

**Assessment and Intervention in Adult Mental Health**

Code: 43420  
ECTS Credits: 6

Degree	Type	Year	Semester
4314949 General Health Psychology	OB	1	1

**Contact**

Name: Ignasi Garrido Ribas  
Email: Ignacio.Garrido@uab.cat

**Use of languages**

Principal working language: catalan (cat)

**Teachers**

Susanna Subirà Álvarez  
Ignasi Garrido Ribas

**Prerequisites**

The knowledge in the following subjects is given by assumptions: semiology in psychopathology, general evaluation

**Objectives and Contextualisation**

**AIMS:**

The general objective of this module is to examine in depth the biopsychosocial model.  
Specific aims:

- Evaluation and global formulation of the case.
- Evidence-based clinical practice guidelines for adult mental disorders.
- Biopsychosocial risk factors and maintenance factors in adult mental health.
- Specific assessment of risk factors and maintenance factors in adult mental health.
- Psychological treatment of risk factors and maintenance factors in adult mental health.
- Structured psychological treatment protocols

**Skills**

- Apply the principles of bioethics and the deliberation method to professional practice, in line with Law 44/2003, of 21 November, on organisation of the healthcare professions.
- Critically analyse and use clinical information sources.
- Design, develop and, where appropriate, supervise and evaluate psychological intervention programmes, on the basis of the psychological evaluation and the individual and social variables of each case.
- Formulate working hypotheses in research and critically assess information for problem-solving, using the scientific method.

- Integrate knowledge and use it to make judgements in complex situations, with incomplete information, while keeping in mind social and ethical responsibilities.
- Know in depth the biological and psychosocial factors associated with mental health problems and illness, especially those related to mental health.
- Know in depth the psychological nature of human behaviour, and the social and biological factors that can affect it.
- Know the framework for the activity of general health psychologists and be able to call in the corresponding specialists.
- Plan, carry out and, where appropriate, supervise the psychological evaluation of human behaviour and of the psychological factors associated with health problems, in order to evaluate the latter.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.

## Learning outcomes

1. Design individual treatment programmes for adults that include measures to prevent relapses.
2. Evaluate the effectiveness of psychological intervention in adults.
3. Formulate questions, objectives and research hypotheses appropriately for problem solving in the field of adult mental health.
4. Gather and analyse information consistently with the research objectives and hypotheses, and interpret the results obtained appropriately, acknowledging the impact on individuals and communities in the field of adult mental health.
5. Identify cases in the field of adults' mental health that call for the involvement of an appropriate specialist or healthcare unit, or for an interdisciplinary approach to be adopted, and describe the procedures to be applied.
6. Identify risk and protective factors regarding adult mental health problems from a gender perspective.
7. Identify the advances in knowledge of mental disorders in adults (definition and classification, epidemiological trends, causal processes and comorbidity).
8. Identify the most suitable research methods and designs for responding to a particular problem in the field of adult mental health.
9. Identify, choose and critically analyse the relevant clinical documents for professional activity in the field of children's mental health.
10. Integrate knowledge and use it to make judgements in complex situations, with incomplete information, while keeping in mind social and ethical responsibilities.
11. Integrate the information from the evaluation of mental disorders in adults to offer guidance on treatment that includes priority objectives.
12. Integrate the information from the evaluation so as to make diagnoses, including the differential diagnosis of mental disorders in adults.
13. Know ethically appropriate professional practice in mental health in depth, and identify cases of professional malpractice.
14. Know the clinical characteristics of adult mental disorders taking the gender perspective into account.
15. Know the evidence-based techniques, procedures and protocols for evaluating mental problems and disorders in adults.
16. Know the mechanisms of action and the impact of risk and protective factors in adult mental disorders.
17. Make a clinical judgment on the nature of adult mental disorders and report to the agents involved in accordance with professional practice.
18. Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.

## Content

Knowledge about:

1. Evaluation in mental health of adults. Interview and functional analysis
2. Formulation of the case, therapeutic objectives, planning of the treatment
3. Management of mental disorder. Complications in therapeutic intervention
4. Treatments based on evidence. The use of clinical guides
5. Motivational interview as a basic therapeutic tool (I)

6. Motivational interview as a basic therapeutic tool (II)
7. Risk Factors for the Development of Mental Disorders (I): stress and a
8. Risk Factors for the Development of Mental Disorders (II): emotional d
9. Risk factors for the development of mental disorders (III): perfectionism
10. Evaluation and treatment of the physiological involvement of mental c
11. Unified Protocol for Transdiagnostic Treatment for Emotional Disorder
12. Unified Protocol for Transdiagnostic Treatment for Emotional Disorder

## Methodology

Seminars for evaluation and intervention of psychological disorders. In these classes, the general approach of evaluation and intervention of psychological disorders. In these classes, the student has to study autonomously and apply the ABP seminars. In these classes, the student has to study autonomously and apply the ABP seminars.
