Use of Languages

Principal working language: catalan (cat)

Some groups entirely in English: No

Some groups entirely in Catalan: Yes

Some groups entirely in Spanish: No

Teachers

Laura Moya Prados

Carolina Nieva Boza

Prerequisites

The subject of: Didactics of the Corporal Education in Childhood Education or Corporal Education and Psicomotor in the Centers of Childhood Education I of 3rd degree of Childhood Education Degree, is previous to the one of Corporal Education and Psicomotor in the centers of Childhood Education Degree II. Be warned that you must have met their objectives and skills before attending this course 4th.

Objectives and Contextualisation

This subject of 4th year is complemented with one of Didactics of the Body Education in Childhood Education or Body Education and Psychomotor I of 3rd degree.

Aim goal: To provide future teachers of Early Childhood Education with the necessary tools to teach Psychomotor Education within the framework of the school institution.

Specific objectives:

Value the body of the teacher and the child as a means of expression, learning and development.

Identify the theoretical framework of psychomotor education in the stage of 0 to 6 years.

Investigate the observation and analysis of children's psychomotor behavior.

Analyze different practical proposals of psychomotor education in the school environment.

Develop intervention proposals, as well as strategies and resources of psychomotor practice.

Establish a system of attitudes as an teacher that adapts the needs of children.

Reflect on the role of psychomotor education in the general framework of the school.

Competences

- Be familiar with the music, plastics and body language curriculum at this stage as well as theories on the acquisition and development of the corresponding learning.
- Critically analyse personal work and use resources for professional development.
- Develop educational proposals that promote perception and musical expression, motor skills, drawing and creativity.
- Develop strategies for autonomous learning.
- Express other languages and use them for educational purposes: corporal, musical, audiovisual.
- Identifying disorders in sleep, feeding, psychomotor development, attention and auditory and visual perception.
- Promote and facilitate early infant learning, from a global and integrative perspective of different cognitive, emotional, psychomotor and developmental dimensions.
- Promote the autonomy and uniqueness of each pupil as factors of education in emotions, feelings and values in early childhood.
- Understand how to use play as a didactic resource and design learning activities based on the principles of play.
- Work in teams and with teams (in the same field or interdisciplinary).

Learning Outcomes

1. Critically analyse personal work through self-evaluation processes.
2. Design, apply and evaluate a learning sequence that respects the globality and uniqueness of each child.
3. Identifying disorders in psychomotor development.
4. Know the basics of the corporal expression curriculum at this stage as well as theories on the acquisition and development of relevant learning.
5. Preparing work sessions for colleagues, applying the learning acquired, meaningfully and autonomously.
6. Preparing work sessions with colleagues and for colleagues, applying the acquired learning.
7. Produce educational proposals that promote perception, motor skills and creativity.
8. Produce educational proposals that promote the perception and expression of motor skills and creativity, using other languages such as music and plastics.
9. Recognising the identity of the stage and its cognitive, psychomotor, communicative, social and emotional characteristics.
10. Understand the psychomotor development approach in the pre-primary education curriculum.
11. Use play as a teaching resource, as well as designing learning activities based on principles of play.
12. Using different languages (body, music and audio-visual) to express the learning acquired in the subject.
13. Working as a team using body work sessions.

Content

1. Psychomotor Education in Early Childhood Education
2. Didactics of Psychomotor Education in Early Childhood Education
3. Neuromotor components
4. Motorperceptive components

Methodology

Student is the main character in the learning teaching process and under this premise the methodology of this subject has been planned.

Mostly, dynamics will be used, starting with the conceptual and theoretical basis with the whole class group, we will analyze and discuss their application to Pre-school Education in seminars and practical sessions with small groups.

The formative activities of this subject can be directed, supervised and autonomous:

- Directed activities are conducted by the teacher or by the students themselves, and they are carried out in the spaces of the Faculty. They can be either classes with the whole big group, or seminars and group practice sessions in a small group. The classes with the whole group are based on exhibitions of the contents and basic issues of the subject. Seminars and practical sessions are work spaces to go into detail, analyze, contrast, debate, live, reflect and assess the contents of the subject. The seminars are carried out through activities such as: case study, videos, material analysis, dynamic groups, problem solving, own experience, discussion-debates, etc. Practical sessions are carried out through the body's own experience, the training and reflection that this entails, and the realization of a practical session by both its colleagues in the Faculty and a group of children. Seminars and practical sessions are obligatory assistance and students will be assigned to one of the programmed groups so that students must always attend the same seminar and be equally distributed, having the most similar number of students each.
- Supervised Activities by the teacher outside the classroom include the set of individual and group tutorials, physical and virtual, which should serve to accompany the student in his learning process by guiding activities, solving difficulties and supervising the follow-up of his evidence of learning
- Self-employed work is carried out by the student independently to develop skills and achieve the goals of this subject.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Master class (In person)	12	0.48	10, 8, 3, 9
Seminars and sessions of Laboratory Practice in a small group	18	0.72	1, 13, 11
Type: Supervised			
Tutoring and accompaniment	20	0.8	1, 2, 5, 13
Type: Autonomous			
Autonomous student work	50	2	1, 10, 2, 8, 3, 5, 13, 9, 11

Assessment

The assessment to pass the course will be continue, formative and shared.

Students have to assistance the minimum assistance to 80% of the dep of seminar and practical laboratory, independent of the reasons that can produce these absences (notes that present only can explain this absence, in any case will be an exempt of this presence). It is even more to go to master class to establish the relationship between the theory and practices and for the possibility of asking for evidence of learning in them. Another prerequisite for approving the subject is to have delivered the documentation of the session of Psychomotricity of the PAPCo-T (psychomotor Learning Project Co-Tutorate) to school as a late, during the first week of February.

In order to pass the course, each of the 3 areas of assessment activities of the subject must be approved. It is also absolutely necessary to demonstrate an attitude compatible with the teaching profession: active listening,

respect, participation, cooperation, empathy, kindness, punctuality, not judging, arguing, appropriate use of electronic devices (mobile, Computer, etc.). It is also imperative that the student demonstrate that he is responsible and rigorous in the self-employment, actively participating in the classes, showing critical thinking and behaviours that favour a friendly and positive, democratic environment and where the differences of gender, culture, etc. In addition, specifically to the practical sessions, it is necessary to come dressed in sportswear that allows to execute all the proposed activities and show a willingness and active participation. It should be treated with care and respect all the equipment of the gym, leaving it in perfect condition and ordered after use. If a rejection is generated, each group is responsible for carrying it directly to the outside containers at the end of the class.

At the same time, the student must show a good general communication competence, both orally and in writing, a good command of the language or vehicular languages that appear in the educational guide, and can be expressed fluently and proofed.

The activity of synthesis of the learning process and the self-assessment reports will be given the last week of class (16 and 17 December). The project of psychomotor learning Co-Tutorizado consists of 3 subactivities of assessment so that the exhibition of contents will evaluate the 28 and 29 of October, the practical academic practice the 4-5-11-12-18-19-25-26 of November and 2 and 3 of December, and the exhibition and presentation of the project and its documentation on 9-10-16 and 17 December. The revision-final recovery of the course will be held on 27 and 28 January (students who choose this pathway may only have a final grade of 5 of the course). The dates of Monday belong to the group 61 and the of Tuesday to the group 62.

The qualifications of each of the evidence of assessment will be communicated in a period not exceeding 4 weeks after its freely. The student who wishes to revise the note, must do so within 15 days after his communication in the tutorials schedule that the teacher has established in this subject and which is entered in the program of the same.

The qualifications of the activities carried out in small groups are considered individual, so that not necessarily all the components of the group must be evaluated with the same qualification.

Copy and plagiarism are intellectual robberies and, therefore, constitute a crime that will be sanctioned with a zero in the whole subject losing the possibility of recovering it if it is an individual or group work (in this case all members of the group will have a 0). In the case of copying between two students, if it is not possible to know who copied from who, the sanction will apply to both. We want to remember that it is considered "copying" a work that reproduces all or a significant portion of the work of one or the other student. "Plagiarism" is the fact of presenting all or part of a text by an author as his own, that is, without quoting the sources, regardless of whether the original sources are on paper or in digital format. More information on plagiarism in:

http://wuster.uab.es/web_argumenta_obert/unit_20/sot_2_01.html

Before delivering evidence of learning, it is necessary to verify that the sources, notes, textual quotations and bibliographic references have been correctly written in accordance with APA regulations of the UAB:
