The proposed teaching and assessment methodology that appear in the guide may be subject to changes as a result of the restrictions to face-to-face class attendance imposed by the health authorities.

**Contact**

Name: David Sánchez Carracedo  
Email: David.Sanchez@uab.cat

**Use of Languages**

Principal working language: catalan (cat)  
Some groups entirely in English: No  
Some groups entirely in Catalan: No  
Some groups entirely in Spanish: No

**Other comments on languages**

The exams will be in Spanish. Spanish classes (groups 1/1 and 1/2): G1 60%, G2 50%, G3 40%, G5 60%. Bibliography in Spanish. PL sessions mainly in Catalan. Official documents in Catalan.

**Teachers**

María Soledad Mora Giral  
Teresa Gutiérrez Rosado  
Joan Torras Claraso  
Silvia Noguer Carmona  
Joaquim Puntí Vidal  
Laura Gonzalez Riesco  
Nuria Reina López

**Prerequisites**

Students will have already studied mandatory subjects such as Psychopathology across the Lifes Cycle (2nd course, 3rd semester) and Psychological Assessment (2nd course, 4th semester) in previous courses. Both are subjects in the second year of the Psychology Degree at the UAB. Students who come from outside the UAB are recommended to have studied subjects with basic knowledge on psychological assessment and psychopathology.

**Objectives and Contextualisation**

- **Identify the intervention process** in clinical practice and the main therapeutic skills involved.  
- **Understand** the main techniques of intervention and psychological treatment, their theoretical and experimental bases, the intervention process and the areas of application.  
- **Learn to evaluate them in a critical way.**
• Undertake some of the intervention procedures.
• Understand the issues and main available data on the efficacy of different psychological treatments.

Competences

• Apply knowledge, skills and acquired values critically, reflexively and creatively.
• Criticise the effects of personal practice on people, taking into account the complexity of human diversity.
• Distinguish and relate the different focuses and theoretical traditions that have contributed to the historical development of psychology as well as its influence on the production of knowledge and professional practice.
• Formulate hypotheses about the demands and needs of the recipients.
• Identify and recognise the different methods of treatment and intervention in the different applied areas of psychology.
• Maintain a favourable attitude towards the permanent updating through critical evaluation of scientific documentation, taking into account its origin, situating it in an epistemological framework and identifying and contrasting its contributions in relation to the available disciplinary knowledge.
• Recognise the deontological code and act ethically.
• Select and apply the methods and techniques in the plan for intervention in accordance with the established objective in relevant contexts for the service requested.
• Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
• Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
• Work in a team.

Learning Outcomes

1. Apply knowledge, skills and acquired values critically, reflexively and creatively.
2. Critically analyse interventions in published cases.
3. Criticise the effects of personal practice on people, taking into account the complexity of human diversity.
4. Describe the basic procedure for administration of basic treatment techniques.
5. Differentiate between the main evidence on the effectiveness of different psychological treatments.
6. Distinguish between the effects due to common factors of the specific effects of different treatments based on evidence.
7. Identify and assess indicators of functionality demanded by the different techniques of psychological intervention, taking into account criteria of success and suitability.
8. Identify constraints and contraindications of various treatment techniques.
9. Identify the main contributions of the different psychotherapeutic models of modern psychological treatment.
10. Identify the main techniques of psychological treatment.
11. Maintain a favourable attitude towards the permanent updating through critical evaluation of scientific documentation, taking into account its origin, situating it in an epistemological framework and identifying and contrasting its contributions in relation to the available disciplinary knowledge.
12. Recognise possible common factors of the different psychotherapeutic models.
13. Recognise the deontological code and act ethically.
14. Recognise the different applications and indications of basic psychological treatment techniques.
15. Recognise the different theoretical and experimental treatment techniques fundamentals.
16. Recognise the stages of intervention.
17. Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
18. Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
19. Work in a team.
**Content**

SECTIONS GROUP 1/1 AND DISCUSSION GROUPS 1/2

Lesson 1. Efficacy and evidence-based practice.
Lesson 2. The therapeutic skills.
Lesson 3. The intervention process.
Lesson 4. Relaxation techniques and Mindfulness.
Lesson 5. Exposure techniques.
Lesson 7. Operants conditioning techniques.
Lesson 8. Self-control techniques.

SEMINAR SESSIONS GROUPS 1/4

1. Difficult situations in psychological treatment
2. Relaxation
3. Exposure I
4. Exposure II
5. Social Skills Training
6. Cognitive Restructuring

**Methodology**

The "IPT" course aims to promote autonomy and critical attitude.

The methodology is addressed at understanding the main therapeutic techniques, their theoretical bases, implementation procedures, areas of application and efficacy data. Content in the videos and mandatory bibliography, which is a central axis of the course, will be combined with introductory flipped classroom and the work with applied cases. The seminars (groups ¼) will be focused on the implementation of different techniques of psychological treatment.

**Directed activities:**

1) Introductory flipped classroom sessions in a large group 1/1: 1.5 hours addressed to all the students in each module. Students must watch a group of videos (total about 45 minutes) prior to the session, in addition to doing the corresponding compulsory reading. During the session, doubts will be clarified, and some information will be completed. Students can be asked about the video and reading content, and their participation can be considered for possible improvements in their final grade.

2) Workshops (groups ½) to discuss mandatory readings, introductory session and applied cases. Two hours long, with half for each module. One workshop for each introductory session will be scheduled. It is essential to review the corresponding reading previously to each workshop session. A Work Guideline is available with questions to guide the reading and to encourage critical thinking, and guided work with applied cases. It is mandatory to attend with the corresponding mandatory reading and the Work Guideline.
3) Seminar sessions (groups ¼), 2 hours. Implementation of different techniques.

Students can find the following materials at Virtual Campus: Readings not available in the Library; the Work Guide with guided reading questions, reflection questions and activities by subject, which will be basic in the workshop sessions, and a Dossier of Seminar Sessions.

Autonomous activities (total 156h) include studying, readings, watching the videos and doing the group project.

N.B. The proposed teaching and assessment methodologies may experience some modifications as a result of the restrictions on face-to-face learning imposed by the health authorities. The teaching staff will use the Moodle classroom or the usual communication channel to specify whether the different directed and assessment activities are to be carried out on site or online, as instructed by the Faculty.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

**Assessment**

In addition to the following criteria, the "2019-20 Assessment Guidelines of the Psychology Faculty" must be taken into account, available at [https://www.uab.cat/web/estudiar/graus/graus/avaluacions-1345722525858.html](https://www.uab.cat/web/estudiar/graus/graus/avaluacions-1345722525858.html)

Individual assessment activities: (Ev1, Ev2)

- There will be two multiple-choice partial examinations (worth 25% of final grade each)
- Exams with 25-30 questions, four choices, only one correct and penalty of 1/3. Questions will not be only about descriptions or identification. They will include reflections, associations of different concepts and applications of main topics worked in all sessions to date.
Individual assessment activities: (Ev3, Ev4)

- There will be two open-answer exams with 5 questions. A short answer (not essay-answer) will be required (worth 15% of final grade each one).
- The questions will be based on brief descriptions of applied cases, which will be similar to those worked in the workshops (PA groups 1/2). There will be no penalties, but incorrect answers, answers without the use of an appropriate technical language, and/or long answers written outside the established margins, will be scored with 0 points.

Group assessment activity: (Ev5)

EV5: Optional group project. This will be assessed according to a rubric that will be published at the beginning of the course (worth 20% of final grade). Grade of EV5 only will be added to the Final Grade if grade of EV5 ≥ 4.95. It will not be possible to hand it in outside the established date.

Assessed / Not assessed

- Students will be assessed if they have attended to at least 40% of the theoretical total grade.
- If a student is finally assessed, all not attended assessment activities will be graded 0

FINAL GRADE / Pass criteria

- Grade Ev1-Ev4 = [(Grade Ev1 x 0.25) + (Grade Ev2 x 0.25) + (Grade Ev3 x 0.15 + (Grade Ev4 x 0.15)]
- Final Grade= (Grade Ev1-Ev4) + [(Grade Ev5 x 0.20) if Ev5 ≥ 4.95]. In order to sum the EV5 grade, Ev5 must be ≥ 4.95.
- To pass this course students must achieve a Final Grade ≥ 4.95 in the continuous assessment.

Reassessment process:

- Reassessment will be offered for not passed assessment activities Ev1 and/or Ev2 and/or Ev3 and/or Ev4 (grade < 4.95).
- It will not be possible to retake the Ev5.
- The students can opt to the reassessment process only if: (1) Final Grade in the continuous assessment is not passed; (2) assessed of a minimum weight of 2/3 of the Final Grade; (3) Final Grade ≥3.5 in the continuous assessment. All the requisites must be fulfilled. If Final Grade ≥3.5 criteria in the continuous assessment is not met, then, exceptionally, Ev5 Grade can sum altough Ev5 < 4.95 to make it easier for the student to choose to take the reassessment.
- The reassessment process will consist in assessment activities with the same characteristics as in the continuous assessment. The same criteria will be applied.
- Students with more than one assessment activity not passed could opt to do all of them or choose between them. The obtained grade in the reassessment process will substitute the previous grade in any case. Not retaken assessment activities will retain the previous grade in order to estimate the new final grade.
- The pass criteria will be the same as in the previous continuous assessment. All new grades will be calculated with the same previous criteria, replacing the grades of the retaken assessment activities.
- In any case the reassessment process can be used to improve passed subject.

No unique final synthesis test for students who enrollefor the second time or more is anticipated.

Grade review process. After all grading activities have ended, students will be informed of the date and way in which the course grades will be published. Students will be also be informed of the procedure, place, date and time of grade review in line with University regulations.

N.B. Except for exceptional situations, and only if previously agreed with a student, one week before the assessments, and until the end of the ordinary review, "content" questions will not be answered by email or Moodle. Students must attend teachers office hours.
