Use of Languages

Principal working language: spanish (spa)
Some groups entirely in English: No
Some groups entirely in Catalan: No
Some groups entirely in Spanish: Yes

Prerequisites

There are no pre requisites.

Objectives and Contextualisation

The subject Social and Cultural Anthropology is part of the main subject "Anthropology" and analyzes the nature / culture binomial from an anthropological perspective, based on the affirmation of the existence of a shared and diverse humanity, and its intrinsic link with the environment and with its interpretation.

Objectives:

The subject Social and Cultural Anthropology seeks to ethnographically illustrate human cultural diversity, discuss the concepts and theoretical explanations related and reflect critically on the scientific study of sociocultural differences in fields such as social, economic organization and symbolic systems, with especial emphasis on knowledge of the environment. Along with the dichotomous Western conception of nature / culture, the subject opens to the consideration of other relational ontological conceptions existing both in human history and in contemporary non-Western cultures to understand how human beings, mediated by technology, give form and meaning to its relationship with what exists.

Competences

- Analyse the relationships between nature and culture using concepts from anthropology, philosophy and history.
- Make critical use of digital tools and interpret specific documentary sources.
- Produce written papers and give effective oral presentations, adopting the appropriate register in different languages.
- Recognise the political, social and cultural dimension of science and technology development in the different historical periods.
- Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.

- Work collaboratively in teams.

Learning Outcomes

1. Apply the knowledge acquired in complex or professional work settings.
2. Assess the reliability of sources, select important data and cross-check information.
3. Critically analyse the successes of science in its historical and cultural development.
4. Develop teamworking skills, blend in and actively collaborate in achieving common goals.
5. Distinguish between natural origin and cultural construction in the scientific analysis of human expressions.
6. Identifying the main and secondary ideas and expressing them with linguistic correctness.
7. Recognise the achievements of the various knowledge systems of the world.

Content

The subject Introduction to Social and Cultural Anthropology is a first approach to the study of human sociocultural variability, from a comparative perspective. Throughout the semester, we will present the basic concepts and key topics of Social and Cultural Anthropology. Students will learn on Classical thematic areas, like anthropological perspectives on difference and inequality and some of the most recent developments in the discipline. By studying ethnographic cases that illustrate cultural diversity and highlight the contrasts and similarities with the student's sociocultural context, and with the support of reading and audiovisual materials, students will gain a basic knowledge about the anthropological discipline. The course will place special emphasis on reflecting on the nature / culture dichotomy, on explaining the diversity of thought and knowledge systems, ethno-sciences and the relationship between technology and society.

Topic 1:

Fundamental concepts of anthropology: culture, nature, diversity, ethnocentrism, relativism, humanity, difference, inequality and other related concepts.

Topic 2:

Natural environment, economic and technological organization.

Topic 3:

Social organization and environment. Kinship, Power and Authority.

Topic 4: Symbolic effectiveness. Belief systems.

Topic 5:

Systems of thought and ethno-sciences.

Transversal:

Case studies: During the course, we will introduce case studies that reflect the diversity of forms of social organization, techniques and knowledge.

Methodology

The teaching methodology and the evaluation proposed in the guide may undergo some modification subject to the onsite teaching restrictions imposed by health authorities.

The first day students will receive the program of the training activities and it will be mandatory to follow the evaluation date of the exercises.

The students' work consists fundamentally in to actively follow-up the explanations given in the classroom, to participate in the programmed or spontaneous debates, the search, reading and analysis of information, the realization and on-time delivery of the essays.

The readings are oriented to the preparation of three basic forms of learning and evaluation: discussion in debates (face-to-face or virtual) of the group, thematic essays proposed and preparation of the contents of the course useful for the evaluation in the written exam.

The student must keep in mind that the Virtual Campus is the space through which are notified the basic information of the subject, incidents, novelties, evaluations, and also the space where he/she will find the syllabus, the essays guidelines and teaching materials, among others. In addition, it is the usual space for the delivery of course essays. Therefore, it is the student's responsibility to consult and use it regularly.

Approximately 15 minutes of a class will be allocated to allow the students to answer the evaluation surveys of the teaching performance and the evaluation of the subject.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Theory classes with computer and audio-visual support	33	1.32	3, 7, 5
classroom practices	16	0.64	3, 1, 4, 7, 5
Type: Supervised			
Tutorials and work supervision	4.25	0.17	3, 7, 5, 2
Type: Autonomous			
Study and personal work	80	3.2	3, 6, 7, 5, 2

Assessment

The evaluation system is organized into three modules, each of which is assigned a specific weight to the final grade. The teacher will present a specific proposal on the first day of the course, following the distribution bellow. Each module can provide for more than one assessment activity (always in accordance with the planned minimums and maximums).

At the time of each assessment activity, the teacher will inform the students via Moodle of the procedure, date of delivery, grading and review of the assessment tests.

The three types of evaluation modalities with the planned minimums and maximums are the following:

- 1) WRITTEN TEST MODULE. They can be one or more written tests of different types and characteristics. Its value ranges from 30% to 50% of the final grade.
- 2) MODULE OF PARTICIPATION in group discussions and public presentations of work in the classroom. Value between 20% and 40% of the final grade.
- 3) WORK DELIVERY MODULE. This module will evaluate one or more works that can be individual or in groups, based on a specific bibliography. Value between 20% and 40% of the final grade.

The Faculty establishes the dates of final evaluation and re-evaluation and the professor communicates it to the students.

In order to participate in the re-evaluation process, students must have been previously evaluated (not necessarily approved) in a set of activities, the weight of which must be equivalent to a minimum of 2/3 parts of the total rating.

The student will receive the grade of "Not assessable" as long as he / she has not submitted more than 30% of the assessment activities.

The UAB is very careful in controlling plagiarism and the virtual campus has tools to detect it.

In the event that the student commits any irregularity that could lead to a significant variation in the grade of an assessment act, this assessment act will be graded with 0, regardless of the disciplinary process that may be instructed. In the event of several irregularities in the assessment acts, the final grade for this subject will be 0. Those assessment acts in which there have been irregularities are not recoverable.

In the event that the tests cannot be carried out in person, their format (without altering their weighting) will be adapted to the possibilities offered by the UAB virtual tools. Homework, activities and class participation will be done through forums, wikis and / or exercise discussions through Teams, ensuring that all students can access them.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Essays delivery	20-40%	3	0.12	3, 4, 6, 7, 5, 2
Participation and classroom practices	20-40%	11.75	0.47	3, 1, 4, 6, 7, 5, 2
Written exams	30-50%	2	0.08	3, 6, 7, 5, 2

Bibliography

Note: This is a generic collection. During the course there will be a bibliography recommended by subject, and a
