

Introduction to Archaeology

Code: 100720
ECTS Credits: 6

Degree	Type	Year	Semester
2500241 Archaeology	FB	1	1
2503702 Ancient Studies	FB	1	1

The proposed teaching and assessment methodology that appear in the guide may be subject to changes as a result of the restrictions to face-to-face class attendance imposed by the health authorities.

Name: Alessandro Ravotto
Email: Alessandro.Ravotto@uab.cat

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Teachers

Francesc Xavier Busquets Costa
Esther Rodrigo Requena

Prerequisites

No prerequisites are required to enroll

Objectives and Contextualisation

The objectives of the first year (with 60 compulsory basic education credits) are to provide the student with basic training in archeology, history and other social disciplines, and familiarize themselves with historical-archaeological matters that will be developed in later courses. Thus, half of the credits correspond to the subject History, which is composed of the subject Introduction to Archeology, and a subject for each one of the great historical periods (Prehistory, Ancient History, Medieval History, and Modern History i Contemporària). The remaining 30 credits correspond to subjects of a social nature that must complement the archeology's literary education such as art, philosophy, anthropology and language. Therefore, while from the subject History begins to the student in the two big blocks of knowledge that compose the degree - those of historical type and those of methodological type -, it is exclusively Introduction to the Archeology that has the responsibility Provide solid foundations on which methodological knowledge must be built throughout the degree. With this objective and with which to provide a panoramic view of the discipline, it is composed of brushstrokes of very diverse subjects and contains excavation practices.

Specifically, the training objectives of the subject are:

1) To provide students with a panoramic view of archeology and the process that involves an archaeological research project.

In this sense, mainly, it is intended that the student:

- Become familiar with the concept of scientific archeology and with the information that can contribute to the analysis and interpretation of the archaeological remains
- reflect on the social importance of archaeological heritage.

- acquire notions about the main methods of archaeological research
- 2) That the student knows and applies the essential methodology to develop a bibliographic research work (eg bibliographic research, structure, formal aspects, etc.).
- 3) That the student acquires essential practical knowledge of excavation.
- 4) That the student acquires first knowledge about different deposits of Catalonia.

Competences

Archaeology

- Contextualizing and analysing historical processes.
- Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethic relevant issues.
- Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.

Ancient Studies

- Apply the main methods, techniques and instruments of historical analysis.
- Demonstrate the basic skills needed to participate in an archaeological excavation and be able to interpret its findings.
- Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.
- Understand and interpret the evolution of ancient societies in the Mediterranean from Egyptian civilisation to the disbanding of Western imperial Rome through analysis of the political, historical, social, economic and linguistic factors.

Learning Outcomes

1. Identifying the context of the historical processes.
2. Identifying the specific methods of history and their relationship with the analysis of particular facts.
3. Interpret material sources and the archaeological register.
4. Interpreting material sources and the archaeological record.
5. Mastering the Universal Ancient History.
6. Mastering the general diachronic structure of the past.
7. Mastering the processes of change produced in Prehistory.
8. Organise and plan the search for historical and archaeological information.
9. Using computing resources of the area of study of history.

Content

Programming of the subject - Introduction to archeology
 September-December 2020-January 2021
 Presentation of the subject
 The Concept of archeology and its evolution throughout history
 The current concept of archeology
 Evolution of the current concept of archeology
 New schools of archaeological thinking
 The detection of an archaeological site: documentation and prospection
 Occasional finds
 Bibliographic documentation
 Aerial recognition and remote sensing
 Superficial prospection of a territory
 Geophysical survey and other prospecting methods
 Prospection project - student work
 Preparation of the work and preparation of the presentation

Presentations

The archaeological excavation

The archeological excavation as a method to reconstruct the history of the deposits

Methods of archaeological excavation

Basic principles of archaeological stratigraphy

Individualization and excavation of stratigraphic units

The documentation of the excavation: recording of the site and databases

The reconstruction and dating of the stratigraphic sequence

i. The concept of relative and absolute chronology

ii. The stratigraphic relationships and the Harris method

iii. Ceramics and other dating elements as a fossil director of stratigraphy

Scientific methods of absolute dating

Types of materials

Methods based on annual cycles: dendrochronology, varves

Radioactive systems:

i. The Carbon 14

ii. The Thermoluminescence

Relative calibrated methods: archeomagnetism or rehydroxylation

Material culture -

Type of material - preservation conditions

Samples of soils, paleofaunes and paleobotany

The Interpretation of Archaeological Evidence

The diet Alimentaria

Exchange-Trade

The religious sphere, ritual, ideology ...

Teaching and dissemination of heritage

Archeology in Catalonia today: legislation and the world of work

Legislation and the world of work

Underwater archeology

Historical introduction

Types of underwater deposits

Information that subaquatic archeology can provide

Documentation and prospecting

Underwater excavation tasks

Conservation of materials

The conservation of archaeological sites and the social importance of archeology

Public archeology

Methodology

Dirigidas

Actividades en el aula:	34h 30'	- Utilitzar els principals mètodes o tècniques en la investigació arqueològica
- clase magistral		
- ejercicios prácticos: de introducción y / o revisión de las unidades docentes y de aplicación de		- Adquirir habilitats per al treball en equip

los conceptos teóricos a la práctica.

- lectura de artículos de prensa con el subsiguiente debate

- vídeos

- 2 trabajos en grupo sobre casos de estudio y exposiciones orales de estos trabajos.

- Adquirir habilidades per debatre a partir del coneixement especialitzat

Salidas: 18

Conceptes teòrics i aplicació pràctica d'aquest conceptes :

-Introducció al jaciment

- Topografia arqueològica

-

Documentació d'excavació

- Tractament i classificació de materials arqueològics.

- Desenvolupar unes primeres habilitats respecte als diferents processos que comporta l'excavació arqueològica.

Supervisadas

10h

- Desenvolupar unes primeres habilitats pel que fa a detectar i excavar les

unitats
estratigràfiques
arqueològiques.

Visita a un jaciment arqueològic: Torre Llauder	5h	- Adquirir coneixements sobre les possibilitats de la difusió arqueològica a partir d'un exemple de jaciment significatiu
---	----	---

Autònomas

Exercicis i treball de recerca bibliogràfica	48 h	- Posar en pràctica diferents estratègies de recerca bibliogràfica i aprofitar els recursos de la UAB (com les bases de dades). - Saber presentar una recerca ben estructurada (introducció, diverses seccions, conclusions) i tractar correctament els aspectes formals (com les citacions bibliogràfiques i les notes). - Desenvolupar esperit crític i capacitat de síntesi.
--	------	---

Pràctiques de camp	4h 30'
--------------------	--------

d'excavació:
sortida a
Torre Llauder
i anàlisi de
secció

Conèixer el
funcionament
del procés

Estudi i
lectura sobre
la matèria
impartida a
classe

22 h 30'

Consolidar
coneixements

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Classroom activities	34.5	1.38	3
Field trips	20.5	0.82	3
Type: Supervised			
Identification and differentiation of an archaeological stratigraphy	5	0.2	6, 3, 8
Visit to an archaeological site	5	0.2	3
Type: Autonomous			
Exercises and bibliographical research work	38	1.52	6, 2, 3, 8
Study and reading about the matter taught in class	22	0.88	6, 2, 3, 8

Assessment

Evaluation indicators:

1. Theoretical test (60%).

There will be two partial examinations to evaluate the theory

Evaluation system:

The concepts taught in class will be evaluated based on a topic-based question - of analysis and synthesis and, optionally, also of critical reflection - to choose between two options.

Competencies to demonstrate to obtain optimal evaluation results:

Knowledges:

A correct assimilation of the knowledge taught in class and its deepening, as a minimum, from one of the bibliographical citations of the basic bibliography for each teaching unit. In case you have not used bibliography to deepen the concepts you will have the option to approve but not to the qualifications of remarkable or excellent.

Abilities:

- Analyze and synthesize information, distinguishing the importance of high school.
- Develop a critical thinking and reasoning.

- Be able to communicate appropriately the acquired knowledge. Write with grammar correction and use appropriate vocabulary and academic style, as well as a specific technical vocabulary and interpretation.
- Master the necessary languages to be able to deepen the class contents with the appropriate bibliography.
- Have developed autonomous learning abilities to deepen the classroom content with the appropriate bibliography.

2. Exercises and bibliographical research work (20%).

Competencies to demonstrate to obtain optimal evaluation results:

Knowledges:

- Be able to develop a formally correct research work both in terms of structure and references and bibliographical citations.
- Demonstrate a correct assimilation of the exposed contents.

Abilities:

- Analyze and synthesize information, distinguishing the importance of high school.
- Develop a critical thinking and reasoning.
- Write with grammar correction and use appropriate vocabulary and academic style, as well as a specific technical vocabulary and interpretation.
- Search, select and manage information independently, both in structural sources (databases, bibliographies, specialized journals) and in information distributed on the network.
- Use basic computer tools (such as word processors or databases).
- Skills for team work: commitment with the team, collaboration habit and ability to incorporate in the resolution of problems.
- Have developed autonomous learning abilities.

3. Case studies and corresponding oral presentations (20%).

Competencies to be demonstrated for the obtaining of optimal evaluation results:

Knowledges:

- Respond to all questions raised in the reference scripts of the activities.
- Demonstrate a correct assimilation of the exposed contents.

Abilities:

- Ability to connect theoretical contents with archaeological practice.
- Make clear oral presentations, structured, didactic, and use appropriate vocabulary and academic style.
- Analyze and synthesize information, distinguishing the importance of high school.
- Develop a critical thinking and reasoning.
- Search, select and manage information independently, both in structural sources (databases, bibliographies, specialized journals) and in information distributed on the network.
- Use basic computer tools (such as the Power Point).
- Skills for team work: commitment with the team, collaboration habit and ability to incorporate in the resolution of problems.
- Ability to debate based on specialized knowledge acquired.
- Master the necessary languages to be able to carry out the relevant readings.
- Have developed autonomous learning abilities.

Competencies to demonstrate to obtain optimal evaluation results:

Knowledges:

- Demonstrate that they have been gaining knowledge of archaeological stratigraphy, excavation documentation, and treatment and classification of materials.

Abilities:

- Skills for team work: commitment with the team, collaboration habit and ability to incorporate in the resolution of problems.

Attitudes:

- Dynamism.
- Responsibility.
- Constance.

Evaluation conditions:

- There will be a single call.
- Not performing 10% or more of the evaluation activities will involve a non-presented.
- If the mark of 50% or more of the assessment activities is less than 4 out of 10, there will be no average between the different activities and the subject will not be approved.
- The delayed delivery of the assessment activities without having previously agreed with the teaching staff will be reduced by 10% of the mark for each day of delay.

Conditions for re-evaluation

- They must have been submitted to all the tests that appear in the teaching guide of the subject of the current year.

Reevaluation calendar

The dates of the reassessment exams are determined by the faculty. It is the responsibility of each one to know the date that corresponds to do the re-evaluation of the your subject

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Case studies and corresponding oral presentations	20	1	0.04	6, 1, 3, 8, 9
Exercises and bibliographical research work	20	20	0.8	6, 1, 2, 3, 8, 9
Theoric exam	60	4	0.16	7, 6, 5, 1, 2, 4, 3, 8
