Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: No
Some groups entirely in Spanish: No

Teachers

Jorge Molero Mesa
Anyely Marin Cisneros
Silvia Cora Levy Lazcano
Digna Maria Couso Lagaron
Anna Macaya Andres

Prerequisites

None.

Objectives and Contextualisation

This subject aims to provide analytic tools from the feminist critique of science, the history and philosophy of science and technology, and education with gender perspective, for the students to actively take part in the current debates, as well as to elaborate programs and take measures to face future challenges in the scientific-technological and environmental fields, with an intersectional gender perspective.

Competences

- Express correctly and in a non-sexist or homophobic manner both orally and in writing.
- Formulate, argue and discuss your own and others' ideas in a respectful, critical and reasoned way.
- Identify and question gender representations in the history of ideas, arts and culture, as well as in the construction of scientific knowledge.
- Interpreting and interrelating the conceptual bases of feminist theories.
- Interpret gender inequalities in relation to sexuality, class, ethnicity and territory based on the concepts and approaches of sociocultural analysis.

- Students can apply the knowledge to their own work or vocation in a professional manner and have the powers generally demonstrated by preparing and defending arguments and solving problems within their area of study.
- Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
- Students must develop the necessary learning skills in order to undertake further training with a high degree of autonomy.

Learning Outcomes

1. Analyze the representations of the body in cultural and artistic productions throughout history.
2. Contrast the debates on feminism and masculinities.
3. Critically analyze informative speeches especially in relation to ideology and ethnocentric and sexist biases.
4. Describe the fundamental concepts of gender theory.
5. Explain the historical links between feminism and other movements against inequality (afrodescendencia, LGBTI, etc.).
6. Make an inclusive use of language.
7. Prepare an organized and correct speech, orally and in writing, in the corresponding language.
8. Prepare basic proposals to promote gender equality in scientific and technological studies.
9. Students can apply the knowledge to their own work or vocation in a professional manner and have the powers generally demonstrated by preparing and defending arguments and solving problems within their area of study.
10. Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
11. Students must develop the necessary learning skills in order to undertake further training with a high degree of autonomy.
12. Use the specific technical vocabulary and own interpretation of the required disciplines.

Content

Block 1. Historical, scientific, and technological accounts of sex/gender.

- Lesson 1. Objectivity and reason as a premise, man as gender.
- Lesson 2. Critiques to the sex/gender system from the history of science and technology.

Block 2: Feminist critique to science and feminist epistemologies.

- Lesson 3. The epistemological debate : knowledge and the subject of science.
- Lesson 4. Rationality, nature and coloniality.

Block 3: Scientific, medical, and technological constructions of the body, sexuality, and gender.

- Lesson 5. Mental health and gender construction.
- Lesson 6. Biological construction of sex and sexual dimorphism.
- Lesson 7. Science and the construction of masculinities.

Block 4. Scientific education and STEM from a gender and equity perspective.

- Lesson 8. Challenges of science education with a gender and equity perspective.
- Lesson 9. Science education and STEM/STEAM with gender perspective. What do they do, what can be done, and what can we do?

Methodology

The methodology is eclectic and interdisciplinary, based on the students' prior knowledge.

The sessions will start by introducing the topic through a case study, reading or audiovisual material to promote the activation of one's own prior knowledge. After that, a lecture related to the proposed topic will add complexity to the analysis. Lastly, a creation, debate and / or argumentation phase will take place to integrate what has been learned during the session.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Lectures	33.33	1.33	3, 2, 4, 7, 5, 12
Practical sessions	14.67	0.59	3, 1, 7, 6, 9, 10, 12
Type: Supervised			
Field trip	4	0.16	3, 9, 10
Programmed tutorials	6	0.24	3, 4, 8, 10, 12
Type: Autonomous			
Comprehensive reading of texts	25	1	3, 10
Preparation for debates and discussions	15	0.6	3, 8, 7, 6, 9, 10, 12
Preparation of the assessment activities	40	1.6	3, 1, 2, 4, 8, 7, 5, 6, 11, 9, 10, 12
Search of bibliography	10	0.4	3, 10, 12

Assessment

The evaluation of the competences and learning outcomes is continuous, through the active participation of the students in relation to the activities proposed. The final grade will consist of the addition of the points obtained in each assessment. For the evaluation to be considered effective, students must pass each of the assessments separately.

Lecturers will report the grades of each assessment through Aula Moodle once each block has been completed. Final grades will be published after the session of general conclusions of the course, also through Aula Moodle.

Recommendations

It is assumed that students are able to express themselves correctly both orally and in writing. For this reason, any spelling and expression errors that may be made will lead to a decrease in the grade of the assessment. Likewise, it is considered that the students know the general norms of presentation of an academic work. However, specific rules may be applied by indication of the lecturers if they consider it appropriate.

In the event of a student committing any irregularity that may lead to a significant variation in the grade awarded to an assessment activity, the student will be given a zero for this activity, regardless of any disciplinary process that may take place. In the event of several irregularities in assessment activities of the same subject, the student will be given a zero as the final grade for this subject.

Grade review procedure

At the time of each assessment test, lecturers will inform the students via Aula Moodle of the procedure and date of revision of the grades.

Recovery procedure

In case of need, a recovery test (exam) will be carried out for those students who do not pass the continuous assessment tests as a whole. To participate in the recovery, the students must have been previously evaluated in a set of activities whose weight equals a minimum of 3/4 of the total grade of the subject, and have obtained a minimum grade of 3,5 out of 10.

Conditions for "Not evaluable"

Students who do not complete at least 3/4 of the assignments will be considered as "Not evaluable", exhausting the enrolment rights of the subject.

Information regarding adaptation of evaluations to the hybrid teaching system in the event of an epidemic

In the event that tests or exams cannot be taken onsite, they will be adapted to an online format made available through the UAB's virtual tools (original weighting will be maintained). Homework, activities, and class participation will be carried out through forums, wikis and/or discussion on Teams, etc. Lecturers will ensure that students are able to access these virtual tools, or will offer them feasible alternatives.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Test (Block 2)	25%	1	0.04	7, 5, 6, 11, 9, 12
Individual essay (Block 1)	25%	0	0	3, 1, 4, 7, 6, 11, 10, 12
Individual portfolio (Block 4)	25%	0	0	8, 7, 6, 11, 10, 12
Oral group presentation (Block 3)	25%	1	0.04	3, 2, 8, 7, 5, 11, 9, 10, 12

Bibliography

The following list corresponds to the basic bibliography for each block. Throughout the course, lecturers will offer specific bibliography of interest.

Block 1:
