

**Statistics I**

Code: 102115  
ECTS Credits: 6

Degree	Type	Year	Semester
2501231 Accounting and Finance	FB	1	2
2501232 Business and Information Technology	FB	1	2

**Contact**

Name: Xavier Vilà Carnicero  
Email: Xavier.Vila@uab.cat

**Use of languages**

Principal working language: catalan (cat)  
Some groups entirely in English: No  
Some groups entirely in Catalan: Yes  
Some groups entirely in Spanish: No

**Teachers**

Anabel Blasco Moreno  
Nestor Garcia Alvarez  
Mikel Esnaola Acebes

**Prerequisites**

It is recommended that the student has passed the course of Mathematics I and is taking (or have passed) Mathematics II.

Thus the student has achieved all the skills needed to approach the study of Statistics I with the best guarantees of success.

**Objectives and Contextualisation**

The aim of this course is that students understand and are able to use the data analysis and basic probabilistic tools that are necessary to address the study of statistical inference. In this sense, the subject is clearly linked, in terms of its immediate application, to the course Statistics II.

However, the skills in probabilistic tools that the student will acquire in this course are also useful in other subjects, such as microeconomics, macroeconomics, econometrics and, in general, those in which random phenomena play an important role.

**Skills**

**Accounting and Finance**

- Analysing, summarising and assessing information.
- Communicating in oral and written form in Catalan, Spanish and English, in order to be able to summarise and present the carried out project in both forms.

- Interpreting and using mathematical tools and statistics in order to identify and solve problems of the economical and business scope with deterministic or/and random components.
- Searching for innovative and imaginative solutions.

### **Business and Information Technology**

- Appropriately drawing up technical reports according to the customer's demands.
- Interpreting and using mathematical and statistic tools in order to identify and solve problems of the economical and business scope with deterministic or/and random components.
- Students must be capable of analysing, summarising, organising, planning and solving problems and making decisions.
- Students must be capable of searching and analysing information of different sources.

## **Learning outcomes**

1. Analysing, summarising and assessing information.
2. Appropriately drawing up technical reports according to the customer's demands.
3. Communicating in oral and written form in Catalan, Spanish and English, in order to be able to summarise and present the carried out project in both forms.
4. Identifying situations characterised by the presence of randomness and analysing them through the basic probabilistic tools.
5. Representing and analysing quantitative and qualitative information referring to economic phenomena and variables.
6. Starting out in the formal study of the analysis of the relationship between variables.
7. Students must be capable of analysing, summarising, organising, planning and solving problems and making decisions.
8. Students must be capable of searching and analysing information of different sources.
9. Students must demonstrate they have an innovative and entrepreneur spirit.

## **Content**

### **Unit 1 Data Analysis**

- 1.1. Collecting data: Sampling and properties.
- 1.2. Types of variables and frequency distribution tables.
- 1.3. Graphical representations.
- 1.4. Measures of position, dispersion and shape.
- 1.5. Covariance and correlation coefficient.
- 1.6. Mean and variance of linear combinations of variables.
- 1.7. Mean vector and covariance matrix.

### **Unit 2 Probability theory**

- 2.1. Random events and sample spaces.
- 2.2. Probability: Axiomatic definition and interpretations.
- 2.3. Probability computation and its properties.
- 2.4. Conditional probability and stochastic independence.
- 2.5. Total probability and Bayes Theorems

### **Unit 3 Discrete random variables**

- 3.1. Definition of random variable.
- 3.2. Probability function and distribution function.
- 3.3. Numeric characteristics: Expectation and Variance.
- 3.4. Classical discrete distributions: Bernoulli, Binomial, Poisson and Geometric.
- 3.5. Multidimensional random variables.
- 3.6. Joint and marginal probability functions.
- 3.7. Conditional probability function and conditional expectation. Independence.
- 3.8. Covariance and correlation coefficient. Covariance matrix.

## Unit 4 Continuous random variables

4.1. Density function and distribution function.

4.2. Numeric characteristics: Expectation and variance.

4.3. Classical continuous distributions: Uniform, Exponential, Normal, Uniform and Normal multivariate analysis.

4.4. Normal approximation to the Binomial distribution.

## Methodology

The activities that will allow the students to learn the basic concepts included in this course are:

### 1. Theory lectures where the instructor will teach the main concepts.

The goal of this activity is to introduce the basic notions and guide the student learning.

### 2. Problem Sets

A problem set which students will have to solve individually will be included in every unit. The goal of this activity is twofold. On one hand students will work with the theoretical concepts explained in the classroom, and on the other hand through this practice they will develop the necessary skills for problem solving.

### 3. Practice lectures

The aim of this activity is to comment on and solve any possible doubt that students may have had solving the problem assignment. This way they will be able to understand and correct any errors they may have had during this process.

### 4. Tutoring hours

Students will have some tutor hours in which the subject instructors will help them solve any doubts they may have.

### 5. Lab sessions

The aim of this activity is to use statistical software to better grasp the statistical concepts and methods. The level of use of ICT will be subject to availability and the number of students registered in the groups.

## Activities

Title	Hours	ECTS	Learning outcomes
<b>Type: Directed</b>			
Lab sessions	8	0.32	4, 6, 5
Lectures	32	1.28	4, 6, 5
Resolution of exercises	10	0.4	4, 6, 5
<b>Type: Supervised</b>			
Tutoring and monitoring work in progress	7.5	0.3	4, 6, 5
<b>Type: Autonomous</b>			
Individual study	86.5	3.46	4, 6, 5

## Evaluation

The evaluation of the students will be carried out according to the following activities:

### 1. A midterm exam

Written evidence in which the student will not be allowed to consult any kind of teaching material. The maximum resolution time will be 50 minutes. This test does not release matter.

### 2. A final exam

Written evidence in which the student will not be allowed to consult any kind of teaching material. The maximum resolution time will be 2 hours, and will include all the subject matter of the course. The exam is designed so that the student performs a last learning effort that is considered necessary to consolidate the previously acquired knowledge, thus guaranteeing the success in the continuous learning process of the greatest possible number of students.

### 3. Submission of problem sets and essays, and/or lab quizzes

Students will submit, at the request of the teaching staff and following their instructions, various exercises and/or essays to be solved individually and/or in groups of between 2 and 4 students. Some of these exercises may consist of one or more quizzes in the lab in order to evaluate the learning of the computer activities carried out.

## Evaluation criteria

The grade of the midterm exam will weight a 30% of the **average grade of the subject**.

The grade of the final exam will weight a 50% of the **average grade of the subject**.

The grade of the submission of exercises, essays and/or quizzes in the lab will weight a 20% of the **average grade of the subject**.

Therefore, the **average grade of the subject** is computed as:

$$\begin{aligned} \text{average grade of the subject} &= 30\% (\text{grade of the midterm exam}) + \\ &+ 50\% (\text{grade of the final exam}) + \\ &+ 20\% (\text{grade exercises/essays/lab quizzes}) \end{aligned}$$

The subject will be considered "passed" if the following two requirements are met:

1. the **average grade of the subject** is equal to or greater than 5 and
  2. the **grade of the final exam** is equal to or greater than 3.
- A student that meets the first requirement above but does **not** meet the second will receive an **average grade of the subject** equal to 4.5, and will qualify for the re-evaluation test according to what is established in the section "**Retake Process**" below.
  - A student that meets the second requirement above but does **not** meet the first, or any of them, will qualify for the re-evaluation test according to what is established in the section "**Retake Process**" below.

A student who has not participated in any of the assessment activities will be considered "Not evaluable"

## Calendar of evaluation activities

The dates of the evaluation activities (midterm exams, exercises, assignments ...) will be announced well in advance during the semester.

The date of the final exam is scheduled in the assessment calendar of the Faculty.

*"The dates of evaluation activities cannot be modified, unless there is an exceptional and duly justified reason why an evaluation activity cannot be carried out. In this case, the degree coordinator will contact both the teaching staff and the affected student, and a new date will be scheduled within the same academic period to make up for the missed evaluation activity."* **Section 1 of Article 115. Calendar of evaluation activities (Academic Regulations UAB).** Students of the Faculty of Economics and Business, who in accordance with the previous paragraph need to change an evaluation activity date must process the request by filling out an **Application for exams' reschedule** at [https://eformularis.uab.cat/group/deganat\\_feie/application-for-exams-reschedule](https://eformularis.uab.cat/group/deganat_feie/application-for-exams-reschedule)

### Grade revision process

After all grading activities have ended students will be informed of the date and way in which the course grades will be published. Students will be also be informed of the procedure, place, date and time of grade revision following University regulations.

### Retake Process

*"To be eligible to participate in the retake process, it is required for students to have been previously been evaluated for at least two thirds of the total evaluation activities of the subject."* **Section 3 of Article 112 ter. The recovery (UAB Academic Regulations).** Additionally, it is required that the student to have achieved **an average grade of the subject between 3.5 and 4.9.**

The date of the retake exam is posted in the calendar of evaluation activities of the Faculty. Students taking this exam and passing will get a grade of 5 for the subject. For the students that do not pass the retake, the grade will remain unchanged, and hence, will fail the course.

### Irregularities in evaluation activities

In spite of other disciplinary measures deemed appropriate, and in accordance with current academic regulations, *"whenever a student makes any irregularity that could lead to a significant variation in the grade of an evaluation activity, it will be graded with a 0, regardless of the disciplinary process that can be instructed. In case of occurrence of various irregularities in the evaluation of the same subject, the final grade of this subject will be 0".* **Section 10 of Article 116. Results of the evaluation. (UAB Academic Regulations).**

### Evaluation activities

Title	Weighting	Hours	ECTS	Learning outcomes
Exercises and essays and/or lab quizzes	20%	3	0.12	1, 9, 4, 6, 2, 5, 7, 8, 3
Final exam	50%	2	0.08	4, 6, 5
Midterm exam	30%	1	0.04	4, 6, 5
