

**Research Perspectives in Science and Mathematics  
Education**

Code: 43928  
ECTS Credits: 6

Degree	Type	Year	Semester
4313815 Research in Education	OT	0	1

### Contact

Name: Núria Gorgorió Solà  
Email: Nuria.Gorgorio@uab.cat

### Use of languages

Principal working language: catalan (cat)

### Teachers

Jordi Deulofeu Piquet  
Mariona Espinet Blanch  
Digna Maria Couso Lagaron

### Prerequisites

there are no prerequisites

### Objectives and Contextualisation

The Research Perspectives in Science and Mathematics Education module is an introductory module to the specialty. It aims to bring students closer to the basic ideas of research in Didactics of Science and Mathematics.

Different themes will be addressed: the nature of science and mathematics; the aims of science and mathematics teaching; theories of science and mathematics learning; historical milestones in the construction and transformation of the character of science and mathematics education as scientific disciplines.

This module is compulsory for the specialty of Science and Mathematics Education and is optional for all other specialties and may be especially useful for students interested in environmental education research.

The module aims to get the student:

- . acquire a basic knowledge of the specificity of research in Science and Mathematics Education
- . learn to speak, read and write according to the area's own criteria;
- . identify the particular criteria of rigour in the field

### Skills

- Communicate and justify conclusions clearly and unambiguously to both specialised and non-specialised audiences.

- Communicate the research results, knowledge acquired and the implications for practice, and adapt the register to the public and formal protocols.
- Continue the learning process, to a large extent autonomously.
- Integrate knowledge and use it to make judgements in complex situations, with incomplete information, while keeping in mind social and ethical responsibilities.
- Plan research according to practice-related problems, taking into account theoretical advances in the field of knowledge.
- Recognise and relate the basic research principles in practical work for improvement in mathematic skill.
- Recognise and relate the basic research principles in practical work for improvement in scientific competence.
- Recognise and relate the theoretical, empirical and social aspects of the specific field of research.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use ICT in the research process, information search and management, data analysis and the dissemination and communication of results.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Work in teams and with teams in the same or interdisciplinary fields.

## Learning outcomes

1. Analyse the theoretical frameworks of reference in order to establish those that guide the research.
2. Apply basic research principles in practical work to the analysis of processes related to improving science skills.
3. Apply the basic principles of research into problem-solving to the analysis of teaching-learning situations that target the improvement of mathematical competence.
4. Communicate and justify conclusions clearly and unambiguously to both specialised and non-specialised audiences.
5. Continue the learning process, to a large extent autonomously.
6. Find and analyse theoretical references.
7. Identify methodological approaches and evaluate their adequacy to investigate problems related to scientific education, mathematical education and possibly the intersection between the two areas.
8. Identify practical problems in science education and mathematics education.
9. Identify research trends in science education and mathematics education, and trends that are emerging at the intersection between both.
10. Identify theoretical references and assess their adequacy to interpret distinctive problems of scientific education, mathematical education and study domains in the intersection of both areas.
11. Integrate knowledge and use it to make judgements in complex situations, with incomplete information, while keeping in mind social and ethical responsibilities.
12. Judge the importance and theoretical and social pertinence of a research problem or problems in science education and mathematics education.
13. Know the changes in the nature of science and mathematics and their resulting impact on science education and mathematics education.
14. Recognise the theoretical standpoints on science and mathematics teaching and learning when planning research in this area.
15. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
16. Understand the main aspects of the contexts of scientific education and mathematical education and analyze them as research objects.
17. Use ICT in the research process, information search and management, data analysis and the dissemination and communication of results.
18. Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
19. Work in teams and with teams in the same or interdisciplinary fields.
20. Write scientific summaries to be presented to different audiences.

## Content

En el módulo se abordarán las siguientes temáticas:

- introducción a la investigación en Didáctica de las Ciencias y en Didáctica de las Matemáticas;
- Planteamientos teórico y de fundamentación de la enseñanza y el aprendizaje de las ciencias y las matemáticas;
- Tendencias de investigación en Didáctica de las Ciencias y en Didáctica de las Matemáticas

## Methodology

The training activity will be developed from the following dynamics:

- Master classes / lectures by the teacher
- Reading of articles and documentary sources
- Collective analysis and discussion of articles and documentary sources
- Classroom practices: problem solving / case studies / exercises
- Presentation / oral presentation of papers
- Tutorials

## Activities

Title	Hours	ECTS	Learning outcomes
<b>Type: Directed</b>			
master classes and classroom practices	36	1.44	
<b>Type: Supervised</b>			
shared analysis and discussion of documents, presentation of works, tutorials	36	1.44	
<b>Type: Autonomous</b>			
reading papers	78	3.12	

## Evaluation

The score of the module will be the weighted average of the scores obtained in the evaluation activities, provided that each of them is equal to or greater than 4. The evaluation of each of the activities will be individual. Details of the evaluation activities and the delivery schedule, where applicable, will be presented during the development of the module.

## Evaluation activities

Title	Weighting	Hours	ECTS	Learning outcomes
Final work of the module: approach and justification of a research problem	40%	0	0	1, 6, 10, 9, 18
Participación reflexiva, recogida especialmente a través del forum posterior a las sesiones	30%	0	0	15, 2, 3, 4, 16, 7, 8, 17, 14, 20
Preparation of documents on fundamental readings	30%	0	0	13, 11, 12, 5, 19

## Bibliography

### BIBLIOGRAHPY

The teachers responsible for the different activities of the module will present the bibliography corresponding to each session.

Below is a list of books and journals compiling research and a list of the most important research publications in Science Education and Mathematics Education.

Research Composition Books and Journals:
