Prerequisites

Following the academic normative of the UAB, students must fulfil two requirements to enrol the Internship course (article 134.5, requirements to enroll the fourth course of a degree):

- To have passed all subjects of the first year, and
- To have been awarded at least 120 ECTS in subjects of the first three years

Furthermore, the students should subscribe for accidents and civil liability insurance, prior to the signature of the internship agreement. It is recommended to do it at the same time as the tuition.

Recommendations

Students should consider the enrolment in this course only if it is their final year and would be able to graduate at the end of the academic year.

Objectives and Contextualisation

Internships are worksite experiences during which students - with guidance and supervision at the work place, as well as with an academic tutor - complete a planned series of activities or project(s) designed to give a broad understanding of a business occupational area.

Thus, internships aim to two interrelated objectives:

1. Implement and test the knowledge and skills achieved by students during the Degree
2. Facilitate a first contact with employers and the professional and business world linked to the IT area.

The process of obtaining the internship is led by the student with the help of the person in charge of the subject, so that the student's personal growth is promoted in order to select where to carry out the internship as well as to prepare him/herself to pass the selection process.

Competences

- Act with ethical responsibility and respect for fundamental rights and duties, diversity and democratic values.
- Analysing, diagnosing, supporting and taking decisions in terms of organisational structure and business management.
- Demonstrating a comprehension of the business information systems, taking into account their three specific dimensions (informational, technological and organisational) and being active in the specification, design and implementation of said systems.
- Demonstrating a comprehension of the ethical values of the professional practice, especially in relation to the processing of information.
- Demonstrating a comprehension of the principles, structure, organisation and inner workings of companies and organisations.
- Developing in an effective way the analysis and design techniques and methodologies of information systems in a business environment.
- Identifying, analysing and solving complex problems and situations related to company organisations.
- Make changes to methods and processes in the area of knowledge in order to provide innovative responses to society's needs and demands.
- Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
- Take sex- or gender-based inequalities into consideration when operating within one's own area of knowledge.

Learning Outcomes

1. Analyse the sex- or gender-based inequalities and the gender biases present in one's own area of knowledge.
2. Analysing the internal organisation processes related to the activities of the company.
3. Applying the acquired knowledge to the identification, analysis and resolution of problems or complex situations in the company that appear during the student's stay.
4. Assessing the decisions regarding the organisational structure within the framework of the company or organisation where the practicum takes place.
5. Consider how gender stereotypes and roles impinge on the exercise of the profession.
6. Critically analyse the principles, values and procedures that govern the exercise of the profession.
7. Demonstrating an active attitude in the processes of specification, design, and implementation of information systems.
8. Fulfilling the ethical principles in the professional practice.
9. Identify situations in which a change or improvement is needed.
10. Propose new methods or well-founded alternative solutions.
11. Propose projects and actions in accordance with the principles of ethical responsibility and respect for fundamental rights, diversity and democratic values.

12. Students must apply the techniques and methodologies of analysis and design of systems in the projects they participate.
13. Students must be capable of applying their knowledge to their work or vocation in a professional way and they should have building arguments and problem resolution skills within their area of study.
14. Weigh up the risks and opportunities of suggestions for improvement: one's own and those of others.

Content

To be able to formalize an internship, the organization offering it should have signed a previous agreement to that end.

Internship content varies according to the specific proposal of the organization receiving the student and should be previously accepted by the degree coordinator. To guarantee the suitability of the internship regarding its content, the following information should be provided prior acceptance:

- Organization and Unit in which the internship will be completed
- Internship aim and scope
- Expected competencies and learning outcomes that the student should have acquired at the end of the internship
- Summary of the planned activities
- Detailed tasks that should be performed by the student during the internship
- Supervisor at the workplace and guidance plan

At the end of the internship the student should be able to write a report relating the content of the internship with the knowledge and skills acquired during the degree, together with a well-argued consideration on the role played by the internship in their learning process.

Activities and Methodology

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Assignment and following-up meetings	2.5	0.1	
Preliminar Internship orientation session	0.5	0.02	
Type: Supervised			
Internship and seminars/specific training	434	17.36	2, 3, 4, 7, 8, 12, 13
Type: Autonomous			
Drafting of both the initial and the final intership reports	12	0.48	1, 5, 6, 10, 11, 14

Upon the agreement in a given internship, a specific collaboration contract must be signed between the various parties (organization, university and student). The agreement will specify the names of the two tutors guiding and supervising the student during the internship: a tutor appointed by the organization and a second one, the academic tutor.

During the internship the student must regularly contact his/her academic tutor and at least three meetings should be scheduled:

1. An initial meeting, to be held between the first and third week of the internship
2. An intermediate one, once the student has submitted his/her initial report
3. A final meeting at the end of the internship

As a good practice, students should maintain a record of the activities carried out during the internship and periodically refer them to the academic tutor. It would also constitute a good basis for preparing the final report on the internship

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Assessment

Continous Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Handing-in and defense (if deemed necessary) of the student's internship report	60%	1	0.04	
Report issued by the academic tutor	20%	0	0	1, 5, 6, 9, 10, 11, 14
Report issued by the tutor appointed by the organization	20%	0	0	2, 3, 4, 7, 8, 12, 13

The assessment combines the following evidences:

- The report from the tutor appointed by the organization (20%)
- The report from the academic tutor (20%)
- The internship final report drafted and handed-out by the student (60%).

Students must hand-in their final and intermediate reports in time and with due form (including the e-signature of the student) to be able to be graded. Any student failing to do so will be graded as "non-evaluable".

Within "Camus Virtual" a specific page for the Internship will be maintained. Models of the different reports, as well as a guide related to the preparation of the internship final report, can be obtained. A rubric used by all academic tutors to assess this last report is also available.

The final grade will be determined by the academic tutor based on the marks of the various reports.

Grade revision process

After all grading activities have ended students will be informed of the date and way in which the course grades will be published. Students will be also be informed of the procedure, place, date and time of grade revision following University regulations.

Irregularities in evaluation activities

In spite of other disciplinary measures deemed appropriate, and in accordance with current academic regulations, "whenever a student makes any irregularity that could lead to a significant variation in the grade of an evaluation activity, it will be graded with a 0, regardless of the disciplinary process that can be instructed. In case of occurrence of various irregularities in the evaluation of the same subject, the final grade of this subject will be 0". Section 10 of Article 116. Results of the evaluation. (UAB Academic Regulations).

Bibliography
