

Corporate Software Project Management

Code: 102175
ECTS Credits: 6

Degree	Type	Year	Semester
2501232 Business and Information Technology	OT	4	0

The proposed teaching and assessment methodology that appear in the guide may be subject to changes as a result of the restrictions to face-to-face class attendance imposed by the health authorities.

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Teachers

Jaume Subiras Pugibet

Prerequisites

Although there are no specific prerequisites for this course, it is advisable to have previously completed most subjects of the first three degree years, and, most particularly, Technology Innovation Projects in the sixth semester. It is one of the electives that can lead to a mention in the fourth year, and therefore its content relates directly to the last formative stage of the degree.

Objectives and Contextualisation

Corporate software development projects are not isolated projects. They are inserted in rich, changing, competitive business environments. Frequently these projects are a core part of the management of the firm, having a large impact on their perceived income.

The process of creation of corporate software is a complex one. It requires a broad base of knowledge and skills to successfully analyze, design, program, test and implement a given project. Both psychological and economic management are essential.

The aim of this course is therefore to present corporate software development projects and the processes needed to carry them out successfully.

The process of creation of corporate software is based not only on the life cycle theory, but also in the proper management of suppliers and contracts. The course includes the most relevant methodologies for developing corporate software. However, the major focus of the course is on the business aspects of corporate software development, with special attention to information systems planning and management on the part of the teams, taking into account its business environment.

After completing the course students will be able to analyze the fundamentals of corporate software development, taking into account actors (stakeholders), processes involved and project objectives. They will also be able to correctly define its scope, make risk analysis and prepare documentation for a good bid. Additionally, they would have the basic knowledge to be able to manage suppliers and subcontractors.

Competences

- Appropriately drawing up technical reports according to the customer's demands.
- Communicating with experts of other fields and non-experts.
- Developing in an effective way the analysis and design techniques and methodologies of information systems in a business environment.
- Developing self-learning strategies.
- Effectively applying techniques and methodologies of analysis and design of information systems to the determination of the specific requirements of an organisation and to their translation into a computing solution, understanding the difficulties and suitability of the implementation.
- Students must be capable of searching and analysing information of different sources.
- Working in teams, sharing knowledge and communicating it to the rest of the team and the organisation.

Learning Outcomes

1. Applying the methodologies of analysis of information systems to the determining of the specific requirements of an organisation and its effective design.
2. Appropriately drawing up technical reports according to the customer's demands.
3. Communicating with experts of other fields and non-experts.
4. Developing self-learning strategies.
5. Effectively applying techniques and methodologies of analysis and design of information systems to the determination of the specific requirements of an organisation and to their translation into a computing solution, understanding the difficulties and suitability of the implementation.
6. Students must be capable of searching and analysing information of different sources.
7. Working in teams, sharing knowledge and communicating it to the rest of the team and the organisation.

Content

The course will be developed around five units, as detailed below.

Unit 1. Development of Information Systems in Organizations

The unit provides an approximation to the peculiarities of IS in business organizations. It develops a number of general aspects which will be used to start the course and to describe the characteristics and complexity of the subject. Some of the points to be developed include: Developing a Plan for Information Systems; Risk in implementing ICT; dilemmas between buying and building software applications; aspects of outsourcing.

Unit 2. Systems Development Life Cycle

This unit introduces the basic methodologies for the development of software applications. The aim is to know and understand a number of clearly defined and distinct work phases that have to be performed, starting from the conceptualization of a business need, and until the required software is in place providing service to users. Given the orientation of the course, the main aspects to be considered are Software Requirements Specification and Functional Analysis; other stages will be stated and discussed superficially.

Unit 3. ICT Project Management

In continuity with the preceding third-year course, Technological Innovation Projects, the unit shall analyze the peculiarities of project management in information technology. Although developing software is an engineering task, as shown in the previous unit, there is also a need to define and use a project management methodology.

The unit will therefore cover topics such as organization and roles of the team, risk management, project management offices. It will also discuss the general aspects to be considered in the tender of ICT projects.

Unit 4. Models of Quality Management in Software Development.

As important as delivering a project on time is its appropriate product quality. In the unit various models such as ISO, CMMI, among others, will be discussed. Furthermore, security issues in the development and implementation of software will also be considered.

Unit 5. Innovative Technologies

As a final unit, some alternative development methods aiming to reduce time-to-market in delivering software products, such as Agile, SCRUM and others, will be presented. Similarly, methodologies aimed at the development of web and mobile applications will also be discussed.

Methodology

Learning will be based on theoretical classes, case development and study and drafting on various teamwork assignments during the course.

Within the course lectures, the case methodology will be used as a teaching tool, with the participation of students.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Classroom problems	10	0.4	5, 1
Development of Case studies	20	0.8	5, 1, 3, 6, 7
Theoretical classes	15	0.6	5, 1
Type: Supervised			
Tutorials	14	0.56	5, 1, 6
Type: Autonomous			
Individual work	50	2	5, 1, 4, 6, 7
Preparation of study cases, teamwork and oral presentations	38	1.52	5, 1, 6, 7

Assessment

Assessment will take into account the following items:

- Problem-based learning exercise(s), teamwork and classroom presentation of the results.
- Individual tests and practical cases and teamwork, plus a subjective evaluation by the teacher based on his/her perception of the participation and implication of the student in the subject throughout the course.
- Final written exam on relevant concepts and aspects of the course

Evaluation criteria

Each of the assessment items has a different weight to the final grade of the subject. The final grade of the subject is obtained from the following calculation:

$$N = 60\% \text{ (work done during the course)} + 40\% \text{ (final test)}$$

The value of N will only be calculated if the student has scored a minimum of 4.5 points out of 10 in each of the two items. In this case, the student passes the course whenever $N \geq 5$, fails if $N < 3.5$ and can enter the retake process otherwise.

The marks obtained from teamwork during the course will always be on an individual level, and not necessarily coincide with the grade of the work itself, since individual aspects such as the students' participation in the resolution and its defense will also be considered.

A student having not participated in any of the assessment activities will be considered "Not evaluable".

Calendar of evaluation activities

The dates of the evaluation activities (exercises, assignments ...) will be announced well in advance during the semester.

The dates of the final exam is scheduled in the assessment calendar of the Faculty.

"The dates of evaluation activities cannot be modified, unless there is an exceptional and duly justified reason why an evaluation activity cannot be carried out. In this case, the degree coordinator will contact both the teaching staff and the affected student, and a new date will be scheduled within the same academic period to make up for the missed evaluation activity." **Section 1 of Article 115. Calendar of evaluation activities (Academic Regulations UAB).** Students of the Faculty of Economics and Business, who in accordance with the previous paragraph need to change an evaluation activity date must process the request by filling out an Application for exams' reschedule at https://eformularis.uab.cat/group/deganat_feie/application-for-exams-reschedule

Grade revision process

After all grading activities have ended students will be informed of the date and way in which the course grades will be published. Students will be also be informed of the procedure, place, date and time of grade revision following University regulations.

Retake Process

"To be eligible to participate in the retake process, it is required for students to have been previously been evaluated for at least two thirds of the total evaluation activities of the subject." Section 3 of Article 112 ter. The recovery (UAB Academic Regulations). Additionally, it is required that the student achieves an average grade of the subject between 3.5 and 4.9.

The date of the retake exam is posted in the calendar of evaluation activities of the Faculty. Students taking this exam and passing will get a grade of 5 for the subject. The students having not passed the retake exam will be graded using his/her final exam grade, and hence, will fail the course.

Irregularities in evaluation activities

Despite other disciplinary measures deemed appropriate, and in accordance with current academic regulations, *"whenever a student makes any irregularity that could lead to a significant variation in the grade of an evaluation activity, it will be graded with a 0, regardless of the disciplinary process that can be instructed. In case of occurrence of various irregularities in the evaluation of the same subject, the final grade of this subject will be 0".* **Section 10 of Article 116. Results of the evaluation. (UAB Academic Regulations).**

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
A. Learning exercises	25%	0	0	5, 1, 3, 6, 7
B. Case studies, individual tests and teamwork	35%	0	0	5, 1, 3, 4, 2, 6, 7
C. Final exam	40%	3	0.12	5, 1, 4
