

**Stress and Health**

Code: 102594  
ECTS Credits: 6

Degree	Type	Year	Semester
2502443 Psychology	OT	4	1

**Contact**

Name: Tatiana Rovira Faixa  
Email: Tatiana.Rovira@uab.cat

**Use of Languages**

Principal working language: catalan (cat)  
Some groups entirely in English: No  
Some groups entirely in Catalan: Yes  
Some groups entirely in Spanish: No

**Other comments on languages**

Course materials and readings are mostly in spanish and/or english / Petitions of evidences 1 and 2 in spanish should be done

**Teachers**

Silvia Edo Izquierdo  
Jordi Fernández Castro  
Guillermo Parra Lorenzo

**Prerequisites**

**Objectives and Contextualisation**

The objectives of the course are:

Acquiring an expert knowledge on stress and its relationship with health.  
Knowing how to identify contextual and individual triggers of the stress process.  
Gaining skills for assessing stress and its impact on wellbeing and health.  
Knowing how to classify different types of coping strategies, and analyze their efficiency on different contexts.  
Distinguishing which research method, among the ones used on stress field, suits to the research objective.  
To develop skills on stress and emotions management.  
Having the ability to assess positive versus negative attitudes towards stress and health.

**Competences**

- Apply techniques to collect and produce information about the functioning of individuals, groups and organisations in context.
- Communicate efficiently, using the appropriate media (oral, written or audio-visual) taking into account diversity and all elements that may ease communication or make it more difficult.

- Criticise the effects of personal practice on people, taking into account the complexity of human diversity.
- Identify and recognise the different methods for assessment and diagnosis in the different areas applied to psychology.
- Recognise the determinants and risk factors for health and also the interaction between people and their physical and social environment.
- Use adequate tools for communication.
- Work in a team.

## Learning Outcomes

1. Apply assessment techniques in health psychology.
2. Criticise the effects of personal practice on people, taking into account the complexity of human diversity.
3. Describe the models and contributions of biomedical and bio psychosocial perspectives to an understanding of health.
4. Identify different assessment instruments and strategies in health psychology.
5. Identify the main psychological determinants affecting the development of health problems and ways of tackling them.
6. Recognise the basics of emotional communication.
7. Use adequate tools for communication.
8. Work in a team.

## Content

1. Stress: the concept.

Historical perspectives. Definition. Explicative models.

2. Stress models: contextual approach.

Prediction, control and conflict. Contextual models of work stress.

3. Stress models: transactional approach.

Primary and secondary appraisal. Coping strategies.

4. Why people react differently to stress?

Personality. Optimism and personal competence. Social support.

5. Stress' influence on health and disease.

Physiological dynamics. Methodological designs. Stress and cardiovascular system. Stress and immunological system.

6. Stress and cognition.

Anxiety, depression and positive emotions. Attention, perception, memory and thinking.

7. Stress and wellbeing.

Quality of life. Posttraumatic growth. Burnout.

8. Stress and emotions management.

Relaxation techniques, breathing, imagination, and full's consciousness. Stress episodes analysis, commitments and values clarification, active coping and worry control. Personal growth and cognitive restructuration. Problem solving.

## Methodology

The teaching methodology (group 1/1) will combine conferences and exercises that will help the students to integrate the acquired knowledge. Activities in classroom practical sessions (group 1/2) will be done to improve

skills in the analysis and application of knowledge. Before each conference, and each classroom practical session, students will be required to do a previous reading and/or assignment to be worked in class.

In specialized seminar, topic 8 will be developed, simulating a stress management workshop with the students as participants. Between sessions, students will deliver exercises, where the content developed in the corresponding session should be applied to everyday life.

There is also a supervised group work. In this work, students must conduct an interview to someone experiencing a potentially stressful situation, and they will write a report analyzing the case and making specific recommendations. The preparation of the interview (profile of the person interviewed, interview guidelines...) will be guided through classroom indications and follow-up tutorials. Finally, some of the cases will be exposed and discussed in class.

## Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Activities and exercises (group 1/2)	8	0.32	3, 4, 5, 7
Conferences (group 1/1)	16	0.64	3, 4, 5
Stress management seminars (group 1/4)	12	0.48	1, 2, 6
Type: Supervised			
Individual tutoring	2	0.08	3, 5
Tutoring group work	4	0.16	5, 7
Type: Autonomous			
Exercises	12	0.48	3, 4, 5
Group work	15	0.6	5, 8
Reading	20	0.8	1, 3, 4, 5
Study	58	2.32	1, 3, 4, 5

## Assessment

The assessment guidelines of the faculty are accessible at:

<https://www.uab.cat/web/estudiar/graus/graus/avaluacions-1345722525858.html>

Ev1 and Ev2: There will be two written synthesis' tests (one on each week of assessment). The Ev1 has a weight of 35% on the final grade, and assess knowledge on topics 1, 2, 3 and 4. The Ev2 has a weight of 30% on the final grade, and assess knowledge on topics 5, 6 and 7. Tests include open questions of short answer, both theoretical and of application to cases and examples.

Ev3: The exercises done on practical work sessions allow obtaining up to a 10% of the grade.

Ev4: The assessment of the competences acquired through the supervised work represents a 10% of the final grade, as a result of the written group report (delivered in a date between the weeks 12 and 14), the oral session of exposition and / or discussion (week 15 or 16 according to the registration group), and the follow-up (preparation of the interview script, between weeks 9 and 12).

Ev5: The overall assessment of the exercises carried out and delivered between the specialized seminar sessions (workshops) as well as the follow-up of the sessions, will contribute on a 15% to the final grade. This evidence will only be included on final grade if student have attended at least 50% of the sessions.

After the first synthesis test (Ev1), a general return will be done to the class, and tutorials will be scheduled for review, under request. After the second synthesis test (Ev2), a revision session will be programmed, which can also be used to review classroom practice exercises (Ev3), supervised work (Ev4) and evidence from specialized seminars (Ev5). Once each review period closed, the qualification will be deemed final.

NOT ASSESSED: Those students who have done evidence with a weight of less than 40% of the final grade will be "Not assessed."

PASS: When the final weighted sum of all the evidences is equal to or greater than 5.

RESIT: When the weighted sum of the evidences does not reach a value of 5, those who have completed at least evidences 1 and 2 will be eligible for resit. The resit will consist of a test equivalent to those evidences not passed, excluding evidences of supervised work (Ev4), and specialized stress management seminars (Ev5). The grade in the resit test will replace the corresponding evidence, and the final grade will be the result of the new weighted sum.

## Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Ev1 i Ev2. Synthesis' tests	65% (35% Ev1; 30% Ev2)	3	0.12	3, 4, 5
Ev3. Practical sessions exercises	10%	0	0	4, 5
Ev4. Supervised work (written report, exposition and/or discussion, follow-up)	10%	0	0	4, 6, 8, 7
Ev5. Stress' management seminars	15%	0	0	1, 2, 6, 8, 7
