

53 OTMA

Madrid, November 14<sup>th</sup> 1969

Mr. Robert A. Donald  
Department of Physics  
University of Liverpool

Dear Robert,

I have considered your proposition about the working opportunities you offered me, and the conditions of the fellowship that might be granted as you indicated in your letter.

Because of the present circumstances and the insecurity in the future of the High Energies, I have felt forced to accept a post in the Industry. However I feel very grateful for the kindness you have shown to me through you offer of a job in your laboratory.

Spanish physicists involved in high energies are having a very difficult time. I feel moved for this reason to ask you whether the invitation you made me might be extended to one or several of my friends who could be interested. I am refering in particular to Drs. A. Ferrando and S. Unamuno. The former has an experience of several years and has recently passed his doctoral dissertation. S. de Unamuno worked two years at CERN before being one of the founders of our group.

In case you could offer them a post, they would try themselves to obtain the fellowship you indicated to me.

Yours sincerely

Miguel Tomás Ondiviela
