

**Programming in Bioinformatics**

Code: 42401  
ECTS Credits: 6

Degree	Type	Year	Semester
4313473 Bioinformatics	OB	0	1

The proposed teaching and assessment methodology that appear in the guide may be subject to changes as a result of the restrictions to face-to-face class attendance imposed by the health authorities.

### Contact

Name: Santiago Marco Sola  
Email: Santiago.Marco@uab.cat

### Use of Languages

Principal working language: english (eng)

### Teachers

Santiago Marco Sola

### Prerequisites

For the general development of the course, it is recommended to have a B2 level, or equivalent, of the English language.

For this module, it is recommended to have basic notions of computer usage in Linux (i.e., knowledge of common user tools and file manipulation).

### Objectives and Contextualisation

General objectives of this module are the application of the core tools and basic techniques for development in this area of knowledge. Provide skills to successfully assume the adaptation to changing technologies and new paradigms emerging in this interdisciplinary field.

### Competences

- Design and apply scientific methodology in resolving problems.
- Identify the biocomputing needs of research centres and companies in the biotechnology and biomedicine sectors.
- Possess and understand knowledge that provides a basis or opportunity for originality in the development and/or application of ideas, often in a research context.
- Student should possess the learning skills that enable them to continue studying in a way that is largely student led or independent.
- Use operating systems, programs and tools in common use in biocomputing and be able to manage high performance computing platforms, programming languages and biocomputing analysis.
- Work individually and as part of a team in an international and multidisciplinary context.

### Learning Outcomes

1. Design and apply scientific methodology in resolving problems.

2. Design, analyse and evaluate the performance of parallel infrastructures and large volumes of data.
3. Identify the advantage and limitations of biocomputing and the importance of applying new computer technology in omic research.
4. Manage parallel platforms and biocomputing databases according to needs.
5. Possess and understand knowledge that provides a basis or opportunity for originality in the development and/or application of ideas, often in a research context.
6. Student should possess the learning skills that enable them to continue studying in a way that is largely student led or independent.
7. Use algorithms and statistical calculation techniques to manage large volumes of data.
8. Work individually and as part of a team in an international and multidisciplinary context.

## Content

### 1. Linux (commands and shell scripting)

Basic commands, user management, software management, and file system  
 Text processing tools and data manipulation  
 Redirections, pipes, and filters  
 Shell scripting in Bash

### 2. Programming languages

Introduction to programming in Python in Bioinformatics  
 Variables, expressions, data types, operators, programming constructs, and contexts  
 Code reutilization: functions, modules, and subroutines  
 Recursive programming  
 Input/Output  
 Code debugging  
 Other programming languages: R

### 3. Data structures and data processing

Basic data structures (including strings, lists, tuple, sets, and dictionaries)  
 Nested data structures and objects  
 Trees and graphs  
 Modelling and representing bioinformatics data  
 Basic bioinformatics data formats (including FASTQ, SAM, VCF)  
 Regular expressions

### 4. Algorithms in bioinformatics

Introduction to algorithm complexity  
 Divide and conquer algorithms  
 Combinatorial enumeration and backtracking  
 Dynamic programming

### 5. Bioinformatics libraries and tools

Data visualisation tools  
 Introduction to Biopython  
 Introduction to NumPy and Pandas

*\*Unless the requirements enforced by the health authorities demand a prioritization or reduction of these contents.*

## Methodology

The methodology will combine classroom work, supervised problem-solving in class, unsupervised work in the computing lab, homework from recommended readings and independent study student. It will use the virtual platform and asked for papers related to the thematic blocks.

*\*The proposed teaching methodology may experience some modifications depending on the restrictions to face-to-face activities enforced by health authorities.*

## Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Classroom work	20	0.8	1, 2, 4, 7, 6, 5
Problem solving (in class)	14	0.56	1, 7, 6, 5
Work in the computing lab	12	0.48	1, 4, 3, 7, 5, 8
Type: Supervised			
Performing lab work from recommending reading	15	0.6	1, 3, 6, 5, 8
Type: Autonomous			
Regular general work on the deliverables definition and materials given	83	3.32	1, 2, 7, 6, 8

## Assessment

The methodology will combine classroom work, problem solving in the classroom, unsupervised work done in the computing lab and individual work from recommended readings. It will make use of the virtual platform and will make references to selected publications related to the thematic blocks. None of the individual assessment activities will account for more than 50% of the final mark.

### Retake exam

To be eligible for the retake process, the student should have been previously evaluated in a set of activities equaling at least two thirds of the final score of the module. The teacher will inform the procedure and deadlines for the retake process. Please note that activities performed within class cannot be recuperated.

### Not valuable

The student will be graded as "Not Valuable" if the weight of the evaluation is less than 67% of the final score.

*\*Student's assessment may experience some modifications depending on the restrictions to face-to-face activities enforced by health authorities.*

## Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Evaluation of work done during the module, presented by the user	10%	1	0.04	1, 3, 7, 6, 8
Final Exam	10%	1	0.04	1, 6, 5

Individual theoretical and practical tests	50%	2	0.08	1, 2, 4, 6, 5
Laboratory work, possibly in groups	30%	2	0.08	1, 2, 4, 3, 7, 6, 8
