

2023/2024

Transgenesis and Gene Therapy: from the Animal to the Clinic

Code: 42891 ECTS Credits: 9

Degree	Туре	Year	Semester
4313772 Advanced Biotechnology	ОТ	0	1
4313794 Biochemistry, Molecular Biology and Biomedicine	ОТ	0	1

Contact

Name: Maria Fatima Bosch Tubert

Email: fatima.bosch@uab.cat

Teaching groups languages

You can check it through this <u>link</u>. To consult the language you will need to enter the CODE of the subject. Please note that this information is provisional until 30 November 2023.

Teachers

Ana Maria Carretero Romay Marc Navarro Beltran Jesus Ruberte Paris Miguel Chillon Rodriguez Victor Nacher Garcia Maria Assumpcio Bosch Merino Anna Maria Pujol Altarriba Miguel García Martínez Ivet Elias Puigdomenech Verónica Jimenez Cenzano

Prerequisites

Graduate in the field of life sciences, for example: Biology, Biochemistry, Biomedicine, Biotechnology, Pharmacy, Genetics, Medicine, Veterinary Medicine.

Objectives and Contextualisation

The student will gain insight into:

- Technologies used to generate transgenic animals overexpressing specific transgenes or mutant models with specific endogenous genes modified (knockout and knockin animal models).

- Application of the aforementioned technologies in biomedicine, biotechnology and livestock.

- Current legislation for animal experimentation

- Mouse anatomy and embryology in order to understand the embryonic development of organs and to analyze morphological/anatomical abnormalities in genetically modified mouse models.

- *In vivo* and *ex vivo* gene therapy, including characteristics of the different types of vectors (viral and non-viral) used for gene transfer as well as their advantages and disadvantages, administration routes and applications of gene therapy in the treatment of hereditary and non-hereditary human diseases.

Competences

Advanced Biotechnology

- Apply techniques for modifying living beings or parts of these in order to improve pharmaceutical and biotechnological processes and products or develop new products. (Specialisation in molecular and therapeutic biotechnology)
- Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Use advanced biotechnology tools in combination to solve problems in emerging areas of biotechnology.
- Use and manage bibliography and IT resources related to biotechnology responsibly.

Biochemistry, Molecular Biology and Biomedicine

- Analyse and explain normal morphology and physiological processes and their alterations at the molecular level using the scientific method.
- Analyse research results to obtain new biotechnological or biomedical products to be transferred to society.
- Apply techniques for modifying living beings or parts of these in order to improve pharmaceutical and biotechnological processes and products or develop new products.
- Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
- Conceive, design, develop and synthesise scientific and/or biotechnological projects within biochemistry, molecular biology or biomedicine.
- Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Use and manage bibliography and IT resources related to biochemistry, molecular biology or biomedicine.
- Use scientific terminology to account for research results and present these orally and in writing.

Learning Outcomes

- 1. Analyse research results to obtain new biotechnological or biomedical products to be transferred to society.
- 2. Communicate and justify conclusions clearly and unambiguously to both specialist and non-specialist audiences.
- 3. Describe the foundations of in vivo and ex vivo gene therapy. .
- 4. Descriure els fonaments de la teràpia gènica in vivo i ex vivo.

- Distingir les diferents metodologies usades per a obtenir animals transgènics que permeten la sobreexpressió, el bloqueig o la modificació de gens endògens de manera ubiqua o específica de teixit i/o induïble.
- 6. Explain the characteristics of the different types of vectors used in gene transfer, their advantages and disadvantages, and their use for each disease or tissue.
- 7. Explicar les característiques dels diferents tipus de vectors usats per a la transferència gènica, els seus avantatges i inconvenients, així com la seva utilitat per a cada malaltia o teixit.
- 8. Interpret molecular or physiological alterations of a transgenic animal.
- 9. Interpret the results of gene therapy clinical trials in humans.
- 10. Proposar un protocol d'utilització de teràpia gènica.
- 11. Propose a protocol for the use of gene therapy.
- 12. Show knowledge of the different methodologies used to obtain transgenic animals that allow the global or tissue-specific and/or inducible over-expression, blockage or modification of endogenous genes .
- 13. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.
- 14. Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- 15. Use and manage bibliography and IT resources related to biochemistry, molecular biology or biomedicine.
- 16. Use and manage bibliography and IT resources related to biotechnology responsibly.
- 17. Use scientific terminology to account for research results and present these orally and in writing.
- 18. Visualise morphological changes in a transgenic animal.

Content

PART 1. MOUSE MORPHOLOGICAL PHENOTYPING

By J. Ruberte, A. Carretero, M. Navarro and V. Nacher. Dept. Animal Health and Anatomy, UAB

- 1. Anatomic Terminology and Regions
- 2. Development and Placenta
- 3. Osteology
- 4. Arthrology and Miology
- 5. Cardiovascular System
- 6. Repiratory Apparatus
- 7. Digestive Apparatus
- 8. Urinary Organs
- 9. Male and Female Genital Organs
- 10. Nervous System
- 11. Visual Organ
- 12. Vestibulocochlear Organ
- PART 2: TRANSGENIC ANIMALS AND GENE THERAPY
- By F. Bosch, A. Pujol, I. Elias, M. Garcia and Verónica Jiménez.
- Dept. Biochemistry & Molecular Biology, UAB

Part 2.1. Transgenic Animals:

1. Generation of transgenic animals by pronuclear microinjection.

2. Constitutive and conditional (tissue specific and/or inducible) Knockout/in animals.

3. Generation of Knockout/in animals by Genome Edition with ZFNs, TALENs and CRISPR/Cas9

4. Cloned animals by nuclear transfer. Aplications.

5. Consortia for genome mutagenesis and mouse phenotyping: Mouse Clinics.

6. Management of transgenic animal colonies. Current legislation on animal experimentation.

7. Aplications of transgenic animal technology in the study of diabetes, obesity, inherited diseases...

Part 2.2. Gene Therapy:

1. Introduction to the gene therapy field.

2. Characteristics of adenoviral vectors. Applications.

3. Characteristics of recombinant vectors derived from adenoassociated viruses. Applications in gene therapy for diabetes mellitus.

4. "Ex vivo" Gene Therapy: retroviral and lentiviral vectors. Applications.

- 5. Non-viral gene therapy. Applications.
- 6. Gene Therapy for Hereditary Diseases. Gene Therapy for Mucopolysaccharidosis (MPS).

7. Invivo" genome editting with Zinc-finger nucleases.

PART 3. INTRODUCTION AND DESIGN OF GENE THERAPY CLINICAL TRIALS FOR THE TREATMENT OF HUMAN DISEASES

By M. Chillon and A. Bosch, Dept. Biochemistry & Molecular Biology, UAB

Invited speaker: Ramon Alemany, Institut Català d'Oncologia (ICO)

1-Introduction to clinical trials. Factors to consider in the design of clinical trials of gene therapy. M Chillon

2-Development and production of vectors for clinical trials. M Chillon

3-Regulation on the use of Genetically Modified Organisms. Biosafety level and quality of production (GMP and GLP conditions). M Chillon

4-Clinical trials using non-viral vectors. M Chillon

5-Strategies to improve biosecurity and to reduce the immune response in clinical trials using adenoviral vectors. M Chillon

6-Adenoassociats vectors in clinical trials. Increased tissue specificity using pseudotyped AAV vectors. Immune response. A Bosch

7-Vectors derived from herpes virus in clinical trials. A Bosch

8-Advantages and disadvantages of retroviral and lentiviral vectors in clinical trials. ABosch

9-Ongoing clinical trials for specific diseases: Haemophilia, ß-Thalassemia, Primary Immunodeficiencies, Cystic Fibrosis, Duchenne Muscular Dystrophy, lysosomal storage diseases, neurodegenerative diseases, blindness, cancer, etc. A Bosch, M Chillon

Methodology

Combination of lectures and laboratory practices and presentation of a project supervised by the teacher.

Theory 72% Laboratory 11% Supervised work 14% Tutoring 3%

UAB Surveys

15 minutes of one class will be allocated for the response of the UAB institutional survey.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Activities

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Lectures and lab practices	55	2.2	1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18
Type: Supervised			
Preparation of oral presentations and lab practices	44	1.76	1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18
Type: Autonomous			
Literature search and study for exams	120	4.8	1, 12, 3, 6, 9, 8, 11, 13, 2, 14, 15, 17, 18

Assessment

The evaluation of the module will be based on work done by students, attendance and class participation, practices, oral defence of a scientific paper and the grade of exams at the end of the course.

To be eligible for the retake process, the student should have been previously evaluated in a set of activities equaling at least two thirds of the final score of the course or module. Thus, the student will be graded as "No Avaluable" if the weighthin of all conducted evaluation activities is less than 67% of the final score.

Important: If plagiarism is detected in any of the works submitted, the student will fail the whole module.

This subject/module does not provide for the single evaluation system.

Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Attendance and active participation in	10%	0	0	12, 4, 3, 5, 7, 6, 9, 8, 10, 13, 2, 14, 16, 15,

lectures				17, 18
Attendance to laboratory practices (part 1)	8%	0	0	12, 6, 9, 8, 11, 13, 14, 16, 15, 17, 18
Oral defence of selected papers (part 2)	32%	2	0.08	1, 12, 4, 3, 5, 7, 6, 9, 8, 10, 13, 2, 14, 16, 15, 17, 18
Theorical and practical tests (part 1 and 3)	50%	4	0.16	12, 4, 3, 7, 6, 9, 8, 10, 11, 13, 2, 16, 15, 17, 18
