Group languages

You can consult this information at the [end](#) of the document.

Prerequisites

A good oral and written command of Catalan and Spanish (C2 level) will be necessary to achieve the aims of the course. An English or French B1 level of the Common European Framework of Reference for Languages will also be required.

Objectives

This course provides the basic knowledge necessary for all future primary school teachers. In particular, it provides participants with theoretical and practical tools to teach primary school students written skills in all content areas, to engage their future pupils in activities that promote metalinguistic awareness, and to organize language learning activities in the classroom.

The learning goals of the course, achieved through promoting student-teacher interaction, are:

- To learn how to design and manage environments, activities, and classroom materials to foster metalinguistic reflection and to help primary school students learn how to write.
- To understand the theoretical premises underlying language learning theories, approaches, and methods that account for the phenomena that take place in the classroom and to make proposals for innovation that emerge from such premises.
- To develop a reflective and investigative attitude that enables the identification of strengths and weaknesses in teaching proposals and allows the integration of work across different content areas into units that make sense for elementary school students.

Learning outcomes

1. Being aware of the possibilities of constructing knowledge in collaborative situations and being able to manage them.
2. Know and appreciate appropriate educational software and web sites for the teaching and learning of languages at different educational levels.
3. Know and use the main resources and tools of inquiry for one's language.
4. Be aware of the specificity of learning language and literature through ICT and understand their full potential.
5. Know the models that explain the reading and writing process and share current views about the nature of written language.
6. Knowing how to relate didactic models for teaching reading, writing and literature with the different ways of working with them in the classroom.
7. Being able to analyse and draw up proposals for class work, taking into account the relevant theoretical frameworks and the goals of the prescriptive curriculum.
8. Being familiar with the didactic approaches that promote an integrated working of the different linguistic and literary contents that take into account the perspective of the pupils.
9. Form teams that are capable of carrying out activities effectively both in person and remotely in different ways.
10. Assessing the value of correction, adaptation and acceptability in oral and written productions.
11. Communicate using language that is not sexist or discriminatory.
12. Consider how gender stereotypes and roles impinge on the exercise of the profession.
13. Identify the principal forms of sex- or gender-based inequality and discrimination present in society.
14. Analyse the sex- or gender-based inequalities and the gender biases present in one's own area of knowledge.
15. Propose projects and actions that incorporate the gender perspective.

Contents

BLOCK 1 - Written language in grades 1 and 2

- The competence focus of the primary language curriculum and its relationship with other areas.
- Uses and functions of written language in today's society.
- Entry into the written code. Children's concepts of written language.
- The foundation of educational practices and current methodological proposals.
- Criteria for the analysis, interpretation and evaluation of children's texts in the initial cycle.

BLOCK 2 - Teaching, learning, and assessing writing activities addressed to grade primary school students

- Writing from a sociocultural perspective and activity theory:
- School and social genres.
- The writing process. Models and reflections on teaching how to write.
- The integration of linguistic skills in the description of learners' writing competence.
- Metalinguistic activities as tools to learn the formal uses of languages.
- The assessment of students' writing learning process.

BLOCK 3 - School organization of language education

- Language learning school environments. The organization of the space in the language classroom.
- The integration of different contents of the linguistic curriculum in meaningful activities for students: insights into project-based learning and on how to plan teaching sequences.

Learning activities and methodology

Title	Hours	ECTS	Learning outcomes
Autonomous self-study time: individual and group work tasks to be carried out outside the classroom	20	0.8	
Sessions with the whole group: the teacher will introduce the topics to be dealt with the course, discuss the class readings, set the tasks, tutor students individually or in small groups, monitor group work and give feedback.	13	0.52	
Seminar sessions: students work in small groups under the supervision of the teacher, who monitors group work and give learners feedback.	25	1	
Readings, individual preparation of course contents	63.75	2.55	

Sessions with the whole group: The teacher will introduce the topics to be dealt with in the course, discuss the class readings, set the tasks, tutor students individually or in small groups, monitor group work and give feedback. Students will cooperate with their peers to construct shared knowledge through oral presentations and to elaborate the course assignments.

Seminar sessions: students work in small groups under the supervision of the teacher, who monitors group work and give learners feedback.

Autonomous self-study time: individual and group work tasks to be carried out outside the classroom

The teaching methodology favours students' active participation in their learning as it creates spaces for cooperative work. Knowledge is built as a process of contrasting and critically examining information and by establishing a relationship among the new knowledge gained, the experience one possesses and one's analysis of the immediate reality.

TransNatura Project:

TransNatura is the title of the multidisciplinary project designed between the teaching teams of five of the 3rd year subjects of the Degree in Primary Education (Learning and Development II, Didactics of Experimental Sciences, Visual Music Education and Learning, Physical Education and its Didactics I, Languages and Learning). It consists of two days and one night in nature (Núria Valley) in which the aim is to provide an intense and formative experience in the natural environment which, in addition to working on specific objectives of the disciplines, also facilitates the approach of transversal aspects such as sustainability, healthy living, coexistence and the relationship between school and nature, among others.

It will take place on October 13th and 14th for groups 21 and 71, and on October 15th and 16th for groups 31 and 41, including overnight stays.

Attendance is compulsory. In the event that someone is unable to attend for a justified reason, he/she will have to prove it and carry out compensatory work previously agreed with the teacher. The activities carried out during the outing will form part of the continuous assessment of the different subjects. Details regarding timetable, price, itinerary and luggage will be provided at the beginning of the course.

The estimated price is around 60 euros (including bus, rack railway, dinner, accommodation, breakfast, and lunch on the second day). The UAB opens in October a call for grants to finance field trips.

Annotation: within the schedule set by the centre or degree programme, 15 minutes of one class will be reserved for students to evaluate their lecturers and their courses or modules through questionnaires.

Assessment

Continuous assessment activities

Title	Weight	Hours	ECTS	Learning outcomes
3. Individual written exam.	50%	1	0.04	2, 3, 4, 5, 6, 7, 8, 10, 11, 12, 13, 14, 15
1. Written group work, supervision during the task of writing and the quality of the written text and tasks to be carried out in the classroom.	40%	2	0.08	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15
N2 Exam (individual).	Mandatory requirement	0	0	10
2. Individual written task.	10%	0.25	0.01	2, 3, 4, 5, 6, 7, 8, 10, 11, 12, 13, 14, 15

This subject does not provide for a single assessment system.

During small group work and seminar sessions, students will prepare a document to establish self-regulation mechanisms of their own learning process. In addition, teachers will provide a mechanism to track this process. Referring to the final assessment of the subject, evaluation activities will be carried out.

Formative assessment tools will be used to evaluate students' individual or group assignments in all types of assessment activities (directed, supervised, and autonomous).

All assessment tasks need to be passed (minimum grade of 5 out of 10) in order to pass the subject. Language will be part of the assessment in written works and oral presentations. No oral presentation or written assignment will obtain a passing mark if students do not demonstrate a good command of Catalan.

The teacher will, in due time, establish a mechanism to help students improve their scores in one particular assignment. Only in the case of the examen and the written task will be given the opportunity to elaborate on an extra assignment to try to get a pass mark on each task (maximum mark 6, see date in the figure), for the written group works there is not this opportunity.

In accordance with UAB policy, plagiarism or copying of any task or part of a task will be penalized with a fail (0). Students do not be given the possibility of doing that assignment again. The rule applies to all individual and group tasks (in the latter case, all members of the group who commits plagiarism will score 0 in that assignment). If during the realisation of an individual assessment task in the classroom, the teacher sees a student trying to copy or find any document or device not approved by the faculty, the mark for the task will also be 0, and that student will not be allowed to redo the task.

This subject will propose to carry out one of the assessment items using the challenge-based learning (CBL) methodology. The aim is to tackle real and complex problems identified by professionals in order to find a suitable definition and point out possible solutions. Challenge-based learning is nowadays a widely recognised methodology that allows not only to deal with real case studies but also to insert students in environments in which they can develop their professional careers in the future.

In this course, the use of Artificial Intelligence (AI) technologies is allowed exclusively in the bibliographic or

information search, image generation and other specific situations that are expressly specified. It is not allowed in generating content beyond images, i.e. generating text or speech in any of the tasks. The student must clearly identify which parts have been generated with AI, specify the tools used and include a critical reflection on how these have influenced the process and the final outcome of the activity. Lack of transparency in the use of AI will be considered as academic dishonesty and may lead to a partial or total penalty in the marking of the assessment evidence, or higher penalties in more serious cases. Misuse will be penalised with a 0.

This subject includes activities for the development of Digital Teaching Competence (A2), such as the use of digital tools for the search and analysis of scientific literature, tools for linguistic consultations such as dictionaries and grammars, tools for the elaboration of a poster or digital presentation.

Dates and deadline:

1) Written group work: Deadline groups 21 and 31 : 8th January 2027; groups 41 and 71: 16th December 2026.

2) Individual written task: groups 41 and 71 - 21.10.2026; groups 21 and 31 - 23.10.2026. Resitting: groups 21, 31, 41 and 71 - 27.01.2027 - 18h.

3) Individual written exam: groups 41 and 71: 02.12.2026; group 21 and 31: 04.12.2026. Resitting: groups 21, 31, 41 and 71: 27.01.2027 - 18h.

The group work consists of the design of a didactic unit. The groups will have to choose a discursive genre, decide on the linguistic content to be learned, plan and sequence the activities and design the corresponding activities.

Marking of assessment activities will be done within 15 to 20 working days.

N2 Exam:

In order to pass this course, students must prove they have a very good command of Catalan (C2 level, as described here: <http://www.uab.cat/web/els-estudis/-competencia-linguistica-1345698914384.html>). To do so, at the end of the semester they should sit a C2 language test (tests can also be taken in June).

If students possess a C2 Catalan certificate issued by either Direcció General de Política Lingüística or the language service of this university, they should not take the test.

If the student has not obtained the Catalan level 2 for preschool and Primary Education teachers, the mark will be a 3.

If the student passes the rest of the subject and has failed the Catalan level 2, the next course will have to demonstrate that he/she has obtained it; the whole of the subject will continue the evaluation of synthesis that each teacher will decide.

Synthesis exam: The synthesis test consists of writing a commentary of about 400 words in which the most relevant aspects of two compulsory readings of the subject are analysed and contrasted.

N2 Exam (individual): Groups 21 and 31- Friday 18th December 2026 from 10:30 to 13h; groups 41 and 71 -18th December 2026 from 15:30 to 18.00h.
