Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Teachers

Rafael Vicente Salar

Prerequisites

It is a 1st year subject, therefore no special prerequisite is required.

Yes, it is recommended to be a little informed of national and international news, especially the economic, politic

In other words, read from time to time the general press, watch some TV shows, listen to some radio gatherings,

Objectives and Contextualisation

Context:

In order to integrate knowledge of economics in relation to Geography, th

That is why we try to maintain certain "bridges" with other subjects of the Degree Plan, such as: "Geographical v

"Urban Policies: Housing, Neighbourhoods and Transport" (3th year) or " Geography of inequalities "," Local and

The subject is aimed at introducing the basic conceptual foundations related to the economic dimension of global

The objectives are:

1. To ensure that the student has a general vision of the chronological evolution of the main schools of thought, hand in hand with the ideas of their main authors, and their implications in the current economic policy.
2. To ensure that the student to acquire the economic terminology and some of the most used macroeconomic and microeconomic indicators to understand the economic news.
3. To ensure that the student has the ability to gather and interpret information of various types and backgrounds to be able to make judgments and reflections on relevant social, economic and ethical issues.
4. To ensure that the student can discuss in a critical spirit the relationship of society with the territory applying the conceptual and theoretical framework of Geography, in general, and of the economy in particular.
5. To ensure that the student is able to integrate knowledge from various social and environmental disciplines in order to be able to describe and interpret the spatial dynamics linked to social, economic and environmental changes.
6. To ensure that the student can identify the main and secondary ideas and express them correctly, formally and linguistically.

Competences

- Critically analyse the relationship between society and the region applying the conceptual and theoretical framework of geography.
- Demonstrate skills of self-analysis and self-criticism
- Integrate the different social and environmental disciplines with a view to describing and interpreting the spatial dynamics linked to social, economic and environmental change.
- Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.

Learning Outcomes

1. Compare the different trends in the study of economics
2. Demonstrate skills of self-analysis and self-criticism.
3. Differentiate the main regional and local economic systems and their historical and contemporary situation.
4. Identify the purpose of studying economics
5. Relate the main economic agents with the main political or institutional agents in the process of regional planning.
6. Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.

Content

Contents:

This subject is an introduction to the basic concepts of economic analysis and to some of the implications of the economic system.

More specifically, and after a first introductory block that focuses on the most immediate economic news and reflects on the current economic situation, the

the program of the subject is divided into a series of blocks whose content is structured around a few key and relevant concepts.

- Block 1. An introduction -> What is the most talked about? Who speaks more and from what ideological position? What does "popular wisdom" or social networks tell us?
- Block 2. Object of the economy -> What is it? Economy and ethics. Schools of economic thought. Current economic ideology.
- Block 3. Economic system and functioning of the market -> Economic agents. Market economy and its operation. Alternative models
- Block 4. Rent -> Economic cycles. Distribution of income and inequalities. Public sector and monetary policies. Economy and COVID-19.
- Block 5. Economy and territory -> Spaces of production and global consumption.
- Block 6. The sustainability of the current economic model -> Growth and sustainable development. Economy of the common good, collaborative economy (or speculative?). The gender perspective in the economy. Externalities and ecological footprint.

Some of the key concepts that have to structure the contents of the subject are: money, market, competition, public goods, externalities, etc.

Gini coefficient, communism, energy poverty, vulnerability, globalization, taxhaven, happiness, well-being, gentrification, etc.

In the Moodle will publish a schedule that will indicate the dates of explanation of each block as well as the dates of delivery and completion of the different exercises that are part of the evaluation.

The language of the Moodle and of explanation in the classroom will be Catalan and only in the exceptional case that there is a significant number of foreign students in the group, the option of switching to Spanish can be considered. This does not exclude that students can express themselves in Catalan or Spanish in the classroom and write their exercises in one or another language.

Methodology

The formative activities of this subject are the following:

1. In the first place, through the directed activities, that is to say, the development of the agenda foreseen in face-to-face sessions (*) included in the teaching calendar for the 1st semester. It must be said that the university intends to prioritize face-to-face teaching in first-year subjects.
2. Second, with supervised activities through the monitoring of news and debates on economic news, at different scales. Likewise, there is a specific Twitter account of the subject that functions as a "repository" of diverse material that serves to introduce the explanation of the syllabus in each of the teaching sessions (https://twitter.com/Eco_Geo_UAB).
3. Third, with autonomous activities, that is, everything that the student would have to do to prepare the subject. This includes the consultation of diverse material (eg. articles or other documents) available in the Moodle of the subject, as well as specialized bibliography, both the most general and the one that is punctually cited. It must be said that in this subject there are no Notes of Economics, strictu sensu, that can be published in the Moodle, but as will be seen throughout the semester the teaching will be done through presentations Prezi. In a complementary way you can consult other manuals available in the market; there are many and some one are excellent.
4. Finally, and in fourth place, with evaluation activities (which are specified in another section).

(*) Attention: the teaching methodology proposed here may undergo some modification depending on the restrictions on attendance imposed by the health authorities.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Explanation of subject topics	45	1.8	1, 3, 4, 6, 5
Type: Supervised			
Study work and individually tutored practices	30	1.2	1, 2, 3, 4, 6, 5
Type: Autonomous			
Monitoring of the economic news	15	0.6	1, 2, 3, 4, 6, 5
Performing evaluation tasks	45	1.8	1, 3, 4, 6, 5
Study for the exam	15	0.6	6, 5

Assessment

The evaluation will be done continuously and the knowledge will be evaluated following the following criteria:

1. Four reports with a weight of 10% each (total 40%). The exercises will be individual and they must be done outside the established teaching hours the teaching schedule; the reports will be deposited in the Moodle within approximately three weeks from its publication. Once the deadline is over, they can no longer be delivered (that is, exercises will not be accepted at the end of the course).
2. An oral presentation, individual or in couple of which more details will be given once the course has begun. As oral presentations will be a few will be made from mid-October and until the end of the period of directed activities (December 22, 2020). Your weight will be 20%. ATTENTION: at the time of writing this guide there is no information about the number of students enrolled in the subject nor about the conditions under which teaching must be done (due to possible restrictions on attendance). If it is

considered that both factors can make the oral presentation unfeasible, it will be replaced by an exercise (with the same weight as the presentation, 20%).

3. An exam whose weight is 40%. The test will have a duration of 1:30h and will be done just before the end of the period of activities directed according to the academic calendar of the Faculty of Philosophy and Letters. The exam can be done in the classroom or through the *Moodle*.
4. The final grade will be the sum of all these partial grades.

On the other hand, we must take into account the following aspects:

1. For each evaluative activity, the procedure and date of revision of the notes will be informed. As a general rule, it is usually one week after the note is published. After this period, there will be no possibility of revision.
2. The absent exercises and / or exam will count as 0 (zero).
3. The student will have the grade of "Not Assessable" if he/she does not deliver a minimum of 2 of the 6 evaluation activities.
4. There is no obligation to deliver a minimum number of exercises (4 or 5) or the oral presentation (if it ends up doing), but the student has to remember that the final grade is a sum of partial grades. Therefore, if they are not done, they do not add up. The student has to be aware of how far he wants to go.

Requirements to be evaluated:

1. To obtain in the exam the minimum score equivalent to half of the maximum expected score.
2. In the event that the above is not met, the student will not be able to compensate this grade with the sum of the remaining partial grades and must report for re-evaluation.

Re-evaluation process:

The evaluation process must always consider re-evaluation systems. However, it must be taken into account that

1. In order to participate in the re-evaluation the student must have been previously evaluated in a set of activities whose weight equals a minimum of 2/3 of the total score.
2. In order to participate in the re-evaluation the student must have obtained a minimum grade in the average of the subject of 3.5 (out of a maximum of 10 points).
3. The oral presentation is left out of the recovery process (or is done when it is played or not done). The reports do not "recover" because they are not "F" either (they have a grade that is added to the rest of the partial grades to set the final grade). However, and by mutual agreement with the teacher, one can opt for the improvement of some exercise if there is the possibility of improving the final grade (eg moving from "C" to "B", of "B" to "A" ...).
4. The date of the re-evaluation will be decided within the period of the academic calendar of the Faculty of Arts and Humanities.
5. In this subject there is no possibility of a final exam (or similar test) as the only way to pass the subject.

Attention:

1. In the event of a student committing any irregularity that may lead to a the student will be given a zero for this activity, regardless of any disciplinary process that may take place. In the assessment activities of the same subject, the student will be given a zero as the final grade for this subject.

2. The copy or plagiarism of material, both in the case of work and exams, constitute a crime that will be sanctioned

or a large part of another student's work is considered a "copy". The "plagiarism" is the fact of presenting all or part

You can consult the UAB documentation on "plagiarism" at this link:

http://wuster.uab.es/web_argumenta_obert/unit_20/sot_2_01.html.

3. In the event that tests or exams cannot be taken onsite, they will be adapted to an online format made available

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Exam	40%	0	0	1, 2, 3, 4, 6, 5
Oral presentation	20%	0	0	2, 6
Reports	40% (each)	0	0	2, 6, 5
