

Theories of Regional Planning

Code: 104243
ECTS Credits: 6

Degree	Type	Year	Semester
2503710 Geography, Environmental Management and Spatial Planning	OB	2	1

Contact

Name: Asunción Blanco Romero
Email: Asuncion.Blanco@uab.cat

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

External teachers

Maria Buhigas Sanjosé

Prerequisites

There are no prerequisites

Objectives and Contextualisation

Regional planning is one of the three modalities of physical planning and regulation that intervenes in any territory. A modality that had traditionally been little developed in our reality and that has been taking a greater role in the last decades impelled, on the one hand, by the Generalitat of Catalonia - with the development of the of Regional Planning Programme approved in 2004 - and on the other hand, by the conditions of the territory itself - with the consolidation of the metropolitan areas and regions.

The three main goals of the course are:

- To introduce the main concepts, tools and contents of regional planning and its alignment with other planning modalities, such as the urban and the sectoral planning.
- To deconstruct and analyse the physical planning process (in particular regional and urban planning) and how decision-making process influences on its outcomes.
- To explore current regional and urban plans in Catalonia mainly and in other European and Latin American realities, in general.

Competences

- Critically analyse the relationship between society and the region applying the conceptual and theoretical framework of geography.
- Integrate the different social and environmental disciplines with a view to describing and interpreting the spatial dynamics linked to social, economic and environmental change.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.

Learning Outcomes

1. Differentiate between different urban and regional planning proposals drawn up in different disciplines.
2. Identify the main theoretical concepts of regional studies.
3. Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.

Content

The subject's course will be taught according to the following agenda:

Block 1: Planning in Theory.

- The basics: the plan, planning modalities, elements and criteria.
- Modalities of physical planning:
- Regional planning: concepts, elements, criteria and instruments.
- Urban planning: concepts, elements, criteria and instruments.

Block 2: Planning in practice - Decision-making process.

- Stakeholders involved in the planning process - in the territorial and urban planning.
- Case study:
 - Decision making models: schools of thought and debates.
 - From planning towards implementation of the plan (constraints and uncertainties).
 - Monitoring and evaluation.

Methodology

The course aims to approach and to show simultaneously the two dimensions embedded in planning: the theoretical and the practical. To make this double look possible there would be two kinds of sessions:

- theoretical sessions, accompanied by readings that the student must prepare in advance to comment in class. This part will allow introducing a common and shared base knowledge for the whole group, a basic bibliography of reference and the state of the art of the most current debates.
- workshop sessions, based on the study of specific cases which will be announced and distributed at the beginning of the course). These cases will be presented in class by the teacher and the students - by groups of 3 - along the course to monitor and build up the final report.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Debates	4	0.16	1, 2
Oral exposition by the students (study cases)	12	0.48	1, 2
Theoretical sessions	30	1.2	1, 2
Type: Supervised			
Tutorial	4	0.16	2
Type: Autonomous			
Readings and personal work	21	0.84	2

Assessment

The course's final grade will essentially be based on the following three components:

- *Written individual work documents that represent 50% of the final grade.*

Between 5 and 8 exercises would be proposed along the course (a summary of reading articles, a short essay regarding an ongoing debate or an issue raised in class, a small intervention on a specific concept discussed in class, etc.). Written quality, ability to concretise and synthesize arguments and argumentation capacity will be valued.

- *Group case study work that represents 40% of the final grade.*

At the beginning of the course, a case study would be proposed for each group (groups of 3 students) and an outline of the contents that will be developed and worked throughout the whole period. The presentations in class of the different parts of the research paper and the partial deliveries will build the final grade. All group members must demonstrate equal work and commitment towards the teamwork.

- *Attendance and active participation in class that represents 10% of the final grade.*

Attendance at all classes is mandatory. In exceptional cases of missing a class, the student would submit an acceptable justification in writing.

Qualification's requirements:

- a) Having passed written individual work documents with a minimum average grade of 5.
- b) Have submitted the case study work with a minimum grade of 5.

Both previous grades will not average between them to pass the subject. Therefore, you must have a minimum grade of 5 in both jobs (individual documents and case work in groups).

- c) Have participated regularly in the classes.

Grade's review:

- a) The exams and works to review the final grade would be indicated in due time.
- b) To qualify for review, you must have participated in the evaluation tests and delivered the materials of the practices in the manner that will be indicated in due time.
- c) The maximum grade that can be obtained in the review process is 5.

Not eligible students:

According to UAB regulations, in order to participate in the recovery process, a minimum grade in the average of the subject must have been obtained. This rating will equal or exceed 3.5. (These conditions are adapted to the regulations on the evaluation of the UAB in Article 112. The recovery http://www.uab.cat/doc/Modificacio_normativa_academica_CG120717).

Plagiarism

The copying or plagiarism of material, both in the case of works and in the case of exams, constitute a crime that will be sanctioned with a zero to the activity. In the case of recidivism, the entire subject will be suspended. Let's remember that a "copy" is considered a work that reproduces all or most of the work of one or the other

company / a. "Plagiarism" is the fact of presenting all or part of a text of an author as its own, without mentioning the sources, be on paper or in digital format. See UAB documentation on "plagiarism" at: http://wuster.uab.es/web_argumenta_obert/unit_20/sot_2_01.html.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Attendance and active participation in class	10%	10	0.4	1, 2, 3
Group case study work	40%	4	0.16	3
Written individual work documents	50%	5	0.2	1, 2, 3
