

Biochemical indicators for crustacean and bivalve quality

Kilian Alonso Aragón – June 2016

Objectives:

- To know main alterations of both genders.
- To learn what, which and what are biochemical indicators useful for.
- To establish if it is necessary and profitable to use them.
- To decide which one is the best.

Conclusions:

- ✓ Lot of methods.
- ✓ Some are still unknown.
- ✓ Important and useful for the industry.

Crustacean and bivalve

What are biochemical indicators based on?

Does the fish industry really need them?

Some important indicators:

- Amines
- Ethanol
- Hidroperoxides
- Nucleotide catabolites

The best: INDOL
