

Scenarios and Uses of Big Data

Code: 104749
ECTS Credits: 6

Degree	Type	Year	Semester
2503873 Interactive Communication	OB	4	1

Contact

Name: Santiago Giraldo Luque

Email: santiago.giraldo@uab.cat

Teaching groups languages

You can check it through this [link](#). To consult the language you will need to enter the CODE of the subject. Please note that this information is provisional until 30 November 2023.

Prerequisites

It is recommended to have completed the course "Introduction to Big Data" in order to better understand and carr

Objectives and Contextualisation

The objective of the course is the study and practice of Big Data architectures, as well as the presentation of solutions in the cloud and based on data collection and processing. The course will be also oriented to discover practical applications of Big Data in relation to geographic intelligence and social analytics. The course also includes the open data paradigm as a system with multiple possibilities of practical applications.

Competences

- Act with ethical responsibility and respect for fundamental rights and duties, diversity and democratic values.
- Act within one's own area of knowledge, evaluating sex/gender-based inequalities.
- Determine and plan the technological infrastructure necessary for the creation, storage, analysis and distribution of interactive multimedia and social-networking products.
- Introduce changes in the methods and processes of the field of knowledge to provide innovative responses to the needs and demands of society.
- Manage time efficiently and plan for short-, medium- and long-term tasks.
- Promote and launch new products and services based on massive-scale mining and analysis of data from the Media.

- Search for, select and rank any type of source and document that is useful for creating messages, academic papers, presentations, etc.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- Students must be capable of communicating information, ideas, problems and solutions to both specialised and non-specialised audiences.
- Students must develop the necessary learning skills to undertake further training with a high degree of autonomy.
- Take account of social, economic and environmental impacts when operating within one's own area of knowledge.

Learning Outcomes

1. Analyse a situation and identify its points for improvement.
2. Communicate using language that is not sexist or discriminatory.
3. Critically analyse the principles, values and procedures that govern the exercise of the profession.
4. Cross-check information to establish its veracity, using evaluation criteria.
5. Describe the infrastructure needed to store big data.
6. Differentiate between the various types of existing architectures for working with big data.
7. Distinguish the salient features in all types of documents within the subject.
8. Evaluate the impact of problems, prejudices and discrimination that could be included in actions and projects in the short or medium term in relation to certain people or groups.
9. Explain the characteristics of the infrastructure needed to recover big data.
10. Explain the explicit or implicit deontological code in your area of knowledge.
11. Explain the infrastructure needed to process big data.
12. Extract large volumes of data from social networks and the new digital media in particular.
13. Identify situations in which a change or improvement is needed.
14. Identify the social, economic and environmental implications of academic and professional activities within one's own area of knowledge.
15. Plan and execute academic projects in the field of big data.
16. Propose new methods or well-founded alternative solutions.
17. Propose projects and actions that are in accordance with the principles of ethical responsibility and respect for fundamental rights and obligations, diversity and democratic values.
18. Propose projects and actions that incorporate the gender perspective.
19. Propose viable projects and actions to boost social, economic and environmental benefits.
20. Share experiences with the group as a path to learning, in order to work subsequently in multidisciplinary groups.
21. Solve basic problems in big data.
22. Submit course assignments on time, showing the individual and/or group planning involved.
23. Weigh up the risks and opportunities of both one's own and other people's proposals for improvement.

Content

Unit 1. Introduction to the scenarios and uses of Big Data.

Unit 2: Study and practice of Big Data architectures (Hadoop/MapReduce-Spark environment).

Unit 3. Cloud solutions and Big Data usage scenarios.

3.1 Geographic intelligence.

3.2 Social analytics

Unit 4. Open data paradigm and public information systems.

The detailed program will be informed on the first day of class through the presentation of the course calendar.

Methodology

The methodology is based on the following activities:

Theoretical sessions: Introduction theoretical sessions to concepts

Laboratory practices: individual or team works in which practical activities are carried out with one task with time limit. Students must apply knowledge, distribute time and prepare the submission within the classroom and in the hours spent in practice under the professor's guidance.

Seminars: individual or teamwork in which more extensive practical activities are carried out and with tasks open to student creativity. There are no limited time in the classroom, but deadlines for submission. Students must apply knowledge, distribute time and prepare submissions by starting their work within the classroom, but continue it in the form of activities supervised by the professor's team.

Course final work: practical group assessment exercise in which students must solve, during course development, a practical application problem linked to the subject's objectives. Students must raise the problem and perform the four processes to provide a solution based on large amounts of data: search, extraction, analysis and publication of data report including a proposal for a decision based on the information collected and analysed.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Lab practices	18	0.72	3, 1, 20, 2, 4, 5, 7, 6, 10, 11, 9, 12, 14, 13, 15, 23, 22, 16, 17, 18, 19, 21, 8
SEMINARS	15	0.6	1, 4, 5, 7, 6, 11, 12, 13, 8
THEORETICAL SESSIONS	15	0.6	3, 2, 5, 7, 11, 9, 8
Type: Supervised			
ASSESSMENT	8.5	0.34	20, 2, 4, 5, 7, 12, 15, 22, 17, 18, 21, 8
TUTORING	8.5	0.34	1, 20, 2, 14, 13, 15, 23, 22, 16, 17, 18, 19, 21, 8
Type: Autonomous			
OTHER ACTIVITIES (study time; practice preparation; seminar preparation, readings, etc.)	50	2	3, 1, 2, 4, 5, 7, 6, 10, 11, 9, 12, 14, 13, 15, 22, 17, 18, 21, 8

Assessment

Activity A. Course project (group). 50% of the final grade.

Activity B: Laboratory Practice. 40% of the final grade.

Activity C. Student participation. 10% of the final grade.

To approve the subject, it is necessary to get a minimum approval note (5,0) in activities A and B.

RE-EVALUATION:

In the last two weeks of the course, students who have not pass the course can participate in a re-evaluation process consisting of a theoretical test and a practical exercise. Students must have done at least 2/3 of the total course practices (activities gruped on B) and must have obtained an average grade equal to or greater than 3.5 (and less than 5) in all evaluation activities.

PLAGIARISM:

In the event that the student performs any irregularity that may lead to a significant variation of an evaluation act, this evaluation act will be graded with 0, regardless of the disciplinary process that could be instructed. In the event, that several irregularities occur in the evaluation acts of the same subject, the final grade for this subject will be 0.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
COURSE PROJECT	50%	12	0.48	1, 20, 2, 5, 6, 11, 9, 12, 13, 15, 23, 22, 16, 17, 18, 19, 21, 8
PRACTICAL SESSIONS	40%	15	0.6	3, 1, 20, 2, 4, 5, 7, 6, 10, 11, 9, 12, 14, 13, 15, 23, 22, 16, 17, 18, 19, 21, 8
STUDENT'S PARTICIPATION	10%	8	0.32	3, 1, 20, 2, 4, 5, 7, 6, 10, 11, 9, 12, 14, 13, 15, 23, 22, 16, 17, 18, 19, 21, 8

Software

This is mostly a practical vourse,thus the required software is the usual one for the performance of capture, processing and analysis tasks in different formats.

Specifically, the following tools are required:

Data analysis software: Excel or similar

Data visualisation software: Infogram - Datawrapper - Flourish

Multimedia editing software: Wordpress - Blogger - Wix

As the subject will carry out practical sessions during all its activities, it is recommended that students (if possible) always bring their laptop to the sessions.
