Prerequisites

There are no prerequisites for this course. The student is advised to refresh the chemistry and biology knowledge acquired during the "batxillerat".

Objectives and Contextualisation

The general objective of this course is to familiarise the student with the basic techniques used in the biochemistry/molecular biology laboratory. This is a classroom-based course centred in theoretical aspects, which will be worked out in the lab in the Laboratori integrat I and II, scheduled later during the academic year.

Learning Outcomes

1. CM22 (Competence) Prioritise the instrumentation necessary for the different techniques for the separation and characterisation of biomolecules.
2. CM22 (Competence) Prioritise the instrumentation necessary for the different techniques for the separation and characterisation of biomolecules.
3. CM23 (Competence) Propose strategies for the purification of biomolecules from complex mixtures.
4. CM23 (Competence) Propose strategies for the purification of biomolecules from complex mixtures.
5. KM24 (Knowledge) Explain the theoretical foundation and appropriate techniques for the structural and functional characterization of proteins and nucleic acids.
6. SM20 (Skill) Use the basic techniques of manipulation, separation, detection and analysis of proteins and nucleic acids.
7. SM20 (Skill) Use the basic techniques of manipulation, separation, detection and analysis of proteins and nucleic acids.
8. SM22 (Skill) Use analytical methodologies for the assay of biological activity of cellular components.
9. SM22 (Skill) Use analytical methodologies for the assay of biological activity of cellular components.

Content

- Introduction to the biochemistry laboratory.
Safety, good practices, laboratory notebook, use of materials and reagents, quantitative transfer of liquids, pipette use, statistical analysis, computer tools. Buffers, electrodes, biosensors. Sample preparation techniques.
- Spectroscopy.
Basic principles and instrumentation: Beer-Lambert law. UV, visible and fluorescence spectroscopy.
Applications, protein and nucleic acid quantification.
- Centrifugation.
Basic principles.
Instrumentation. Types of centrifuges depending on their speed: low, high and ultracentrifugation. Rotor types.
Applications: fractional centrifugation for subcellular fractionation, gradient density centrifugation for the separation of blood components.
Analytical centrifugation.
- Chromatography.
Basic principles. Types and materials: Planar and column chromatography. Gel filtration, ionic exchange, affinity. HPLC.
Basic types and applications.
- Electrophoresis.
Basic principles.
Electrophoretic methods and instrumentation. Supports: paper, agarose and polyacrylamide.
Applications: nucleic acid separation in agarose gels and polyacrylamide gel electrophoresis (PAGE) for protein separation. PAGE types.
- Introduction to molecular biology techniques.
Isolation and characterisation of DNA, restriction digestion of DNA. Nucleic acid amplification: the polymerase chain reaction (PCR). Basic principles of PCR and applications.
- Immunological techniques.
Antibody production, immunoelectrophoresis, Western blot, enzyme-linked immunosorbent assay (ELISA), immunofluorescence, fluorescent activated cell sorting (FACS), LFA.

Activities and Methodology

| Title | Hours | ECTS | Learning Outcomes |
|--|-------|------|-------------------|
| Type: Directed | | | |
| Lectures | 25 | 1 | |
| Type: Supervised | | | |
| Tutorial hours | 8 | 0.32 | |
| Type: Autonomous | | | |
| Autonomous learning: MOODLE activities | 20 | 0.8 | |
| Self study | 10 | 0.4 | |

- Guided learning (lectures): The instructor will deliver the classroom materials before each session through the MOODLE platform. Materials can be power point presentations, recorded lectures, recommended videos or exercises related to the contents of the course.
- Autonomous learning:
Study.

MOODLE activities. The lecturer will propose several autonomous activities. Results will be delivered through the MOODLE platform. Activities can consist in visualisation of videos or tutorials, questionnaires, numerical resolution exercises or others, depending on the subject matter. In general terms, activities will have a close relationship with the aspects covered during classroom sessions. Sometimes it might be necessary that students deliver the MOODLE activity before a particular classroom session, in order to fully benefit from the classroom session.

- Tutoring: Individual or small-group sessions, focused in difficulties, as virtual meetings. These will be scheduled by the instructor and/or on demand by students.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Assessment

Continous Assessment Activities

| Title | Weighting | Hours | ECTS | Learning Outcomes |
|---------------------------|-----------|-------|------|------------------------|
| MOODLE activities | 20% | 8 | 0.32 | CM22, CM23, SM20, SM22 |
| Problem-solving test | 40% | 2 | 0.08 | CM22, CM23, KM24 |
| Theoretical concepts test | 40% | 2 | 0.08 | CM22, CM23, KM24 |

- Students will undergo two written assessments, each of them accounting for 40% of the final mark. The two assessments will be taken on the same day, one after the other.
- The first assessment will evaluate the theoretical concepts, and the second one will consist of exercises (problem-solving). Each test is passed if the mark is equal or higher than 5. The two tests can be compensated if the mark on one of them is in the interval [4,5-4,9], and the average between the two is equal or higher than 5.
- The two assessments can be retaken. Students can retake each or both assessments in case they fail one or both assessments, or those who wish to improve their marks.
- Those students who retake any test with the purpose to improve their marks give up their former mark, and must give a 48h prior notice to the instructor, in order to plan the logistics of the assessment (e.g. booking a suitable exam room).
- The written assessment results will be available for revision on a previously agreed date and place, according to the Faculty rules.
- A 20% of the weight will be obtained by the evaluation of the activities performed by the student, and delivered through the MOODLE platform (continuous assessment). MOODLE activities must be delivered on time and can not be retaken.
- Written assessments can not be compensated with MOODLE marks. This means that, in order to pass the course, it is compulsory that the average between the two written assessments scores equal or higher than 5.
- Those students who can not attend written assessments because of a justified and verifiable cause, must check with the lecturer about the possibility to retake the assessment(s).
- In all cases, the evaluation regulations of the faculty will be applied.
- In order to retake the written assessments, students must have previously been evaluated in a set of activities equal to two thirds of the total weight of the subject. Therefore, students will be considered "No Evaluable" when the evaluation activities taken amount for less than 67% of the final mark.
- Those students who request the single evaluation or "avaluació única", will have to undergo a 3rd test, the same day of the theoretical concepts test and the problem solving test, to assess the knowledge of the concepts evaluated by MOODLE for the rest of the students.
