

Computer tools for mathematics

Code: 100091
ECTS Credits: 9

Degree	Type	Year	Semester
2500149 Mathematics	FB	1	A

Contact

Name: Aureli Alabert Romero
Email: Aureli.Alabert@uab.cat

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Other comments on languages

This document is an unsupervised translation. In case of discrepancy, the Catalan version shall prevail.

Teachers

Francesc Xavier Xarles Ribas
Jaume Coll Guerrero
Joaquim Roe Vellve

External teachers

Aureli Alabert Romero

Prerequisites

None.

Objectives and Contextualisation

Familiarize yourself with the use of an algebraic manipulator. This manipulator must become a common tool in the study of many other subjects.

Learn to structure and write scientific texts with the LaTeX typographic composition system.

Begin with computer programming, in the most relevant aspects of scientific computing.

Competences

- Actively demonstrate high concern for quality when defending or presenting the conclusions of ones work.

- Calculate and reproduce certain mathematical routines and processes with agility.
- Develop critical thinking and reasoning and know how to communicate it effectively, both in ones own languages and in a third language.
- Distinguish, when faced with a problem or situation, what is substantial from what is purely chance or circumstantial.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.
- Understand and use mathematical language.
- Use computer applications for statistical analysis, numeric and symbolic calculus, graphic display, optimisation or other purposes to experiment with Mathematics and solve problems.

Learning Outcomes

1. Actively demonstrate high concern for quality when defending or presenting the conclusions of ones work.
2. Be familiar with a symbolic computation program and be able to use it as a tool in other subjects.
3. Develop critical thinking and reasoning and know how to communicate it effectively, both in ones own languages and in a third language.
4. Know how to reproduce certain routines of simple mathematical processes in order to convert them into algorithms.
5. Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
6. Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.
7. Understand programming language and be able to program basic algorithms.
8. Use a scientific word processor and be able to use it to write mathematical texts.

Content

1. SAGE (3 credits).

Numeric and algebraic computations.

Graphs of functions.

Equation solving.

Vectors and matrices.

Funtions and programs.

Basic infinitesimal calculus.

Integers and congruencies.

Linera Algebra.

2. Typestting with LaTeX (1 credit).

LaTeX foundations.

Structure of the document.

Pictures. Definition of new commands.

Presentations with Beamer.

3. Programació en C (3 credits).

What is a program. Source code. Compilation.

Data and constant types. Operators.

Iterative, repetitive and conditional structures.

Functions, variables and pointers.

Vectors and matrices.

Character strings.

Dynamic memory management.

Input/Output. Formats and files.

Preprocessor and macros.

Parameters and output of the main() function.

4. Introduction to computer science (2 credits).

Algorithms.

Information coding.

Hardware.

Operating systems.

Languages and compilation.

Object Oriented Programming.

Methodology

In the first semester, there will be 12 practical sessions of two hours of class, in classrooms with computers. In the second semester, two types of sessions will be developed in parallel: 11 practical sessions in the computer room and 10 theoretical sessions in the ordinary classroom. The blogs of Sage, LaTeX and C language will be done in practical sessions exclusively; the one of Introduction to the Computing will be done in the theoretical sessions.

Students will be able to communicate with the teachers through the email, always sent from the institutional address @ e-campus.uab.cat. The teachers will communicate with a specific student via email to the institutional address, and with all students in general through the Moodle Classroom News and Notices Forum of the subject (which also sends automatic copy by mail electronic to everyone).

In all aspects of teaching / learning activities, the best efforts will be made by teachers and students to avoid language and situations that can be interpreted as sexist. In order to achieve continuous improvement in this topic, everyone should collaborate to show the deviations that you observe regarding this objective.

Activities

Title	Hours	ECTS	Learning Outcomes
-------	-------	------	-------------------

Type: Directed			
Practical lectures	46	1.84	7, 1, 3, 2, 6, 5, 4, 8
Theoretical lectures	20	0.8	1, 3, 6, 5, 4
Type: Autonomous			
C programming	60	2.4	7, 1, 3, 6, 5, 4
Preparation LATEX document	18	0.72	1, 6, 5, 8
Preparation exam Sage	38	1.52	2, 6, 5
Preparation exams Introduction to Informatics	25	1	6, 5, 4
Sage programming	10	0.4	1, 3, 2, 6, 5, 4

Assessment

The note of the continuous assessment will be based on the weighted average of:

S: The note of the Sage exam.

L: The note of the work of LaTeX.

C: The note of the Programming exam in C.

T: The note of the work of Programming in C.

I: The note on the Introduction to Computing exam.

The final mark of the continuous evaluation will be obtained by doing $(3S + L + C + 2T + 2I) / 9$.

To pass the course, you must:

Obtain a global average of 5 out of 10. (The averages from 4.8 will be assessed on a case by case basis.)

Obtain a minimum of 3.5 out of 10 on each and every one of the notes S, L, C, T, I.

From each one of the examinations there will be a second call to recover / improve the note. The delivery of this second exam will automatically annul the note of the first call. The works are NOT recoverable.

The student who has submitted works or exams for a total of at least 50% of the subject will be considered evaluable, according to the weight that appears in the formula of the final grade. Otherwise, it will appear in the Minutes as Non-Valuable.

The notes of the second call will not be taken into account for the allocation of Honor Matriculations.

VERY IMPORTANT: The evaluable works are individual. Copy or leave to copy in whole or in part a work that can be evaluated or an exam will be penalized with a zero as the final mark of the subject.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
C assignment	According to formula above	0	0	7, 1, 3, 6, 5, 4

Final exam	According to formula above	4	0.16	1, 3, 6, 5, 4
Latex assignment	According to formula above	0	0	1, 3, 6, 5, 8
Partial exam of Sage	According to formula above	0	0	1, 3, 2, 6, 5, 4
Partial exams of C	According to formula above	0	0	7, 1, 3, 6, 5, 4
Partial exams of Introduction to Informatics	According to formula above	4	0.16	1, 3, 6, 5, 4

Bibliography

During the course the essential material will be provided to follow it. As an additional material, we recommend:

SAGE. <http://www.sagemath.org/help.html>

Tobias Oetiker, Hubert Partl, Irene Hyna and Elisabeth Schlegl. The not so short introduction to LaTeX 2e. Tobi.oetiker.ch/lshort/lshort.pdf

CProgramming. <http://www.cprogramming.com/tutorial/c-tutorial.html> (The amount of tutorials on language C on the internet and in the form of a book is enormous, and in a variety of languages)

B.W. Kernighan, Ritchie, D.M., The C programming language. 2nd edition. 1988
