Prerequisites

It is a mandatory module in the research (academic) itinerary. It trains students for the research modules (M5 + M9) of the second semester.

Objectives and Contextualisation

How to write the History of Science at the beginning of the 21st century? To answer this complex question, the module provides students with a critical approach to the different schools, themes and problems on which the history of science has been working as an academic discipline. It invites students to draw useful conclusions for their education as historians of science today. It is a historiographical module, in which plural views of a specific event in the past have priority over consensus -the latter being worked in module M1.

Content

The course is divided into two parts:

A. Methodology: students are introduced to the bibliography, approaches and research methodology of the history of science.

B. Topics and its problems: offer to the students some of the current controversies and problems of the field in relation to different topics linked to science and its historiography.

A. Methodology:
