group to manage its pension obligations resulting in an adverse impact on the Group's CET1 capital.

Additional information

Risk factors continued

The Group's business and results of operations may be adversely affected by increasing competitive pressures and technology disruption in the markets in which it operates.

The markets for UK financial services, and the other markets within which the Group operates, are very competitive, and management expects such competition to continue or intensify in response to customer behaviour, technological changes (including the growth of digital banking), competitor behaviour, new entrants to the market (including non-traditional financial services providers such as large retail or technology conglomerates), new lending models (such as peer-to-peer lending), industry trends resulting in increased disaggregation or unbundling of financial services or conversely the re-intermediation of traditional banking services, and the impact of regulatory actions and other factors. In particular, developments in the financial sector resulting from new banking, lending and payment solutions offered by rapidly evolving incumbents, challengers and new entrants, in particular with respect to payment services and products, and the introduction of disruptive technology may impede the Group's ability to grow or retain its market share and impact its revenues and profitability, particularly in its key UK retail banking segment.

These trends may be catalysed by various regulatory and competition policy interventions, particularly as a result of the Open Banking initiative and other remedies imposed by the Competition and Markets Authority (CMA) which are designed to further promote competition within retail banking.

Increasingly many of the products and services offered by the Group are, and will become, technology intensive and the Group's ability to develop such services has become increasingly important to retaining and growing the Group's customer business in the UK.

There can be no certainty that the Group's investment in its IT capability intended to address the material increase in customer use of online and mobile technology for banking will be successful or that it will allow the Group to continue to grow such services in the future. Certain of the Group's current or future competitors may have more efficient operations, including better IT systems allowing them to implement innovative technologies for delivering services to their customers. Furthermore, the Group's competitors may be better able to attract and retain customers and key employees and may have access to lower cost funding and/or be able to attract deposits on more favourable terms than the Group. Although the Group invests in new technologies and participates in industry and research led initiatives aimed at developing new technologies, such investments may be insufficient, especially given the Group's focus on its cost savings targets, which may limit additional investment in areas such as financial innovation and therefore could affect the Group's offering of innovative products and its competitive position. The Group may also fail to identify future opportunities or derive benefits from disruptive technologies in the context of rapid technological innovation, changing customer behaviour and growing regulatory demands, including the UK initiative on Open Banking (PSD2), resulting in increased competition from both traditional banking businesses as well as new providers of financial services, including technology companies with strong brand recognition, that may be able to develop financial services at a lower cost base.

If the Group is unable to offer competitive, attractive and innovative products that are also profitable, it will lose market share, incur losses on some or all of its activities and lose opportunities for growth.

For example, companies in the financial services industry are increasingly using artificial intelligence and/or automated processes to enhance their output and performance. As part of this broader trend, the Group is in the early stages of automating certain of its solutions and interactions within its customer-facing businesses. Such developments may result in unintended consequences or conduct risk for the Group if such new processes, including the algorithms used, are not carefully tested and integrated into the Group's current solutions. In addition to such reputational risks, the development of automated solutions will require investment in technology and will likely result in increased costs for the Group.

In addition, recent and future disposals and restructurings by the Group relating to the implementation of non-customer facing elements of its transformation programme and the UK ring-fencing regime, or required by the Group's regulators, as well as constraints imposed on the Group's ability to compensate its employees at the same level as its competitors, may also have an impact on its ability to compete effectively.

Intensified competition from incumbents, challengers and new entrants in the Group's core markets could lead to greater pressure on the Group to maintain returns and may lead to unsustainable growth decisions. These and other changes in the Group's competitive environment could have a material adverse effect on the Group's business, margins, profitability, financial condition and prospects.

Operational risks are inherent in the Group's businesses and these risks are heightened as the Group implements its transformation programme, including significant cost reductions, the UK ring-fencing regime and implementation of the Alternative Remedies Package against the backdrop of legal and regulatory changes.

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people or systems, or from external events, including legal risks. The Group has complex and diverse operations and operational risks or losses can result from a number of internal or external factors, including:

- internal and external fraud and theft from the Group, including cybercrime;
- compromise of the confidentiality, integrity, or availability of the Group's data, systems and services;
- failure to identify or maintain the Group's key data within the limits of the Group's agreed risk appetite;
- failure to provide adequate data, or the inability to correctly interpret poor quality data;
- failure of the Group's technology services due to loss of data, systems or data centre failure as a result of the Group's actions or those actions outside the Group's control, or failure by third parties to restore services;
- failure to appropriately or accurately manage the Group's operations, transactions or security;
- incorrect specification of models used by the Group or implementing or using such models incorrectly;
- failure to effectively design, execute or deliver the Group's transformation programme;

Additional information

Risk factors continued

- failure to attract, retain or engage staff;
- insufficient resources to deliver change and business-as-usual activity;
- decreasing employee engagement or failure by the Group to embed new ways of working and values; or
- incomplete, inaccurate or untimely statutory, regulatory or management reporting.

Operational risks are and will continue to be heightened as a result of the number of initiatives being concurrently implemented by the Group, in particular the implementation of its transformation programme, including its cost-reduction programme, the implementation of the UK ring-fencing regime and implementation of the Alternative Remedies Package. Individually, these initiatives carry significant execution and delivery risk and such risks are heightened as their implementation is often highly correlated and dependent on the successful implementation of interdependent initiatives. These initiatives are being delivered against the backdrop of ongoing cost challenges and increasing legal and regulatory uncertainty and will put significant pressure on the Group's ability to maintain effective internal controls and governance frameworks. Although the Group has implemented risk controls and loss mitigation actions and significant resources and planning have been devoted to mitigate operational risk, it is not possible to be certain that such actions have been or will be effective in controlling each of the operational risks faced by the Group. Ineffective management of such risks could have a material adverse effect on the Group's business, financial condition and results of operations.

The Group's business performance and financial position could be adversely affected if its capital is not managed effectively or if it is unable to meet its prudential regulatory requirements, or if it is deemed prudent to increase the amount of any management buffer that it requires. Effective management of the Group's capital is critical to its ability to operate its businesses, comply with its regulatory obligations, pursue its transformation programme and current strategies, resume dividend payments on its ordinary shares, maintain discretionary payments and pursue its strategic opportunities.

The Group is required by regulators in the UK, the EU and other jurisdictions in which it undertakes regulated activities to maintain adequate capital resources. Adequate capital also gives the Group financial flexibility in the face of continuing turbulence and uncertainty in the global economy and specifically in its core UK and European markets.

The Group currently targets a CET1 ratio at or above 13% throughout the period until completion of its restructuring. On a fully loaded basis, the Group's CET1 ratio was 15.9% at 31 December 2017, compared with 13.4% at 31 December 2016.

The Group's target capital ratio is based on its expected regulatory requirements and internal modelling, including stress scenarios. However, the Group's ability to achieve such targets depends on a number of factors, including the implementation of its transformation programme and any of the factors described below.

A shortage of capital, which could in turn affect the Group's capital ratio and ability to resume dividend payments, could arise from:

- a depletion of the Group's capital resources through increased costs or liabilities (including pension, conduct and litigation costs), reduced profits or increased losses (which would in turn impact retained earnings), sustained periods of low or lower interest rates, reduced asset values resulting in write-downs, impairments or accounting charges;
- reduced upstreaming of dividends from the Group's subsidiaries as a result of the Bank of England's approach to setting the minimum requirements for own funds and eligible liabilities ('MREL') within groups, requiring sub-groups to hold internal MREL resources sufficient to match both their own individual MREL as well as the internal MREL of the subsidiaries constituting the sub-group;
- an increase in the amount of capital that is required to meet the Group's regulatory requirements, including as a result of changes to the actual level of risk faced by the Group, factors influencing the Group's regulator's determination of the firm-specific Pillar 2B buffer applicable to the Group (PRA buffer), changes in the minimum levels of capital or liquidity required by legislation or by the regulatory authorities or the calibration of capital or leverage buffers applicable to the Group, including countercyclical buffers, increases in risk-weighted assets or in the risk weighting of existing asset classes, or an increase in the Group's view of any management buffer it needs, taking account of, for example, the capital levels or capital targets of the Group's peer banks and criteria set by the credit rating agencies;
- the implementation of the Group's transformation programme, including in response to implementation of the UK ring-fencing regime, certain intragroup funding arrangements will be limited and may no longer be permitted and the Group may need to increasingly manage funding and liquidity at an individual Group entity level, which could result in the Group being required to maintain higher levels of capital in order to meet the Group's regulatory requirements than would otherwise be the case, as may be the case if the Bank of England were to identify impediments to the Group's resolvability resulting from new funding and liquidity management strategies.

The Group's current capital strategy is based on the expected accumulation of additional capital through the accrual of profits over time and/or through the planned reduction of its risk-weighted assets through disposals, natural attrition and other capital management initiatives.

Further losses or a failure to meet profitability targets or reduce risk-weighted assets in accordance with or within the timeline contemplated by the Group's capital plan, a depletion of its capital resources, earnings and capital volatility resulting from the implementation of IFRS 9 as of 1 January 2018, or an increase in the amount of capital it needs to hold (including as a result of the reasons described above), would adversely impact the Group's ability to meet its capital targets or requirements and achieve its capital strategy during the restructuring period.

Additional information

Risk factors continued

If the Group is determined to have a shortage of capital, including as a result of any of the circumstances described above, the Group may suffer a loss of confidence in the market with the result that access to liquidity and funding may become constrained or more expensive or may result in the Group being subject to regulatory interventions and sanctions. The Group's regulators may also request that the Group carry out certain capital management actions or, in an extreme scenario, this may also trigger the implementation of its recovery plans. Such actions may, in turn, affect, among other things, the Group's product offering, ability to operate its businesses, comply with its regulatory obligations, pursue its transformation programme and current strategies, resume dividend payments on its ordinary shares, maintain discretionary payments on capital instruments and pursue strategic opportunities, affecting the underlying profitability of the Group and future growth potential.

If, in response to such shortage, certain regulatory capital instruments are converted into equity or the Group raises additional capital through the issuance of share capital or regulatory capital instruments, existing shareholders may experience a dilution of their holdings. The success of such issuances will also be dependent on favourable market conditions and the Group may not be able to raise the amount of capital required or on satisfactory terms. Separately, the Group may address a shortage of capital by taking action to reduce leverage and/or risk-weighted assets, by modifying the Group's legal entity structure or by asset or business disposals. Such actions may affect the underlying profitability of the Group.

RBSG and the Group entities' ability to meet their obligations, including funding commitments, depends on their ability to access sources of liquidity and funding. If the Group or any Group entity is unable to raise funds through deposits and/or in the capital markets, its liquidity position could be adversely affected which may require unencumbered assets to be liquidated or it may result in higher funding costs which may impact the Group's margins and profitability.

Liquidity risk is the risk that a bank will be unable to meet its obligations, including funding commitments, as they fall due. This risk is inherent in banking operations and can be heightened by a number of factors, including an over-reliance on a particular source of wholesale funding (including, for example, short-term and overnight funding), changes in credit ratings or market-wide phenomena such as market dislocation and major disasters.

The Group's funding may also be impacted at the Group entity level as a result of ongoing restructuring efforts and strategy planning, including in response to implementation of the UK ring-fencing regime, planning around Brexit and the implementation of the Alternative Remedies Package, amongst others. For example, where the Group's funding strategy depends on intragroup funding arrangements between Group entities, as a result of the implementation of the UK ring-fencing regime, such arrangements will be limited and may no longer be permitted if they are provided between RFB and entities outside the RFB and, as a result, the cost of funding may increase for certain Group entities, which will be required to manage their own funding and liquidity strategy.

As a result of these and other restructuring changes that could result in the Group's need to manage funding and liquidity at an individual entity level, the Group may be required to maintain higher levels of funding and liquidity than would otherwise be the case.

The Group relies on retail and wholesale deposits to meet a considerable portion of its funding. The level of deposits may fluctuate due to factors outside the Group's control, such as a loss of confidence (including in individual Group entities), increasing competitive pressures for retail customer deposits or the repatriation of deposits by foreign wholesale depositors, which could result in a significant outflow of deposits within a short period of time.

An inability to grow, or any material decrease in, the Group's deposits could, particularly if accompanied by one of the other factors described above, have a material adverse impact on the Group's ability to satisfy its liquidity needs. Increases in the cost of retail deposit funding may impact the Group's margins and profitability.

The market view of bank credit risk has changed radically as a result of the financial crisis and banks perceived by the market to be riskier have had to issue debt at significantly higher costs. Although conditions have improved, there have been recent periods where corporate and financial institution counterparties have reduced their credit exposures to banks and other financial institutions, limiting the availability of these sources of funding. Rules currently proposed by the Financial Stability Board ('FSB') and in the EU in relation to the implementation of total loss-absorbing capacity ('TLAC') and MREL may also limit the ability of certain large financial institutions to hold debt instruments issued by other large financial institutions. The ability of the Bank of England to resolve the Group in an orderly manner may also increase investors' perception of risk and hence affect the availability and cost of funding for the Group. Any uncertainty relating to the credit risk of financial institutions may lead to reductions in levels of interbank lending or may restrict the Group's access to traditional sources of funding or increase the costs or collateral requirements for accessing such funding.

The implementation of the UK ring-fencing regime may impact the Group's funding strategy and the cost of funding may increase for certain Group entities which will be required to manage their own funding and liquidity strategy, in particular those entities outside the ring-fence which will no longer be able to rely on retail deposit funding.

In addition, the Group is subject to certain regulatory requirements with respect to liquidity coverage, including a liquidity coverage ratio set by the PRA in the UK. This requirement was phased in at 90% from 1 January 2017 and increased to 100% in January 2018 (as required by the Capital Requirements Regulation). The PRA may also impose additional liquidity requirements to reflect risks not captured in the leverage coverage ratio by way of Pillar 2 add-ons, which may increase and/or decrease from time to time and require the Group to obtain additional funding or diversify its sources of funding. Current proposals by the FSB and the European Commission also seek to introduce certain liquidity requirements for financial institutions, including the introduction of a net stable funding ratio ('NSFR').

Additional information

Risk factors continued

Under the European Commission November 2016 proposals, the NSFR would be calculated as the ratio of an institution's available stable funding relative to the required stable funding it needs over a one-year horizon.

The NSFR would be expressed as a percentage and set at a minimum level of 100%, which indicates that an institution holds sufficient stable funding to meet its funding needs during a one-year period under both normal and stressed conditions. If an institution's NSFR were to fall below the 100% level, the institution would be required to take the measures laid down in the CRD IV Regulation for a timely restoration to the minimum level. Competent authorities would assess the reasons for non-compliance with the NSFR requirement before deciding on any potential supervisory measures. These proposals are currently being considered and negotiated among the European Commission, the European Parliament and the European Council and, in light of Brexit, there is considerable uncertainty as to the extent to which such rules will apply to the Group.

If the Group is unable to raise funds through deposits or in the capital markets on acceptable terms or at all, its liquidity position could be adversely affected and it might be unable to meet deposit withdrawals on demand or at their contractual maturity, to repay borrowings as they mature, to meet its obligations under committed financing facilities, to comply with regulatory funding requirements, to undertake certain capital and/or debt management activities, or to fund new loans, investments and businesses. The Group may need to liquidate unencumbered assets to meet its liabilities, including disposals of assets not previously identified for disposal to reduce its funding commitments. In a time of reduced liquidity, the Group may be unable to sell some of its assets, or may need to sell assets at depressed prices, which in either case could have a material adverse effect on the Group's financial condition and results of operations.

Failure by the Group to comply with regulatory capital, funding, liquidity and leverage requirements may result in intervention by its regulators and loss of investor confidence, and may have a material adverse effect on its results of operations, financial condition and reputation and may result in distribution restrictions and adversely impact existing shareholders.

The Group is subject to extensive regulatory supervision in relation to the levels and quality of capital it is required to hold in connection with its business, including as a result of the transposition of the Basel Committee on Banking Supervision's regulatory capital framework (Basel III) in Europe by a Directive and Regulation (collectively known as CRD IV).

In addition, the Group is currently identified as a global systemically important bank (G-SIB) by FSB and is therefore subject to more intensive oversight and supervision by its regulators as well as additional capital requirements, although the Group belongs to the last 'bucket' of the FSB G-SIB list and is therefore subject to the lowest level of additional loss-absorbing capacity requirements.

Under CRD IV, the Group is required to hold at all times a minimum amount of regulatory capital calculated as a percentage of risk-weighted assets (Pillar 1 requirement).

CRD IV also introduced a number of new capital buffers that are in addition to the Pillar 1 and Pillar 2A requirements (as described below) that must be met with CET1 capital. The combination of the capital conservation buffer (which, subject to transitional provisions, will be set at 2.5% from 2019), the countercyclical capital buffer (of up to 2.5% which is currently set at 1.0%, with binding effect from 28 November 2018 by the FPC for UK banks) and the higher of (depending on the institution) the systemic risk buffer, the global systemically important institutions buffer (G-SIB Buffer) and the other systemically important institutions buffer, is referred to as the 'combined buffer requirement'. These rules entered into force on 1 May 2014 for the countercyclical capital buffer and on 1 January 2016 for the capital conservation buffer and the G-SIB Buffer.

The G-SIB Buffer is currently set at 1.0% for the Group (from 1 January 2017), and is being phased in over the period to 1 January 2019. The systemic risk buffer will be applicable from 1 January 2019. The Bank of England's Financial Policy Committee (the FPC) was responsible for setting the framework for the systemic risk buffer and the PRA adopted in December 2016 a final statement of policy implementing the FPC's framework. In early 2019, the PRA is expected to determine which institutions the systemic risk buffer should apply to, and if so, how large the buffer should be up to a maximum of 3% of a firm's risk-weighted assets. The systemic risk buffer will apply to ring-fenced entities only and not all entities within a banking group. The systemic risk buffer is part of the UK framework for identifying and setting higher capital buffers for domestic systemically important banks (D-SIBs), which are groups that, upon distress or failure, could have an important impact on their domestic financial systems.

In addition, national supervisory authorities may add extra capital requirements (the Pillar 2A requirements) to cover risks that they believe are not covered or insufficiently covered by Pillar 1 requirements. The Group's current Pillar 2A requirement has been set by the PRA at an equivalent of 4.0% of risk-weighted assets.

The PRA has also introduced a firm-specific the PRA buffer, which is a forward-looking requirement set annually and based on various factors including firm-specific stress test results and is to be met with CET1 capital (in addition to any CET1 capital used to meet any Pillar 1 or Pillar 2A requirements). Where appropriate, the PRA may require an increase in an institution's PRA buffer to reflect additional capital required to be held to mitigate the risk of additional losses that could be incurred as a result of risk management and governance weaknesses, including with respect to the effectiveness of the internal stress testing framework and control environment. UK banks are required to meet the higher of the combined buffer requirement or PRA buffer requirement. The FPC and PRA have expressed concerns around potential systemic risk associated with recent increases in UK consumer lending and the impact of consumer credit losses on banks' resilience in a stress scenario, which the PRA has indicated that it will consider when setting capital buffers for individual banks.

In addition to capital requirements and buffers, the regulatory framework adopted under CRD IV, as transposed in the UK, sets out minimum leverage ratio requirements for financial institutions.

Additional information

Risk factors continued

These include a minimum leverage requirement of 3.25% which applies to major UK banks, as recalibrated in October 2017 in accordance with the FPC's recommendation to the PRA. In addition, the UK leverage ratio framework provides for: (i) an additional leverage ratio to be met by G-SIBs and ring-fenced institutions to be calibrated at 35% of the relevant firm's capital G-SIB Buffer or systemic risk buffer and which is being phased in from 2016 (currently set at 0.75% from 1 January 2018) and (ii) a countercyclical leverage ratio buffer for all firms subject to the minimum leverage ratio requirements which is calibrated at 35% of a firm's countercyclical capital buffer. Further changes may be made to the current leverage ratio framework as a result of future regulatory reforms, including FSB proposals and proposed amendments to the CRD IV proposed by the European Commission in November 2016.

Most of the capital requirements which apply or will apply to the Group will need to be met in whole or in part with CET1 capital. CET1 capital broadly comprises retained earnings and equity instruments, including ordinary shares. As a result, the Group's ability to meet applicable CET1 capital requirements is dependent on organic generation of CET1 through sustained profitability and/or the Group's ability to issue ordinary shares, and there is no guarantee that the Group may be able to generate CET1 capital through either of these alternatives.

The amount of regulatory capital required to meet the Group's regulatory capital requirements (and any additional management buffer), is determined by reference to the amount of risk-weighted assets held by the Group. The models and methodologies used to calculate applicable risk-weightings are a combination of individual models, subject to regulatory permissions, and more standardised approaches. The rules are applicable to the calculation of the Group's risk-weighted assets are subject to regulatory changes which may impact the levels of regulatory capital required to be met by the Group.

On 7 December 2017, the Basel Committee on Banking Supervision published revised standards intended to finalise the Basel III post-crisis regulatory reforms. The revised standards include the following elements: (i) a revised standardised approach for credit risk, which will improve the robustness and risk sensitivity of the existing approach; (ii) revisions to the internal ratings-based approach for credit risk, where the use of the most advanced internally modelled approaches for low-default portfolios will be limited; (iii) revisions to the credit valuation adjustment (CVA) framework, including the removal of the internally modelled approach and the introduction of a revised standardised approach; (iv) a revised standardised approach for operational risk, which will replace the existing standardised approaches and the advanced measurement approaches; (v) revisions to the measurement of the leverage ratio and a leverage ratio buffer for global systemically important banks (G-SIBs), which will take the form of a Tier 1 capital buffer set at 50% of a G-SIB's risk-weighted capital buffer; and (vi) an aggregate output floor, which will ensure that banks' risk-weighted assets (RWAs) generated by internal models are no lower than 72.5% of RWAs as calculated by the Basel III framework's standardised approaches.

The revised Basel III standards will take effect from 1 January 2022 and will be phased in over five years. Although the revised Basel III standards must be implemented through legislation in the EU and UK, and precise estimates of their impact would be premature at this time, the revised standards may result in higher levels of risk-weighted assets and therefore higher levels of capital, and in particular CET1 capital, required to be held by the Group, under Pillar 1 requirements. Such requirements would be separate from any further capital overlays required to be held as part of the PRA's determination of the Group's Pillar 2A or PRA buffer requirements with respect to such exposures.

In the UK, the PRA also set revised expectations to the calculation of risk-weighted capital requirements in relation to residential mortgage portfolios which firms are expected to meet by the end of 2020. To this effect, firms should also submit amended models for regulatory approval.

Although the above provides an overview of the capital and leverage requirements currently applicable to the Group, such requirements are subject to ongoing amendments and revisions, including as a result of final rules and recommendations adopted by the FSB or by European or UK regulators. In particular, on 23 November 2016, the European Commission published a comprehensive package of reforms including proposed amendments to CRD IV and the EU Bank Recovery and Resolution Directive 'BRRD'. Although such proposals are currently being considered and discussed among the European Commission, the European Parliament and the European Council and their final form and the timetable for their implementation are not known, such amendments may result in increased or more stringent requirements applying to the Group or its subsidiaries. This uncertainty is compounded by Brexit which may result in further changes to the prudential and regulatory framework applicable to the Group.

If the Group is unable to raise the requisite amount of regulatory capital (including loss absorbing capital in the form of MREL), or to otherwise meet regulatory capital and leverage requirements, it may be exposed to increased regulatory supervision or sanctions, loss of investor confidence, restrictions on distributions and it may be required to reduce further the amount of its risk-weighted assets or total assets and engage in the disposal of core and other non-core businesses, which may not occur on a timely basis or achieve prices which would otherwise be attractive to the Group.

This may also result in write-down or the conversion into equity of certain regulatory capital instruments issued by the Group or the issue of additional equity by the Group, each of which could result in the dilution of the Group's existing shareholders. A breach of the Group's applicable capital or leverage requirements may also trigger the application of the Group's recovery plan to remediate a deficient capital position.

Failure by the Group to comply with its capital requirements or to maintain sufficient distributable reserves may result in the application of restrictions on its ability to make discretionary distributions, including the payment of dividends to its ordinary shareholders and coupons on certain capital instruments.

In accordance with the provisions of CRD IV, a minimum level of capital adequacy is required to be met by the Group in order for it to be entitled to make certain discretionary payments.

Additional information

Risk factors continued

Pursuant to Article 141 (Restrictions on distribution) of the CRD IV Directive, as transposed in the UK, institutions that fail to meet the 'combined buffer requirement' will be subject to restricted 'discretionary payments' (which are defined broadly by CRD IV as payments relating to CET1 instruments (dividends), variable remuneration and coupon payments on additional Tier 1 instruments). The resulting restrictions are scaled according to the extent of the breach of the 'combined buffer requirement' and calculated as a percentage of the profits of the institution since the last distribution of profits or 'discretionary payment' which gives rise to a maximum distributable amount (MDA) (if any) that the financial institution can distribute through discretionary payments.

The EBA has clarified that the CET1 capital to be taken into account for the MDA calculation should be limited to the amount not used to meet the Pillar 1 and Pillar 2 own funds requirements of the institution. In the event of a breach of the combined buffer requirement, the Group will be required to calculate its MDA, and as a consequence it may be necessary for the Group to reduce or cease discretionary payments to the extent of the breach.

The ability of the Group to meet the combined buffer requirement will be subject to the Group holding sufficient CET1 capital in excess of its minimum Pillar 1 and Pillar 2 capital requirements. In addition, the interaction of such restrictions on distributions with the capital requirements and buffers applicable to the Group remains uncertain in many respects while the relevant authorities in the EU and the UK consult on and develop their proposals and guidance on the application of the rules. In particular, the proposals published by the European Commission in November 2016 contain certain proposed amendments to Article 141, including to introduce a 'stacking order' in the calculation of the maximum distributable amount and establish certain priorities in the payments which could be made in the event the restrictions apply (with payments relating to additional Tier 1 instruments being required to be made before payments on CET1 instruments (dividends) or other discretionary payments). The treatment of MDA breaches under the European Commission proposals differ from the proposed consequences set out in the final PRA rules and may result in uncertainty in the application of these rules.

In addition to these rules and the requirement for PRA approval, in order to make distributions (including dividend payments) in the first place, RBSG is required to have sufficient distributable reserves available. Furthermore, coupon payments due on the additional Tier 1 instruments issued by RBSG must be cancelled in the event that RBSG has insufficient 'distributable items' as defined under CRD IV. Both distributable reserves and distributable items are largely impacted by the Group's ability to generate and accumulate profits or conversely by material losses (including losses resulting from conduct related-costs, restructuring costs or impairments).

RBSG's distributable reserves and distributable items are sensitive to the accounting impact of factors including the redemption of preference shares, restructuring costs and impairment charges and the carrying value of its investments in subsidiaries which are carried at the lower of cost and their prevailing recoverable amount. Recoverable amounts depend on discounted future cash flows which can be affected by restructurings, including the restructuring required to implement the UK ring-fencing regime, or unforeseen events.

The distributable reserves of RBSG also depend on the receipt of income from subsidiaries, principally as dividends. The ability of subsidiaries to pay dividends is subject to their performance and applicable local laws and other restrictions, including their respective regulatory requirements and distributable reserves. Any of these factors, including restructuring costs, impairment charges and a reduction in the carrying value of RBSG subsidiaries or a shortage of dividends from them could limit RBSG's ability to maintain sufficient distributable reserves to be able to pay coupons on certain capital instruments and dividends to its ordinary shareholders.

The Group may be required to recognise further impairments in the future if the outlook for its subsidiaries were to worsen. Whilst this level of distributable profits does not impact upon RBSG's ability to pay coupons on existing securities, the Group implemented a capital reorganisation in 2017 in order to increase RBSG's distributable reserves by approximately £30 billion, providing greater flexibility for potential future distributions and preference share redemptions (if any).

Failure by the Group to meet the combined buffer requirement or retain sufficient distributable reserves or distributable items as a result of reduced profitability or losses, or changes in regulation or taxes adversely impacting distributable reserves or distributable items, may therefore result in limitations on the Group's ability to make discretionary distributions which may negatively impact the Group's shareholders, holders of additional Tier 1 instruments, staff receiving variable compensation (such as bonuses) and other stakeholders and impact its market valuation and investors' and analysts' perception of its financial soundness.

The cost of implementing the Alternative Remedies Package regarding the business previously described as Williams & Glyn could be more onerous than anticipated and any failure to comply with the terms of the Alternative Remedies Package could result in the imposition of additional measures or limitations on the Group's operations.

On 18 September 2017, the Group received confirmation that an alternative remedies package announced on 26 July 2017 ('Alternative Remedies Package'), regarding the business previously described as Williams & Glyn, had been formally approved by the European Commission ('EC') in the form proposed.

Additional information

Risk factors continued

The Alternative Remedies Package replaced the existing requirement to divest the business previously described as Williams & Glyn by 31 December 2017. The Alternative Remedies Package focuses on the following two remedies to promote competition in the market for banking services to small and medium-sized enterprises ('SMEs') in the UK: (i) a £425 million capability and innovation fund that will grant funding to a range of eligible competitors in the UK banking and financial technology sectors; and (ii) a £275 million incentivised switching scheme which will provide funding for eligible bodies to help them incentivise SME customers of the business previously described as Williams & Glyn to switch their primary accounts and loans from the Group paid in the form of 'dowries' to business current accounts at the receiving bank. The Group has also agreed to set aside up to a further £75 million in funding to cover certain costs customers may incur as a result of switching under the incentivised switching scheme. In addition, under the terms of the Alternative Remedies Package, should the uptake within the incentivised switching scheme not be sufficient, RBSG may be required to make a further contribution, capped at £50 million.

An independent body ('Independent Body') is in the process of being established to administer the Alternative Remedies Package. However, the implementation of the Alternative Remedies Package also entails additional costs for the Group, including but not limited to the funding commitments and financial incentives envisaged to be provided under the plan. Implementation of the Alternative Remedies Package could also divert resources from the Group's operations and jeopardise the delivery and implementation of other significant plans and initiatives. In addition, under the terms of the Alternative Remedies Package, the Independent Body can require the Group to modify certain aspects of the Group's execution of the incentivised switching scheme, which could increase the cost of implementation. Furthermore, should the uptake within the incentivised switching scheme not be sufficient, the Independent Body can extend the duration of the scheme by up to twelve months and can compel the Group to extend the customer base to which the scheme applies which may result in prolonged periods of disruption to a wider portion of the Group's business.

As a direct consequence of the incentivised switching scheme, the Group will lose existing customers and deposits, which in turn will have adverse impacts on the Group's business and associated revenues and margins. Furthermore, the capability and innovation fund is intended to benefit eligible competitors and negatively impact the Group's competitive position. To support the incentivised switching initiative, upon request by an eligible bank, the Group has also agreed to grant those customers which have switched to eligible banks under the incentivised switching scheme access to its branch network for cash and cheque handling services, which may result in reputational and financial exposure for the Group and impact customer service quality for RBS's own customers with consequent competitive, financial and reputational implications. The implementation of the incentivised switching scheme is also dependent on the engagement of the eligible banks with the incentivised switching scheme and the application of the eligible banks to and approval by the Independent Body. The incentivised transfer of SME customers to third party banks places reliance on those third parties to achieve satisfactory customer outcomes which could give rise to reputational damage if these are not forthcoming.

A failure to comply with the terms of the Alternative Remedies Package could result in the imposition of additional measures or limitations on the Group's operations, additional supervision by the Group's regulators, and loss of investor or customer confidence, any of which could have a material adverse impact on the Group. Delays in execution may also impact the Group's ability to carry out its transformation programme, including the implementation of cost saving initiatives and mandatory regulatory requirements. Such risks will increase in line with any delays.

As a result of extensive reforms being implemented relating to the resolution of financial institutions within the UK, the EU and globally, material additional requirements will arise to ensure that financial institutions maintain sufficient loss-absorbing capacity. Such changes to the funding and regulatory capital framework may require the Group to meet higher capital levels than the Group anticipated within its strategic plans and affect the Group's funding costs.

In addition to the prudential requirements applicable under CRD IV, the BRRD introduces, among other things, a requirement for banks to maintain at all times a sufficient aggregate amount of own funds and 'eligible liabilities' (that is, liabilities that can absorb loss and assist in recapitalising a firm in accordance with a predetermined resolution strategy), known as the minimum requirements for MREL, designed to ensure that the resolution of a financial institution may be carried out, without public funds being exposed to the risk of loss and in a way which ensures the continuity of critical economic functions, maintains financial stability and protects depositors.

In November 2015, the FSB published a final term sheet setting out its TLAC standards for G-SIBs. The EBA was mandated to assess the implementation of MREL in the EU and the consistency of MREL with the final TLAC standards and published an interim report setting out the conclusions of its review in July 2016 and its final report in December 2016. On the basis of the EBA's work and its own assessment of CRD IV and the BRRD, the European Commission published in November 2016 a comprehensive set of proposals, seeking to make certain amendments to the existing MREL framework. In particular, the proposals make a number of amendments to the MREL requirements under the BRRD, in part in order to transpose the FSB's final TLAC term sheet.

The UK government is required to transpose the BRRD's provisions relating to MREL into law through further secondary legislation. In November 2016, the Bank of England published its final rules setting out its approach to setting MREL for UK banks. These final rules (which were adopted on the basis of the current MREL framework in force in the EU) do not take into account the European Commission's most recent proposals with respect to MREL and differ in a number of respects. In addition, rules relating to a number of specific issues under the framework remain to be implemented. These include internal MREL requirements, in respect of which the FSB published guiding principles in July 2017. The Bank of England published a consultation paper in October 2017 but has not yet published a final statement of policy on its approach to setting internal MREL. The Bank of England has also stated that it expects to set out policy proposals for MREL cross-holdings and disclosure requirements once there is greater clarity as to the timing and final content of related EU proposals.

Additional information

Risk factors continued

The Bank of England is responsible for setting the MREL requirements for each UK bank, building society and certain investment firms in consultation with the PRA and the FCA, and such requirement will be set depending on the resolution strategy of the financial institution. In its final rules, the Bank of England has set out a staggered compliance timeline for UK banks, including with respect to those requirements applicable to G-SIBs (including the Group).

Under the revised timeline, G-SIBs will be expected to (i) meet the minimum requirements set out in the FSB's TLAC term sheet from 1 January 2019 (i.e. the higher of 16% of risk-weighted assets or 6% of leverage exposures), and (ii) meet the full MREL requirements to be phased in from 1 January 2020, with the full requirements applicable from 2 January 2022 (i.e. for G-SIBs two times Pillar 1 plus Pillar 2A or the higher of two times the applicable leverage ratio requirement or 6.75% of leverage exposures). MREL requirements are expected to be set on consolidated, sub-consolidated and individual bases, and are in addition to regulatory capital requirements (so that there can be no double counting of instruments qualifying for capital requirements).

For institutions, including the Group, for which bail-in is the required resolution strategy and which are structured to permit single point of entry resolution due to their size and systemic importance, the Bank of England has indicated that in order to qualify as MREL, eligible liabilities must be issued by the resolution entity (i.e. the holding company for the Group) and be structurally subordinated to operating and excluded liabilities (which include insured deposits, short-term debt, derivatives, structured notes and tax liabilities). Under the single point of entry (SPE) resolution model that applies to the Group, losses that crystallise in the operating companies are passed up the chain to RBSG through the write down of the holding company's investments in the equity and debt of its operating companies.

The probability of the external MREL investors being bailed-in will depend on the Group's overall going-concern capital resources, the extent of any losses in the operating companies, and the extent to which those losses are passed up to the investing entity (recognising that some operating company liabilities, including obligations to pension schemes, are protected from bail-in).

The final rules set out a number of liabilities which cannot qualify as MREL and are therefore 'excluded liabilities'. As a result, senior unsecured issuances by RBSG will need to be subordinated to the excluded liabilities described above. The proceeds from such issuances will be transferred to material operating subsidiaries (as identified using criteria set in the Bank of England's final rules on internal MREL) in the form of capital or another form of subordinated claim.

In this way, MREL resources will be 'structurally subordinated' to senior liabilities of operating companies, allowing losses from operating companies to be transferred to the holding company and - if necessary - for resolution to occur at the holding company level, without placing the operating companies into a resolution process.

The TLAC standard requires that the total amount of excluded liabilities on RBSG's balance sheet does not exceed 5% of its external TLAC (i.e. the eligible liabilities RBSG has issued to investors which meet the TLAC requirements) and the Bank of England has adopted this criterion in its final rules.

If the Group were to fail to comply with this 'clean balance sheet' requirement, it could disqualify otherwise eligible liabilities from counting towards MREL and result in the Group breaching its MREL requirements. The purpose of internal MREL requirements is to provide for loss-absorbing capacity to be appropriately distributed within a banking group and to provide the mechanism by which losses can be transferred from operating companies to the resolution entity.

The Bank of England proposes to set internal MREL requirements above capital requirements for each 'material subsidiary' of a banking group. The Bank of England will formally determine which entities within the group represent material subsidiaries, with reference to indicative criteria including such subsidiary's contribution to the Group's risk-weighted assets and operating income. It will also set the internal MREL requirement, calibrated to be between 75% and 90% of the external MREL requirement that would otherwise apply to a material subsidiary were it a resolution entity in its own right. Such requirements must be met with internal MREL resources which are subordinated to the operating liabilities of the material subsidiary issuing them and must be capable of being written down or converted to equity via a contractual trigger. These liabilities, issued to other group entities (typically the issuing entity's immediate parent), must be priced on an arm's-length basis. The impact of these requirements on the Group, the cost of servicing these liabilities and the implications for the Group's funding plans cannot be assessed with certainty until the Bank of England's proposed internal MREL policy is finalised and final rules are published.

Compliance with these and other future changes to capital adequacy and loss-absorbency requirements in the EU and the UK by the relevant deadline will require the Group to restructure its balance sheet and issue additional capital and other instruments compliant with the rules which may be costly whilst certain existing Tier 1 and Tier 2 securities and other senior, unsecured instruments issued by the Group will cease to count towards the Group's loss-absorbing capacity for the purposes of meeting MREL/TLAC requirements. The Group's resolution authority can impose an MREL requirement over and above the regulatory minima and potentially higher than the Group's peers, if it has concerns regarding the resolvability of the Group. As a result, RBSG may be required to issue additional loss-absorbing instruments in the form of CET1 capital or subordinated or senior unsecured debt instruments or may result in an increased risk of a breach of the Group's combined buffer requirement, triggering the restrictions relating to the MDA described above. There remain some areas of uncertainty regarding the implementation of outstanding regulatory requirements within the UK, the EU and globally, and the final requirements to which the Group will be subject, and the Group may therefore need to revise its capital plan accordingly.

Additional information

Risk factors continued

The Group's businesses and performance can be negatively affected by actual or perceived economic conditions in the UK and globally and other global risks, including risks arising out of geopolitical events, and political developments and the Group will be increasingly impacted by developments in the UK as its operations become increasingly concentrated in the UK.

Actual or perceived difficult global economic conditions can create challenging economic and market conditions and a difficult operating environment for the Group's businesses and its customers and counterparties.

As part of its revised strategy, the Group has been refocusing its business in the UK, the ROI and Western Europe and, accordingly is more exposed to the economic conditions of the British economy as well as the Eurozone. In particular, the longer term effects of Brexit are difficult to predict and are subject to wider global macro-economic trends, but may include periods of financial market volatility and slower economic growth, in the UK in particular, but also in the ROI, Europe and the global economy, at least in the short to medium term. See 'The Group is subject to political risks, including economic, regulatory and political uncertainty arising from the referendum on the UK's membership of the European Union which could adversely impact the Group's business, results of operations, financial condition and prospects.' and 'The Group has been, and will remain, in a period of major business transformation and structural change through to at least 2019 as it implements its own transformation programme and seeks to comply with UK ring-fencing and recovery and resolution requirements as well as the Alternative Remedies Package. Additional structural changes to the Group's operations will also be required as a result of Brexit. These various transformation and restructuring activities are required to occur concurrently, which carries significant execution and operational risks, and the Group may not be a viable, competitive and profitable bank as a result.'

The outlook for the global economy over the medium-term remains uncertain due to a number of factors including: political instability, an extended period of low inflation and low interest rates, although monetary policy has begun the process of normalisation in some countries. The normalisation of monetary policy in the USA may affect some emerging market economies which may raise their domestic interest rates in order to avoid capital outflows, with negative effects on growth and trade. Such conditions could be worsened by a number of factors including political uncertainty or macro-economic deterioration in the Eurozone or the US, increased instability in the global financial system and concerns relating to further financial shocks or contagion, volatility in the value of the pound sterling, new or extended economic sanctions, volatility in commodity prices or concerns regarding sovereign debt. In particular, concerns relating to emerging markets, including lower economic growth or recession, concerns relating to the Chinese economy and financial markets, reduced global trade in emerging market economies to which the Group is exposed or increased financing needs as existing debt matures, may give rise to further instability and financial market volatility.

Any of the above developments could impact the Group directly by resulting in credit losses and indirectly by further impacting global economic growth and financial markets.

Developments relating to current economic conditions, including those discussed above, could have a material adverse effect on the Group's business, financial condition, results of operations and prospects. Any such developments may also adversely impact the financial position of the Group's pension schemes, which may result in the Group being required to make additional contributions. See 'The Group is subject to pension risks and will be required to make additional contributions as a result of the restructuring of its pension schemes in relation to the implementation of the UK ring-fencing regime. In addition, the Group expects to make additional contributions to cover pension funding deficits if there are degraded economic conditions of if there is any devaluation in the asset portfolio held by the pension trustee.'

In addition, the Group is exposed to risks arising out of geopolitical events or political developments, such as trade barriers, exchange controls, sanctions and other measures taken by sovereign governments that can hinder economic or financial activity levels. Furthermore, unfavourable political, military or diplomatic events, including secession movements or the exit of other Member States from the EU, armed conflict, pandemics, state and privately sponsored cyber and terrorist acts or threats, and the responses to them by governments, could also adversely affect economic activity and have an adverse effect upon the Group's business, financial condition and results of operations.

The financial performance of the Group has been, and may continue to be, materially affected by customer and counterparty credit quality and deterioration in credit quality could arise due to prevailing economic and market conditions and legal and regulatory developments.

The Group has exposure to many different industries, customers and counterparties, and risks arising from actual or perceived changes in credit quality and the recoverability of monies due from borrowers and other counterparties are inherent in a wide range of the Group's businesses.

In particular, the Group has significant exposure to certain individual customers and other counterparties in weaker business sectors and geographic markets and also has concentrated country exposure in the UK, the US and across the rest of Europe principally Germany, the Netherlands, Ireland and France.

At 31 December 2017, current exposure in the UK was £363.0 billion, in the US was £18.4 billion and in Western Europe (excluding the UK) was £60.0 billion; and within certain business sectors, namely personal and financial institutions (at 31 December 2016, personal lending amounted to £176.6 billion, and lending to banks and other financial institutions was £37.8 billion).

Provisions held on loans in default have decreased in recent years due to asset sales and the portfolio run-down in Ulster Bank Ireland DAC and the NatWest Markets franchise's legacy portfolios. If the risk profile of these loans were to increase, including as a result of a degradation of economic or market conditions, this could result in an increase in the cost of risk and the Group may be required to make additional provisions, which in turn would reduce earnings and impact the Group's profitability.

Additional information

Risk factors continued

The Group's lending strategy or processes may also fail to identify or anticipate weaknesses or risks in a particular sector, market or borrower category, which may result in an increase in default rates, which may, in turn, impact the Group's profitability. Any adverse impact on the credit quality of the Group's customers and other counterparties, coupled with a decline in collateral values, could lead to a reduction in recoverability and value of the Group's assets and higher levels of impairment allowances, which could have an adverse effect on the Group's operations, financial position or prospects.

The credit quality of the Group's borrowers and its other counterparties is impacted by prevailing economic and market conditions and by the legal and regulatory landscape in their respective markets.

Credit quality has improved in certain of the Group's core markets, in particular the UK and Ireland, as these economies have improved. However, a further deterioration in economic and market conditions or changes to legal or regulatory landscapes could worsen borrower and counterparty credit quality and also impact the Group's ability to enforce contractual security rights. In particular, developments relating to Brexit may adversely impact credit quality in the UK.

In addition, as the Group continues to implement its strategy and further reduces its scale and global footprint, the Group's relative exposure to the UK and certain sectors and asset classes in the UK will continue to increase as its business becomes more concentrated in the UK as a result of the reduction in the number of jurisdictions outside of the UK in which it operates. The level of UK household indebtedness remains high and the ability of some households to service their debts could be challenged by a period of higher unemployment. Highly indebted households are particularly vulnerable to shocks, such as falls in incomes or increases in interest rates, which threaten their ability to service their debts.

In particular, in the UK, the Group is at risk from downturns in the UK economy and volatility in property prices in both the residential and commercial sectors. With UK home loans representing the most significant portion of the Group's total loans and advances to the retail sector, the Group has a large exposure to adverse developments in the UK residential property sector. In the UK commercial real estate market, activity has improved against 2016 but may be short-lived given continued political uncertainty and progress of negotiations relating to the form and timing of Brexit. There is a risk of further adjustment given the reliance of the UK commercial real estate market in recent years on inflows of foreign capital and, in some segments, stretched property valuations. As a result, the continued house price weakness, particularly in London and the South East of the UK, would be likely to lead to higher impairment and negative capital impact as loss given default rate increases. In addition, reduced affordability of residential and commercial property in the UK, for example, as a result of higher interest rates, inflation or increased unemployment, could also lead to higher impairments on loans held by the Group being recognised.

The Group also remains exposed to certain counterparties operating in certain industries which have been under pressure in recent years and any further deterioration in the outlook the credit quality of these counterparties may require the Group to make additional provisions, which in turn would reduce earnings and impact the Group's profitability.

In addition, the Group's credit risk is exacerbated when the collateral it holds cannot be realised as a result of market conditions or regulatory intervention or is liquidated at prices not sufficient to recover the full amount of the loan or derivative exposure that is due to the Group, which is most likely to occur during periods of illiquidity and depressed asset valuations, such as those experienced in recent years.

This has particularly been the case with respect to large parts of the Group's commercial real estate portfolio. Any such deteriorations in the Group's recoveries on defaulting loans could have an adverse effect on the Group's results of operations and financial condition.

Concerns about, or a default by, one financial institution could lead to significant liquidity problems and losses or defaults by other financial institutions, as the commercial and financial soundness of many financial institutions may be closely related as a result of credit, trading, clearing and other relationships. Even the perceived lack of creditworthiness of, or questions about, a counterparty may lead to market-wide liquidity problems and losses for, or defaults by, the Group. This systemic risk may also adversely affect financial intermediaries, such as clearing agencies, clearing houses, banks, securities firms and exchanges with which the Group interacts on a daily basis.

The effectiveness of recent prudential reforms designed to contain systemic risk in the EU and the UK is yet to be tested. Counterparty risk within the financial system or failures of the Group's financial counterparties could have a material adverse effect on the Group's access to liquidity or could result in losses which could have a material adverse effect on the Group's financial condition, results of operations and prospects.

The trends and risks affecting borrower and counterparty credit quality have caused, and in the future may cause, the Group to experience further and accelerated impairment charges, increased repurchase demands, higher costs, additional write-downs and losses for the Group and an inability to engage in routine funding transactions.

The Group's borrowing costs, its access to the debt capital markets and its liquidity depend significantly on its credit ratings and, to a lesser extent, on the UK sovereign ratings.

The credit ratings of RBSG, RBS plc and other Group members directly affect the cost of funding and capital instruments issued by the Group, as well as secondary market liquidity in those instruments. The implementation of ring-fencing is expected to change the funding strategy of the Group as a result of the RFB and the entities outside of the RFB raising debt capital directly. A number of UK and other European financial institutions, including RBSG, RBS plc and other Group entities, have been downgraded multiple times in recent years in connection with rating methodology changes and credit rating agencies' revised outlook relating to regulatory developments, macroeconomic trends and a financial institution's capital position and financial prospects.

Additional information

Risk factors continued

The senior unsecured long-term and short-term credit ratings of RBSG and RBS plc are investment grade by Moody's, S&P and Fitch. The outlook for RBSG is currently stable for S&P, Fitch and Moody's and the outlook for RBS plc is currently stable for S&P and Fitch and under review for downgrade for Moody's. This outlook is consistent with previous statements made by Moody's that the implementation of the ring-fencing regime is likely to lead to downgrades in the ratings of RBS plc.

Rating agencies regularly review the RBSG and Group entity credit ratings and their ratings of long-term debt are based on a number of factors, including the Group's financial strength as well as factors not within the Group's control, such as political developments and conditions affecting the financial services industry generally.

In particular, the rating agencies may further review the RBSG and Group entity ratings as a result of the implementation of the UK ring-fencing regime, pension and litigation/regulatory investigation risk, including potential fines relating to investigations relating to legacy conduct issues, and other macroeconomic and political developments, including in light of the outcome of the negotiations relating to the form and timing of the UK's exit from the EU.

A challenging macroeconomic environment, a delayed return to satisfactory profitability and greater market uncertainty could negatively impact the Group's credit ratings and potentially lead to ratings downgrades which could adversely impact the Group's ability and cost of funding. The Group's ability to access capital markets on acceptable terms and hence its ability to raise the amount of capital and funding required to meet its regulatory requirements and targets, including those relating to loss-absorbing instruments to be issued by the Group, could be affected. See 'Implementation of the ring-fencing regime in the UK which began in 2015 and must be completed before 1 January 2019 will result in material structural changes to the Group's business. The steps required to implement the UK ring-fencing regime are complex and entail significant costs and operational, legal and execution risks, which risks may be exacerbated by the Group's other ongoing restructuring efforts.'

Any reductions in the long-term or short-term credit ratings of RBSG or of certain of its subsidiaries (particularly RBS plc), including downgrades below investment grade, could adversely affect the Group's issuance capacity in the financial markets, increase its funding and borrowing costs, require the Group to replace funding lost due to the downgrade, which may include the loss of customer deposits and may limit the Group's access to capital and money markets and trigger additional collateral or other requirements in derivatives contracts and other secured funding arrangements or the need to amend such arrangements, limit the range of counterparties willing to enter into transactions with the Group and its subsidiaries and adversely affect its competitive position, all of which could have a material adverse impact on the Group's earnings, cash flow and financial condition.

As discussed above, the success of the implementation of the UK ring-fencing regime and the restructuring of the Group's NatWest Markets franchise, is in part dependent upon the relevant banking entities obtaining a sustainable credit rating and being able to satisfy their funding needs.

A failure to obtain such a rating, or any subsequent downgrades may threaten the ability of the NatWest Markets franchise or other entities outside of the RFB to satisfy their funding needs and to meet prudential capital requirements. At 31 December 2017, a simultaneous one-notch long-term and associated short-term downgrade in the credit ratings of RBSG and RBS plc by the three main ratings agencies would have required the Group to post estimated additional collateral of £1.4 billion, without taking account of mitigating action by management. Individual credit ratings of RBSG, RBS plc, RBS N.V., RBS International, RBS Securities Inc., National Westminster Bank Plc, Ulster Bank Ltd, Ulster Bank Ireland DAC and Adam & Company PLC are also important to the Group when competing in certain markets such as corporate deposits and over-the-counter derivatives.

The major credit rating agencies downgraded and changed their outlook to negative on the UK's sovereign credit rating in June 2016 and September 2017 following the UK's decision to leave the EU. Any further downgrade in the UK Government's credit ratings could adversely affect the credit ratings of Group entities and may result in the effects noted above. Further political developments, including in relation to Brexit or the outcome of any further Scottish referendum could negatively impact the credit ratings of the UK Government and result in a downgrade of the credit ratings of RBSG and Group entities.

The Group's businesses are exposed to the effect of movements in currency rates, which could have a material adverse effect on the results of operations, financial condition or prospects of the Group.

As part of its strategy, the Group has revised its focus to become a UK-focused domestic bank. However, 6.5% of its revenues are derived in foreign currencies. The Group's foreign exchange exposure arises from structural foreign exchange risk, including capital deployed in the Group's foreign subsidiaries, branches and joint arrangements, and non-trading foreign exchange risk, including customer transactions and profits and losses that are in a currency other than the functional currency of the transacting entity. The Group also relies on MREL issuances in foreign currency. The Group maintains policies and procedures to ensure the impact of exposures to fluctuations in currency rates are minimised. Nevertheless, changes in currency rates, particularly in the sterling-US dollar and euro-sterling exchange rates, affect the value of assets, liabilities, (including the total amount of MREL eligible instruments), income and expenses denominated in foreign currencies and the reported earnings of the Group's non-UK subsidiaries and may affect the Group's reported consolidated financial condition or its income from foreign exchange dealing and may also require incremental MREL to be issued.

Changes in foreign exchange rates may result from the decisions of the Bank of England, ECB, the US Federal Reserve and from political or global market events outside the Group's control and lead to sharp and sudden variations in foreign exchange rates, such as those seen in the sterling/US dollar exchange rates since the occurrence of the EU Referendum. Throughout 2017, ongoing UK negotiations to exit the EU, amongst other factors, resulted in continued volatility in the sterling exchange rate relative to other major currencies. Continued or increasing volatility in currency rates can materially affect the Group's results of operations, financial condition or prospects.

Additional information

Risk factors continued

Continued low interest rates have significantly affected and will continue to affect the Group's business and results of operations. A continued period of low interest rates, and yield curves and spreads may affect net interest income, the effect of which may be heightened during periods of liquidity stress.

Interest rate and foreign exchange risks, discussed below, are significant for the Group. Monetary policy has been highly accommodative in recent years, including as a result of certain policies implemented by the Bank of England and HM Treasury such as the Term Funding Scheme, which have helped to support demand at a time of very pronounced fiscal tightening and balance sheet repair. In the UK, the Bank of England lowered interest rates to 0.25% in August 2016 and raised them to 0.5% in November 2017.

However, there remains considerable uncertainty as to whether or when the Bank of England and other central banks will further increase interest rates. While the ECB has been conducting a quantitative easing programme since January 2015 designed to improve confidence in the Eurozone and encourage more private bank lending, there remains considerable uncertainty as to whether such measures have been or will be sufficient or successful and the extension of this programme until the end of September 2018 (or beyond) may put additional pressure on margins. Continued sustained low or negative interest rates or any divergences in monetary policy approach between the Bank of England and other major central banks could put further pressure on the Group's interest margins and adversely affect the Group's profitability and prospects.

A continued period of low interest rates and yield curves and spreads may affect the interest rate margin realised between lending and borrowing costs, the effect of which may be heightened during periods of liquidity stress.

Conversely while increases in interest rates may support Group income, sharp increases in interest rates could lead to generally weaker than expected growth, or even contracting GDP, reduced business confidence, higher levels of unemployment or underemployment, adverse changes to levels of inflation, potentially higher interest rates and falling property prices in the markets in which the Group operates. In turn, this could cause stress in the loan portfolio of the Group, particularly in relation to non-investment grade lending or real estate loans and consequently to an increase in delinquency rates and default rates among customers, leading to the possibility of the Group incurring higher impairment charges. Similar risks result from the exceptionally low levels of inflation in developed economies, which in Europe particularly could deteriorate into sustained deflation if policy measures prove ineffective. Reduced monetary stimulus and the actions and commercial soundness of other financial institutions have the potential to impact market liquidity.

The Group's earnings and financial condition have been, and its future earnings and financial condition may continue to be, materially affected by depressed asset valuations resulting from poor market conditions.

The Group's businesses and performance are affected by financial market conditions. The performance and volatility of financial markets affect bond and equity prices and have caused, and may in the future cause, changes in the value of the Group's investment and trading portfolios.

Financial markets have recently experienced and may in the near term experience significant volatility, including as a result of concerns about Brexit, political and financial developments in the US and in Europe, including as a result of general elections, geopolitical developments and developments relating to trade agreements volatility and instability in the Chinese and global stock markets, expectations relating to or actions taken by central banks with respect to monetary policy, and weakening fundamentals of the Chinese economy, resulting in further short-term changes in the valuation of certain of the Group's assets. Uncertainty about potential fines for past misconduct and concerns about the longer-term viability of business models have also weighed heavily on the valuations of some financial institutions in Europe and in the UK, including the Group.

Any further deterioration in economic and financial market conditions or weak economic growth could require the Group to recognise further significant write-downs and realise increased impairment charges or goodwill impairments, all of which may have a material adverse effect on its financial condition, results of operations and capital ratios. As part of its transformation programme, the Group is executing the run-down or disposal of a number of businesses, assets and portfolios.

Moreover, market volatility and illiquidity (and the assumptions, judgements and estimates in relation to such matters that may change over time and may ultimately not turn out to be accurate) make it difficult to value certain of the Group's exposures.

Valuations in future periods reflecting, among other things, the then-prevailing market conditions and changes in the credit ratings of certain of the Group's assets may result in significant changes in the fair values of the Group's exposures, such as credit market exposures, and the value ultimately realised by the Group may be materially different from the current or estimated fair value. As part of its ongoing derivatives operations, the Group also faces significant basis, volatility and correlation risks, the occurrence of which are also impacted by the factors noted above.

In addition, for accounting purposes, the Group carries some of its issued debt, such as debt securities, at the current market price on its balance sheet. Factors affecting the current market price for such debt, such as the credit spreads of the Group, may result in a change to the fair value of such debt, which is recognised in the income statement as a profit or loss.

The Group's businesses are subject to substantial regulation and oversight. Significant regulatory developments and increased scrutiny by the Group's key regulators has had and is likely to continue to increase compliance and conduct risks and could have a material adverse effect on how the Group conducts its business and on its results of operations and financial condition.

The Group is subject to extensive laws, regulations, corporate governance requirements, administrative actions and policies in each jurisdiction in which it operates. Many of these have been introduced or amended recently and are subject to further material changes.

Additional information

Risk factors continued

Among others, the implementation and strengthening of the prudential and recovery and resolution framework applicable to financial institutions in the UK, the EU and the US, and future amendments to such rules, are considerably affecting the regulatory landscape in which the Group operates and will operate in the future, including as a result of the adoption of rules relating to the UK ring-fencing regime, severe restrictions on proprietary trading, CRD IV and the BRRD and certain other measures. Increased regulatory focus in certain areas, including conduct, consumer protection regimes, anti-money laundering, anti-tax evasion, payment systems, and antiterrorism laws and regulations, have resulted in the Group facing greater regulation and scrutiny in the UK, the US and other countries in which it operates.

Recent regulatory changes, proposed or future developments and heightened levels of public and regulatory scrutiny in the UK, Europe and the US have resulted in increased capital, funding and liquidity requirements, changes in the competitive landscape, changes in other regulatory requirements and increased operating costs, and have impacted, and will continue to impact, product offerings and business models.

Such changes may also result in an increased number of regulatory investigations and proceedings and have increased the risks relating to the Group's ability to comply with the applicable body of rules and regulations in the manner and within the time frames required.

Such risks are currently exacerbated by Brexit and the unprecedented degree of uncertainty as to the respective legal and regulatory frameworks in which the Group and its subsidiaries will operate when the UK is no longer a member of the EU. For example, current proposed changes to the European prudential regulatory framework for banks and investment banks may result in additional prudential or structural requirements being imposed on financial institutions based outside the EU wishing to provide financial services within the EU (which may apply to the Group once the UK has formally exited the EU). See 'The Group has been, and will remain, in a period of major business transformation and structural change through to at least 2019 as it implements its own transformation programme and seeks to comply with UK ring-fencing and recovery and resolution requirements as well as the Alternative Remedies Package. Additional structural changes to the Group's operations will also be required as a result of Brexit. These various transformation and restructuring activities are required to occur concurrently, which carries significant execution and operational risks, and the Group may not be a viable, competitive and profitable bank as a result.'. In addition, the Group and its counterparties may no longer be able to rely on the European passporting framework for financial services and could be required to apply for authorisation in multiple European jurisdictions, the costs, timing and viability of which is uncertain.

Any of these developments (including failures to comply with new rules and regulations) could have a significant impact on how the Group conducts its business, its authorisations and licenses, the products and services it offers, its reputation and the value of its assets, the Group's operations or legal entity structure, including attendant restructuring costs and consequently have a material adverse effect on its business, funding costs, results of operations, financial condition and future prospects.

Areas in which, and examples of where, governmental policies, regulatory and accounting changes and increased public and regulatory scrutiny could have an adverse impact (some of which could be material) on the Group include, but are not limited to, those set out above as well as the following:

- amendments to the framework or requirements relating to the quality and quantity of regulatory capital to be held by the Group as well as liquidity and leverage requirements, either on a solo, consolidated or subgroup level (and taking into account the Group's new legal structure following the implementation of the UK ring-fencing regime), including amendments to the rules relating to the calculation of risk-weighted assets and reliance on internal models and credit ratings as well as rules affecting the eligibility of deferred tax assets;
- the design and implementation of national or supranational mandated recovery, resolution or insolvency regimes or the implementation of additional or conflicting loss-absorption requirements, including those mandated under UK rules, BRRD, MREL or by the FSB's recommendations on TLAC;
- new or amended regulations or taxes that reduce profits attributable to shareholders which may diminish, or restrict, the accumulation of the distributable reserves or distributable items necessary to make distributions or coupon payments or limit the circumstances in which such distributions may be made or the extent thereof;
- the monetary, fiscal, interest rate and other policies of central banks and other governmental or regulatory bodies;
- further investigations, proceedings or fines either against the Group in isolation or together with other large financial institutions with respect to market conduct wrongdoing;
- the imposition of government-imposed requirements and/or related fines and sanctions with respect to lending to the UK SME market and larger commercial and corporate entities;
- increased regulatory scrutiny with respect to mortgage lending, including through the implementation of the FCA's UK mortgages market study and other initiatives led by the Bank of England or European regulators;
- concerns expressed by the FPC and PRA around potential systemic risk associated with recent increases in UK consumer lending and the impact of consumer credit losses on banks' resilience in a stress scenario, which the PRA has indicated that it will consider when setting capital buffers for individual banks;
- additional rules and regulatory initiatives and review relating to customer protection, including the FCA's Treating Customers Fairly regime and increased focus by regulators on how institutions conduct business, particularly with regard to the delivery of fair outcomes for customers and orderly/transparent markets;
- the imposition of additional restrictions on the Group's ability to compensate its senior management and other employees and increased responsibility and liability rules applicable to senior and key employees;
- rules and regulations relating to, and enforcement of, anti-corruption, anti-bribery, anti-money laundering, anti-terrorism, sanctions, anti-tax evasion or other similar regimes;
- investigations into facilitation of tax evasion or avoidance or the creation of new civil or criminal offences relating thereto;
- rules relating to foreign ownership, expropriation, nationalisation and confiscation of assets;

Additional information

Risk factors continued

- changes to financial reporting standards (including accounting standards or guidance) and guidance or the timing of their implementation;
- changes to risk aggregation and reporting standards;
- changes to corporate governance requirements, senior manager responsibility, corporate structures and conduct of business rules;
- competition reviews and investigations relating to the retail banking sector in the UK, including with respect to SME banking and PCAs;
- financial market infrastructure reforms establishing new rules applying to investment services, short selling, market abuse, derivatives markets and investment funds, including the European Market Infrastructure Regulation and the Markets in Financial Instruments Directive and Regulation in the EU and the Dodd Frank Wall Street Reform Consumer Protection Act of 2010 in the US;
- increased regulatory scrutiny with respect to UK payment systems by the Payments Systems Regulator and the FCA, including in relation to banks' policies and procedures for handling push payment scams;
- increased attention to competition and innovation in UK payment systems and developments relating to the UK initiative on Open Banking and the European directive on payment services;
- new or increased regulations relating to customer data and privacy protection, including the EU General Data Protection Regulation ('GDPR');
- restrictions on proprietary trading and similar activities within a commercial bank and/or a group;
- the introduction of, and changes to, taxes, levies or fees applicable to the Group's operations, such as the imposition of a financial transaction tax, changes in tax rates, increases in the bank corporation tax surcharge in the UK, restrictions on the tax deductibility of interest payments or further restrictions imposed on the treatment of carry-forward tax losses that reduce the value of deferred tax assets and require increased payments of tax;
- the regulation or endorsement of credit ratings used in the EU (whether issued by agencies in European member states or in other countries, such as the US);
- the Markets in Financial Instruments Directive ('MiFID') regulating the provision of 'investment services and activities' in relation to a range of customer-related areas and the revised directive ('MiFID II') and new regulation (Markets in Financial Instruments Regulation or 'MiFIR') replacing and changing MiFID to include expanded supervisory powers that include the ability to ban specific products, services and practices;
- the European Commission's proposal to impose a requirement for any bank established outside the EU, which has an asset base of a certain size and has two or more institutions within the EU, to establish a single intermediate parent undertaking ('IPU') in the European Union, under which all EU entities within that group would operate; and
- other requirements or policies affecting the Group and its profitability or product offering, including through the imposition of increased compliance obligations or obligations which may lead to restrictions on business growth, product offerings, or pricing.

Changes in laws, rules or regulations, or in their interpretation or enforcement, or the implementation of new laws, rules or regulations, including contradictory laws, rules or regulations by key regulators in different jurisdictions, or failure by the Group to comply with such laws, rules and regulations, may have a material adverse effect on the Group's business, financial condition and results of operations. In addition, uncertainty and lack of international regulatory coordination as enhanced supervisory standards are developed and implemented may adversely affect the Group's ability to engage in effective business, capital and risk management planning.

The Group relies on valuation, capital and stress test models to conduct its business, assess its risk exposure and anticipate capital and funding requirements. Failure of these models to provide accurate results or accurately reflect changes in the micro-and macroeconomic environment in which the Group operates or findings of deficiencies by the Group's regulators resulting in increased regulatory capital requirements could have a material adverse effect on the Group's business, capital and results.

Given the complexity of the Group's business, strategy and capital requirements, the Group relies on analytical models to manage its business, assess the value of its assets and its risk exposure and anticipate capital and funding requirements, including with stress testing. The Group's valuation, capital and stress test models and the parameters and assumptions on which they are based, need to be periodically reviewed and updated to maximise their accuracy.

Failure of these models to accurately reflect changes in the environment in which the Group operates or to be updated in line with the Group's business model or operations, or the failure to properly input any such changes could have an adverse impact on the modelled results or could fail to accurately capture the Group's risk exposure or the risk profile of the Group's financial instruments or result in the Group being required to hold additional capital as a function of the PRA buffer. For example, as the Group implements its transformation programme, including the restructuring and funding of its NatWest Markets franchise and the implementation of the UK ring-fencing regime, any impacted models would need to be correctly identified and adapted in line with the implementation process. The Group also uses valuation models that rely on market data inputs. If incorrect market data is input into a valuation model, it may result in incorrect valuations or valuations different to those which were predicted and used by the Group in its forecasts or decision making. Internal stress test models may also rely on different, less severe, assumptions or take into account different data points than those defined by the Group's regulators.

Some of the analytical models used by the Group are predictive in nature. In addition, a number of internal models used by Group subsidiaries are designed, managed and analysed by the Group and may not appropriately capture the risks and exposures at subsidiary level. Some of the Group's internal models are subject to periodic review by its regulators and, if found deficient, the Group may be required to make changes to such models or may be precluded from using any such models, which could result in an additional capital requirement which could have a material impact on the Group's capital position.

Additional information

Risk factors continued

The Group could face adverse consequences as a result of decisions which may lead to actions by management based on models that are poorly developed, implemented or used, or as a result of the modelled outcome being misunderstood or such information being used for purposes for which it was not designed. Risks arising from the use of models could have a material adverse effect on the Group's business, financial condition and results of operations, minimum capital requirements and reputation.

The Group is subject to stress tests mandated by its regulators in the UK and in Europe which may result in additional capital requirements or management actions which, in turn, may impact the Group's financial condition, results of operations and investor confidence or result in restrictions on distributions.

The Group is subject to annual stress tests by its regulator in the UK and also subject to stress tests by the European regulators with respect to RBSG, RBS N.V. and Ulster Bank Ireland DAC. Stress tests provide an estimate of the amount of capital banks might deplete in a hypothetical stress scenario. In addition, if the stress tests reveal that a bank's existing regulatory capital buffers are not sufficient to absorb the impact of the stress, it is possible that it will need to take action to strengthen its capital position. There is a strong expectation that the PRA would require a bank to take action if, at any point during the stress, a bank were projected to breach any of its minimum CET1 capital or leverage ratio requirements.

However, if a bank is projected to fail to meet its systemic buffers, it will still be expected to strengthen its capital position over time but the supervisory response is expected to be less intensive than if it were projected to breach its minimum capital requirements. The PRA will also use the annual stress test results to inform its determination of whether individual banks' current capital positions are adequate or need strengthening. For some banks, their individual stress-test results might imply that the capital conservation buffer and countercyclical rates set for all banks is not consistent with the impact of the stress on them. In that case, the PRA can increase regulatory capital buffers for individual banks by adjusting their PRA buffers.

Under the 2017 Bank of England stress tests, which were based on the balance sheet of the Group for the year ended 31 December 2016, the Group's capital position before the impact of strategic management actions that the PRA judged could realistically be taken in the stress scenario remained below its CET1 capital hurdle rate and above its Tier 1 leverage hurdle rate. After the impact of strategic management actions the Group's capital position would have remained above its CET1 capital hurdle rate, but the PRA judged that RBS did not meet its systemic reference point in this scenario. Given the steps RBS had already taken to strengthen its capital position during 2017, the PRA did not require the Group to submit a revised capital plan.

Failure by the Group to meet the thresholds set as part of the stress tests carried out by its regulators in the UK and elsewhere may result in the Group's regulators requiring the Group to generate additional capital, increased supervision and/or regulatory sanctions, restrictions on capital distributions and loss of investor confidence, which may impact the Group's financial condition, results of operations and prospects.

The Group's operations entail inherent reputational risk, i.e., the risk of brand damage and/or financial loss due to a failure to meet stakeholders' expectations of the Group's conduct, performance and business profile.

Brand damage can be detrimental to the business of the Group in a number of ways, including its ability to build or sustain business relationships with customers, low staff morale, regulatory censure or reduced access to, or an increase in the cost of, funding. In particular, negative public opinion resulting from the actual or perceived manner in which the Group conducts or modifies its business activities and operations, including as a result of the transformation programme or other restructuring efforts, speculative or inaccurate media coverage, the Group's financial performance, ongoing investigations and proceedings and the settlement of any such investigations and proceedings, IT failures or cyber-attacks resulting in the loss or publication of confidential customer data or other sensitive information, the level of direct and indirect government support, or the actual or perceived strength or practices in the banking and financial industry may adversely affect the Group's ability to keep and attract customers and, in particular, corporate and retail depositors.

Modern technologies, in particular online social networks and other broadcast tools which facilitate communication with large audiences in short time frames and with minimal costs, may also significantly enhance and accelerate the impact of damaging information and allegations.

Although the Group has implemented a Reputational Risk Policy across customer-facing businesses to improve the identification, assessment and management of customers, transactions, products and issues which represent a reputational risk, the Group cannot ensure that it will be successful in avoiding damage to its business from reputational risk, which could result in a material adverse effect on the Group's business, financial condition, results of operations and prospects.

The reported results of the Group are sensitive to the accounting policies, assumptions and estimates that underlie the preparation of its financial statements. Its results in future periods may be affected by changes to applicable accounting rules and standards.

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of assets, liabilities, income and expenses. Due to the inherent uncertainty in making estimates, results reported in future periods may reflect amounts which differ from those estimates. Estimates, judgements and assumptions take into account historical experience and other factors, including market practice and expectations of future events that are believed to be reasonable under the circumstances.

The accounting policies deemed critical to the Group's results and financial position, based upon materiality and significant judgements and estimates, include goodwill, provisions for liabilities, deferred tax, loan impairment provisions, fair value of financial instruments, which are discussed in detail in 'Critical accounting policies and key sources of estimation uncertainty' on pages 259 to 261. IFRS Standards and Interpretations that have been issued by the International Accounting Standards Board (the IASB) but which have not yet been adopted by the Group are discussed in 'Accounting developments' on pages 261 to 263.

Additional information

Risk factors continued

Changes in accounting standards or guidance by accounting bodies or in the timing of their implementation, whether mandatory or as a result of recommended disclosure relating to the future implementation of such standards could result in the Group having to recognise additional liabilities on its balance sheet, or in further write-downs or impairments and could also significantly impact the financial results, condition and prospects of the Group.

In July 2014, the IASB published a new accounting standard for financial instruments (IFRS 9) effective for annual periods beginning on or after 1 January 2018. It introduced a new framework for the recognition and measurement of credit impairment, based on expected credit losses, rather than the incurred loss model currently applied under IAS 39. The inclusion of loss allowances with respect to all financial assets that are not recorded at fair value tend to result in an increase in overall impairment balances when compared with the previous basis of measurement under IAS 39. The Group expects IFRS 9 to increase earnings and capital volatility in 2018 and beyond.

The valuation of financial instruments, including derivatives, measured at fair value can be subjective, in particular where models are used which include unobservable inputs. Generally, to establish the fair value of these instruments, the Group relies on quoted market prices or, where the market for a financial instrument is not sufficiently active, internal valuation models that utilise observable market data. In certain circumstances, the data for individual financial instruments or classes of financial instruments utilised by such valuation models may not be available or may become unavailable due to prevailing market conditions. In such circumstances, the Group's internal valuation models require the Group to make assumptions, judgements and estimates to establish fair value, which are complex and often relate to matters that are inherently uncertain. Resulting changes in the fair values of the financial instruments has had and could continue to have a material adverse effect on the Group's earnings, financial condition and capital position.

The Group is exposed to conduct risk which may adversely impact the Group or its employees and may result in conduct having a detrimental impact on the Group's customers or counterparties.

In recent years, the Group has sought to refocus its culture on serving the needs of its customers and continues to redesign many of its systems and processes to promote this focus and strategy. However, the Group is exposed to various forms of conduct risk in its operations. These include business and strategic planning that does not adequately reflect the Group's customers' needs, ineffective management and monitoring of products and their distribution, actions taken that may not conform to the Group's customer-centric focus, outsourcing of customer service and product delivery via third parties that do not have appropriate levels of control, oversight and culture, the possibility of alleged mis-selling of financial products or the mishandling of complaints related to the sale of such product, or poor governance of incentives and rewards. Some of these risks have materialised in the past and ineffective management and oversight of conduct issues may result in customers being poorly or unfairly treated and may in the future lead to further remediation and regulatory intervention/enforcement.

The Group's businesses are also exposed to risks from employee misconduct including non-compliance with policies and regulatory rules, negligence or fraud (including financial crimes), any of which could result in regulatory fines or sanctions and serious reputational or financial harm to the Group. In recent years, a number of multinational financial institutions, including the Group, have suffered material losses due to the actions of employees, including, for example, in connection with the foreign exchange and LIBOR investigations and the Group may not succeed in protecting itself from such conduct in the future. It is not always possible to timely detect or deter employee misconduct and the precautions the Group takes to detect and prevent this activity may not always be effective.

The Group has implemented a number of policies and allocated new resources in order to help mitigate against these risks. The Group has also prioritised initiatives to reinforce good conduct in its engagement with the markets in which it operates, together with the development of preventative and detective controls in order to positively influence behaviour.

The Group's transformation programme is also intended to improve the Group's control environment. Nonetheless, no assurance can be given that the Group's strategy and control framework will be effective and that conduct and financial crime issues will not have an adverse effect on the Group's results of operations, financial condition or prospects.

The Group may be adversely impacted if its risk management is not effective and there may be significant challenges in maintaining the effectiveness of the Group's risk management framework as a result of the number of strategic and restructuring initiatives being carried out by the Group simultaneously.

The management of risk is an integral part of all of the Group's activities. Risk management includes the definition and monitoring of the Group's risk appetite and reporting of the Group's exposure to uncertainty and the consequent adverse effect on profitability or financial condition arising from different sources of uncertainty and risks as described throughout these risk factors.

Ineffective risk management may arise from a wide variety of events and behaviours, including lack of transparency or incomplete risk reporting, unidentified conflicts or misaligned incentives, lack of accountability control and governance, lack of consistency in risk monitoring and management or insufficient challenges or assurance processes.

Failure to manage risks effectively could adversely impact the Group's reputation or its relationship with its customers, shareholders or other stakeholders, which in turn could have a significant effect on the Group's business prospects, financial condition and/or results of operations.

Risk management is also strongly related to the use and effectiveness of internal stress tests and models. See 'The Group relies on valuation, capital and stress test models to conduct its business, assess its risk exposure and anticipate capital and funding requirements. Failure of these models to provide accurate results or accurately reflect changes in the micro-and macroeconomic environment in which the Group operates or findings of deficiencies by the Group's regulators resulting in increased regulatory capital requirements could have a material adverse effect on the Group's business, capital and results.'

Additional information

Risk factors continued

A failure by the Group to embed a strong risk culture across the organisation could adversely affect the Group's ability to achieve its strategic objective.

In response to weaknesses identified in previous years, the Group is currently seeking to embed a strong risk culture within the Group based on a robust risk appetite and governance framework. A key component of this approach is the three lines of defence model designed to identify, manage and mitigate risk across all levels of the organisation. This framework has been implemented and improvements continue and will continue to be made to clarify and improve the three lines of defence and internal risk responsibilities and resources, including in response to feedback from regulators. Notwithstanding the Group's efforts, changing an organisation's risk culture requires significant time, investment and leadership, and such efforts may not insulate the Group from future instances of misconduct. A failure by any of these three lines to carry out their responsibilities or to effectively embed this culture could have a material adverse effect on the Group through an inability to achieve its strategic objectives for its customers, employees and wider stakeholders.

As a result of the commercial and regulatory environment in which it operates, the Group may be unable to attract or retain senior management (including members of the board) and other skilled personnel of the appropriate qualification and competence. The Group may also suffer if it does not maintain good employee relations.

The Group's current and future success depend on its ability to attract, retain and remunerate highly skilled and qualified personnel, including senior management (which includes directors and other key employees), in a highly competitive labour market. This cannot be guaranteed, particularly in light of heightened regulatory oversight of banks and the increasing scrutiny of, and (in some cases) restrictions placed upon, employee compensation arrangements, in particular those of banks in receipt of Government support (such as the Group), which may place the Group at a competitive disadvantage. In addition, the market for skilled personnel is increasingly competitive, thereby raising the cost of hiring, training and retaining skilled personnel.

Certain of the Group's directors as well as members of its executive committee and certain other senior managers and employees are also subject to the new responsibility regime introduced under the Banking Reform Act 2013 which introduces clearer accountability rules for those within the new regime. The senior managers' regime and certification regime took effect on 7 March 2016, whilst the conduct rules apply to the wider employee population from 7 March 2017, with the exception of some transitional provisions. The new regulatory regime may contribute to reduce the pool of candidates for key management and non-executive roles, including non-executive directors with the right skills, knowledge and experience, or increase the number of departures of existing employees, given concerns over the allocation of responsibilities and personal liability introduced by the new rules.

In addition, in order to ensure the independence of the RFB as part of the Group's implementation of the UK ring-fencing regime, the Group will be required to recruit new independent directors and senior members of management to sit on the boards of directors and board committees of the RFB and other Group entities, and there may be a limited pool of competent candidates from which such appointments can be made.

The Group's evolving strategy has led to the departure of a large number of experienced and capable employees. The restructuring relating to the ongoing implementation of the Group's transformation programme and related cost-reduction targets may cause experienced staff members to leave and prospective staff members not to join the Group. The lack of continuity of senior management and the loss of important personnel coordinating certain or several aspects of the Group's restructuring could have an adverse impact on its implementation.

The failure to attract or retain a sufficient number of appropriately skilled personnel to manage the complex restructuring required to implement the Group's strategy could prevent the Group from successfully maintaining its current standards of operation, implementing its strategy and meeting regulatory commitments. This could have a material adverse effect on the Group's business, financial condition and results of operations.

In addition, many of the Group's employees in the UK, Republic of Ireland and continental Europe are represented by employee representative bodies, including trade unions. Engagement with its employees and such bodies is important to the Group and a breakdown of these relationships could adversely affect the Group's business, reputation and results.

HM Treasury (or UKFI on its behalf) may be able to exercise a significant degree of influence over the Group and any further offer or sale of its interests may affect the price of securities issued by the Group.

On 6 August 2015, the UK Government made its first sale of RBSG ordinary shares since its original investment in 2009 and sold approximately 5.4% of its stake in RBSG. Following this initial sale, the UK Government exercised its conversion rights under the B Shares on 14 October 2015 which resulted in HM Treasury holding 72.88% of the ordinary share capital of RBSG.

The UK Government, through HM Treasury, held 70.5% of the issued ordinary share capital of the Group as of 31 December 2017. The UK Government in its November 2017 Autumn Budget indicated its intention to recommence the process for the privatisation of RBSG before the end of 2018-2019 and to carry out over the forecast period a programme of sales of RBSG ordinary shares expected to sell down approximately two thirds of HM Treasury's current shareholding in the Group, although there can be no certainty as to the commencement of any sell-downs or the timing or extent thereof.

Any offers or sale, or expectations relating to the timing thereof, of a substantial number of ordinary shares by HM Treasury, could negatively affect prevailing market prices for the outstanding ordinary shares of RBSG and other securities issued by the Group and lead to a period of increased price volatility for the Group's securities.

Additional information

Risk factors continued

In addition, UKFI manages HM Treasury's shareholder relationship with the Group and, although HM Treasury has indicated that it intends to respect the commercial decisions of the Group and that the Group will continue to have its own independent board of directors and management team determining its own strategy, its position as a majority shareholder (and UKFI's position as manager of this shareholding) means that HM Treasury or UKFI might be able to exercise a significant degree of influence over, among other things, the election of directors and appointment of senior management, the Group's capital strategy, dividend policy, remuneration policy or the conduct of the Group's operations. The manner in which HM Treasury or UKFI exercises HM Treasury's rights as majority shareholder could give rise to conflicts between the interests of HM Treasury and the interests of other shareholders. The Board has a duty to promote the success of the Group for the benefit of its members as a whole.

The Group operates in markets that are subject to intense scrutiny by the competition authorities and its business and results of operations could be materially affected by competition decisions and other regulatory interventions.

The competitive landscape for banks and other financial institutions in the UK, the rest of Europe and the US is changing rapidly. Recent regulatory and legal changes have and may continue to result in new market participants and changed competitive dynamics in certain key areas, such as in retail and SME banking in the UK where the introduction of new entrants is being actively encouraged by the UK Government. The competitive landscape in the UK is also likely to be affected by the UK Government's implementation of the UK ring-fencing regime and other customer protection measures introduced by the Banking Reform Act 2013. The implementation of these reforms may result in the consolidation of newly separated businesses or assets of certain financial institutions with those of other parties to realise new synergies or protect their competitive position and is likely to increase competitive pressures on the Group.

The UK retail banking sector has been subjected to intense scrutiny by the UK competition authorities and by other bodies, including the FCA, in recent years, including with a number of reviews/inquiries being carried out, including market reviews conducted by the CMA and its predecessor the Office of Fair Trading regarding SME banking and personal banking products and services, the Independent Commission on Banking and the Parliamentary Commission on Banking Standards.

These reviews raised significant concerns about the effectiveness of competition in the retail banking sector. The CMA's Retail Banking Market Investigation report sets out measures primarily intended to make it easier for consumers and businesses to compare PCA and SME bank products, increase the transparency of price comparison between banks and amend PCA overdraft charging. The CMA is working with HM Treasury and other regulators to implement these remedies which are likely to impose additional compliance requirements on the Group and could, in aggregate, adversely impact the Group's competitive position, product offering and revenues.

Adverse findings resulting from current or future competition investigations may result in the imposition of reforms or remedies which may impact the competitive landscape in which the Group operates or result in restrictions on mergers and consolidations within the UK financial sector.

The impact of any such developments in the UK will become more significant as the Group's business becomes increasingly concentrated in the UK retail sector. These and other changes to the competitive framework in which the Group operates could have a material adverse effect on the Group's business, margins, profitability, financial condition and prospects.

The Group and its subsidiaries are subject to an evolving framework on recovery and resolution, the impact of which remains uncertain, and which may result in additional compliance challenges and costs.

In the EU, the UK and the US, regulators have implemented or are in the process of implementing recovery and resolution regimes designed to prevent the failure of financial institutions and resolution tools to ensure the timely and orderly resolution of financial institutions without use of public funds.

These initiatives have been complemented by a broader set of initiatives to improve the resilience of financial institutions and reduce systemic risk, including the UK ring-fencing regime, the introduction of certain prudential requirements and powers under CRD IV, and certain other measures introduced under the BRRD, including the requirements relating to loss absorbing capital.

The BRRD, which was implemented in the UK from January 2015, provides a framework for the recovery and resolution of credit institutions and investment firms, their subsidiaries and certain holding companies in the EU, and the tools and powers introduced under the BRRD include preparatory and preventive measures, early supervisory intervention powers and resolution tools.

Implementation of certain provisions of the BRRD remains subject to secondary rulemaking as well as a review by the European Parliament and the European Commission of certain topics mandated by the BRRD. In November 2016, as a result of this review, the European Commission published a package of proposals seeking to introduce certain amendments to CRD IV and the BRRD. These proposals are now subject to further discussions and negotiations among the European institutions and it is not possible to anticipate their final content. Further amendments to the BRRD or the implementing rules in the EU or the UK may also be necessary to ensure continued consistency with the FSB recommendations on key attributes of national resolution regimes and resolution planning for G-SIBs, including with respect to TLAC and MREL requirements.

In light of these potential developments as well as the impact of Brexit, there remains uncertainty as to the rules which may apply to the Group going forward. In addition, banks headquartered in countries which are members of the Eurozone are now subject to the European banking union framework.

Additional information

Risk factors continued

In November 2014, the ECB assumed direct supervisory responsibility for RBS N.V. and Ulster Bank Ireland DAC under the Single Supervisory Mechanism (SSM). As a result of the above, there remains uncertainty as to how the relevant resolution regimes in force in the UK, the Eurozone and other jurisdictions, would interact in the event of a resolution of the Group, although it remains clear that the Bank of England, as UK resolution authority, would be responsible for resolution of the Group overall (consistent with the Group's single point of entry bail-in resolution strategy, as determined by the Bank of England)

The BRRD requires national resolution funds to raise 'ex ante' contributions on banks and investment firms in proportion to their liabilities and risk profiles and allow them to raise additional 'ex post' funding contributions in the event the ex-ante contributions do not cover the losses, costs or other expenses incurred by use of the resolution fund. Although receipts from the UK bank levy are currently being used to meet the ex-ante and ex post funding requirements, the Group may be required to make additional contributions in the future. In addition, Group entities in countries subject to the European banking union are required to pay supervisory fees towards the funding of the SSM as well as contributions to the single resolution fund.

The recovery and resolution regime implementing the BRRD in the UK places compliance and reporting obligations on the Group. These compliance and reporting obligations may result in increased costs, including as a result of the Group's mandatory participation in resolution funds, and heightened compliance risks and the Group may not be in a position to comply with all such requirements within the prescribed deadlines or at all. In addition to the costs associated with the issuance of MREL-eligible debt securities and compliance with internal MREL requirements, further changes may be required for the Group to enhance its resolvability, in particular due to regulatory requirements relating to operational continuity and valuations capabilities in resolution.

In July 2016, the PRA adopted a new framework requiring financial institutions to ensure the continuity of critical shared services (provided by entities within the group or external providers) to facilitate recovery action, orderly resolution and post-resolution restructuring, which will apply from 1 January 2019.

The application of such rules to the Group requires the Group to restructure certain of its activities relating to the provision of services from one legal entity to another within the Group, may limit the Group's ability to outsource certain functions and will result in increased costs resulting from the requirement to ensure the financial and operational resilience and independent governance of such critical services.

In August 2017, the Bank of England published a consultation paper setting out its preliminary views on the valuation capabilities that firms should have in place prior to resolution. The Bank of England has not yet published a final statement of policy in this area.

Achieving compliance with the expectations set out in any such statement of policy, once finalised, may require changes to the Group's existing valuation processes and/or the development of additional capabilities, infrastructure and processes. The Group may incur costs in complying with such obligations, which costs may increase if the Bank of England determined that the Group's valuation capabilities constitute an impediment to resolution and subsequently exercised its statutory power to direct the Group to take measures to address such impediment.

In addition, compliance by the Group with this recovery and resolution framework has required and is expected to continue to require significant work and engagement with the Group's regulators, including in order for the Group to continue to submit to the PRA an annual recovery plan assessed as meeting regulatory requirements and to be assessed as resolvable by the Bank of England. The outcome of this regulatory dialogue may impact the Group's operations or structure or otherwise result in increased costs, including as a result of the Bank of England's power under section 3A of the Banking Act to direct institutions to address impediments to resolvability.

The Group may become subject to the application of stabilisation or resolution powers in certain significant stress situations, which may result in various actions being taken in relation to the Group and any securities of the Group, including the write-off, write-down or conversion of the Group's securities.

The Banking Act 2009, as amended to implement the BRRD ('Banking Act') confers substantial powers on relevant UK authorities designed to enable them to take a range of actions in relation to UK banks or investment firms and certain of their affiliates in the event a bank or investment firm in the same group is considered to be failing or likely to fail. Under the Banking Act, wide powers are granted to the Bank of England (as the relevant resolution authority), as appropriate as part of a special resolution regime (the 'SRR'). These powers enable the Bank of England to implement resolution measures with respect to a UK bank or investment firm and certain of its affiliates (including, for example, RBSG) (each a 'relevant entity') in circumstances in which the relevant UK resolution authorities are satisfied that the resolution conditions are met. Under the applicable regulatory framework and pursuant to guidance issued by the Bank of England, governmental financial support, if any is provided, would only be used as a last resort measure where a serious threat to financial stability cannot be avoided by other measures (such as the stabilisation options described below, including the UK bail-in power) and subject to the limitations set out in the Banking Act.

Several stabilisation options and tools are available to the Bank of England under the SRR, where a resolution has been triggered. In addition, the Bank of England may commence special administration or liquidation procedures specifically applicable to banks. Where stabilisation options are used which rely on the use of public funds, such funds can only be used once there has been a contribution to loss absorption and recapitalisation of at least 8% of the total liabilities of the institution under resolution. The Bank of England has indicated that among these options, the UK bail-in tool (as described further below) would apply in the event that a resolution of the Group were triggered.

Additional information

Risk factors continued

Further, the Banking Act grants broad powers to the Bank of England, the application of which may adversely affect contractual arrangements and which include the ability to (i) modify or cancel contractual arrangements to which an entity in resolution is party, in certain circumstances; (ii) suspend or override the enforcement provisions or termination rights that might be invoked by counterparties facing an entity in resolution, as a result of the exercise of the resolution powers; and (iii) disapply or modify laws in the UK (with possible retrospective effect) to enable the powers under the Banking Act to be used effectively.

The stabilisation options are intended to be applied prior to the point at which any insolvency proceedings with respect to the relevant entity would otherwise have been initiated. Accordingly, the stabilisation options may be exercised if the relevant UK resolution authority: (i) is satisfied that a UK bank or investment firm is failing, or is likely to fail; (ii) determines that it is not reasonably likely that (ignoring the stabilisation powers) action will be taken by or in respect of a UK bank or investment firm that will result in condition (i) above ceasing to be met; (iii) considers the exercise of the stabilisation powers to be necessary, having regard to certain public interest considerations (such as the stability of the UK financial system, public confidence in the UK banking system and the protection of depositors, being some of the special resolution objectives) and (iv) considers that the special resolution objectives would not be met to the same extent by the winding-up of the UK bank or investment firm.

In the event that the Bank of England seeks to exercise its powers in relation to a UK banking group company (such as RBSG), the relevant UK resolution authority has to be satisfied that (A) the conditions set out in (i) to (iv) above are met in respect of a UK bank or investment firm in the same banking group (or, in respect of an EEA or third country credit institution or investment firm in the same banking group, the relevant EEA or third country resolution authority is satisfied that the conditions for resolution applicable in its jurisdiction are met) and (B) certain criteria are met, such as the exercise of the powers in relation to such UK banking group company being necessary having regard to public interest considerations. The use of different stabilisation powers is also subject to further 'specific conditions' that vary according to the relevant stabilisation power being used. Although the SRR sets out the pre-conditions for determining whether an institution is failing or likely to fail, it is uncertain how the relevant UK resolution authority would assess such conditions in any particular pre-insolvency scenario affecting RBSG and/or other members of the Group and in deciding whether to exercise a resolution power. There has been no application of the SRR powers in the UK to a large financial institution, such as RBSG, to date, which could provide an indication of the relevant UK resolution authority's approach to the exercise of the resolution powers, and even if such examples existed, they may not be indicative of how such powers would be applied to RBSG. Therefore, holders of shares and other securities issued by the Group may not be able to anticipate a potential exercise of any such powers.

The UK bail-in tool is one of the powers available to the Bank of England under the SRR and was introduced under the Banking Reform Act 2013.

The UK government amended the provisions of the Banking Act to ensure the consistency of these provisions with the bail-in provisions under the BRRD, which amendments came into effect on 1 January 2015. The UK bail-in tool includes both a power to write-down or convert capital instruments and triggered at the point of non-viability of a financial institution and a bail-in tool applicable to eligible liabilities (including senior unsecured debt securities issued by the Group) and available in resolution.

The capital instruments write-down and conversion power may be exercised independently of, or in combination with, the exercise of a resolution tool, and it allows resolution authorities to cancel all or a portion of the principal amount of capital instruments and/or convert such capital instruments into common equity Tier 1 instruments when an institution is no longer viable. The point of non-viability for such purposes is the point at which the Bank of England or the PRA determines that the institution meets certain conditions under the Banking Act, for example if the institution will no longer be viable unless the relevant capital instruments are written down or extraordinary public support is provided, and without such support the appropriate authority determines that the institution would no longer be viable. The Bank of England may exercise the power to write down or convert capital instruments without any further exercise of resolution tools, as may be the case where the write-down or conversion of capital instruments is sufficient to restore an institution to viability.

Where the conditions for resolution exist and it is determined that a stabilisation power may be exercised, the Bank of England may use the bail-in tool (in combination with other resolution tools under the Banking Act) to, among other things, cancel or reduce all or a portion of the principal amount of, or interest on, certain unsecured liabilities of a failing financial institution and/or convert certain debt claims into another security, including ordinary shares of the surviving entity.

In addition, the Bank of England may use the bail-in tool to, among other things, replace or substitute the issuer as obligor in respect of debt instruments, modify the terms of debt instruments (including altering the maturity (if any) and/or the amount of interest payable and/or imposing a temporary suspension on payments) and discontinue the listing and admission to trading of financial instruments. The exercise of the bail-in tool will be determined by the Bank of England which will have discretion to determine whether the institution has reached a point of non-viability or whether the conditions for resolution are met, by application of the relevant provisions of the Banking Act, and involves decisions being taken by the PRA and the Bank of England, in consultation with the FCA and HM Treasury. As a result, it will be difficult to predict when, if at all, the exercise of the bail-in power may occur.

The potential impact of these powers and their prospective use may include increased volatility in the market price of shares and other securities issued by the Group, as well as increased difficulties in issuing securities in the capital markets and increased costs of raising such funds.

If these powers were to be exercised (or there is an increased risk of exercise) in respect of the Group or any entity within the Group, such exercise could result in a material adverse effect on the rights or interests of shareholders which would likely be extinguished or very heavily diluted.

Additional information

Risk factors continued

Holders of debt securities (which may include holders of senior unsecured debt), may see the conversion of part (or all) of their claims into equity or written down in part or written off entirely. In accordance with the rules of the Special Resolution Regime, the losses imposed on holders of equity and debt instruments through the exercise of bail-in powers would be subject to the 'no creditor worse off' safeguard, which requires losses (net of any compensation received) not to exceed those which would be realised in an insolvency counterfactual.

Although the above represents the risks associated with the UK bail-in power currently in force in the UK and applicable to the Group's securities, changes to the scope of, or conditions for the exercise of the UK bail-in power may be introduced as a result of further political or regulatory developments. For example, the application of these powers to internally-issued MREL instruments, issued by one group entity and held solely by its parent entity, is currently being consulted on by the Bank of England. In addition, further political, legal or strategic developments may lead to structural changes to the Group, including at the holding company level. Notwithstanding any such changes, the Group expects that its securities would remain subject to the exercise of a form of bail-in power, either pursuant to the provisions of the Banking Act, the BRRD or otherwise.

The value or effectiveness of any credit protection that the Group has purchased depends on the value of the underlying assets and the financial condition of the insurers and counterparties.

The Group has some remaining credit exposure arising from over-the-counter derivative contracts, mainly credit default swaps (CDSs), and other credit derivatives, each of which are carried at fair value.

The fair value of these CDSs, as well as the Group's exposure to the risk of default by the underlying counterparties, depends on the valuation and the perceived credit risk of the instrument against which protection has been bought. Many market counterparties have been adversely affected by their exposure to residential mortgage-linked and corporate credit products, whether synthetic or otherwise, and their actual and perceived creditworthiness may deteriorate rapidly. If the financial condition of these counterparties or their actual or perceived creditworthiness deteriorates, the Group may record further credit valuation adjustments on the credit protection bought from these counterparties under the CDSs. The Group also recognises any fluctuations in the fair value of other credit derivatives.

Any such adjustments or fair value changes may have a material adverse impact on the Group's financial condition and results of operations.

In the UK and in other jurisdictions, the Group is responsible for contributing to compensation schemes in respect of banks and other authorised financial services firms that are unable to meet their obligations to customers.

In the UK, the Financial Services Compensation Scheme (FSCS) was established under the Financial Services and Markets Act 2000 and is the UK's statutory fund of last resort for customers of authorised financial services firms. The FSCS pays compensation if a firm is unable to meet its obligations.

The FSCS funds compensation for customers by raising levies on the industry, including the Group. In relation to protected deposits, each deposit-taking institution contributes towards these levies in proportion to their share of total protected deposits.

In the event that the FSCS needs to raise additional and unexpected funding, is required to raise funds more frequently or significantly increases the levies to be paid by authorised firms, the associated costs to the Group may have an adverse impact on its results of operations and financial condition.

To the extent that other jurisdictions where the Group operates have introduced or plan to introduce similar compensation, contributory or reimbursement schemes, the Group may make further provisions and may incur additional costs and liabilities, which may have an adverse impact on its financial condition and results of operations.

The Group intends to execute the run-down and/or the sale of certain portfolios and assets. Failure by the Group to do so on commercially favourable terms could have a material adverse effect on the Group's operations, operating results, financial position and reputation.

The Group's ability to execute the run-down and/or sale of certain portfolios and assets and the price achieved for such disposals will be dependent on prevailing economic and market conditions.

As a result, there is no assurance that the Group will be able to sell or run down these portfolios or assets either on favourable economic terms to the Group or at all or that it may do so within the intended timetable. Material tax or other contingent liabilities could arise on the disposal or run-down of assets and there is no assurance that any conditions precedent agreed will be satisfied, or consents and approvals required will be obtained in a timely manner or at all. The Group may be exposed to deteriorations in the portfolios or assets being sold between the announcement of the disposal and its completion, which period may span many months.

In addition, the Group may be exposed to certain risks, including risks arising out of ongoing liabilities and obligations, breaches of covenants, representations and warranties, indemnity claims, transitional services arrangements and redundancy or other transaction-related costs, and counterparty risk in respect of buyers of assets being sold.

The occurrence of any of the risks described above could have a material adverse effect on the Group's business, results of operations, financial condition and capital position and consequently may have the potential to impact the competitive position of part or all of the Group's business.

The Group's results could be adversely affected in the event of goodwill impairment.

The Group capitalises goodwill, which is calculated as the excess of the cost of an acquisition over the net fair value of the identifiable assets, liabilities and contingent liabilities acquired. Acquired goodwill is recognised initially at cost and subsequently at cost less any accumulated impairment losses. As required by IFRS Standards, the Group tests goodwill for impairment annually, or more frequently when events or circumstances indicate that it might be impaired.

Additional information

Risk factors continued

An impairment test involves comparing the recoverable amount (the higher of the value in use and fair value less cost to sell) of an individual cash generating unit with its carrying value.

At 31 December 2017, the Group carried goodwill of £5.6 billion on its balance sheet. The value in use and fair value of the Group's cash-generating units are affected by market conditions and the performance of the economies in which the Group operates.

Where the Group is required to recognise a goodwill impairment, it is recorded in the Group's income statement, but it has no effect on the Group's regulatory capital position. Further impairments of the Group's goodwill could have an adverse effect on the Group's results and financial condition.

Changes in tax legislation or failure to generate future taxable profits may impact the recoverability of certain deferred tax assets recognised by the Group.

In accordance with IFRS Standards, the Group has recognised deferred tax assets on losses available to relieve future profits from tax only to the extent it is probable that they will be recovered. The deferred tax assets are quantified on the basis of current tax legislation and accounting standards and are subject to change in respect of the future rates of tax or the rules for computing taxable profits and offsetting allowable losses.

Failure to generate sufficient future taxable profits or further changes in tax legislation (including rates of tax) or accounting standards may reduce the recoverable amount of the recognised deferred tax assets. Changes to the treatment of deferred tax assets may impact the Group's capital, for example by reducing further the Group's ability to recognise deferred tax assets. The implementation of the rules relating to the UK ring-fencing regime and the resulting restructuring of the Group may further restrict the Group's ability to recognise tax deferred tax assets in respect of brought forward losses.

Additional information

Approach to the Financial Stability Board's Task Force on Climate-related Financial Disclosure (TCFD) recommendations

In 2016, the Financial Stability Board (FSB) launched an industry-led initiative, the Task Force on Climate-related Financial Disclosure, to review how to best manage the threat climate change presents to the stability of the global financial system. The mandate was to develop recommendations for voluntary, consistent climate-related risk to provide information to stakeholders. The Task Force considered the physical, liability and transition risks associated with climate change.

The Task Force published its final recommendations in June 2017. RBS welcomed the release of these recommendations and is committed to implementing them. RBS has reported on carbon emissions and climate-related matters, and submitted information to the CDP sustainability index, since 2003.

Governance

The Board has oversight of climate related risks and opportunities through the Sustainable Banking Committee (SBC). SBC's remit includes considering relevant environmental, social and ethical issues and during 2017 was engaged on environmental targets, the sustainable energy strategy and reputational risk appetite. In addition, in August 2017 SBC invited a group of external experts to attend a stakeholder engagement session on climate change risk. For further details on risk governance, see page 152.

At a franchise level, climate-related opportunities in relation to supporting customers through the low carbon transition are managed and assessed through the business and products approvals processes, with strategy and co-ordination undertaken by the cross-bank Sustainable Energy Forum (SEF). This forum brings together senior leaders from across RBS who support customers from SMEs to multinationals to achieve their sustainable energy ambitions.

Strategy

The RBS climate change strategy is driven by a range of external and internal drivers and encompasses all activities covering both direct and indirect impacts.

Climate Change Strategy Drivers

Direct impacts

The strategy for managing direct climate change impacts is focused on continued efficiency of buildings, processes and associated activities such as business travel. In 2017 90% of UK and Republic of Ireland electricity usage was from renewable sources (66% globally). RBS is also investing in its property estate to reduce energy usage and waste. This is further supported by the Innovation Gateway initiative for green entrepreneurs. The property strategy has and will aim to continue to result in a material reduction in footprint which in aggregate will reduce the exposure to direct physical impacts for climate-related risks.

RBS also continues to refine its business continuity plans to deal with the impact of severe weather to operations and sees the shift to digital and mobile banking as helping to improve the resilience of the business and customers' activities during severe weather.

Indirect impacts

The strategy for managing indirect climate change impacts is focused on supporting customers with the transition to a low carbon economy through the provision of financial products and services. RBS is committed to ensuring it does not miss the substantial opportunities available to finance low carbon technologies and has been recognised externally as a leader in supporting renewable energy finance. RBS expects these, and wider opportunities to continue to grow in the future.

Risk Management

RBS employs a continuous process for identifying and managing emerging risks, including climate-related risks. While no climate-related risks have been identified that would have a major impact on RBS's strategy over a five-year horizon, the ability to manage new, emerging and unforeseen threats is a key element of the risk management framework.

The impact of climate-related issues on the risk profile of RBS's customers may also be considered as part of the periodic sector reviews and deep dives carried out to monitor and assess different types of risk across the portfolios. Further climate scenario analysis will be undertaken in 2018.

RBS has significantly reduced its credit exposure to the sectors most vulnerable to climate-related regulation and market changes. At 31 December 2017, total exposure to the Power and Oil & Gas sectors had reduced to 1.2% of total lending exposures.

RBS has had a policy in place for ESE risks since 2011. The policy includes sectors sensitive to climate-related risk, such as Forestry, Fisheries and Agriculture, and prohibits lending activity to some industry types proven to have a material adverse environmental impact.

Metrics and Targets

RBS uses a range of metrics and targets to assess our climate related risks and opportunities. These include: climate impacts from our operations (refer to page 30 of the Strategic Report); exposure to high carbon sectors and lending to support sustainable energy sectors. For further information refer to the Sustainable Banking pages on rbs.com.

Shareholders requiring a Braille or audio version of the Strategic report with additional information should contact the Registrar on +44 (0)370 702 0135.

ShareGift

The company is aware that shareholders who hold a small number of shares may be retaining these shares because dealing costs make it uneconomical to dispose of them. ShareGift, the charity share donation scheme, is a free service operated by The Orr Mackintosh Foundation (registered charity 1052686) to enable shareholders to donate shares to charity.

Donating your shares in this way will not give rise to either a gain or a loss for UK capital gains tax purposes and you may be able to reclaim UK income tax on gifted shares. Further information can be obtained from HM Revenue & Customs.

Should you wish to donate your shares to charity in this way you should contact ShareGift for further information:

ShareGift, The Orr Mackintosh Foundation

Shareholder information

Share and bond scams

Share and bond scams are often run from 'boiler rooms' where fraudsters cold-call investors, after obtaining their phone number from publicly available shareholder lists, offering them worthless, overpriced or even non-existent shares or bonds.

They use increasingly sophisticated tactics to approach investors, offering to buy or sell shares, often pressuring investors to make a quick decision or miss out on the deal. Contact can also be in the form of email, post or word of mouth. Scams are sometimes advertised in newspapers, magazines or online as genuine investment opportunities and may offer free gifts or discounts on dealing charges.

Scammers will request money upfront, as a bond or other form of security, but victims are often left out of pocket, sometimes losing their savings or even their family home. Even seasoned investors have been caught out by scams.

Clone firms

A 'clone firm' uses the name, firm registration number (FRN) and address of a firm which is FCA authorised. The scammer may claim that the genuine firm's contact details on the FCA Register (Register) are out of date and then use their own details, or copy the website of an authorised firm, making subtle changes such as the phone number. They may claim to be an overseas firm, which won't always have full contact and website details listed on the Register.

How to protect yourself

Always be wary if you're contacted out of the blue, pressured to invest quickly, or promised returns that sound too good to be true. FCA authorised firms are unlikely to contact you unexpectedly with an offer to buy or sell shares or bonds.

Check the Register to ensure the firm contacting you is authorised and also check the FCA's Warning List of firms to avoid.

Ask for their (FRN) and contact details and then contact them using the telephone number on the Register. Never use a link in an email or website from the firm offering you an investment.

It is strongly advised that you seek independent professional advice before making any investment.

Report a scam

If you suspect that you have been approached by fraudsters, or have any concerns about a potential scam, report this to the FCA by contacting their Consumer Helpline on 0800 111 6768 or by using their reporting form which can be found at www.fca.org.uk/consumers/report-scam-unauthorised-firm

If you have already invested in a scam, fraudsters are likely to target you again or sell your details to other criminals. The follow-up scam may be completely separate, or may be related to the previous scam in the form of an offer to get your money back or buy back the investment on payment of a fee.

Forward-looking statements

Cautionary statement regarding forward-looking statements

Certain sections in this document contain 'forward-looking statements' as that term is defined in the United States Private Securities Litigation Reform Act of 1995, such as statements that include the words 'expect', 'estimate', 'project', 'anticipate', 'commit', 'believe', 'should', 'intend', 'plan', 'could', 'probability', 'risk', 'Value-at-Risk (VaR)', 'target', 'goal', 'objective', 'may', 'endeavour', 'outlook', 'optimistic', 'prospects' and similar expressions or variations on these expressions.

In particular, this document includes forward-looking statements relating, but not limited to: future profitability and performance, including financial performance targets such as return on tangible equity; cost savings and targets, including cost:income ratios; litigation and government and regulatory investigations, including the timing and financial and other impacts thereof; structural reform and the implementation of the UK ring-fencing regime; the implementation of RBS's transformation programme, including the further restructuring of the NatWest Markets franchise; the satisfaction of the Group's residual EU State Aid obligations; the continuation of RBS's balance sheet reduction programme, including the reduction of risk-weighted assets (RWAs) and the timing thereof; capital and strategic plans and targets; capital, liquidity and leverage ratios and requirements, including CET1 Ratio, RWA equivalents (RWAE), Pillar 2 and other regulatory buffer requirements, minimum requirement for own funds and eligible liabilities, and other funding plans; funding and credit risk profile; capitalisation; portfolios; net interest margin; customer loan and income growth; the level and extent of future impairments and write-downs, including with respect to goodwill; restructuring and remediation costs and charges; future pension contributions; RBS's exposure to political risks, operational risk, conduct risk, cyber and IT risk and credit rating risk and to various types of market risks, including as interest rate risk, foreign exchange rate risk and commodity and equity price risk; customer experience including our Net Promoter Score (NPS); employee engagement and gender balance in leadership positions.

Limitations inherent to forward-looking statements

These statements are based on current plans, estimates, targets and projections, and are subject to significant inherent risks, uncertainties and other factors, both external and relating to the Group's strategy or operations, which may result in the Group being unable to achieve the current targets, predictions, expectations and other anticipated outcomes expressed or implied by such forward-looking statements. In addition certain of these disclosures are dependent on choices relying on key model characteristics and assumptions and are subject to various limitations, including assumptions and estimates made by management. By their nature, certain of these disclosures are only estimates and, as a result, actual future gains and losses could differ materially from those that have been estimated. Accordingly, undue reliance should not be placed on these statements. Forward-looking statements speak only as of the date we make them and we expressly disclaim any obligation or undertaking to release publicly any updates or revisions to any forward-looking statements contained herein to reflect any change in the Group's expectations with regard thereto or any change in events, conditions or circumstances on which any such statement is based.

Important factors that could affect the actual outcome of the forward-looking statements

We caution you that a large number of important factors could adversely affect our results or our ability to implement our strategy, cause us to fail to meet our targets, predictions, expectations and other anticipated outcomes or affect the accuracy of forward-looking statements we describe in this document, including in the risk factors and other uncertainties set out in the Group's 2017 Annual Report and other risk factors and uncertainties discussed in this document. These include the significant risks for RBS presented by the outcomes of the legal, regulatory and governmental actions and investigations that RBS is or may be subject to and any resulting material adverse effect on RBS of unfavourable outcomes and the timing thereof (including where resolved by settlement); economic, regulatory and political risks, including as may result from the uncertainty arising from Brexit and from the outcome of general elections in the UK and changes in government policies; RBS's ability to satisfy its residual EU State Aid obligations and the timing thereof; RBS's ability to successfully implement the significant and complex restructuring required to be undertaken in order to implement the UK ring-fencing regime and related costs; RBS's

ability to successfully implement the various initiatives that are comprised in its restructuring and transformation programme, particularly the proposed further restructuring of the NatWest Markets franchise, the balance sheet reduction programme and its significant cost-saving initiatives and whether RBS will be a viable, competitive, customer focused and profitable bank especially after its restructuring and the implementation of the UK ring-fencing regime; the dependence of the Group's operations on its IT systems; the exposure of RBS to cyber-attacks and its ability to defend against such attacks; RBS's ability to achieve its capital, funding, liquidity and leverage requirements or targets which will depend in part on RBS's success in reducing the size of its business and future profitability as well as developments which may impact its CET1 capital including additional litigation or conduct costs, additional pension contributions, further impairments or accounting changes; ineffective management of capital or changes to regulatory requirements relating to capital adequacy and liquidity or failure to pass mandatory stress tests; RBS's ability to access sufficient sources of capital, liquidity and funding when required; changes in the credit ratings of RBS, RBS entities or the UK government; declining revenues resulting from lower customer retention and revenue generation in light of RBS's strategic refocus on the UK; as well as increasing competition from new incumbents and disruptive technologies.

In addition, there are other risks and uncertainties that could adversely affect our results, ability to implement our strategy, cause us to fail to meet our targets or the accuracy of forward-looking statements in this document.

These include operational risks that are inherent to RBS's business and will increase as a result of RBS's significant restructuring and transformation initiatives being concurrently implemented; the potential negative impact on RBS's business of global economic and financial market conditions and other global risks, including risks arising out of geopolitical events and political developments; the impact of a prolonged period of low interest rates or unanticipated turbulence in interest rates, yield curves, foreign currency exchange rates, credit spreads, bond prices, commodity prices, equity prices; basis, volatility and correlation risks; the extent of future write-downs and impairment charges caused by depressed asset valuations; deteriorations in borrower and counterparty credit quality; heightened regulatory and governmental scrutiny (including by competition authorities) and the increasingly regulated environment in which RBS operates as well as divergences in regulatory requirements in the jurisdictions in which RBS operates; the risks relating to RBS's IT systems or a failure to protect itself and its customers against cyber threats, reputational risks; risks relating to increased pension liabilities and the impact of pension risk on RBS's capital position, including on any requisite management buffer; risks relating to the failure to embed and maintain a robust conduct and risk culture across the organisation or if its risk management framework is ineffective; RBS's ability to attract and retain qualified personnel; limitations on, or additional requirements imposed on, RBS's activities as a result of HM Treasury's investment in RBS; the value and effectiveness of any credit protection purchased by RBS; risks relating to the reliance on valuation, capital and stress test models and any inaccuracies resulting therefrom or failure to accurately reflect changes in the micro and macroeconomic environment in which RBS operates, risks relating to changes in applicable accounting policies or rules which may impact the preparation of RBS's financial statements or adversely impact its capital position; the impact of the recovery and resolution framework and other prudential rules to which RBS is subject; the application of stabilisation or resolution powers in significant stress situations; contribution to relevant compensation schemes; the execution of the run-down and/or sale of certain portfolios and assets; the recoverability of deferred tax assets by the Group; and the success of RBS in managing the risks involved in the foregoing.

The forward-looking statements contained in this document speak only as at the date hereof, and RBS does not assume or undertake any obligation or responsibility to update any forward-looking statement to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.

The information, statements and opinions contained in this document do not constitute a public offer under any applicable legislation or an offer to sell or solicit of any offer to buy any securities or financial instruments or any advice or recommendation with respect to such securities or other financial instruments.

In the Report and Accounts, unless specified otherwise, the terms 'company' and 'RBSG' mean The Royal Bank of Scotland Group plc; 'RBS', 'RBS Group' and the 'Group' mean the company and its subsidiaries; 'the Royal Bank' and 'RBS plc' mean The Royal Bank of Scotland plc; and 'NatWest' means National Westminster Bank Plc.

The company publishes its financial statements in pounds sterling (£' or 'sterling'). The abbreviations '£m' and '£bn' represent millions and thousands of millions of pounds sterling, respectively, and references to 'pence' represent pence in the United Kingdom ('UK'). Reference to 'dollars' or '\$' are to United States of America ('US') dollars. The abbreviations '\$m' and '\$bn' represent millions and thousands of millions of dollars, respectively, and references to 'cents' represent cents in the US. The abbreviation '€' represents the 'euro', and the abbreviations '€m' and '€bn' represent millions and thousands of millions of euros, respectively.

Glossary of terms

Arrears - the aggregate of contractual payments due on a debt that have not been met by the borrower. A loan or other financial asset is said to be 'in arrears' when payments have not been made.

Asset-backed commercial paper (ABCP) - a form of asset-backed security generally issued by a commercial paper conduit.

Asset-backed securities (ABS) - securities that represent interests in specific portfolios of assets. They are issued by a structured entity following a securitisation. The underlying portfolios commonly comprise residential or commercial mortgages but can include any class of asset that yields predictable cash flows. Payments on the securities depend primarily on the cash flows generated by the assets in the underlying pool and other rights designed to assure timely payment, such as guarantees or other credit enhancements. Collateralised debt obligations, collateralised loan obligations, commercial mortgage backed securities and residential mortgage backed securities are all types of ABS.

Asset quality (AQ) band - probability of default banding for all counterparties on a scale of 1 to 10.

Assets under management - assets managed by RBS on behalf of clients.

Back-testing - statistical techniques that assess the performance of a model, and how that model would have performed had it been applied in the past.

Basel III - in December 2010, the Basel Committee on Banking Supervision issued final rules: 'Basel III: A global regulatory framework for more resilient banks and banking systems' and 'Basel III: International framework for liquidity risk measurement, standards and monitoring'.

Basis point - one hundredth of a per cent i.e. 0.01 per cent. 100 basis points is 1 per cent. Used when quoting movements in interest rates or yields on securities.

Buy-to-let mortgages - mortgages to customers for the purchase of residential property as a rental investment.

Capital requirements regulation (CRR) - refer to CRD IV.

Certificates of deposit (CDs) - bearer negotiable instruments acknowledging the receipt of a fixed term deposit at a specified interest rate.

Collateralised debt obligations (CDOs) - asset-backed securities for which the underlying asset portfolios are debt obligations: either bonds (collateralised bond obligations) or loans (collateralised loan obligations) or both. The credit exposure underlying synthetic CDOs derives from credit default swaps. The CDOs issued by an individual vehicle are usually divided in different tranches: senior tranches (rated AAA), mezzanine tranches (AA to BB), and equity tranches (unrated). Losses are borne first by the equity securities, next by the junior securities, and finally by the senior securities; junior tranches offer higher coupons (interest payments) to compensate for their increased risk.

Collateralised loan obligations (CLOs) - asset-backed securities for which the underlying asset portfolios are loans, often leveraged loans.

Collectively assessed loan impairment provisions - impairment loss provisions in respect of impaired loans, such as credit cards or personal loans, that are below individual assessment thresholds. Such provisions are established on a portfolio basis, taking account of the level of arrears, security, past loss experience, credit scores and defaults based on portfolio trends.

Commercial mortgage backed securities (CMBS) - asset-backed securities for which the underlying asset portfolios are loans secured on commercial real estate.

Commercial paper (CP) - unsecured obligations issued by a corporate or a bank directly or secured obligations (asset-backed CP), often issued through a commercial paper conduit, to fund working capital. Maturities typically range from two to 270 days. However, the depth and reliability of some CP markets means that issuers can repeatedly roll over CP issuance and effectively achieve longer term funding. CP is issued in a wide range of denominations and can be either discounted or interest-bearing.

Commercial paper conduit - a structured entity that issues commercial paper and uses the proceeds to purchase or fund a pool of assets. The commercial paper is secured on the assets and is redeemed either by further commercial paper issuance, repayment of assets or liquidity drawings.

Commercial real estate (CRE) - freehold and leasehold properties used for business activities. Commercial real estate includes office buildings, industrial property, medical centres, hotels, retail stores, shopping centres, agricultural land and buildings, warehouses, garages etc.

Common Equity Tier 1 capital (CET1) - the highest quality form of regulatory capital under Basel III comprising common shares issued and related share premium, retained earnings and other reserves excluding reserves which are restricted or not immediately available, less specified regulatory adjustments.

Contractual maturity - the date in the terms of a financial instrument on which the last payment or receipt under the contract is due for settlement.

Cost:income ratio - operating expenses as a percentage of total income.

Counterparty credit risk - the risk that a counterparty defaults before the maturity of a derivative or sale and repurchase contract. In contrast to non-counterparty credit risk, the exposure to counterparty credit risk varies by reference to a market factor (e.g. interest rate, exchange rate, asset price).

Coverage ratio - impairment provisions as a percentage of impaired loans.

Covered bonds - debt securities backed by a portfolio of mortgages that are segregated from the issuer's other assets solely for the benefit of the holders of the covered bonds.

Glossary of terms

CRD IV - the European Union has implemented the Basel III capital proposals through the CRR and the CRD, collectively known as CRD IV. CRD IV was implemented on 1 January 2014. The EBA's technical standards are still to be finalised through adoption by the European Commission and implemented within the UK.

Credit default swap (CDS) - a contract where the protection seller receives premium or interest-related payments in return for contracting to make payments to the protection buyer upon a defined credit event in relation to a reference financial asset or portfolio of financial assets. Credit events usually include bankruptcy, payment default and rating downgrades.

Credit derivatives - contractual agreements that provide protection against a credit event on one or more reference entities or financial assets. The nature of a credit event is established by the protection buyer and protection seller at the inception of a transaction, and such events include bankruptcy, insolvency or failure to meet payment obligations when due. The buyer of the credit derivative pays a periodic fee in return for a payment by the protection seller upon the occurrence of a credit event. Credit derivatives include credit default swaps, total return swaps and credit swap options.

Credit enhancements - techniques that improve the credit standing of financial obligations; generally those issued by a structured entity in a securitisation. External credit enhancements include financial guarantees and letters of credit from third party providers. Internal enhancements include excess spread - the difference between the interest rate received on the underlying portfolio and the coupon on the issued securities; and over-collateralisation – at inception, the value of the underlying portfolio is greater than the securities issued.

Credit grade - a rating that represents an assessment of the creditworthiness of a customer. It is a point on a scale representing the probability of default of a customer.

Credit risk - the risk of financial loss due to the failure of a customer, or counterparty, to meet its obligation to settle outstanding amounts.

Credit risk mitigation - reducing the credit risk of an exposure by application of techniques such as netting, collateral, guarantees and credit derivatives.

Credit valuation adjustment (CVA) - the CVA is the difference between the risk-free value of a portfolio of trades and its market value, taking into account the counterparty's risk of default. It represents the market value of counterparty credit risk, or an estimate of the adjustment to fair value that a market participant would make to reflect the creditworthiness of its counterparty.

Currency swap - an arrangement in which two parties exchange specific principal amounts of different currencies at inception and subsequently interest payments on the principal amounts. Often, one party will pay a fixed rate of interest, while the other will pay a floating rate (though there are also fixed-fixed and floating-floating currency swaps). At the maturity of the swap, the principal amounts are usually re-exchanged.

Customer accounts - money deposited with RBS by counterparties other than banks and classified as liabilities. They include demand, savings and time deposits; securities sold under repurchase agreements; and other short term deposits. Deposits received from banks are classified as deposits by banks.

Debit valuation adjustment (DVA) - an adjustment made in valuing OTC derivative liabilities to reflect the entity's own credit risk.

Debt securities - transferable instruments creating or acknowledging indebtedness. They include debentures, bonds, certificates of deposit, notes and commercial paper. The holder of a debt security is typically entitled to the payment of principal and interest, together with other contractual rights under the terms of the issue, such as the right to receive certain information. Debt securities are generally issued for a fixed term and redeemable by the issuer at the end of that term. Debt securities can be secured or unsecured.

Debt securities in issue - unsubordinated debt securities issued by RBS. They include commercial paper, certificates of deposit, bonds and medium-term notes.

Deferred tax asset - income taxes recoverable in future periods as a result of deductible temporary differences (temporary differences between the accounting and tax base of an asset or liability that will result in tax deductible amounts in future periods) and the carry-forward of tax losses and unused tax credits.

Deferred tax liability - income taxes payable in future periods as a result of taxable temporary differences (temporary differences between the accounting and tax base of an asset or liability that will result in taxable amounts in future periods).

Defined benefit obligation - the present value of expected future payments required to settle the obligations of a defined benefit plan resulting from employee service.

Defined benefit plan/scheme - pension or other post-retirement benefit plan other than a defined contribution plan.

Defined contribution plan/scheme - pension or other post-retirement benefit plan where the employer's obligation is limited to its contributions to the fund.

Deposits by banks - money deposited with RBS by banks and recorded as liabilities. They include money-market deposits, securities sold under repurchase agreements, federal funds purchased and other short term deposits. Deposits received from customers are recorded as customer accounts.

Derivative - a contract or agreement whose value changes with changes in an underlying variable such as interest rates, foreign exchange rates, share prices or indices and which requires no initial investment or an initial investment that is smaller than would be required for other types of contracts with a similar response to market factors. The principal types of derivatives are: swaps, forwards, futures and options.

Glossary of terms

Discontinued operation - a component of RBS that either has been disposed of or is classified as held for sale. A discontinued operation is either: a separate major line of business or geographical area of operations or part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations; or a subsidiary acquired exclusively with a view to resale.

Economic capital - an internal measure of the capital required by RBS to support the risks to which it is exposed.

Economic profit - the difference between the return on shareholders funds and the cost of that capital. Economic profit is usually expressed as a percentage.

Effective interest rate method - the effective interest method is a method of calculating the amortised cost of a financial asset or financial liability (or group of financial assets or liabilities) and of allocating the interest income or interest expense over the expected life of the asset or liability. The effective interest rate is the rate that exactly discounts estimated future cash flows to the instrument's initial carrying amount. Calculation of the effective interest rate takes into account fees payable or receivable that are an integral part of the instrument's yield, premiums or discounts on acquisition or issue, early redemption fees and transaction costs. All contractual terms of a financial instrument are considered when estimating future cash flows.

Encumbrance - an interest in an asset held by another party. Encumbrance usually restricts the asset's transferability until the encumbrance is removed.

Equity risk - the risk of changes in the market price of the equities or equity instruments arising from positions, either long or short, in equities or equity-based financial instruments.

Eurozone - the 19 European Union countries that have adopted the euro: Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia and Spain.

Expected credit loss (ECL, an IFRS 9 accounting measure) – generally is the weighted average of credit losses; for collectively assessed portfolios it is the product of the exposure, probability of default at the reporting date and the lifetime loss given default. At initial recognition of a financial asset, an allowance is made for the 12 month expected credit loss, using the probability of default in the first 12 months only. On a significant increase in credit risk, the expected credit loss is increased to the lifetime probability of default. ECL is applied to exposures to all financial assets and contractual facilities whose performance is not recognised at fair value in the income statement.

Expected loss (EL, a regulatory measure) – is the product of the regulatory credit exposure, the probability of default over the next 12 months, averaged through an economic cycle, and the downturn loss given default. It is applied to exposures whether performance is recognised in income or reserves. Credit exposures include all financial assets, customer facilities and are subject to regulatory overlays.

Exposure - a claim, contingent claim or position which carries a risk of financial loss.

Exposure at default (EAD) - an estimate of the extent to which the bank will be exposed under a specific facility, in the event of the default of a counterparty.

FICO score - a credit score calculated using proprietary software developed by the Fair Isaac Corporation in the US from a consumer's credit profile. The scores range between 300 and 850 and are used in credit decisions made by banks and other providers of credit.

Financial Conduct Authority (FCA) - the statutory body responsible for conduct of business regulation and supervision of UK authorised firms from 1 April 2013. The FCA also has responsibility for the prudential regulation of firms that do not fall within the PRA's scope.

Financial Services Compensation Scheme (FSCS) - the UK's statutory fund of last resort for customers of authorised financial services firms. It pays compensation if a firm is unable to meet its obligations. The FSCS funds compensation for customers by raising management expenses levies and compensation levies on the financial services industry.

First/second lien - a lien is a charge such as a mortgage held by one party, over property owned by a second party, as security for payment of some debt, obligation, or duty owed by that second party. The holder of a first lien takes precedence over all other encumbrances on that property i.e. second and subsequent liens.

Forbearance - forbearance takes place when a concession is made on the contractual terms of a loan in response to a customer's financial difficulties.

Forward contract - a contract to buy (or sell) a specified amount of a physical or financial commodity, at an agreed price, at an agreed future date.

Futures contract - a contract which provides for the future delivery (or acceptance of delivery) of some type of financial instrument or commodity under terms established at the outset. Futures differ from forward contracts in that they are standardised and traded on recognised exchanges and rarely result in actual delivery; most contracts are closed out prior to maturity by acquisition of an offsetting position.

G10 - the Group of Ten comprises the eleven industrial countries (Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom and the United States) that have agreed to participate in the International Monetary Fund's (IMF's) General Arrangements to Borrow.

Government Sponsored Enterprises (GSEs) - a group of financial services corporations created by the US Congress. Their function is to improve the efficiency of capital markets and to overcome statutory and other market imperfections which otherwise prevent funds from moving easily from suppliers of funds to areas of high loan demand. They include the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association.

Gross yield - the interest rate earned on average interest-earning assets i.e. interest income divided by average interest-earning assets.

Glossary of terms

Haircut - a downward adjustment to collateral value to reflect its nature and any currency or maturity mismatches between the collateral and the exposure it secures.

Hedge funds - pooled investment vehicles that are not widely available to the public; their assets are managed by professional asset managers who participate in the performance of the fund.

Impaired loans - all loans for which an impairment provision has been established; for collectively assessed loans, impairment loss provisions are not allocated to individual loans and the entire portfolio is included in impaired loans.

Impairment losses - (a) for impaired financial assets measured at amortised cost, impairment losses - the difference between carrying value and the present value of estimated future cash flows discounted at the asset's original effective interest rate - are recognised in profit or loss and the carrying amount of the financial asset reduced by establishing a provision (allowance) (b) for impaired available-for-sale financial assets, the cumulative loss that had been recognised directly in equity is removed from equity and recognised in profit or loss as an impairment loss.

Individually assessed loan impairment provisions - impairment loss provisions for individually significant impaired loans assessed on a case-by-case basis, taking into account the financial condition of the counterparty and any guarantor and the realisable value of any collateral held.

Interest rate swap - a contract under which two counterparties agree to exchange periodic interest payments on a predetermined monetary principal, the notional amount.

Interest spread - the difference between the gross yield and the interest rate paid on average interest-bearing liabilities.

Internal Capital Adequacy Assessment Process (ICAAP) - RBS's own assessment, as part of Basel III requirements, of its risks, how it intends to mitigate those risks and how much current and future capital is necessary having considered other mitigating factors.

Internal funding of trading business - the internal funding of the trading book comprises net banking book financial liabilities that fund financial assets in RBS's trading portfolios. Interest payable on these financial liabilities is charged to the trading book.

Internal Liquidity Adequacy Assessment Process (ILAAP) an ongoing exercise as part of the PRA's regulatory framework to comply with best practice and regulatory standards for liquidity management.

International Accounting Standards Board (IASB) - the independent standard-setting body of the IFRS Foundation. Its members are responsible for the development and publication of International Financial Reporting Standards (IFRSs) and for approving Interpretations of IFRS as developed by the IFRS Interpretations Committee.

International Swaps and Derivatives Association (ISDA) master agreement - a standardised contract developed by ISDA for bilateral derivatives transactions. The contract grants legal rights of set-off for derivative transactions with the same counterparty.

Investment grade - generally represents a risk profile similar to a rating of BBB-/Baa3 or better, as defined by independent rating agencies.

Key management - members of the RBS Executive Committee.

L-SREP - An annual Liquidity Supervisory Review and Evaluation Process with the PRA, that involves a comprehensive review of the RBS ILAAP, liquidity policies and risk management framework.

Latent loss provisions - loan impairment provisions held against impairments in the performing loan portfolio that have been incurred as a result of events occurring before the balance sheet date but which have not been identified at the balance sheet date.

Level 1 - level 1 fair value measurements are derived from quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.

Level 2 - level 2 fair value measurements use inputs, other than quoted prices included within level 1, that are observable for the asset or liability, either directly or indirectly.

Level 3 - level 3 fair value measurements use one or more unobservable inputs for the asset or liability.

Leverage ratio - a measure prescribed under Basel III. It is the ratio of Tier 1 capital to total exposures. Total exposures include on-balance sheet items, off-balance sheet items and derivatives, and generally follow the accounting measure of exposure.

Liquidity and funding risk - the risk that RBS is unable to meet its financial liabilities when they fall due.

Liquidity coverage ratio (LCR) - the ratio of the stock of high quality liquid assets to expected net cash outflows over the following 30 days. High quality liquid assets should be unencumbered, liquid in markets during a time of stress and, ideally, central bank eligible.

Loan:deposit ratio - the ratio of loans and advances to customers net of provision for impairment losses and excluding reverse repurchase agreements to customer deposits excluding repurchase agreements.

Loan impairment provisions - loan impairment provisions are established to recognise incurred impairment losses on a portfolio of loans classified as loans and receivables and carried at amortised cost. It has three components: individually assessed loan impairment provisions, collectively assessed loan impairment provisions and latent loss provisions.

Loan-to-value ratio - the amount of a secured loan as a percentage of the appraised value of the security e.g. the outstanding amount of a mortgage loan as a percentage of the property's value.

Glossary of terms

London Interbank Offered Rate (LIBOR) - the benchmark interest rate at which banks can borrow funds from other banks in the London interbank market.

Loss given default (LGD) - an estimate of the amount that will not be recovered by RBS in the event of default, plus the cost of debt collection activities and the delay in cash recovery.

Market risk - the risk of loss arising from fluctuations in interest rates, credit spreads, foreign currency rates, equity prices, commodity prices and other risk-related factors such as market volatilities that may lead to a reduction in earnings, economic value or both.

Master netting agreement - an agreement between two counterparties that have multiple derivative contracts with each other that provides for the net settlement of all contracts through a single payment, in a single currency, in the event of default on, or termination of, any one contract.

Maximum distributable amount (MDA) - a restriction on distributions which may be made by a bank which does not meet the combined buffer requirements as set out in the PRA Supervisory Statement SS6/14 'Implementing CRD IV: capital buffers'.

Medium term notes (MTNs) - debt securities usually with a maturity of five to ten years, but the term may be less than one year or as long as 50 years. They can be issued on a fixed or floating coupon basis or with an exotic coupon; with a fixed maturity date (non-callable) or with embedded call or put options or early repayment triggers. MTNs are generally issued as senior unsecured debt.

Minimum requirement for own funds and eligible liabilities (MREL) – Tier 1 and Tier 2 capital plus specific loss absorbing instruments, including senior notes, that may be used to cover certain gone concern requirements in the EU.

Monoline insurers (monolines) - entities that specialise in providing credit protection against the notional and interest cash flows due to the holders of debt instruments in the event of default. This protection is typically in the form of derivatives such as credit default swaps.

Model Risk Management - performs independent model validation for material models where necessary.

Mortgage-backed securities - asset-backed securities for which the underlying asset portfolios are loans secured on property. See Residential mortgage backed securities and Commercial mortgage backed securities.

Net interest income - the difference between interest receivable on financial assets classified as loans and receivables or available-for-sale and interest payable on financial liabilities carried at amortised cost.

Net interest margin - net interest income as a percentage of average interest-earning assets.

Net stable funding ratio (NSFR) - the ratio of available stable funding to required stable funding over a one year time horizon, assuming a stressed scenario. Available stable funding includes items such as equity capital, preferred stock with a maturity of over one year and liabilities with an assessed maturity of over one year.

Non-performing loans - loans classified as Risk elements in lending and potential problem loans. They have a 100% probability of default and have been assigned an AQ10 internal credit grade.

Operational risk - the risk of loss resulting from inadequate or failed processes, people, systems or from external events.

Option - an option is a contract that gives the holder the right but not the obligation to buy (or sell) a specified amount of an underlying physical or financial commodity, at a specific price, at an agreed date or over an agreed period. Options can be exchange-traded or traded over-the-counter.

Over-the-counter (OTC) derivatives - derivatives with tailored terms and conditions negotiated bilaterally, in contrast to exchange traded derivatives that have standardised terms and conditions.

Own credit adjustment (OCA) - the effect of the RBS's own credit standing on the fair value of financial liabilities.

Past due - a financial asset such as a loan is past due when the counterparty has failed to make a payment when contractually due.

Pillar 1 - the part of CRD IV that sets out the process by which regulatory capital requirements should be calculated for credit, market and operational risk.

Pillar 2 - Pillar 2 is intended to ensure that firms have adequate capital to support all the relevant risks in their business and is divided into capital held against risks not captured or not fully captured by the Pillar 1 regulations (Pillar 2A) and risks to which a firm may become exposed over a forward-looking planning horizon (Pillar 2B). Capital held under Pillar 2A, in addition to the Pillar 1 requirements, is the minimum level of regulatory capital a bank should maintain at all times to cover adequately the risks to which it is or might be exposed, and to comply with the overall financial adequacy rules. Pillar 2B is a capital buffer which helps to ensure that a bank can continue to meet minimum requirements during a stressed period, and is determined by the PRA evaluating the risks to which the firm may become exposed (e.g. due to changes to the economic environment) during the supervisory review and evaluation process. All firms will be subject to a PRA buffer assessment and the PRA will set a PRA buffer only if it judges that the CRD IV buffers are inadequate for a particular firm given its vulnerability in a stress scenario, or where the PRA has identified risk management and governance failings, which the CRD IV buffers are not intended to address.

Pillar 3 - the part of CRD IV that sets out the information banks must disclose about their risks, the amount of capital required to absorb them, and their approach to risk management. The aim is to strengthen market discipline.

Glossary of terms

Potential future exposure - is a measure of counterparty risk/credit risk. It is calculated by evaluating existing trades done against the possible market prices in future during the lifetime of the transactions.

Potential problem loans (PPL) - loans for which an impairment event has taken place but no impairment loss is expected. This category is used for advances which are not past due 90 days or revolving credit facilities where identification as 90 days overdue is not feasible.

PRA Rule Book - contains provisions made by the PRA that apply to PRA authorised firms. Within 'Banking and Investment Rules', the Capital Requirements firms' section applies to RBS.

Private equity - equity investments in operating companies not quoted on a public exchange. Capital for private equity investment is raised from retail or institutional investors and used to fund investment strategies such as leveraged buyouts, venture capital, growth capital, distressed investments and mezzanine capital.

Probability of default (PD) - the likelihood that a customer will fail to make full and timely repayment of credit obligations over a one year time horizon.

Prudential Regulation Authority (PRA) - the statutory body responsible for the prudential supervision of banks, building societies, insurers and a small number of significant investment firms in the UK. The PRA is a subsidiary of the Bank of England.

Regulatory capital - the amount of capital that RBS holds, determined in accordance with rules established by the PRA for the consolidated Group and by local regulators for individual Group companies.

Repurchase agreement (Repo) - refer to Sale and repurchase agreements.

Residential mortgage - a loan to purchase a residential property where the property forms collateral for the loan. The borrower gives the lender a lien against the property and the lender can foreclose on the property if the borrower does not repay the loan per the agreed terms. Also known as a home loan.

Residential mortgage backed securities (RMBS) - asset-backed securities for which the underlying asset portfolios are residential mortgages. RBS RMBS classifications, including prime, non-conforming and sub-prime, reflect the characteristics of the underlying mortgage portfolios. RMBS are classified as prime RMBS where the loans have low default risk and are made to borrowers with good credit records and reliable payment histories and there is full documentation. Non-conforming RMBS include US Alt-A RMBS, together with RMBS in jurisdictions other than the US where the underlying mortgages are not classified as either prime or sub-prime. Classification of RMBS as subprime or Alt-A is based on Fair Isaac Corporation (FICO) scores, level of documentation and loan-to-value ratios of the underlying mortgage loans. US RMBS are classified as sub-prime if the mortgage portfolio comprises loans with FICO scores between 500 and 650 with full or limited documentation. Mortgages in Alt-A RMBS portfolios have FICO scores of 640 to 720, limited documentation and an original LTV of 70% to 100%. In other jurisdictions, RMBS are classified as sub-prime if the mortgage portfolio comprises loans with one or more high risk characteristics such as: unreliable or poor payment histories; high loan-to-value ratios; high debt-to-income ratio; the loan is not secured on the borrower's primary residence; or a history of delinquencies or late payments on the loan.

Retail loans - loans made to individuals rather than institutions. The loans may be for car purchases, home purchases, medical care, home repair, holidays and other consumer uses.

Return on equity - profit attributable to ordinary shareholders divided by average shareholders' equity as a percentage.

Reverse repurchase agreement (Reverse repo) - refer to Sale and repurchase agreements.

Risk appetite - an expression of the maximum level of risk that RBS is prepared to accept to deliver its business objectives.

Risk asset ratio - total regulatory capital as a percentage of risk-weighted assets.

Risk elements in lending (REIL) - impaired loans and accruing loans which are contractually overdue 90 days or more as to principal or interest.

Risk-weighted assets (RWAs) - assets adjusted for their associated risks using weightings established in accordance with the CRD IV as implemented by the PRA. Certain assets are not weighted but deducted from capital.

Sale and repurchase agreements - in a sale and repurchase agreement one party, the seller, sells a financial asset to another party, the buyer, at the same time the seller agrees to reacquire and the buyer to resell the asset at a later date. From the seller's perspective such agreements are repurchase agreements (repos) and from the buyer's reverse repurchase agreements (reverse repos).

Glossary of terms

Securitisation - a process by which assets or cash flows are transformed into transferable securities. The underlying assets or cash flows are transferred by the originator or an intermediary, typically an investment bank, to a structured entity which issues securities to investors. Asset securitisations involve issuing debt securities (asset-backed securities) that are backed by the cash flows of income-generating assets (ranging from credit card receivables to residential mortgage loans).

Settlement balances - payables and receivables that result from purchases and sales of financial instruments recognised on trade date. Asset settlement balances are amounts owed to RBS in respect of sales and liability settlement balances are amounts owed by RBS in respect of purchases.

Standardised approach - a method used to calculate credit risk capital requirements under Pillar 1. In this approach the risk weights used in the capital calculation are determined by regulators. For operational risk, capital requirements are determined by multiplying three years' historical gross income by a percentage determined by the regulator. The percentage ranges from 12 to 18%, depending on the type of underlying business being considered.

Standstill - is an agreement, usually for a specified period of time, not to enforce the lender's rights as a result of a customer breaching the terms and conditions of their facilities. This is a concession to the customer. A standstill is most commonly used in a complex restructuring of a company's debts, where a group of creditors agree to delay enforcement action to give the company time to gather information and formulate a strategy with a view to establishing a formal restructuring.

Stress testing - a technique used to evaluate the potential effects on an institution's financial condition of an exceptional but plausible event and/or movement in a set of financial variables.

Stressed value-at-risk (SVaR) - a VaR measure using historical data from a one year period of stressed market conditions. For the purposes of calculating regulatory SVaR, a time horizon of ten trading days is assumed at a confidence level of 99%. Refer also to Value-at-risk below.

Structured entity (SE) - an entity that has been designed such that voting or similar rights are not the dominant factor in deciding who controls the entity, for example when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. SEs are usually established for a specific, limited purpose, they do not carry out a business or trade and typically have no employees. They take a variety of legal forms - trusts, partnerships and companies - and fulfil many different functions.

Structured notes - securities that pay a return linked to the value or level of a specified asset or index. Structured notes can be linked to equities, interest rates, funds, commodities and foreign currency.

Subordinated liabilities - liabilities which, in the event of insolvency or liquidation of the issuer, are subordinated to the claims of depositors and other creditors of the issuer.

Tier 1 capital - a component of regulatory capital, comprising Common Equity Tier 1 and Additional Tier 1. Additional Tier 1 capital includes eligible non-common equity capital securities and any related share premium. Under Basel III, Tier 1 capital comprises Core Tier 1 capital plus other Tier 1 securities in issue, less certain regulatory deductions.

Tier 2 capital - qualifying subordinated debt and other Tier 2 securities in issue, eligible collective impairment provisions less certain regulatory deductions.

Total loss absorbing capacity (TLAC) - a Financial Stability Board requirement for global systemically important banks to have a sufficient amount of specific types of liabilities which can be used to absorb losses and recapitalise a bank in resolution. The implementation of the TLAC requirements is being discussed within local regulators.

Unaudited - financial information that has not been subjected to the audit procedures undertaken by RBS's auditors to enable them to express an opinion on RBS's financial statements.

US Federal Agencies - are independent bodies established by the US Government for specific purposes such as the management of natural resources, financial oversight or national security. A number of agencies, including, the Government National Mortgage Association, issue or guarantee publicly traded debt securities.

Value-at-risk (VaR) - a technique that produces estimates of the potential loss in the market value of a portfolio over a specified time period at a given confidence level.

Wholesale funding - wholesale funding comprises Deposits by banks, Debt securities in issue and Subordinated liabilities.

Write-down - a reduction in the carrying value of an asset to record a decline in its fair value or value in use.
