

# How we Measure Angles

**Marta Gallart Rosas i grup CLIL-SI/ GREIP (suport en la planificació i experimentació)**

**IES La Roca**

**Curs: 2005-6, 2006-7**

**Objectius principals:** aprendre a fer operacions amb el Sistema Sexagesimal i el Sistema Internacional d'Unitats per mesurar angles (radiants), i millorar les habilitats orals dels alumnes en parlar de matemàtiques.

**Continguts principals:** aprendre a fer operacions amb la calculadora científica (sumar i restar en el sistema sexagesimal, convertir angles en radiants i viceversa, etc), aprendre a construir un discurs oral estructurat i comprensible per a l'audiència.

Seqüència didàctica creada per Marta Gallart Rosas amb el suport del grup CLIL-SI per a la planificació i l'experimentació sota una llicència de Creative Commons:

## *Agraïments*

*Vull expressar el meu agraïment als alumnes de 1r d'ESO del curs 2006-2007 de l'IES La Roca , de La Roca del Vallès, amb els quals he dut a terme el pilotatge d'aquesta seqüència didàctica, a Zoraida Horrillo pel seu ajut i els seus consells, a Ester González per la revisió del primer text en anglès, a Terry Cartin pel seu ajut constant, a Xavier Fontich pel seu suport i especialment a Cristina Escobar coordinadora del grup de recerca ARIE, que va organitzar la Primera Trobada de semiimmersió a Catalunya el 25 d'abril de 2007, on va ser presentada aquesta experiència, per les seves orientacions, encoratjament i confiança.*

Registre de càlculs. Donar instruccions per a la utilització del transportador, de la calculadora científica i com s'han de registrar els càlculs que es facin a la graella de la fitxa 11. <i>Execució.</i> <b>Card game.</b> Grups de 4. Juguen a cartes, qualsevol joc de fer parelles que coneguin. Apuntar els càlculs que fa cadascú a la fitxa 11.</li> </ul>

## How we measure angles

	<p>- Reflexionar sobre el que han après, i com ho han après, expressar els dubtes i el seu grau de satisfacció amb l'activitat.</p>	<p>- Sintetitzar les instruccions de la calculadora i el que hem fet a classe.</p>	<p>- <b>Homework.</b> Individual. Fitxa 12. Fabricació d'una "xuleta", que els càpiga a l'estoig i plastificada. En una cara hi ha d'haver les instruccions per a fer sumes i resten en sistema sexagesimal (ho poden trobar en anglès al llibret d'instruccions de la seva calculadora) i en l'altra , la relació entre graus sexagesimals i radians i com fer les conversions d'unitats.</p> <p>- <b>Learning diary.</b> Individual. Escriure.</p>
--	---	--	--

## How we measure angles

FASE 3	OBJECTIUS LLENGUA ANGLESA	OBJECTIUS MATEMÀTIQUES	ACTIVITAT. DESCRIPCIÓ
-Verbalització	<p>- Verbalitzar els raonaments i les estratègies que utilitzen.</p> <p>- Discutir i argumentar com creuen que s'ha de fer el disc.</p>	<p>- Assentar l'ús de la calculadora científica.</p> <p>- Adquirir agilitat en la conversió d'unitats.</p> <p>- Relacionar tots els continguts treballats.</p> <p>- Reforçar la utilització de la calculadora científica.</p> <p>- Evidenciar la utilitat dels factors de conversió per canviar d'unitats</p> <p>- Verbalitzar els raonaments i les estratègies que utilitzen.</p> <p>- Verbalitzar els procediments apresos.</p> <p>- Adquirir agilitat en la conversió d'unitats.</p> <p>- Relacionar tots els continguts treballats</p> <p>- Utilitzar el llenguatge formal i vocabulari específic propi de la unitat, en un discurs estructurat i comprensible.</p>	<p>- <b>Protractor game.</b> Grups de 4. Fitxa 13. Parlar. En aquesta activitat hi entra tot el que s'ha treballat a les sessions anteriors, però és sobretot una activitat de verbalització. Es tracta d'un joc de sobretaula tipus joc de l'oca, però enlloc d'oques hi ha transportadors, i en algunes caselles s'han de respondre preguntes (tipus trivial). Explicar les instruccions del joc. Jugar.</p> <p>- <b>Summary disc.</b> Grups de 4. <b>Fitxa 14.</b> Activitat manipulativa en que hauran de construir un disc del tipus dels discos horaris de la zona vermella d'aparcament, però que sigui un resum de tot el que han après aquest dies. Parlar.</p>

## How we measure angles

	<ul style="list-style-type: none"><li>- Parlar durant un minut com a mínim i respondre les preguntes dels altres alumnes.</li><li>- Reflexionar sobre el que han après, i com ho han après, expressar els dubtes i el seu grau de satisfacció amb l'activitat.</li></ul>		<ul style="list-style-type: none"><li>- <b>Presentation.</b> Grups de 4. Fitxa 15. Preparar l'exposició. Exposició de tots els grups.</li><li>- <b>Learning diary.</b> Individual. Escriure.</li></ul>
--	--	--	--

**Prova inicial**

## How we measure angles

### PROVA INICIAL

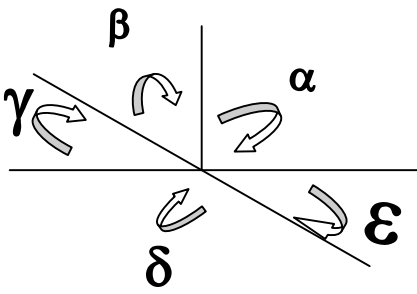

Nom i cognoms

1. Amb el transportador, dibuixa els angles següents i completa cada frase amb el paraula que hi correspongui d'entre les següents: (2 punts)

*pla      agut      recte      obtús*

45°	90°
És un angle .....	És un angle .....
180°	150°
És un angle .....	És un angle .....

2. En el dibuix següent troba dos angles que siguin i completa la taula:  
(2 punts)

	Complementaris
	Consecutius
	Oposats pel vèrtex
	Suplementaris

## How we measure angles

3. Calcula a mà: (2 punts)

$$\begin{array}{r} 2^{\circ} 45' 6'' \\ + 34^{\circ} 32' 59'' \\ \hline \end{array}$$

Comprova si ho has fet bé amb la calculadora científica. Explica quines tecles utilitzes.

$$2^{\circ} 45' 6'' + 34^{\circ} 32' 59'' =$$

4. Escribeu el nom de la unitat utilitzada en el Sistema Internacional d'Unitats per a la mesura dels angles. (1 punt)

5. Escribeu l'equivalència entre aquesta unitat i els graus sexagesimals. (1 punt)

6. Utilitzant l'equivalència anterior com a factor de conversió, calcula quants són en unitats SI  $45^{\circ}$ . (2 punts)

# How we measure angles

Student's book

Name \_\_\_\_\_

## What is an angle?

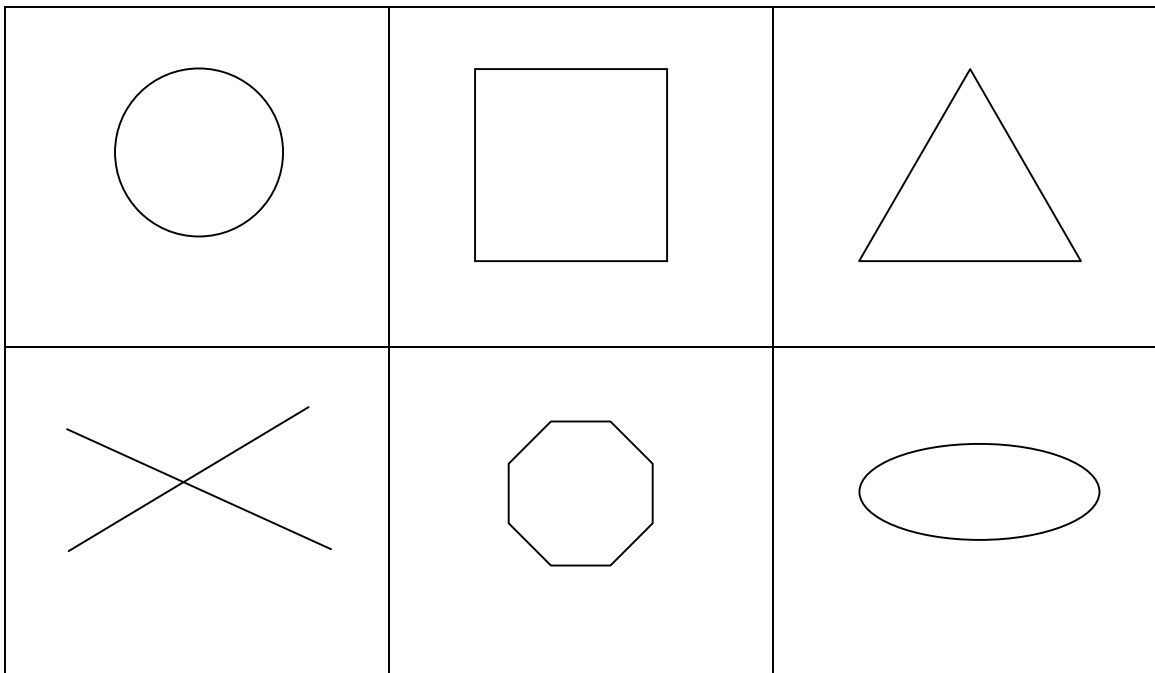

*Work in pairs*

Draw an angle.

Look up the word angle at the dictionary and copy the definition:

**angle**

In some of the following pictures there are angles. Mark the angles in red.

## Using the protractor

### Work in pairs

Discuss if this statement suggests that an angle is a physical magnitude or not. Give a reason for your answer. Write it down into the square.

*Angles are measured in degrees.*

If it does, then you need a specific instrument in order to measure an angle. It is called **protractor**. It is graduated in sexagesimal degrees:  $360^\circ$  for a complete circle.

Use the protractor to measure the angles marked in the following drawings:

## Angles relationship (part I)

### Work in pairs

Discuss with your partner which is the correct relationship for every pair of angles.

$\alpha$  and  $\alpha'$  are vertically **opposite angles**  
 $\alpha = \alpha'$

$\alpha$  and  $\beta$  are **complementary angles**  
 $\alpha + \beta = 90^\circ$

$\alpha$  and  $\beta$  are **adjacent angles**  
 $\alpha$  besides  $\beta$  sharing a limb

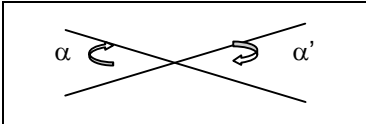

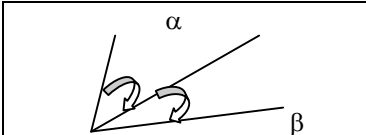

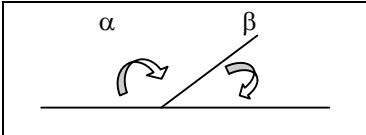

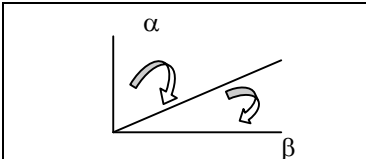

$\alpha$  and  $\beta$  are **supplementary angles**  
 $\alpha + \beta = 180^\circ$

*Example for the conversation:*

*Joan - I think  $\alpha$  and  $\beta$  here are supplementary angles because their they sum  $90^\circ$*

*Laia - I don't agree because supplementary angles means they sum  $180^\circ$*

Copy the correct answer into the boxes.

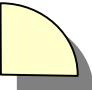

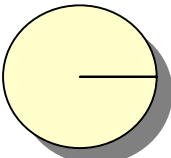

Drawing	Relationship
	
	
	
	

## Type of angles

### Groups of four

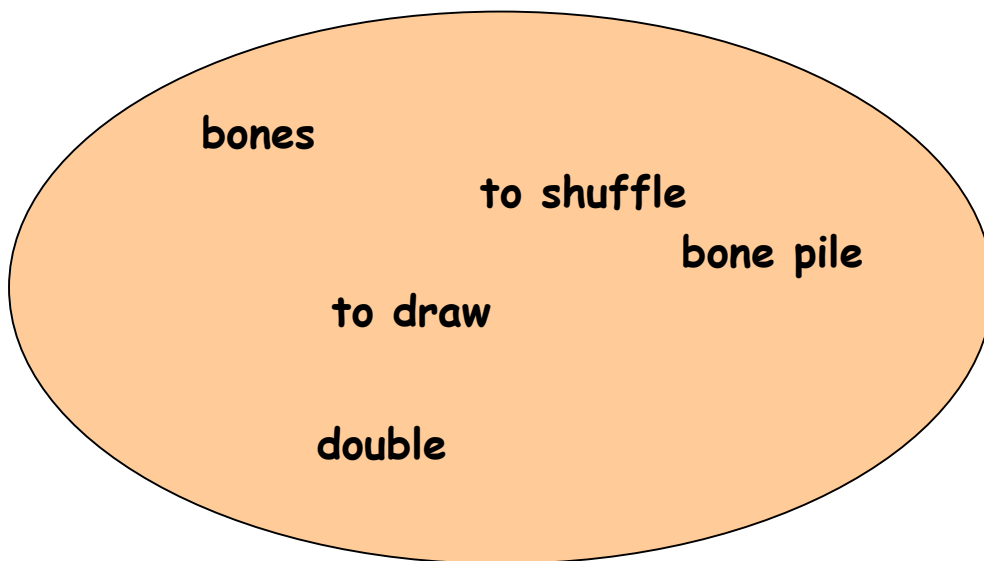

On the left there is a list of type of angles (shown with a drawing). On the right there is another list with their properties. Discuss and match the type of angle with its property.

Type of angle		Property
acute angle		$= 360^\circ$
right angle		$> 90^\circ$
obtuse angle		$< 90^\circ$
straight angle		$= 90^\circ$
full angle		$= 180^\circ$

## Domino Terms and Language

### Groups of four

Here there are some domino terms you need to learn for the next activity. Try to match every term with its definition. Discuss and give reasons for your choice.

- The actual playing pieces are .....
- A bone which contains the same number of pips at both ends is a .....
- To pick the bones for your hand out of a central pile is .....
- Spare bones left after the draw that may be used as a draw pile in some games is a .....
- To mix the bones while they are turned face down on the table is .....

Informació extreta de <http://www.gamecabinet.com/rules/DominoTerms.html>

## How to play

### *Groups of four*

Here there are some sentences you need to know in order to play (no matter which game) with other people. Discuss their meaning.

**We turn the bones face down and we shuffle them**

**You begin**

**What's the meaning of this?**

**We have a double here**

**This measure (.....) and this (.....)**

**You have to draw**

**I pass**

**It's my turn**

**Wait a moment! Yes, it is. It's your turn now**

**It's finished. I won**

Copy the ones your teacher tell you on a cardboard and stick them on the wall.

## Sexagesimal system

### Work in pairs

Fill in the gaps with the correct word.

This instrument is called \_\_\_\_\_. It is graduated in degrees:  $360^\circ$  for a complete circle.

### READING: What is the *Sexagesimal system*.

*It is a numeration system whose base is 60 (like 10 is the base for the decimal system, and 2 is the base for the binary system). This means that every superior unit has 60 inferior units. It is used in the measure of angles and arcs and as a result in the traditional measure of time.*

Fill in the gaps:

$$1^\circ = \underline{\quad} ' \qquad 1 \text{ hour} = \underline{\quad} \text{ minutes}$$

$$1' = \underline{\quad} '' \qquad 1 \text{ minute} = \underline{\quad} \text{ seconds}$$

Let's calculate together on the board:  $30^\circ 3' 21'' + 3^\circ 21' 59'' =$

Now, we are going to use the scientific calculator to do this. Search for a key on the calculator with the marks  $^\circ$  ' '' on it and follow the teacher's instructions to complete:

$23^\circ 31' 45'' - 5^\circ 41' 3'' =$	
$5^\circ 12' + 3^\circ 2'' + 5' =$	

Compare your answers with those of your partner.

*Seqüència didàctica de matemàtiques. How we measure angles.*

## Radian Measure of Angles

*Work in pairs*

### READING

*radian: angle unit in the IS of Units. Its symbol is rad.*

*If a unit circle is drawn with the vertex of an angle at its centre, then the measure of this angle in RADIANS is the length of the arc that subtends the angle.*

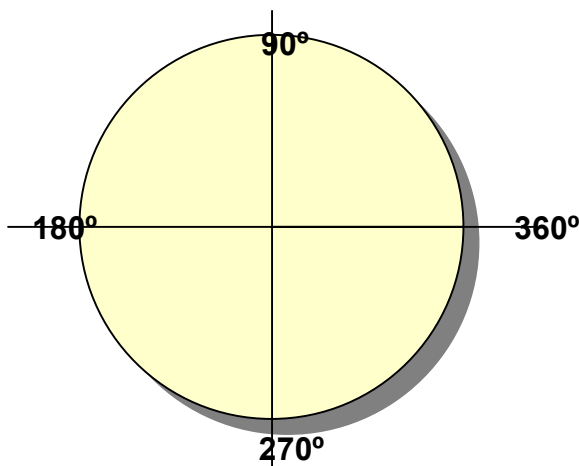

*The circumference of a circle of radius  $r$  is  $2\pi r$*

*The circumference subtends a full angle:  $360^\circ$*

*The full angle in radians is  $\frac{2\pi r}{r} = 2\pi \text{ rad}$*

So what is the relationship between degrees and radians?

We know that a full angle  $360^\circ$  has a measure of  $2\pi \text{ rad}$ , so what is the measure for a straight angle and for a right angle in radians? Look at the drawing and fill in the gaps. Discuss it with your partner and give reasons for your answer.

For a straight angle:  $180^\circ = \underline{\hspace{1cm}} \text{ rad}$

For a right angle:  $90^\circ = \underline{\hspace{1cm}} \text{ rad}$

We can use either of these equalities in order to convert radians to degrees and vice versa, as in the following examples:

- Converting Radians to Degrees  $\frac{\pi}{4} \text{ rad} \cdot \frac{180^\circ}{\pi \text{ rad}} = 45^\circ$
- Converting Degrees to Radians  $60^\circ \cdot \frac{\pi \text{ rad}}{180^\circ} = \frac{\pi}{3} \text{ rad}$

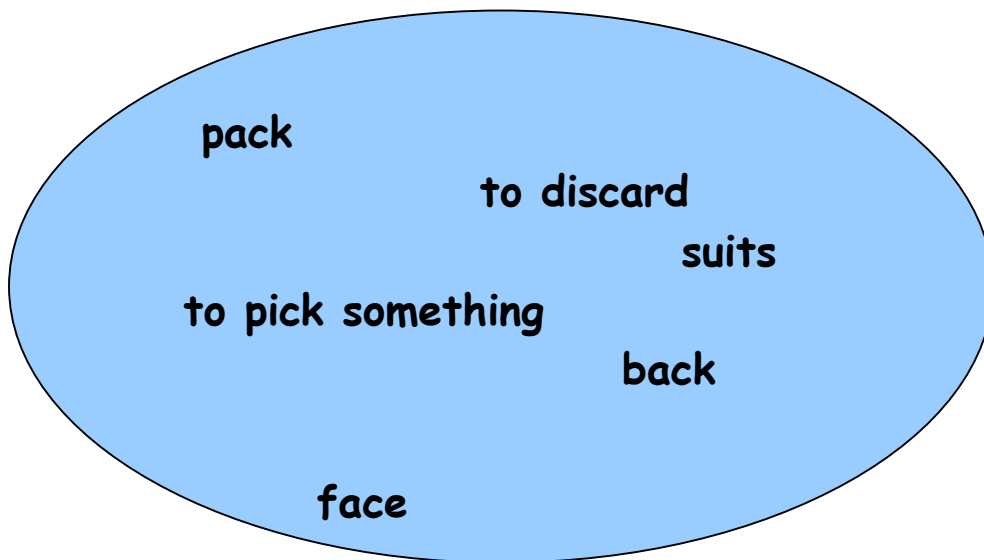

Following the examples:

- (Student A) Find the radian measure of  $225^\circ$
- (Student B) Change the measure  $2\pi/3 \text{ rad}$  into degrees

## Card Terms and Language

### *Groups of four*

Here are some card terms you need to know for the next activity. Try to match every term with its definition. Discuss and give reasons for your choice.

- The cards in a pack are identical in size and shape. The fixed number of pieces of card known as cards is a .....
- The side of the card that makes the card indistinguishable from the other is the .....
- To choose something is .....
- The four groups to whom belong the cards are the .....
- To get ride of some cards is .....
- The side of the card that makes the card distinguishable from the other is the .....

## How to play

### *Groups of four*

Here are some phrases you must know in order to play (no matter which game) with other people. Discuss their meaning.

**Pick a card**

**Choose a card and hide it**

**It's your turn**

**You can discard this pair of cards**

**You can't discard this pair of cards because they aren't equivalent**

**I won**

Copy the ones your teacher tell you on a cardboard and stick them on the wall.

## Equivalences between angles Card game

### *Groups of four*

Individually register some pairs you discard. Give reasons for your choice.

## Homework

### *Individually*

Pay attention to what you have learnt in worksheet 7 and worksheet 8.  
You have to concentrate on the most practical aspects:

- How do you do additions and subtractions in the sexagesimal system with your scientific calculator? Write it in the following square.

- How do you convert degrees into radians and vice versa? Write it in the following square.

Make a crib with them (A crib is the little piece of paper containing summarised information students usually use to cheat in the exams). Write what you have in the first square on one side of the crib, and what you have in the second square on the other side of the crib. Cover it with plastic.

## Protractor game (part I)

### Groups of four

You have to play on the cardboard with a dice and four counters, one for each player.

### *Instructions for the protractor game (4 players maximum)*

*If a player falls in a*

**Yellow**  
square:

*If your answer is correct, you can play again. If your answer is wrong, you lose your turn.*

**Violet**  
square:

*If your answer is correct, you can play again. If your answer is wrong, you lose your turn.*

**Green**  
square:

*You do what is written there.*

**Red**  
square:

*You do what is written there.*

**Protractor**  
square:

*You go forward to the next protractor square and you play again.*

*The **winner** is the first player arriving to the **magenta** square*

## Protractor game (part II)

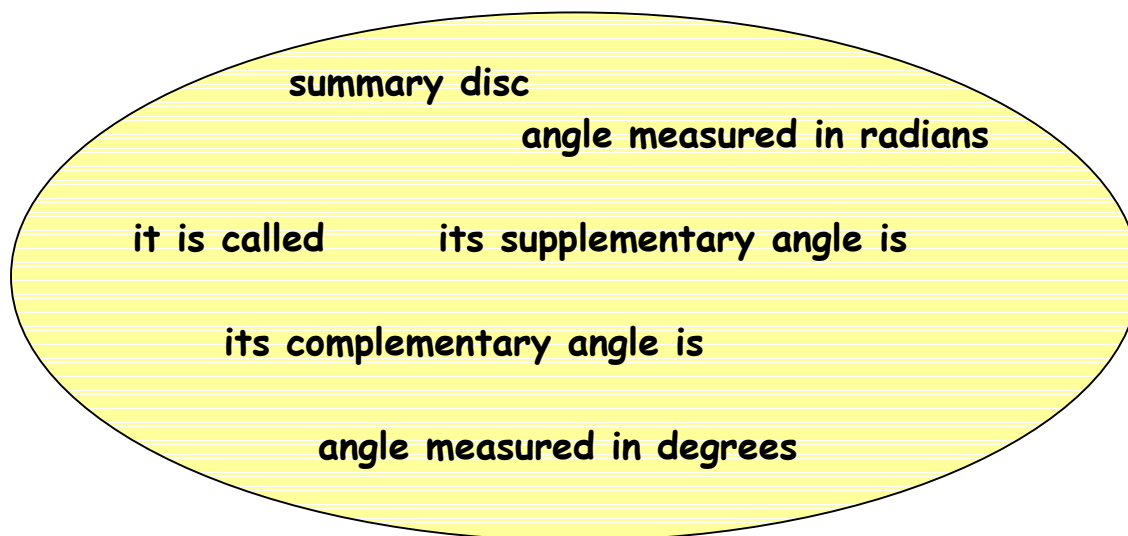

### *Groups of four*

Here is a register. You have to register two of your correct answers: one from a violet card and one from a yellow card.

## Summary disc

### Groups of four

1. You have to assemble the two discs the teacher will give you. Discuss what has to be written in the arrows, depending on the relationship between the figures that appear on the holes. Choose from the following box a word or words for every concentric circle. Write them inside the grey arrows.

2. You have to make a summary of the most important thing you have learnt in the previous sessions.

Four aspects are compulsory:

- How to convert units
- Type of angles
- Angles relationship
- How the summary disc works, and what information it can give you

Write them in the cells and also on the back of your summary disc as a kind of crib.

## Presentation

### *Groups of four*

You have 15 minutes to prepare a presentation (about 4 minutes each group) of your summary disc.

You have to speak about:

- How to convert units
- Type of angles
- Angles relationship
- How the summary disc works, and what information it can give to you

Divide the four tasks among the members of the group. Everybody has to speak for a minute at least.

When you finish your presentation your classmates can ask you some questions. Be ready for that and prepare yourselves as well as you can.

While other groups do their presentation, you have to listen to them carefully and when they finish you can ask them questions as well. Write down at least two questions.

# *Card game*

### *Card game. Instructions (4 players)*

**1**

- *One player chooses a card from the pack and hides it without looking at it.*

**2**

- *The players have to match as many pairs of equivalent cards as possible and can then discard them.*

**3**

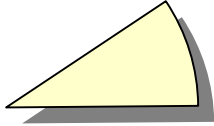

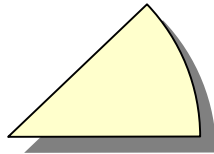

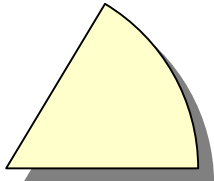

- *All the players have 12 cards at the beginning. One of them has only 11.*

**4**

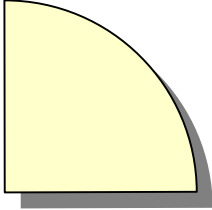

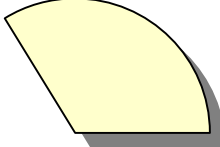

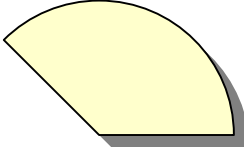

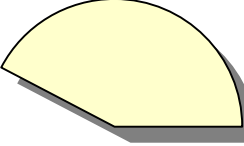

- *The next step is to pick one card from another player (in turn) and try to make an equivalent pair to be discarded.*

*The **winner** is the first person who get ride of their cards.*

<p><math>5^{\circ}23'' + 32^{\circ}2'48'' =</math> Explain how you'll do it.</p> <p>Answer: <math>37^{\circ}3'11''</math></p>	<p>Express <math>\frac{7\pi}{4}rad</math> in degrees. Explain how you'll do it.</p> <p>Answer: <math>315^{\circ}</math></p>
<p><math>5^{\circ}40'23'' + 32^{\circ}35' =</math> Explain how you'll do it.</p> <p>Answer: <math>38^{\circ}15'23''</math></p>	<p>Express <math>2\pi rad</math> in degrees. Explain how you'll do it.</p> <p>Answer: <math>360^{\circ}</math></p>
<p><math>5^{\circ}40'23'' + 32^{\circ}25'48'' + 15^{\circ}23'' =</math> Explain how you'll do it.</p> <p>Answer: <math>53^{\circ}6'34''</math></p>	<p>Change the measure <math>\frac{\pi}{8}rad</math> into degrees. Explain how you'll do it.</p> <p>Answer: <math>22,5^{\circ}</math></p>

## How we measure angles

<p><math>5^{\circ}40'23'' + 32^{\circ}25'48'' - 31^{\circ}59' =</math> Explain how you'll do it.</p> <p>Answer: <math>6^{\circ}7'11''</math></p>	<p>Change the measure <math>\frac{\pi}{6} \text{ rad}</math> into degrees. Explain how you'll do it.</p> <p>Answer: <math>30^{\circ}</math></p>
<p><math>17^{\circ}40'2'' + 5'4'' =</math> Explain how you'll do it.</p> <p>Answer: <math>17^{\circ}45'6''</math></p>	<p>Change the measure <math>\frac{3\pi}{4} \text{ rad}</math> into degrees. Explain how you'll do it.</p> <p>Answer: <math>135^{\circ}</math></p>
<p><math>5^{\circ}50'56'' + 55'58'' =</math> Explain how you'll do it.</p> <p>Answer: <math>6^{\circ}46'54''</math></p>	<p>Change the measure <math>\frac{2\pi}{3} \text{ rad}</math> into degrees. Explain how you'll do it.</p> <p>Answer: <math>120^{\circ}</math></p>
<p><math>5^{\circ}33'' + 3^{\circ}45'44'' =</math> Explain how you'll do it.</p> <p>Answer: <math>8^{\circ}46'17''</math></p>	<p>Change the measure <math>\frac{\pi}{2} \text{ rad}</math> into degrees. Explain how you'll do it.</p> <p>Answer: <math>90^{\circ}</math></p>
<p><math>5^{\circ}40'23'' + 2^{\circ}48'' =</math> Explain how you'll do it.</p> <p>Answer: <math>7^{\circ}41'11''</math></p>	<p>Name a pair of complementary angles. Explain how you'll do it.</p> <p>Answer: Every pair of angles whose sum is <math>90^{\circ}</math></p>
<p>Find the radian measure of <math>45^{\circ}</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{\pi}{4} \text{ rad}</math></p>	<p>Name a pair of supplementary angles. Explain how you'll do it.</p> <p>Answer: Every pair of angles whose sum is <math>180^{\circ}</math></p>

## How we measure angles

<p>Find the radian measure of <math>210^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{7\pi}{6}rad</math></p>	<p>Find the complementary angle of <math>45^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>45^\circ</math></p>
<p>Find the radian measure of <math>330^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{11\pi}{6}rad</math></p>	<p>Find the complementary angle of <math>10^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>80^\circ</math></p>
<p>Find the radian measure of <math>15^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{\pi}{12}rad</math></p>	<p>Find the complementary angle of <math>30^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>60^\circ</math></p>
<p>Find the radian measure of <math>135^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{3\pi}{4}rad</math></p>	<p>Find the complementary angle of <math>50^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>40^\circ</math></p>
<p>Find the radian measure of <math>270^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{3\pi}{2}rad</math></p>	<p>Find the supplementary angle of <math>90^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>90^\circ</math></p>
<p>Find the radian measure of <math>360^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>2\pi rad</math></p>	<p>Find the supplementary angle of <math>60^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>120^\circ</math></p>

## How we measure angles

<p>Find the radian measure of <math>100^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{5\pi}{9} rad</math></p>	<p>Find the supplementary angle of <math>120^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>60^\circ</math></p>
<p>Find the radian measure of <math>300^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>\frac{5\pi}{3} rad</math></p>	<p>Find the supplementary angle of <math>167^\circ</math>. Explain how you'll do it.</p> <p>Answer: <math>13^\circ</math></p>

## How we measure angles

### Fitxes de coneixements (imprimir-ho en paper groc)

<p><b>When are complementary a pair of angles?</b></p> <p>Answer: When they sum <math>90^\circ</math></p>	<p><b>Explain what is the IS of Units. Name the unit used in the International System of Units, for angles.</b></p> <p>Answer: The IS of Units is a system of units all countries agree to use // radian</p>
<p><b>When are supplementary a pair of angles?</b></p> <p>Answer: When they sum <math>180^\circ</math></p>	<p><b>The numbers and marks on the protractor are radians or degrees?</b></p> <p><b>Give reasons for your answer.</b></p> <p>Answer: Degrees because there are <math>180^\circ</math> in a semi-circle or <math>360^\circ</math> in a complete circle.</p>
<p><b>When are adjacent a pair of angles?</b></p> <p>Answer: When they are one beside the other, and they are sharing one half straight line and the vertex point.</p>	<p><b>How many angles are inside a triangle?</b></p> <p><b>Explain it using a drawing, if necessary.</b></p> <p>Answer: 3</p>
<p><b>What is a full angle?</b></p> <p>Answer: It's an angle whose measure is <math>360^\circ</math> or <math>2\pi</math> rad.</p>	<p><b>How many angles are inside a square?</b></p> <p><b>Explain it using a drawing, if necessary.</b></p> <p>Answer: 4</p>
<p><b>What is an acute angle?</b></p> <p>Answer: It's an angle whose measure is <math>&lt;90^\circ</math> or <math>&lt; \frac{\pi}{2} \text{ rad}</math></p>	<p><b>How many angles are inside a circle?</b></p> <p><b>Give reasons for your answer.</b></p> <p>Answer: None</p>
<p><b>What is an obtuse angle?</b></p> <p>Answer: It's an angle whose measure is <math>&gt;90^\circ</math> or <math>&gt; \frac{\pi}{2} \text{ rad}</math></p>	<p><b>What type of angles are the angles inside a square?</b></p> <p><b>Give reasons for your answer.</b></p> <p>Answer: They are all right angles</p>

## How we measure angles

<p><b>What is a right angle?</b></p> <p>Answer: It's an angle whose measure is <math>90^\circ</math> or <math>\frac{\pi}{2} \text{ rad}</math>.</p>	<p><b>How many degrees there are in a full angle?</b></p> <p><b>Give reasons for your answer. Use a drawing and the protractor if necessary.</b></p> <p>Answer: <math>360^\circ</math></p>
<p><b>What is a straight angle?</b></p> <p>Answer: It's an angle whose measure is <math>180^\circ</math> or <math>\pi \text{ rad}</math>.</p>	<p><b>Name the instrument we use to measure angles. Tell the differences between the one you have, and the one you see in this board.</b></p> <p>Answer: Protractor. Can be a semi-circle or a complete circle.</p>
<p><b>Explain why an angle is a physical magnitude?</b></p> <p>Answer: Because they have a property that can be measured: the distance between their limbs.</p>	<p><b>How many minutes there are in a degree?</b></p> <p><b>Give reasons for your answer.</b></p> <p>Answer: 60'</p>
<p><b>Name two units, from different unit systems, used in the angles measure.</b></p> <p><b>Tell at what unit system belongs each one.</b></p> <p>Answer: <i>sexagesimal degree</i> // <i>radian (IS)</i></p>	<p><b>How many seconds there are in minute?</b></p> <p><b>Think of another physical magnitude which is measured in these units also.</b></p> <p>Answer: 60" // Time</p>
<p><b>What is the relation between degrees and radians we use to change measures given in one of this units into the other?</b></p> <p><b>How we use it?</b></p> <p>Answer: <math>180^\circ = \pi \text{ rad}</math></p>	<p><b>How many radians there are in a full angle?</b></p> <p><b>Give reasons for your answer.</b></p> <p>Answer: <math>2\pi \text{ rad}</math></p>
<p><b>How many degrees there are in a right angle?</b></p> <p><b>Give reasons for your answer. Use a drawing and the protractor if necessary.</b></p> <p>Answer: <math>90^\circ</math></p>	<p><b>How many radians there are in a right angle?</b></p> <p><b>Give reasons for your answer.</b></p> <p>Answer: <math>\frac{\pi}{2} \text{ rad}</math></p>

## How we measure angles

How many degrees there are in a straight angle?

Give reasons for your answer. Use a drawing and the protractor if necessary.

Answer:  $180^\circ$

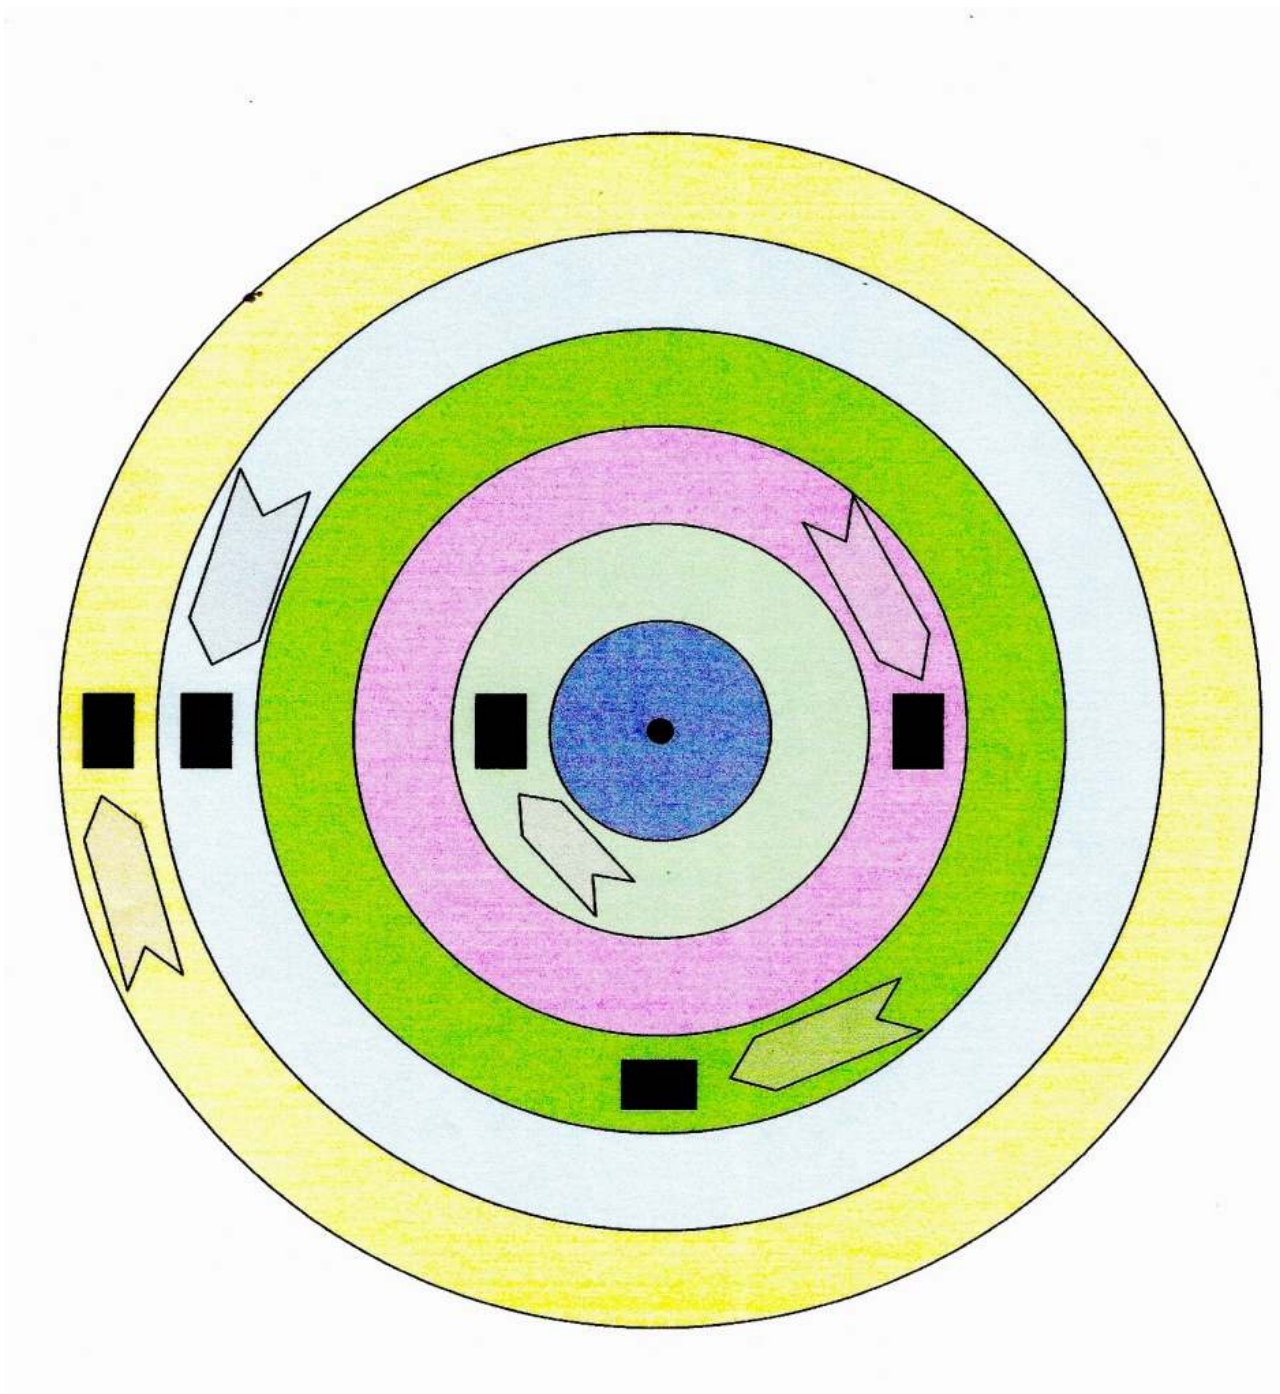

How many radians there are in a straight angle?

Give reasons for your answer.

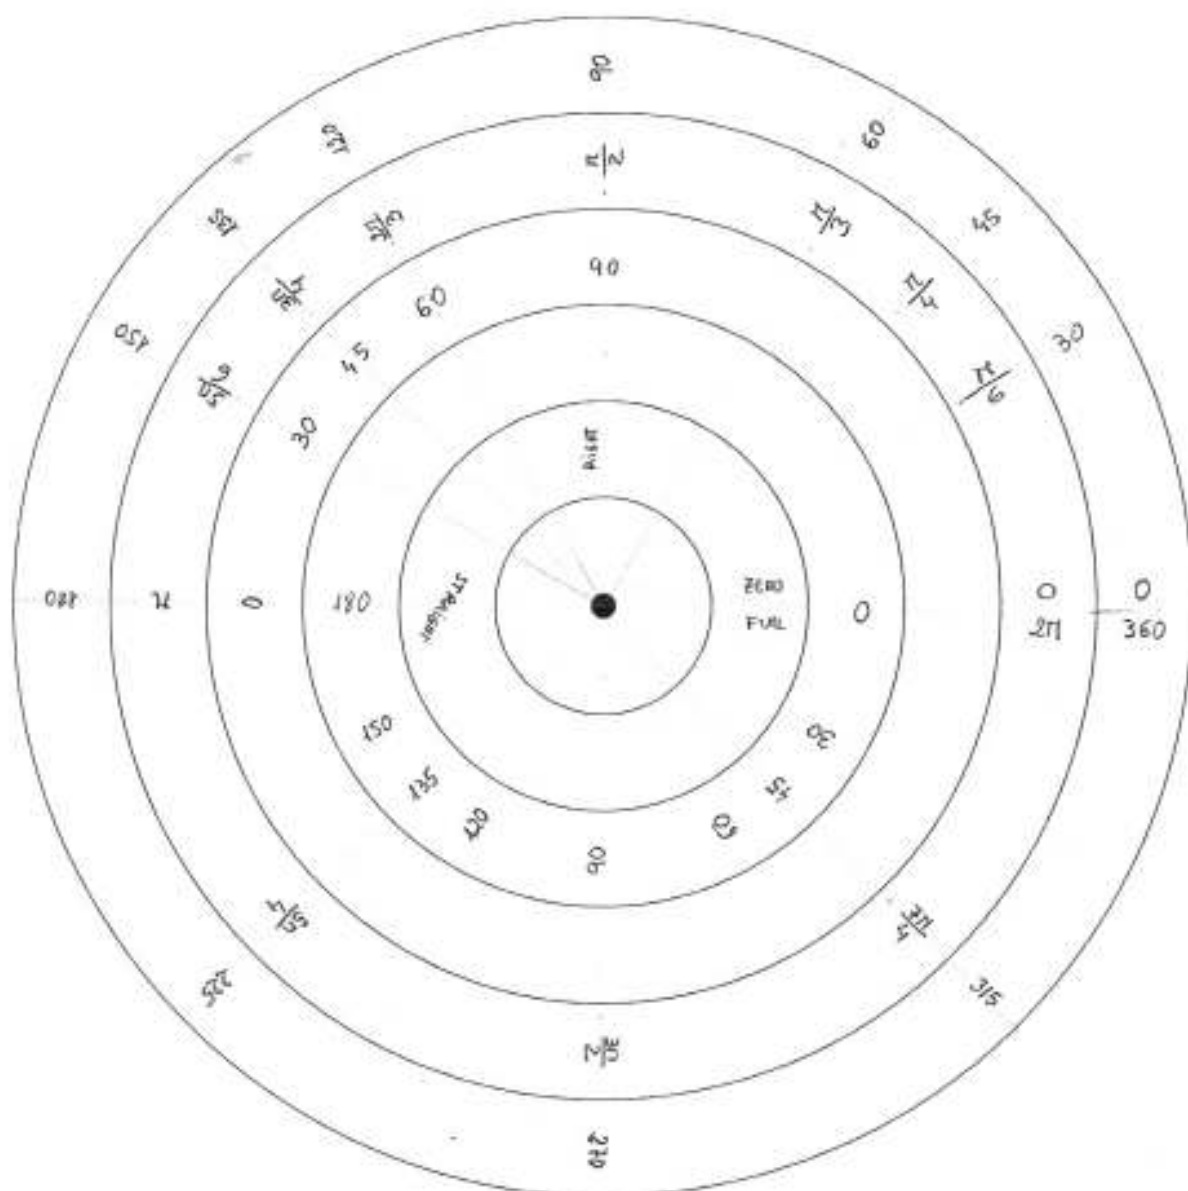

Answer:  $\pi$  rad

## How we measure angles

### VOCABULARY: Angles relationship

---

- Relationship
- Adjacent
- Complementary
- Supplementary
- Opposite
- Pair
- Angle

### VOCABULARY: Type of angles

---

- Property
- Acute
- Right
- Obtuse
- Straight
- Full
- Angle
- Degrees

### VOCABULARY: How to convert units

---

- Sexagesimal
- Degrees
- Radians
- IS of Units
- Measure
- Angle
- Converting units

### VOCABULARY: Summary disc

---

- Sexagesimal
- Degrees
- Radians
- IS of Units
- Measure
- Angle
- Converting units
- Rotation
- Disc
- Complementary
- Supplementary
- Right
- Straight
- Full
- Zero

**Exam**

## How we measure angles

### EXAM

Name \_\_\_\_\_

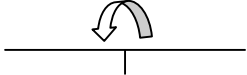

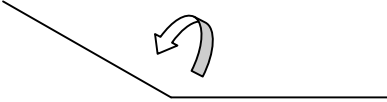

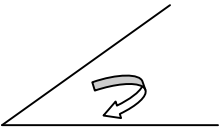

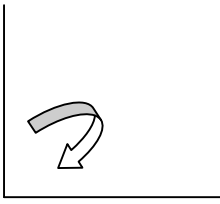

1. Measure the following angles using the protractor. Fill in the gaps with a property from below: (2 points)

*right*

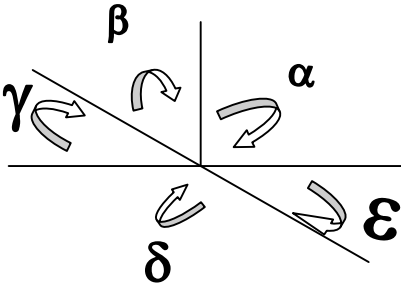

*acute*

*obtuse*

*straight*

 <p>Is an _____ angle</p>	 <p>Is an _____ angle</p>
 <p>Is an _____ angle</p>	 <p>Is an _____ angle</p>

2. Look at this picture (2 points)

	Name a pair of adjacent angles: ___ and ___
	Name a pair of supplementary angles: ___ and ___
	Name a pair of complementary angles: ___ and ___
	Name a pair of vertically opposite angles: ___ and ___

## How we measure angles

3. Do the next sum: (2 points)

$$\begin{array}{r} 5^{\circ} 53' 16'' \\ + 4^{\circ} 12' 59'' \\ \hline \end{array}$$

Compare your answer with the one that gives you your scientific calculator. Explain how you did it.

$$5^{\circ} 53' 16'' + 4^{\circ} 12' 59'' =$$

4. Name the unit used in the International System of Units for angles. (1 point)

5. How many radians are in  $180^{\circ}$ . (1 point)

6. Change into degrees  $\frac{\pi}{6} \text{ rad}$ . (2 points)
