Name: Llorenç Badiella Busquets

Email: Ilorenc.badiella@uab.cat

Teaching groups languages

You can check it through this <u>link</u>. To consult the language you will need to enter the CODE of the subject. Please note that this information is provisional until 30 November 2023.

Prerequisites

Descriptive Statistics

Programming tools with Statistical software and data management Linear Models Analysis of Categorical Data Multivariate analysis

Objectives and Contextualisation

Develop skills necessary to carry out professional consultancy tasks in statistics.

Covering the different fields of statistical consultancy:

- Health Sciences,

- Banking and insurance

- Sociological studies and surveys

2023/2024

Competences

- Correctly use a wide range of statistical software and programming languages, choosing the best one for each analysis, and adapting it to new necessities.
- Critically and rigorously assess one's own work as well as that of others.
- Formulate statistical hypotheses and develop strategies to confirm or refute them.
- Identify the usefulness of statistics in different areas of knowledge and apply it correctly in order to obtain relevant conclusions.
- Interpret results, draw conclusions and write up technical reports in the field of statistics.
- Make efficient use of the literature and digital resources to obtain information.
- Select and apply the most suitable procedures for statistical modelling and analysis of complex data.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
- Students must be capable of communicating information, ideas, problems and solutions to both specialised and non-specialised audiences.
- Use quality criteria to critically assess the work done.
- Work cooperatively in a multidisciplinary context, respecting the roles of the different members of the team.

Learning Outcomes

- 1. Critically assess the work done on the basis of quality criteria.
- 2. Design and conduct hypothesis tests in the different fields of application studied.
- 3. Draw conclusions that are consistent with the experimental context specific to the discipline, based on the results obtained.
- 4. Draw up technical reports that clearly express the results and conclusions of the study using vocabulary specific to the field of application.
- 5. Interpret statistical results in applied contexts.
- 6. Justify the choice of method for each particular application context.
- 7. Make effective use of references and electronic resources to obtain information.
- 8. Reappraise one's own ideas and those of others through rigorous, critical reflection.
- 9. Recognize the advantages and drawbacks of the different statistical methodologies when studying data from a variety of disciplines.
- 10. Recognize the importance of the statistical methods studied within each particular application.
- 11. Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- 12. Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
- 13. Students must be capable of communicating information, ideas, problems and solutions to both specialised and non-specialised audiences.
- 14. Use different programmes, both open-source and commercial, associated with the different applied branches.
- 15. Work cooperatively in a multidisciplinary context, accepting and respecting the roles of the different team members.

Content

Introduction

Objective of the Statistical Consulting Areas of Consultancy and Needs

Functions and responsibilities of the Statistical Consultant Work meetings Objectives according to scope Budget Statistical Report Summary Graphics Analysis, Methodology, Validation Presentation of results Productive programming with SAS and / or R Syntax files structure Implementation of Statistical Techniques Functions to reproduce code Production of results Practical cases Reports Presentation and Review

Methodology

The subject will follow the following methodology:

Theoretical classes Practical software sessions Evaluation of practical cases

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Practical cases	15	0.6	2, 4, 13, 11, 12, 9, 14, 7
Practical classes	30	1.2	8, 1, 2, 4, 3, 5, 6, 13, 11, 12, 9, 10, 15, 14, 7
Theory	30	1.2	2, 5, 13, 9

Assessment

The subject will be evaluated by solving one or more practical cases.

Statistical advice must be carried out, delivering the following documenta Initial proposal This course does not admit "Avaluació única".

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Oral Presentation	70	75	3	8, 1, 2, 4, 3, 5, 6, 13, 11, 12, 9, 10, 15, 14, 7
Practices	30	0	0	8, 1, 2, 4, 3, 5, 6, 13, 11, 12, 9, 10, 15, 14, 7
