Teachers

Michael David Creel

Jordi Masso Carreras

Hanna Wang

Prerequisites

No specific prerequisites.

Objectives and Contextualisation

The goal of the first part of the module is for students to learn standard concepts of non-cooperative and cooperative Game Theory at a graduate level.

In the second and third parts of the module the goal is for students to learn how to analyze, interpret and organize economic data with advanced statistical and econometric techniques. The student will also become familiar with the use of econometric software packages.

Competences

- Apply the methodology of research, techniques and specific advanced resources to research and produce innovative results in a specific area of specialisation
- Capacity to articulate basic economic theory, analytically deriving them from mathematical reasoning

- Capacity to identify basic statistical analysis and econometric techniques deriving them from the laws of probability and statistics
- Conceptually analyse a specific economic problem using advanced analytical tools
- Find, compile and analyse economic data using advanced econometric techniques
- Possess and understand knowledge that provides a basis or opportunity for originality in the development and/or application of ideas, often in a research context
- Student should possess the learning skills that enable them to continue studying in a way that is largely student led or independent
- Students should know how to apply the knowledge they have acquired and their capacity for problem solving in new or little known fields within wider (or multidisciplinary) contexts related to the area of study
- Students should know how to communicate their conclusions, knowledge and final reasoning that they hold in front of specialist and non-specialist audiences clearly and unambiguously
- Use new technology for the collection and organisation of information to solve problems in professional activities
- Use the main computer packages to program economic data analysis

Learning Outcomes

1. Apply the methodology of research, techniques and specific advanced resources to research and produce innovative results in a specific area of specialisation
2. Critically analyse the different estimators and basic empirical methods
3. Describe the underlying basis for modelling dynamic economic phenomena on a macroeconomic scale
4. Frame an economic question in a mathematical problem and derive the answer using mathematical logic
5. Identify the possibilities and limitations of basic empirical analysis
6. Implement an empirical analysis with all its stages using publicly accessible data bases
7. Possess and understand knowledge that provides a basis or opportunity for originality in the development and/or application of ideas, often in a research context
8. Program basic methods of estimation.
9. Student should possess the learning skills that enable them to continue studying in a way that is largely student led or independent
10. Students should know how to apply the knowledge they have acquired and their capacity for problem solving in new or little known fields within wider (or multidisciplinary) contexts related to the area of study
11. Students should know how to communicate their conclusions, knowledge and final reasoning that they hold in front of specialist and non-specialist audiences clearly and unambiguously
12. Use new technology for the collection and organisation of information to solve problems in professional activities

Content

I. Game Theory

1. Introduction to Game Theory and Some Examples
2. Games in Normal Form
3. Games in Extensive Form
4. Nash Equilibrium and Related Issues
5. Repeated Games
6. Games of Incomplete Information

- 7. Bargaining Theory
- 8. Cooperative Games

II. Econometrics I

- 1. Introduction to econometric analysis
- 2. Ordinary least squares
- 3. OLS and finite sample theory
- 4. OLS and large sample theory
- 5. Nonspherical disturbances
- 6. Endogeneity

III. Econometrics II

- 1. Extremum estimation and numerical optimization
- 2. Maximum likelihood
- 3. Generalized Method of Moments
- 4. Introduction to time series analysis
- 5. Additional topics in econometrics

For a detailed description of the content of this module go to <https://sites.google.com/view/idea-program/master-program> .

Methodology

The course will consist of sessions where the instructor presents the material, and sessions specifically dedicated to problem solving. Students are encouraged to form study groups to discuss assignments and readings.

The proposed methodology may undergo some modifications according to the restrictions imposed by the health authorities on on-campus courses.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Theory classes	112.5	4.5	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12

Type: Supervised

Problems sets, tutorials	75	3	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12
Type: Autonomous			
Personal study, study groups, textbook readings, article readings	187.5	7.5	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12

Assessment

1. CONTINUOUS EVALUATION

Exam Part I	26%
Exam Part II	26%
Exam Part III	26%
Problem sets, assignments & Class attendance and active participation	22%

The proposed evaluation activities may undergo some changes according to the restrictions imposed by the health authorities on on-campus courses.

2. THIS MODUL CONTEMPLATES A COMPREHENSIVE EVALUATION option:

COMPREHENSIVE EVALUATION (Art. 265 of the UAB Academic Regulations)

By requesting the comprehensive evaluation the student waives the option of continuous evaluation.

The comprehensive evaluation must be requested at the Academic Management (Gestió acadèmica) of the Campus where the degree/master's degree is taught. The request must be filed according to the procedure and the deadline established by the administrative calendar of the Faculty of Economics and Business.

Attendance :

- *Student attendance is mandatory on the day of the comprehensive assessment. The date will be the same as that of the final exam of the semester as per the evaluation calendar published by the Faculty of Economics and Business and approved by the Faculty's Teaching and Academic Affairs Committee. The duration of the comprehensive assessment must be specified in the characteristics of such activity.*
- *100% of the evaluation evidences must be handed in by the student on the day of the comprehensive assessment.*
- *The evaluation evidences carried out in person by the student on the same day of the comprehensive assessment must have a minimum weight of 70%.*

The following information referring to the characteristics of the comprehensive assessment must be included. We suggest incorporating the following table:

<i>Evidence Type (1)</i>	<i>Weight in the final assessment (%) (2)</i>	<i>Duration of the activity</i>	<i>Is the activity that corresponds to this evaluation evidence to be carried out in person on the date scheduled for the comprehensive evaluation? (YES/NO) (3)</i>
--------------------------	---	---------------------------------	--

EXAM	80%	YES
LAB TEST	20%	YES
TOTAL	100%	

(1) Descriptive title of each piece of evidence (exam, problem sets solving, case analysis, activity carried out using specific software that the student is expected to know,...)

(2) Weight of the evidence in the final mark of the subject (specify the percentages of each evaluation evidence that the student must undertake)

(3) For each piece of evidence: Is the activity that corresponds to this evaluation evidence to be carried out in person on the date scheduled for the comprehensive evaluation? (YES/NO)

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Class Attendance and Problem sets and assignments	22%	0	0	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12
Exam Part I	26%	0	0	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12
Exam Part II	26%	0	0	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12
Exam Part III	26%	0	0	2, 1, 3, 4, 5, 6, 8, 10, 11, 9, 7, 12
