anna.matamala@uab.cat

CILC 2016, 8th International Conference on Corpus Linguistics
Málaga, 02-04/03/2016.

Funding: FFI2015-62522-ERC
2014SGR0027

Overview

- Audio description (AD) research
- The VIW (Visuals Into Words) project
- Compiling the corpus: strategies
- Corpus description
- Exploitation needs and annotation levels
- Sample analyses
- Next steps

AD research

- AD, intersemiotic translation (visuals into words)
- AD research: case-studies, descriptive research on various modalities

Corpus research in AD

- Small corpus (Piety 2004)
- TIWO (Salway 2007)
- TRACCE (Jiménez Hurtado et al. 2010)
- Pear Tree Project (Mazur and Kruger 2012),
inspired by Chafe (1980)

The VIW project

- Funded by the Spanish Gov. under “Europa Excelencia” funding scheme (Oct 15-Sept 16)
- Rationale
 - one small stimulus, expanding research
 - open access
 - multilingual
 - multimodal

Compiling the corpus: strategies

- Authentic materials/materials created ad hoc?
- Copyright issues: open access
- Multimodal: audio and video, and text
- Multilingual: English, Spanish, and Catalan
(possibility to expand it even more)

Corpus description: the short film

- Commission a short film to a film director
- Create copyright agreement
- Literature and guidelines' analysis on AD challenges:
 - characters and action (including gestures and facial expressions)
 - spatio-temporal settings
 - film language
 - sound effects and silence
 - text on screen
 - intertextual references.

Instructions to the film director

- Standard narrative
- Various actions
- At least four characters, speaking in English except for one
- At least three different spatio-temporal settings
- Incorporate some text on screen and credits.
- Include one non-identifiable sound
- Silent passages for artistic purposes
- 12-15 minutes long
- Awareness about the AD.

What happens while---

- Result is a 14-minute film directed by Núria Nia ([trailer](#) & [open access link](#))
- Dubbed into Catalan and into Spanish (professional dubbing studio)

Corpus description: the ADs

- 10 ADs in Catalan , 10 in English and 10 in Spanish
- Service providers contacted with the same instructions, paid by the project
- Copyright issues solved through an agreement

The corpus: textual data

AD	Versions	Words
English	10	6,814
Catalan	10	5,702
Spanish	10	5,292
Global:	30	17,808

Exploitation needs

- Comparative analyses
 - Monolingual
 - Multilingual
- Linguistic elements: frequency, POS, semantic?
- AD distribution along the timeline
- AD elements: how is X rendered in the AD?
Divergences and commonalities

Annotation levels

- ELAN (Sloetjes and Wittenburg 2008)
- Linguistic annotations: sentences, chunks, tokens, part of speech, lemma, and semantic annotations.
- Cinematic annotations: text, sound, and camera.

Filmic annotations

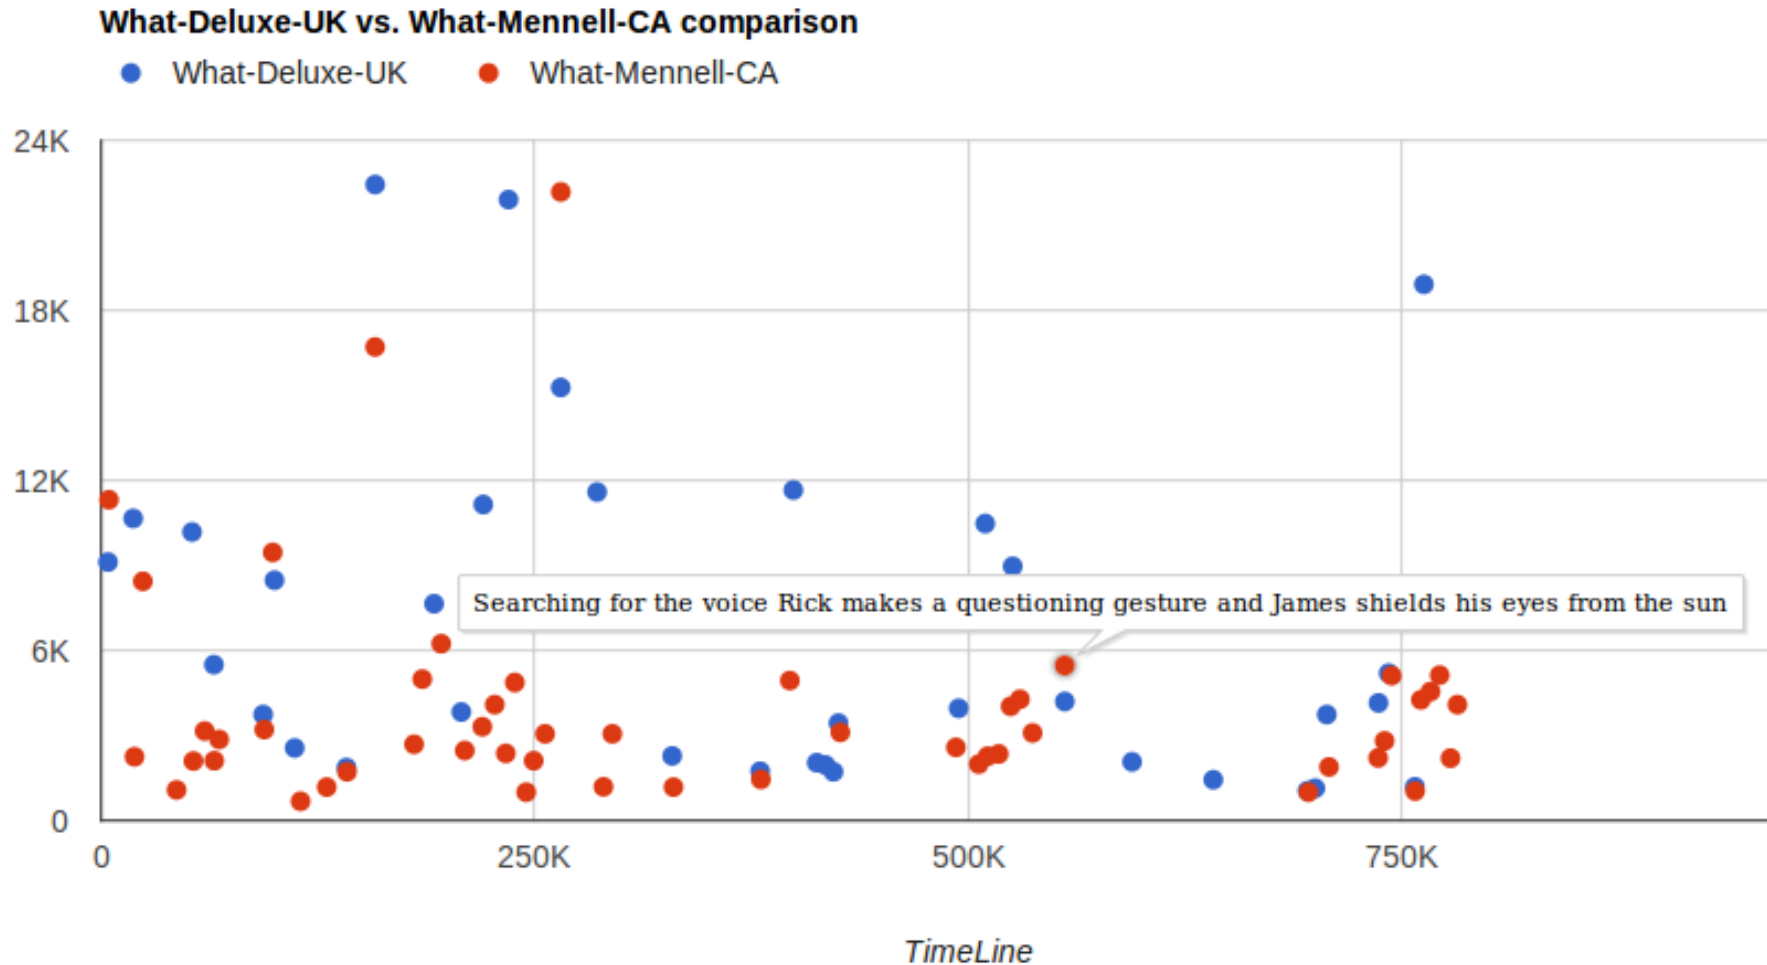

Time line

Data visualisation

- Web application providing access to:
 - XML annotation file conforming to EAF format, visualized in [HTML](#)
 - some graphical visualizations using Google Charts API

Sample analyses: comparing two ADs

Sample analyses: numbers of words

(2) Number of words per sentences:

Num of sentences	63	Avg. words per sentence	9.92063492063	Min. words per sentence	1
Num of Words	623	Median words per sentence	10	Max. words per sentence	22
		Mode words per sentence	13	Range. words per sentence	21

Sample analyses: density in timeline

Density Graph (duration in msec) for What-Able-NZ-Hits.txt:

Mean duration	5567.8888888889	Min duration	950	Variance	9715490.8765432
Median duration	4929	Max duration	14420	Standard deviation	3161.182742291

Utterances in timeline (duration in msec)

Time in timeline is given in msec

Next steps

- Creating a website, a platform and uploading materials: pagines.uab.cat/viw/
- Expanding the corpus: students? Process data? Other languages? Project sustainability
- Another level of annotation: AD annotation (who, what, why, where, when)

Designing a new platform for AD analysis: the VIW project
