

Genomics**2013/2014**

Codi: 42925

Crèdits: 6

Titulació	Tipus	Curs	Semestre
4313802 Genètica avançada/Advanced Genetics	OB	0	1

Professor de contacte

Nom: Alfredo Ruiz Panadero

Correu electrònic: Alfredo.Ruiz@uab.cat

Utilització d'idiomes

Llengua vehicular majoritària: anglès (eng)

Prerequisits

Languages: Lectures will be mainly in English

Postgraduates in Biochemistry, Biotechnology, Biology, Biomedicine, Genetics, Microbiology, Chemistry, Informatics/Bioinformatics, Pharmacy, Medicine and Veterinary Medicine

Objectius

The overall aim of the subject is to provide students an overview of genomics including fundamentals, current techniques and applications. The specific objectives include understanding the following aspects: the diversity and complexity of eukaryotic genomes, the historical and evolutionary perspective of genomic content, the meaning and consequences of intraspecific variability, techniques commonly employed in studies of genomics and transcriptomics and applications derived from the knowledge provided by this science.

Competències

Genètica avançada/Advanced Genetics

- Conceive, design, carry out and synthesise scientific projects in the area of genetics, both theoretical and applied.
- Demonstrate a mastery of genetic analysis as a transversal tool applicable to any field of genetics.
- Demonstrate responsibility in management of information and knowledge.
- Demonstrate responsibility in the direction of groups and/or projects in multidisciplinary teams.
- Develop critical reasoning in the area of study and in relation to the scientific and business environments.
- Identify and propose scientific solution for problems related to genetic research at both molecular and organism levels and demonstrate an understanding of the complexity of living beings.
- Identify and use biocomputing tools to contribute to knowledge of the genomics of different organisms.
- Integrate genetic analysis at different levels of complexity (molecular, cell, individual, population) to coherently resolve different problems in the area of genetics.
- Integrate knowledge of the possible alterations in DNA with their consequences for living beings.
- Student should possess an ability to learn that enables them to continue studying in a manner which is largely self-supervised or independent
- Students should know how to apply the knowledge they acquire and be capable of solving problems in new or little-known areas within broader contexts (or multidisciplinary contexts) related to their area of study

- Students should know how to communicate their conclusions, knowledge and final reasoning that they hold in front of specialist and non-specialist audiences clearly and unambiguously
- Understand the genetic techniques necessary for improving biological processes and their acceptability in economic and health terms.
- Use and manage bibliographical information and other resources related to genetics and related fields.
- Use scientific terminology to argue the results of the research and show how to communicate in spoken and written English in an international setting.

Resultats d'aprenentatge

1. Analyse the importance of genomics, from a theoretical and applied viewpoint, when planning scientific projects.
2. Analyse the role that different changes in DNA have played in gene evolution
3. Analyse the role that different genetic changes have had as mechanisms for genomic change
4. Apply strategies and techniques to isolate genomic regions for specific purposes
5. Appreciate the strategic, industrial and economic importance of genomics in life sciences, health sciences and society.
6. Demonstrate responsibility in management of information and knowledge.
7. Demonstrate responsibility in the direction of groups and/or projects in multidisciplinary teams.
8. Describe and identify the different components present in genomic eukaryotes.
9. Describe the complexity of genomes according to the complexity of the organism.
10. Describe the organisation, evolution, expression and population variation of the human genome.
11. Present summaries and conclusions in public
12. Search for and make explicit the necessary bibliography for understanding the work related to genomics in biocomputing and evolution
13. Student should possess an ability to learn that enables them to continue studying in a manner which is largely self-supervised or independent
14. Understand the different methodologies, techniques and tools used habitually in sequencing, assembly and annotation of genomes.
15. Understand the types and levels of genetic variability in populations as well as their significance and application in medicine and genetic improvement.
16. Use knowledge of biocomputing for managing genome databases
17. Use scientific terminology to argue the results of the research and show how to communicate in spoken and written English in an international setting.
18. Write critical summaries about the taught seminars

Continguts

- Eukaryotic genomes.
- Genome size.
- The human genome.
- Comparative genomics.
- Transposable elements.
- Genomic technologies.
- Population genomics.
- Nucleotide and structural variability.
- Association Studies.
- Functional Genomics and Transcriptomics.

Metodologia

Subject teaching includes three types of activities:

- Lectures. Spoken explanations of the subject that is to be learned accompanied by powerpoint presentations to help students visualize questions and answers.

- Reading and discussion. Students are expected to read a number of research papers during the course and participate in the critical discussion of the papers in the class room.
- Oral presentations. Students will prepare a subject and make an oral and powerpoint presentation of the subject to their peers.

Activitats formatives

Títol	Hores	ECTS	Resultats d'aprenentatge
Tipus: Dirigides			
Lectures	24	0,96	2, 3, 5, 10, 14, 15
Oral presentations	6	0,24	11, 12, 13, 16, 17, 18
Student work and learning	118	4,72	6, 7, 12, 16, 17, 18

Avaluació

Final grades are a weighed average of following items:

- Attendance and participation in the classroom (20%)
- Oral presentation and defense (40%)
- Exam (40%)

Activitats d'avaluació

Títol	Pes	Hores	ECTS	Resultats d'aprenentatge
Exam	40%	2	0,08	2, 3, 4, 8, 9, 10, 14, 15, 18
Lecture attendance and participation	20%	0	0	1, 6, 7, 11, 12, 16
Oral presentations	40%	0	0	11, 13, 17
