Prerequisites

Final Master Thesis must be written and defended in English.

Objectives and Contextualisation

The main objective of the Final Master's Project (TFM) is for students to learn and apply the scientific method in the first person in the thematic area of the Master. Therefore, students must participate in the design, implementation and presentation of the results of a research project.

It is an autonomous and individual work that involves the preparation of a memory and the public defense of a practical work on a topic related to plant biology, genomics or biotechnology.

The main objective is that the student with the realization of this TFM is able to integrate the entire set of knowledge, skills and competences acquired during the master's program with the guidance of a tutor. The TFM does not imply a practical internship in a research group or research department. However, the work may be related to the project developed by the student during the External Practices module.

Learning Outcomes

1. CA16 (Competence) Possess the learning skills that will enable you to continue studying in a way that will be largely self-directed or autonomous.
2. CA19 (Competence) Develop a scientific, technical or industrial project in biology, genomics and plant and fungi biotechnology with respect for human and fundamental rights, diversity and democratic values, as well as the principles of universal accessibility and design for all.
3. CA23 (Competence) Write a written report and orally defend the results and conclusions of a research project in Plant Biology, Genomics and Biotechnology for specialised and non-specialised audiences.
4. KA19 (Knowledge) Critically identify public and scientific information related to Plant Biology, Genomics and Biotechnology in relation to the scientific and business environment.
5. KA20 (Knowledge) Identify research results in relation to obtaining new products or viable biotechnological processes at an industrial and commercial level to transfer to society.
6. SA28 (Skill) Communicate research results in the field of Plant Biology, Genomics and Biotechnology in English orally and in writing using appropriate scientific terminology.

7. SA32 (Skill) Manage bibliographic information and computer resources in the field of study.
8. SA37 (Skill) Hold critical debates in the fields of Plant Biology, Genomics and Biotechnology.
9. SA38 (Skill) Design, propose and carry out a research project in the area of Plant Biology, Genomics and Biotechnology, based on an overarching view of the knowledge acquired.

Content

Several orientation seminars/conferences will be held on the different lines of research.

As it is an individual work carried out autonomously by the students under the direction of one or more directors. The contents will depend on each case, since it is a tutored training in the specific field that each student has selected.

The student will carry out the Master's thesis (TFM) where she will develop a research project.

Presentation of the written memory (TFM)

Limit 30 pages, A4, including figures, written in 1.5 or double spaced.

This report must contain the following aspects:

Signature page: there must be a page with the signatures of the applicant and the director of the work. If the director is not a member of the responsible departments, she should have the signature of a tutor or coordinator of the research module.

Abstract (maximum 200 words)

List of abbreviations (if necessary)

Introduction

conclusions

References (not included in the 30 pages)

The oral defence will consist of a summary exhibit (10-15 minutes) in front of the assessment commission. Members of the Commission may ask students about scientific and technical aspects of the work to discuss different aspects of the work.

The oral defence of the work will be public (as long as there is no agreement of confidentiality).

Language of both the written report and the oral defence is English.

Activities and Methodology

Title	Hours	ECTS	Learning Outcomes
Type: Supervised			
Lab experimentation	75	3	
Tutorial sessions	4.5	0.18	
Type: Autonomous			

Elaboration of Final Master Thesis	140	5.6
Personal study, consult and analysis of articles and reports	80	3.2

Elaboration and public defense of the Final Master Thesis on a topic related to Plant Biology, Genomics or Biotechnology integrating the abilities and competences acquired in the master.

For the elaboration of this final master dissertation the student gets involved in a research project of a research group, preferably the same where he/she had performed the External Practical Placement.

Annotation: Within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Assessment

Continuous Assessment Activities

Title	Weighting	Hours	ECTS	Learning Outcomes
Final Master Thesis Report	40%	0	0	CA16, CA23, KA19, KA20, SA28, SA32, SA38
Oral presentation of Final Master Thesis	40%	0.5	0.02	CA16, CA23, SA28, SA37
Supervisor report	20%	0	0	CA19, SA28, SA37

The research work will be evaluated by a Committee of 3 members. The assessment Committee will be made up of three doctors that are part of the teaching staff of the Master.

The coordination of the research module, together with the coordinator of the Master, make a list of evaluators of up to 6 members which include faculty experts in different lines of research developed in the UAB (BABVE, Biochemistry and Molecular Biology), UB departments or in the CRAG. If the number of work to evaluate is high, the coordinator of the research module can form different commissions (from the list of reviewers) for research projects that have a similar theme or methodology.

The written Master's thesis report (one paper copy) must be submitted to the Department of Animal Biology, Plant Biology and Ecology (BABVE) before the deadline set by the module coordinator. This deadline will be announced well in advance. Typically, submission takes place during the last week of June or the first week of July for the first call, and during the first week of September for the second call, with the thesis defense scheduled for the first half of July or September, respectively. A PDF version of the Master's thesis report must also be sent to each member of the committee and to the coordinator.

If necessary (due to a high number of presentations), several examination committees may be established. Each committee will set the date for the oral presentation, which must take place before the official closing deadline. Both the written report and the oral defense will be evaluated by the same committee, which will assign a single final grade.

The range of qualifications that will be used is: Not Presented, Fail, Pass, Outstanding, Excellent, Honours.

Using as a basis the work presented both the written report and the oral defence, the committee will evaluate the research capacity gained by the student during the semesters in which these research modules have been developed.

Use of AI

The use of Artificial Intelligence (AI) technologies is not allowed in any phase of this course. Any work that includes AI-generated content will be considered a breach of academic integrity and may result in partial or total penalties in the activity grade, or more serious sanctions in severe cases.

This subject/module does not include the single assessment system.

Bibliography

Scientific articles and reviews specifically addressing the research topic of the master thesis.
