

Analysis and Synthesis of Bioprocesses

Code: 100962
ECTS Credits: 6

Degree	Type	Year	Semester
2500253 Biotechnology	OB	3	2

Contact

Name: Pau Ferrer Alegre
Email: pau.ferrer@uab.cat

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Prerequisites

The syllabus does not determine any specific prerequisite for this subject. However, due to its integrating nature of the different knowledge acquired throughout previous courses, the recommendation is to have passed the maximum number of subjects possible before taking it. In any case, they are essential to be able to properly follow the basic principles of bioprocess engineering, bioreactors and separation and purification processes.

Objectives and Contextualisation

Introduce to the student the concepts and practice of the integrated synthesis of bioprocesses, that is, in the selection and matching of a set of unit operations (stages of the process) for the production of a product, service at an acceptable cost and quality.

Acquire comprehension and practice in the analysis of biotechnological processes in terms of engineering, economics, compliance with regulations, quality, intellectual property, etc.

Introduce to the student the most important tools used in the analysis and to be able to use these tools in the evaluation and comparison of different solutions (proposals) of design of a determined process.

Overall, it is a subject where we intend to integrate / synthesize knowledge acquired in other subjects of the degree for the design (synthesis and analysis) of bioprocesses.

Competences

- Display an integrated vision of an R&D&I process, from the discovery of the basic knowledge and the development of applications to market launch, and apply the main concepts of organisation and management to a biotechnological process.
- Identify the strategies for producing and improving products in different sectors using biotechnological methods and display an integrated vision of the R&D&I process.
- Make an oral, written and visual presentation of one's work to a professional or non-professional audience in English or in one's own language.
- Read specialised texts both in English and one's own language.
- Reason in a critical manner

- Search for and manage information from various sources.
- Think in an integrated manner and approach problems from different perspectives.
- Work individually and in teams

Learning Outcomes

1. Design a process for obtaining products through biotechnology.
2. Design an industrial process for obtaining products using biotechnology, from the initial discovery, through the various production stages, to market launch.
3. Make an oral, written and visual presentation of one's work to a professional or non-professional audience in English or in one's own language.
4. Read specialised texts both in English and one's own language.
5. Reason in a critical manner
6. Search for and manage information from various sources.
7. Think in an integrated manner and approach problems from different perspectives.
8. Work individually and in teams

Content

1. Analysis of bioprocesses

- 1.1. Characteristics of the biotechnological industries.
- 1.2. Structure of bioprocesses. The stages of the development and design of a process.
- 1.3. Analysis of bioprocesses: Economic, environmental and social sustainability assessment.

2. Synthesis of bioprocesses: Selection, arrangement and integration of steps of bioprocesses

- 2.1. Synthesis of the biocatalyst.
- 2.2. Synthesis of upstream stages and of the cultivation/bioreaction system and strategy.
- 2.3. Synthesis of the recovery and purification stages of the product.
- 2.4. Bioprocess integration and intensification. Biorefineries
- 2.5. The quality of the process and product.

3. Design of bioprocesses:

- 3.1. Biotechnology applied to human and animal health.
- 3.2. Industrial biotechnology and agro-food.
- 3.3. Environmental biotechnology.

Methodology

Teaching will be carried out with face-to-face theoretical classes.

In addition to the theoretical classes, seminars will be held on specific as

biotechnological process case introduced in the seminars, of their choice. They will presented a written report on

The subject is registered in the Virtual Campus and all the materials use

in a specific topic.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Seminars	15	0.6	6, 1, 2, 4, 7, 5
Theoretical classes	30	1.2	6, 1, 2, 4, 7, 5
Type: Supervised			
Compulsory group work	50	2	6, 3, 4, 8
Type: Autonomous			
self study	47	1.88	6, 1, 2, 4, 7, 5

Assessment

During the course, three partial exams will be carried out, previously announced, which will represent 75% of the final mark as a whole. To do the average with the rest of the marks, a minimum mark of 4 (out of 10) is needed in each partial exam.

The compulsory group work, selected from the 4 case studies of the syllabus presented in the Seminars sessions, will represent 25% of the final grade.

To participate in the recovery exam, the students must have previously been evaluated in a set of activities whose weight equals to a minimum of two thirds of the total grade of the subject or module. Therefore, students will obtain the "Non-Valuable" qualification when the evaluation activities carried out have a weighting of less than 67% in the final grade

Students who do not pass the partial examinations may perform a recovery exam of the whole theoretical part, which will have a weight of 75% (which will be added to the the compulsory group work assessment with a 25% weight that is not recoverable).

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
-------	-----------	-------	------	-------------------

Compulsory group work	25%	0	0	6, 3, 4, 7, 8
Partial exams	75%	6	0.24	1, 2, 7, 5
Recovery exam	75%	2	0.08	1, 2, 7, 5

Software

In order to elaborate and present the essay on the case study, alumni will have to use a standard ofimatics software
