## Teachers

Antonio Miguel Pineda Ruiz

## Teaching groups languages

You can view this information at the [end](#) of this document.

## Prerequisites

It is recommended to have followed the course Introduction to the Physics of the Cosmos, and be familiar with classical field theory and special relativity.

## Objectives and Contextualisation

The main purpose of this course is to learn the basic concepts and techniques behind the theory of quantum fields, with applications to elementary particle physics, in particular Quantum Electrodynamics.

## Competences

- Apply the main principles to specific areas such as particle physics, astrophysics of stars, planets and galaxies, cosmology and physics beyond the Standard Model.
- Formulate and tackle problems, both open and more defined, identifying the most relevant principles and using approaches where necessary to reach a solution, which should be presented with an explanation of the suppositions and approaches.
- Use acquired knowledge as a basis for originality in the application of ideas, often in a research context.
- Use critical reasoning, analytical capacity and the correct technical language and formulate logical arguments.
- Use mathematics to describe the physical world, select the appropriate equations, construct adequate models, interpret mathematical results and make critical comparisons with experimentation and observation.

## Learning Outcomes

1. Analyze the concept of renormalization and apply it in to electromagnetic processes.
2. Apply the language of Feynman diagrams in quantum field theory .
3. Apply quantum field theory electromagnetic processes.
4. Calculate cross sections of electromagnetic processes .
5. Understand the basics of quantum field theory.

## Content

### 1. Introduction

(a) Fock space. Asymptotic states

(b) Poincare group and Lorentz group

(c) Associated Lie algebra

(d) One particle irreducible representation. Wigner method. Little group. Spin, helicity. Massive and massless case

(e) Natural units

### 2. Interaction

(a) Cross Section and S matrix

(b) Decays and S matrix

(c) Interaction picture and S matrix

(d) Motivation for causal (free) fields

(e) Poincare symmetry and S matrix

(f) Wick theorem

### 3. Fields for particles with spin

(a)  $SL(2,C)$  and non-unitary irreducible representations of the Lorentz group

(b) Dirac field: construction. Propagator, symmetries, spin: helicity and quirkality. Spin-statistics theorem

(c) Field for a massive spin-one particle: Proca field

(d) Field for a massless spin-one particle: Electromagnetic field

### 4. Quantum Electrodynamics (QED)

(a) Quantization of QED

(b) S-matrix to  $O(e^2)$ .

- Elementary processes of QED to tree level: Compton scattering,  $e^+e^- \rightarrow e^+e^-$ ,  $e^+e^- \rightarrow \mu^+\mu^-$ , ...
- Feynman diagrams and computational techniques: traces, spin, ...

- (c) Generalized Feynman rules
  - (d) About gauge invariance. Examples of Ward identity
  - (e) Non relativistic limit of QED
  - (f) Soft Bremsstrahlung (\*)
5. Beyond tree level. Introduction
- (a) Infinities and dimensional regularization
  - (b) Vacuum polarization
  - (c) Renormalization of the electric charge
  - (d) Optical theorem
  - (e) Dispersion relations
  - (f) Bound states in Quantum Field Theory: Hydrogen-like atoms (\*)
  - (g) Renormalization of QED (\*)

## Activities and Methodology

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Theory and problems	45	1.8	1, 2, 3, 4, 5
Type: Autonomous			
Study, exercises	84	3.36	1, 2, 3, 4, 5

There will be teaching lectures where the theory will be explained in detail.

There will be teaching lectures where a selection of the list of exercises will be discussed.

The student should digest at home the theory explained in class, and perform the list of exercises suggested during the lectures.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

## Assessment

### Continous Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
-------	-----------	-------	------	-------------------

Exam	50%	3	0.12	1, 2, 3, 4, 5
Exercises delivery	30%	15	0.6	1, 2, 3, 4, 5
Oral presentations and active attendance in class	20%	3	0.12	1, 2, 3, 4, 5

Exam: 50%

Exercises delivery: 30%

Participation in class and oral presentation of some exercises: 20%

Make-up exam: 50%. Necessary condition: To have 3.5 or more in the previous final mark.

The examination process does not have a single assessment system.
