

Separation and Purification Processes

Code: 100959
ECTS Credits: 6

Degree	Type	Year	Semester
2500253 Biotechnology	OB	3	1

The proposed teaching and assessment methodology that appear in the guide may be subject to changes as a result of the restrictions to face-to-face class attendance imposed by the health authorities.

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Prerequisites

It is recommended to have the foundations of bioprocess engineering achieved

Objectives and Contextualisation

The study of the different separation processes used in biotechnology, its theoretical basis, the dimensioning of the equipment and the development of the strategies and the sequences to be applied according to the product to obtain.

Competences

- Design and implement a complete protocol for obtaining and purifying a biotechnological product.
- Learn new knowledge and techniques autonomously.
- Read specialised texts both in English and ones own language.
- Reason in a critical manner
- Search for and manage information from various sources.
- Use ICT for communication, information searching, data processing and calculations.
- Use the fundamental principles of mathematics, physics and chemistry to understand, develop and evaluate a biotechnological process.
- Work individually and in teams

Learning Outcomes

1. Describe the various processes of separation at different scales.
2. Design and execute a protocol for purifying a biotechnological product.
3. Learn new knowledge and techniques autonomously.
4. Read specialised texts both in English and ones own language.
5. Reason in a critical manner
6. Search for and manage information from various sources.
7. Solve problems in different key aspects of bioindustrial processes.
8. Use ICT for communication, information searching, data processing and calculations.

9. Work individually and in teams

Content

1. Introduction.
2. Filtration.
3. Centrifugation and sedimentation.
4. Cell disruption.
5. Liquid-liquid extraction.
6. Adsorption.
7. Chromatography.
8. Membrane separation processes.
9. Precipitation.
10. Crystallization.
11. Drying.

Methodology

Theoretical lectures:

The basic concepts of the syllabus will be introduced. Whenever possible, audiovisual and interactive material to help understand concepts will be used. This material will be available in Moodle before the theoretical sessions are held

Practical exercises:

The teacher and the students will solve problems related to the subject exposed in the theory classes. The problems will be proposed by the teacher from the proposed problems available in a collection of exercises available in Moodle. The latter will also allow autonomous student learning through the autonomous resolution of exercises out of the seminar sessions.

Tutorials:

Individual sessions or small groups for the resolution of doubts related to the subject.

Homework:

Knowledge will be achieved through autonomous learning by students based on literature searches and the realization of a homework in group

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Practical exercises	15	0.6	8, 6, 2, 7
Theoretical lectures	30	1.2	6, 1, 2, 4
Type: Supervised			

Seminars	5	0.2	8, 6, 1, 2, 4, 7
Solving practical exercises and correction	18	0.72	8, 6, 2, 7
homeworks	15	0.6	8, 6, 1, 2, 4, 7
Type: Autonomous			
Resolution of practical exercises	21	0.84	8, 6, 2, 7
Studi	33	1.32	8, 6, 1, 2, 4, 7
Tutories	4	0.16	7

Assessment

A) Continuous evaluation:

- Three partial exams that will count 85% of the final mark
- A group homework that will count 15% of the final mark

The scheduling of the assessment activities will be given on the first day of the subject and will be made public through the web of the faculty of biosciences.

B) Recovery test:

The student can submit to recovery test whenever it has been presented to a set of activities that represent a minimum of two thirds of the total grade of the subject. Of these, students who have an average qualification of all the activities of the subject superior to 3,5 on 10 will be able to present to the recovery final test.

C) Procedure for the revision of the qualifications:

For each assessment activity, a place, date and time of revision will be indicated in which the student will be able to review the activity with the teacher. In this context, claims can be made about the activity note, which will be evaluated by the teachers responsible for the subject. If the student does not submit to this review, this activity will not be reviewed later.

D) Qualifications:

The MH qualification is a decision of the lecturers responsible for the subject. The regulations of the UAB indicate that MH can only be awarded to students who have obtained a final grade of 9.00 or more. It can be granted up to 5% of MH of the total students enrolled.

A student will be considered non-evaluable (NA) if it has not been presented in a set of activities whose weight equals to a minimum of two thirds of the total grade of the subject.

E) Irregularities by the student, copy and plagiarism:

without prejudice to other disciplinary measures considered appropriate, the irregularities committed by the student that can lead to a variation in the rating of an evaluation act will be qualified with a zero. Therefore, copying, plagiarizing, cheating, copying, etc. in any of the assessment activities it will imply suspending it with a zero. Assessment activities qualified in this way and by this procedure will not be recoverable. If it is necessary to pass any of these assessment activities to pass the subject, this subject will be suspended directly, without opportunity to retake it in the same course.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Homework	15% of final mark	0	0	3, 8, 6, 4, 5, 7, 9
Three partial exams	85% of final mark	9	0.36	1, 2, 5, 7
