Teaching groups languages

You can view this information at the [end](#) of this document.

Prerequisites

The first and second year Analysis courses of the mathematics degree. It is also useful, but not essential, to have

Objectives and Contextualisation

The main objective is to describe the way in which Harmonic Analysis allows to decompose a function as a sum of

Competences

- Actively demonstrate high concern for quality when defending or presenting the conclusions of one's work.
- Assimilate the definition of new mathematical objects, relate them with other contents and deduce their properties.
- Develop critical thinking and reasoning and know how to communicate it effectively, both in one's own languages and in a third language.
- Effectively use bibliographies and electronic resources to obtain information.
- Formulate hypotheses and devise strategies to confirm or reject them.
- Generate innovative and competitive proposals for research and professional activities.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
- Students must develop the necessary learning skills to undertake further training with a high degree of autonomy.
- Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.

Learning Outcomes

1. Actively demonstrate high concern for quality when defending or presenting the conclusions of one's work.
2. Develop critical thinking and reasoning and know how to communicate it effectively, both in one's own languages and in a third language.
3. Effectively use bibliographies and electronic resources to obtain information.
4. Formulate conjectures and devise strategies to confirm or reject said conjectures
5. Generate innovative and competitive proposals for research and professional activities.
6. Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
7. Students must be capable of collecting and interpreting relevant data (usually within their area of study) in order to make statements that reflect social, scientific or ethical relevant issues.
8. Students must develop the necessary learning skills to undertake further training with a high degree of autonomy.
9. Students must have and understand knowledge of an area of study built on the basis of general secondary education, and while it relies on some advanced textbooks it also includes some aspects coming from the forefront of its field of study.
10. Understand and know how to reproduce basic results in relation to the Hilbert transform.

Content

1. Fourier series and applications

2. Fourier integrals and applications.
3. The Poisson summation formula. The Heisenberg Uncertainty Principle.
4. Fourier analysis in finite abelian groups. Dirichlet's theorem on prime numbers.

5. Theory of distributions. Fourier transform of tempered distributions. Applications.

Activities and Methodology

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Directed	30	1.2	5, 8, 6
Type: Supervised			
Supervised	20	0.8	10, 5, 8, 6
Type: Autonomous			
Autonomous	85	3.4	10, 5, 8, 6

The standard one in Mathematics. Discussion of definitions, examples and Theorems. We will also have problem sessions.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Assessment

Continuous Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Exercises	40%	1	0.04	1, 2, 10, 4, 5, 9, 8, 6, 7, 3
Final Exam	50%	4	0.16	1, 2, 10, 4, 5, 9, 8, 6, 7, 3
Oral Exam	10%	10	0.4	1, 2, 10, 4, 5, 9, 8, 6, 7, 3

The subject will be evaluated according to the three activities and their weights shown in the table.

Students who do not pass the course can repeat the final exam with the :

THERE IS ALSO THE POSSIBILITY OF DOING ONLY ONE FINAL EXAM WITH THAT WEIGHTS THE 100% O
