

Applied Plant Physiology.

Code: 100821
ECTS Credits: 6

Degree	Type	Year	Semester
2500251 Environmental Biology	OT	4	0

Contact

Name: Carlota Poschenrieder Wiens

Email: Charlotte.Poschenrieder@uab.cat

Use of languages

Principal working language: spanish (spa)

Some groups entirely in English: No

Some groups entirely in Catalan: No

Some groups entirely in Spanish: No

Teachers

Josep Allué Creus

Isabel Corrales Pinart

Maria Soledad Martos Arias

Prerequisites

none

Objectives and Contextualisation

The general objective of this subject is to introduce the students into the functional mechanisms and techniques, which properly developed, allow to improve the yield of the crop plants and their agricultural and industrial applications.

The specific training objectives are:

Identify the processes that determine the yield of plants of agricultural and industrial interest and their regulation by internal and external factors

Acquire an advanced vision of reproduction techniques for plants with a practical purpose;

Introduce the students to the basic techniques of agricultural biotechnology

Introduce the students to the basics of phytochemistry and its application in medicine and industry

Skills

- Focus on quality.
- Manage information
- Obtain, observe, handle, cultivate and conserve specimens.
- Perform studies on animal and plant production and improvement.

Learning outcomes

1. Apply knowledge of physiology to the processes of plant improvement and production.
2. Focus on quality.
3. Learn and apply in vitro culture techniques under controlled conditions for the plants.
4. Manage information

Content

Lectures

- Applied Plant Physiology: field of study; Scientific and social interest
- Plant productivity and yield: Assessment parameters; Conditioning factors
- Genetic potential and its regulation by internal and external factors
 - Internal factors:
 - Reproduction and regulation of development
 - Genetics of reproduction: Sexual reproduction and seed technology
 - Asexual reproduction
 - Reproduction in vitro
 - Genetic improvement
 - Plant biotechnology: methods and applications
 - Secondary metabolism of plants
 - Regulation of growth, use of phytohormones
 - External factors
 - Biotic
 - Plant-microorganism interaction: pathogenesis of bacterial, viral and fungal diseases
 - Molecular bases of defense
 - Abiotic
 - Essential nutrients and soil fertility.
 - Water relations

Laboratory practices

- In vitro culture techniques
- Hydroponic cultivation
- Techniques for evaluating productivity and quality of plants
- Phytopathology protocol

Methodology

Lectures

During the lectures, the professor explains the functional mechanisms and techniques that allow to improve the yield of crop plants and their agricultural and industrial applications, establishing the functional and mechanistic relationships clarifying the basic concepts necessary for their understanding. The methodology is mainly based on verbal communication, accompanied by visual schemes. Teacher's direct questions to students during the class are indicative of the student's degree of follow-up. Bibliographical references and other sources of information are given to foster self-study.

Seminars: The main purpose of the seminars in this subject is to promote the knowledge of the general and transversal competences of the students. The teaching methodology is based on the exposition and discussion of a scientific article, written in English.

Students divided into groups have to search for and select an adequate article according to the quality criteria explained by the teacher.

Laboratory practices: Some of the topics covered in the theory class are visualized through laboratory testing. The student became familiar with protocols and techniques of Applied Plant Physiology and have to interpret

the results obtained in their own experiments.

The student will be able to access the protocols and guides of practices through the Virtual Campus.

Tutoring: In tutorials in groups or individually, the professor tries to help the students to solve their doubts about the concepts of the subject and guide them in their studies.

Field trips: A visit to an agrobiotechnology industry

Activities

Title	Hours	ECTS	Learning outcomes
Type: Directed			
Lab practice	16	0.64	3, 2, 4
Lectures	28	1.12	1, 3
Seminars	6	0.24	1, 4
Type: Supervised			
Field trip	4	0.16	1, 2
Tutorials	6	0.24	1, 4
Type: Autonomous			
Personal study	70	2.8	1, 3, 4
Preparation of homework and/or seminars	11	0.44	1, 4
Preparation of lab practice report	5	0.2	1, 3, 4

Evaluation

The evaluation is based on the following items:

Written exams that include the evaluation of the contents of the lectures. There will be two eliminatory tests corresponding to the two equitable parts in which the program has been divided.

To be able to pass the subject, a minimum grade of 5 must be obtained in each of these parts. The weight of each partial exam in the theory note is 50%.

The weight of the theory mark in the final grade is 70%.

To improve the mark, or to pass the notes less than 5, you can do a recovery at the end of the course of each of these exams in a final examination of recovery. The minimum mark to pass this exam is 5.

To be eligible for this retake process, the student should have been previously evaluated in a set of activities equaling at least two thirds of the final score of the course or module. Thus, the student will be graded as "No Avaluable" if the weighthin of all conducted evaluation activities is less than 67% of the final score".

If you present yourself to improve your note you waive the previously obtained note and only the note of the recovery exam will be counted.

Laboratory practices will be evaluated by means of a theoretical exam that will be done on the last day of

practices together with the presentation of the script in which the results obtained individually for each student will be discussed.

The lab practice note represents 20% of the final mark of the subject. Attendance is mandatory. In the event of justified absence, a lab session can be recovered through assistance to another group or, if that is not possible, by means of a substitute work. There is no practice recovery exam.

Seminars: Participation in these seminars and the quality of the works and / or problems resolved and presented will account for 10% of the final mark. The seminars will consist of group presentations before the class of a scientific article in English; students presentations in English will be awarded. Seminars cannot be retaken.

The subject of Applied Plant Physiology will be passed when the student fulfills the above conditions and the resultant note of the different evaluations (exams, practices and seminar) is 5.0.

The presentation to the final examination of recovery in any case means that the student has presented and will be evaluated.

Students who can not attend an individual assessment test for just cause (such as illness, death of a first-degree relative or accident) and provide the official documentation corresponding to the Degree Coordinator, will have the right to perform the test in question on another date.

Evaluation activities

Title	Weighting	Hours	ECTS	Learning outcomes
Evaluation of lab practice	20%	1	0.04	3, 2, 4
Evaluation of seminar	10%	0	0	1, 4
Examination of lecture program 1	35%	1.5	0.06	1, 3, 2
Examination of lecture program 2	35%	1.5	0.06	1, 3, 2
