

Projects in IoT for eHealth

Code: 44021
ECTS Credits: 6

Degree	Type	Year	Semester
4316624 Internet of Things for e-Health	OB	0	1

Contact

Name: Jordi Carrabina Bordoll
Email: Jordi.Carrabina@uab.cat

Use of Languages

Principal working language: english (eng)

Teachers

Ferran Torres
Maria Feijoo Cid
Nina Granel Gimenez
David Téllez Velasco
Juan Leyva Galera

Prerequisites

MOdules 1 & 2 of the Master

Objectives and Contextualisation

This module focuses on the design, development and management of ICT projects in health in the range of applications spanning the active health monitored by devices IoT master in accordance with the standards and models of the health domain both international and local, including qualitative and quantitative aspects related to research and the multidisciplinary teams and in compliance with the ethical and legal aspects, specially those related with the users and patients.

Competences

- Apply basic research tools in the area of IoT in health.
- Apply the ethical rules applicable in the health sector.
- Apply the local, autonomic, national and international regulations in the area of IoT in health.
- Continue the learning process, to a large extent autonomously.
- Identify care procedures in the health system and the factors for their digital transformation to a more efficient model for professionals and patients.
- Integrate knowledge and use it to make judgements in complex situations, with incomplete information, while keeping in mind social and ethical responsibilities.
- Plan, develop, evaluate and manage solution for projects in the different areas of IoT taking into account aspects of multidisciplinary co-design, user privacy and data security.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use ICT applied to IoT in health.

- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.

Learning Outcomes

1. Apply basic research tools in the area of IoT in health.
2. Apply the local, autonomic, national and international regulations in the area of IoT in health.
3. Continue the learning process, to a large extent autonomously.
4. Design subsystems or systems generating products that meet standards and regulations and be familiar with related procedures and their evaluation.
5. Identify the healthcare procedures within the health system in its distinct ambits and implement these totally or partially through IoT technologies in an efficient manner.
6. Integrate knowledge and use it to make judgements in complex situations, with incomplete information, while keeping in mind social and ethical responsibilities.
7. Select the most suitable components, technologies, platforms and data sets to develop solutions to health IoT problems.
8. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
9. Use ICT applied to IoT in health.
10. Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.

Content

Examples of ICT projects and technologies (Invited Companies/Entities)

Methodology

The learning methodology will combine: classes exhibition activities in tutored session based learning problems and use cases participation in follow-up to prepare oral presentation/exhibition of works works Personal study.

Attendance will be mandatory for all face-to-face activities.

This course will employ UAB's virtual campus at <https://cv.uab.cat>.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Lessons and Seminars	45	1.8	2, 1, 4, 5, 3, 9
Type: Supervised			
Use Case Exercices & TFM	14	0.56	1, 4, 5, 8, 7
Type: Autonomous			
Study, Homework, TFM Project Plan	90	3.6	2, 4, 5, 8, 3, 7, 9

Assessment

The final mark for the course, is calculated in the following way:

A - 10% from the mark obtained by the student for class attendance and active participation in class discussions.

B - 50% from the mark obtained by the exercise and work reports.

C - 40% of the mark obtained by the student for an oral defense of the TFM project proposal

A final weighted average mark not lower than 50% is sufficient to pass the course, provided that a score over one third of the range is attained in everyone of the 3 mark.

Plagiarism will not be tolerated. All students involved in a plagiarism activity will be failed automatically. A final mark no higher than 30% will be assigned.

An student not having achieved a sufficient final weighted average mark, may opt to apply for remedial activities the subject under the following conditions:

- the student must have participated in the problem-based learning activities, and
- the student must have participated in the oral defense, and
- the student must have a final weighted average higher than 35%, and
- the student must not have failed any activity due to plagiarism.

Students not having participated in any evaluation activity will receive a final mark of "No evaluable".

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Attendance and active participation in class	10	0	0	2, 1, 5, 3, 9
Evaluation of the Work/Project Report	50	0	0	2, 4, 5, 8, 7, 9
Oral defense of the work(s)/project(s) carried out	40	1	0.04	2, 1, 4, 6, 8, 7, 10, 9
