

Transgenesis and Gene Therapy: from the Animal to the Clinic 2014/2015

Code: 42891

ECTS Credits: 9

Degree	Type	Year	Semester
4313794 Bioquímica, Biología Molecular i Biomedicina	OT	0	1

Contact

Name: Maria Fátima Bosch Tubert

Email: Fatima.Bosch@uab.cat

Use of languages

Principal working language: anglès (eng)

Some groups entirely in English: No

Some groups entirely in Catalan: Yes

Some groups entirely in Spanish: No

Teachers

Jesús Ruberte París

Assumpció Bosch Merino

Anna Maria Pujol Altarriba

Prerequisites

Graduate in the field of life sciences, for example:

Biology, Biochemistry, Biomedicine, Biotechnology, Pharmacy, Genetics, Medicine, Veterinary Medicine.

Objectives and Contextualisation

The student will gain insight into:

- Technologies used to generate transgenic animals overexpressing specific transgenes or knocking down the expression of endogenous genes.
- Application of the aforementioned technologies in biomedicine and livestock.
- Mouse anatomy and embryology in order to understand the embryonic development of organs and to analyze morphological/anatomical abnormalities in genetically modified mouse models.
- In vivo and ex vivo gene therapy, including characteristics of the different types of vectors (viral and non-viral) used for gene transfer as well as their advantages and disadvantages, administration routes and applications of gene therapy in the treatment of hereditary and non-hereditary human diseases.

Skills

- Analyse and explain normal morphology and physiological processes and their alterations at the molecular level using the scientific method.
- Analyse research results to obtain new biotechnological or biomedical products to be transferred to society.
- Apply techniques for modifying living beings or parts of these in order to improve pharmaceutical and biotechnological processes and products or develop new products.

- Apply techniques for modifying living beings or parts of these in order to improve pharmaceutical and biotechnological processes and products or develop new products. (Specialisation in molecular and therapeutic biotechnology)
- Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
- Conceive, design, develop and synthesise scientific and/or biotechnological projects within biochemistry, molecular biology or biomedicine.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Use advanced biotechnology tools in combination to solve problems in emerging areas of biotechnology.
- Use and manage bibliography and IT resources related to biochemistry, molecular biology or biomedicine.
- Use and manage bibliography and IT resources related to biotechnology responsibly.
- Use scientific terminology to account for research results and present these orally and in writing.

Learning outcomes

1. Analyse research results to obtain new biotechnological or biomedical products to be transferred to society.
2. Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
3. Describe the foundations of in vivo and ex vivo gene therapy. .
4. Descriure els fonaments de la teràpia gènica in vivo i ex vivo.
5. Distingir les diferents metodologies usades per a obtenir animals transgènics que permeten la sobreexpressió, el bloqueig o la modificació de gens endògens de manera ubíqua o específica de teixit i/o induïble.
6. Explain the characteristics of the different types of vectors used in gene transfer, their advantages and disadvantages, and their use for each disease or tissue.
7. Explicar les característiques dels diferents tipus de vectors usats per a la transferència gènica, els seus avantatges i inconvenients, així com la seva utilitat per a cada malaltia o teixit.
8. Interpret molecular or physiological alterations of a transgenic animal.
9. Interpret the results of gene therapy clinical trials in humans.
10. Proposar un protocol d'utilització de teràpia gènica.
11. Propose a protocol for the use of gene therapy.
12. Show knowledge of the different methodologies used to obtain transgenic animals that allow the global or tissue-specific and/or inducible over-expression, blockage or modification of endogenous genes .
13. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
14. Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
15. Use and manage bibliography and IT resources related to biochemistry, molecular biology or biomedicine.
16. Use and manage bibliography and IT resources related to biotechnology responsibly.
17. Use scientific terminology to account for research results and present these orally and in writing.
18. Visualise morphological changes in a transgenic animal.

Content

PART 1. MOUSE MORPHOLOGICAL PHENOTYPING

By J. Ruberte, A. Carretero, M. Navarro and V. Nacher. Dept. Animal Health and Anatomy, UAB

1. Anatomic Terminology and Regions
2. Development and Placenta

3. Osteology
4. Arthrology and Miology
5. Cardiovascular System
6. Repiratory Apparatus
7. Digestive Apparatus
8. Urinary Organs
9. Male and Female Genital Organs
10. Nervous System
11. Visual Organ
12. Vestibulocochlear Organ

PART 2: TRANSGENIC ANIMALS AND GENE THERAPY

By F. Bosch, A. Pujol, P. Otaegui, E. Riu, F. Mingozi, S. Frankhauser, V. Haurigot and M. Garcia,
Dept. Biochemistry & Molecular Biology, UAB

Part 2.1. Transgenic Animals:

1. Generation of transgenic animals by pronuclear microinjection.
2. Constitutive and conditional (tissue specific and/or inducible) Knockout/in animals.
3. Cloned animals by nuclear transfer. Applications.
4. Consortia for genome mutagenesis and mouse phenotyping: Mouse Clinics.
5. Management of transgenic animal colonies. Current legislation on animal experimentation.
6. Applications of transgenic animal technology in the study of diabetes, obesity, inherited diseases...
7. Analysis of the mechanisms involved in epigenetic silencing / activation of transgenes in vivo.

Part 2.2. Gene Therapy:

1. Introduction to the gene therapy field.
2. Characteristics of adenoviral vectors. Applications.
3. Characteristics of recombinant vectors derived from adenoassociated viruses. Applications in gene therapy for diabetes mellitus.
4. "Ex vivo" Gene Therapy: retroviral and lentiviral vectors. Applications.
5. Non-viral gene therapy. Applications.
6. Gene Therapy for Hereditary Diseases. Gene Therapy for Mucopolysaccharidosis (MPS).
7. Invivo" genome editing with Zinc-finger nucleases.

PART 3. INTRODUCTION AND DESIGN OF GENE THERAPY CLINICAL TRIALS FOR THE TREATMENT OF HUMAN DISEASES

By M. Chillón and A. Bosch, Dept. Biochemistry & Molecular Biology, UAB

Invited speaker: Manel Cascalló, VCN

1-Introduction to clinical trials. Factors to consider in the design of clinical trials of gene therapy. MChillon

2-Development and production of vectors for clinical trials. MChillon

3-Regulation on the use of Genetically Modified Organisms. Biosafety level and quality of production (GMP and GLP conditions). MChillon

4-Clinical trials using non viral vectors. MChillon

5-Strategies to improve biosecurity and to reduce the immune response in clinical trials using adenoviral vectors. MChillon

6-Adenoassociated vectors in clinical trials. Increased tissue specificity using pseudotyped AAV vectors. Immune response. ABosch

7-Vectors derived from herpes virus in clinical trials. ABosch

8-Advantages and disadvantages of retroviral and lentiviral vectors in clinical trials. ABosch

9-Ongoing clinical trials for specific diseases: Haemophilia, β -Thalassemia, Primary Immunodeficiencies, Cystic Fibrosis, Duchenne Muscular Dystrophy, lysosomal storage diseases, neurodegenerative diseases, blindness, cancer, etc. ABosch, MChillon

Methodology

Combination of lectures and laboratory practices and presentation of a project supervised by the teacher.

Theory 72%

Laboratory 11%

Supervised work 14%

Tutoring 3%

Activities

Title	Hours	ECTS	Learning outcomes
Type: Directed			
Lectures and lab practices	55	2.2	1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18
Type: Supervised			
Preparation of oral presentations and lab practices	44	1.76	1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18
Type: Autonomous			
Literature search and study for exams	120	4.8	1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18

Evaluation

The evaluation of the module will be based on work done by students, attendance and class participation, practices and the grade of an exam at the end of the course.

Evaluation activities

Title	Weighting	Hours	ECTS	Learning outcomes
Attendance and active participation in lectures	10%	0	0	12, 3, 6, 9, 8, 13, 2, 14, 15, 17, 18
Attendance to laboratory practices	8%	0	0	12, 6, 9, 8, 11, 13, 14, 15, 17, 18
Oral defence of selected papers	32%	2	0.08	1, 12, 3, 6, 9, 2, 14, 15, 17
Theoretical and practical tests	50%	4	0.16	12, 6, 9, 8, 11, 13, 2, 15, 17, 18
