

## Corporate Software Project Management

Code: 102175  
ECTS Credits: 6

**2025/2026**

Degree	Type	Year
Business and Information Technology	OP	4

### Contact

Name: Maria Gloria Estape Dubreuil

Email: gloria.estape@uab.cat

### Teachers

Jaume Subiras Pugibet

(External) (Jaume.Subiras@uab.cat)

### Teaching groups languages

You can view this information at the [end](#) of this document.

### Prerequisites

Although there are no specific prerequisites for this course, it is advisable to have previously completed most subjects of the first three degree years, and, most particularly, Technology Innovation Projects in the sixth semester. It is one of the electives that can lead to a mention in the fourth year, and therefore its content relates directly to the last formative stage of the degree.

### Objectives and Contextualisation

Corporate software development projects are not isolated projects. They are inserted in rich, changing, competitive business environments. Frequently these projects are a core part of the management of the firm, having a large impact on their perceived income.

The process of creation of corporate software is a complex one. It requires a broad base of knowledge and skills to successfully analyze, design, program, test and implement a given project. Both psychological and economic management are essential.

The aim of this course is therefore to present corporate software development projects and the processes needed to carry them out successfully.

The process of creation of corporate software is based not only on the life cycle theory, but also in the proper management of suppliers and contracts. The course includes the most relevant methodologies for developing

corporate software. However, the major focus of the course is on the business aspects of corporate software development, with special attention to information systems planning and management on the part of the teams, taking into account its business environment.

After completing the course students will be able to analyze the fundamentals of corporate software development, taking into account actors (stakeholders), processes involved and project objectives. They will also be able to correctly define its scope, make risk analysis and prepare documentation for a good bid. Additionally, they would have the basic knowledge to be able to manage suppliers and subcontractors.

## **Learning Outcomes**

1. CM27 (Competence) Recommend the best IT solution, considering not only the technical and financial requirements but also the difficulties arising from implementation.
2. KM14 (Knowledge) Identify algorithm and program analysis techniques.
3. SM09 (Skill) Design databases adapted to the operational needs of organisations.

## **Content**

The course will be developed around six units, as detailed below.

### **Unit 1. Development of Information Systems in Organizations**

The unit provides an approximation to the peculiarities of IS in business organizations. It develops a number of general aspects which will be used to start the course and to describe the characteristics and complexity of the subject. Some of the points to be developed include: Developing a Plan for Information Systems; Risk in implementing ICT; dilemmas between buying and building software applications; aspects of outsourcing.

### **Unit 2. Systems Development Life Cycle**

This unit introduces the basic methodologies for the development of software applications. The aim is to know and understand a number of clearly defined and distinct work phases that have to be performed, starting from the conceptualization of a business need, and until the required software is in place providing service to users. Given the orientation of the course, the main aspects to be considered are Software Requirements Specification and Functional Analysis; other stages will be stated and discussed superficially.

### **Unit 3. ICT Project Management**

In continuity with the preceding third-year course, Technological Innovation Projects, the unit shall analyze the peculiarities of project management in information technology. Although developing software is an engineering task, as shown in the previous unit, there is also a need to define and use a project management methodology. The unit will therefore cover topics such as organization and roles of the team, risk management, project management offices. It will also discuss the general aspects to be considered in the tender of ICT projects.

### **Unit 4. Models of Quality Management in Software Development.**

As important as delivering a project on time is its appropriate product quality. In the unit various models such as ISO, CMMI, among others, will be discussed. Furthermore, security issues in the development and implementation of software will also be considered.

### **Unit 5. Incremental systems development methodologies: Agile**

In this topic, development models such as Agile, SCRUM and others, aiming to reduce the deadlines for the delivery of software products, will be presented. In particular, both the principles of the Scrum methodology and its advantages and disadvantages will be studied in depth.

## Unit 6. Service management: ITIL

Once the projects move to productive environments, it is necessary to maintain them and therefore to look for models allowing to effectively manage incidents. ITIL is presented as the main management methodology used in production departments. The different services available are studied in its version 4.0

## Activities and Methodology

Title	Hours	ECTS	Learning Outcomes
Type: Directed			
Development of Case studies	20	0.8	CM27, KM14, SM09, CM27
Theoretical classes	25	1	CM27, KM14, SM09, CM27
Type: Supervised			
To train students in tools and agility in making effective presentations	2	0.08	SM09, SM09
Tutorials	14	0.56	CM27, KM14, SM09, CM27
Type: Autonomous			
Individual work	48	1.92	CM27, CM27
Preparation of study cases, teamwork and oral presentations	38	1.52	CM27, KM14, CM27

Learning will be based on theoretical classes, case development and study and drafting on various teamwork assignments during the course.

Within the course lectures, the case methodology will be used as a teaching tool, with the participation of students.

The use of Artificial Intelligence (AI) technologies is allowed exclusively in activities related to the drafting of some group work during the course. Submissions where AI tools have been used must include an annex clearly identifying those parts that have been generated with the help of this technology, specifying tools and "*prompts*" used, as well as including a critical reflection on their influence on the development of the activity. Lack of transparency in the use of AI in these assessable activities will be considered a lack of academic honesty and may result in a partial or total penalty in the grade of the activity, or greater penalties in cases of seriousness.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

## Assessment

### Continuous Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes

A. Learning exercises	10%	0	0	CM27, KM14, SM09
B. Case studies, individual tests and teamwork	50%	0	0	CM27, KM14, SM09
C. Final exam	40%	3	0.12	CM27, KM14, SM09

Assessment will take into account the following items:

- Problem-based learning exercise(s), teamwork and classroom presentation of the results.
- Individual tests and practical cases and teamwork, plus a subjective evaluation by the teacher based on his/her perception of the participation and implication of the student in the subject throughout the course.
- Final written exam on relevant concepts and aspects of the course

#### Evaluation criteria

Each of the assessment items has a different weight to the final grade of the subject. The final grade of the subject is obtained from the following calculation:

$$N = 50\% \text{ (work done during the course)} + 40\% \text{ (final test)} + 10\% \text{ (questionnaires)}$$

The value of N will only be calculated if the student has scored a minimum of 4.5 points out of 10 in each of the three items. In this case, the student passes the course whenever  $N \geq 5$ , fails if  $N < 3.5$  and can enter the retake process otherwise.

The marks obtained from teamwork during the course will always be on an individual level, and not necessarily coincident with the grade of the work itself, since individual aspects such as the students' participation in the resolution and its defense will also be considered.

#### CAUTION:

1. A student having participated in at least two of the three assessment categories cannot be considered "Non evaluable"
2. This subject does NOT offer the option for comprehensive evaluation.

#### Calendar of evaluation activities

The dates of the evaluation activities (exercises, assignments ...) will be announced well in advance during the semester.

The dates of the final exam is scheduled in the assessment calendar of the Faculty.

*"The dates of evaluation activities cannot be modified, unless there is an exceptional and duly justified reason why an evaluation activity cannot be carried out. In this case, the degree coordinator will contact both the teaching staff and the affected student, and a new date will be scheduled within the same academic period to make up for the missed evaluation activity."* **Section 1 of Article 115. Calendar of evaluation activities (Academic Regulations UAB).** Students of the Faculty of Economics and Business, who in accordance with the previous paragraph need to change an evaluation activity date must process the request by filling out an Application for exams' reschedule at

[https://eformularis.uab.cat/group/deganat\\_feie/application-for-exams-reschedule](https://eformularis.uab.cat/group/deganat_feie/application-for-exams-reschedule)

#### Grade revision process

After all grading activities have ended students will be informed of the date and way in which the course grades will be published. Students will be also be informed of the procedure, place, date and time of grade revision following University regulations.

## Retake Process

*"To be eligible to participate in the retake process, it is required for students to have been previously been evaluated for at least two thirds of the total evaluation activities of the subject."* Section 3 of Article 112 ter. The recovery (UAB Academic Regulations). Additionally, it is required that the student achieves an average grade of the subject between 3.5 and 4.9.

The date of the retake exam is posted in the calendar of evaluation activities of the Faculty. Students taking this exam and passing will get a grade of 5 for the subject. The students having not passed the retake exam will be graded using his/her final exam grade, and hence, will fail the course.

## Irregularities in evaluation activities

Despite other disciplinary measures deemed appropriate, and in accordance with current academic regulations, *"whenever a student makes any irregularity that could lead to a significant variation in the grade of an evaluation activity, it will be graded with a 0, regardless of the disciplinary process that can be instructed. In case of occurrence of various irregularities in the evaluation of the same subject, the final grade of this subject will be 0". Section 10 of Article 116. Results of the evaluation. (UAB Academic Regulations).*
