

Mathematics

Code: 106040
ECTS Credits: 9

Degree	Type	Year	Semester
2500897 Chemical Engineering	FB	1	A

Contact

Name: Laura Prat Baiget
Email: laura.prat@uab.cat

Use of Languages

Principal working language: catalan (cat)
Some groups entirely in English: No
Some groups entirely in Catalan: Yes
Some groups entirely in Spanish: No

Prerequisites

None.

A good knowledge of mathematics (secondary school level) is assumed.

Objectives and Contextualisation

1. Be able to fluently use the language of Infinitesimal Calculus and basic Algebra, mainly linear.
2. Achieve theoretical knowledge of Calculus and Algebra, and the most
3. Know how to apply Calculus methods to Science and Technology problems.

Competences

- Apply relevant knowledge of the basic sciences, such as mathematics, chemistry, physics and biology, and the principles of economics, biochemistry, statistics and material science, to comprehend, describe and resolve typical chemical engineering problems.
- Demonstrate basic knowledge of the use and programming of computers, and apply the applicable IT resources to chemical engineering.
- Develop personal work habits.
- Develop thinking habits.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.
- Work in a team.

Learning Outcomes

1. Apply the basic concepts of algebra to problem solving.

2. Apply the methods and basic concepts of differential and integral calculus of a variable to the description and calculation of magnitudes.
3. Apply the methods for solving differential equations to the analysis of deterministic phenomena.
4. Develop critical thinking and reasoning
5. Develop scientific thinking.
6. Identify, describe and apply basic mathematical and statistical concepts.
7. Make one's own decisions.
8. Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.
9. Use specific software to resolve mathematical or statistical problems in engineering.
10. Work cooperatively.

Content

1- Real numbers.

2- Functions of one real variable. Graphs. Limits and continuity.

3- Polinomic equations. The complex numbers.

4- Derivatives and their properties. Optimitzation. Taylor's formula. Applications.

5- Integration. Primitives. Basic differential relations (Equations). Parametric integrals. Applications.

6- The \mathbb{R}^n space. Linear transformations and simetries. Matrices. Determinants. Matrius. Determinants. Systems of linear equations. Applications.

7- Vector spaces.

8- Matrix diagonalization. Applications.

Methodology

Theory classes. The scientific and technical knowledge of the subject will be presented in these classes.

Practical classes (of problems). The scientific and technical knowledge presented in the theory classes will be wc

Seminars. Students must work independently in the classroom, in groups and assisted by the teacher when nece
The course will have a space in the Moodle Classroom, within the platfor

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Problems session	23	0.92	5, 4, 7, 8
Theoretical sessions	45	1.8	5, 4, 6, 8

Type: Supervised

Seminars	8	0.32	1, 6, 7, 10
----------	---	------	-------------

Type: Autonomous

Preparation of the evaluations	27	1.08	5, 4, 7, 10
Solving the proposed problems	45	1.8	1, 5, 4, 6
Study of theoretical concepts	68	2.72	1, 5, 4, 6

Assessment

You get your current qualification from formula: $Q=0,2 \cdot S+ 0,40 \cdot (P1+P2)$.

If Q is bigger or equal than 5, you succeeded. Otherwise, you have the possibility of a second try consisting in a global exam where you will obtain a qualification R. The final qualification is given by the formula $Q'=0,2 \cdot S+ \max\{0,40 \cdot (P1+P2), 0,8 R\}$.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
First Partial Exam P1	40%	3	0.12	3, 2, 4, 6, 7, 8
Second Partial Exam P2	40%	3	0.12	1, 5, 6, 7, 8
Seminar exams S	20%	3	0.12	4, 6, 8, 10, 9
