

Waste Management

Code: 42408
ECTS Credits: 6

Degree	Type	Year	Semester
4313784 Interdisciplinary Studies in Environmental, Economic and Social Sustainability	OT	0	1

Contact

Name: Teresa Gea Leiva
Email: Teresa.Gea@uab.cat

Use of languages

Principal working language: english (eng)

Teachers

Cristina Sendra Sala

Prerequisites

No specific knowledge required.

Objectives and Contextualisation

Provide the knowledge needed to manage waste as a resource, energy saving and reduction of greenhouse gas emissions (GHG).

Skills

- Analyse, summarise, organise and plan projects related to the environmental improvement of product, processes and services.
- Communicate and justify conclusions clearly and unambiguously to both specialised and non-specialised audiences.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Work in an international, multidisciplinary context.

Learning outcomes

1. Choose and propose the most sustainable waste management system under current legislation and the objectives of international policies.
2. Communicate and justify conclusions clearly and unambiguously to both specialised and non-specialised audiences.
3. Estimate greenhouse gas emissions attributable to waste.
4. Estimate the main environmental impacts of waste management systems, whether urban, industrial or agricultural.
5. Quantify the chances of reducing environmental impacts and GHG on the basis of new technologies, methodologies and waste management systems.
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.

7. Work in an international, multidisciplinary context.

Content

Block 1 Unit operations for the use of waste as raw materials and emissions of greenhouse gases (GHG).

- Reduction. Collection. Transport. Compaction. Valorization. Sorting.
- Recyclable materials: plastic, glass, paper and cardboard, cans, batteries and accumulators. Organic matter. Other recyclable materials.
- Recycling plants. Eco-parks and Recovery areas.
- Landfills and estimation of their emissions.

Block 2 Indicators.

- GHG quantification methodologies for the waste sector (IPCC, LCA ...)
- Waste classification. Definition of a management plan.
- Emissions generated and/or reduced due to waste management that affects other sectors: transport, industry, energy. CO2 credits
- Saving energy and material recycling and recovery of materials and energy.
- Software modeling and measurement: LCA study, CO2 equivalent calculator, Landgem

Block 3 Sustainable management of urban, agricultural and industrial waste

- Applying Industrial Ecology tools (industrial symbiosis, flows exchanging, MFA, LCA Exegetic Analysis, Ecodesign, carbon footprint,) for designing innovative and sustainable system for waste management.
-

Methodology

Lectures/oral expositions

Classroom practices

Seminars

Preparation of reports

Autonomous activity

Reading reports/papers of interest

Activities

Title	Hours	ECTS	Learning outcomes
Type: Directed			
Lectures	36	1.44	
Type: Supervised			

Seminars/Oral Expositions	15	0.6
Visit to industrial plants	10	0.4
Type: Autonomous		
Preparation of reports	25	1
Reading of reports/papers	20	0.8
Self-study	30	1.2

Evaluation

Students must submit essays or reports which will be prepared as a group or individually. Some works can be presented / discussed in class (50%).

Written exam (50%).

The minimum mark required for each item is 40% for obtaining the final mark.

Evaluation activities

Title	Weighting	Hours	ECTS	Learning outcomes
Delivered reports and oral presentations	50 %	12	0.48	1, 4, 6, 2, 7
Exams	50 %	2	0.08	1, 4, 3, 5
